Comes, ko'mes (*comes,* associate). Term applied to subsidiary vessels. **C. archiatro'rum,** see *Exarchiater.* **C. ner'vi ischiad'ici,** branch from sciatic artery to great sciatic nerve. **C. n. media'ni,** branch from anterior interosseous artery to median nerve. **C. n. phren'ici,** small branch of the internal mammary artery, arising from that vessel where it enters the chest, and descending to the diaphragm with the phrenic nerve.

Comestible, kom-es'tib'l (*com, edo,* to eat). Edible. When this word is used substantively in French as in English, it means solid food.

Cometocora, kom-et-ok'or-ah (*cometes,* comet, *kore,* pupil). Term applied to the different shapes of the pupil in coloboma of the iris.

Comfit, kum'fit (*conficio,* to make). Confection.

Comfrey, kum'fre. Symphytum. **C., spot'ted,** pulmonaria. **C., wild,** Cynoglossum Virginicum.

Comiste, kom-is'te. Aliment.

Com'ma bacil'lus. Spirillum choleræ Asiaticæ. **C. tract,** tract situated in the middle of the external posterior column of the spinal cord in the cervical and thoracic regions.

Commanducatio, kom-man-du-kah'she-o (*com, manduco,* to chew). Mastication.

Commelyna medica, kom-mel-i'na med'ik-ah. Aneilema medica; tubers are employed in disorders of the liver and chest.

Commemorative, kom-mem'or-a-tiv (*commemoro,* to cause to remember). That which recalls, or rather which is recalled. **C. signs** are those deduced from circumstances which have gone before; or rather, according to others, those which point out the preceding condition of the patient. They are also called *Anamnestic signs.*

Commensum, kom-men'sum (*com, metior,* to measure). Symmetry.

Commercium, kom-mur'se-um (communication) (*com, merx,* merchandise). Sympathy.

Commi, kom'me. Gummi.

Comminuted, kom'min-u-ted (*comminuo,* to break to pieces). Broken into pieces. A comminuted fracture is one in which the bone is broken into a number of pieces.

Comminution, kom-min-u'shun (same etymon). Fracture of a bone into a number of pieces.

Commiphora, kom-mif'or-ah (*kommi,* gum, *phoreo,* to bear). Balsamodendron.

Commissura, kom-mis-su'rah (*committo,* to join together). Articulation, commissure. **C. al'ba ante'rior** or **al'ba medul'læ spina'lis,** white commissure of the spinal cord; band of nerve-fibres running along entire length of spinal cord, situated at bottom of anterior median fissure. **C. ansa'ta,** fibres extending from lamina terminalis cinerea over chiasma opticum to tuber cinereum. **C. ante'rior accesso'ria,** anterior gray cornu of the spinal cord. **C. ante'rior cer'ebri,** commissure, anterior, of the brain. **C. arcua'ta ante'rior,** fibræ arcuatæ orbitales of optic chiasm. **C. arcua'ta poste'rior,** fibræ arcuatæ cerebrales posteriores of optic chiasm. **C. basa'lis,** transverse fibres in tuber cinereum, uniting the two hemispheres. **C. ba'seos al'ba,** thin white lamella connecting the rostrum of corpus callosum with lamina cinerea. **C. ba'seos gris'ea,** gray matter forming floor of third ventricle. **C. ba'sis sep'ti pellu'cidi,** commissura baseos alba. **C. bre'vis,** a lobule or prominence of the inferior vermiform process of the cerebellum, situate in the incisura posterior, below the horizontal fissure. **C. cerebel'li,** pons Varolii. **C. cerebel'li ad cer'ebrum,** superior peduncles of cerebellum. **C. cer'ebri ante'rior,** anterior commissure of the brain; see *Cerebral commissures.* **C. cer'ebri mag'na** or **max'ima,** corpus callosum. **C. cer'ebri me'dia** or **mol'lis,** middle commissure of the brain; see *Cerebral commissures.* **C. cer'ebri poste'rior,** posterior commissure of the brain; see *Cerebral commissures.* **C. cine'rea,** gray commissure. **C. crucia'ta,** decussating fibres of optic tract. **C. exter'na** and **inter'na,** canthus of the eye. **C. for'nicis,** transverse band below crista fornicis. **C. gris'ea,** gray commissure; see *Spinal commissures.* **C. gris'ea ante'rior,** part of the gray commissure in front of central canal; see *Spinal commissures.* **C. habena'rum,** transverse fibres connecting the striæ medullares above the ventriculus conarii. **C-æ hemisphæ'rio'rum,** cerebral commissures. **C. infe'rior,** Gudden's commissure. **C. labio'rum,** commissure of the lips. **C. labio'rum o'ris,** commissure of the lips. **C. labio'rum puden'di,** commissure of the vulva. **C. lemnis'ci,** fibres from deep layer of lemniscus, decussating beneath the corpora quadrigemina. **C. mag'na cerebri,** corpus callosum. **C. max'ima cerebri,** corpus callosum. **C. me'dia,** middle commissure; see *Cerebral commissures.* **C-æ medul'læ spina'lis,** spinal commissures. **C. mol'lis,** soft commissure; see *Cerebral commissures.* **C. ner'vea,** syndesmosis. **C. oliva'rum,** arcuate fibres apparently passing from one olivary body to the other. **C. os'sium car'nea,** union of bones by means of muscles. **C. palpebra'rum,** commissure of eyelids. **C. pedunculo'rum cona'rii,** commissura habenarum. **C. pedunculo'rum sep'ti pellu'cidi,** commissura baseos alba. **C. poste'rior cer'ebri,** commissure, posterior, of the brain. **C. prosta'tæ poste'rior,** middle lobe of prostate. **C-æ puden'di,** commissures of vulva. **C. sim'plex,** lobule on upper surface of vermis of cerebellum, near posterior notch. **C. ten'uis,** folium cacuminis. **C. transver'sa sulca'ta,** ala uvulæ. **C-æ vul'væ,** commissures of vulva.

Commissural, kom-mis-su'ral. Of or belonging to a commissure.

Commissure, kom'is-ure. A point of union between two parts: thus the commissures of the eyelids, lips, etc. are the angles which they form at the place of union. See *Fibres, converging.* **C., ante'rior, of the brain,** small medullary fasciculus, situate transversely at the anterior part of the third ventricle, and uniting the two hemispheres. **C-s of cerebel'lum,** decussations of white fibres occurring above roof nucleus (**great anterior commissure**) and in the posterior part of corpus trapezoides (**posterior commissure**). **C. of the eye'lids,** commissura palpebrarum; union of lids at outer and inner angles of eye. **C. of floc'culus,** pedunculus flocculi; unites the flocculus with the posterior medullary velum. **C., great, of the brain,** unites the two hemispheres for some extent, and is the *Corpus callosum.* **C. of Gud'den,** see *Gudden's commissure.* **C., intercer'ebral,** see *Valvula Vieussenii.* **C. of lips,** place of union of lips at either angle of mouth. **C. of Mey'nert,** commissura basalis. **C., mid'dle, of the brain,** layer of gray substance uniting the thalami optici. **C., oblique',** see *Valvula Vieussenii.* **C., op'tic,** see *Chiasm.* **C., poste'rior, of the brain,** medullary band situate at the posterior part of the third or middle ventricle. **C., short,** lobule on inferior surface of vermis of cerebellum, in the incisura posterior. **C., soft,** C., middle, of the brain. **C. of spi'nal cord,** see *Spinal cord.* **C. of the u'vea,** ciliary ligament. **C-s of vul'va,** places of union of labia majora, above and below. **C. of Wer'nekinck,** commissura lemnisci.

Common, kom'un. Term applied to structures related to each other by position or function, of which there are many cases, as ductus choledochus communis, etc.

Commosis, kom-mo'sis (*komeo,* to adorn). The art of concealing natural deformities, as by painting the face. See also *Propolis.*

Commotice, kom-mo'tis-e (*kommotike, techne*). Art of communicating factitious beauty to a person; painting the face.

Commotio, kom-mo'she-o (*com, motio*). Motion, concussion. **C. cer'ebri,** concussion of the brain. **C. ret'inæ,** œdema of the retina due to traumatism.

Commotion, kom-mo'shun. Concussion.

Communicable, kom-mu'nik-a'bl (*communicans, habilis,* able). See *Contagious.*

Communicans, kommu'nik-ans (*communico,* to communicate). That which communicates or establishes a communication. Communicant, as the two *Arteriæ communicantes,* within the cranium—the one *anterior,* very short, and extending transversely from one anterior cerebral artery to the other; the other *posterior,* called *Communicans Willisii,* passing from the internal carotid to the posterior cerebral artery. It is a branch of the basilary. **C. no'ni,** long, slender, nervous branch, formed by filaments from the first, second, and third cervical nerves, descending upon the outer side of the internal jugular vein, and forming a loop with the descendens noni over the sheath of the carotids. **C. perone'i,** see *Communicans poplitei.* **C. poplite'i,** large nerve arising from the popliteal, and, at a variable distance below the articulation of the knee, receiving the *communicans peronei* from the peroneal nerve, the two forming the external saphenous nerve. **C. tibia'lis,** communicans poplitei. **C. Willis'ii,** see *Artery* (table) and *Communicans.*

Communicating, kom-mu'ni-ka-ting. Establishing communication. See *Communicans.*

Commutator, kom'mu-ta-tor (*commuto,* to exchange). A device for alternating in direction a galvanic current, with any desired frequency.

Comose, ko'moze. Profuse in hair.

Comp. See *Abbreviation.*

Compact, kom-pakt' (*com, pango,* to strike, to fix). Solid, close. The term *Compact tissue* is given to the hardest and closest parts of bone.

Compages, kom-pa'jes (setting together). Articulation, commissure. **C. os'sium per lin'eam sim'plicem,** harmony. **C. vertebra'rum,** vertebral column.

Compaginatio, kom-paj-in-ah'she-o. Commissure.

Compass (kum'pas) **plant** (so called from its leaves pointing, quite uniformly, north and south). Silphium lanciniatum.

Compassio, kom-pas'se-o (*com, patior, passus,* to suffer). Sympathy.

Compatibility, kom-pat-i-bil'it-e. Quality of being compatible.

Compatible, kom-pat'ib'l. A substance which can be prescribed with another without interfering with its chemical composition or medicinal activity.

Compeba, kom'pe-bah. Piper cubeba.

Compelled move'ments. Involuntary movements.

Compensation, kom-pen-sa'shun (*com, penso,* to weigh). Increase in size and power of some of the cavities of the heart, so that the arteries receive their full supply of blood, in spite of valvular or other obstruction or of regurgitation. **C., lost,** a reverse condition of that just described, the heart being unable to fully supply the arteries, and pulmonary and venous congestion resulting. Balancement.

Compensatory, kom-pen'sa-to-re. Acting as a substitute for that which is absent.

Compeper, kom'pep-ur. Piper cubeba.

Compernis, kom-pur'nis. One who has his knees turned inward; a case of distortion of the legs.

Competentia membrorum omnium, kom-pe-ten'she-ah mem-bro'rum om'ne-um (fitness of all the members). Symmetry.

Com'piper. Piper cubeba.

Complaint' (*com, plango,* to beat the breast for grief). Disease. **C., bow'el,** diarrhœa. **C., fam'ily,** see *Hereditary.* **C., sum'mer,** cholera infantum.

Complemental (kom-ple-men'tal) **air** (*com, pleo,* to fill). See *Respiration.*

Complementary (kom-ple-men'ta-re) **air.** See *Respiration.* **C. col'ors,** see *Colors.*

Completio, kom-ple'she-o. Plethora.

Com'plex (*com, plecto,* to twist). Embracing several distinct things; complicated.

Complexio, kom-pleks'e-o. Coition; complexion; confusion; temperament.

Complexion, kom-plek'shun. Often employed to denote the color of the face, as "a *good complexion,*" "a *sallow complexion,*" etc. It formerly had a more extensive signification, as where Hamlet says, "To this complexion do we come at last," and still has in France. It signifies the aggregate of physical characters presented by any individual considered with respect to his external arrangement or condition. It means more than *constitution,* for which it is used synonymously in many cases, and differs from *temperament,* which is less the external condition of the body than the state or disposition of the organs in health.

Complexus, kom-pleks'us. Complex. **C. ma'jor,** C. musculus. **C. mi'nor** arises from the transverse processes of the last four cervical vertebræ, and is inserted into the mastoid process. **C. mus'culus,** muscle situate at the hind part of the neck, extending from the interval that separates the two prominent ridges on the posterior surface of the os occipitis to the transverse and articular processes of the six cervical vertebræ, as well as to those of the first five dorsal. It serves to straighten, incline, and turn the head.

Complication, kom-pli-ka'shun (*com, plico,* to fold). In medicine, the presence of several diseases, *morbi complicati* or *perplexi,* or of several adventitious circumstances foreign to the primary disease.

Component, kom-po'nent. Forming a portion of another composite.

Composite, kom'poz-it. Made up of several substances. See *Composition.* **C. mar'ginal cells,** see *Crescents of Gianuzzi.*

Composition, kom-po-zish'un (*compono,* to place together). The act of composing or compounding—of medicines, for example; also, the *Compound, Compositum,* or thing compounded. Likewise, a combination.

Compositor's (kom-poz'it-or's) **cramp.** See *Cramp, writer's.*

Compositum, kom-poz'it-um. See *Composition.*

Compound, kom-pownd'. To mix medicines. To mingle different ingredients into one whole. Used adjectively, *compound* signifies the result of the union of several medicinal agents, as a compound medicine, compound cathartic pills for example. **C. frac'ture,** see *Fracture.*

Compounding, kom-pownd'ing. The pharmaceutical preparation of a prescription.

Comprehensio, kom-pre-hen'se-o (*com, prehendo,* to take hold of). Catalepsy.

Comprensio, kom-pren'se-o. Catalepsy.

Compress, kom'pres (*comprimo,* to press together). Folded pieces of lint or rag, so contrived as, by the aid of a bandage, to make due pressure upon any part. According to their shape, direction, and use, compresses have been called long, square, triangular, prismatic, graduated, split, oblique, circular, dividing, uniting, cribriform, fenestrated, etc. With the hydropathists it is a cloth, well wetted with cold water, applied to the surface near the supposed seat of disease, securely covered with a dry cloth, and changed as often as it becomes dry. It is sometimes covered with a layer of oiled silk, to prevent evaporation.

Compressed (kom-presd') **air cure.** See *Atmosphere.* **C. sponge,** sponge specially prepared for surgical tents.

Compressio, kom-pres'se-o (same etymon as **Compress**). Compression; constriction by external means.

Compression, kom-presh'un (same etymon). Pressure; methodical compression, an agent frequently had recourse to in surgery. We compress a limb affected with œdema, varices, hydrops articuli, callous ulcer, etc. The abdomen is compressed after delivery, after paracentesis abdominis, etc. The compression is produced by means of the roller, laced stocking, etc., according to the part and to the particular case. Moderate pressure aids the contractility of parts and modifies their nutritive action, so that large tumors at times disappear after it has been used for some time. A greater degree of pressure occasions, still more, the emaciation of the part, but is apt to impede the circulation. Pressure is often used to stop or moderate the flow of blood in cases of aneurism or wounds of arteries and veins. In such cases the compression may be immediate, when applied upon the artery itself, or it may be mediate, when applied through the integuments and soft parts. *Methodical compression* is pressure applied *secundum artem. Digital compression* is pressure made by the fingers.

Compression of the brain may arise from coagula of blood, soft tumor, bony excrescence, depressed portion of the skull, or the presence of some foreign body. The effects vary according as the compression takes place suddenly or gradually: when suddenly, the symptoms are of the comatose or apoplectic character; when gradually, mania, convulsions, etc. are more likely to occur. Compression arising from a depressed portion of skull requires the use of the trephine, but surgical interference is not always practical or judicious. In local suppuration, however, when the matter is collected between the bone and dura mater or in the cavity of the arachnoid, good results may follow from puncturing. Compression may also be caused by sudden hemorrhage in the interior of the brain, as from the lenticulo-striate artery, the artery of cerebral hemorrhage of Charcot, or the middle meningeal artery.

The following table gives the differential diagnosis of compression and concussion of the brain (Roberts):

Compression.	*Contusion or Laceration (Concussion).*
1. Symptoms may not be immediate after injury.	Symptoms always immediate.
2. Complete unconsciousness and total insensibility to impressions upon organs of sense.	Partial unconsciousness, and only impaired sensibility to impressions upon organs of sense.
3. Respiration slow, stertorous, and puffing.	Respiration quiet.
4. Pulse slow and full.	Pulse frequent and feeble.
5. No vomiting.	Sometimes vomiting.
6. Retention of urine, and often of feces.	Incontinence of urine and feces.
7. Paralysis, usually hemiplegia, of opposite side.	No paralysis.
8. Pupils insensible to light.	Pupils react somewhat to light.
9. Deglutition impossible.	Deglutition possible.

C. myeli'tis, see *Myelitis.*

Compressive, kom-pres'siv. That which compresses; a *compressive bandage* is one that compresses the parts to which it is applied.

Compressor, kom-pres'sor. Anything that exerts the force of compression, as a muscle or surgical instrument or an arterial compressor. **C. bul'bi**, accelerator urinæ. **C. b. pro'prius**, deep layer of bulbo-cavernosus, situated directly over the bulb of the urethra. **C.** or **Compresso'rium of Dupuy'tren**, instrument for compressing the femoral artery, invented by Dupuytren, constructed on the same principles as the tourniquet of J. L. Petit. **C. hemisphæ'rio'rum bul'bi**, compressor bulbi proprius. **C. la'bii**, musculus labii proprius; fibres of orbicularis oris muscle. **C. laryn'gis**, group of muscles, regarded as a whole, situated between wings of thyroid cartilage and cricoid cartilage. **C. len'tis**, see *Ciliary muscle.* **C. na'ris**, muscle situate at the sides of the nose; flat and triangular; arises from the inner part of the fossa canina, and passes to the dorsum of the nose, where it is confounded with that of the opposite side. **C. na'si**, compressor naris. **C.** or **Constric'tor of Nuck**, instrument for compressing the urethra to obviate incontinence of urine; consists of a girdle of iron, which surrounds the pelvis, to which is fixed a plate of the same metal, that compresses the urethra *in perinæo.* **C. pros'tatæ**, muscle, admitted by Albinus, which is formed of the anterior fibres of the levator ani, that embrace the prostate; it is the *Prostaticus superior* of Winslow. **C. sac'culi laryn'gis**, see *Sacculus laryngis.* **C. tu'bæ Eustach'ii**, levator veli palati. **C. ure'thræ**, muscle consisting of two portions—one of which is *transverse* in its direction, and, in consequence of its having been particularly described by Mr. Guthrie, has been called *Guthrie's muscle;* arises from the ramus of the ischium, and passes inward to embrace the membranous urethra. The other portion is *perpendicular*, descending from the pubis and passing down to be inserted into the transverse portion of the muscle—*Pubio-urethralis.* This portion has been considered by many to be only the anterior fibres of the levator ani, and, having been described by Mr. Wilson, it has been called *Wilson's muscle.* **C. ve'næ dorsa'lis pe'nis**, small muscle distinctly seen in animals, less distinctly in man, which arises from the ramus of the pubis, and, ascending in a direction forward, is inserted above the vena dorsalis, joining with its fellow of the opposite side on the mesial line. Its use is supposed to compress the vein in erection. It is sometimes called the *muscle of Houston*, after Dr. Houston of Dublin. **C. vesic'ulæ et duc'tus semina'lis**, muscular coat surrounding the vesiculæ seminales and vas deferens.

Compressorium, kom-pres-so're-um. Compressor.

Comptonia asplenifolia, komp-to'ne-ah as-plen-e-fo'le-ah (after Compton, bishop of London). *Sweet fern, Shrubby sweet fern, Sweet bush, Fern bush, Fern gale, Spleenwort bush, Meadow fern, Astringent root.* Indigenous shrubby plant which grows in sandy or stony woods from New England to Virginia. Possesses tonic and astringent properties, and is used as a domestic remedy in diarrhœa, etc., in the form of decoction.

Compunctio, kom-punk'she-o (*com, pungo*, to puncture). Paracentesis; puncturing.

Con, kon, as a prefix, like *cum*, with.

Conæsthesis, kon-es-the'sis. See *Cœnæsthesis.*

Conamarin, kon-am-ar'in (*koneion*, conium, *amarus*, bitter). Bitter principle of Conium maculatum.

Conarial tube, kon-a're-al. Hollow stalk of pineal gland in early embryo.

Conario-hypophysial, kon-a're-o-hy-po-fiz'e-al. Relating to the pineal gland and pituitary body.

Conarium, kon-ah're-um (*konos*, cone). Pineal gland.

Conatus, kon-at'us (*conor*, to endeavor). Effort.

Concarnatio, kon-kar-nah'she-o (*con, caro*, flesh). Union of bones by means of muscles.

Concassation, kon-kas-sa'shun. Pharmaceutical process for reducing roots, woods, etc. into small fragments, in order that their active principles may be more readily separated from them.

Concatenate, kon-kat'en-ate (*con*, with, *catena*, a chain). In a linked condition.

Concausa (kon-kaws'ah) or **Concaus'sa** (*con, causa*). A cause which co-operates with another in the production of disease.

Concavation, kon-kav-a'shun. Anterior gibbosity, or projection of the sternum forward.

Con'cave. Hollow and curved.

Concavitas conchularis cerebri, kon-kav'it-as kon-ku-la'ris ser'e-bre. Infundibulum of the brain. **C. u'teri**, cavity of the uterus.

Concavity, kon-kav'it-e. Hollowness.

Concavo-concave, kon-kav'o-kon'kave. Concave on opposite sides.

Concavo-convex, kon-kav'o-kon'veks. Concave on one side and convex on the other.

Concavum pedis, kon-kav'um pe'dis (*con, cavus*, hollow). Sole.

Concentrantia, kon-sen-tran'she-ah (*con, centrum*, centre). Name once given to absorbents of acids.

Concentrated, kon'sen-tra-ted. Term applied to solutions that are strong in ingredients, or in which the fluid takes up every part of the ingredient that is soluble.

Concentration, kon-sen-tra'shun. Evaporation of part of the fluid portion of a mixture, by which the latter gains relative strength. Word sometimes used in medical theories to express an afflux of fluids, or a convergence of sensibility or of vital force, toward an organ. Pulsation of arteries when not easily felt under the finger.

Concentric, kon-sen'trik. Peripheries having a common centre; a term sometimes applied to a series of circles so arranged.

Concept, kon'sept. A definite form of thought.

Conceptacula (pl. of **Conceptaculum**) **seminaria**, kon-sep-tak'u-lah sem-in-ah're-ah. Vesiculæ seminariæ or seminales.

Conceptaculum, kon-sep-tak'ul-um (receptacle). Uterus; vessel.

Conceptio, kon-sep'she-o. Conception. **C. vitio'sa**, pregnancy, extra-uterine.

Conception, kon-sep'shun (*concipio*, to bring together). Impregnation of the ovum by the positive contact of the male sperm, whence results a new being. The whole subject of conception is most mysterious. It seems to occur as follows: During the sexual union the male sperm passes along the uterus and Fallopian tubes, the fimbriated extremities of the latter seize hold of the ovarium, and the sperm in this manner comes in contact with a matured ovum and impregnates it. The fecundated ovum remains some time in the ovarium, but at length bursts its covering, is held by the fimbriated extremity of the Fallopian tubes, and passes along the tube into the cavity of the uterus, where it remains for the full period of utero-gestation. Some are of opinion that the ovum is not impregnated until it has entered the Fallopian tube or uterus.. **C., imper'ative**, mental condition observed to exist among

lunatics, in which they entertain the most erratic ideas and often commit violence.

Conceptus, kon-sep'tus. First rudiments of the fœtus after conception. Also, conception. **C. fal'sus,** conception, false.

Concha (kon'kah) or **Con'chus** (*konche, konchos,* concave shell). Liquid measure among the Athenians, equal to half an ounce. Anatomists apply this term to several hollow parts of the body, as the *Concha of the ear—Concha auris, Concha auriculæ, Fossa conchæ*—the hollow part of the cartilage of the external ear, with which the external auditory canal commences. The root of the helix divides it into two portions, the upper and smaller of which is the *cymba.* The term has also been applied to the genital organs of the female, to the patella, and turbinated bone (middle). **C. au'ris inter'na,** cochlea. **C. cer'ebri,** infundibulum of the brain. **C. ge'nu,** patella. **C., infe'rior,** turbinated bone (inferior). **C. labyrin'thi,** cochlea. **C. Morgagni-a'na,** turbinated bone (superior). **C. na'rium supe'rior,** turbinated bone (superior). **C. Santonia'na,** small bone of the nose occasionally met with, situated above the superior turbinated bone. **C. sphenoida'lis,** sphenoidal turbinated bone. **C. supre'ma,** C. Santoniana.

Conchæ, kon'ke. See *Ostrea.* **C. na'rium,** turbinated bones. **C. prepara'tæ,** burned oyster-shells. **C. ven'eris,** turbinated bones.

Conchairamadine, kon-chair-am'ad-een. $C_{22}H_{26}N_2O_4 + H_2O$. Alkaloid from cinchona.

Conchairamine, kon-chair'am-een. $C_{22}H_{26}N_2O_4 + H_2O + C_2H_6O$. Alkaloid from cinchona-bark.

Conchial, kon'ki-al. Relating to concha of ear.

Conchinamine, kon-kin'am-een. Quinidamine.

Conchinine, kon'kin-een. Quinidine.

Conchitis, kon-ke'tis. Inflammation of concha of ear.

Conchohelix, kon-ko-he'liks. Small, fleshy fasciculus attached to the concha of the ear and helix; also called the *small muscle of the helix.*

Chonchoid, kon'koid. Shell-like.

Conchoid'al. Shell-like.

Conchoscope, kon'ko-skope (*concha, skopeo,* to view). Speculum for examining the anterior and middle parts of the nose.

Conchus, kon'kus (*konchos, konche*). *Concha.* Cranium. In the plural it means the orbitar cavities. **C. oc'uli,** orbit.

Conchylia, kon-kil'e-ah (*concha,* shell). Turbinated bones.

Concidentia, kon-sid-en'she-ah (*con, cado,* to fall). Collapse.

Concilia (pl. of **Concilium,** union) **corpora'lia,** konsil'e-ah kor-po-ral'e-ah. Coition.

Concilium, kon-sil'e-um. Milky plant referred to by Pliny as aphrodisiac and antiphthisical, considered to be a Campanula.

Concineration, kon-sin-er-a'shun. Incineration.

Concoagulate, kon-ko-ag'u-late. Curdled.

Concocted, kon-kok'ted (*con, coquo,* to boil). Brought to maturity; ripe; concocted; digested.

Concoctio, kon-kok'she-o. Coction. **C. tar'da,** dyspepsia.

Concoction, kon-kok'shun. Coction.

Concomitans, kon-kom'it-ans. Concomitant.

Concomitant, kon-kom'it-ant (*con, comito,* to go with). That which accompanies, as a symptom accompanying others.

Concrematio, kon-kre-mah'she-o (*con, cremo,* to burn). Calcination.

Concrementa (pl. of **Concrementum**) **zoohylica,** kon-kre-men'tah zo-o-hil'ik-ah. Concretions formed of animal matter.

Concrementum, kon-kre-men'tum. Concretion.

Concrescence, kon-kres'ence. Union.

Concrescible, kon-kres'i-b'l. Capable of thickening or of forming a concrement.

Concrete, kon'krete (*concretus,* compacted). Condensed to solidity.

Concretio, kon-kre'she-o. Adherence. See *Concretion.* **C. palpebra'rum cum bul'bo oc'uli,** preternatural adhesion between the eyelids and the globe of the eye.

Concretion, kon-kre'shun (*concresco, con* and *cresco,* to grow together, to become solid). The act of becoming thick or solid. It was once used synonymously with adhesion or growing together—as *concretion of the toes.* Most commonly it is applied to extraneous and inorganic bodies, of a solid character, met with in different textures after certain chronic inflammations, or which make their appearance in the joints or in the reservoirs for excrementitial fluids. They are calcareous, chalky, fibrinous, etc. Concretion is therefore frequently synonymous with calculus, but accidental ossifications or deposits of phosphates of lime—*Calcareous concretions*—in certain organs, and especially in the liver and lungs, are properly called *osseous concretions;* they could not well be called *osseous calculi.* **C., am'yloid,** see *Corpora amylacea.* **C., calca'reous,** see *Concretion.* **C., fi'brinous, pol'ypiform, pol'ypous,** or **sanguin'eous, of the heart,** see *Polypus.* **C. intestina'lis,** calculus of the stomach and intestines. **C. of the ton'sils,** caseous and calcareous concretions in the crypts or follicles of the tonsils, perhaps parasitic in origin generally.

Concretiones alvinæ, kon-kre-she-o'nees al-ve'ne. See *Calculi of the stomach and intestines.*

Concubitus, kon-ku'bit-us (*con, cubo,* to lie). Coition. **C. vene'reus,** coition.

Concursus, kon-kur'sus (*concurro,* to run, to meet together). The congeries or collection of symptoms which constitute and distinguish a particular disease.

Concus'conine. Alkaloid from some of the cinchona barks.

Concussion, kon-kush'un. *Commotion* (*concutio, con, quatio,* to shake, to shake together). In surgery, it is used for the agitation often communicated to one organ by a fall upon another; as to the brain from a fall on the breech, etc. In all severe injuries, in sudden encephalic hemorrhage, and in overwhelming emotions a concussion or shock is felt to a greater or less extent in the nervous system, requiring the careful attention of the physician. **C. of the brain** sometimes gives rise to alarming symptoms, even to abolition of the functions of the brain, yet without any sensible organic disease. Slight concussion of the brain, called stunning, consists in vertigo, tinnitus aurium, loss of memory, and stupefaction; all these being temporary. When more severe, there is instant loss of sensation and volition, vomiting, the patient being as if in a sound sleep, but there is no stertorous breathing; pulse variable, generally more rapid and feeble than in compression; extremities cold. (For table of differential diagnosis of compression and concussion, see *Compression.*) Violent concussion of the spine, often produced by railway accidents, and the disabling effects thereof, have been collectively termed the *Railway spine.* **C. cat'aract,** form of cataract due to traumatism. **C. myeli'tis,** see *Myelitis.*

Concussor, kon-kus'sor. Apparatus for stimulating muscles in a paralyzed condition.

Concutiens, kon-ku'she-enz. Shaking. **C. ca'put,** intertransversalis colli muscles.

Condaminea (kon-dam-in'e-ah) **corymbo'sa.** Tree of Peru; bark is employed as substitute for Peruvian bark. **C. ve'ra,** variety of Cinchona condaminea.

Condensantia, kon-den-san'she-ah (*con, denso,* to thicken). Medicines esteemed proper for inspissating the humors.

Condensatio, kon-den-sah'she-o. Condensation; stegnosis.

Condensation, kon-den-sa'shun. Increase in density of the blood and other liquids, or of the solids which enter into the composition of the human body.

Condenser, kon-den'sur. See *Alembic.* **C., Lieb'ig's,** distillatory arrangement invented by Liebig, in which the tube conveying the vapor is made to pass through another tube, the calibre of which is such as to leave a space between the two, through which a stream of water may be made to run.

Condiment, kon'dim-ent (*condio,* to season). Some substances are called, at times, Aliments, and at

others, Condiments, according as they constitute the basis or the accessory to any dish; such are cream, butter, mushrooms, olives, etc. Others are always condiments, as they are only used to improve the savor of food, and contain little or no nutritive matter; such are pepper, salt, cinnamon, etc. Almost all condiments are possessed of stimulant properties.

Conditum, kon-de'tum. Pharmaceutical compound of wine, honey, and some aromatics, especially pepper; also a confection.

Conditura cadaverum, kon-dit-u'rah kad-av'er-um. Embalming.

Conditus, kon-de'tus. Preserved, embalmed.

Condom, kun'dum (from its proposer, Dr. Condom). *Armor, French letter, Cytherean shield.* Intestinum cæcum of a sheep, properly prepared by removal of the mucous coat, so that it can be drawn over the penis prior to coition, to prevent venereal infection and pregnancy; condoms are also made of gold-beater's skin.

Condrilla (kond-ril'lah) or **Condril'lon.** Gum resin obtained from Atractylis gummifera.

Condris, kon'dris. Chondrus.

Conductio, kon-duk'she-o (*con, duco,* to lead). Tonic spasm; convulsion.

Conduction, vibrations of, kon-duk'shun, vi-bra'-shuns. See *Sound.*

Conductivity, kon-duk-tiv'it-e. The ability of some media to convey certain forces; as the nerves, nervous impulses, and metal electricity. **C., specif'ic,** relative ability possessed by some substances for the conveying of certain forces.

Conductor, kon-duk'tur. *Director.* That which conducts. The conductor was an instrument, formerly used in the high operation for the stone, for directing the forceps into the bladder. **C., pin,** instrument for conducting a long pin through tissues. **C., sono'rous,** name given to nerve-fibres in the floor of the fourth ventricle.

Condurango, kon-du-ran'go. Cundurango.

Condylar, kon'dil-ar (*kondulos*). Relating to a condyle.

Condylarthrosis, kon-dil-ar-thro'sis (*kondulos,* condyle, *arthron,* joint). Articulation by condyles; an elongated head or condyle received into an elliptical cavity.

Condyle, kon'dile (*kondulos,* knot, eminence). Articular eminence, round in one direction, flat in the other. A kind of process met with more particularly in the ginglymoid joints, such as the condyles of the occipital, inferior maxillary bone, etc. Some anatomists have applied the term, however, to eminences that are not articular—as to the lateral tuberosities at the inferior extremity of the os humeri; and even to certain depressions—as to the concave articular surfaces at the upper extremity of the tibia. The transverse root of the zygomatic process has been called *Condyle of the temporal bone.* See *Humerus.*

Condyli (pl. of **Condylus**) **digitorum manûs,** kon'-dil-e dij-it-o'rum man'ûs. Phalanges of the fingers. **C., exter'nal, of the fe'mur,** rounded prominence on the outside of the lower part of the femur. **C., e., of the hu'merus,** see *Humerus.* **C. fem'oris,** condyles of the femur. **C. of the infe'rior maxil'la,** see *Maxillary bone, inferior.* **C., inter'nal, of the fe'mur,** see *Condylus flexorius.* **C., i., of the hu'merus,** see *Humerus.* **C., occip'ital,** the two condyles with which the occipital bone is provided, and which articulate with the atlas.

Condylius, kon-dil'e-us. Condyloid.

Condylodes, kon-dil-o'des. Condyloid.

Condyloid, kon'dil-oid (*condyle, eidos,* shape). Having the shape of a condyle. **C. foram'ina** are distinguished into *anterior* and *posterior.* They are four in number, seated in the occipital bone; two anterior and two posterior to the condyles or condyloid processes of the same bone, and to depressions which are called *Fossæ condyloïdeæ.*

Condyloïdeo-coracoïdeus, kon-dil-o-e'de-o-kor-ak-o-e'de-us. Relating to the coracoid process and to head of scapula.

Condyloma, kon-dil-o'mah (*konduloma,* a knot, an eminence). Soft, fleshy excrescence, of an indolent character, which appears near the orifice of the genital organs and rectum, and occasionally on the fingers and toes. It is a consequence of the syphilitic virus. Such tumors are also called *Dermophymata venerea.* They are also found in other parts of the body, as the scrotum, penis, mouth, tonsils, etc.—*Mucous patches* or *Tubercles, Moist papules.* The whitish pellicle seen in the mouth especially is called the *opaline patch.* **C. acumina'tum,** cauliflower excrescence. **C. cla'vus,** condylomatous excrescence of the uterus. **C. eleva'tum,** C. acuminatum. **C. endocys'ticum,** molluscum contagiosum. **C., flat,** C. latum. **C. i'ridis,** iritis gummosa. **C. la'tum,** broad condylous syphilitic eruptions on the skin, contagious in character. **C. porcela'neum,** molluscum contagiosum. **C. subcuta'neum,** molluscum contagiosum. **C. syphilit'icum,** condyloma latum. **C. ty'lus,** tyloma.

Condylosis, kon-dil-o'sis. Condyloma.

Condylotomy, kon-dil-ot'o-me (*kondulos, tome,* incision). Excision of part of a condyle.

Condylus, kon'dil-us (*kondulos*). Condyle. **C. exter'nus** or **extenso'rius hu'meri,** external condyle of humerus. **C. flexo'rius** or **inter'nus hu'meri,** internal condyle of humerus. **C. latera'lis fem'oris,** external condyle of femur. **C. l. hu'meri,** external condyle of humerus. **C. media'lis fem'oris,** internal condyle of femur. **C. m. hu'meri,** internal condyle of humerus.

Condy's disinfecting liquid (kon'de's dis-in-fek'-ting lik'wid) or **fluid.** A 2 per cent. solution of potassium permanganate; good antibromic. *Darby's fluid* is a similar preparation.

Conecphlogiscon, kon-ek-flo-jis'kon (*konos,* cone, *ekphlogizo,* to fire). Varicella accompanied by lesions of a conical shape.

Cone-fi'bres. The processes connecting retinal cones with the outer molecular layer.

Coneflower, kone'flow-ur. Rudbeckia laciniata. **C., purple,** Echinacea purpurea.

Coneine, kon-e'een. Coniine.

Coneion, ko-ni'on. Conium maculatum.

Cones of kid'ney. Pyramids of Malpighi. **C. of ret'ina,** structure intermingled with rods, in columnar layer of retina.

Conessi cortex, kone-es'se kor'teks. Nerium antidysentericum.

Conessine, kone-es'seen. Alkaloid contained in bark of Nerium antidysentericum, Halarrhena Africana, and H. antidysenterica. Used in diarrhœa and dysentery.

Conessium, kone-es'se-um. Wrightia antidysenterica.

Conexio, kon-eks'e-o. Connexio.

Confectio, kon-fek'she-o (*conficio,* to make up). Confection, comfit. In general, it means anything made up or preserved with sugar. In the pharmacopœias of the United States, London, and Dublin it includes the articles before called electuaries and conserves. Confectio or confectum also means confectionery. **C. alker'mes,** alkermes. **C. amygdala'-rum,** almond confection, almond paste (sweet almonds, gum acacia, white sugar); a good mode of keeping almonds in a state fit for making emulsions. In the British Pharmacopœia the ingredients are rubbed to a coarse powder, called pulvis amygdalæ compositus, compound powder of almonds. **C. archig'-eni** (castor, long pepper, black pepper, storax, galbanum, costus, opium, saffron, syrup of wormwood); stimulant in nervous affections. **C. aromat'ica,** aromatic confection, Sir Walter Raleigh's cordial (aromatic powder, clarified honey). Dose, ℈j to ʒj. Under the name pulvis cretæ aromaticus, aromatic powder of chalk, the British Pharmacopœia has a substitute for confectio aromatica, made by mixing prepared chalk, powdered cinnamon, nutmeg, saffron, cloves, cardamom seeds, and refined sugar, and passing the powder through a sieve. **C. aurantio'rum** or **C. aur'anti cor'ticis,** confection of orange or of orange-peel (sweet orange-peel, rectified sugar); stomachic and

agreeable vehicle, corrigent, and adjuvant for other remedies; dose, ʒss. **C. cardi'aca,** confectio aromatica. **C. cas'siæ,** cassia confection (cassia pulp, manna, tamarind pulp, ʒj, syrup of roses); gently laxative; dose, ʒss. **C. cat'echu compos'ita,** compound or confection of catechu (compound catechu powder and syrup, catechu, kino, cinnamon, nutmeg, opium, sherry, syrup of red roses). A grain of opium is contained in about 200 grains of the mass; dose, as an astringent, ʒss to ʒj. **C. Damoc'ratis,** mithridate. **C. Hamec,** from an Arabian physician (yellow myrobalans, black myrobalans, violets, pulp of colocynth, polypodium of the oak, leaves of wormwood, thyme, aniseed, fennel, red roses, pulps of prunes, raisins, sugar, honey, senna, rhubarb, etc.); was used as a purgative in glysters. **C. hyacin'thi,** hyacinth confection; tonic and slightly astringent confection (terra sigillata, crabs' stones, cinnamon, leaves of dittany of Crete, myrrh, saffron, syrup of lemon, camphor, Narbonne honey, oil of lemon, hyacinth, etc.). **C. o'pii** (Ph. Br.) or **opia'ta,** opium confection (compound powder of opium, gr. c, syrup, gr. ccc); narcotic and stimulant; dose, gr. x. to ℈j. **C. ex capit'ibus papav'eris,** diacodium. **C. Pauli'na,** confectio archigeni. **C. pi'peris** (Ph. Br.), black pepper, caraway fruit, clarified honey; dose, gr. lx–cxx, three or four times a day; used for fistula. **C. Raleigha'na,** confectio aromatica. **C. ro'sæ,** confection of red rose (red rose, powder, 8 p., sugar, in fine powder, 64 p., clarified honey, 16 p., rose-water, 12 p., Ph. U. S.); astringent, and chiefly used as a vehicle for other remedies. **C. ro'sæ cani'næ** (Ph. Br.), confection or conserve of dog rose or hips (pulp of dog rose, refined sugar); acidulous and refrigerant; chiefly used as a vehicle for other remedies. **C. ru'tæ,** confection of rue (rue leaves, caraway seeds, bay berries, sagapenum, black pepper, honey). Given in clysters as an antispasmodic and carminative. **C. de san'talis,** confection of sanders; formerly used as an astringent. **C. scammo'nii** (Ph. Br.), confection of scammony (powdered scammony, oil of cloves, powdered ginger, oil of caraway, syrup, clarified honey); stimulating cathartic; dose, ʒss to ʒj. **C. sen'næ** (Ph. U. S. and Br.), confection of senna, lenitive, electuary, etc. (senna in fine powder; coriander in fine powder; purging cassia; tamarind; prune, sliced; fig, bruised; sugar, in coarse powder; water); laxative; used in habitual constipation and in constipation during pregnancy; dose, ʒss to ʒss. **C. sulph'uris** (Ph. Br.), confection of sulphur; sublimed sulphur (potassium bitartrate, syrup of orange-peel); laxative and alterative; dose, ʒj to ʒij. **C. terebinth'inæ** (Ph. Br.), confection of turpentine (oil of turpentine, powdered licorice, clarified honey); agreeable mode of administering turpentine; dose, a scruple to a drachm. **C. de Thu're,** frankincense confection. Compound of coriander seeds, nutmeg, thus, liquorice, mastich, cubebs, prepared hartshorn, conserve of red roses, sugar, etc.

Confection, kon-fek'skun. Confectio. **C. of cat'echu, com'pound,** confectio catechu compositum. **C. frank'incense,** confectio de Thure. **C. of hips,** confectio rosæ caninæ. **C. of orange,** confectio aurantiorum. **C. of red rose,** confectio rosæ Gallicæ. **C. of rue,** confectio rutæ. **C. of the sanders,** confectio de santalis. **C. of sul'phur,** confectio sulphuris. **C. of tur'pentine,** confectio terebinthinæ.

Confectionarius, kon-fek-shun-ar'e-us. Apothecary.

Confectioners (kon-fek'shun-ers), **disease of.** Disease of the nails resulting from handling the ingredients of confectionery.

Confectiones, kon-fek-she-o'nees (pl. of **Confectio**) (Ph. U. S.). Confections.

Confectum, kon-fek'tum. Confection.

Confertus, kon-furt'us. Pressed together or standing close together, as a cutaneous eruption.

Conferva helminthocortos, kon-fer'va hel-min-thokor'tos (*confervo,* to knit together). Corallina Corsicana. **C. riva'lis,** species of river weed, which has been recommended in cases of spasmodic asthma, phthisis, etc.

Confervus, kon-fur'vus. Strophulus.

Configuration, kon-fig-u-ra'shun. Shape of an object.

Confinement, kon-fine'ment. Parturient state.

Confirmantia, kon-fir-man'she-ah (*con, firmo,* to strengthen). Tonics.

Confirmatio, kon-fir-mah'she-o. Union or consolidation, as of a fractured bone.

Confirmed, kon-furmd'. Established, as confirmed consumption.

Confluence, kon'flu-ence. Point of union of two or more canals. **C. of the si'nuses,** torcular Herophili.

Confluens sinuum anterior, kon'flu-ens sin'u-um an-te're-or. Point where the petrosal and transverse sinuses are given off.

Confluent, kon'flu-ent (*con, fluo,* to flow). Running together. An epithet for certain exanthematous affections, in which the pimples, pustules, etc. run together; particularly applied to small-pox, so circumstanced. Some authors have called scarlatina or scarlet fever confluent measles.

Confluentia, kon-flu-en'she-ah. Term employed to express the concordance between a disease and its remedies.

Conflux, kon'fluks. Confluence.

Confluxio, kon-fluks'e-o. Sympathy.

Confo'cal, kon-fo'kal. Having the same focus; term applied to lenses.

Confœderatio, kon-fed-er-ah'she-o (*con, fœdus,* treaty). Confluentia.

Conformatio, kon-for-mah'she-o (*conformo,* to arrange, dispose). Conformation, structure. **C. pupil'læ artificia'lis,** operation for artificial pupil.

Conformation, kon-for-ma'shun. Structure; natural disposition or arrangement of the body. *Faulty conformation* is vice of original formation, existing, of course, from birth.

Confortantia, kon-for-tan'she-ah (*con, fortis,* strong). Tonics.

Confortativa, kon-for-tah-te'vah. Tonics.

Confrey, kon'fre-i. Comfrey.

Confrication, kon-frik-a'shun (*confrico,* to rub together). The action of reducing a friable substance to powder by rubbing it between the fingers, and of expressing the juice of a plant with the hand. Masturbation.

Confricatrix, kon-frik-ah'triks. Female who practises masturbation.

Confrontation, kon-frun-ta'shun. Method employed as an aid to diagnosis, which consists in bringing together the patient and the one from whom the affection was contracted.

Confusæ febres, kon-fu'se feb'rees. Intermittents whose paroxysms are irregular and confused.

Confusio, kon-fu'ze-o (*confundo, confusum,* to mix together). Disease of the eye which consists in the mixture of the humors. In modern times the term *synchysis* has been applied to a morbid state of the vitreous body, in which it is reduced to a different condition. Occasionally, sparkling bodies are perceptible, which seem to be seated behind the crystalline, in the vitreous humor; hence the disease has been called *Sparkling synchysis* or *spintheropia* (*spinther,* spark, *ops,* eye), *Synchysis scintillans.* This is due to sparkling flakes of cholesterin floating in the vitreous fluid. *Confusio* has also been used synonymously with *Complexio.*

Confu'sion col'ors. Colors used in testing for color-blindness.

Confusiones animi, kon-fu-ze-o'nees an'im-e. Confusions of the mind. See *Affections of the mind.*

Confustus, kon-fus'tus. Irregular; term applied to fevers.

Congee discharges, kon-je' dis-char'jes. Rice-water discharges.

Congelantia, kon-jel-an'she-ah (*congelo,* to congeal, to freeze). See *Congelativa.* Agents capable of uniting and consolidating wounds. Producing congelation.

Congelaticus, kon-jel-at'ik-us. One affected with ecstasy.

Congelatio, kon-jel-ah'she-o. Congelation, catalepsy, frostbite. **C. bullo'sa,** frostbite accompanied with formation of blebs. **C. erythemato'sa,** frostbite accompanied with erythematous reddish or purplish spots, which become gangrenous and slough. **C. escharot'ica,** frostbite accompanied with gangrene.

Congelation, kon-jel-a'shun. The action of congealing, of passing to the solid state by the abstraction of heat; as congelation of water, mercury, etc. The term had once other acceptations, as concretion; coagulation; any disease produced by cold, or disease in which there is a kind of stupor or torpor, particularly catalepsy; also frostbite. Congelation of a part by the application of powdered ice or of a freezing mixture, in a bladder or gauze bag, has been employed to induce anæsthesia in the lesser surgical operations; also used in external inflammation.

Congelativa medicamenta, kon-jel-at-e'vah medik-am-en'tah. Medicines considered capable of uniting or consolidating wounds, etc.

Congelativus, kon-jel-at-e'vus. Congealing, uniting, or consolidating.

Congelatus, kon-jel-ah'tus. Congealed, united, or consolidated.

Congener, kon'jen-ur (*con, genus,* kind). *Congeneros.* Of the same kind or species; resembling each other in some manner. When applied to muscles, it means that they concur in the same action; in opposition to *antagonist,* acting in opposite direction.

Congeneric, kon-jen-er'ik. Of the same genus or species.

Congenialis, kon-jen-e-al'is. Congenital.

Congenitæ notæ, kon-jen'it-e no'te. Nævus.

Congenital, kon-jen'it-al (*con, genitus,* begotten). *Congenite.* Originating or existing at birth. **C. diseases,** diseases which infants have at birth; hence, congenital affections are those that depend on faulty conformation, as *congenital hernia, congenital cataract,* etc. See *Connate.*

Congeries, kon-je're-ees. Collection of small bodies or particles into one mass.

Congested, kon-jes'ted. Hyperæmic.

Congestio, kon-jes'te-o (*congero,* to carry, to amass, accumulate, etc.). Congestion; hyperæmia. **C. abdomina'lis,** hyperæmia or congestion of the blood-vessels of the abdomen. **C. pec'toris** or **pulmo'num,** congestion or accumulation of blood in the pulmonary vessels. **C. san'guinis,** congestion.

Congestion, kon-jest'yun. *Engorgement.* Accumulation of blood in an organ; important symptom in febrile and other disorders; may arise either from an extraordinary flow of blood by the arteries, or from a difficulty in the return of blood to the heart by the veins. More often, perhaps, it is owing to the latter cause, and is termed *venous congestion, stasis,* or *stagnation,* being not unusually attended with symptoms of oppression and collapse. See *Hyperæmia.* **C. of the abdo'men,** hyperæmia of the blood-vessels of the abdomen. **C. of the brain,** hyperæmia or congestion of the brain. **C., cer'ebral,** congestion of the brain. **C., hypostat'ic,** congestion resulting from long-maintenance of the position on the back in bed, as in pneumonia, in infancy, etc. **C. of the lungs,** congestion or accumulation of blood in the pulmonary vessels. **C. papil'la,** see *Papilla.*

Congestive, kon-jes'tiv. Belonging or relating to or affected with congestion, as *congestive fever, congestive chill.* **C. fe'ver,** see *Fever, congestive.*

Congialis, kon-je-al'is. Holding a gallon.

Congiarium, kon-je-ah're-um. Measure holding a gallon.

Congius, kon'je-us. A gallon.

Conglaciation, kon-gla-se-a'shun (*con, glacies,* ice). Congelation.

Conglobate, kon-glo'bat (*conglobo,* to collect, to gather into a ball). Collected into a ball. **C. gland,** *Globate gland, Lymphatic ganglion.* A round body formed of lymphatic vessels, connected together by cellular structure, but having neither cavity nor excretory duct, as mesenteric, inguinal, and axillary glands.

Conglomerate, kon-glom'er-ate (*con, glomero,* to gather in a heap). Composed of large or small lobes. **C. glands,** those whose lobules are united under the same membrane, as the liver, kidney, testicle, mammæ, etc.; acinous glands.

Conglomeratio (kon-glom-er-ah'she-o) **intestino'rum.** Conglomeration of the intestines.

Conglutin, kon-gloo'tin. Emulsin.

Conglutinant, kon-gloo'tin-ant (*con, gluten,* glue). Causing or promoting adhesion; substance that causes adhesion.

Conglutina'tion. Gluing together, as in atresia of the os uteri or in adhesion of the pleura to the lungs.

Con'go-red test. Test for free acid from the stomach by means of Congo-red paper, which becomes blue when brought in contact with pure acid.

Con'gregate glands. Agminated glands.

Con'gress (*con, gradior,* to go together). Coition. Ocular proof, formerly ordered by judicial authority, in presence of surgeons and matrons, to test impotence or capabilities of parties, but forbidden by Parliament of Paris in 1667. **C., sex'ual,** sexual intercourse.

Conhydrine, kon-hi'dreen. $C_8H_{17}NO$. Alkaloid from flowers of Conium maculatum.

Coni (ko'ne) (pl. of **Conus,** cone) **Hal'leri.** C. vasculosi. **C. hu'muli** or **lu'puli,** strobiles of hops. **C. Malpig'hii,** pyramids of Malpighi; see *Papillæ of kidney.* **C. re'num,** see *Papillæ of kidney.* **C. retinæ,** cones of retina. **C. testic'uli,** C. vasculosi. **C. tubulo'si,** see *Papillæ of kidney.* **C. vasculo'si,** conical bundles formed by the vasa efferentia of the testis, having their base toward the epididymis, into the tube of which they enter.

Conia (ko-ne'ah) or **Coni'ine.** See *Conium.*

Coniasis, ko-ne'as-is (*konia,* plaster). Incrustation. **C., bil'iary,** biliary calculus.

Con'ical cor'nea. Ceratoncus. **C. papil'læ,** papillæ on surface of tongue; see *Tongue.*

Conicine, kon'is-een. Conine. See *Conium.*

Conif'erine. Glucoside analogous to salicine, from special species of Coniferæ, the Abies excelsa for example.

Conii (ko-ne'e) **fo'lia.** See *Conium.* **C. fruc'tus,** see *Conium.* **C. se'men,** see *Conium.*

Coniic (ko-ni'ik) **acid.** Acid in conium, probably malic acid.

Coniine, ko-ne'een. See *Conium.* Cadaveric ptomaïne or alkaloid resembling coniine, vegetable alkaloid of conium. **C. bromhy'drate,** see *Conium.* **C. hydrochlo'rate** or **hydrochlo'ride,** $C_8H_{17}NH_2Cl$; used as substitute for coniine.

Co'nine. Coniine. See *Conium maculatum.*

Co'nion. Conium.

Coniosele'nium Canadense, ko-ne-o-sel-e'ne-um kan-ad-en'se. *Hemlock parsley,* growing in northern parts of the U. S. and Canada; antidysenteric.

Coniostosis, ko-ne-os-to'sis (*konis,* dust). Pulverization.

Conis, ko'nis. Powder.

Conium (ko-ni'um) or **C. macula'tum.** *Common* or *Poison hemlock, Hemlock, Poison parsley, Spotted parsley, St. Bennett's herb;* ord. Umbelliferæ. The fresh leaves and young branches, *Conii folia* (Ph. Br.), are narcotic. The full-grown fruit of Conium maculatum is officinal under the name *Conium* (Ph. U. S. and Br.). Powder has been used as palliative in cancer and other painful affections. Externally, it has been applied in fomentation to cancerous and scrofulous ulcers. Its active alkaloid principle is conia, conine, conylia, coniine, coneïne, conicine, or cicutine, $C_8H_{17}N$; oily liquid, forming crystalline salts. It or its salts—hydrobromate or hydrochlorate—has been given as a sedative to the nervous centres in neuralgic and spasmodic diseases, but it is an energetic poison, and is chiefly used as a collyrium in ophthalmia and locally in pain in the ovaries. Conium also contains another alkaloid, *Methylconine.* The ripe fruit dried, *Conii fructus, Hemlock fruit,* and juice, *Succus conii* (Ph. Br.), are also employed. *Bromhydrate of conium* has greater

stability and uniform composition; $C_8H_{17}NHBr$. **C. hydrochlo'rate** or **hydrochlo'ride**, see *Conine*.

Conjoined'. Joined together, as *C. tendon*, blended tendinous mass from internal oblique and transversalis muscles. **C. manipula'tion**, examination of parturient uterus with both hands; bimanual version.

Conjugal, kon'ju-gal (*con*, with, *jugum*, yoke). Relating to married life; applied to diseases affecting both man and wife, or conveyed from one to the other.

Con'jugate. Joined or acting together. **C. deviation of the eyes**, condition noticed in early stages of hemiplegia, in which the head and eyes are turned to the side of the lesion. **C. diam'eter**, antero-posterior diameter of brim of pelvis, taken in median plane from promontory of sacrum to pubic symphysis. **C., exter'nal**, distance from posterior part of upper portion of sacrum to anterior part of pubic symphysis, including soft parts. **C. fo'ci**, foci so placed that a ray from one will be reflected to the other. **C., obstet'rical**, shortest line from promontory of sacrum to pubic symphysis.

Conjugatio, kon-ju-gah'she-o. Conjugation. Cranial nerve.

Conjugation, kon-ju-ga'shun (*con*, *jugum*, yoke). Assemblage; union; copulation; fusion of spores; anastomosis (erroneously so called) of nerves.

Conjugationis foramina, kon-ju-gah-she-o'nis foram'in-ah. Apertures at the sides of the spine, formed by union of the notches of the vertebræ, giving passage to the nerves of the spinal marrow and to vessels entering or issuing from the vertebral canal.

Conjugium, kon-ju'ge-um Coition; conjugation.

Conjuncti (kon-junk'te) (*conjungo*, to join together) **mor'bi**. Diseases joined together, going on either simultaneously, *morbi connexi*, or succeeding each other, *morbi consequentes*.

Conjunctio, kon-junk'she-o. Articulation. **C. vaso'rum**, anastomosis.

Conjunctiva, kon-junk-te'vah. Conjunctiva membrana. **C. ar'ida**, inflammation of the eye without discharge. **C. bul'bi**, see *C. membrana*. **C., cutic'ular**, inflammation of the eye without discharge. **C. for'nicis**, part of c. uniting ocular and palpebral portions; see *C. membrana*. **C., gran'ular**, trachoma. **C. membra'na**, *Conjunctiva*, mucous membrane uniting the globe of the eye with the eyelids. It covers the anterior surface of the eye, *C. bulbi;* the inner surface of the eyelids, *C. palpebrarum;* and the caruncula lacrymalis. It possesses great general sensibility, communicated to it by the fifth pair. The place where the conjunctiva is reflected upon the globe is called fornix conjunctivæ. **C., oc'ular**, C. bulbi. **C. palpebra'rum**, see *C. membrana*. **C. scle'ræ**, portion of c. covering sclerotic. **C. tar'si**, C. palpebrarum.

Conjuncti'val. Appertaining or relating to the conjunctiva. **C. fold**, fold formed by reflection of conjunctiva from the lids to the eyeball. **C. re'flex**, see *Reflex*.

Conjunc'tive tis'sue. Connective tissue.

Conjunctivitis, kon-junk-tiv-e'tis. Inflammation of the conjunctiva; see *Ophthalmia*. **C. Ægypti'aca**, see *Ophthalmia, purulent*. **C. blennorrha'gica**, see *Ophthalmia*. **C. catarrha'lis**, ophthalmia, catarrhal. **C., croup'ous**, C. with formation of membrane on the lids. **C., diphtherit'ic**, see *Ophthalmia*. **C., exanthem'atous**, see *Ophthalmia*. **C. gonorrho'ica**, see *Ophthalmia*. **C., gran'ular**, see *Ophthalmia*, **C., g., chron'ic**, trachoma. **C., gum'my**, C. with deposit of gummatous tumor in conjunctiva or tissues underlying it. **C., lac'rymal**, C. caused by obstruction of l. gland or its ducts. **C., mem'branous**, C., croupous. **C., mu'co-pur'ulent**, ophthalmia, catarrhal. **C., oc'ular**, see *Conjunctiva*.. **C., pal'pebral**, see *Conjunctiva*. **C. phlyctenulo'sa**, see *Ophthalmia*. **C. pu'ro-muco'sa catarrha'lis**, ophthalmia, catarrhal. **C. pu'ro-muco'sa contagio'sa** or **Ægypti'aca**, see *Ophthalmia*. **C. purulen'ta**, see *Ophthalmia*. **C. pustulo'sa**, see *Ophthalmia*. **C. scrofulo'sa**, see *Ophthalmia*. **C. strumo'sa**, see *Ophthalmia*. **C. trachomato'sa**, trachoma; granular conjunctiva.

Con'nate (*con*, *natus*, born). Congenital; existing at birth; ossifying from the same centre. **C. diseases**, those which an individual is born with. Diseases or conditions dependent upon original conformation may be called congenital, while those supervening during gestation or delivery are termed connate.

Conna'tion (same etymon). Fusion or coalescence of parts, as in fœtal life.

Connect'ing car'tilages. Fibro-cartilages between osseous structures.

Connec'tion. Relation of parts; coition. **C., sex'ual**, coition.

Connec'tive (*con*, *necto*, to bind) **tis'sue**. See *Cellular tissue*. **C. tis'sues**, a group of tissues forming the skeleton with its various connections—bones, cartilages and ligaments—and affording a supporting framework and investment to the various organs composed of nervous, muscular, and glandular tissues. They are classified as follows (Kirkes):

I. The Fibrous Connective Tissues.
  1. *Chief Forms.*
     White fibrous tissue,
     Elastic tissue,
     Areolar tissue.
  2. *Special Varieties.*
     Gelatinous tissue,
     Adenoid or retiform tissue,
     Neuroglia,
     Adipose tissue.

II. Cartilage.

III. Bone.

All the varieties of connective tissue are made up of two elements—cells and intercellular substance.

Connervation, kon-ner-va'shun (*con*, *nervus*, sinew). Union by means of ligament.

Connex'io (*con*, *necto*, to bind) **cartilagin'ea**. Synchondrosis. **C. ligamento'sa**, union by means of ligaments. **C. os'sium carno'sa**, union or connection of bones by muscles.

Connictation, kon-nik-ta'shun (*con*, *nicto*, to wink). Winking.

Conni'vens (drawing together). In circular folds, as valvulæ conniventes of the intestine.

Connutritus, kon-nu-tre'tus (*con*, *nutrio*, to nourish). A disease is so called which has grown up, as it were, with an individual or been connate with him.

Conocephalic, kon-o-sef-al'ik (*konos*, cone, *kephale*, head). Having a cone-shaped skull.

Conoceras, kon-os'er-as (*konos*, conical, *keras*, cornea). Conical cornea.

Conoho'ria cus'pa. Tree of tropical America, bark of which (fever-bark) is febrifuge.

Co'noid (*konos*, cone, *eidos*, shape). Conical; resembling a cone. **C. bod'y**, pineal gland. **C. lig'ament**, ligament passing from the coracoid process to the scapula, and forming part of the coraco-clavicular ligament of some anatomists. **C. sub'stance of kid'ney**, pyramids of Malpighi; see *Kidney*. **C. tu'bercle**, tuberosity of scapula for attachment of conoid ligament.

Conoïdes (kon-o-e'dees) **cor'pus** (conoid body). Pineal gland.

Conopholis (kon-of'il-is) **America'na**. Squaw-root, cancer-root of U. S. and Canada; astringent and tonic.

Conophthalmia, kon-of-thal'me-ah (*konos*, cone, *ophthalmia*). Staphyloma corneæ; conical cornea.

Conquinine, kon-qui'nine. Quinidine.

Consanes'cent (*con*, *sanus*, well). Convalescent, as from sickness or wounds.

Consanguin'eous (*con*, *sanguis*, blood). Related by common origin or descent, as of same family, or *Consanguinity*.

Conscious, kon'shus (*con*, *scio*, to know). Occurring with cerebral appreciation, as conscious movement.

Con'sciousness (*con*, *scio*, to know). Cerebral appreciation. **C., doub'le**, somnambulistic condition in which the individual leads, as it were, two lives, recollecting in each condition what occurred in previous conditions of the same character, but knowing

nothing of the occurrences of the other; see *Duality*. **C., mus'cular,** muscular sense.

Consecutive, kon-sek'u-tiv (*con, sequor,* to follow). Following in order or as a sequel. **C. phenom'ena** or **symp'toms,** such as appear after the cessation of a disease or during its decline, but without having direct connection with it.

Consenescence, con-sen-es'sence (*consenesco,* to grow old). Progress toward old age.

Consensual, kon-sens'u-al (*con, sentio,* to feel). Not regulated by will; sympathetic. See *Instinctive*.

Consensus, kon-sens'us. Consent of parts; sympathy. **C. oculo'rum,** consentaneous action of the two eyes in health or disease.

Consent' of parts. Relation of the different parts of the body with each other; sympathy.

Conser'va. Conserve; pharmaceutical preparation composed of a vegetable substance and a sufficient quantity of sugar beaten into a uniform mass. See *Confection*. **C. absin'thii,** conserve of wormwood, mixture of leaves of absinthium and sugar; tonic, stomachic, and vermifuge. **C. amygdala'rum,** confectio amygdalarum. **C. angel'icæ,** conserve of angelica, made of pulp of root; white sugar, boiled in a decoction of the root, and reduced to the consistence of a solid electuary; tonic, aromatic, and stomachic. **C. de a'pio graveolen'te,** conserve of smallage; prepared like the preceding, with similar properties. **C. a'ri,** conserve of arum, made of fresh root and sugar. Diuretic and stimulant. **C. auran'tii,** confectio aurantiorum. **C. cas'siæ,** confectio cassiæ. **C. cit'ri auran'tii,** confectio aurantiorum. **C. cochleari'æ horten'sis,** conserve of lemon scurvy grass and sugar; stimulant and antiscorbutic. **C. cor'ticis exterio'ris auran'tii Hispalen'sis,** confectio aurantiorum. **C. cor'ticum aurantio'rum,** confectio aurantiorum. **C. cynor'rhodi,** confectio rosæ caninæ. **C. cynos'bati,** confectio rosæ caninæ. **C. flave'dinis cort'icis aurantio'rum Hispalen'sium,** confectio aurantiorum. **C. flo'rum rosa'rum rubra'rum,** confectio rosæ Gallicæ. **C. Gal'licæ,** confectio rosæ Gallicæ. **C. lu'julæ,** C. foliorum lujulæ, conserve of woodsorrel; gratefully acid and refrigerant. **C. men'thæ, C. men'thæ folio'rum, C. men'thæ sati'væ,** conserve of mint; stomachic in nausea and vomiting. **C. pru'ni sylves'tris, C. pru'næ sylves'tris,** conserve of aloes; astringent. **C. ro'sæ,** confectio rosæ Gallicæ. **C. ro'sæ cani'næ,** confectio rosæ caninæ. **C. ro'sæ fruc'tûs,** confectio rosæ caninæ. **C. scil'læ,** conserve of squill; possesses the diuretic and other virtues of the squill.

Conservation, kon-ser-va'shun (*conservo,* to preserve). Preservation of health, or of any object or remedial agent, etc. from decay.

Conservative, kon-serv'a-tive. Tending to saving of injured parts, as C. surgery.

Con'serve. Conserva. See *Confectio*. **C. of al'oes,** conserva pruni sylvestris. **C. of lem'on scur'vy grass,** conserva cochleariæ hortensis. **C. of mint,** conserva menthæ. **C. of or'ange,** confectio aurantiorum. **C. of roses (red),** confectio rosæ. **C. of roses (white),** confectio rosæ caninæ. **C. of small'age,** conserva de apio graveolente. **C. of wood'sorrel,** conserva lujulæ. **C. of worm'wood,** conserva absinthii.

Considentia, con-sid-en'she-ah (*considεo,* to settle). Restoration, cessation, and the subsiding of a humor; contraction of a cavity or canal. See *Apocatastasis* and *Synezisis*. **C. pupil'læ,** closure or contraction of the pupil.

Consistentia, kon-sis-ten'she-ah (*consisto,* to stand still). When joined to the word morbi or ætatis, it expresses the acme of a disease or the age at which the constitution has acquired full strength. **C. humo'ris,** density of a humor.

Consolida (kon-sol'id-ah) **In'dica.** Nicotiana tabacum. **C. ma'jor,** symphytum. **C. me'dia,** ajuga, Chrysanthemum leucanthemum. **C. mi'nor,** prunella. **C. rega'lis,** Delphinium consolida. **C. ru'bra,** tormentil. **C. Saracen'ica,** Solidago virgaurea.

Consolidantia (kon-sol-id-an'she-ah) or **Consolidativa,** kon-sol-id-at-e'vah (*con, solido,* to make solid). Substances producing consolidation in wounds or strengthening cicatrices.

Consolidation, kon-sol-id-a'shun. Change to more solid condition, as in hepatization of the lungs, healing and cicatrization of wounds, and union of fractures.

Consommé, kon-som-ma' (*consummo,* to add together). Soup strongly charged with gelatin, and consequently nutritious, although not proportionably easy of digestion. A clear soup.

Consonance, kon'son-ance (*consono,* to sound together). Agreement of parts. See *Sound*.

Consonant, kon'son-ant (same etymon.). Alphabetic sound only properly expressed when conjoined with a vowel; physiologically, a breath or sound produced in the larynx, which suffers more or less interruption in passing through the vocal tube.

Consortium, kon-sort'e-um (*con, sors,* lot). Sympathy.

Con'sound. Consolida. **C., mid'dle,** Ajuga reptans.

Conspersio, kon-spur'se-o (*con, spargo,* to sprinkle). Compound medicine in form of powder, sprinkled on ulcers and to absorb perspiration.

Conspicilla, kon-spis-il'lah (*con, specio,* to look at). Spectacles.

Conspiratio, kon-spir-ah'she-o (*con, spiro,* to breathe). Sympathy.

Constancy, kon'stan-se. Not changing, as bacteria under cultivation.

Con'stant. Term applied to current of electricity which is uninterrupted or not of greatly varying intensity. The currents do not weaken rapidly, and the metals can stand all the time in the solution. The term constant is also given to the galvanic current distinguished from the faradic current.

Consternation, kon-ster-na'shun (*consterno,* to confuse). Stupor; night-terrors of children.

Constipated, kon'stip-a-ted (*constipo,* to cram close). Costive; affected with constipation.

Con'stipating. *Binding*. Rendering the bowels less open; having the power to induce constipation.

Constipation, kon-stip-a'shun. Costiveness, fecal retention, alvine obstruction, stopping or stoppage of the bowels; state of the bowels in which the evacuations do not take place as frequently as usual, or are inordinately hard and expelled with difficulty, owing to diminished action of the muscular coat of the intestines or to diminished secretion from the mucous membrane, or to both. The exciting and predisponent causes must be inquired into and obviated to render the cure permanent.

Constituent, kon-stit'u-ent. Vehicle. See *Prescription*.

Constitutio, kon-ste-tu'she-o (*constituo,* to set up). Constitution, habit of body. **C. a'ëris,** constitution of the atmosphere. **C. epidem'ica,** see *Constitution, epidemic*. **C. nervo'sa,** nervous diathesis.

Constitution, kon-ste-tu'shun. Nature or temperament or individual characteristics; collection of several parts, forming a whole structure. State of all the organs of the body considered as to arrangement, order, or activity. A good constitution is one in which every organ is well developed and endowed with due energy, so that all perform their functions with equal facility. **C., apoplec'tic,** condition supposed to predispose to apoplexy, as large head, short neck, red face, etc. **C., arte'rial,** form of plethora in which the blood is rich in fibrin and red corpuscles. **C. of at'mosphere,** condition of the atmosphere, as regards dryness and humidity, temperature, etc., considered in its influence on the animal economy. **C., epidem'ic,** aggregate of meteorological conditions, during which diseases prevail epidemically. **C., scrof'ulous,** condition in which the body is affected with scrofula.

Constitutional, kon-ste-tu'shun-al. Belonging to the constitution of an individual, to his manner of being. Sporadic disease is said to be constitutional when arising from some tendency to morbid development impressed on the cells of nutrition, but independently of communication from without. See

Cachectic. Epithet given also to diseases produced by the constitution of the atmosphere; congenital.

Constriction, kon-strik'shun (*constringo,* to bind). Stricture, narrowing or drawing together; systole.

Constrictive, kon-strik'tive. Styptic.

Constrictor, kon-stric'tor. Compressor. Binding in a circular direction; some muscles are so called, as the sphincters. Instrument for pressure by constriction on an artery. **C. al'æ na'si,** compressor naris. **C. a'ni,** sphincter ani externus. **C. cun'ni,** sphincter vaginæ; see *Constrictores cunni.* **C. fau'cium,** see *Constrictores pharyngis.* **C. isth'mi fau'cium,** palato-glossus and palato-pharyngeus muscles, glosso-staphylinus. **C. isth'mi ure'thræ,** deep fibres of ischio-urethralis muscle. **C. labio'rum,** orbicularis oris. **C. na'si,** compressor naris. **C. of Nuck,** compressor of Nuck. **C. œsoph'agi,** constrictor of the œsophagus; fasciculus of fleshy circular fibres at the upper part of the œsophagus. **C. o'ris,** orbicularis oris. **C. palpebra'rum,** orbicularis palpebrarum. **C. pharyn'gis,** see *Constrictores p.* **C. radi'cis pe'nis,** bulbo-cavernosus. **C. ure'thræ,** ischio-urethralis muscle. **C. vagi'næ,** C. cunni. **C. v. profun'dus,** fibres of ischio-urethralis surrounding vagina. **C. v. urina'riæ,** detrusor urinæ. **C. vestib'uli,** C. vaginæ profundus. **C. v. laryn'gis,** aryteno-epiglottic muscle. **C. vul'væ,** C. cunni.

Constrictores (kon-strik-to'rees) **ala'rum na'si.** Depressor alæ nasi. **C. cun'ni** or **vagi'næ** or **vul'væ,** small muscles which originate beneath the clitoris, descend along the sides of the vagina, and terminate by becoming confounded with the transversus perinæi and external sphincter ani muscles. They contract the entrance of the vagina. **C. laryn'gis,** crico-arytenoïdeus lateralis and thyro-arytenoïdeus muscle combined. **C. na'si,** compressor naris. **C. o'ris,** orbicularis oris. **C. palpebra'rum,** orbicularis palpebrarum. **C. pharyn'gis,** constrictors of pharynx; muscular expansions assisting in forming the parietes of the pharynx: 1. Constrictor pharyngis or faucium inferior, cricopharyngeus, and thyropharyngeus, broad, very thin, quadrilateral, seated superficially, extending from the thyroid and cricoid cartilages as far as the middle of the pharynx, and uniting, on the median line, with that of the opposite side. 2. Constrictor pharyngis medius, hyopharyngeus and chondropharyngeus, syndesmopharyngeus, occupying the middle part of the pharynx; triangular, and attached anteriorly to the great and little cornu of the os hyoides, to the stylohyoid ligament, and terminating, posteriorly, by joining its fellow of the opposite side. 3. Constrictor pharyngis superior, cephalopharyngeus, gnathopharyngeus, glossopharyngeus, mylopharyngeus, pterygopharyngeus, quadrilateral, and extending from the internal ala of the pterygoid process, from the intermaxillary ligament, from the internal oblique line of the jaw, and from the base of the tongue, to the posterior part of the pharynx. The constrictors contract the pharynx, and can likewise approximate the ends to each other. **C. vagi'næ,** C. cunni. **C. vul'væ,** C. cunni.

Constringentia, kon-strin-gen'she-ah. Astringents, styptics.

Constructive, kon-struk'tive (*construo,* to build). See *Plastic element.*

Constupration, kon-stu-pra'shun (*constupro,* to commit rape). Rape.

Consuetudo, kon-swa-tu'do (*con, suesco,* to become accustomed). Habit. **C. men'strua,** menses.

Consultant, kon-sult'ant. Consulting physician or surgeon.

Consultation, kon-sul-ta'shun (*consulo,* to hold council). Meeting of two or more practitioners to deliberate on any case of disease; in France the written result of such deliberations, as well as the opinion of a physician, given to a patient consulting him.

Consult'ing physic'ian or **sur'geon.** Consultant; one who consults with the attending practitioner regarding any case of disease.

Consummatum, kon-sum-mat'um. Anything thoroughly accomplished; consommé.

Consummatus, kon-sum-mat'us (*consummo,* to accomplish). Confirmed, established, as phthisis consummata, confirmed consumption; incurable.

Consumption, kon-sum'shun (*consumo,* to waste away). Wasting, wearing; progressive emaciation or wasting away; condition preceding death in some chronic diseases, particularly in phthisis pulmonalis; on this account phthisis has received the name Consumption; see *Phthisis.* **C., apostem'atous,** pulmonary phthisis with purulent expectoration. **C., black,** anthracosis. **C. of bow'els,** tuberculosis of intestines; enterophthisis; tabes mesenterica. **C., bron'chial,** bronchial phthisis. **C., catar'rhal,** catarrhal phthisis. **C., dyspep'tic,** dyspeptic phthisis. **C., feb'rile,** see *Phthisis pulmonalis.* **C., gal'loping,** phthisis pulmonalis rapidly running its course to a fatal termination. **C., larynge'al,** laryngeal phthisis. **C. of lungs,** phthisis pulmonalis. **C., mi'ner's,** anthracosis. **C., ner'vous,** condition in which all symptoms of phthisis are present except those of a pulmonary character. **C., pot'ter's,** potter's bronchitis; pathological condition similar to that observed in grinder's bronchitis; see *Asthma, grinder's.* Primarily, it is an acute or subacute bronchitis; secondarily, that of chronic bronchitis with emphysema. **C., pul'monary,** phthisis pulmonalis. **C., se'nile,** see *Phthisis.* **C. of spi'nal cord,** progressive locomotor ataxia; tabes dorsalis. **C., tuber'cular,** phthisis pulmonalis.

Consumptiva, kon-sump-te'vah. Caustics used for the destruction of fungous growths, as burnt caustic or lunar caustic.

Consumptive, kon-sump'tiv. Affected with phthisis; one so affected. **C. fe'ver,** hectic fever. **C.'s weed,** Eriodictyon Californicum.

Contabes'cence (*contabesco,* to grow lean). Consumption; marasmus; atrophy.

Con'tact (*con, tango,* to touch). State of two bodies touching each other. In the theory of contagious diseases we distinguish immediate or direct contact, as when we touch a patient laboring under such disease; mediate or indirect contact, when we touch objects that have touched or emanated from him. See *Contagion.* **C. ac'tion,** catalysis. **C. break'er,** rheotome.

Contagion, kon-ta'jun. Transmission of a disease from one person to another by direct or indirect contact. See *Contact.* Also at one time applied to action of miasmata arising from dead animal or vegetable matter, bogs, fens, etc. Contagious diseases are produced either by a virus, *contagium,* capable of causing them by inoculation, as in small-pox, cow-pox, hydrophobia, syphilis, etc., or by miasmata proceeding from a sick individual, as in plague, typhus gravior, measles, etc. Contagion and infection are generally esteemed synonymous. Frequently, however, the former is applied to diseases not produced by contact, as measles, etc., while infection is used for those that require positive contact, as itch, syphilis, etc. Diseases which are only produced by contagion are said to have their origin in specific contagion, as small-pox, cow-pox, syphilis, etc. Those produced by contagion, and yet supposed to be sometimes owing to other causes, are said to arise from common contagion, as typhus, cynanche parotidæa, etc.

Contagionist, kon-ta'jun-ist. One who believes in or advocates the contagious character of any particular disease.

Contagios'ity. Property of being contagious.

Contagious, kon-ta'jus. Communicable; capable of being transmitted by mediate or immediate contact, as disease, fever, etc. See *Contagion.*

Conta'giousness. Property of being contagious.

Contagium, kon-ta'jum. Contagion; miasm; contagious matter; disease germ; pathogenic bacterium. **C. halituo'sum,** contagion by exhalation, as by the breath. **C. vi'vum,** contagion by a living organism.

Contemplabiles (kon-tem-plab'il-ees) **di'es.** Days to be carefully watched; critical days.

Contempla'tion. Catalepsy.

Contention, kon-ten'shun (*con, tendo,* to stretch). Consultation; tension; retention.

Contexture, kon-text'ure (*con, texo,* to cover, to weave). Arrangement of parts; texture. See *Tissue* and *Texture.*

Context'us. Tissue. **C. cellulo'sus,** cellular tissue.

Contiguity, diarthrosis of, kon-tig-u'it-e, de-arthro'sis (*con, tango,* to touch). See *Continuity, lesion of.* **C., sym'pathy of,** see *Sympathy.*

Continence, kon'tin-ence (*contineo,* to restrain). Self-restraint; abstinence from, or moderation in, indulgence of the sexual appetite.

Continent, kon'tin-ent. Restrained; continued. **C. cause,** proximate cause. **C. fe'ver,** continued fever; one preserving during its whole course the same degree of intensity, without remission or sensible exacerbation.

Continued, kon-tin'ude. Uninterrupted in its course; free from intermissions or remissions. **C. disease,** disease continuing uninterruptedly. **C. fe'ver,** one which preserves, during its whole course, the same degree of intensity, without remission or sensible exacerbation. Older writers make distinction between continual fever (febris continua) and synochus (febris continens); the latter fever being of one paroxysm from beginning to end, the former being allied to intermittents.

Continuitas, kon-tin-u'it-as. Continuity. **C. nervo'rum optico'rum,** optic chiasm.

Continuity, kon-tin-u'it-e. Adhesion of two things to each other, so that they cannot be separated without fracture or laceration. **C., diarthro'ses of,** movable joints in which the bones are continuous, but do not touch immediately, having between them a ligamentous substance permitting motion; the vertebral articulations are examples. *Diarthroses of contiguity* are movable articulations in which the bones are not continuous, but touch by surfaces covered with a cartilaginous layer moistened by synovia. **C., le'sion of,** see *Continuity, solution of.* **C., solu'tion of,** division of parts previously continuous, as wounds and fractures. *Contiguity* is the condition of two things which are near each other or touch without uniting, as between the head of the humerus and the glenoid cavity of the scapula. *Lesion of continuity* is a destruction of continuity from disease. **C., sym'pathy of,** see *Sympathy.*

Contin'uous cur'rent. Direct current from a galvanic battery. **C. trem'or,** form of clonic spasm, continuous during waking hours; may be diminished or arrested for a short time by voluntary effort.

Contorsio or **Contortio,** kon-tor'she-o. Contortion. **C. colum'næ vertebra'lis,** deviation of the spinal column.

Contortion, kon-tor'shun (*contorqueo,* to twist about). Violent movement of a part, accompanied with torsion, twist, cast, or writhing, as contortion of the face, wryneck, curvature of spine, sprain, etc.

Con'tra (L.). In composition, counter, against.

Contra-apertura, kon'trah-ap-er-tu'rah (*contra, aperio,* to open). *Counter-opening.* Incision made in the most depending part of a wound or abscess when the first opening is not situate in a manner favorable for the discharge of the pus.

Contractile, kon-trak'teel (*contraho,* to draw together). Capable of contracting, as fibre of muscles.

Contractility, kon-trak-til'it-e. Vital property which gives to certain parts the power of contracting. Muscles of locomotion are endowed with a power of voluntary contractility dependent immediately on the action of the brain. Muscles of the viscera of digestion and other internal organs enjoy involuntary contractility. Contractility and irritability are frequently used synonymously to signify the property of contracting on the application of appropriate stimulus. **C., elec'trical,** muscular contractility under electric stimulation.

Contractio, kon-trak'she-o. Contraction. **C. cor'dis,** systole.

Contraction, kon-trak'shun. Action of contracting. C. of a muscle is the phenomenon it exhibits during the time it is in action. **C., ano'dal-clo'sure,** see *Anodal.* **C., ano'dal-o'pening,** C., anodal. **C., catho'dal-clo'sure,** see *Cathodal.* **C., catho'dal-o'pening,** see *Cathodal.* **C., cicatric'ial,** contraction of a scar. **C., Dupuytren's,** contraction of palmar fascia, causing permanent flexion of the fingers. **C. of the extremities,** tetanilla. **C., fibril'lar** or **fi'brillary,** contraction of different fibrillæ of muscles after division of main trunks of their motor nerves. **C., front-tap,** variety of ankle-clonus excited when muscles of the front of the leg are tapped. **C., hour-glass,** irregular contraction of the uterus, which assumes such shape. **C., idiopath'ic** or **intermit'tent rheumat'ic,** tetanilla. **C., myotat'ic,** tendon reflex. **C., paradox'ical,** tetanic contraction of tibialis anticus muscle, noticed in early stage of locomotor ataxia, in multiple sclerosis, paralysis agitans, etc. **C., pel'vic,** narrowness of diameters of pelvis. **C., peristal'tic,** see *Peristalsis.* **C., per'manent,** contracture. **C. ring of Bandl,** firm ring made by different contractions of segments of the uterus in parturition, a precursor of rupture of that organ. **C., tetan'ic,** prolonged contraction from tetanus. **C., vermic'ular,** peristalsis.

Contractor (kon-trak'tor) **chord'æ.** Muscular fibres in chordæ tendineæ of the heart. **C. u'teri,** abortive.

Contrac'ture, kon-trak'ture. Muscular stiff-joint. Permanent rigidity and progressive atrophy of the flexor muscles, preventing the motion of extension beyond a certain limit. The affected muscles form hard cords beneath the skin; on dissection they are found converted into tendinous fibres, the fleshy fibres having almost disappeared when the disease has been of any duration. Warm bath, vapor bath, or thermal waters, oleaginous embrocations, mechanical extension of the limbs, etc. are the chief means of treatment. **C., essen'tial,** tetanus. **C., myopath'ic,** C. from morbid alterations in muscular structure. **C., ner'vous, neuropath'ic,** or **pri'mary,** C. arising from disorder of the nervous system. **C., paralyt'ic,** C. of normal muscular structure, in which the extremities of the muscles are permanently approximated to a condition due to paralysis of their antagonists. **C., protopath'ic,** C., myopathic. **C., sec'ondary,** C., paralytic.

Contra-expec'torants. Medicines that diminish the amount of expectoration.

Contra-extension, kon'trah-eks-ten'shun. Counter-extension.

Contrafissura, kon-trah-fis-su'rah (*contra, findo,* to cleave). *Counter-stroke.* Fracture, contusion, or injury produced by a blow in a part distant from that struck, particularly of the cranium.

Contrahentia, kon-trah-hen'she-ah (*con, traho,* to draw). Astringents, styptics.

Contraincisio, kon-trah-in-siz'e-o. Counter-opening.

Contraindicated, kon-tra-in'dik-a-ted. Prohibited by the pathological condition, or not in accordance with the indications for treatment or diet of the patient.

Contraindication, kon-tra-in-dik-a'shun. Counter-indication.

Contrairritation, kon-tra-ir-ri-ta'shun. Counter-irritation.

Contralunaris, kon-trah-lu-nar'is (*contra, luna,* moon). Epithet for a woman who conceives during the menstrual discharge.

Contrastimulant, kon-tra-stim'u-lant. Medicine that diminishes vital action; nauseant, for example. Controstimulant.

Contrastimula'tion. Action or employment of a contrastimulant.

Contrastim'ulism. See *Controstimulus.*

Contrastim'ulist. A believer in controstimulism.

Contrastimulus, kon-tra-stim'u-lus. Diminution of vital power. Controstimulus.

Contrayerva, kon-trah-yur'vah (*contra,* (S.) *yerba,* herb). Dorstenia contrayerva. **C. balls,** pulvis contrayervæ compositus. **C., Lis'bon,** Dorstenia contrayerva. **C., Mex'ican,** Psoralea pentaphylla. **C. no'va,** Psoralea pentaphylla. **C. Virginia'na,** Aristolochia serpentaria.

Contrecoup (Fr.). Contrafissura; counter-stroke.

Contrectation, kon-trek-ta'shun. Manipulation; palpation.

Contrition, kon-trish'un (*contero,* to bruise or make small). Comminution, trituration.

Contritura'tion. Trituration.

Controstimulant, kon-tro-stim'u-lant. Hyposthenic. Substance possessing particular debilitating property, acting upon the excitability in a manner opposite to stimulus. Therapeutical agent endowed with the property of diminishing excitement by specific action.

Controstim'ulus, Contrastimulus (kon-tra-stim'u-lus) or **Contrastimulism** (kon-tra-stim'u-lism), **doc'trine of.** Name given by Rasori to medical doctrine founded on the controstimulant or Rasorian property attributed to certain medicines, by virtue of which living beings are endowed with aptitude for feeling the action of external agents or exciting influences, and of reacting on those influences. When this excitability is too great, there is excess of stimulus or hypersthenia; when too little, there is deficiency or hyposthenia. Diseases, general and local, were divided into three great classes—hypersthenic, hyposthenic, and irritative. Controstimulant physicians admit only two classes of medicines—stimulants and controstimulants.

Contund'ing or **Contu'sing** (*contundo,* to bruise). Causing contusions, as vulnerating projectiles, which bruise or lacerate parts without cutting them.

Conturbation, kon-tur-ba'shun (*conturbo,* to disturb). Night-terrors of children.

Con'tus (*kontos,* a pole). Penis.

Contused, kon-tuzed'. Affected with contusion or bruise, as contused wound.

Contusio, kon-tu'ze-o. Contusion. **C. cer'ebri,** contusion of brain from external violence. **C. concussi'va,** simple contusion without extravasation. **C. sanguin'ea,** contusion with effusion of blood. **C. sero'sa,** contusion with effusion of serum.

Contusion, kon-tu'zhun. Bruise. Injury or lesion arising from the impulse of a body with a blunt surface, and presenting no loss of substance and no apparent wound. If the skin be divided, the injury takes the name of contused wound. Deep contusion of the soft parts has been called sarcothlasis and sarcothlasma. **C., cer'ebral,** bruise of the brain from external violence. **C., wind,** see *Wind of a ball.*

Contusor, kon-tu'sor. Instrument for crushing the head of the fœtus.

Contu'sum. Contused wound.

Contusu'ra. Contusion.

Co'nus. Cone; posterior staphyloma; modiolus of the ear; pineal gland. **C. arterio'sus** (arterial cone), infundibulum of the heart; portion of the right ventricle from which the pulmonary artery proceeds, forming a prominence on the right side of the anterior furrow of the heart, and prolonged toward the left, becoming narrower so as to form a funnel-shaped projection (conus arteriosus) extending a little beyond the base of the ventricles. **C. coch'leæ,** modiolus. **C. cor'dis,** ventricle of the heart; c. arteriosus. **C. cor'poris stria'ti,** anterior rounded extremity of corpus striatum. **C. Malpig'hii,** pyramids of Malpighi. **C. medulla'ris** or **termina'lis,** conical part of spinal cord below its enlargement in lumbar region. **C. vasculo'sus,** see *Coni vasculosi.*

Convalescence, kon-val-es'sence (*convalesco,* to grow well). Recovery of health after disease; time which elapses between the termination of a disease and complete restoration.

Convalescent, kon-val-es'cent. In a state of convalescence.

Convallamare'tin. Product of action of sulphuric acid on convallamarin.

Convallamarin, kon-val-lam-ah'rin. $C_{23}H_{44}O_{12}$. Bitter glucoside from Convallaria maialis; emetic; strengthens action of the heart and augments blood pressure.

Convallare'tin or **Convallarhetin,** kon-val-lar-het'in. $C_{28}H_{52}O_6$. Product of decomposition of convallarin by dilute acids; emetic.

Convallaria angulosa, kon-val-lah're-ah an-gu-lo'sah (*con, vallis,* valley). C. polygonatum. **C. canalicula'ta,** great Solomon's seal, and **C. pubes'cens,** smaller Solomon's seal; indigenous; a decoction of the roots is cathartic, diuretic, and diaphoretic. **C. maia'lis** or **map'pi,** lily of the valley; May lily; recent flowers are aromatic, cephalic, errhine, cathartic, and cardiac stimulant. There have been obtained from it convallarin and convallaramin; former purgative, latter emetic and sedative, resembling digitalis, aconite, and veratria. **C. multiflo'ra,** growing in this country and Europe, has properties analogous to C. maialis. **C. polygo'natum,** systematic name of Solomon's seal, Convallaria angulosa; root is astringent and tonic; also a reputed cosmetic. **C. pubes'cens,** see *Convallaria canaliculata.*

Convallarine, kon-val'lar-een. $C_{32}H_{62}O_{41}$. Principle extracted by water from Convallaria maialis.

Conven'tio or **Conven'tus** (*con, venio*). Coition.

Convergence, kon-vur'jence. Power of converging or bringing together, as the eyes.

Convergent (kon-vur'jent) **fi'bres.** See *Fibres, convergent.* **C. strabis'mus,** see *Strabismus.*

Conversion, kon-vur'shun (*con, verto,* to turn). Change from one state into another. **C. of diseases,** change or transformation of one disease into another.

Convoluted (kon'vo-lu-ted) **tu'bules.** Twisted or convoluted portions of the uriniferous tubules.

Convolution, kon-vo-lu'shun (*convolvo,* to entwine). Rolling of anything upon itself. The convolutions or *gyri* of the brain are numerous smooth and tortuous eminences which characterize the surface of the hemispheres of the brain, with intervening fissures or sulci. (A full list and account of all the convolutions or gyri will be found under *Gyri.*)

Convolvulin, kon-volv'u-lin. See *Convolvulus jalapa.*

Colvolvulus, kon-volv'u-lus (*convolvo,* to entwine). Ileus, intussusception; volvulus. **C. Africa'nus,** Ipomœa cathartica. **C. America'nus,** Jalapa. **C. arven'sis,** small bind-weed; purgative. **C. bata'tas,** sweet potato, Spanish potato, Carolina potato, ord. Convolvulaceæ; only esculent root of the genus Convolvulus: much eaten in the United States. **C. Cantab'rica,** cantabrica, lavender-leaved bindweed; anthelmintic and cathartic. **C. dis'color,** species of S. America; leaves are used in gonorrhœa. **C. Formo'sus,** root is purgative; leaves are used for poultices in skin diseases. **C. In'dicus,** C. batatas. **C. jala'pa,** name of the plant once thought to be the jalap plant; now referred to Exogonium purga (Jalapa, Ph. U. S. and Br.), Ipomœa jalapa, I. purga, I. Schideana, or I. macrorhiza; jalap root is procured from Mexico. Its odor is nauseous; taste sweetish and slightly pungent; its operation is cathartic, the resinous part griping violently; dose, gr. x to xxx; a drop or two of any essential oil may prevent it from griping. Two distinct substances have been separated from jalap—jalapin or cathartin, and convolvulin, a purgative glucoside, $C_{31}H_{50}O_{16}$. Convolvulin is a glucoside, $C_{31}H_{50}O_{16}$, a powerful purgative; dose, ½ to 3 grains. An inferior kind, light, fusiform, or male jalap, is yielded by Ipomœa or Convolvulus Orizabensis, I. batatoïdes or Mestitlanica, growing near Orizaba and Mestitlan, in Mexico. **C. ma'jor al'bus,** Convolvulus sepium. **C. marit'imus,** Convolvulus soldanella. **C. Mecho'acan,** Mexican convolvulus, root of which is aperient, used instead of jalap in dropsy. **C. megalorhi'zus,** C. panduratus. **C. nil,** blue morning-glory; Indian plant, naturalized in Western States; seeds and root are cathartic. **C. opercula'tus,** see *Batata de purga.* **C. Orizaben'sis,** see *Convolvulus jalapa.* **C. pandura'tus,** *Fiddle-leaved bindweed, Hog potato, Virginian bindweed, Wild potato, Mechameck, M. bindweed, Wild jalap, Man in the ground, Man of the earth, Wild rhubarb, Wild potato-vine, Kassauder, Kassader, Kussauder.* In some parts of the United States the root is used in cases of gravel, in powder or decoction. **C. pelta'tus,** species used in inflammation of the lungs and in bronchial affections. **C. peren'nis,** Humulus lupulus. **C. pes ca'præ,** bargada; plant used in India as cataplasm in arthritis. **C. re'pens,** C. sepium. **C. scammo'nea**

or **scammo'nia**, systematic name of the scammony plant, Syrian and Mexican plant, concrete gummi-resinous juice of which (scammony, mahmoudy) is in blackish-gray fragments. It is a drastic, hydragogue cathartic; dose, gr. iij–xv. **C., sea**, Convolvulus soldanella. **C. se'pium**, great or hedge bindweed; concrete juice of this plant is German scammony; violently purgative, and given in dropsical affections. **C. soldanel'la**, systematic name of sea convolvulus, sea bindweed, soldanella; leaves of this plant are drastic cathartic. **C. Syri'acus**, Convolvulus scammonea. **C. tugurio'rum**, C. sepium. **C. turpe'thum**, systematic name of turbith plant; cortical part of root of this species, from East Indies, is cathartic.

Convul'sant. A medicine that produces tetanic effects or convulsions.

Convulsed, kon-vulsd' (*convello*, to pull together). Affected with convulsions.

Convulsibil'ity. Tendency to convulsions; see *Subsultus tendinum*.

Convulsio, kon-vul'se-o. Convulsion. **C. cani'na**, risus sardonicus; see *Canine laugh*. **C. cerea'lis**, singular disorder of the convulsive kind, attended with a peculiar tingling and formication in the arms and legs, said to have been endemic in Germany, and to arise often from the use of spoiled corn; see *Raphania*. **C. flatulen'ta**, muscular spasm from flatulence. **C. habitua'lis**, chorea. **C. In'dica**, tetanus. **C. rapha'nia**, raphania. **C. Solonien'sis**, C. cerealis, ergotism. **C. ton'ica**, tonic spasm. **C. u'teri**, abortion.

Convulsion, kon-vul'shun. See *Convulsions*. Clonic spasm. Violent perversion of the animal movements. Alternate contraction, violent and involuntary, of muscles which habitually contract only under the influence of the will. Such contraction, when slight, is called tremor; when strong and permanent, tetanus, trismus, etc. Spasms, cramp, risus sardonicus, and St. Vitus's dance are forms of convulsions. Contracture or tonic spasms. **C., catalep'tic**, irregular muscular action seen in catalepsy. **C. cen'tre**, see *Centre*. **C., chore'ic**, spasms characteristic of St. Vitus's dance. **C., clon'ic**, C. characterized by alternate contraction and relaxation of muscles involved. **C., epilep'tic**, C. associated with epileptic paroxysm. **C., epilep'tiform**, C. which resembles epilepsy. **C., essen'tial**, C., spontaneous. **C., hyster'ical**, a convulsive hysterical attack. **C., hys'tero-epilep'tic**, hysterical convulsion, afterward becoming epileptoid; or epileptic convulsion in an hysterical person. **C., inter'nal** or **in'ward**, slight convulsion without unconsciousness, of brief duration; asthma thymicum. **C., lo'cal**, spasm. **C., mim'ic** or **mimet'ic**, convulsive tic. **C., puer'peral**, C. occurring during pregnancy or parturition. **C., salaam'**, C. in children in which there is peculiar bobbing of the head forward, and sometimes spasm of the face and eyelids, squinting, or cramps of the limbs. **C., stat'ic**, convulsive condition in which movements of position or locomotion are not controllable. **C., suf'focative**, laryngismus stridulus. **C., tetan'ic**, spasms of tetanus. **C., ton'ic**, C. apparently without relaxation, as in tetanus. **C., uræ'mic**, C. from uræmia.

Convulsionnaires, kon-vul-se-on-naire' (F.). Name given, during the last century, to individuals who had, or affected to have, convulsions produced by religious impulses; epidemic chorea. Some were called *sauteuses* or jumpers, others, from barking like a dog, *aboyeuses*, and others, from mewing like a cat, *miaulantes*. A form of convulsion induced by religious frenzy has been vulgarly called *the jerks*. Gymnastic movements of the shakers may be placed in the same category.

Convul'sions. See *Convulsion*. Eclampsia. **C., puer'peral**, eclampsia of parturient women; see *Mania, dancing*, and *Convulsion*.

Convulsive, kon-vul'siv. That which is accompanied by, or is analogous to, convulsions, as C. cough, C. disease, etc. A spastic or tetanic agent, such as strychnia. **C. tic**, spasm in the area of distribution of the facial nerves. **C. trem'or**, severe paroxysmal affection attended with marked muscular tremor.

Cony'drin. Conhydrin.

Conyza, ko-ne'zah. Inula dysenterica. **C. bifolia'ta**, Sericocarpus tortifolius. **C. co'ma au'rea**, Solidago virgaurea. **C. ma'jor**, C. squarrosa. **C. me'dia**, Inula dysenterica. **C. pycnostach'ya**, Pterocaulon pycnostachyum. **C. squarro'sa**, *Great fleabane* or *Spikenard*, European plant, whose strong and disagreeable odor was considered destructive to flies, fleas, etc. Infusion of the plant in wine was regarded as emmenagogue and anti-icteric; in vinegar antiepileptic.

Cool'wood. Pilea pumila.

Cool'wort. Tiarella cordifolia.

Coöperculum oculi, ko-o-pur'ku-lum ok'u-le (*co, operculum*, cover). Eyelid.

Coop'er's fascia, fas'she-a. Scarpa's fascia.

Coöpertorium, ko-o-pur-to're-um (*co, opertorium*, cover). Thyroid cartilage.

Coördina'tion. Consentaneous action, as of muscles; adjustment or regulation of separate actions of muscles.

Coör'dinator, oc'ulo-nu'chal. Posterior longitudinal fasciculus beneath the floor of the fourth ventricle.

Coöstrum, ko-os'trum. Middle part of the diaphragm.

Copahin, ko'pah-hin. Resinous extract from copaiva.

Copaiba, ko-pa'bah. Resinous juice or oleoresin of Copaifera multijuga, officinalis, or Jacquini, Copaiva officinalis, and other species of Copaifera. Copaiva (Ph. U. S. and Br.) is the oleoresin of Copaifera Langsdorffii and of several other species of Copaifera, ord. Leguminosæ. Balsam of copaiba or copaiva (vulgarly pronounced *copee'vy*) has a pungent, bitter taste and syrupy consistence; yellowish and transparent; it is soluble in ether, alcohol, and expressed oils. It is stimulant and diuretic; in large doses purgative. It acts on the lining membrane of the urethra and on mucous membranes in general; is given in gonorrhœa, gleet, leucorrhœa, bronchitis, etc., in dose of gtt. x to ʒj, twice or thrice a day. Brazil is the chief source of supply. **C., West In'dian**, Copaifera officinalis.

Copaifera Jacquini, ko-pay'fer-ah jak-ke'ne (*copaiba, fero*, to bear). See *Copaiba*. **C. multiju'ga**, see *Copaiba*. **C. officina'lis**, see *Copaiba*.

Copa'iva officina'lis. See *Copaiba*.

Copal'. Gum copal. Resinous substance from E. Indies, S. America, and western coast of Africa, flowing spontaneously from Elæocarpus copalliferus and different species of Hymenæa. Stimulant like all resins, but is now only employed in varnishes.

Copalche (ko-pal'che) or **Copal'chi bark.** Bark of Croton pseudo-china and Strychnos pseudo-china. A bitter principle found in it is called *copalchin*.

Co'pallin. Resin of liquidambar styraciflua.

Cophoma (ko-fo'mah), **Cophosis** (ko-fo'sis), or **Cophotes**, ko-fo'tees (*kophos*, deaf). Diminution or loss of hearing; paracousia or paracoe. In dysecœa, however, the sonorous rays cannot reach the labyrinth, while paracousia is a confused state of hearing. Cophosis is usually synonymous with deafness, paracusis, surditas.

Cophonia, ko-fo'ne-ah. Auscultatory percussion; see *Acouophonia*.

Copiopia (kop-e-o'pe-ah) or **Copiopsia**, kop-e-ops'e-ah (*kopos*, fatigue, *opsis*, sight). Fatigue or weakness of vision; asthenopia.

Copodyscine'sia (*kopos*, fatigue, *duskinesia*, difficulty of movement). Irregular movement from repeating similar actions.

Co'pos. Lassitude; fatigue. State of body in which animal functions are exerted with less promptitude and vigor than common. Cramp in the legs.

Cop'per. Cuprum. **C. ac'etate**, cupri acetas. **C. ace'to-ar'senite**, Paris green; a pigment, and destructive to insects, potato-bugs, etc. **C., alu'minated**, cuprum aluminatum. **C., ammo'niated**, cuprum ammoniatum. **C. ammo'nio-sul'phate**, cuprum ammoniatum. **C. ar'senite**, see *Arsenite*. **C. o'leate**, see *Oleates*. **C. ox'ide**, cupri oxidum. **C. potas'sio-**

tar'trate, see *Fehling's solution.* **C. rose,** Papaver rhœas. **C. subac'etate,** cupri subacetas. **C. sul'phate,** cupri sulphas. **C. sul'phate, ammoni'acal,** cuprum ammoniatum.

Cop'peras. Ferri sulphas. **C., blue,** cupri sulphas. **C., white,** zinci sulphas.

Cop'pernose. Gutta rosea.

Copracrasia (kop-rah-krah'se-ah) or **Copracratia,** kop-rah-krah'te-ah (*copro, a, kratos,* strength). Inability to retain feces; involuntary evacuation of the bowels.

Copræ'mia (*copro, haima,* blood). Condition arising from retention of feces and absorption of their materials into the blood.

Copragogue, kop'ra-gog (*copro, ago,* to bring away). Cathartic.

Copranon, kop'ran-on. Excrement.

Coprecriticus, kop-re-krit'ik-us. Mildly cathartic; eccoprotic.

Copremesia (kop-rem-a'ze-ah), **Coprem'esis,** or **Copriemesis,** kop-re-em'e-sis (*copro, emeo,* to vomit). Vomiting of feces.

Coprem'etus, Copriemetus (kop-re-em'et-us), or **Coproem'etus.** One who vomits feces.

Coprepis'chesis (*copro, epischesis,* obstruction). Obstruction of the bowels from hardened or retained feces.

Cop'ro (*kopros,* excrement). In composition, excrement.

Coprocritic or **Coprecritic,** kop-re-krit'ik (*copro, krino,* to separate). Mildly cathartic; eccoprotic.

Coprodæum, kop-ro-de'um. Inner cloacal chamber of the embryo.

Coprodochæ'um. Place of reception of feces.

Coproëm'esis. Vomiting of feces.

Coproemetus, kop-ro-em'et-us. One who vomits feces.

Coproepischesis, kop-ro-ep-is'kes-is (*copro, epischesis,* retention). Constipation. Obstruction of the bowels from hardened or retained feces.

Coprolalia, kop-ro-lal'e-ah (*copro, laleo,* to talk). Indecency of language as symptomatic of disease of the brain.

Coprolith, kop'ro-lith (*copro, lithos,* stone). Concretion of fecal matter in the bowels. See *Calculus of the stomach and intestines.*

Coprophagy, kop-rof'ah-je (*copro, phago,* to eat). Eating feces; a symptom of disease of the nervous system.

Coprophoresis (kop-ro-for-a'sis) or **Coprophoria,** kop-ro-for'e-ah (*copro, phoreo,* to carry forward). Catharsis.

Coproplanesis, kop-ro-plan-a'sis (*copro, planesis,* wandering). Passage of feces through an unusual outlet, as in fistula.

Copropoie'sis (*copro, poiesis,* making). Formation of feces.

Coprorrhœa, kop-ror-rhe'ah (*copro, rheo,* to flow). Diarrhœa.

Cop'ros. Feces.

Coproscleroma (kop-ro-skler-o'mah) or **Coprosclerosis,** kop-ro-skler-o'sis (*copro, skleros,* hard). Induration of fecal matters.

Coprosis (kop-ro'sis) or **Coprostasia,** kop-ro-stah'ze-ah. Formation of feces; defecation.

Coprostasis, kop-ros'tas-is (*copro, stasis,* standing). Constipation or obstruction of the bowels, usually from stricture or constriction.

Coprotic, kop-rot'ik. Relating to feces; cathartics.

Cop'rus. Excrement.

Cop'te or **Cop'ton** (*kopto,* to beat or pound). Cake composed of vegetable substances, applied to the epigastric region as a cataplasm.

Cop'tis or **C. trifo'lia** (*kopto,* to cut, in reference to the divided leaves). *Goldthread, Mouthroot.* The root of this evergreen is used in aphthous and other ulcerations of the mouth as a local application; internally it is a pure bitter. The alkaloid *coptine* has been obtained from it. **C. tee'ta,** root is a tonic and stomachic.

Cop'ula (band). Ligament, articulation, commissure. **C. carna'lis,** coition. **C. cartilagin'ea,** see *Synchondrosis.* **C. mag'na cer'ebri,** corpus callosum. **C. nervo'rum optico'rum,** optic chiasm.

Copulation, kop-u-la'shun (*copulo,* to bind together). Coition.

Copyo'pia, Copio'pia, or **Copyopsia,** kop-e-op'se-ah (*kopos,* fatigue, *ops,* eye). Fatigue of vision; weakness of sight; inability of the eye to sustain continued exertion.

Cor, as a prefix, *cum,* with.

Cor. Heart; corn. **C. adipo'sum,** fatty degeneration of the heart-muscle or increase of fat around the heart. **C. aor'ticum** or **arterio'sum,** see *Heart.* **C. bilocula're,** congenital deficiency of both auricles and ventricles may exist, the heart consisting of only two chambers. **C. bovi'num,** heart, hypertrophy of. **C. dextrum,** right auricle and ventricle of heart together. **C. hirsu'tum** or **his'pidum,** cor villosum. **C. membrano'sum,** auricular portion of the heart. **C. musculo'sum,** ventricular portion of the heart. **C. pulmona'le,** C. dextrum; see *Heart.* **C. sem'inis,** embryo. **C. sinis'trum,** left auricle and ventricle together. **C. tauri'num,** heart, hypertrophy of. **C. tomento'sum,** cor villosum. **C. veno'sum,** right auricle and ventricle of heart. **C. villo'sum,** condition of the heart at times after pericarditis, when it is studded with projections of fibrinous matter from its surface.

Cor'aco. In composition, appertaining or relating to the coracoid process.

Coraco-acromial, kor-ak-o-ak-ro'me-al. Relating to the coracoid and acromion processes, as coraco-acromial ligaments.

Coracobrachiæus, kor-ak-o-brak-e-e'us. Coracobrachialis.

Coracobrachial, kor-ak-o-brak'e-al. Belonging both to the coracoid process and arm, as coracobrachial bursa and ligament.

Coracobrachia'lis or **Coracobrachiæ'us.** Muscle situate at the inner and upper part of the arm, arising from the coracoid process of the scapula, and inserted at the middle part of the inner side of the humerus. It carries the arm forward and upward, raising the humerus a little, and can also, by acting inversely, depress the shoulder.

Coracocapsularis, kor-ak-o-kap-su-lar'is. Relating to the coracoid process and capsular ligament of the shoulder. Anomalous muscle is so called, which has similar origin and insertion.

Coracocervica'lis. Relating to the coracoid process and cervical region. Anomalous muscle with such origin and insertion.

Coracoclavi-axillary lig'ament. (kor-ak-o-klav-e-ax'il-lar-e) Suspensory ligament of the axilla.

Coracoclavicular, kor-ak-o-klav-ik'u-lar. Belonging to the coracoid process and clavicle. **C. lig'ament,** *Omoclavicular ligament,* unites the clavicle to the coracoid process. It is very irregular, and formed of two fasciculi, the conoid and trapezoid ligaments.

Coracoclavicularis anticus (kor-ak-o-klav-ik-u-lar'is an-te'kus) or **singula'ris.** Anomalous muscle from clavicle and capsular ligament of shoulder to coracoid process. **C. posti'cus,** anomalous muscle from clavicle inserted into coracoid process and superior surface of scapula.

Coracocostalis, kor-ak-o-kos-tal'is. Relating to coracoid process and ribs.

Coracocubita'lis. Relating to coracoid process and forearm.

Coraco'des. Coracoid.

Coracoglenoidalis, kor-ak-o-glen-oid-al'is. Relating to coracoid process and glenoid cavity.

Coracoglenoradia'lis. Relating to coracoid process, glenoid cavity, and radius; term applied to biceps flexor cubiti muscle.

Coracohumeral, kor-ak-o-u'mer-al. Coracobrachialis.

Coracohy'oid. Omohyoideus.

Coracoid, kor'ak-oid (*korax,* crow, *eidos,* resemblance). Resembling the beak of a crow; name given by Galen to the short, thick process situate at the anterior part of the upper margin of the scapula. **C. lig'ament,** small fibrous fasciculus converting the notch at the

superior margin of the scapula into a foramen. **C. notch,** suprascapular notch. **C. pro'cess,** see *Coracoid.*

Coraco-olecranalis, kor-ak'o-o-lek-ran-al'is. Muscular slip from coracoid process, uniting with common tendon of triceps muscle.

Coracopectoralis, kor-ak-o-pek-tor-al'is. Pectoralis minor.

Coracoradialis, kor-ak-o-rad-e-al'is. Biceps flexor cubiti, or its short head only.

Coracoscap'ular. Relating to the coracoid process in its relation to other parts of scapula, as coracoscapular foramen.

Coraco-ulna'ris. Relating to coracoid process and ulna; part of biceps flexor cubiti muscle inserted into fascia of forearm near the ulna.

Coral (*koreo,* to adorn, *hals,* sea). Beautiful production of the deep, fixed to submarine rocks, in the form of a shrub; habitation of a multitude of Zoophyta, and formed of calcareous substance secreted by the animals themselves. It was formerly esteemed tonic, absorbent, astringent, etc., but it contains only calcium carbonate and a little gelatin. **C. root,** Corallorhiza odontorhiza.

Corallina, kor-al-le'nah (dim. of **Corallium,** coral). Sea coralline, white wormweed; production of animal belonging to the class Polypi, found in seas of Europe, particularly the Mediterranean. It has the appearance of a plant, salt taste, and marine smell, and was once used as a vermifuge. **C. bif'ida, Corsica'na, melitochor'ton,** or **ru'bra,** Corsican wormweed or moss; mixture of several marine plants and zoophytes, as fucus, ceramium, ulva, coralline, confervæ, etc.; used in strong decoction for intestinal worms, also as a febrifuge.

Cor'alloid. Like coral. **C. fun'gus,** Clavaria coralloïdes.

Corallorhiza (kor-al-lo-rhe'zah) **multiflo'ra** or **odontorhi'za.** Coral root; plant of the United States, whose root is diaphoretic.

Cor'alwort. Clavaria coralloïdes.

Corchorus humilis, kor'ko-rus hu'mil-is. Weed of E. Indies; demulcent, emollient, astringent, diuretic, and aphrodisiac.

Corculum (dim. of **Cor,** heart). Small heart. **C. germ'inis,** germinal spot. See *Molecule.*

Cord. See *Chorda, Tendon.* **C., ax'is,** primitive streak in embryology. **C., bioplas'son,** reticulum of branching cells; reticulum of umbilical cord. **C., dor'sal,** notochord. **C., false,** superior vocal cords of larynx. **C. of Ferrein',** C., vocal. **C., gen'ital,** cord-like appearance made by fusion of Wolffian ducts with ducts of Müller; see *Genital.* **C., gubernac'ular,** fibrous part of gubernaculum testis; see *Gubernaculum.* **C., lymphat'ic,** see *Bubonulus.* **C., lymph'oid,** lymph-tube. **C., med'ullary,** medullary tube. **C. of Müller,** Müller, duct of. **C., sono'rous,** membranous semicircular canals of ear. **C., spermat'ic,** see *Spermatic.* **C., spi'nal,** medulla spinalis; see *Spinal.* **C., testic'ular,** spermatic cord. **C., tympan'ic,** chorda tympani. **C., umbil'ical,** funiculus umbilicalis. **C-s, vo'cal** (Ferrein), ligaments of the glottis which Ferrein compared to stretched cords, to which he attributed the production of voice; see *Thyreo-arytenoid ligament.* **C. of Weit'brecht,** orbicular ligament of elbow.

Cor'da. Chorda, cord. **C. Hippoc'ratis,** Achillis tendo. **C. mag'na,** Achillis tendo. **C. spina'lis,** medulla spinalis.

Cord'ate. Heart-shaped.

Cor'dia Africa'na (after Cordius, a German botanist). Sebestena. **C. Bossie'ri,** Mexican species, source of anacahuite wood, used in consumption. **C. calococ'ca,** species from Jamaica; fruit is expectorant and aphrodisiac, and root and leaves are used in skin diseases. **C. domes'tica,** sebestena. **C. globo'sa,** from this W. Indian species gout-tea is prepared; leaves are used in dropsy and cutaneous affections. **C. myx'a, obli'qua,** or **officina'lis,** sebestena. **C. sebesti'na** or **specio'sa,** sebestena. **C., smooth'leaved,** sebestina.

Cor'dial (*cor,* heart). Tonic or excitant medicine, judged to be proper for exciting the heart; warm stomachic. **C., God'frey's,** see *Godfrey.* **C., War'ner's,** see *Tinctura rhei et sennæ.*

Cordiceps (kor'de-ceps) **purpu'rea.** Claviceps purpurea.

Cord'iform (heart-shaped) **ten'don of the di'aphragm.** Centre, phrenic.

Cordinema, kor-din-a'mah (*kura,* head, *dineo,* to turn round). Headache accompanied with vertigo. See *Carebaria* and *Scordinema.*

Cor'dis emuncto'rium. Axilla.

Cordolium, kor-do'le-um (*cor,* heart, *dolor,* pain). Cardialgia.

Cordon sanitaire (F.). Line of soldiers or others to prevent communication with an infected district.

Cords. See *Cord.*

Cordyle, kor'dil-e. Furuncle; bandage for the head.

Core, ko're. Pupil; axile body or corpuscle. In composition, the pupil.

Core, kore. Furunculus; central part of boil or carbuncle.

Coreclisis (kor-ek'lis-is) or **Corocleisis,** kor-o-kli'sis (*core, kleio,* to close). Closure or obliteration of the pupil.

Corectasis, kor-ek'tas-is (*core, ektasis,* dilatation). Dilatation of the pupil.

Corectenia, kor-ek-ten'e-ah (*core, ektenia,* extension). Dilatation of the pupil by prolapse of the iris from external injury of the cornea.

Corectodialysis, kor-ek-to-de-al'is-is (*core, dialusis,* separation, *tome,* incision). Coretomy.

Corectomodialysis, kor-ek-to-mo-de-al'is-is. Coretomy.

Corectomy, kor-ek'tom-e (*core, ektome,* excision). See *Coretomy* and *Iridectomia.*

Corectopia, kor-ek-top'e-ah (*core, ec,* out of, *topos,* place). Displacement of the pupil; condition of the iris in which one segment is larger than the other, so that the pupil is not in the centre.

Coredialysis, kor-e-di-al'is-is (*core, dialusis,* separation). Iridodialysis; coretomy.

Coredias'tasis or **Coredias'tole** (*core, diastasis,* dilatation, or *diastole,* dilatation). Dilatation of the pupil.

Corelysis, kor-el'is-is (*core, lusis,* solution). Operation for the detachment of adhesions between the edge of the pupil and the anterior capsule of the lens.

Corema, kor-a'mah (*koreo,* to cleanse). Remedy proper for cleaning the skin.

Core'megine (*core,* pupil, *megas,* large). Atropine.

Coremetamorpho'sis (*core, metamorphosis,* transformation). Irregularity in contour of pupil.

Coremetath'esis. Operation for artificial pupil; see *Iridodesis.*

Coremorphoma, kor-e-mor-fo'mah (*core, morphe,* shape). Morbid change in the shape of the pupil; artificial pupil.

Coremorphosis or **Coromorphosis,** kor-o-mor-fo'sis (*core, morphosis,* formation). *Coreplasty.* Operation for artificial pupil. See *Coretomy* and *Iridectomy.*

Corencleisis, kor-en-kli'sis (*core, enkleio,* to include). Operation for artificial pupil, consisting in drawing out, through an incision in the cornea, a portion of the iris, and cutting it off; iridencleisis.

Coreometer, kor-e-om'e-tur (*core, metron,* measure). Instrument to measure the diameter of the pupil.

Coreon'cion, Coron'cion, or **Coreoncium,** kor-e-on'se-um (*core, onkos,* a hook). Instrument hooked at its extremity, used by Langenbeck for the formation of artificial pupil; double-hooked forceps, used by Von Gräfe, is similarly named.

Coreopsis trichosperma, kor-e-op'sis trik-o-spur'mah (*koris,* a tick, *opsis,* appearance). Tickweed or tickseed sunflower; indigenous plant, with large golden-yellow rays; used as an alterative.

Coreparel'kysis (*core, parelkusis,* drawing aside). Operation for artificial pupil; see *Iridodesis.*

Corephthi'sis (*core, phthisis,* wasting). Shrinking or contraction of the pupil.

Coreplasty, kor'e-plas-te (*core, plasso,* to form). Operation for artificial pupil.

Coresteno'ma (*core, stenos*, narrow). Narrowness of the pupil, congenital or acquired, by growths from the margin of the iris.

Coretodialysis, kor-et-o-de-al'is-is (*core, dialusis*, separation). Coretomy; iridodialysis.

Coretomedialysis, kor-et-o-me-de-al'is-is (*core, tome*, incision, *dialusis*, separation). Coretomy; iridectomy.

Coretomy, kor-et'om-e (*core, tome*, incision). Iridectomy. Various operations for the formation of artificial pupil are included under this term. Simple incision of the iris for that purpose is variously called coretomy, iridotomy, coretotomy, and corotomy. Excision of the iris or incision with loss of substance is called iridectomy, coretonectomy, and corectomy. Simple separation or tearing asunder of the iris from the ciliary ligament is termed iridodialysis, corodialysis, coredialysis, and coretodialysis. Such separation with excision of the iris is called coretomedialysis and iridotomedialysis. Such separation with excision of the part of the iris detached is termed iridectomedialysis. When a portion of the iris is left strangulated in the wound, it is termed iridencleisis, iridencleismus, and irodotomencleisis. See *Iridectomy.*

Coretonectomy, kor-et-on-ek'tom-e. See *Coretomy.*

Coretotomy, kor-et-ot'om-e. Coretomy.

Coriamyrtin, kor-e-a-mur'tin. See *Coriaria myrtifolia.*

Coriander, kor-e-an'dur. Coriandrum sativum.

Coriandrum, kor-e-an'drum. Coriandrum sativum. **C. cicu'ta,** C. sativum, Cicuta aquatica, Conium maculatum. **C. cyna'pium,** Æthusa cynapium. **C. latifo'lium,** Sium latifolium. **C. macula'tum,** Conium maculatum. **C. sati'vum,** coriander; seeds or fruit of coriander are officinal as *Coriandrum* (Ph. U. S.); carminative, but chiefly used to cover the taste of other medicines. **C. vulga're,** C. sativum.

Coriaria, kor-e-ah're-ah (*corium*, leather, owing to its leaves containing tannin). Small genus of plants, of which the most known is **C. myrtifo'lia,** myrtle-leaved sumach; plant of Southern Europe; its leaves were used for the adulteration of senna. The leaves and fruit are narcotico-acrid poisons in large doses, owing to the presence of a peculiar principle, *Coriamyrtin* ($C_{30}H_{36}O_{101}$), resembling picrotoxin in its action; another alkaloid, coriarine, is also extracted from it.

Corigin, kor'ig-een. Fucus crispus.

Coriïtis, kor-e-e'tis. Inflammation of the corium, a form of dermatitis.

Corin'dine. Ptomaïne analogous to parvoline and collidine.

Corinthiaceæ, kor-inth-e-ah'se-e. See *Vitis Corinthiaca.*

Co'rion. Corium, chorion, Hypericum perforatum, Ranunculus sceleratus.

Co'ris. Acanthia lectularis; cimex. **C. Monspelien'sis,** Symphytum petræum.

Corium, ko're-um. Skin of animals, especially when tanned. Cutis vera, or thickest part of human skin. Connective-tissue basis for epithelium of mucous membranes. **C. phlogis'ticum,** *Inflammatory crust* or *buff, Buffy coat.* Grayish crust or buff, varying in thickness, observed on blood drawn from a vein during existence of violent inflammation, pregnancy, etc.; particularly manifest in pleurisy. For its production there must be increase in the proportion of the fibrous element of the blood over that of the red corpuscles, with augmented aggregation of the latter. The blood is then longer in coagulating, and the red corpuscles have time to subside. In highly inflammatory conditions the buffy coat assumes a concave appearance on its upper surface, and the blood is therefore said to be *cupped.* The coagulative substance has been called *Bradyfibrin;* it is the ordinary fibrin of the blood, the only self-coagulable ingredient in it. When blood presents the above appearance, it is said to be buffy or sizy. The buffed and cupped appearance are also seen in chlorosis on account of the deficiency in the number of the white corpuscles.

Cork tree, East In'dian. Adansonia digitata.

Cork'wood. Duboisia myoporoides; agave.

Corm. Portion of bulb of a plant that is beneath the surface of the ground.

Cormotridymus, kor-mo-trid'im-us (*kormos*, neck, *tridumos*, triple). Monster with three distinct heads and necks.

Corn (*cornu*, horn). In Great Britain, cerealia, or seeds which grow in ears, not in pods; in the United States, Indian corn. Zea mays. Small, hard, corneous tumor forming upon the foot, generally the toes; commonly produced by pressure of tight shoes. The deeper portion, its base, is buried in the integuments, occasionally as far as the tendons and periosteum. Corns can be destroyed by knife or caustic, or by paring them down and pulling them out by the roots. In the way of palliation they must be constantly pared; and to prevent pressure, soft plaster, spread upon linen or leather, may be applied, with a central hole to receive the corn; layer after layer of plaster being added until they attain the level of the corn. Lunar caustic, rubbed over the surface, will generally diminish its irritability. A combination of salicylic acid, cannabis indica, and collodion has been found efficacious in removing the corn. **C. cock'le,** Lychnis githago. **C. er'got,** see *Ergot.* **C. flag,** Gladiolus vulgaris. **C. flow'er,** Centaurea cyanus. **C., Guin'ea,** Panicum Italicum. **C., In'dian,** Zea mays. **C. mint,** Mentha arvensis. **C. pop'py,** Papaver rhœas. **C. sal'ad,** Valeriana dentata. **C. silk,** long delicate stigmata of Zea mays; diuretic in dropsy of heart and kidneys. **C. smut,** stigmata of maize or Indian corn. **C., squir'rel,** Dicentra Canadensis. **C. starch,** starch from seed of Zea mays. **C., wild,** Matricaria chamomilla.

Corna'lian bodies. Corpuscles of Cornalia, or sporospermia, a parasitic organism in pebrine, a petechial disease of silkworms.

Cornea, kor'ne-ah (*cornu*). Transparent or lamellated cornea. One of the coats of the eye, so called because it has resemblance to horn. It is termed transparent to distinguish it from the opaque—cornea opaca or sclerotic. It is convex anteriorly, concave posteriorly, forming nearly one-fifth of the anterior part of the eye, and representing a segment of a sphere about 0.625 in. in diameter. It is constituted of fine laminæ or lamellæ, in superposition: 1. Epithelial layer, made up of three layers of cells of different shape, flattened, tooth-like, and cylindrical. 2. Bowman's membrane or anterior basal membrane. 3. Parenchyma or proper substance. 4. Posterior basal membrane, or m. of Demours or of Descemet. See *Aqueous humor.* 5. Endothelial layer. Between these layers are areolæ or spaces—interlamellar spaces—assuming a tubular arrangement, hence called corneal tubes. The corneal groove, limbus corneæ, is the margin of the cornea where it joins the sclerotica. **C. cacumina'ta,** staphyloma of the cornea. **C., cloud'iness of,** caligo. **C., con'ical,** staphyloma of the cornea. **C. consum'ta,** atrophy of the cornea. **C. globo'sa,** see *Keratoglobus, Buphthalmos, Hydrophthalmos,* all of which are characterized by prominence of cornea. **C., her'nia of,** ceratocele. **C., her'pes of,** herpes corneæ. **C., lam'ellated,** cornea. **C., leuco'ma of,** see *Leucoma.* **C. lu'cida,** cornea. **C. opa'ca,** sclerotic; see *Leucoma* and *Caligo.* **C. pellu'cida,** cornea. **C. scle'ra,** sclerotic. **C. semicircula'ris,** tænia semicircularis. **C., su'garloaf,** staphyloma of the cornea. **C. tabefac'ta,** atrophy of the cornea. **C. transpa'rens,** cornea. **C., transplanta'tion of,** see *Transplantation.*

Corneal, kor'ne-al. Relating or appertaining to the cornea. **C. tubes,** see *Cornea.*

Corneïtis, kor-ne-e'tis. Inflammation of the cornea; may be simple, strumous, or scrofulous, marginal—commencing at the extreme border of the cornea—chronic interstitial—dependent on hereditary syphilis—suppurative (see *Ceratitis suppurans*), phlyctenular (see *Herpes corneæ*), or complicated with iritis, corneoiritis. Fascicular corneïtis is a rare form, in which a narrow bundle of subconjunctival vessels is seen to extend on to the surface of the cornea.

Cor'nel, alter'nate-leaved (*corneus*, horny). Cor-

nus alternifolia. **C., Amer'ican red-rod,** Cornus sericea. **C., large-flow'ered,** Cornus florida. **C., pan'icled,** Cornus paniculata. **C., round-leaved,** Cornus carcinata. **C. tree,** Cornus mas. **C., white,** Cornus paniculata. **C., wild,** Cornus florida.

Corneo-blepharon, kor'ne-o-blef'ar-on (*cornea, blepharon,* eyelid). Adhesion between the cornea and the eyelid.

Cor'neo-scle'ra. Sclerotic.

Corneous, kor'ne-us (*cornu,* horn). Horny; having the nature or appearance of horn. **C. lay'er of skin,** see *Skin.* **C. tis'sue,** that which forms the nails. The cornea is a corneous membrane.

Cornicula, kor-nik'u-lah (pl. of **Corniculum**). Small horns. **C. of hy'oid bone,** small cornua of that bone. **C. inter'na,** C. of hyoid bone. **C. laryn'gis** or **Santorinia'na,** supra-arytenoid cartilages, cartilages of Santorini; small very movable cartilages articulating with upper part of arytenoid cartilages.

Cornicular, kor-nik'u-lar. See *Anconoid.* **C. pro'cess,** coracoid process.

Cornic'ulo- pharynge'al. Relating to cornicula of the larynx and the pharynx.

Corniculum, kor-nik'u-lum (dim. of **Cornu**). Horn-shaped body; cupping instrument, shaped like a trumpet, having a hole at the top for sucking the air out, to diminish the pressure in its interior. See *Cornicula.*

Cornification, kor-ni-fik-a'shun (*cornu, fio,* to become). Conversion into corneous or horny tissue.

Corn'ified. Converted into corneous or horny tissue.

Cornin, kor'nin. Bitter principle from Cornus florida; another alkaline principle from it has been called *Cornine.*

Cornix, kor'niks (crow's beak). Fornix cerebri; sharp process of bone.

Cornu, korn'u. Corn, horn; conical, hard, epidermic projection, growing on the heads of certain animals, serving as a weapon of offence and defence. Anatomists have given this name to parts of the human body having nearly the same shape as the horns of animals; horny excrescence; a corneous wart which occasionally forms on the skin and requires the use of the knife. See *Corn, Cornu cervi, Cervus.* Zygomatic process of temporal bone. **C. acus'ticum,** ear-trumpet. **C. ammo'nis,** hippocampus major or pes hippocampi minor. Broad eminence, curved on itself, and situate at the posterior part of the lateral ventricle. The accessorius pedis hippocampi, prominence usually formed by the base of the inferior cornu of the lateral ventricle of the brain, is merely a fold of the hemisphere. **C. ante'rius** or **anti'cum ventric'uli latera'lis,** *Anterior cornu of the lateral ventricle.* Portion of the lateral ventricle lodged in the middle of the lobe, and forming the commencement of that cavity. **C. arie'tis,** C. ammonis; hippocampus major. **C. cer'vi** or **cervi'num,** *Hartshorn.* Horns of various species of the stag. They contain about 27 per cent. of gelatin. The shavings, boiled in water, have been esteemed emollient and nutritive. When burnt, the shavings constitute *Cornu cervi calcinatum* or *Cornu ustum,* consisting of 57.5 per cent. of phosphate of lime. It has been given in osteomalacia, from a presumption that the latter is due to deficiency of earthy matter in the blood, the fault, however, being in the agents of assimilation or the cells of nutrition. It has been proposed also as an excitant to the healthy action of the cells in tuberculosis. Calcis phosphas præcipitatus (Ph. U. S.), calcii phosphas præcipitata, calcis phosphas (Ph. Br.), precipitated phosphate of lime, precipitated phosphate of calcium, is the form employed; see also *Cervus, Plantago coronopus.* **C. coccyge'um,** see *Cornua of coccyx.* **C. combus'tum,** cornu cervi. **C. cuta'neum,** cornu; ichthyiasis. **C. descen'dens ventric'uli latera'lis,** digital cavity, descending or inferior cornu of the lateral ventricle. Termination of the lateral ventricle in the middle lobe of the brain, behind the fissure of Sylvius. **C., ethmoid'al,** middle turbinated bone. **C. human'um,** corn or skin; see *Cornu.* **C. of hy'oid bone,** see *Hyoid.* **C., mid'dle,** middle turbinated bone, descending horn of lateral ventricle. **C. occipita'le,** posterior horn of lateral ventricle. **C. poste'rius** or **posti'cum ventric'uli latera'lis,** *Posterior cornu of the lateral ventricle.* Triangular prolongation of the lateral ventricle of the brain into the substance of the occipital lobe. **C. rupica'præ,** horn of the chamois, having the same properties as the cornu cervi. **C. sac'ri,** prominence on bones of sacrum.

Cornua, kor'nu-ah (pl. of **Cornu**). See *Cornu* and *Turbinated bones.* **C. cartilag'inis thyroi'deæ,** eminences on thyroid cartilage—great or superior—articulated with the great cornu of the os hyoides, and small or inferior, united with the cricoid cartilage. **C. cer'ebri,** horns of lateral ventricles of the brain. **C. coccy'gis,** *C. of the coccyx;* two small tubercular eminences at the base of the coccyx, articulated with those of the sacrum. **C. cuta'nea,** horny excrescences; ichthyosis. **C. el'aphi,** cornu cervi. **C. fronta'lia,** peduncles of corpus callosum. **C. gland'ulæ thyroi'deæ,** C. cartilaginis thyroïdeæ. **C. hyoi'dei os'sis,** *C. of hyoid bone;* four fragments of the os hyoides situate above the body of the bone, and distinguished into the small or superior and the great or lateral. **C. lacryma'lia,** lacrymal ducts. **C. lima'cum,** lacrymal ducts; see *Lacrymal puncta.* **C. medul'læ spina'lis,** anterior and posterior cornua of spinal cord. **C., sac'ral,** *C. of sacrum;* two tubercles situate at the posterior and inferior surface of the sacrum, sometimes united. **C., sphenoid'al,** see *Sphenoidal cornua.* **C., sty'loid,** see *Hyoid bone.* **C. of thy'roid car'tilage,** C. cartilaginis thyroïdeæ. **C. u'teri,** *C. of the uterus;* angles of the uterus where the Fallopian tubes arise; Fallopian tubes themselves. **C. ventric'uli,** C. cerebri.

Corn'ual myeli'tis. See *Myelitis.*

Cornucopia, kor-nu-ko'pe-ah. Extensions of the choroid plexuses of the fourth ventricle of brain in lateral recesses.

Cor'nus al'ba. C. sericea. **C. alternifo'lia** (*cornu,* horn, owing to the hardness of the wood), *Alternate-leaved cornel;* indigenous; nat. ord. Cornaceæ; bark is diaphoretic and astringent. **C. amo'mus,** C. sericea. **C., blue'berried,** C. sericea. **C. circina'ta,** *Round-leaved cornel* or *dogwood;* bark has been used for similar purposes with that of Cornus florida. **C. fem'ina,** C. sericea. **C. flor'ida,** *Dogwood, Dogtree, Box-tree, Bitter redberry, Large-flowered cornel, Male great-flowered dogwood, Florida dogwood, Virginian dogwood, Boxwood;* bark of this tree, growing everywhere in the United States, has been long employed as a substitute for cinchona; the bark of the root is officinal (Ph. U. S.) under the name *Cornus;* dose, from ʒss to ʒj. Active principle separated from it has received the name of Cornine. **C. mas** or **mas'cula,** *Cornel tree, Cornelian cherry;* indigenous in Greece; the fruit, called krania, is agreeably acid and prized by the Turks; flowers are astringent. **C. mas odora'ta,** Laurus sassafras. **C. panicula'ta,** *Panicled* or *White cornel* or *Dogwood;* indigenous; has been used as a substitute for Cornus florida. **C. rubigino'sa,** C. sericea. **C. sanguin'ea,** C. sericea. **C. seri'cea,** *Swamp dogwood, Red willow, Rose willow, New England dogwood, Female dogwood, Silky-leaved dogwood, American red-rod cornel, Red-rod, Red osier, Blueberried dogwood, Blueberried cornus;* bark, it is said, is little inferior to that of Cinchona pallida in intermittents. **C. tomento'sa,** C. circinata.

Cornutine, kor-nu'teen. Alkaloid, active derivative from ergot by action of hydrochloric acid; very poisonous, acting upon the vascular system; used in hemorrhage from abortion and as a putrifacient; dose, gr. $\frac{1}{12}$–$\frac{1}{6}$.

Co'ro, in composition, see *Core.*

Corocleisis, kor-o-kleis'is. Closure or obliteration of the pupil.

Corodialysis, kor-o-de-al'is-is (*coro, dialusis,* dissolution). See *Coretomy.*

Corodiastasis, kor-o-de-as'tas-is (*coro, diastasis,* separation). Dilatation of pupil.

Corodiastole, kor-o-de-as'to-le (*coro, diastole,* dilatation). Dilatation of pupil; coreclisis.

Corol'la (dim. of **Corona**) **infundibulifor'mis.** See *Tube, Fallopian.*

Coromegine, kor-om'eg-een (*core,* pupil, *megas,* large). Atropina; so called on account of its action.

Coromeiosis or **Coromiosis,** kor-o-mi-o'sis (*coro, meiosis,* diminution). Diminution of the size of pupil.

Coromorphoma, kor-o-mor-fo'ma. Artificial pupil; coremorphoma.

Coromorphosis, kor-o-mor-fo'sis. Formation of artificial pupil.

Coromydriasis, kor-o-mid-re'as-is. See *Mydriasis.*

Coromydriatic, kor-o-mid-re-at'ik. Mydriatic.

Corona, kor-o'nah. Crown. Rim of os uteri externum. **C. cilia'ris,** ciliary body. **C. cor'dis,** auricle of heart. **C. den'tis,** crown of a tooth. **C. glan'dis,** crown of glans penis. **C., infe'rior,** coronoid process of ulna. **C. poste'rior ul'næ,** olecranon. **C. ra'dians** or **radia'ta,** radiating crown of Reil; fibrous cone. Fasciculi of white fibres radiate from the surface of the optic thalamus, excepting its inner side; the anterior fibres pass directly forward, the middle fibres outward, and the posterior backward, forming the corona radians; expansion of fibres of cerebral peduncles; remains of discus proligerus. C. ciliaris. **C. re'gia,** Trifolium melilotus. **C. Reil'ii,** C. radians. **C., supe'rior,** olecranon. **C. trep'ani,** crown of trephine. **C. ul'næ,** olecranon. **C. Vene'rea** or **Ven'eris,** crown of Venus; syphilide of the forehead.

Cor'onad. See *Coronal aspect.*

Coro'næ (pl. of **Corona**) **cilia'ris membran'ula.** Ciliary zone. **C. palpebra'rum,** see *Tarsus.* **C. tubulo'rum,** crypts of Lieberkühn. **C. vagina'les,** pieces of cotton for local intravaginal applications of remedies.

Coronal, kor-o'nal (*corona*). Relating to the crown. Name formerly given to the frontal bone, because on it partly reposes the crown of kings. **C. aponeuro'sis,** epicranial aponeurosis. **C. as'pect,** aspect toward the plane of the corona or crown. *Coronad* is used adverbially to signify toward the coronal aspect. **C. bone,** frontal bone. **C. su'ture,** suture of the head extending from one temporal bone to the other over the crown of the head, and uniting the parietal bones with the frontal. Suture coronal of the French anatomists is the suture uniting the two halves of the os frontis at the early period of life; prolongation of the sagittal suture.

Coronale, kor-o-nal'a. Frontal bone.

Coronamen, kor-o-nam'en. Corona.

Coronaria, kor-o-nar'e-ah. Coronary artery or vein. **C. ventric'uli,** gastric artery.

Coronarius, kor-o-nar'e-us. Coronal, coronary. Nerve branches of which take the shape of a crown. **C. stomach'icus,** ramification of the eighth pair in the vicinity of the cardiac orifice of the stomach.

Coronary, kor'o-na-re (*corona,* crown). Resembling a crown. **C. ar'teries of the heart,** cardiac arteries. **C. ar'teries of the lip,** branches of the facial artery supplying the lips, labial glands, etc. **C. ar'tery of the stom'ach,** branch of the cœliac passing toward the superior orifice of the stomach, extending along its lesser curvature, and ending by anastomosing with the pyloric branch of the hepatic. It furnishes branches to the inferior part of the œsophagus, the cardiac orifice, the great cul-de-sac, the middle part of the stomach, and the lesser omentum, and anastomoses with the other arteries of those organs. **C. lig'ament of the liv'er,** reflection of the peritoneum surrounding the posterior margin of the liver. The same term is likewise applied to ligaments uniting the radius and ulna, and to internal ligaments of the knee-joint. **C. plex'us of the heart,** anterior and posterior coronary plexuses of the heart are derived from the anterior and posterior cardiac plexuses; see *Cardiac plexus.* **C. plex'us of stom'ach,** plexus of nerves given off from the upper part of the solar plexus. **C. si'nus of the heart,** sinus, coronary; s., venous. **C. si'nus of Ridley,** sinus coronarius. **C. ten'dons,** fibro-cartilaginous rings at the orifices of the coronary arteries and aorta. **C. valve,** fold of the lining membrane of the auricle of the heart, protecting the orifice of the coronary sinus. **C. vein of the stom'ach** accompanies the artery, and terminates in the vena porta; some anatomists call all the four arteries of the stomach coronariæ stomachicæ; pyloric vein. **C. veins of the heart,** cardiac veins.

Coroncion, kor-on'se-on. Coreoncion; iridoncion.

Corone, kor-o'ne (a crow). Coronoid process of the lower jaw; cornix.

Coroner, kor'o-ner (*corona,* crown). Officer of the Crown in Great Britain, or of a county in the United States, whose duty it is to verify death and its causes, with the assistance of a jury, in all questionable cases. The feeling is becoming general that this officer should be a medical man. See *Body-searcher.* **C.'s in'quest,** examination by the coroner as to the cause of accidental, sudden, or violent death.

Coronilla (kor-on-il'lah) **em'erus.** Plant of S. Europe; purgative. **G. jun'cea,** plant of S. Europe; galactagogue. **C. scorpioi'des,** species of leguminous plant of south of France, which, with its glucoside, *coronillin,* is diuretic and heart tonic. **C. va'ria,** juice of this plant is emetic; leaves are purgative and diuretic.

Coroni'tis. Inflammation of coronary substances of horse's hoof.

Coro'no-fa'cial an'gle. Angle formed by line from incisor teeth and protuberance of forehead, prolonged to meet line projected in plane of coronal suture.

Coronoid, kor'o-noid (*korone,* a crow, *eidos,* resemblance). Resembling the beak of a crow; name given to two processes, one situate at the anterior and superior part of the ramus of the inferior maxillary bone, and affording attachment to the temporal muscles; the other, a sharp process, situate at the superior part of the ulna, anterior to the great sigmoid fossa, and forming a part of the hinge of the elbow-joint. **C. depres'sion** or **fos'sa,** depression on humerus for reception of coronoid process of ulna.

Coro'no-ju'gal in'dex. Fronto-zygomatic index.

Coro'no-pari'etal in'dex. Relation of greatest frontal and transverse diameter of skull.

Coronopodium, kor-on-o-po'de-um (*korone,* a crow, *pous,* foot, in allusion to the shape, etc. of the leaves). Plantago coronopus.

Coronopus, kor-on'o-pus. Cochlearia coronopus. **C. depres'sus,** Cochlearia coronopus. **C. Ruel'lii,** Cochlearia coronopus. **C. vulga'ris,** Cochlearia coronopus.

Coroparel'cysis (*core, parelkusis,* drawing aside). Operation of incising the cornea and drawing part of the iris through it, displacing the pupil.

Corophthisis, kor-o-te'sis (*core, phthisis,* wasting). Wasting of the eye, with diminution of calibre of pupil.

Cor'os. Satiety.

Corosys'tole (*core, systole,* contraction). Contraction of the pupil.

Corotomedialysis, kor-o-to-med-e-al'is-is. Coretomedialysis.

Corotomy, kor-ot'om-e (*coro, tome,* incision). Coretomy; iridotomy.

Corpora (pl. of **Corpus**) **albicantia,** kor'por-ah al-bik-an'she-ah. Mammillary eminences. **C. amyla'cea,** amylaceous or amyloid bodies, starch-corpuscles, animal starch; name given by Virchow to microscopic bodies found in the human brain and spinal marrow—in the ependyma ventriculorum and its prolongations in the prostate and lungs—mingled with the proper nerve-elements; having chemical characters of cellulose; see *Glycogenic matter.* They differ, however, from starch in being nitrogenized. **C. Aran'tii,** noduli arantii, tubercula a. **C. arena'cea,** abnormal concretions in dura mater; psammoma. **C. bigem'ina,** quadrigemina corpora. **C. bul'bi forn'icis,** C. candicantia. **C. candican'tia,** albicantia corpora, mammillary eminences. **C. caverno'sa,** cavernous bodies. **C. chalcedo'nica,** see *Psammoma.* **C. erectil'ia,** erectile tissues, as of penis. **C. fibro'sa,**

tough semi-opaque fibrous bodies occasionally found in the ovaries, probably due to fibrous changes in the tissue of the corpus luteum. **C. fibro-spongio'sa,** cavernous bodies. **C. fibro-spongio'sa pe'nis,** C. cavernosa penis. **C. fimbria'ta,** fimbriated or fringed bodies; thin, flattened, and delicate band situate along the concave edge of the cornu ammonis, which is a continuation of the posterior crura of the fornix. **C. genicula'ta,** eminences situate at the lower and outer part of the optic thalami; each optic tract commences at the corpus geniculatum externum; the corpus geniculatum internum is merely a tubercle inserted into the bend or knee formed by the corpus geniculatum externum. **C. glandulo'sa,** seminal vesicles. **C. globo'sa cervi'cis u'teri,** Nabothi glandulæ. **C. granulo'sa,** granular leucocytes; corpuscles of the colostrum. **C. labo'sa,** Malpighian corpuscles. **C. latera'lia,** cavernous bodies. **C. lie'nis,** see *Spleen.* **C. lu'tea,** see *Corpus luteum.* **C. Malpighia'na,** Malpighian bodies, corpuscles or glomerules of Malpighi. Scattered through the plexus formed by blood-vessels and uriniferous tubes in the kidney, a number of small dark points may be seen with the naked eye, which received their name from Malpighi, their describer. Each of these, under the microscope, consists of a convoluted mass of blood-vessels, constituting the true glandule, corpuscle, or glomerule of Malpighi. It has been supposed that their office may be to separate the watery portions of the blood to be mixed with proper urinous matter; see *Kidney.* For Corpora Malpighiana of the spleen, see *Spleen.* **C. mammilla'ria,** mammillary eminences. **C. menstrua'lia,** see *Corpus luteum.* **C. Morgagn'ii,** hydatids of Morgagni; one or more short processes of the tunica vaginalis testis, containing fine blood-vessels, situate on the front of the globus major; after Morgagni, who first described them. **C. ner'veo-spongio'sa pe'nis,** cavernous bodies. **C. nervo'sa,** cavernous bodies. **C. oliva'ria** or **ova'ta,** oblong, whitish eminences situate at the occipital surface of the medulla oblongata, exterior to the corpora pyramidalia. **C. op'to-stria'ta,** optic thalami and corpora striata regarded as one mass. **C. oryzoï'dea,** rice-like growths in sheaths of tendons, bursæ, or joints. Sputa sometimes seen in phthisis. **C. ova'ta** or **ova'lia,** corpora olivaria. **C. Pacchio'ni,** Pacchionian bodies. **C. period'ica,** see *Corpus luteum.* **C. pisifor'mia,** mammillary tubercles. **C. pyramida'lia,** two medullary bundles placed on either side of the anterior fissure; called corpora pyramidalia antica to distinguish them from C. olivaria or pyramidalia lateralia. Over a space commencing eight or ten lines below the pons and extending to the lower end of the medulla oblongata, a portion of each pyramid crosses to the opposite side—decussation of the pyramids. **C. pyramida'lia posterio'ra,** see *Corpora restiformia.* **C. pyramida'lia tes'tis,** coni vasculosi. **C. quadrigem'ina,** Q. tubercula. **C. restifor'mia,** posterior pyramids, peduncles of medulla oblongata, inferior peduncles of cerebellum; two medullary projections, oblong and of whitish appearance, proceeding from each side of the upper extremity of the medulla oblongata, and contributing to the formation of the cerebellum. The posterior pyramids—fasciculi graciles—described as distinct from the restiform bodies, are situate in contact with each other, one on each side of the posterior median fissure. They become closely applied to the restiform bodies, and have been considered to be blended with them, and to proceed to form the cerebellum. According to some, they ascend to the cerebrum. **C. Santorinia'na,** cornicula laryngis. **C. sesamoï'dea,** C. Arantii. **C. spongio'sa,** cavernous bodies; bulbi vestibuli; see *Corpus spongiosum urethræ.* **C. stria'ta,** anterior cerebral ganglion; pyriform eminences, of slightly brownish-gray color, forming part of the floor of the lateral ventricles of the brain. When cut, a mixture of white and gray substance is seen, arranged alternately, to which they owe their name. The tract of fibres ascending from the anterior pyramids passes chiefly into them. **C. stria'ta super'na posterio'ra,** thalami nervorum opticorum. **C. tendin'ea,** cavernous bodies. **C. triti'cea,** see *Hyoides os.* **C. vestib'uli,** bulbi vestibuli. **C. Wolffia'na,** see *Corpus Wolffianum.* **C. Wrisbergia'na,** cuneiform cartilages.

Corpse (*corpus*). Body, cadaver. **C. fat,** adipocere. **C. poi'sons,** ptomaïnes.

Corp'ulence. Obesity.

Corpulent, korp'u-lent (*corpus,* body, *lentus,* thick). Fat, fleshy. Having unusual development of fat or flesh in proportion to the frame of the body.

Corpulentia, korp-u-len'she-ah. Corpulence, obesity. **C. carno'sa,** muscular strength.

Cor'pus. Body. Any object which strikes one or more of our senses. Gases, liquids, metals, vegetables, animals, are so many bodies. Natural bodies have been divided into animal, vegetable, and mineral; or into inorganic, including the mineral kingdom, and organized, including the animal and vegetable. The chief differences between organized and inorganic bodies consist in the former having an origin of generation, growth by nutrition, and termination by death; the latter a fortuitous origin, external growth, and termination by chemical or mechanical force. See *Body* and *Corpora.* **C. adenifor'me, adeno'des,** or **adenoï'des,** prostate. **C. adipo'sum,** pinguedo. **C. adventi'tium** or **alie'num,** extraneous or foreign body. **C. al'bicans,** see *Corpora albicantia.* **C. al'bum subrotun'dum,** anterior tubercle of optic thalamus. **C. alie'num,** extraneous or foreign body. **C. annula're,** pons Varolii. **C. callo'sum,** white, medullary band, perceived on separating the two hemispheres of the brain, which it connects with each other. It was formerly regarded as the seat of the soul. On it are seen longitudinal and transverse fibres—striæ longitudinales Lancisii, nerves of Lancisi (see *Raphe*), and striæ or chordæ transversales Willisii. The anterior portion is termed genu, the posterior flexure splenium or tuber. Fibres curving backward into the posterior lobes from the posterior border of the corpus callosum have been termed forceps; those passing directly outward into the middle lobes from the same point, tapetum; and those curving forward and inward from the anterior border to the anterior lobe, forceps anterior. Part extending backward from the genu is the rostrum. **C. camera'tum,** fornix cerebri. **C. cand'icans** or **cand'idum,** see *Corpora albicantia.* **C. cauda'tum,** see *Corpus striatum.* **C. caverno'sum,** see *Cavernous bodies* and *Corpus spongiosum urethræ.* **C. caverno'sum vestib'uli,** bulbus vestibuli. **C. cilia're,** ciliary body, corpus dentatum; see *Ciliary.* **C. cine'reum,** lamina cinerea, corpus dentatum. **C. clitor'idis,** body of clitoris. **C. collic'uli stria'ti,** anterior extremity of corpus striatum. **C. communio'nis cer'ebri,** fornix cerebri. **C. con'icum Rosenmüll'eri,** parovarium, epoöphoron. **C. confor'me** or **conoï'des,** pineal gland. **C. cor'dis,** ventricle of the heart. **C. cribro'sum,** rete mucosum. **C. crystal'linum** or **crystalloï'des,** crystalline lens. **C. denta'tum** or **denticula'tum,** central oval nucleus, of cineritious substance, met with in the cerebellum, the circumference of which exhibits a number of indentations, surrounded by medullary substance. It is seen by dividing the cerebellum vertically into two equal parts. The term corpus dentatum, nucleus olivæ, is also given to the ganglion of the corpus olivare, a yellowish-gray, dentated capsule, open behind, and containing medullary matter, from which a fasciculus of fibres proceeds upward to the corpora quadrigemina and thalami optici. **C. discoï'des,** crystalline. **C. epididym'idis,** body of the epididymis. **C. exter'num** or **extra'neum,** extraneous or foreign body. **C. fibro'sum,** fibrous tumor. **C. fimbria'tum,** olivary nucleus; see *Corpora fimbriata.* **C. genicula'tum,** see *Corpora geniculata.* **C. glandifor'me** or **glando'sum** or **glandulo'sum,** prostate; corpus luteum. **C. glandulo'sum muli'erum,** vascular spongy eminence surrounding the orifice of the female urethra, and projecting at its under part. **C. globo'sum,** pons Varolii. **C. Highmo'ri** or **Highmoria'num,** oblong eminence along the superior edge of the testicle, which seems formed of a reflection of the tunica albuginea, through

which the principal trunks of the seminiferous vessels pass before reaching the epididymis. **C. hyali'num** or **hyaloï'deum**, C. vitreum. **C. incomprehensib'ile**, thymus gland. **C. innomina'tum**, see *Organ of Giraldès;* paradidymis. **C. lenticula'tum**, lenticular nucleus, dentate nucleus of cerebellum. **C. Lieutand'ii**, trigone of the bladder. **C. lu'teum** (yellow body), a small yellowish body perceived in the ovarium, and left after the rupture of one of the vesicles. For every follicle in the ovary from which the ovum is discharged a corpus luteum will be found. It was for a long time considered an evidence of impregnation, but corpora lutea or menstrualia or periodica are met with in unquestionable virgins, although the corpora lutea of virgins differ materially in size and character from those of impregnation, *true corpora lutea*, in contradistinction to the other, *false corpora lutea*. The following table by Dalton well exhibits the distinguishing characteristics of these two forms of corpus luteum:

	Corpus Luteum of Menstruation.	*Corpus Luteum of Pregnancy.*
At the end of 3 weeks.	¾ in. in diameter; central clot reddish; convoluted wall pale.	
One month.	Smaller; convoluted wall bright yellow; clot still reddish.	Larger; convoluted wall bright yellow; clot still reddish.
Two months.	Reduced to the condition of an insignificant cicatrix.	½ in. in diameter; convoluted wall bright yellow; clot perfectly decolorized.
Four months.	Absent or unnoticeable.	Size about as at two months; clot pale and fibrinous; convoluted wall dull yellow.
Six months.	Absent.	Still as large as at the end of the second month. Clot fibrinous. Convoluted wall paler.
Nine months.	Absent.	¼ in. in diameter; central clot converted into a radiating cicatrix; external wall tolerably thick and convoluted, but without any bright-yellow color.

Sometimes the corpora lutea assume a cystic form, cystic corpora lutea. **C. mam'mæ**, strictly glandular part of mamma. **C. mammilla're**, mammillary eminences; see *Corpora albicantia*. **C. mandib'ulæ**, body of lower jaw. **C. mediasti'num**, C. Highmorianum. **C. medulla're**, C. dentatum of cerebellum; centrum ovale. **C. menstrua'le**, see *Corpus luteum*. **C. muco'sum**, mucous web; second layer of the skin, situate between the cutis vera and cuticle, and giving color to the body; in the white varieties of our species it is colorless, in the negro black. **C. nervo'sum cu'tis**, C. papillare; papillary layer of skin. **C. ni'gricans** or **ni'grum**, C. luteum containing dark pigment or blood-clot. **C. occip'itis**, basilar process. **C. Oken'se**, corpus Wolffianum; mesonephros. **C. oli'væ, oliva're**, or **oliva'rium**, see *Corpora olivaria* and *C. restiformia*. **C. op'to-stria'tum**, thalamus opticus and corpus striatum, regarded as anatomically one. **C. pampinifor'me** (*pampinus*, tendril), plexus or retiform arrangement of the spermatic arteries and veins in the cavity of the abdomen, anterior to the psoas muscle; parovarium; epoöphoron. **C. papilla're**, nervous and vascular papillæ situate beneath the epidermis, called by Breschet *Neurothelic apparatus;* derma. **C. phacoi'des**, crystalline lens. **C. pituita're** or **pituita'rium**, pituitary gland. **C. psalloïdes**, lyra. **C. pyramida'le**, pyramid; restiform body; C. dentatum; septum lucidum; C. striatum; olivary body; pineal gland; see *Corpora pyramidalia*. **C. restifor'me**, see *Corpora restiformia*. **C. reticula're**, C. mucosum, C. papillare. **C. retifor'me**, bulbus vestibuli. **C. rhomboida'le** or **rhomboï'deum**, C. dentatum; trapezium; C. fimbriatum. **C. ru'brum**, C. luteum, reddened by blood passing through it. **C. semiova'le**, see *Corpora olivaria*. **C. serra'tum**, C. dentatum. **C. specula're**, septum lucidum. **C. sphenoida'le**, body or central portion of sphenoid. **C. spongio'sum ure'thræ**, this substance arises before the prostate gland, surrounds the urethra, and forms the bulb; it then proceeds to the end of the corpora cavernosa, and terminates in the glans penis, which it forms. Where the urethra enters the bulb it is surrounded by a layer of erectile tissue, called by Kobelt Colliculi bulbi. He describes in the female, as the analogue of the corpus spongiosum of the male, a venous plexus, which, as it lies between the glans clitoridis and the part that corresponds in the male to the bulb of the urethra, he terms par intermedia. **C. spon'gio-vascula're**, C. spongiosum urethræ. **C. stern'i**, mesosternum. **C. stria'tum**, lentiform nucleus; see *Corpora striata*. **C. suprarena'le**, capsule, renal. **C. te'res**, eminentia or fasciculus teres. **C. thymia'num** or **thym'icum**, thymus. **C. thyreoï'deum**, thyroid gland. **C. tib'iæ**, shaft of tibia. **C. trapezoï'des** or **trapezoï'deum**, trapezium. **C. trigo'num**, see *Urinary bladder*. **C. trit'icum**, cartilago triticea. **C. turbina'tum**, pineal gland. **C. varicifor'me** or **varico'sum tes'tis**, epididymis. **C. varico'sum**, C. pampiniforme; spermatic cord; spermatic plexus; see *Spermatic veins*. **C. ver'tebræ fronta'lis** or **ter'tiæ**, presphenoid bone. **C. v. nasa'lis**, vomer. **C. v. occipita'lis** or **pri'mæ**, basioccipital bone. **C. v. parieta'lis** or **secun'dæ**, basisphenoid bone. **C. vit'reum**, vitreous humor or body; transparent mass of a gelatinous consistence which fills the eye behind the crystalline lens; it is contained in cells formed by the tunica hyaloïdea. **C. Wolffia'num**, Wolffian body, primordial kidney. At a very early period of fœtal formation bodies are perceptible, first described by Wolff as existing in the fowl, and by Oken in the mammalia. According to Müller, they disappear in man very early, so that but slight remains of them are perceptible after the ninth or tenth week of pregnancy. They cover the region of the kidneys and renal capsules, which are formed afterward; they are presumed to be the organs of urinary secretion during the first periods of fœtal existence. Remains of the tubules of the Wolffian body sometimes become the seat of formation of large cysts, Wolffian cysts, cysts of the broad ligament.

Cor'puscle (dim. of **Corpus**, body). Small body or particle. Cell. See *Corpuscles*. **C., amniot'ic**, small growths from amnion surrounding umbilical cord. **C., amyla'ceous** or **am'yloid**, corpora amylacea. **C., assimila'tion**, C. assisting in assimilation of food. **C., ax'ile** or **ax'is**, central part of tactile corpuscle. **C., Bizzozero's**, form of corpuscle considered by some as a hematoblast. **C., black**, osteoplast. **C., blood**, globules of the blood. **C., bone**, see *Lacunæ of bone*. **C., calca'reous**, calcigerous cells. **C., car'tilage**, see *Cartilage;* granular matter dividing nucleus of cartilage-cell from capsule. **C., cau'date**, see *Caudate*. **C., cement**, bone-cells in cement of teeth. **C., chyle**, see *Chyle*. **C., col'loid**, corpora amylacea. **C., colos'trum**, bodies in colostrum containing oil-globules. **C. of Corna'lia**, ovoid bodies in blood, tissues, etc. of silkworms; see *Cornalia*. **C., cor'neal**, corpuscles of Toynbee or Virchow; nucleated cells, giving off processes to unite with other processes to form a cellular network traversing the whole cornea. **C., cy'toid**, leucocytes; see *Cytoid*. **C. of Donné**, C., colostrum. **C., Eichhorst's**, microcytes in blood of those affected with pernicious anæmia. **C., elemen'tary, of Zimmerman**, see *Globules of blood*. **C., end**, C., terminal; end-bulb. **C., exuda'tion**, plastic corpuscles; organizable nuclei, exudation-cells of some, contained in fibrinous fluids, which are the origin of the new tissues formed from such fluid. **C., fec'undating** or **fer'tilizing**, spermatozoids. **C., gan'glion** or **ganglion'ic**, see *Neurine*. **C., gas'tric**, epithelial cells or corpuscles of stomach. **C., gen'ital**, end-bulbs. **C., germ**, germ-cells. **C., gi'ant**, giant-cell; megalocyte. **C., glan'diform**, acinus; see *Spleen*. **C. of Glu'ge**, granules of fat seen in chronic cerebral softening and fatty degeneration. **C., hæm'atoblast**, see *Hæmatoblast*. **C., Has'sall's**, striated c. in medulla of thymus gland. **C. of Hayem**, see *Blood-globules*. **C., Hen'sen's**, elliptical c. in outer hair-cells of organ of Corti. **C., hy'aline**, extension globules. **C., inflam'matory**, C., exudation. **C. of Krause**, Krause, end-bulbs of; Pacinian corpuscles. **C. of Laënnec**, fibroid granules

on pericardium. **C., lymph, lymphat'ic,** or **lymph'oid,** see *Lymph.* **C. of Malpig'hi,** corpora Malpighiana. **C., mar'ginal,** see *Marginal.* **C., med'ullary,** cells of marrow; odontoblast. **C. of Meiss'ner,** corpuscula tactûs. **C. of Miescher,** Rainey's bodies. **C., mi'gratory,** wandering cells; lymph-corpuscles. **C., milk,** oil-globules of that fluid. **C., mu'cous,** see *Mucus.* **C., mus'cular,** cell-like bodies in striated muscular tissue. **C., nerve,** see *Neurine.* **C. of Nor'ris,** hæmatoblast; colorless transparent bodies in the blood, probably red blood-corpuscles deprived of hæmoglobin. **C., nu'clear,** nucleolus. **C., os'seous,** see *Lacunæ of bone.* **C. of Pacchio'ni,** Pacchioni, glands of. **C., Pacin'ian,** from Pacini, an Italian physician, who first noticed them in 1830. They appear to have been depicted in 1741 by Lehmann, from a preparation by A. Vater, who called them Papillæ and P. nervæ; hence called Vaterian corpuscles or corpuscles of Vater. Small bodies connected with the cutaneous nerves of the palm and sole; found sparingly and inconstantly in nerves at the wrist and elbow, the upper arm, forearm, and thigh, and in the intercostal nerve, the sacral plexus, solar plexus, and the plexuses adjacent to it. In each corpuscle there is the termination of a nervous filament. **C., palpa'tion,** corpuscula tactûs. **C., plas'tic,** corpuscles, exudation. **C. of Purkin'je,** see *Canaliculus.* **C., pus** or **py'oid,** see *Pus.* **C., Rainey's,** see *Rainey.* **C. of Reiss'ner,** see *Reissner.* **C., sal'ivary,** globules in saliva like white corpuscles of blood. **C., sen'sual,** end-bulbs. **C., spleen** or **sple'nic,** corpuscles of Malpighi; see *Spleen.* **C., starch,** corpora amylacea. **C., tac'tile,** corpuscula tactûs. **C., ter'minal,** bodies which are terminal points of sensory nerves. **C., third,** see *Blood-globules.* **C. of thy'mus,** C., Hassall's. **C., touch,** corpuscula tactûs. **C. of Toyn'bee,** see *Corpuscles, corneal.* **C., transpa'rent, of Nor'ris,** hæmatoblast. **C. of Troltsch,** C. situate between fibres of layers of membrane of tympanum. **C. of Va'ter,** C., Pacinian. **C. of Vir'chow,** see *Corpuscles, corneal.* **C. of Wag'ner,** corpuscula tactûs. **C., Weber'ian,** uterus masculinus; see *Ejaculatory ducts.* **C., white,** see *Blood-globules.* **C., white, gran'ulated,** see *Globulin.* **C. of Zim'merman,** hæmatoblasts.

Corpuscula (pl. of **Corpusculum**) **Arantii,** kor'por-ah ar-an'she-e. Tubercula Arantii; see *Sigmoid valves.* **C. glandula'rum simil'ia intestino'rum,** Peyeri glandulæ. **C. globo'sa cervi'cis u'teri,** Nabothi glandulæ. **C. Laënnec'ii,** fibroid granulations occasionally observed on thickened portions of the pericardium. **C. Malpig'hii,** corpora Malpighiana. **C. os'sium,** see *Lacunæ of bone.* **C. san'guinis,** globules of blood. **C. sem'inis,** spermatozoa. **C. sesamoï'dea,** see *Sigmoid valves.* **C. tac'tûs,** tactile or touch corpuscle, corpuscles of Wagner or of Meissner, axile bodies; bodies composed of a horizontally laminated mass of areolar tissue, found in the papillæ of parts endowed with great tactile sensibility. Nerves of touch communicate with them, and their function is probably to render the sense more acute. **C. tritic'ea,** see *Hyoides os.* **C. Weberia'na,** see *Ejaculatory ducts.* **C. Wrisberg'ii,** cuneiform cartilages.

Corpuscular, kor-pus'ku-lar. Relating to or containing corpuscles or atoms.

Corpuscula'tion. Increase in dimensions and number of the blood-corpuscles.

Corpusculum, kor-pus'cu-lum (dim. of **Corpus,** body). Corpuscle. **C. Aran'tii,** see *Sigmoid valves.* **C. con'icum Rosenmüll'eri,** parovarium. **C. lac'tis,** milk-corpuscle. **C. lie'nis,** Malpighian corpuscle. **C. Malpighia'na** or **Malpig'hii,** Malpighian corpuscle. **C. Meissner'i,** tactile corpuscle. **C. Morgagn'i,** corpus Arantii. **C. os'seum,** bone-corpuscle. **C. ova'tum,** glomerule of kidney. **C. re'num,** Malpighian corpuscle. **C. san'guinis,** blood-corpuscle. **C. Santori'ni,** corniculum laryngis. **C. sem'inis,** spermatozoid. **C. sesamoï'deum,** see *Sigmoid valves.* **C. tritic'eum,** see *Thyreohyoid membrane.* **C. Weberia'num,** see *Ejaculatory ducts.* Uterus masculinus. **C. Wrisberg'ii,** see *Cuneiform cartilages of the larynx.*

Cor'rageen. Carrageen.

Corrago, kor-rah'go. Borago officinalis.

Corre, kor're (*keiro,* to shave). The temple; the hair.

Correction, kor-rek'shun (*corrigo,* to correct). Act of correcting medicines—that is, of diminishing their energy or obviating unpleasant effects—by mixing them with substances which modify their operation. Removing abnormal condition or deformity.

Correc'tive. Corrigent.

Corrector, kor-rek'tor. Corrigent.

Correlation, kor-rel-a'shun (*cor, refero, relatum,* to accomplish). Relation or dependence of one part on another. See *Synergy.*

Corresponding points. Points on the two retinas which coincide and are absolutely identical.

Corrigan's (kor'rig-an's) **cau'tery.** Button cautery. **C.'s disease,** insufficiency of the sigmoid valves of the aorta; after Dr. Corrigan, who described it. **C.'s pulse,** jerking or water-hammer pulse produced by aortic regurgitation.

Corrigeen (kor'rig-een) **moss.** Fucus crispus.

Corrigent, kor'ri-jent (same etymon as **Correction**). That which corrects; in a pharmaceutical formula a substance added to a medicine to mollify or modify its action, as oleum menthæ in the following formula:

℞.	Aloës,	ʒj.
	Olei menthæ,	gtt. v.
	Syrup, q. s. ut fiant pilulæ	xvj.

Corrigia, kor-rij'e-ah (*corium,* leather). Leathern straps; hence term for tendons and ligaments.

Corrobal, kor-ro-bal'. Curare.

Corroborant or **Corroborative,** kor-rob'or-a-tiv (*corroboro,* to strengthen). Restorative, bracing; substance which strengthens and gives tone. Tonic.

Corro'dent or **Corroding,** kor-ro'ding (*cor, rodo,* to gnaw). Corrosive.

Corrosion, kor-ro'zhun. Action or effect of corrosive substances.

Corrosive, kor-ro'siv. Substances which, when placed in contact with living parts, gradually disorganize them, as caustic alkalies, mineral acids, corrosive sublimate, etc. They act either directly, by chemically destroying the part, or indirectly, by causing inflammation and gangrene. **C. chlo'ride,** hydrargyri chloridum corrosivum. **C. poi'son,** see *Poison.* **C. sub'limate,** hydrargyri chloridum corrosivum.

Corroval, kor-ro-val'. Form of curare. A poisonous alkaloid called *corrovaline* has been procured from it.

Corrugatio, kor-ru-gah'she-o. Corrugation. **C. cu'tis,** wrinkle.

Corrugation, kor-ru-ga'shun (*cor, ruga,* wrinkle). Wrinkling, frowning. Contraction of the corrugatores supercilii muscles. Corrugation of the skin is often owing to the application of styptics.

Corrugator (kor-ru-gah'tor) **coite'rii** or **supercil'ii,** su-per-sil'e-e. Muscle situate in the eyebrows, attached by its inner extremity to the superciliary ridge, and confounded externally with the occipito-frontalis and orbicularis palpebrarum; it carries the eyebrow inward and wrinkles the skin of the forehead. **C. cu'tis a'ni,** dilator ani internus; termination of fibres of muscularis mucosæ of rectum. **C. glabel'læ,** C. supercilii. **C. la'bii inferio'ris,** part of depressor anguli oris from angle of the mouth, which puckers the lower lip. **C. posti'cus,** occipitalis transversus.

Corruption, kor-rup'shun (*corrumpo,* to destroy). Act of corrupting; state of being corrupted; state of puriform, putrid, or other breaking down of parts or humors; pus; abortion.

Cor'sa or **Cor'se.** Temporal region; hair.

Corse (*corpus*). Cadaver.

Corset (*corpus,* body). Article of dress closely embracing the trunk, and much used by females in civilized countries. When corsets or stays are worn very tight, serious evils result from the unnatural compression. Bandages or other close-fitting apparatus embracing the greater part of the chest and abdomen are also called corsets. An orthopedic corset is one

intended to obviate deviation of the stature or spinal deformity.

Cort (abbrev. for **Cortex**). Bark.

Cortex, kor′teks. Bark. Often applied exclusively to cinchona, but it means also any bark. **C. adstrin′gens Brasilien′sis**, astringent bark first introduced from Brazil into Germany; said to be obtained from Mimosa cochleacarpa or virginalis, but now referred to Stryphnodendron barbatimaô, barbatimaô. Used in all cases in which astringent barks are indicated. **C. alcornoco**, alcornoco bark. **C. ama′rus**, bark of Croton pseudo-china. **C. angustu′ræ**, cusparia bark. **C. ani′si stellat′i**, see *Illicium anisatum*. **C. antifebri′lis**, cinchona bark. **C. antiquart′ius**, cinchona bark. **C. antiscorbu′ticus**, Canella alba. **C. auran′tii**, see *Citrus aurantium*. **C. auran′tii ama′ri**, bitter orange-peel. **C. beberu** or **bibiru**, Nectandræ cortex. **C. benedic′tus**, bark of Guiacum officinale. **C. braye′ræ anthelmint′icæ**, see *Rottlera Schimperi*. **C. cabar′ro**, alcornoco bark. **C. canel′læ Malabar′icæ**, Laurus cassia. **C. cardina′lis del lugo**, cinchona. **C. caryophylla′tus**, see *Myrtus caryophyllata*. **C. caryophylloï′des**, Laurus culilawan. **C. cerebel′li**, the greater part of the gray substance of the cerebellum is on the surface or cortex. **C. cer′ebri**, cortical, cineritious, vesicular, or gray substance of the brain. Gray portion observed at the exterior of the cerebrum and cerebellum. The name cortical is likewise given to the external substance of the kidneys, because it is of a deeper color than the inner part of the organ, and forms a kind of envelope to it. **C. chabar′ro**, alcornoco bark. **C. chacaril′læ**, Croton cascarilla. **C. chi′næ**, cinchona. **C. chi′næ calisay′æ**, yellow cinchona. **C. chi′næ fla′vus** or **lu′teus**, yellow cinchona. **C. chi′næ ru′ber**, red cinchona. **C. cincho′næ**, cinchona bark. **C. c. flav′æ**, yellow cinchona. **C. c. fus′cus** or **pal′lidæ**, pale cinchona. **C. c. ru′ber**, red cinchona. **C. corno′va** or **coro′a**, bark of E. Indian plant; stomachic and febrifuge. **C. cor′ticis**, external part of cortical portion of kidney. **C. crass′ior**, Laurus cassia. **C. culilaban** or **culilawan**, Laurus culilawan. **C. den′tium**, enamel. **C. eleuthe′riæ**, Croton cascarilla. **C. febrif′ugus** or **febri′lis**, cinchona bark. **C. fla′vus**, yellow cinchona; Cinchonæ cordifoliæ cortex. **C. garou**, bark of Daphne mezereum. **C. of hair**, fibrous portion of shaft of hair. **C. hippocas′tani**, horse-chestnut bark. **C. Jesuit′icus**, cinchona. **C. lavo′la**, see *Illicium anisatum*. **C. Magellan′icus**, see *Wintera aromatica*. **C. malico′rii**, pomegranate rind. **C. Monspeli′acus**, C. garou. **C. muse′næ**, see *Rottlera Schimperi*. **C. nectan′dræ**, bebeeru bark. **C. oss′eus den′tis**, see *Tooth*. **C. o′vi**, cortical membrane; usually regarded as a uterine production, and designated decidua reflexa; see *Decidua membrana*. **C. pal′lidus**, pale bark; Cinchonæ lancifoliæ cortex; C. cinchonæ fuscus. **C. pa′trum**, cinchona. **C. Perua′nus** or **Peruvia′nus**, cinchona. **C. profu′vii**, Nerium antidysentericum. **C. re′gius**, Cinchonæ cordifoliæ cortex. **C. re′nis**, see *Kidney*. **C. ru′ber**, red cinchona bark; Cinchonæ oblongifoliæ cortex. **C. sapona′rius**, bark of Mimosa saponaria. **C. stria′tus den′tium**, enamel of the teeth. **C. thu′ris**, Croton cascarilla. **C. thyme′leæ**, mezereon. **C. ul′mi**, slippery-elm bark. **C. Wintera′nus**, Winter's bark. **C. Wintera′nus spu′rius**, Canella alba.

Corti (kor′te), **arch′es of.** See *Corti, organ of*. **C., canal′ of**, see *C., organ of*. **C., fi′bres of**, see *C., organ of*. **C., gan′glion of**, ganglion Cortii. **C., mem′brane of**, see *C., organ of*. **C., or′gan of** (after the Italian anatomist), peculiar and complicated arrangement in the cochlea, including various cellular and rod-like structures covered by the membrana tectoria or membrane of Corti, resting on the membrana basilaris or basilar membrane—lamina spiralis membranacea—and arranged like piano-forte keys. The fibres or rods or arches of Corti are attached to the margins of the inner zone of the basilar membrane; they meet like the beams of a roof, and from their junction a very delicate network extends, the lamina or membrana reticularis or velamentosa. Resting on the articulating ends of the inner rods is a row of ciliated cells, while three rows are placed external to the outer rods, attached by their pointed extremities to the membrana basilaris (cells of Corti). Alternating with the latter are the cells of Dieters, while epithelium cells cover the upper surface of the remaining portion of the basilar membrane. Rods and cells of Corti probably admit of movement on one another, and, from their intimate connection with the ganglionic nervous structure, doubtless play an important part in the perfection of audition. The part of the membranous labyrinth between the tectorial and basilar membranes is called *Canal of Corti*. Tunnel formed by arches of Corti and basilar membrane is called *Tunnel of Corti*. **C., rods of**, see *Corti, organ of*. **C., tun′nel of**, see *C., organ of*.

Cor′tical (*cortex*, bark). Belonging to the bark or cortex. **C. arch**, part of cortex of kidney passing from one cortical column to another. **C. ar′teries**, those distributed to cortical part of brain or spinal cord. **C. blind′ness**, blindness dependent on disease or injury of cortical part of brain. **C. cat′aract**, cataract dependent on opacity of cortex of crystalline lens. **C. col′umns**, processes of cortical substance of kidney, passing between the pyramids. **C. ep′ilepsy**, Jacksonian epilepsy. **C. mat′ter of brain**, cortex cerebri. **C. mem′brane**, cortex ovi. **C. paral′ysis**, paralysis from disease or injury of cortical portion of brain. **C. sub′stance of brain**, cortex cerebri. **C. s. of kid′ney**, see *Kidney*. **C. s. of teeth**, see *Tooth*.

Cortu′sa America′na (after Prof. J. A. Cortusi, botanist of Padua). Heuchera cortusa.

Coruscation, kor-us-ka′shun (*corusco*, to flash). Lightning as supposed cause of epilepsy; subjective sensation of light.

Corvisartia (kor-vis-ar′te-ah) **helen′ium** (after Corvisart, physician to Napoleon I.). Inula helenium.

Corybantiasm (kor-e-ban′te-asm) or **Coryban′tism** (from Corubas, one of the Corybantes). Name formerly given to frenzy or acute mania and convulsive movements in which the sick were tormented by fantastic visions and perpetual want of sleep.

Corydaline, kor-id′al-een. Alkaloid ($C_{18}H_{19}HO_4$) from Corydalis formosa and Corydalis tuberosa; tonic, diuretic, alterative, and antiperiodic.

Corydalis (kor-id′al-is) **bulbo′sa.** Fumaria bulbosa. **C. Canaden′sis**, Dicentra Canadensis. **C. ca′va**, Fumaria bulbosa. **C. formo′sa**, turkey corn or pea; the root of this indigenous plant is tonic, diuretic, and alterative. **C. tubero′sa**, Fumaria bulbosa.

Corylus (kor′il-us) (*korus*, helmet) or **C. avella′na.** Hazelnut tree, ord. Amentaceæ; the nut—filbert, hazelnut—of this tree is eaten in many countries; like all nuts, it is not easy of digestion. **C. rostra′ta**, beaked hazel; indigenous shrub; the short thick bristles have been given as an anthelmintic in the same cases and doses as mucuna.

Corymbose, kor′im-bōze (*korumbos*, cluster). Term used for cutaneous affections characterized by arrangement of eruption in groups or clusters.

Coryne, kor′in-e (club). Penis; point of elbow.

Coryphe, kor′if-a. Acme, vertex; nape of neck. **C. cor′dis**, base of heart; apex of heart; see *Mucra*.

Corys, kor′is. Vertex.

Coryza, kor-i′zah (*korus*, the head, *zeo*, to boil). Catarrh, nasal catarrh; vulgarly, running at the nose, cold in the head. Inflammation attended with increased discharge of the Schneiderian membrane lining the nose and the sinuses communicating with it; generally subsides without medical treatment. Chronic coryza is termed, also, ozæna benigna when accompanied by an offensive discharge. See *Ozæna*. **C. blennorrho′ica**, purulent coryza. **C. caseo′sa**, caseous matter in nasal passages. **C. enton′ica**, ozæna. **C., idiosyncrat′ic**, hay fever. **C. malig′na**, ozæna. **C. neonato′rum**, nasal catarrh or snuffles of newborn children. **C. ozæno′sa** or **purulen′ta**, ozæna. **C., period′ic**, hay fever. **C. scarlatino′sa**, morbid condition of the Schneiderian membrane in bad cases of scarlatina. **C. ulcero′sa** or **virulen′ta**, ozæna. **C. u′teri**, leucorrhœa. **C., va′so-mo′tor**, hay fever.

Coscina, kos-ce′nah. See *Cribration*.

Coscinism, kos'kin-ism (*koskinon*, a sieve). Cribration.

Cosmesis, kos-ma'sis. Use of cosmetics; method of improving and preserving natural beauty.

Cosmetics, kos-met'iks (*kosmeo*, to adorn). Art of improving the beauty, and different means employed for that purpose. All the compounds used, however—as zinc oxide, bismuth subnitrate, magnesia, etc.—injure the skin, and may give rise to unpleasant cutaneous affections. Frequent ablution with cold water and bathing are the best cosmetics. Cosmetics include essences, soaps, and all the preparations intended for the toilet.

Cosmetology, kos-met-ol'o-je (*kosmeo*, to adorn, *logos*, discourse). Treatise on dress and cleanliness of the body.

Cosmibue'na acumina'ta. Peruvian tree once supposed to be a source of cinchona. Cascarilla.

Cos'mic disease (worldly disease). Syphilis.

Cos'moline. See *Petrolatum*.

Cos'mos (the world). Order supposed to preside over critical days.

Cossa, kos'sah. Haunch; hip.

Cossin, kos'sin. Koussin.

Cos'sus or **Cossis,** kos'sis. Worm in intestines of horses. Small vermiform pimples on the face (acne), from inflammation of the sebaceous follicles.

Costa, kos'tah (*custodio*, to guard). Rib. The ribs are twenty-four in number, twelve on each side. They are irregular, long, bony curves, slightly flattened, and situate obliquely at the sides of the chest. Intervals between them are called intercostal spaces, and they are numbered first, second, third, etc., reckoning from above to below. They have been distinguished into costæ veræ or true ribs, and costæ spuriæ or false ribs. True or sternal ribs are the first seven, articulated at one extremity to the spine, and at the other by cartilages, hæmopophyses of Owen, to the sternum. The false, asternal, or short ribs are the remaining five, the uppermost three being united by cartilages to the cartilage of the last true rib. The others are free at their sternal extremity, and hence have been called floating ribs, costæ fluctuantes. The slightly expanded vertebral extremity of each rib is called the head of the rib, capitulum costæ; the space between this and the tubercle is the collum or neck. Anterior to the tubercle is the angle, angulus or cubitus costæ. The angle is the part where the bone bends to form the lateral part of the thorax.

Cos'tæ (gen. of **Costa**) **asterna'les** or **fal'sæ.** See *Costa*. **C. capit'ulum,** see *Costa*. **C. fluctuan'tes,** see *Costa*. **C. illegit'imæ,** false ribs. **C. legit'imæ,** true ribs. **C. mendo'sæ, no'thæ,** or **spu'riæ,** false ribs; see *Costa*. **C. sterna'les** or **ve'ræ,** see *Costa*. **C. vertebra'les,** floating ribs; see *Costa*. **C. ver'tebrospina'les,** sternal ribs; see *Costa*.

Costal, kos'tal. Appertaining or relating to a rib. **C. an'gle,** angle of rib. **C. arch,** curve made by the edges of inferior costal cartilages at the lower opening of the thorax. **C. car'tilages,** see *Costa*. **C. nerves,** intercostal nerves. **C. pleu'ra,** pleura lining ribs and spaces between. **C. respira'tion,** respiration effected by rising and falling of ribs.

Costalgia, kos-tal'je-ah (*costa*, rib, *algos*, pain). Pain over the ribs; intercostal neuralgia.

Costa'lis. Muscle attached to a rib. **C. dor'si,** iliocostalis dorsi.

Costatome, kos'tah-tome. See *Costotome*.

Costi-cervica'lis. Cervicalis ascendens.

Costi-costa'lis. Musculus accessorius ad sacrolumbalem.

Cos'tiform (rib-shaped) **apoph'ysis.** Anterior tubercle of transverse process of vertebra of neck.

Costi-spina'les. Levatores costarum.

Costive, kos'tiv. Constipated.

Costiveness, kos'tiv-nes. Constipation.

Cos'to (*costa*, rib). In composition, relating or appertaining to a rib.

Costo-abdominal, kos-to-ab-dom'in-al. Relating to rib and stomach. Obliquus externus abdominis.

Costo-acro'mio-clavicula'ris. Costo-deltoid.

Costo-articula'ris. Relating to rib and sternoclavicular articulation.

Costo-ax'illary veins. Branches from intercostal veins to axillary vein.

Costo-ba'si-scapula'ris. Serratus magnus.

Costo-cen'tral. Name given to articulations of ribs with bodies of vertebræ or to ligaments connected with them.

Costo-cer'vical ar'tery. Portion of superior intercostal artery.

Costo-cervica'lis. Occasional slip from sternothyroid muscle to cervical fascia.

Costo-chon'dral. Relating to ribs and cartilage of ribs.

Costo-clavicular, kos-to-klav-ik'u-lar. Belonging to ribs and clavicle, as **C. lig'ament,** cleidocostal or rhomboid ligament; fibrous, flattened fascia, extending obliquely from the cartilage of the first rib to the inferior surface of the clavicle. **C. line,** line from internal extremity of the clavicle to the tip of the eleventh costal cartilage.

Costo-clavicula'ris. Subclavius.

Costo-col'ic lig'ament. Phreno-colic ligament.

Costo-coracoid, kos-to-kor'ak-oid. Relating to ribs and coracoid process. **C. lig'ament,** inferior edge of C. membrane. **C. mem'brane,** see *Pectoralis minor*.

Costo-coracoïdeus, kos-to-kor-ak-o-e'de-us. Pectoralis minor.

Costo-del'toid. Muscular slip from axillary surface of scapula, joining with deltoid at its insertion on acromion, or inserted into the aponeurosis.

Costo-epitrochlea'ris. Occasional muscle from front of thorax to internal condyle of humerus.

Costo-fascia'lis cervica'lis. Costo-cervicalis.

Costo-humera'lis. Muscle generally fused with pectoralis major, arising from aponeurosis of external oblique muscle, variously inserted on the humerus or scapula. Also wandering slip of sterno-thyroid muscle from cartilage of first rib to hyoid bone.

Costo-hyoid, kos-to-hy'oid. Omo-hyoid muscle.

Cos'to-infe'rior. Term applied to respiration with lower ribs.

Costo-inter'nus. Lumbo-abdominalis.

Costo-lumba'lis. Relating to ribs and lumbar region.

Costo-pericar'dial lig'ament. Upper of two bands passing from pericardium to manubrium and ensiform process of sternum.

Costo-pleu'ral. Relating to ribs and pleura.

Costo-pleu'ro-ver'tebral. Relating to ribs, vertebræ, and pleura.

Costo-pu'bic mus'cle. Rectus abdominis.

Costo-pul'monary. Relating to ribs and lung.

Costo-scapula'ris. Serratus magnus.

Costo-spi'nal. Costo-central.

Costo-sternal, kos-to-stur'nal. Relating to the ribs and sternum, as articulation of the latter with the anterior extremity of the first seven ribs.

Costo-supe'rior. Term applied to respiration effected with upper ribs.

Costo-thorac'ic ar'tery. Long thoracic artery.

Costo-thy'roid mus'cle. Rare muscular slip from sterno-thyroid muscle, passing from cartilage of first rib to thyroid cartilage.

Cos'totome (*costa*, *tome*, incision). Instrument for cutting a rib; the operation being called *Costot'omy* or *Estlander's operation*.

Costo-trachelian, kos-to-trak-e'le-an. Relating to ribs and to the trachelian or transverse process of the neck. Anterior and posterior scaleni muscles.

Costo-transverse, kos-to-trans-verse'. Relating to the ribs and transverse processes, as articulation of the tuberosities of the ribs with the transverse processes of the spine, connected with which are C. ligaments.

Costo-vertebral, kos-to-vur'te-bral. Belonging to the ribs and vertebræ; articulation, that of the head of the ribs with the vertebræ, connected with which are C. or centro-vertebral ligaments.

Costo-xiphoid, kos-to-zi'foid. Ligament uniting

the cartilage of the seventh rib to the xiphoid or ensiform cartilage.

Costus, kos'tus. The ancients gave this name to several plants, C. Arabicus, C. Indicus, C. speciosus or amarus, C. dulcis or orientalis, Amomum hirsutum, Hellenia grandiflora, Banksia speciosa, Tsiana, the root of which is aromatic, tonic, carminative, diuretic, emmenagogue, etc. **C. ama'rus,** costus, Canella alba. **C. Arab'icus,** costus. **C. costico'sus,** Canella alba. **C. dul'cis,** bark of Canella alba. **C. horto'rum,** Tanacetum balsamita. **C. horto'rum mi'nor,** Achillea ageratum. **C. In'dicus,** costus. **C. ni'gra,** Cynara scolymus. **C. specio'sus,** costus. **C. spica'tus,** root is stimulant, diuretic, and diaphoretic.

Co'ta. Anthemis cotula.

Cotarnine, ko-tar'neen (word formed from letters of narcotine). Alkaloid, $C_{12}H_{13}NO_3$, formed by oxidation and decomposition of narcotine.

Co'tis. Occiput; nucha.

Co'to bark. Bark of E. Indian tree used in diarrhœa, cholera, and profuse sweating. Two principles, *cotoin* and *paracotoin*, have been obtained from it. Cotoin has been given in doses of half a grain in night-sweats and cholera.

Cotoin, ko'to-in. $C_{22}H_{18}O_6$. See *Coto bark.*

Cotonea, ko-to'ne-ah. Pyrus cydonia.

Cot'tage hos'pital. See *Hospital.*

Cot'ton (Arab. *kutn* or *kutun*). Gossypium. **C., absorb'ent,** see *Gossypium.* **C., hemostat'ic,** absorbent cotton saturated with astringent solutions, as Monsel's, or with alum, ferric chloride, etc. **C. phthi'sis,** see *Phthisis, cotton.* **C. pneumo'nia,** see *Phthisis, cotton.* **C. root,** see *Gossypium.* **C. seed,** see *Gossypium.* **C. seed oil,** fixed oil from seed of Gossypium herbaceum and other species; used in liniments and to adulterate sweet oil. **C. wool,** absorbent cotton; see *Gossypium.*

Cot'ula (*kotule,* cup). Anthemis cotula. **C. fœt'ida,** Anthemis cotula. **C. multif'ida,** S. African plant, used in rheumatism, scalds, and cutaneous diseases.

Cotunnius (ko-tun'ne-us), **aq'ueduct of.** A. of vestibule. **C., liq'uor of,** perilymph; transparent, slightly viscid fluid surrounding the membranous labyrinth, and of which Cotugno made mention. **C., nerve of,** naso-palatine nerve. **C., wa'ter of,** C., liquor of.

Cotyle or **Cotyla,** kot'il-ah. Acetabulum; hollow cavity of a bone receiving the head of another bone, and particularly the cotyloid cavity; hollow of the hand.

Cotyledon, kot-il-e'don. Cotyle. **C. mari'na,** Umbilicus marinus. **C. orbicula'ta,** plant of S. Africa; fresh juice is used in epilepsy; leaves form a good application to hard corns. **C-s, placen'tal,** lobes which, by their union, form the placenta. **C. umbili'cus** or **u. ven'eris,** *Pennywort, Navelwort, Venus's navelwort;* plant growing in Europe on old walls and rocks; leaves are emollient, and are applied externally to piles, inflamed parts, etc.; internally the juice has been given in epilepsy; the flowers in calculous cases and dropsy. **C-s, u'terine,** tubercular projections of mucous membrane of uterus in some animals.

Cot'ylis. Acetabulum.

Cotyloid, kot'il-oid (*kotule,* drinking cup, *eidos,* form). Relating to the acetabulum. Hemispherical cavity in the os innominatum, which receives the head of the os femoris; variously called *fossa cotyloidea, sinus coxæ, acetabulum, a. cotyle, pyxis;* notch on the inner side of this cavity. **C. bone,** acetabular bone. **C. cav'ity,** acetabulum. See *Cotyloid.* **C. lig'ament,** very thick fibro-cartilaginous ring surrounding the cotyloid cavity, the depth of which it increases. **C. mar'gin,** margin of cotyloid cavity. **C. notch,** depression in margin of acetabulum for passage of vessels and nerves to the joint.

Cotylo-pu'bic. Relating to acetabulum and pubis. **C. arch,** pubic arch.

Cotylo-sa'cral. Relating to acetabulum and sacrum. **C. arch,** arch above and back of acetabulum.

Cotylus, kot'il-us. Cotyle.

Couch or **Couch'grass.** Triticum repens.

Couch'ing. Operation of depressing the lens in cataract in the vitreous humor, and allowing it to undergo absorption there. See *Cataract.*

Couch'wheat. Triticum repens.

Coucin'ea coccin'ea. Cacoucia coccinea.

Cough (D. *kuch*). Tussis. **C., bronch'ial,** C., tubal. **C. cen'tre,** see *Centre.* **C., chin,** whooping cough. **C., dry,** cough without expectoration. **C., ear,** see *Ear.* **C., hoop'ing,** pertussis. **C., hu'mid,** mucous cough. **C., hyster'ical** or **ner'vous,** see *Hysteria* and *Asthma thymicum.* **C., larynge'al,** C. from irritation of larynx. **C., mu'cous,** C. with copious expectoration of mucus. **C., re'flex,** C. caused by some irritation external or beyond respiratory passages. **C. root,** Trillium latifolium. **C., spasmod'ic,** asthma thymicum. **C., tooth,** reflex cough from dental irritation. **C., trigem'inal,** form of continuous and violent sneezing, coughing, etc. due to reflex action of trigeminal nerve, induced by irritation in nose, pharynx, or ears. **C., tu'bal,** bronchial cough; cough in which the succussion communicated by it to the parietes of the chest is very energetic, and a sensation is experienced by the ear as if a column of air were traversing tubes with solid walls, with much noise, strength, and rapidity. **C., u'terine,** C. induced by disease of uterus. **C., va'gus,** C. from irritation of vagus nerve. **C., whoop'ing,** pertussis. **C., win'ter,** C. from chronic bronchitis, occurring in winter.

Coughing, kawf'ing. Tussis.

Coughwort, kawf'wurt. Tussilago.

Cou'lomb (after French electrician). Unit of electrical quantity produced by force of one volt operating for one second against one ohm of resistance; in static electricity, unit determined by charge developed in Leyden jar having capacity of one farad by one volt of force.

Coulomb'meter. Galvanometer to measure quantity of electricity.

Cou'marin. Odorous principle of tonka bean.

Coumarouna (koo-mar-oo'nah) **odora'ta.** Dipterix odorata.

Countenance, kown'ten-ance (*cum, teneo,* to hold). Visage; form of the face; system of the features.

Counter-bane, kown'tur-bane. Antidote.

Counter-extension, kown-tur-eks-ten'shun (*contra-extendo,* to extend in a contrary direction). This consists in retaining firmly and immovably the upper part of a limb, while extension is practised on the lower, in fractures or luxations.

Counter-fissure, kown'tur-fish-ure. Contrafissura.

Counter-indication, kown-tur-in-dik-a'shun. Indication contrary to another; any circumstance acting as obstacle to the employment of such therapeutical means as seem to be indicated by other circumstances.

Counter-ir'ritant. See *Counter-irritation.* **C.-i., Gran'ville's** (lotion), Granville's counter-irritant.

Counter-irritation, kown-tur-ir-ri-ta'shun. Irritation excited in one part of the body, with the view of relieving one existing in another part; remedies so used are called counter-irritants. See *Derivation.*

Counter-o'pening. Contra-apertura.

Counter-poison, kown-tur-poi'zun. Antidote.

Counter-pressure, kown'ter-presh-ure. Pressure to accomplish a certain result by force applied to opposite ponits. **C.-p. hook, Mun'de's.** See *Hook.*

Coun'ter-stroke. Contrecoup; contrafissura.

Count'ess's pow'der. Powdered cinchona bark.

Coun'try fe'ver. Malarial fever.

Coup de soleil, koo der sol-ale' (F.). Sunstroke, stroke of the sun, insolation, Egyptian starstroke or sunstroke. Affection produced by the action of the sun on some region of the body, as head, hands, arms, etc.; insolation. The presumed effect of exposing the naked head to the sun is inflammation of the brain or its meninges. It is called thermic fever, heat or solar asphyxia, heatstroke, solar exhaustion, heat apoplexy. The morbid phenomena observable after death are generally those of nervous exhaustion, neuroparalysis. Like effects have also been ascribed to the moon, selenoplexia, selenoplege, moonstroke; and to the stars, starstroke.

Couple. Pair, as of elements of a galvanic cell.

Courap. Distemper common in India, in which there is a perpetual itching and herpetic eruption on the axilla, groins, breast, and face.

Courondi or **Courondo,** koo-ron'do. Evergreen tree of Malabar, juice of which, mixed with warm whey, is used in dysentery.

Couros, koo'ros. Human fœtus at full term.

Couroupita Guianensis, koo-roo-pe'tah gi-an-en'sis. Cannon-ball tree of Guiana; decoction made from the fruit is given as an enema in chronic diarrhœa.

Courses. Menses.

Court plas'ter. Isinglass plaster on silk or other fine material.

Cousso, koos'so. Hagenia Abyssinica.

Couta'rea specio'sa. Species of Guiana; tonic, antiperiodic, and laxative.

Coutoubea (koo-too'be-ah) **al'ba** or **spica'ta.** Plant of Guiana; very bitter, tonic, emmenagogue, anthelmintic, antidyspeptic, and antipyretic.

Couvage, koo-vazhe (F.). Incubation; preservation and rearing of a child in a couveuse.

Couveuse (F.). Incubator for ill-developed or prematurely born children.

Cov'er. Operculum.

Cov'er-shame. Juniperus sabina; so called because employed to produce abortion.

Covolam, ko'vo-lam. *Bengal quince, Bael, Bela;* bark of this E. Indian tree is tonic; the unripe fruit astringent, used in diarrhœa and dysentery. See *Extractum belæ liquidum.*

Cow'age. Cowhage.

Cowa'nia Stansburia'na (after James Cowan, English merchant and botanist, and Captain Stansbury, U. S. Army). Plant growing in vicinity of Salt Lake; general astringent and local styptic.

Cow'bane. Cicuta aquatica. **C., spot'ted,** Cicuta maculata.

Cow bas'il. Vaccaria vulgaris.

Cow'bean. Cicuta virosa.

Cow'berry. Vaccinium vitis idæa.

Cow'cumber. Cucumis sativus.

Cow'flop. Digitalis purpurea.

Cow'hage or **Cow'itch.** Dolichos pruriens.

Cow'lick. Tuft of hair on the head, pressed out of place, and seeming as if it had been licked by a cow; causing pain when pressed into its natural position.

Cowmum'ble. Anthriscus sylvestris; Heracleum spondylium.

Cow-pars'nep. Heracleum.

Cowpe'rian cysts. Nabothi glandulæ.

Cowperitis, kow-per-e'tis. Literally, inflammation of Cowper, but a badly contrived word to denote inflammation of Cowper's glands.

Cow'per's glands. *Accessory glands, Bulbo-cavernous glands, Glands of Méry;* two small ovoid groups of mucous, reddish follicles, situate behind the bulb of the urethra, before the prostate, the excretory ducts of which open into the bulbous portion of the urethra. The terms anterior prostate and anteprostatic glands are sometimes given to them, but usually they are applied to a third glandular body, occasionally found in front of, and between, Cowper's glands. **C. glands in the fe'male,** *Glands of Duverney* or *of Bartholin;* these are situate at each side of the entrance of the vagina, beneath the skin covering the posterior or inferior part of the labia; they are rounded, but elongated, flat, and bean-shaped. They are not invariably present. The secretion from them is a thick, tenacious, grayish-white fluid, emitted in quantity during sexual intercourse; probably the fluid supposed, of old, to be female sperm.

Cow'pock or **Cow'pox.** Vaccina. **C. inocula'tion,** vaccination. **C. itch,** see *Itch, cowpox.* **C. ves'icle,** see *Vaccination.*

Cow's mouth or **Cow'slop.** Primula veris. **C.'s wort,** Pedicularis palustris.

Cow'slick. Bryonia dioica.

Cow'slip. Caltha palustris, Primula veris. **C., Jeru'salem,** pulmonaria.

Cowstrip'ling or **Cowstrop'ple.** Primula veris.

Cowth'wort. Matricaria; Leonurus cardiaca.

Cow'tree, Ceylon'. Gymneura lactiferum. **C. of S. Amer'ica,** Galactodendron utile.

Cow'weed. Chærophyllum sylvestre; Anthriscus sylvestris.

Cow'wort. Geum urbanum.

Cox'a. Haunch, hip, or hip-joint; coccyx; optic thalamus.

Coxæluvium, koks-e-lu've-um (*coxa, luo,* to wash). Hip-bath.

Coxag'ma (*coxa, agma,* fracture). Fracture of the hip.

Coxagra, koks'ag-rah (*coxa, agra,* seizure). Pain in hip; sciatica; hip-joint disease; femoro-popliteal neuralgia.

Cox'al. Relating to the hip. **C. bone,** ilium.

Coxalgia, koks-al'je-ah (*coxa, algos,* pain). Word of hybrid origin. Pain in the hip; sign of rheumatic or other inflammation—coxitis—or of some disease about the hip-joint; hip-joint disease. See *Neuralgia femoro-poplitæa* and *Coxarum morbus.*

Coxankylom'eter (*coxa, ankule,* adhesion, *metron,* measure). Instrument to measure amount of deformity of hip-joint.

Coxarthritis, koks-ar-thre'tis (*coxa, arthritis,* inflammation of joint). Inflammation of hip-joint.

Coxarthrocace, koks-ar-throk'as-e (*coxa, arthron,* joint, *kakos,* evil). Fungous inflammation of hip-joint; coxarum morbus.

Coxarthropathy, koks-ar-throp'ath-e (*coxa, arthron,* joint, *pathos,* disease). Coxarum morbus.

Coxa'rum mor'bus. Coxalgia (of some), hip disease; scrofulous caries, and often spontaneous luxation of the head of the os femoris, occasioning permanent shortening of the limb, and not unfrequently hectic and death—*Ischiophthisis.* In advanced life another form of chronic hip disease sometimes occurs, often attended with osseous protuberances, known as morbus coxæ senilis, a variety of chronic osteo-arthritis.

Coxendix, koks-en'diks. Haunch; ischium; ilia.

Coxe's hive syrup. Syrupus scillæ compositus.

Coxitis, koks-e'tis. Inflammation of the hip-joint. **C. cotyloï'dea,** hip-joint inflammation, involving especially the acetabulum. **C., se'nile,** rheumatoid affection of hip-joint in old persons.

Coxocace, koks-ok'as-e. Coxarum morbus.

Coxodyn'ia (*coxa, odune,* pain). Coxalgia.

coxal bone or ilium and to the os femoris; ilio-femoral

Coxo-femoral, koks-o-fem'or-al. Belonging to the has the same signification. **C. articula'tion,** ilio-femoral a.; hip-joint. The head of the femur and the articular cavity are covered by a diarthrodial cartilage and synovial capsule, and by a very strong capsular or articular ligament attached to the circumference of the cotyloid cavity, and to the neck of the femur. The round or interarticular ligament also passes from the inferior notch of the cotyloid cavity to the rough depression at the top of the caput femoris; and the cotyloid ligament, a thick, cartilaginous ring, is situate on the edge of the cotyloid cavity, converting the inferior notch into a foramen.

Crab. Class Crustacea. Shell-fish used as article of diet; like other shell-fish, it is apt to disagree and excite urticaria, etc.

Crab'louse. Pediculus pubis.

Crabs' claws, eyes, or **stones.** Abrus precatorius; cancrorum chelæ.

Crab'yaws. In the W. Indies, ulcer on the soles of the feet, with edges so hard that they are difficult to cut.

Cracked-pot sound. Bruit de pot félé.

Crackling, krak'ling (onomatopœia). Crepitant, crepitation, or crepitus.

Cradina, krad-e'nah. Ferment from juice of the common fig-tree; yellow mass, with action similar to that of pepsin and papain.

Cradle, kra'd'l. Semicircle of thin wood, or strips of wood, to prevent contact of bed-clothes in wounds, fractures, etc. **C. cap,** seborrhœal incrustations on heads of young children.

Cræpale, kre'pal-a (*kara,* the head, *pallo,* to agitate).

Derangement of the functions of the brain, etc., produced by wine or other fermented liquor, or by excessive eating.

Cræpalia temulenta, kre-pal'e-ah tem-u-len'tah. Lolium temulentum.

Crambe, kram'be. Cabbage. **C. marit'imi,** see *Kale.*

Crameria, kram-e're-ah. Krameria.

Cramp (G. *krampfen,* to contract). Sudden, involuntary, and highly painful contraction of a muscle or muscles; most frequently experienced in the lower extremities, and a common symptom of certain affections, as of colica pictonum and cholera morbus. Friction and compression of the limb by a ligature applied around it above the muscles affected will usually remove the spasm. **C., auctioneer''s,** analogous cramp to that of writers, except that the orbicularis oris muscle is affected. **C. bark,** bark of Viburnum opulus. **C. bone,** patella of sheep. **C., cigar'maker's,** see *Cramp, writer's.* **C., coach'man's,** see *C., writer's.* **C., compos'itor's,** see *C., writer's.* **C., dan'cer's,** see *C., writer's.* **C., glass'blower's,** see *C., writer's.* **C., milk'ing,** see *C., writer's.* **C., musi'cian's,** see *C., writer's.* **C., pian'ist's,** see *C., writer's.* **C. rings,** rings, solemnly consecrated, given out by English kings of old for the prevention or cure of cramp, blessed by them on Good Fridays, which were worn in full belief of their sanative powers, a decided impression being thus made on the nervous system. **C., scriv'ener's,** cramp, writer's. **C., semp'stress's,** palsy, sempstress's; see *C., writer's.* **C., shoe'maker's,** see *C., writer's.* **C. of the stom'ach,** sudden, violent, and most painful affection of the stomach, with sense of constriction in the epigastrium; effect of the spasmodic contraction of the muscular coat of the stomach, and requiring the use of the most powerful stimulants and antispasmodics, of which opium is the best. **C. stone,** stone carried as preventive of cramp. **C., wri'ter's,** *Scrivener's cramp* or *paralysis, Scribe palsy, Pen palsy, Stammering of the fingers;* a functional spasm of the fingers, in which they are unable to hold the pen, or in which one or more muscles of the fingers are irregularly and irresistibly contracted. A similar condition of the nerves and muscles concerned is seen in shoemaker's cramp, milking cramp, musician's cramp, cigarmaker's cramp, coachman's cramp, dancer's cramp, glassblower's cramp, pianist's cramp, compositor's cramp, and sempstress's cramp.

Cranberry, kran'ber-re. Vaccinium oxycoccos. **C., Al'pine,** Vaccinium vitis idæa. **C., Amer'ican, com'mon,** see *Vaccinium oxycoccos.* **C., up'land,** Arbutus uva ursi.

Crane's bill. Geranium. **C. b., spot'ted,** Geranium maculatum. **C. b., stink'ing,** Geranium Robertianum.

Craniacromial, kra-ne-ak-ro'me-al Relating to the skull and shoulder.

Craniæmatoma, kran-e-e-mat-o'mah. Cephalæmatoma.

Cranial, kra'ne-al. Relating to the cranium. **C. flex'ures,** curving of medullary tube on itself in early embryonic life, by which the primary vesicles are displaced and the future head commences its development. Flexures of the brain. **C. fos'sæ,** fossæ of the skull. **C. re'flex,** see *Reflex.* **C. si'nuses,** sinuses of the dura mater. **C. su'tures,** see *Sutures.*

Craniectomy, kra-ne-ek'to-me (*cranium, ektome,* excision). Excision of a strip of skull in young children for the condition of microcephalia, hyperostosis, or hydrocephalus.

Cranio, kra'ne-o. In composition, the cranium.

Cranio-abdominal, kra'ne-o-ab-dom'in-al. Relating to cranium and abdomen.

Cra'niocele (*cranio, kele,* tumor). Encephalocele.

Craniocerebral, kra-ne-o-ser'e-bral. Relating to the skull and brain in common.

Craniocervical, kra-ne-o-sur'vik-al. Relating to cranium and cervical region.

Cranioc'lasis or **Cranioclasm,** kra'ne-o-klasm (*cranio, klao,* to break). Breaking up of the child's head, as by the craniotomy forceps.

Cranioclast, kra'ne-o-klast (same etymon). Instrument for crushing the head of the fœtus, *Cranioclasty.*

Craniodi'aclast. Cranioclast.

Craniodidymus, kran-e-o-did'im-us (*didumos,* double). Cephalopagus; monstrosity with two heads.

Craniofa'cial, Relating to the cranium and face.

Craniograph, kra'ne-o-graf (*grapho,* to describe). Apparatus for graphic outlining of the skull, *Craniography* or *Cephalology.*

Craniohæmatoncus, kran-e-o-he-mat-on'kus (*cranio, haima,* blood, *onkos,* swelling). Cephalæmatoma.

Craniolabis, kran-e-ol'ab-is (*labis,* forceps). Obstetrical forceps.

Craniolaria annua, kran-e-o-lah're-ah an'u-ah. A tropical plant, root of which is a bitter tonic.

Craniolingual, kra-ne-o-lin'gwal. Relating to the cranium and tongue.

Craniol'ogy (*cranio, logos,* description). *Cranioscopy, Craniomancy, Phrenology.* Description or simply an examination of the different parts of the external surface of the cranium, to deduce from it a knowledge of the different intellectual and moral dispositions. The cranium being moulded to the brain, there are as many prominences on the bone as there are projections at the surface of the brain. According to Gall, each projection, which he calls an organ, is the seat of a particular intellectual or moral faculty, and all persons endowed with the same faculty have, at the same part of the brain, a prominence, indicated externally by a bump or projection in the bony case.

Craniomalacia, kran-e-o-mal-ah'se-ah (*cranio, malakia,* softness). Softening and thinning of cranial bones, especially occipital bone, from pressure, often due to rickets; craniotabes.

Craniomancy, kra'ne-o-man-se (*cranio, manteia,* divination). Divination by means of the cranium.

Craniomandibular, kra-ne-o-man-dib'u-lar. Relating to cranium and inferior maxillary bone.

Craniometry, kra-ne-om'et-re (*cranio, metron,* measure). Measurement of the skull; a compass used for this purpose is called a *Craniometer* or *Cephalometer.* See *Index.*

Cranion, kran'e-on. Craniology.

Craniopagus, kran-e-op'ag-us. Cephalopagus.

Craniopathy, kra-ne-op'ath-e (*cranio, pathos,* disease). Disease of the cranium.

Craniopharyngeus, kran-e-o-far-in-je'us. Relating to cranium and pharynx.

Craniophore, kra'ne-o-fore (*cranio, phoreo,* to bear). Apparatus for holding a skull in proper position for study of it.

Cranioplasty, kra'ne-o-plas-te (*cranio, plasso,* to form). Operation for the restoration of the soft parts and bones of the cranium.

Cranioscepsis, kran-e-o-skep'sis (*skepsis,* inspection). Cranioscopy.

Cranioschisis, kran-e-os'kis-is (*schisis,* fissure). Congenital fissure of the skull similar to spina bifida.

Craniosclerosis, kran-e-o-skler-o'sis. Induration and enlargement of bones of skull.

Cranioscopy, kra-ne-os'ko-pe (*cranio, skopeo,* to view). Craniology.

Craniospinal, kra-ne-o-spi'nal. Cephalo-spinal. **C. ax'is,** see *Encephalon.*

Craniostegno'sis or **Craniosteno'sis** (*cranio, stenos,* narrow). Contraction of the skull. See *Microcephalus.*

Craniostosis, kran-e-os-to'sis (*cranio, osteon,* bone). Early ossification of sutures of the skull.

Cra'niostyle (*stulos,* column). Cartilage of septum of nose.

Craniotabes, kran-e-ot'ab-ees (*cranio, tabes,* wasting). Craniomalacia.

Craniotome, kra'ne-o-tome (*cranio, tome,* incision). Instrument used in craniotomy; trephine.

Craniotomy, kra-ne-ot'om-e. Operation of opening the fœtal head in parturition. **C. for'ceps,** instrument resembling the lithotomy forceps for laying hold of and breaking down the bones of the fœtal head in parturition.

Craniotractor, kra-ne-o-trak'tor (*cranio*, *traho*, to draw). Cranioclast used for traction.

Craniotripsotome, kra-ne-o-trip'so-tome (*cranio*, *tribo*, to crush, *tome*, incision). Cranioclast arranged as trephine perforator.

Craniotrypesis, kran-e-o-tryp-a'sis (*cranio*, *trupao*, to perforate). Trephining.

Cranio-vertebral, kra-ne-o-vur'te-bral. Cephalospinal; cephalo-rhachidian.

Cranitis, kran-e'tis. Inflammation of the cranial bones.

Cranium, kran'e-um (*kranon*, head). Brain-pan; the skull. Collection of bones forming the case for lodging the brain and its membranes, as well as their vessels and some of the nerves. These bones are eight in number—the frontal, occipital, two parietal, two temporal, the sphenoid, and ethmoid. There might also be considered as belonging to the cranium the cornua sphenoidalia, the bones of the ear, and the ossa Wormiana. Primitive forms of the skull are sometimes described according to the width of the bregma or spaces between the parietal bones: *stenobregmate* (*stenos*, narrow) or Ethiopian variety; *mesobregmate* (*mesos*, middle) or Caucasian variety; and *platybregmate* (*platus*, broad) or Mongolian variety. **C., cartilag'inous**, chondrocranium. **C., mem'branous**, C. of embryo before the period of ossification.

Cranology, kra-nol'o-je. Craniology.

Cranomancy, kra'no-man-se (*kranon*, head, *manteia*, divination). Art of divining, from the inspection of the head or cranium, the moral dispositions and inclinations of individuals.

Cranon, kran'on. Cranium; cornus mascula.

Cran'ter (*kraino*, to finish). Wisdom tooth.

Cranum, kran'um. Cranium.

Crap'ula or **Crapulence**, krap'u-lence. Cræpale.

Crapulous, krap'u-lus. Produced by, or indulging in, excessive use of alcoholic drinks; crackling sound heard on auscultation, as in tuberculosis of the lungs.

Craquement de cuir neuf (F.). Sound like new leather, heard on auscultation when the pericardium is thickened with plastic deposits.

Cra'sis. Mixture of the constituents of a fluid, as blood, humors, etc.; constitution, temperament, etc.

Craspedon, kras'pa-don. Staphylœdema.

Cras'sa (thick, *membrana* understood). Sclerotica; decidua reflexa.

Crassa'men or **Crassamentum**, kras-sam-en'tum (*crassus*, thick). Thick part or deposit of any fluid; particularly applied to clot of blood. **C. san'guinis**, see *Blood*.

Cras'sitas, **Crassit'ies**, or **Crassitudo**, kras-sit-u'do (*crassus*, thick). Thickening, as of the valves of the heart; corpulence.

Crassula (dim. of **Crassus**, thick), kras'su-lah. Sedium telephium. **C. arbores'cens**, see *Cotyledon orbiculata*. **C. ma'jor**, sedum. **C. tetrago'na**, S. African succulent plant, somewhat astringent. Boiled in milk it is used in diarrhœa.

Cras'sum (thick, *intestinum* understood). Colon.

Cras'sus (thick). Corpulent; full; turgid; term applied to the pulse.

Cratægus aria, krat-e'gus ar'e-a. White bean tree; fruit of size of small pear, slightly astringent, employed in diarrhœa.

Cratæva marmelos, krat-e'vah mar'mel-os. Plant of Society Islands, etc.; leaves are diuretic and tonic; root is alterative. **C. nerv'ula**, same habitat; leaves are aromatic, stomachic, and diuretic; root is alterative; bark is used externally in rheumatism. Covolam.

Craterauchen, krat-er-awk'en (*krateros*, strong, *auchen*, neck). One with a strong neck; strong neck itself.

Craticula, krat-ik'u-lah. Omentum.

Cravat' (said to be derived from regiment of Croats in the service of France in the 17th century). Form of necktie or neck-cloth; name given to different bandages or slings, as carpocervical c., carpo-olecranial c., etc. **C., Swiss** (from fancied resemblance), band of the longitudinal or superficial layer of the muscular fibres of the stomach, along the lesser curvature.

Craw. Crop of fowl. Ranunculus bulbosus.

Crawcraw. Species of itch or parasitic disease common on the African coast.

Crawcrow'foot or **Craw'foot.** Ranunculus.

Craw'feet. Scilla nutans; Orchis mascula.

Crayon, kra'yon. Pencil or stick with which caustics, astringents, etc., as nitrate of silver, sulphate of copper, tannic acid, or iodoform, may be locally applied.

Cra'ziness. Insanity.

Crazolaryngis'mus (*krazo*, to crow). Laryngismus stridulus.

Cra'zy (F. *écrasé*, crushed). Insane. Ranunculus. **C. bone**, funny bone.

Crea, kra'ah. Shin.

Cream. Thick, unctuous matter of a yellowish-white color and sweet, agreeable taste, which rises to the surface of milk if kept at rest. It constitutes about 15 per cent. of the milk, and is composed of butter, serum, and casein. **C., cold**, ceratum Galeni, unguentum aquæ rosæ. **C. of tar'tar**, potassii supertartras. Adansonia Gregorii. **C. whey**, beverage made by adding two teaspoonfuls of cream of tartar to a pint of milk.

Cre'as. Flesh.

Creasol, kre'as-ol. $C_8H_{10}O_2$. Phenol from wood-tar creasote.

Creasote, kre'as-ote (*kreas*, flesh, *soter*, preserver). Creasotum (Ph. U. S. and Br.). Colorless, oily, neutral liquid, of a strong, characteristic, penetrating odor and acrid, burning taste, obtained from wood-tar by distillation; transparent, freely soluble in alcohol and acetic acid; s. g. 1.035–1.085, Ph. U. S. (1.071, Ph. Br.). It coagulates albumin, whence its hæmostatic power, and is a powerful antiseptic. It has been largely administered in hemorrhages, both internally and externally, and as an external application in burns, ulcers, especially those of a sloughing character, fetid discharges, diphtheria, etc., and chronic cutaneous affections. Internally, it is a sedative in small doses; it has been administered in pulmonary phthisis, vomiting, cholera morbus, diarrhœa, typhoid fever, fermentative diseases of the stomach and bowels, diabetes mellitus, nervous diseases, chronic glanders, etc. In overdoses it is a violent poison. Dose internally is one or two drops; externally, it is sometimes applied pure, at others diluted, and commonly with water (fʒss to fʒvj), or in the form of ointment (fʒss to ʒj of cerate). *Aqua creasoti* (Ph. U. S.), creasote-water, is made of creasote 1 part, distilled water 99 parts. **C., coal-tar** or **min'eral**, heavy oil of coal-tar, containing carbolic acid; sometimes used as substitute for creasote; carbolic acid. **C. plant**, Laurea Mexicana. **C. water**, aqua creasoti; see *Creasote*. **C., wood** or **wood-tar**, creasote.

Creasotum, kre-as-o'tum. Creasote.

Creatine, kre'at-in (*kreas*, flesh). $C_4H_9N_3O_2$. Nitrogenized crystallizable alkaloid obtained from muscular tissue of man and other animals. By the action of strong acids creatine is converted into creatinin or kreatinin ($C_4H_7N_3O$), a substance having a strong alkaline reaction and forming crystallizable salts with acids. It pre-exists to a small extent in the juice of flesh and in conjunction with creatin in urine.

Creat'inin. $C_4H_7N_3O$. See *Creatin*.

Creatophagus, kra-at-of'ag-us (*kreas*, flesh, *phago*, to eat). Carnivorous.

Creatozo'ma or **Creazoma**, kra-az-o'mah (*kreas*, flesh, *zomos*, broth). Meat broth.

Créde's (kra'de's) **meth'od.** Assistance rendered the uterus to expel the placenta, consisting in seizing that organ between the fingers and thumb through the abdominal walls, thus producing expulsion of the after-birth.

Creep'er, trum'pet. Tecoma radicans. **C., Virgin'ia**, Ampelopsis quinquefolia, Tecoma radicans.

Creep'ing sick'ness. Ergotism.

Crem'asis or **Cremasmus**, krem-az'mus. Suspension,

Cremaster, kre-mas'ter (*kremao*, to suspend). The spermatic cord, or all the parts by which the testicle is, as it were, suspended, formerly received this name; but its meaning is now limited to a very thin muscular fascia, sometimes hardly perceptible, which detaches itself from the internal oblique muscle, passes through the abdominal ring, and vanishes around the tunica vaginalis; serving to draw up the testicle and to move it slightly. Suspensory muscle of the testicle; in the fœtus the gubernaculum testis. **C. re'flex**, see *Tendon, reflex*, and *Cremasteric*.

Cremaster'ic. Appertaining or relating to the cremaster. **C. ar'tery**, branch of the epigastric artery; corresponding artery in female supplies the labia majora. **C. re'flex**, retraction of testicle from irritating integument of the thigh at its upper and inner part.

Cremastes, krem-as'tes. Cremaster.

Crema'tion (*cremo*, to burn). Reduction to ashes by intense heat; method of disposing of a dead body in a furnace or room arranged with this object—*Crematory* or *Crematorium*. Also similar disposal of garbage.

Crem'atory. See *Cremation*.

Cre'mer. Disease frequent in Hungary, produced by excess in eating and drinking.

Cremnocele, krem-no-se'le (Eng. krem'no-seel) (*cremnos*, steep bank, *kele*, rupture). Hernia of labia pudendi.

Crem'noi (pl. of **Cremnos**, steep bank). Lips of an ulcer; labia pudendi.

Cremnoncus, krem-non'kus (*cremnoi, onkos*, tumor). Swelling of labia pudendi.

Crem'nos or **Crem'nus.** Labium pudendi. Prominent edges of an ulcer.

Cre'mor. Cream. **C. frig'idus**, cold cream. **C. lac'tis**, cream. **C. tar'tari**, potassii supertartras. **C. uri'næ**, pellicle on urine; see *Urine*.

Cre'na (notch) or **Crenatura**, kren-at-u'rah. In plural, the small teeth or projections in bones of the cranium producing accurate junction at the sutures. **C. a'ni** or **clu'nium**, fissure between the nates.

Crena'ted (*crena*, notch). Notched.

Crena'tion (*crena*, notch). Notched appearance of the red corpuscles of the blood.

Crenature, kren'at-ure. Crena.

Creole, kre'ole (S. *criollo*). Native of America or of West Indies whose ancestors emigrated from the Old World or from Africa. Hence there may be black as well as white creoles. In the South it is used in the same sense as native, or, more strictly, to one born in the South whose parents were born in the tropics.

Creolin, kre'o-lin. Dark-brown syrupy liquid from dry distillation of coal-tar, some resins, etc. It forms a milky emulsion with water, and is used as a local antiseptic, germicidal, deodorant, and disinfectant in cases in which corrosive sublimate and carbolic acid are applicable, in one to two per cent. solution. It has also been used internally in gastric and intestinal fermentation, dysentery, phthisis, vesical catarrh, etc.

Creophagus, kre-of'ag-us (*kreas*, flesh, *phago*, to eat). Carnivorous.

Creophila, kra-of'il-ah. Flesh flies.

Creosol, kre'o-sol. Creasol.

Cre'osote. Creasote.

Crepalia temulenta, krep-al'e-ah tem-u-len'tah. Lolium temulentum.

Crepanella, krep-an-el'lah. Plumbago Europæa.

Crepatura, krep-at-u'rah. Hernia of intestines; discharge of wind per anum.

Crepidines (krep-id'in-ees) (pl. of **Crepido**, border) **palpebra'rum.** Cartilages of the eyelids.

Crepitant (krep'it-ant) or **Crep'itating** (*crepito*, to crackle). Crackling; subcrepitant. **C. râle**, sound heard during respiration in severe pneumonia and œdema of the lung; it resembles the sound produced by rubbing slowly and firmly between the finger and thumb a lock of hair near the ear, and is probably produced by the air of inspiration passing into the air-cells obstructed by viscid secretion from their interior.

Crepitatio, krep-it-ah'she-o. Crepitation. **C. den'tium**, chattering of teeth. **C. in'dux**, crepitant râle at commencement of hepatization of lung in pneumonia. **C. re'dux**, crepitant râle heard when solidification of lung is disappearing in pneumonia. **C. vesicula'ris**, crepitation.

Crepitation, krep-it-a'shun (*crepito*, to make a noise). Crackling. In surgery, noise of fractured bones when moved in certain directions; detected by the immediate application of the ear or by the use of the stethoscope. It is likewise met with in gangrene when air is effused into the areolar membrane, if the part be carefully examined with the fingers. Cracking of the joints in health or disease. See *Crepitant*.

Crepitus, krep'it-us. Crepitation; discharge of wind from the rectum. **C. lu'pi**, lycoperdon.

Cresalol, kres'al-ol. Produced by heating together, at an elevated temperature, salicylate of sodium and cresylate of sodium with phosphoric chloride. Antiseptic, especially in intestinal conditions; antiarthritic.

Cres'cent. White semilunar appearance at macular margin of optic disk, from deficient or atrophied choroid. **C. of Gianuzzi**, see *Gianuzzi*. **C., myo'pic**, crescentic appearance of the papilla from choroidal atrophy and detachment from the sclerotic; observed especially in myopia.

Crescentia, kres-sen'she-ah (*cresco*, to grow). Growth. **C. ala'ta** (after Crescentio, Italian writer on agriculture), Mexican plant, used in Mexico in hæmoptysis, **C. cuje'te**, narrow-leaved calabash tree; pulp of the fruit of this W. Indian plant is acidulous; used in diarrhœa and headache, and in syrup for diseases of the chest.

Cres'cents. Crescentic bodies found in the blood of malarial-fever patients.

Cres'era (a sieve). See *Cribration*.

Cresol, kre'sol. Cresols are derived from coal-tar by fractional distillation, and are present in the portion distilled over between 200° and 210° C., and are named orthocresol, metacresol, and paracresol. Antiseptics and disinfectants, and not so toxic as carbolic acid. **C. i'odide**, light-yellow powder, antiseptic; used in diseases of the nasal passages. **C. sal'icylate**, cresalol.

Cresol-salol, kre'sol-sal'ol. Cresol salicylate.

Cresotic (kres-ot'ik) **ac'ids.** There are three of these, orthocresotic, metacresotic, and paracresotic acids, made by mutual action of sodium and carbon dioxide and the three isomeric cresols, and by other processes. They are white prismatic needles; the paracresotic salts being alone employed therapeutically.

Cresotinic (kres-o-tin'ik) **ac'id.** Crystallized acid obtained by action of carbonic acid or sodium cresylate; resembles salicylic acid therapeutically.

Crespinus, kres-pe'nus. Oxyacantha Galeni.

Cress, bitter, com'mon. Cardamine pratensis. **C., dock**, Lapsana. **C., gar'den**, Lepidium sativum. **C., In'dian**, Tropæolum majus. **C., mead'ow**, Cardamine pratensis. **C., pen'ny**, Thlaspi. **C., sciat'ica**, Lepidium iberis. **C., swine's**, Cochlearia coronopus. **C., wa'ter**, Sisymbrium nasturtium. **C., wa'ter, marsh**, Nasturtium palustre.

Cress'wort. Eupatorium perfoliatum.

Crest. Crista. **C., aud'itive**, crista acustica. **C., canine'**, prominence on superior maxillary bone over root of canine teeth. **C. of clit'oris**, bony ridge for attachment of crura clitoridis. **C., den'tal**, projections of vascular fibrous tissue along line of future teeth in fœtus. **C. of eth'moid bone**, crista galli, superior turbinate crest. **C., fron'tal**, crest on internal surface of frontal bone. **C., gin'gival**, C., dental. **C., il'iac**, crista ilii. **C. of il'ium**, crista ilii. **C., inci'sor**, prolongation anteriorly of nasal crest. **C., infe'rior tur'binate**, prominence on nasal surface of superior maxilla to articulate with inferior turbinate bone. **C., infratem'poral**, prominence on external surface of greater wing of sphenoid bone. **C., na'sal**, C. on palatal process of superior maxilla; prolongation backward of internal face of nasal bone. **C., occip'ital**, vertical ridge on exterior of occipital bone. **C., or'bital**, inferior edge of orbital surface of sphenoid bone. **C. of the pu'bis**, see *Cristi ilii*. **C. of sa'crum**,

longitudinal c. on posterior surface of that bone. **C., sphenoi'dal,** prominent margin of bone on front part of body of sphenoid bone. **C., spheno-max'illary,** bony ridge formed partly by front portion of great wing of sphenoid and partly by pterygoid process, forming margin of spheno-maxillary fissure. **C., tem'poral,** C. of os frontis from external angular process, continuous with temporal line of parietal bone. **C. of the tib'ia,** crista tibiæ. **C., tur'binated,** two ridges on the internal surface of the palate bone. **C. of the ure'thra,** gallinaginis caput. **C., zygomat'ic,** anterior margin of great wing of sphenoid, articulating with malar bone.

Cresylic (kres-il'ic) **acid.** Cresol. See *Carbolic acid* and *Carbolic acid, impure.*

Cre'ta (from island of Crete). $CaCo_3$. Chalk, carbonate of lime; native friable carbonate of lime, carbonate of calcium. **C. præpara'ta** (Ph. U. S. and Br.), prepared chalk (prepared by levigation); used externally as an absorbent; internally, antacid. Dose, gr. x to ʒj or more.

Cretaceous, kre-ta'she-us (*creta,* chalk). Containing, or relating to, or having the characters of, chalk.

Cretefaction (kre-te-fac'shun) or **Cretification,** kre-te-fi-ca'shun (*creta,* chalk, *facio,* to make). Mineral or earthy degeneration; formation of, or conversion into, chalk, as the conversion of tubercles into calcareous or cretaceous concretions; calcification, calcareous degeneration. Calcification was formerly erroneously regarded as synonymous with ossification.

Cre'tin. One affected with cretinism. See *Cagot.*

Cre'tinism. Epidemic affection in the low, deep, narrow situations in Switzerland, the Pyrenees, Tyrol, China, Syria, etc.; state of idiocy, deformity of head and body, sometimes with deaf-mutism and loss of reproductive power, commonly accompanied by enormous goitre, and often hereditary.

Cretinoid, kre'tin-oid. Resembling a cretin; having appearance like that of cretinism; myxœdema.

Cretomania, kre-to-ma'ne-ah. Depraved form of insanity.

Crew'el. Primula veris.

Cri'bra (pl. of **Cribrum**). See *Cribration.* **C. orbita'lia,** porous condition of orbital plate of frontal bone behind margin of orbit.

Cribration, krib-ra'shun (*cribro,* to sift). Sifting, a pharmaceutical operation consisting in separating the finer parts of drugs from the coarser.

Cribratus, krib-rat'us. Having holes like a sieve.

Cribriform, krib'ri-form (*cribrum,* sieve, *forma,* form). Sieve-like; the ethmoid bone was formerly called os cribriforme. Cribriform plate is the horizontal lamina of the ethmoid bone, so called because perforated like a sieve. Through the perforations (foramina cribrosa) the olfactory nerves pass. **C. com'press,** square piece of linen pierced with holes; spread with cerate and applied to a suppurating surface, the holes being intended for the escape of the pus. **C. fas'cia,** see *Fascia, cribriform.* **C. lamel'la,** lamina cribrosa, a circular spot perforated with small holes, seen when the optic nerve is regarded from the inside after removing the retina and choroid. **C. mac'ulæ,** maculæ cribrosæ. **C. mem'brane,** membrana decidua.

Cribrosa, krib-ro'sah (*membrana* understood). Decidua vera.

Cribrosum, krib-ro'sum (*os* understood). Ethmoid bone.

Cribrosus, krib-ro'sus. Having holes like a sieve.

Crib'rum. Sieve. See *Cribration.* **C. pollina'rium,** see *Cribration.*

Cricarytæno'des or **Cricarytænoïdeus,** krik-ar-it-e-no-e'de-us. Crico-arytenoid.

Crick in the neck. Sudden painful rheumatic affection of the muscles of the neck, causing a person to hold his head to one side in a characteristic manner.

Cri'co. In composition, cricoid cartilage.

Crico-arytenoid, kri-ko-ar-it'en-oid. Relating to the cricoid and arytenoid cartilages. **C.-a. mus'cle,** *Crico-arytænoïdeus anterior, anticus,* or *lateralis;* muscle proceeding from the lateral part of the superior edge of the cricoid cartilage to the outer and anterior part of the base of the arytenoid cartilage. It carries the arytenoid cartilage outward and forward. **C.-a., poste'rior,** *Crico-arytænoïdeus posticus;* small triangular muscle in the back part of the larynx, extending from the prominent line at the middle of the posterior surface of the cricoid cartilage to the outer and posterior part of the base of the arytenoid cartilage. The crico-arytenoïdeus superior of Winslow forms part of the arytenoïdeus muscle of modern anatomists.

Crico-corniculatus, krik-o-kor-nik-u-lat'us. Occasional slip from cricoid cartilage to corniculum laryngis.

Crico-corniculo-pharyngeus, krik-o-kor-nik'u-lo-far-in-ja'us. Relating to cricoid cartilage, cartilages of Santorini, and pharynx.

Crico-epiglot'ticus. Relating to cricoid cartilage and epiglottis; epiglotticus muscle.

Crico-hy'oid. Relating to cricoid cartilage and hyoid bone; anomalous muscle from hyoid bone to cricoid cartilage.

Cricoid, kri'koid (*krikos,* a ring, *eidos,* form). Having the form of a ring. Name given to a cartilage of the larynx (cartilago innominata) situate at its lower part, between the thyroid and first ring of the trachea.

Cricoïdes, krik-o-e'dees. Annular; cricoid.

Crico-membranosus, krik-o-mem-bran-o'sus. Crico-epiglotticus.

Crico-œsophage'us. Relating to cricoid cartilage and œsophagus; muscle related to those parts.

Crico-pharynge'al. Relating to the cricoid cartilage and pharynx. The crico-pharyngei muscles of Winslow are a fleshy bundle forming part of the constrictor pharyngis inferior, the other part being called thyro-pharyngeus, the whole mass being named thyro-crico-pharyngeus.

Cri'cos. Circulus; ring.

Crico-Santorinia'nus. Relating to cricoid cartilage and cartilages of Santorini, as crico-Santorinian ligaments.

Crico-thy'reo-arytænoï'deus. Relating to the three cartilages named.

Crico-thyreo-pharynge'us. Relating to cartilages named and pharynx.

Crico-thyreotomy, kri-ko-thi-re-ot'o-me. Operation of opening into the air-passages through the cricoid and thyroid cartilages.

Crico-thyroid (kri-ko-thy'roid) **ar'tery.** Small branch from lower cornua of thyroid cartilage. **C. mem'brane,** fibrous membrane extending from the upper edge of the cricoid cartilage to the inferior edge of the thyroid. **C. mus'cle,** *Crico-thyroïdeus;* small fleshy bundle of a triangular shape at the anterior and inferior part of the larynx, extending from the outer surface of the cricoid cartilage to the lateral parts of the inferior margin of the thyroid cartilage. **C. space,** space on anterior part of the neck between the cricoid and thyroid cartilages.

Crico-thyroidean, kri-ko-thi-roid'e-an. Relating to cricoid and thyroid cartilages.

Cricotomy, kri-kot'o-me (*krikos,* ring, *tome,* incision). Laryngotomy through the cricoid cartilage.

Crico-tracheal, kri-ko-trak-e'al. Relating to the cricoid and trachea; name given to anomalous muscular fibres between tracheal rings and cricoid cartilage; also to c. ligament connecting cricoid carlilage and trachea.

Crico-tracheotomy, kri-ko-trak-e-ot'o-me. Cricotomy and tracheotomy combined.

Crimnodes, krim-no-dees. Resembling meal or bran; applied to urine which deposits bran-like sediment.

Crim'non. Wheat; barley; bran.

Crinale, krin-al'e (*crinis,* hair). Instrument used for compression in cases of fistula lacrymalis, so called from its having at one end a small cushion stuffed with hair.

Crinis, krin'is. Hair; capillus.

Crino, krin'o. Dracunculus; nematoid worm in the skin of animals; comedo.

Crinon, krin'on. Lilium candidum

Crinones (pl. of **Crino**), krin-o'nees (*crinis*, hair). Comedones. See *Acne*.

Crinoses, krin-o'sees (*krino*, to separate). Diseases of secretion.

Crinosity, krin-os'it-e. Hairiness.

Crin'um Asiat'icum, bractea'tum, or **defix'um.** Species of Amaryllideæ; diaphoretic, emetic, and used externally in local inflammations, felon, etc.

Criomyxus, kre-o-mix'us (*krios*, a ram, *muxa*, mucus). One who has much mucus flowing from his nasal fossæ, like the ram.

Crip'ple. One who is so injured, malformed, or diseased as to be disturbed in his natural powers of movement or exercise of his functions.

Crises. See *Crisis*. Term used in reference to pains of some spinal diseases. **C., car'diac**, intense lancinating pain in the cardiac region, with dyspnœa, distress, etc. **C., gastric**, violent shooting and burning pains radiating from the epigastric region, accompanied with nausea and vomiting. **C., gen'ital**, violent burning and boring pain in the genital organs of both sexes; or excitement of venereal orgasm until it becomes intensely painful. **C., genito-u'rinary**, violent pain in the ureters or urethra, with tenesmus of the bladder. **C., intes'tinal**, pains similar to those of gastric crises, occurring particularly in the umbilical region. **C., larynge'al**, paroxysmal cough with intense pain, hoarse, rough respiration, etc. **C., mus'cular**, muscular fatigue and soreness. **C., pain**, paroxysms of excessive pain, as in locomotor ataxia; a pathognomonic symptom. **C., rec'tal**, burning pain radiating from the rectum.

Crisis, kri'sis (decision). Term applied to disease when it augments or diminishes considerably, becomes transformed into another, or ceases entirely; favorable change supervening in disease; change going on in the acme or violence of the disease; rapid and favorable change, joined to some copious evacuation or eruption; symptoms that accompany such change, and not the change itself.

Crispation, kris-pa'shun (*crispo*, to wrinkle). Contraction or spasmodic contraction, supervening in certain parts, either spontaneously or by the influence of some morbific cause or therapeutic agent. Crispation of the nerves is a slight involuntary convulsive motion of external or internal parts.

Crispatura, kris-pat-u'rah. Contracture. **C. ten'dinum**, contraction of palmar aponeurosis or tendons.

Crispitu'do. Crispation.

Crissaneurysma, kris-an-u-riz'mah. Varicose aneurism.

Cris'ta. Crest. Name given to several bony projections; also to the clitoris; also fimbriated excrescence forming at the anus and near the genital organs, commonly owing to the syphilitic virus. **C. acus'tica**, yellowish-white semicircular spot on the ampullæ of the semicircular canal, near the mouth of the utriculus, at the termination of the twig of the nervus acusticus. **C. arcua'ta**, oblique line of thyroid cartilage. **C. basila'ris**, prominence on ligamentum spirale for attachment of lamina basilaris; ridge on basilar process of occipital bone. **C. capit'uli**, ridge on head of rib, dividing its articular portion into two parts. **C. of clit'oris**, nymphæ. **C. cribro'sa** or **ethmoida'lis**, ethmoidal spine of sphenoid bone; superior turbinate crest. **C. falcifor'mis**, circular ridge at bottom of internal auditory meatus. **C. fem'oris**, linea aspera. **C. for'nicis**, elevation on caudal surface of fornix. **C. gal'li**, comb of a cock; flat, triangular process rising above the cribriform plate of the ethmoid bone, and resembling a cock's comb. It gives attachment to the anterior part of the falx cerebri. **C. gallina'cea**, Verbena officinalis. **C. gingiva'lis**, gingival crest. **C. glutæo'rum**, intertrochanteric line. **C. hel'icis**, portion of cartilage of ear above orifice of external auditory canal. **C. il'ii**, crest of the ilium, the superior margin of the ilium. **C. iliopectine'a**, iliopectineal line. **C. incisi'va**, incisor crest. **C. inter'na**, frontal spine. **C. intertrochanter'ica**, intertrochanteric line. **C. juga'lis**, zygomatic crest. **C. lacryma'lis**, lacrymal crest. **C. mandib'ulæ**, prominence on anterior surface of coronoid process of lower jaw for origin of buccinator muscle. **C. mastoï'dea**, prominence on mastoid portion of temporal bone. **C. obturato'ria**, spine of pubes; ridge along upper edge of obturator foramen. **C. orbita'lis**, orbital crest. **C. pectora'lis hu'meri**, pectoral ridge. **C. pe'nis**, ridges on descending rami of pubes for attachment of crura penis. **C. petro'sa**, external auditory process. **C. pharynge'a**, pharyngeal spine. **C. pu'bis**, crest of the pubis, the posterior sharp edge on the upper surface of that bone. **C. pyramida'lis**, C. vestibuli. **C. sagitta'lis**, linea semicircularis. **C. scap'ulæ**, spine of scapula. **C. semiluna'ris**, anterior part of border of fenestra rotunda. **C. sphenoida'lis**, sphenoidal spine. **C. spira'lis**, see *Lamina spiralis*. **C. tib'iæ**, crest of the tibia, the anterior edge or shin. **C. transver'sa**, superior turbinate crest; crista falciformis. **C. turbina'lis**, turbinate crest. **C. ul'næ**, external border of ulna. **C. ure'thræ** or **urethra'lis**, crest of the urethra; gallinaginis caput; verumontanum. **C. vagi'næ**, rugæ or folds of the vagina. **C. vestib'uli**, crest dividing the vestibule of the ear into two fossæ—one inferior and hemispherical, fovea or cavitas or fossa orbicularis, subrotunda, rotunda, or hemisphærica; sinus rotundus; the other superior and semielliptical, fovea or cavitas or fossa ovalis, semiovalis, orbicularis, elliptica, semielliptica, or hemielliptica, terminating in a conical projection—*Pyramis vestibuli, Eminentia pyramidalis*. Morgagni has described a third groove-like fossa, recessus or fovea or fossa sulciformis, sinus sulciformis, sulcus ad aquæductum vestibuli, recessus labyrinthi, situate at the mouth of the common orifice of the two superior semicircular canals.

Cristæ ampullares, kris'te am-pul-lar'ees. Ridges between ampullæ of semicircular canals and vestibule. **C. clitor'idis**, bony ridges for attachment of crura clitoridis; nymphæ. **C. supercilia'res**, superciliary ridges. **C. vagi'næ**, rugæ of vagina.

Cristalloïditis, kris-tal-lo-id-e'tis. Inflammation of crystalline lens; phacitis. See *Crystalloid*.

Crithe, krith'a (barley). Stye. Hordeolum, hordeum. Penis.

Crithidion, krith-id'e-on (dim. of **Crithe**). Small stye.

Crithmum (krith'mum) **mari'num** or **maritimum**, mar-it'im-um. Plant growing on the sea-coasts, having a spicy, aromatic flavor; diuretic, anthelmintic, and aromatic, and used, pickled, as a condiment.

Crit'ical. Belonging to a crisis, real or expected. **C. age**, age when menstruation ceases. **C. days**, those on which a crisis, it is imagined, is most likely to happen. According to Hippocrates and Galen, the greatest number of fevers terminate favorably on the 7th day, many on the 14th—these days being the most propitious. Next to these come, in order of efficiency, the 9th, 11th, 20th or 21st, 17th, 5th, 4th, 3d, 18th, 27th, and 28th. On the 6th day the crises were generally unfavorable; after this, the most unfavorable were the 8th, 10th, 12th, 16th, and 19th. The 13th was a neutral day. **C. pe'riod** or **time**, period of cessation of menses; see *Menses*.

Crocidis'mus or **Crocidixis**, krok-id-iks'is (*krokidizo*, to pick wool). Carphology.

Crocodilium, krok-o-dil'e-um. Echinops.

Cro'cus. *C. sativus*; saffron, ord. Iridaceæ; stigmata of crocus (Ph. U. S. and Br.) brought from the East are the parts used in medicine; its virtues are yielded to alcohol, wine, vinegar, and water; it is stimulant, exhilarating, and diaphoretic. Colcothar. **C. antimo'nii**, oxidum stibii sulphuratum. **C. Austri'acus**, crocus. **C. autumna'lis**, Colchicum autumnale. **C. frog**, Colchicum autumnale. **C. German'icus**, Carthamus tinctorius. **C. In'dicus**, Curcuma longa. **C. mar'tis adstrin'gens**, colcothar. **C. mar'tis ape'riens**, ferri subcarbonas. **C. mar'tis vitriola'tus**, colcothar. **C., mead'ow**, Colchicum autumnale. **C. metallo'rum**, oxidum stibii sulphuratum. **C. officina'-**

lis, crocus. **C. orienta'lis,** crocus. **C., pur'ple,** Colchicum autumnale. **C. Saracen'icus,** Carthamus tinctorius. **C. sati'vus,** crocus. **C. silves'tris,** Carthamus tinctorius.

Crocydismus, krok-id-iz'mus (*krokudizo,* to pick wool). Carphology.

Crocydocarcino'ma (*krokus,* wool). Fibrous form of cancer; fibroma.

Crommyon, krom'me-on. Allium cepa.

Crommyoxyregmia, krom-me-ox-e-reg'me-ah (*krommuon,* onion, *oxus,* acid, *rhegnumi,* to break forth. Sour fetid eructations, having smell like that of onions.

Crop. Expansion of lower part of œsophagus of birds. Ingluvies. Polygonum fagopyrum.

Cross of aorta. See *Aorta.* **C. flow'er,** Polygala vulgaris. **C. of Jeru'salem,** Lychnis Chalcedonica. **C., Maltese,** see *Maltese.* **C. paral'ysis,** hemiplegia, alternate. **C., plan'tar,** plantar arch.

Crossarm'ed. Decussate.

Cross'birth. Presentation of fœtus by any other part than the cephalic extremity.

Cross'breed. Progeny of parents of different breeds.

Crossed. Term applied to decussating nervous fibres, or to paralysis occurring in the side of the body opposite to that of the lesion producing it; to amblyopia and diplopia from similar cause. **C. reflexes,** reflex irritation in the side of the body opposite to the point affected.

Cross'eye. Strabismus.

Cross'eyed. Affected with strabismus.

Cross'foot. See *Kyllosis.*

Cross'ing. Union of an animal of one race with one of another to improve the breed. In man, as in other animals, union of near relatives is apt to deteriorate the offspring.

Cross'legged. Walking with one foot crossing the other or getting in front of it; a condition noticed in certain lesions of the spinal cord.

Cross'wort. Eupatorium perfoliatum; Lysimachia quadrifolia.

Crotalaria (krot-al-ar'e-ah) **al'ba.** Baptisia alba. **C. espadil'la,** shrub of Venezuela; sudorific. **C. verruco'sa,** plant of E. and W. Indies; its bitter leaves are emetic, and are also used in skin diseases; the root is given in colic.

Crotalin, krot'al-in. See *Crotalus horridus.*

Crotalophorus, kro-tal-of'or-us (*krotalon,* rattle, *phero,* to carry). Crotalus horridus.

Crotalus (krot'al-us) **duris'sus** or **hor'ridus.** Rattlesnake. Class, Reptilia, ord. Ophidia. Venomous reptile of North America; its poison, *crotalin,* is virulent. Crotalus is so called from the rattle on its tail.

Crotaphe (krot'af-a) or **Crotaphium,** krot-af'e-um (*krotaphos,* the temple). Pulsatory pain, chiefly in the temples, with drumming in the ears.

Crotaphite (krot'af-ite) **ar'teries.** Temporal arteries.

Crotaphi'tes. Relating to the temple; temporal muscles.

Crotaphitic, krot-a-fit'ik. Temporal. **C. nerve,** superior maxillary branch of fifth nerve.

Crotaphoceph'alus (*krotaphos,* temple, *kephale,* head). Double monster having the temporal bones fused.

Crotaphogan'glion (*krotaphos,* temple). Otic ganglion.

Crot'aphos or **Crot'aphus** (*krotaphos,* temple). Temple; temporal bone; pain in the temporal region.

Crot'chet (dim. of **Croc,** hook). Small hook or crook. Obstetrical instrument whose name indicates its shape, used in extraction of the fœtus, when necessary to destroy it to expedite delivery.

Cro'ton (*kroton,* a tick) **antisyphilit'icus.** Plant of Brazil; the leaves are used in syphilis, and externally in poultices. **C. argyran'themum,** indigenous in the Southern States; infusion is used in colic, in diarrhœa, and in sore throat. **C. ben'zoë,** benjamin. **C. cascaril'la,** ord. Euphorbiaceæ. The bark of Croton eleuteria (Ph. U. S. and Br.) of the Bahamas, cortex thuris, cascarilla, has a slightly aromatic odor and bitterish aromatic taste. The active parts are essential oil and bitter extractive; it is tonic and stomachic. Dose, gr. xv to xxx or more, in powder. The bitter principle is called cascarillin. **C. chlo'ral,** butyl chloral; see *Chloral.* **C. chlo'ral hy'drate,** butyl chloral hydrate. **C. dioi'cus,** plant of Mexico; root and seeds are drastic purgatives; the oil has similar effects to croton oil. **C. eleute'ria,** see *C. cascarilla.* **C. eleuthe'ria,** Croton cascarilla. **C. ful'vus,** root of this Brazilian plant is antisyphilitic. **C. Jamalgo'ta,** C. tiglium. **C. laccif'erum,** see *Lacca.* **C. linea'ris,** species from the Antilles, used in colic. **C. loba'tum,** species from E. Indies, oil of which is used externally in rheumatism, and leaves for abscesses and furuncles. **C. Malam'bo,** see *Matias.* **C. oblongifo'lium,** bark of root of this plant of E. Indies is cholagogue cathartic; externally applied in sprains and rheumatic pains. **C. oil,** see *Croton tiglium.* **C. perd'iceps,** herb of Brazil; the leaves are used for wounds; diuretic and antisyphilitic. **C. pseudochi'na,** copalche or copalchi bush; S. American plant yielding a bark, cortex copalche or copalchi, very like cascarilla. **C., purg'ing,** Croton tiglium. **C. racemo'sum,** beenel; small Malabar tree, the aromatic root of which is employed as a liniment in headache and rheumatism. **C. seeds,** see *Croton tiglium.* **C. tig'lium,** *Purging croton.* Ceylonese plant, every part of which is endowed with medicinal power. The root is a drastic cathartic; the wood (pavana wood) and the seeds have like virtues. The croton seeds, purging nuts, yield croton oil, oleum tiglii (Ph. U. S. and Br.), by expression; of a pale brownish-yellow color, and hot, biting taste, owing to crotonic acid, and a most powerful drastic cathartic. Dose, half a drop to two drops, made into pills with crumbs of bread. Applied externally, it is a rubefacient, three to five drops being rubbed on the part, or one part of the oil and three parts of olive oil.

Crotone, kro-to'na (a tick). Fungus growing on trees and produced by an insect; by extension, fungous tumor developed on the periosteum.

Crotonic (kro-ton'ik) **ac'id.** $C_4H_6O_2$. See *Croton tiglium.*

Crotonoleic (kro-ton-o'le-ik) **ac'id.** Acid in croton oil; its active, vesicating, and cathartic principle.

Croup (formed from the breathing and cough by onomatopœia). Term variously applied to acute inflammation of mucous membrane of the larynx alone, or larynx and trachea combined, with production of fibrinous exudation, diminishing the calibre of this portion of the air-passages, and causing peculiar cough and breathing characteristic of this disease. Of late years croup has been regarded as diphtheria, with laryngeal or laryngo-tracheal symptoms, indicating a deeper invasion of the structure of these regions. See *Diphtheria.* Other acute affections of these parts, with hoarseness, spasmodic cough, etc., have received the same name. See *Cynanche trachealis.* **C., ascen'dant,** see *Croup, pharyngeal.* **C., bron'chial,** croupous bronchitis, polypus bronchialis. **C., catar'rhal,** see *Cynanche trachealis.* **C., cer'ebral,** asthma thymicum. **C., cer'ebral, spasmod'ic,** carpopedal spasm. **C., chron'ic,** polypus bronchialis. **C., descen'dant,** see *Croup, pharyngeal.* **C., diphtherit'ic,** see *Croup.* **C., false,** see *Croup;* cynanche trachealis. **C., fi'brinous,** see *Croup.* **C., hyster'ic,** spasmodic affection of the laryngeal muscles in hysterical females. **C., larynge'al,** croup restricted to the laryux. **C., mem'branous,** see *Croup.* **C., pal'pebral,** diphtheritic conjunctivitis. **C., pharynge'al,** condition of the pharyngeal mucous membrane, in which, in addition to the symptoms of catarrhal angina, croupous deposits are seen, which spread from the larynx to the pharynx, or conversely. **C., pseu'do,** false croup; see *Croup.* Asthma thymicum. **C., pseudo-mem'branous,** see *Croup.* Cynanche trachealis. **C., sec'ondary,** see *Cynanche trachealis.* **C., spasmod'ic,** false croup; see *Croup, Asthma thymicum,* and *Cynanche trachealis.* **C., spu'rious,** false croup; see *Croup.* Asthma thymicum. **C., true,** see *Croup.* **C., u'terine,** croupous endometritis.

Croup'al. Croupous.

Croup'ion. Sacro-coccygeal region.

Croup'like inspira'tion of in'fants. Asthma thymicum.

Croup'ous or **Croup'y.** Relating or appertaining to, or resembling, croup; attended with pseudo-membranous exudation; hoarse. **C. inflamma'tion,** inflammation of mucous membrane attended with pseudo-membranous exudation.

Crow'corn. Aletris farinosa.

Crowd-poi'soning. Ochlesis.

Crow'foot. Geranium maculatum; ranunculus. **C., brist'ly,** Ranunculus Pennsylvanicus. **C., bul'bous,** Ranunculus bulbosus. **C., bul'bous-rooted,** Ranunculus bulbosus. **C., cel'ery-leaved,** Ranunculus sceleratus. **C., crushed,** Ranunculus sceleratus. **C., marsh,** Ranunculus sceleratus. **C., mead'ow,** Ranunculus acris. **C., small-flow'ered,** Ranunculus abortivus. **C., tall,** Ranunculus acris. **C., wa'ter, small'er,** Ranunculus flammula.

Crown. See *Corona.* In anatomy, name given to parts of a circular form, surmounting other portions of the same body. The os uteri acts as a crown to the child's head during expulsion in labor. **C. bark,** loxa bark. **C., cil'iary,** ciliary zone. **C. of the glans,** round, almost circular, ring, circumscribing the base of the glans penis. **C. of the head,** vertex. **C. pars'nip,** Leontodon taraxacum. **C. rhu'barb,** Russian variety of rhubarb. **C. of a tooth,** portion of a tooth projecting above the gum. **C. of the trepan',** species of saw, in form of a crown, or rather of a portion of a cylinder, having grooves on its external surface and teeth at its lower extremity; the other being fitted to the handle of the trepan. **C. of Ve'nus,** red, rosy pustules, dry or moist, on the face, particularly on the forehead and temples, owing to constitutional syphilis.

Crown'ing. Action of retraction of neck of uterus over head of fœtus or other presenting part, as in course of expulsion during labor.

Crow's-beak'like pro'cess. Coracoid process.

Cru'cial (*crux,* cross). Having the shape of, or relating to, a cross. **C. band'age,** T bandage. **C. incis'ion,** incision made in the form of a cross, employed for exposing the cranium for application of the trepan. **C. lig'ament of the at'las,** annular ligament of the atlas. **C. lig'aments,** two strong ligaments within the knee-joint; the anterior passes obliquely from a depression anterior to the spine of the tibia to the posterior and inner part of the external condyle of the femur; the posterior extends from the posterior part of the spine of the tibia to the anterior and outer part of the internal condyle.

Cruciati dolores, kru-se-at'e do-lo'rees (pl. of **Cruciatus,** crossed). Excruciating pains.

Cruciatus, kru-se-at'us. Crossed; excruciating (referring to pain).

Cru'cible. Vessel for incineration, as of bodies in a crematory.

Crucifixion attitude, kru-se-fiks'yun at'te-tude. Peculiar attitude of patient with hystero-epilepsy, described by Charcot, in which the head is thrown back, the spine curved, the feet extended, the patient resting on the occiput and heels, the arms being thrown back above the level of the shoulders; it is really *Hysterical opisthotonos.*

Cruciform, kru'se-form (*crux,* cross, *forma,* shape). Cross-shaped; name given to the ligaments closing the articulations of the phalanges, and to the crucial ligaments.

Crude. Raw, unripe, not concocted, as referring to contents of intestine or bloody urine.

Cruditas, kru'dit-as. Crudity. **C. mor'bi,** see *Crudity.* **C. ventric'uli,** see *Crudity.*

Cru'dity (*crudus,* raw). Rawness, crudeness; quality of aliments which have not experienced the action of fire. Condition of undigested matters in the digestive tube, *Cruditas ventriculi;* condition of morbific matter in a sick individual, *Cruditas morbi;* when it has not yet been prepared or concocted by the action of the organs, *Azymia humorum.* In the plural, *Crudities* signifies crude matters contained in the stomach and intestines. **C., ac'id,** acid dyspepsia.

Crudiv'orous (*crudus,* crude, *voro,* to eat). Eating raw food habitually.

Cru'dus. Crude.

Cru'els. Herpes zoster; scrofula.

Cruenta exspuitio, kru-en-tah ex-spu-ish'e-o (*cruor,* coagulated blood). Hæmoptysis; spitting of blood.

Cruentation, kru-en-ta'shun. Bloody oozing, as from dead body.

Cruen'tin. Substance formed by action of sulphuric acid on hæmoglobin.

Cruenture'sis (*cruentus,* bloody, *ouron,* urine). Hæmaturia.

Cruen'tus. Bloody.

Cru'men. Lacrymal sinus.

Crumena, kru-men'ah. Small sac or bag. **C. nuptia'lis,** scrotum. **C. urina'riæ** or **vesi'cæ,** cavity of urinary bladder.

Crumenophthalmus, kru-men-of-thal'mus (*crumena,* sac, *ophthalmos,* eye). Hairy, baggy, or sac-like appearance around the eye.

Cru'or (*kruos,* a blood-clot). Coagulated blood, gore; blood in general, venous blood, extravasated or coagulated blood, and the coloring matter of the blood. **C. san'guinis,** see *Blood.*

Cru'orin. Hæmoglobin. See *Globules of the blood.*

Crupo'sus. Croupy.

Crup'per (*croupe,* rump). Croupion. **C. bone,** coccyx. **C. incis'ion,** originated by Malgaigne in oval amputation, of the shape of a longitudinal cut, extending from the apex of the oval, and having the appearance of a crupper.

Crupsia, krup'se-ah (*krupsis,* concealment, deception). Metamorphopsia.

Cru'ra (pl. of **Crus,** a leg). Applied to some parts of the body, from resemblance to legs or roots, as C. cerebri, C. cerebelli, etc. **C. anterio'ra medul'læ oblonga'tæ,** peduncles of the brain. **C. bifurca'ta,** C. helicis. **C. cerebel'li,** peduncles of the cerebellum. **C. cerebel'li ad cor'pora quadrigem'ina,** see *Peduncles of the cerebellum.* **C. cerebel'li ad pon'tem,** see *Peduncles of the cerebellum.* **C. cer'ebri,** peduncles of the brain. **C. clitor'idis inter'na,** bulbus vestibuli. **C. cor'porum cavernoso'rum pe'nis,** see *Cavernous bodies.* **C. diaphrag'matis,** see *Diaphragm.* **C. of for'nix,** pillars of fornix. **C. hel'icis,** two ridges on the outer surface of the external ear. **C. labio'rum majo'rum,** crura of nymphæ. **C. medul'læ oblonga'tæ,** corpora restiformis, thalami nervorum opticorum; see *Peduncles of the cerebellum.* **C. of nym'phæ,** folds of nymphæ embracing the clitoris. **C. of pe'nis,** part of corpora cavernosa attached to rami of ischium and pubis. **C. posterio'ra medul'læ oblonga'tæ,** peduncles of the cerebellum. **C. u'teri,** round ligaments of uterus. **C. ventriculo'rum,** horns of lateral ventricles of brain.

Cruræus, kru-re'us. Cruralis.

Cru'ral (*crus,* thigh or leg). What belongs to the thigh or lower limb. **C. arch,** inguinal or femoral arch; Poupart's ligament; l. of Fallopius; arch formed by the internal portion of the inferior edge of the aponeurosis of the obliquus externus muscle, which is attached at one end to the pubis, at the other to the anterior and superior spinous process of the ilium. At its posterior and inner part the aponeurosis forming the arch sends off a falciform reflection attached along the crest of the pubis, and known under the name of Gimbernat's ligament. **C. ar'tery,** femoral artery; continuation of the external iliac artery extending from the crural arch to the aperture in the triceps or to the ham; also trunk extending from the primitive or common iliac to the tibial arteries, embracing, of course, the external iliac, femoral, and popliteal. **C. bulb,** enlargement of spinal cord in lumbar region. **C. canal'** or **ring,** femoral canal or ring; canal nearly an inch long, triangular, more spacious above than below, and shorter and broader in the female than in the male. Upper orifice is bounded anteriorly by the crural arch; posteriorly by the crista of the pubis; on the outer side by the psoas and iliacus muscles, covered by the iliac aponeurosis; and at the inner by Gimber-

nat's ligament. This orifice is covered by the peritoneum, and is closed by a septum, septum crurale, crural septum. Its inferior orifice is formed by the foramen of the fascia lata, giving passage to the vena saphæna. At the upper orifice of this canal the femoral or crural hernia occurs, which would be more common were it not for the fibrous cellular septum. **C. her'nia,** femoral hernia; see *C. canal* and *Hernia.* **C. mo'nospasm,** spasm limited to the leg. **C. nerve,** this proceeds from the lumbar plexus, and is situate at the outer side of the psoas muscle and crural artery. After it has passed under the crural arch it divides into cutaneous and muscular branches. One branch, larger than the rest, is called the saphæna nerve. The remainder of the branches of the crural are distributed to the anterior and inner part of the thigh. The accessory of the crural nerve includes the fourth and fifth pairs of lumbar nerves. **C. plex'us,** union of the anterior branches of the last four pairs of lumbar nerves and the first four sacral, forming the lumbar and sacral plexuses. **C. pro'tospasm,** spasm beginning in one leg and extending to the other limb and half the body, or both sides of the body. **C. ring,** crural canal. **C. sep'tum,** see *Crural canal.* **C. sheath,** sheath formed by transversalis fascia continued in front of, and pelvic fascia behind, upper portion of femoral artery. **C. vein,** femoral vein, has the same arrangement as the artery; it receives only one great branch, the saphæna vein.

Cruralis (kru-ral'is) or **Cruræus,** kru-re'us. Muscle situate at the anterior, outer, and inner part of the thigh; arising, fleshy, from between the two trochanters, adhering firmly to most of the fore part of the os femoris, and is inserted, tendinous, into the upper part of the patella, behind the rectus. It assists the vasti and rectus muscles in the extension of the leg. Small muscular slips, sometimes found under the cruræus muscle and inserted into the capsular ligament of the knee-joint, have been called subcruræi and subcrurales, articularis genu.

Cru'ris ra'dius. Fibula.

Cruro-genital, kru-ro-jen'it-al. Relating to thigh and genital organs.

Cruro-inguinal, kru-ro-in'gwin-al. Relating to thigh and groin.

Crus (leg). Thigh. See *Crura.* **C. ante'rius hel'icis,** crista helicis. **C. Barbad'icum,** elephantiasis; see *Barbadoes leg.* **C. cerebel'li,** see *Crura cerebelli.* **C. cer'ebri,** see *Crura cerebri.* **C. commu'ne,** combined part of posterior and superior semicircular canals. **C. exter'num,** folds of nymphæ forming prepuce. **C. for'nicis,** see *Fornix.* **C. glan'dis,** folds of nymphæ passing beneath the clitoris and attached to the glans forming the frenulum. **C. inter'num,** C. glandis. **C., lam'ellated,** see *Crusta.* **C. me'dium,** middle peduncle of cerebellum. **C. pe'nis,** see *Penis.* **C. præputia'le,** C. externum. **C. transver'sum,** transverse ligament of atlas. **C. u'teri,** round ligament of uterus.

Crusher. Écraseur, lithotrite.

Crusocreatinine, kru-zo-kre-at'in-een (*kruseos,* yellow, *kreas,* flesh). $C_5H_8N_4O$. Golden-yellow leucomaïne found in muscular tissue. See *Leucomaïnes* (table).

Crust. Scab; eschar. See *Crusta.* **C., French,** syphilis. **C., lam'ellated,** see *Crusta.* **C., milk,** crusta lactea; porrigo larvalis. **C. of ped'uncle,** anterior portion of crus cerebri; see *Peduncles of the brain.* **C. transver'sum,** transverse ligament of atlas.

Crus'ta. Crust or scab; assemblage of small flakes formed by the drying up of a fluid secreted by the skin. Ordinary crust is a solid mass, the result of the drying up of exuded fluids or of extravasated blood; at times it is lamellated, consisting of layers placed one over the other. The lining membrane of the stomach and intestines has been called crusta villosa. **C. adamanti'na den'tium,** enamel of the teeth. **C. carno'sa,** muscular coat of stomach and intestines. **C. cru'ris cer'ebri,** crust of cerebral peduncle. **C. fibro'sa,** cement; see *Tooth.* **C. ge'nu equi'næ,** *Sweat* or *Knee scab, Morck* or *Encircled hoof knees, Hangers, Dew claws, Night eyes, Horse crust;* morbid secretion from the horse, formerly used in epilepsy and other nervous diseases. **C. inflammato'ria,** buffy coat; corium phlogisticum. **C. lac'tea,** porrigo larvalis, porrigo lupinosa. **C. lamello'sa,** see *Crusta.* **C. membrana'cea,** villous or mucous coat of the intestines. **C. petro'sa,** see *Tooth.* **C. phlogis'tica** or **pleuret'ica,** buffy coat; corium phlogisticum. **C. prurigino'sa,** gutta rosea. **C. serpigino'sa,** gutta rosea. **C. vermicula'ris,** mucous coat of the stomach and bowels. **C. villo'sa,** mucous membrane of stomach and bowels. **C. v. lin'guæ,** see *Tongue.* **C. v. ventric'uli,** mucous membrane of stomach.

Crusta'tion. Incrustation.

Crustula, krus'tu-lah (dim. of **Crusta**). Small shell or scab. Ecchymosis of the conjunctiva.

Crutch. Staff with a cross-piece at the top, placed under the shoulder or armpit, to support the lame or infirm in walking. **C. disease,** simple gastric ulcer. **C. pal'sy** or **paral'ysis,** paralysis produced by pressure of a crutch on the nerves of the axilla.

Cruveilhier's (kru-vale-he-a's) **at'rophy** or **paral'ysis** (after M. Cruveilhier of Paris). Progressive muscular atrophy.

Crux cer'vi. Bone in the heart of the stag, once used as a remedy in heart diseases.

Cry (example of onomatopœia). Sound of the unarticulated voice; native voice. The cry of the newborn child has been called vagitus. The *hydrocephalic cry* or shriek is a single violent cry or shriek, resembling the cry of a person suddenly exposed to great danger. The *epileptic cry* is a peculiar discordant cry or yell uttered just before arrest of respiration in an epileptic fit. **C. cen'tre,** see *Centre.*

Cryæsthesia, kre-ees-tha'ze-ah (*kruos,* cold, *aisthesis,* sensation). Extreme sensitiveness to cold.

Cry'ing. Production of cry.

Crymodes, krim-o'dees (*krumos,* cold). Intensely cold; sensation in algid fever. Term applied to continued fever, in which the internal parts feel hot and the external cold; attributed formerly to erysipelatous inflammation of the lungs.

Crymodynia, krim-o-din'e-ah (*krumos,* cold, *odune,* pain). Pain of chronic rheumatism.

Crymoses, krim-o'sees (*krumos,* cold). Diseases caused by cold.

Cryphalum, kriph'al-um (*kekruphalos,* helmet). Reticulum; second stomach of ruminant animals.

Crypsor'chis or **Cryptorchis,** krip-tor'kis (*krupto,* to conceal, *orchis,* testicle). One in whom the testes have not descended into the scrotum; the condition being called *cryptorchidism, cryptorchism,* or *retained testicle.*

Crypt. Crypta.

Cryp'ta. Crypt, folliculose gland, follicle. Small secreting cavity formed by a depression of the skin or mucous membranes, *crypta mucosa, follicular mucosus.* Cryptal or follicular secretion keeps the parts on which it is poured supple and moist, and preserves them from the action of irritating bodies. Little rounded appearances or glomeruli at the ends of the small arteries in the cortical substance of the kidney are also called *Cryptæ.* **C. muco'sa,** see *Crypta.*

Cryptæ (kript'e) (pl. of **Crypta**) **l'ridis.** Small crypts or follicles on front surface of iris. **C. Lieberkühnia'næ,** Lieberkühn's glands. **C. Litt'rii,** preputial glands. **C. min'imæ** or **muco'sæ,** Lieberkühn's glands. **C. odorif'eræ** or **præputia'les,** preputial glands; see *Sebaceous glands.* **C. seba'ceæ,** sebaceous glands. **C. Tyso'niæ,** preputial glands.

Cryptandrous, kript-an'drus (*crypto, aner,* male). Not having distinct male generative organs.

Cryptidine, crypt'id-een. Alkaloid, $C_{11}H_{11}N$, produced by dry distillation of quinine.

Cryp'to (*kruptos,* concealed). In composition, concealed.

Cryptocar'ya densiflo'ra (*crypto, karuon,* nut). Bark contains bitter substance, used in puerperal convulsions, etc.

Cryptocephalus, kript-o-sef'al-us (*crypto, kephale,*

head). Monster whose head is excessively small, and does not appear externally.

Cryptococcus, kript-o-kok'kus (*crypto, kokkos,* berry). Saccharomyces. **C. cerevis'iæ** or **fermen'tum,** torula cerevisiæ, saccharomyces cerevisiæ.

Cryptodidymus, kript-o-did'im-us (*crypto, didumos,* twin). Monstrosity in which one fœtus is found contained in another, fœtus in fœtu, included fœtus.

Cryptogamous (kript-og'am-us) or **Cryptogamic,** kript-o-gam'ik (*crypto, gamos,* marriage). Epithet applied to plants whose organs of fructification are concealed or not manifest.

Crypto-impetigines. Group of skin diseases, such as maculæ and squamæ.

Cryptolith, kript'o-lith (*crypto, lithos,* stone). Encysted calculus, or C. concealed in crypt or follicle.

Cryptoneurus, kript-o-nu'rus (*crypto, neuron,* nerve). Having no apparent or visible nervous system.

Cryptophanic (kript-o-fan'ik) **a'cid.** $H_2C_5H_7NO_5$. Acid to which acidity of urine is credited.

Cryptophlogosis, kript-o-flog-o'sis (*crypto, phlogosis,* inflammation). Inflammation of follicles of skin.

Cryptophthalmia, kript-of-thal'me-ah. Congenital atresia of the eyelids, hiding the eyeball from sight; closure of palpebral fissure by skin, the globe and orbit being absent. One so affected is said to be *Cryptophthal'mus.*

Cryptopia (kript-o'pe-ah), **Crypt'opine, Crypto'pianine,** or **Crypt'open** (*kruptos,* concealed, *opium*). $C_{21}H_{23}NO_5$. Alkaloid obtained from weak spirituous washings of crude precipitated morphia.

Cryptopyic, kript-o-pi'ik (*crypto, puon,* pus). State of disease kept up by occult abscess.

Cryptor'chid (*crypto, orchis,* testicle). One whose testicles have not descended into the scrotum.

Cryptor'chidism or **Cryptorchism,** kript-or'kism. Crypsorchis.

Cryptorchis, kript-or'kis. Crypsorchis.

Crypto'ses. Diseases of crypts or mucous follicles.

Cryptostenoses, kript-o-sten-o'ses (*crypto, stenos,* narrow). Diseases of follicles of the skin, in which they are in a contracted condition.

Cryptozous, kript-o-zo'us (*crypto, zoe,* life). Being in apparently lifeless condition, the functions seeming to be in abeyance.

Cryptoz'ygous (*crypto, zugon,* arch). Term applied to skull in which zygomatic arch is hardly noticed when viewed from above.

Crypts of Lieberkühn. See *Intestine* and *Lieberkühn's glands.* **C., multiloc'ular,** simple pouch-like glands; lobules of acinose gland. **C. seba'ceous,** sebaceous glands. **C., syno'vial,** bursæ mucosæ.

Crys'tal, ear. Otolith. **C., min'eral,** potassæ nitras fusus sulphatis paucillo mixtus.

Crystalli, kris-tal'le (pl. of **Crystallus,** crystal). Vesicles filled with a watery fluid; probably pemphigus, chicken-pox vesicles. **C. lu'næ,** argenti nitras.

Cryst'allin. Globulin of the crystalline lens.

Crystallina, kris-tal'lin-ah (*krustallos,* crystal). Vesicle or phlyctæna filled with serum, and appearing on the prepuce or in the vicinity of the anus, surrounded by a reddish extravasated aureola. See *Crystalli.* **C. tu'nica,** arachnoid membrane.

Crystalline, kris'tal-line. Having the appearance or nature of crystal. **C. lens** or **bod'y** or **hu'mor,** lenticular, transparent body, situate between the vitreous and aqueous humors of the eye, at the union of the anterior third with the two posterior thirds of the organ. It is composed of a soft exterior substance, and its interior is made up of albuminoid substance, forming a solid nucleus, in which a number of elliptical layers is perceptible. It is contained in a capsule, capsule of the lens, which receives, at its posterior surface, a small branch of the central artery of the retina, always readily distinguishable in the fœtus prior to the seventh month of utero-gestation. The crystalline refracts rays of light and serves as an achromatic glass, for which its laminæ or layers, increasing in refractive power from the circumference to the centre, admirably adapt it. **C., opac'ity of,** see *Cataract.*

Crystallino-capsuli'tis. Inflammation of the lens and its capsule. See *Phacitis.* **C. ante'rior,** inflammation of anterior portion of capsule of lens.

Crystallinocele, kris-tal-lin-o-se'le (Eng. kris-tal'-lin-o-seel). Hernia of crystalline lens.

Crystallion, kris-tal'le-on. Plantago psyllum.

Crystallitis, kris-tal-le'tis. Phacitis.

Crystallization, kris-tal-li-za'shun. Aggregation of component particles into regular geometric shapes.

Crystallocatapiesis, kris-tal-lo-kat-ap-e-a'sis (*katapiesis,* depression). See *Cataract.*

Crystallocataracta, kris-tal-lo-kat-ar-ak'tah. Cataract of the lens.

Crystallocatathesis, kris-tal-lo-kat-ath'es-is (*katathesis,* laying down). Couching lens. See *Cataract.*

Crystalloid, kris'tal-loid. Resembling crystal or the crystalline. Capsule or membrane of the crystalline; crystalline lens itself. Substance passing with facility through porous septa. See *Colloid.*

Crystalloiditis, kris-tal-lo-id-e'tis. Inflammation of the crystalline lens.

Crystalloparatopia, kris-tal-lo-par-at-op'e-ah (*krustallos,* crystalline lens, *para,* beyond, *topos,* place). Displacement or dislocation of the crystalline lens.

Crystalluridrosis, kris-tal-u-rid-ro'sis (*krystallos,* crystalline lens, *ouron,* urine, *hidros,* sweat). Excretion of elements of urine through the sweat.

Crystal'lus minera'lis. Potassæ nitras fusus sulphatis paucillo mixtus.

Crys'tals, blood. Hæmatoidin. Red, transparent crystals composed of oxyhæmoglobin. **C. of Ve'nus,** crystals of copper sulphate.

Ctedon, kta'don. Fibre.

Cteis, teis (comb). Pubes; row of incisor teeth; hair of pubes; ulnar margin of hand.

Cubatio, ku-bah'she-o (*cubo,* to lie down). Decubitus; anteversion and retroversion of the uterus.

Cu'beb. Cubeba.

Cubeba, ku-be'bah. Piper cubeba. **C. officina'lis** or **officina'rum,** Piper cubeba.

Cubebic (ku-beb'ik) **ac'id.** Resin derived from cubebs ($C_{13}H_{14}O_7$); laxative and diuretic.

Cubeb'in. $C_{10}H_{10}O_3$. Crystallized substance derived from cubebs.

Cu'bic space. Amount of space that should be allowed to a patient in a hospital; 1000 cubic feet being considered the proper amount.

Cubiform, ku'be-form (*cubus,* cube, *forma,* shape). Cuboid.

Cu'bit. Ulna; elbow; forearm. **C., top of,** olecranon.

Cubitæus, ku-bit-e'us. Cubital; cubitalis.

Cu'bital. Connected with or relating to the cubitus or to the inner and posterior part of the forearm. **C. ar'tery,** this artery arises from the humeral a little below the bend of the elbow, proceeds along the anterior and inner part of the forearm, passes anterior to the annular ligament of the carpus, and goes to form, in the palm of the hand, the superficial palmar arch. Besides the numerous other branches which it gives off, it sends posteriorly the common trunk of the interosseous arteries, and internally the two cubital recurrents, anterior and posterior—articular branches anastomosing on the inside of the elbow with the divisions of the humeral artery. **C. mus'cles** are two in number: 1. C. anterior or internus, flexor carpi ulnaris or f. ulnaris internus, a long muscle situate at the anterior and inner part of the forearm, arising from the inner condyle of the os humeri, at the inner side of the olecranon, and from the posterior edge of the ulna, and inserted by a tendon into the os pisiforme. It bends the hand on the forearm by directing it slightly inward. 2. Cubitalis posterior or externus, extensor carpi ulnaris, ulnaris externus, cubiteus externus, situate at the posterior part of the forearm. It arises from the external condyle of the os humeri, and is inserted into the superior extremity of the fifth bone of the metacarpus. It extends the hand, inclining it a little inward. **C. nerve,** *Ulnar nerve;* this is furnished by the last two or three nerves of the brachial plexus, and is distributed to the inner and anterior side of the forearm, to

the inner part of the palm and the back of the hand, and to the last two or three fingers. **C. veins,** the recurrent cubital veins, accompanying the corresponding arteries. The superficial or cutaneous cubital belong to the basilic.

Cubitale (ku-bit-al'e) **os.** Cuneiform bone.

Cubitalis, ku-bit-al'is. Cubital; anconæus; cuneiform bone of hand. See *Cubital muscles.* **C., ante'rior,** flexor carpi ulnaris. **C. exter'nus,** extensor carpi ulnaris. **C. gra'cilis,** palmaris longus. **C. inter'nus,** flexor carpi ulnaris. **C., poste'rior,** extensor carpi ulnaris. **C. Riola'ni,** anconæus.

Cubiteus (ku-bit-e'us) **exter'nus.** See *Cubital muscles.*

Cu'bito. In composition, the cubitus or ulna.

Cubito-car'pal. Relating to forearm or ulna and carpus or wrist.

Cubito-car'peus. Cubito-carpal; flexor carpi ulnaris.

Cubito-cuta'neous nerve. Internal cutaneous nerve of arm.

Cubito-dig'ital. Relating to forearm or ulna and fingers.

Cubiton, ku'bit-on. Elbow.

Cubito-palma'ris. Relating to the forearm or ulna and palm of hand. **C.-p. ar'tery,** superficial palmar arch.

Cubito-phalangettia'nus. Relating to forearm or ulna and phalanxes; flexor digitorum profundus.

Cubito-præphalange'us. Analogue in some lower animals of extensor minimi digiti.

Cubito-ra'dial. Relating to radius and ulna; pronator quadratus muscle.

Cubito-suprametacar'pal. Relating to ulna and upper part of metacarpus. Extensor carpi ulnaris; extensor ossis metacarpi pollicis.

Cubito-suprapalmaris, ku-bit-o-su-prah-pal-mar'-is. Belonging to the cubitus and suprapalmar or dorsal surface of the hand. Small artery given off by the cubital or ulnar, a little above the wrist; vein accompanying this artery.

Cubito-supraphalange'al. Relating to ulna or forearm and upper part of phalanges, as C.-s. muscle, extensor primi internodii pollicis.

Cu'bitus or **Cu'bitum.** Elbow; ulna; decubitus; bed. Ancient name of a measure 18 inches long. **C. cos'tæ,** see *Costa.* **C. supi'nus,** see *Decubitus.*

Cu'boid (*kubos,* cube, *eidos,* form). Cyboid. Having the form of a cube. A bone of the tarsus, situate at the anterior and outer part of the tarsus, and articulated, behind, with the calcaneum; before, with the last two metatarsal bones; and within, with the third cuneiform bone, and sometimes with the scaphoid.

Cuboido-navic'ular or **Cuboido-scaph'oid.** Relating to cuboid and scaphoid bones.

Cuca. Coca.

Cucaine. Cocaine.

Cuck'le or **Cuck'old.** Arctium lappa. **C. cap,** Aconitum napellus.

Cuck'oo bread. Oxalis acetosella; Cardamine pratensis. **C. flow'er,** Cardamine pratensis; lychiris. **C. pint,** Arum maculatum; Orchis mascula.

Cucubalus baccifer, ku-ku'bal-us bak'sif-ur. Herb employed as astringent and styptic. **C. be'hen,** spatling poppy; plant once considered alexipharmic and cordial. **C. visco'sus,** species employed as emetic. All the forms of Cucubalus are varieties of Silena.

Cucul'la (monkshood). Lower portion of trapezius muscle, so called from its shape.

Cucul'læ, ku-kul'le (pl. of **Cuculla**). Cartilages of the nose.

Cucullaris, ku-kul-lar'is. Trapezius.

Cucullata, ku-kul-lat'ah. Sanicula; pinguicula.

Cucul'lus, ku-kul'lus (hood). Cucupha, infundibulum of the cochlea. **C. Hippoc'ratis,** turbinate bone.

Cuculus, ku'ku-lus (cuckoo). Coccyx. Pertussis.

Cu'cumber. Cucumis sativus. **C., ass's,** Momordica elaterium. **C., In'dian,** Medeola Virginica. **C., squirt'ing** or **wild,** Momordica elaterium. **C., star, one-seeded,** Sycios angulatus. **C. tree,** Magnolia acuminata.

Cucumer, ku'ku-mer. Cucumis sativus.

Cucumis, ku'ku-mis (gourd). Cucumis sativus; penis. **C. agres'tis,** Momordica elaterium. **C. amaris'simus,** species used as substitute for colocynth. **C. caf'fer,** see *Cucurbita citrullus.* **C. citrul'lus,** watermelon, Cucurbita citrullus; diuretic. **C. colocyn'this,** colocynth or bitter apple, bitter gourd, bitter cucumber; ord. Cucurbitaceæ. Turkey and Cape of Good Hope plant; the spongy part or medulla of the fruit, *Colocynthis* (Ph. U. S. and Br.), is the fruit of Citrullus colocynthis deprived of its rind. It has a bitter, nauseous, and acrimonious taste, and is a strong cathartic, acting chiefly on the upper part of the intestines. Its virtues are dependent upon a bitter principle, colocynthin or colocynthite; but another principle, colocynthitin, has been derived from it. **C. me'lo,** systematic name of melon plant, melo, common melon; fruit is an agreeable article of diet, but not very digestible, unless when ripe; seeds possess mucilaginous properties. **C. sati'vus,** systematic name of cucumber plant; the cucumber or cowcumber is used, when young, as a pickle, when it is called a gherkin; it is not easy of digestion; seeds are mucilaginous. Ointment of green cucumbers—cucumber ointment—is used as a cooling emollient salve; made by combining, by means of heat, the juice of green cucumbers with lard and suet. **C. sylves'tris,** Momordica elaterium. **C. trigo'nus,** species from E. Indies; purgative.

Cucupha, ku'ku-phah. Coif or cap, with double bottom, between which is enclosed a mixture of aromatic powders, formerly used as an application to the head.

Cucurbita, ku-kur'bit-ah. Gourd. See *Cupping-glass.* **C. angu'ria,** C. citrullus. **C. cathart'ica,** Citrullus colocynthis. **C. citrul'lus,** systematic name of the watermelon plant; juice of fruit is very abundant, whence its name. Watermelon is refreshing and agreeable when cool; it is much used in the U. States and in S. Africa; seeds of the watermelon have been employed as a domestic remedy in strangury and other affections of the urinary passages. The pulp of the root of the gourd, Cucurbita lagenaria, is a drastic purgative. **C. cruen'ta,** wet cup, or cup applied to promote flow of blood after scarification, etc. See *Cupping.* **C. lagena'ria,** see *C. citrullus, C. pepo,* and *Lagenaria.* **C. leucan'tha,** see *Cucurbita pepo.* **C. le'vis,** dry cup. **C. max'ima,** red gourd, growing in Europe, Asia, and America; diuretic and anthelmintic. **C. melope'po,** see *Cucurbita pepo.* **C. occidenta'lis,** species from W. Indies; anthelmintic. **C. par'va,** cupping-glass, originally made of a gourd. **C. pe'po,** systematic name of common pompion or pumpkin; seeds of this plant, *Pepo* (Ph. U. S.), as well as those of Cucurbita lagenaria, bottle-gourd, contain a large proportion of oil, capable of forming emulsion, and are used in tapeworm, in dose of ℥ss to ℥ij. The fixed oil of the seeds has been given with success in the same cases, in dose of half a fluidounce. The fruits of Cucurbita lagenaria or C. leucantha or C. melopepo, round or pattypan squash, cymling, and of C. verrucosa, warted or long-necked squash, are eaten. **C. pinnatif'ida,** C. citrullus.

Cucurbitatio, ku-kur-bi-tah'she-o. Wet cupping. **C. sic'ca,** dry cupping.

Cucurbitinus, ku-kur-bit-e'nus. Name formerly given to tænia solium, because composed of rings resembling seeds of the gourd, cucurbita. See *Tænia* and *Proglottis.*

Cucurbitula, ku-kur-bit'u-lah (dim. of **Cucurbita**). Cupping-glass. See *Cupping.* **C. cruen'ta,** cupping with the scarificator. **C. cum fer'ro,** cupping with the scarificator. **C. le'vis** or **sic'ca,** dry cupping.

Cud. Food of ruminant animals swallowed and regurgitated.

Cud'weed. Antennaria plantaginifolia, Gnaphalium margaritaceum.

Cuema, ku-a'mah. Cyema.

Cuichunchilli or **Cuichunchulli.** Root of Ionid-

ium parviflorum of Peru; diaphoretic, diuretic, and emeto-cathartic.

Cuirass, kweer-ass'. Shield-shaped bandage, usually immovable, applied to the chest. **C. can'cer,** shield-shaped cancer of the chest.

Cul'cita or **Culcitra,** kul'sit-rah. Pillow or cushion. **C. perfora'ta,** perforated cushion, employed in connection with obstetric chair. **C. sali'na,** salt pillow; halotyle.

Cul-de-sac, kool'der-sak ([F.] blind alley). Blind sac or sac-like cavity. **C., Douglas's,** see *Uterus.*

Culeus, ku'le-us. Measure containing 20 barrels, equal to 180 gallons, scrotum; vagina; pericardium.

Cu'li flos. Cardamine pratensis.

Culil'aban, Culil'awan, Culit'lawan, or **Culit'lawang.** See *Laurus culilawan.*

Cul'men. Acme. **C. cerebel'li,** upper portion of superior vermiform process.

Culmination, kul-min-a'shun (*culmen,* the top). Acme, as of a fever.

Cultel'lus (dim. of **Culter**). Culter; small knife. **C. an'ceps,** double-edged knife. **C. un'cus,** crotchet knife.

Cul'ter (*colo, cultum,* to cultivate). Coulter; knife; scalpel; bistoury. Third lobe of the liver, from some fancied resemblance. **C. cur'vus** or **falca'tus,** knife, crooked. **C. lenticula'ris,** knife, lenticular. **C. rec'tus,** knife, amputation. **C. tonso'rius,** razor.

Cultivation, kul-tiv-a'shun. See *Culture.*

Cultrariorum (kul-trar-e-o'rum) **asth'ma** (*cultrarius,* grinder). Grinder's asthma.

Cultricollis, kul-trik-ol'lis (*culter,* knife, *collum,* neck). Having neck or thorax shaped like a knife-blade.

Cultrivorous, kul-triv'or-us (*culter,* knife, *voro,* to devour). Term applied to individuals who seem to swallow knives with impunity—knife-eaters.

Culture, kul'shur. Cultivation, multiplication, and propagation of micro-organisms in nutritive material, as broth, gelatin, etc., for closer study and investigation. These fluids are called *culture-media.* In plate cultivation or culture the micro-organisms become separated on a plane surface, and as they grow each one forms its own colony. Cultures are thus obtained which consist of only one form of organism; these are called *pure cultures.* See *Bacteria.*

Culus, ku'lus. Anus.

Cumarin, ku'mar-in. Coumarin.

Cum'frey. Comfrey.

Cu'min. Cuminum cyminum.

Cuminum cyminum, ku-me'num sim-e'num. Systematic name of cummin or cumin plant, a native of Egypt, ord. Umbelliferæ. The seeds have a warm, bitterish, disagreeable taste; they are used in form of plaster. **C. minu'tum,** C. cyminum. **C. ni'grum,** nigella. **C. praten'se,** carum. **C. Roma'num,** C. cyminum.

Cum'min. Cuminum cyminum.

Cumulative, ku'mu-la-tiv (*cumulus,* a heap). Increasing by successive additions. Cumulative action of medicines generally means violent action supervening after single and successive doses have been taken with little or no apparent effect.

Cumulus, ku'mu-lus. A heap. Rounded prominence in the centre of the proligerous disk, in which there is a small opaque cavity containing the ovum. **C., ger'minal, germinati'vus,** or **prolig'erus,** embryonic area; discus proligerus.

Cundurango, kun-du-ran'go. Tree of Ecuador, wood and bark of which enjoyed a temporary but undeserved reputation in the cure of cancer; also used in syphilis.

Cu'neal or **Cuneate,** ku'ne-ate (*cuneus,* wedge). Wedge-shaped. **C. lob'ule,** triangular space on the middle surface of the cerebral hemispheres between the parieto-occipital and calcarine fissures. **C. nu'cleus,** mass of gray nervous matter in funiculus cuneatus.

Cunealis sutura, ku-ne-al'is su-tu'rah (*cuneus,* wedge). Suture formed between the great and little alæ of the sphenoid bone and os frontis.

Cuneiform, ku'ne-e-form (*cuneus,* wedge, *forma,* shape). Wedge-shaped. Name given to sphenoid bone; bone of carpus, situate between os lunare and os orbiculare, also called os pyramidale, os triquetrum, and os cubitale; to the basilary process of the occipital bone, and to three bones of the tarsus, distinguished according to situation, reckoning from within outward, into first, second, and third, or internal, middle, and external; and according to size, reckoning in the same order, into great, small, and middle-sized. **C. car'tilages of the lar'ynx,** cartilages of Wrisberg; two small cylinders of fibro-cartilage enlarged at each extremity. By the base the cartilage is attached to the middle of external surface of the arytenoid; its upper extremity forms a prominence on the border of the aryteno-epiglottidean fold of membrane. **C. col'umns,** columns of Burdach; white nervous fibres in posterior columns of spinal cord.

Cu'neo. In composition, the cuneiform bones.

Cuneo-cuboid, ku-ne-o-ku'boid. Belonging to the cuneiform bones and cuboid. The *C. articulation* is formed by the third cuneiform bone and cuboid, furnished with a synovial capsule, and two cuneo-cuboid ligaments, dorsal and plantar.

Cuneo-navicular, ku-ne-o-nav-ik'u-lar. Articulation between cuneiform and scaphoid bones.

Cuneo-scaphoid, ku-ne-o-skaf'oid. Belonging to the cuneiform bones and scaphoid. *C. articulation* is formed by the posterior surfaces of the three cuneiform bones and the anterior surface of the scaphoid. It is furnished with a synovial capsule and ligaments, dorsal and plantar.

Cuneus, ku'ne-us. Cuneate lobule on surface of occipital lobe of brain. **C. cine'reus,** ala cinerea.

Cunic'ular or **Cunic'ulate.** Having a furrow or sulcus.

Cuniculi, ku-nik'u-le. Semicircular canals of the ear.

Cuniculus, ku-nik'u-lus (rabbit, hence burrowing). Sulcus, groove. **C. scabiæ'i,** groove made by sarcoptes scabiæi in itch.

Cunila, ku-ne'lah. Satureia capitata. **C. bu'bula,** origanum. **C. maria'na,** *Dittany, American* or *Mountain dittany, Mint-leaved* or *Maryland cunilla, Stonemint, Wild basil, Sweet horsemint;* small indigenous herb, growing from N. England to Georgia. Its medical properties are dependent upon essential oils, like the mints. **C., Ma'ryland,** Cunila mariana. **C., mint'-leaved,** C. mariana. **C. mus'cula,** Inula dysenterica. **C. pulegioi'des,** Hedeoma pulegioides. **C. sati'va,** Satureia hortensis.

Cunilago, ku-ne-lah'go. Inula dysenterica; I. pulicaria.

Cunnus, kun'nus (*kuo,* to conceive). Vulva.

Cup (Sax. *copp*). Small vessel for receiving the blood during venesection, usually containing about four ounces; see *Cupping.* **C., bit'ter,** cup for drinking, made of quassia-wood. **C., dry,** cupping-glass to bring blood to surface without scarification; see *Cupping.* **C., glauco'matous,** see *Optic papilla.* **C., oc'ular** or **op'tic,** secondary optic vesicle in embryonic life. **C. plant,** Silphium perfoliatum. **C., wet,** see *Cucurbita cruenta* and *Cupping.*

Cupai'ba. Copaiba.

Cupa'nia. Loblolly-wood, of Jamaica. **C. America'na** or **tomento'sa,** Antille chestnut; fruit and leaves are astringent, and employed in catarrh; seeds in dysentery and hæmoptysis.

Cuparo'sa. Iron sulphate; gutta rosacea.

Cuphea antisyphilitica, ku'fe-ah ant-e-sif-il-it'-ik-ah. Plant of Central and S. America, used in syphilis.

Cupho'sis. Kyphosis.

Cupid'itas. Will or desire. **C. deseden'di,** desire to go to stool.

Cupido, ku-pe'do (desire). Appetite; also, Cupid, the god of love, deus copulationis.

Cu'pola (I.). Dome; vaulted roof of apex of cul-de-sac of cochlea; see *Infundibulum of the cochlea.* Top expanded part of a solitary gland in the small intestines.

Cupped. Subjected to application of a cup. See *Corium phlogisticum.* **C. disk,** see *Disk.*

Cup'ping (*couper*, to cut, or to draw blood in cups). Species of bloodletting, performed by a scarificator and glass called a cupping-glass. After scarification, the cupping-glass, previously exhausted by heat or by an exhausting syringe, is applied; pressure of the air within the glass being thus diminished, the necessary quantity of blood may be drawn. See *Bdellometer*. *Dry cupping* is the application of the glasses or dry cups, without previous scarification. Cupping, without any epithet, means the abstraction of blood by means of the scarificator and cups, *wet cupping*, *wet cups*, or cut cups. To cup signifies to draw blood by cupping. **C. glass**, see *Cupping*.

Cuprea (ku'pre-ah) **bark.** Bark of two varieties of remijia, yielding a small percentage of quinine.

Cupreine, ku'pre-een. Name given to homoquinine, because obtained from cuprea bark.

Cupreol, ku'pre-ol. Cholesteroid substance obtained from Cinchona calisaya; $C_{20}H_{34}O$.

Cu'preous (*cuprum*, copper). Relating to, consisting of, or resembling copper.

Cupress, ku'press. Cypress.

Cupressus, ku-pres'sus. C. sempervirens. **C. ar'bor vi'tæ**, Thuya occidentalis. **C. dist'icha**, Taxodium distichum. **C. glau'ca** or **lusitan'ica**, E. Indian plant, cones of which are stomachic; powder is tonic and antipyretic. **C. pyramida'lis** or **sempervi'rens**, systematic name of cupressus or cyparissus; cypress; berries, leaves, and wood are astringent and diaphoretic, and used in intermittents. The whole plant abounds with bitter, aromatic terebinthinate fluid; the cones and oil yielded by them are used in febrile conditions, hemorrhage, etc. **C. thu'ja**, Thuja orientalis. **C. thyoi'des**, white cedar; indigenous. Infusion of the tops is stomachic, and, when taken warm, diaphoretic.

Cupri acetas, ku'pre as-e'tas. $Cu(C_2H_3O_2)_2,H_2O$ (Ph. U. S.). Acetate of copper; C. subacetas. **C. et ammo'nii sul'phas**, cuprum ammoniatum. **C. ammo'nio-sul'phas**, cuprum ammoniatum. **C. ar'senis**, arsenite of copper. **C. diace'tas**, C. subacetas. **C. limatu'ra**, filings of copper; have been used in hydrophobia, but are inert. **C. ni'tras**, nitrate of copper; has been employed as a caustic. **C. ox'idum**, black oxide of copper; prepared by heating the nitrate to redness, and employed in the form of ointment in frictions for the treatment of chronic glandular induration. **C. rubi'go** (rust of copper), cupri subacetas. **C. subace'tas** or **diace'tas**, *Verdigris*, *Crystals of Venus*; subacetate of copper; impure subacetate of copper; tonic, emetic, escharotic, and detergent, but scarcely ever employed internally; chiefly used in detergent ointments. An ointment of one drachm of finely-powdered verdigris, with an ounce of lard or spermaceti ointment, is used in psoriasis, tetter, etc. **C. sul'phas** (Ph. U. S. and Br.), $CuSO_4,5H_2O$; sulphate of copper, *Cupric sulphate*, *Blue stone*, *Blue vitriol*, *Blue copperas*, *Roman vitriol*; it is tonic, emetic, astringent, and escharotic. As a tonic it has been used in epilepsy, intermittents, etc.; dose as a tonic, gr. ¼ to gr. ij in pill; as an emetic, gr. ij to x in water. A very weak solution is sometimes used in ophthalmia and in gleet. **C. sul'phas ammoniaca'lis**, cuprum ammoniatum. **C. vitri'olum**, cupri sulphas.

Cupric, ku'prik. Relating to copper. **C. sul'phate**, cupri sulphas.

Cu'prum (properly **Cyp'rium**, being originally from Cyprus). Venus of the alchemists; copper. This metal has s. g. 8.92 to 8.95; is easily oxidized. In its metallic state it exerts no action on the system. When swallowed it undergoes no deleterious change. Copper cannot be dissolved while tin is in the mixture, and hence the utility of tinning copper vessels. Copper culinary vessels are harmless under ordinary cleanliness, provided the substances be not suffered to remain in them till cold. Salts of copper are very deleterious. Cuprum is the technical name of copper wire. **C. ace'ticum**, copper acetate. **C. alumina'tum**, aluminated copper; lapis divinus. **C. ammonia'tum**, **ammoniaca'le**, **ammoni'acum**, or **ammoni'aco-sulphu'ricum**, ammoniated copper, ammoniacal sulphate of copper, ammonio-sulphate of copper. Crystalline powder of a rich violet color and hot, styptic taste. By exposure to air it becomes partly converted into carbonate of copper. It is tonic and astringent, and has been chiefly employed in epilepsy and other obstinate spasmodic diseases. Dose, gr. ¼, increased to gr. iv, in pill. **C. bichlora'tum** or **chlora'tum**, copper chloride. **C. carbon'icum**, copper carbonate. **C. muriat'icum**, C. bichloratum. **C. olea'tum**, copper oleate; see *Oleates*. **C. oxyda'tum**, copper oxide. **C. sulphu'ricum** or **vitriola'tum**, cupri sulphas.

Cu'pula. Cupola. **C. ampul'læ** or **termina'lis**, generally called membrana tectoria, embryonic membranous formation in ampullæ of ear.

Cupular, ku'pu-lar (*cupula*, dim. of **Cupa**, vat). Of or belonging to a cup or cupule; cup-shaped. **C. cau'tery**, an iron in the shape of a cupule, used to cauterize the skin of the cranium in certain diseases, as epilepsy, chronic headache, etc.

Cu'ra (care). Attention to, or treatment or cure of, a disease; purification, as in curing lard; operation of shaving the head. **C. avena'cea** (oat cure), decoction of oats and succory root in which a little nitre and sugar are dissolved; used as a refrigerant. **C. derivati'va**, derivation. **C. fa'nis**, hunger cure. **C. fumigato'ria**, art of employing perfumes in medicine. **C. mag'na** (great cure), term employed for a method of treatment preferable to all others, as ptyalism for syphilis formerly. **C. Medea'na** (after Dr. Mead), transfusion. **C. palliati'va**, see *Palliative*. **C. radica'lis**, see *Palliative*. **C. revulso'ria**, see *Derivation*.

Curable, ku'ra-b'l. Medicable, sanable. That which is susceptible of cure; epithet applied to both patients and diseases.

Curaçoa, ku-rah-so'ah. Cordial whose ingredients are orange-peel, brandy, water, and sugar, with a little coloring matter.

Curan'ga. Species of Scrophularineæ of E. Indies and Moluccas; bitter, and employed in constipation, worms, and intermittent fevers.

Cura're or **Cura'ra.** Very energetic vegetable poison, employed by the American Indians to poison their arrows, and obtained from various plants, as cocculus, arum, strychnos, etc., also from species of convolvulus, called vejuco de mavacure, but referred by Martius to Strychnos Guianensis, and by Dr. Schomburg to S. toxicaria or toxifera. The juice of Echites suberecta, another apocynaceous plant, is said to enter into its composition. The poison acts directly on the heart, probably through the ganglia in its tissue. Curare is a sedative narcotic, and must be prescribed endermically or hypodermically on account of its tardy absorption, or perhaps non-absorption, by the stomach. It is used to calm the spasms in hydrophobia, tetanus, etc.

Curaria (ku-rah're-ah), **Curarina** (ku-rah-re'nah), or **Curarine**, ku-rah'reen. Alkaloid, active principle of curare, $C_{10}H_{15}N$; crystallized, soluble, and at least twenty times the strength of curare.

Curarism, ku-rah'rism. Condition of subjection to influence of curare or its alkaloid.

Curariza'tion. Process of producing curarism.

Curatella (ku-rat-el'lah) **America'na.** Leaves of this species, growing in Guiana, are used locally, applied to sores; inner bark is astringent. **C. cambaiba**, Brazilian shrub; astringent; decoction is used as a wash for wounds.

Curatio, ku-rah'she-o. Curation; treatment. Aggregate of means employed for the cure of disease, wounds, etc.; see *Therapeutics*. **C. contrario'rum per contra'ria**, allopathy. **C. cu'ra**, cure. **C. per ine'diam**, cure by fasting.

Curation, ku-ra'shun. Treatment; see *Curatio*.

Curative, ku'ra-tiv. Sanative, sanatory, healing; relating to or tending to the cure of a disease.

Curator, ku-ra'tor (*cura*, care). One whose duty it is to take care of anything, as a museum or collection of valuable materials or papers. **C. infirmo'rum** (caretaker of the sick), one employed in hospital or infirmary to take care of the sick.

Curato'ria, Cura'trix. Female curator. Therapeutics.

Curcas, kur'kas. Jatropha. **C. In'dica,** Jatropha curcas. **C. multif'idus,** see *Jatropha curcas, J. multifida.* **C. pur'gans,** Jatropha curcas.

Curculigo orchioïdes, kur-ku'lig-o ork-e-o-e'des. Species of amaryllidaceous herb of Japan, E. Indies, and Eastern hemisphere generally; bitter roots are tonic, and employed also in gonorrhœa. **C. uncifo'lia,** root of E. Indian herb, used as demulcent, tonic, and diuretic in asthma, piles, diarrhœa, gonorrhœa, etc.

Curculio, kur-ku'le-o (a mite). Penis.

Cur'cum. Curcuma longa.

Cur'cuma angustifo'lia. See *Arrow root.* Curcuma longa. **C. aromat'ica,** Kæmpferia rotunda. **C. lon'ga,** turmeric root—the rhizome of Curcuma longa. Curcuma is brought from the East Indies; but is possessed of little medicinal efficacy; it is an ingredient in curry powder. **C. zedoa'ria,** see *Kæmpferia rotunda.* **C. zerum'bet,** see *Kæmpferia rotunda.*

Curcumin, kur'ku-min. $C_{14}H_{14}O_4$. Yellow coloring matter of turmeric.

Curcumol, kur'ku-mol. $C_{10}H_{14}O$. Volatile oil from distillation of turmeric.

Curd. Curd of milk; coagulated or curdled part of milk. **C., al'um,** coagulum aluminosum. **C., soap,** sapo animalis.

Cure (*cura,* care). Course of treatment; restoration to health; remedy; restorative. **C., air,** pneumatic treatment. **C., Bant'ing,** Bantingism. **C., grape,** see *Grape.* **C., movement,** kinesipathy. **C., pota'to,** treatment in cases where foreign body has been swallowed, the patient being stuffed with potatoes, which surround it, so that it becomes coated and escapes from the bowels without injury to them. **C., Swedish movement,** kinesipathy. **C. by sympathy,** see *Sympathy.* **C., water,** hydrotherapy, hydrosudotherapeia. **C., whey,** see *Whey.*

Cure'all. Geum Virginianum, Œnothera biennis. A panacea.

Curet'tage. Curetting.

Curette (F. *curer,* to cleanse). Scoop; instrument for removal of foreign bodies, secretions, local growths, etc. from surface or canals by scraping, as for the uterus. **C., ves'ical,** lithotomy scoop.

Curet'ting. Operation of using curette for scraping a surface or canal; curettage.

Cu'rine. Weak base derived from curare.

Curl. Fimbriated extremity of Fallopian tube in animals.

Curnberry (kurn'ber-re) or **Cur'ranberry.** See *Vitis Corinthiaca.*

Cur'rant, black. Ribes nigrum. **C., red,** Ribes rubrum.

Cur'rants. See *Vitis Corinthiaca.*

Cur'rent (*curro,* to run). Flow, as of electric fluid. **C., contin'uous,** constant, uninterrupted current. **C., demarca'tion,** see *Demarcation.* **C., galvan'ic,** current developed by a galvanic battery. **C. reg'ulator,** rheostat.

Currier's su'mach. Cosiaria myrtifolia.

Cur'ry (or **Cur'rie**) **pow'der.** Condiment formed of various spices, as coriander seed, black pepper, cayenne pepper, ginger, caraway, curcuma root, curnin seed, fenugreek, etc., and eaten with rice, particularly in India.

Curschmann's (koorsch'mon's) **spi'rals.** Small grayish rounded bodies in the sputa of asthma, made up of fine spirals of mucus, which have received their shape in the delicate bronchioles.

Cursuma hæmorrhoïdalis herba, kur-su'mah hem-or-rho-id-al'is er'bah. Ranunculus ficaria.

Cursus, kur'sus (*curro, cursum,* to run). Running flow. **C. mat'ricis,** leucorrhœa. **C. men'struus,** menses. **C. uri'næ,** flow of urine.

Cursu'ta. Gentiana purpurea.

Curt'ate. See *Expectation of life.*

Cur'tum. Coloboma.

Curuba, ku-ru'bah. Chronic, painless form of psoriasis affecting the hands and feet of the Indians of Brazil.

Curupa. Herb of S. America, having, when powdered, the exhilarating qualities of hasheesh.

Curvamen, kurv-am'en (*curvo,* to bend). Curvature, as of the spine.

Curvatio, kur-vah'she-o. Bending or curving.

Curvator coccygis, kurv-at'or kok-se'jis. Occasional small bundle of fleshy fibres descending on the middle of the coccyx, uniting on each side with the ischio-coccygei muscles. Fasciculus of levator ani muscle; fasciculus of coccygeus muscle.

Curvatu'ra. Curvature. **C. prostat'ica,** curvature forward of inferior portion of rectum. **C. sacra'lis,** sacral curvature of rectum. **C. sigmoï'dea,** sigmoid flexure of colon; curve of internal carotid artery in its passage through the carotid canal. **C. un'guium,** see *Onychogryphosis.*

Cur'vature. Approximation of a line or surface more or less to the form of an arc; as the curvature of the spine, duodenum, stomach, etc. Accidental curvatures of bones are the effect of rickets or mollities ossium. **C. ametro'pia,** A. caused by changes in the curvature of ocular refractive media. **C., Pott's,** angular curvature of spine; vertebral disease. **C. of spine,** abnormal deviation of spinal column.

Curve, aor'tic. Arch of aorta. **C. of Ca'rus,** imaginary curved line representing axis of pelvis; see *Pelvis.* **C., caud'al,** caudal flexure of embryo. **C., cephal'ic,** cephalic flexure of embryo. **C., skull,** cephalic flexure.

Curved lines. Two crooked lines or projections on the posterior surface of the occipital bone; some lines on the os ilium are also so called.

Curvimer, kur'vim-er (*curvus,* bent). Cucumis sativus.

Cuscamine, kus'kam-een. Crystalline substance in Cinchona succirubra.

Cus'co bark. Variety of Cinchona pubescens, variety Pelletieriana.

Cuscocinch'onine. Cusconine; aricine.

Cusconidine, kus-kon'id-een. Amorphous alkaloid in Cusco bark.

Cusconine, kus'ko-neen. $C_{23}H_{26}N_2O_4+2H_2O$. Alkaloid from Cusco and cuprea barks.

Cus'cus. Andropogon muricatus.

Cuscuta (kus-ku'tah) **America'na.** Species of Convolvulaceæ; diuretic, laxative, cholagogue; C. Europæa. **C. chlorocar'pa,** see *C. glomerata.* **C. epith'ymum,** systematic name of the dodder of thyme, ord. Convolvulaceæ; parasitical plant possessed of a strong, disagreeable smell and durable, pungent taste; once used as laxative in diseases of the liver, cathartic in melancholia. **C. Europæ'a** possesses similar properties. **C. filifor'mis,** C. Europæa. **C. glomera'ta,** dodder, American dodder, indigenous plants, are bitterish, subastringent, tonic, and antiperiodic. **C. ma'jor,** C. Europæa. **C. mi'nor,** C. epithymum. **C. nimia'ta,** juice of this species is astringent and styptic. **C. reflex'a** grows in E. Indies; used in skin diseases, disorders of liver, etc. **C. tetran'dra,** C. Europæa. **C. umbella'ta,** species of S. America; used for sore throat, hoarseness, etc.

Cushia, kush'e-ah. Heracleum spondylium.

Cush'ion. A small soft bed of fatty or other tissue. **C. of epiglot'tis,** tubercle of epiglottis.

Cusp, pointed prominence, as crown of a tooth; part of a valve of the heart.

Cusparia (kus-par'e-ah) **bark.** See *C. febrifuga.* **C. bark, false,** Brucea antidysenterica and Strychnos nux vomica. **C. febrif'uga,** ord. Rutaceæ, S. American tree which furnishes cusparia or angustura bark. Angustura bark is also derived from Galipea officinalis. Cuspariæ cortex (Ph. U. S.) is the dried bark of Galipea cusparia. It yields its virtues to water and to proof spirit. It is tonic, stimulant, aromatic, and in large doses cathartic. Dose, gr. v to xx or more, in powder. **C. trifolia'ta,** C. febrifuga.

Cus'parin. Crystalline principle from cusparia bark.

Cus'pidate (*cuspis,* a point). Having sharp points, as canine teeth.

Cuspis (spear, point, or cusp). Glans penis; also a kind of bandage.

Cus'so. Hagenia Abyssinica; brayera.

Cus'tard ap'ple. Edible fruit of Anona reticulata.

Custodia virginitatis, kus-to'de-ah vir-jin-it-at'is (guard of virginity). Hymen.

Cus'tos (guardian). Vulva. **C. cer'ebri,** dura mater. **C. membra'næ** or **menin'gis,** instrument for guarding the dura mater from injury in operations on the skull.

Cut. Common expression for the division or solution of continuity made by a sharp instrument; incised wound.

Cutambulus, ku-tam'bu-lus (*cutis,* skin, *ambulo,* to walk). "Walking in or on the skin." Epithet given to certain parasitical animals which creep under the skin, and to certain pains or sensations felt between the skin and flesh, as it were, in scurvy and other diseases.

Cuta'neal (*cutis,* skin). Cutaneous.

Cutaneo-phalangeal, ku-ta-ne-o-fal-an-ge'al. Relating to skin and fingers, as ligaments from the sides of the phalanges.

Cutaneous, ku-ta'ne-us (*cutis,* skin). Cutaneal; belonging to the skin. **C. cal'culus,** pearly white tumor in the skin—milium—infiltrated with calcareous matter. **C. diseases,** diseases of the skin; eruptions. Affections of a morbid character to which the skin is liable—*dermatopathiæ, dermatoses.* It is difficult to classify them systematically; the following is sufficiently satisfactory, being the classification adopted by the American Dermatological Association:

CLASSIFICATION OF CUTANEOUS DISEASES.

CLASS I. DISORDERS OF THE GLANDS.

1. *Of the sweat-glands.*
   - Hyperidrosis.
   - Sudamen.
   - Anidrosis.
   - Bromidrosis.
   - Chromidrosis.
   - Uridrosis.
2. *Of the sebaceous glands.*
   - Seborrhœa:
     - oleosa.
     - sicca.
   - Comedo.
   - Cyst:
     - milium.
     - steatoma.
   - Asteatosis.

CLASS II. INFLAMMATIONS.

- Exanthemata.
- Erythema simplex.
- Erythema multiforme:
  - papulosum.
  - bullosum.
  - nodosum.
- Urticaria.
  - pigmentosa.
- Dermatitis (indicating affections of this class not properly included under other titles):
  - traumatica.
  - venenata.
  - calorica.
  - medicamentosa.
  - gangrænosa.
- Erysipelas.
- Furunculus.
- Anthrax.
- Phlegmona diffusa.
- Pustula maligna.
- Herpes simplex.
- Herpes zoster.
- Dermatitis herpetiformis.
- Psoriasis.
- Pityriasis maculata et circinata.
- Dermatitis exfoliativa.
- Pityriasis rubra.
- Lichen:
  - planus.
  - ruber.
- Eczema:
  - erythematosum.
  - papulosum.
  - vesiculosum.
  - madidans.
  - pustulosum.
  - rubrum.
  - squamosum.
- Prurigo.
- Acne.
- Acne rosacea.
- Sycosis.
- Impetigo.
- Impetigo contagiosa.
- Impetigo herpetiformis.
- Ecthyma.
- Pemphigus.

CLASS III. HEMORRHAGES.

- Purpura:
  - simplex.
  - hæmorrhagica.

CLASS IV. HYPERTROPHIES.

1. *Of pigment.*
   - Lentigo.
   - Chloasma.
2. *Of epidermal and papillary layers.*
   - Keratosis:
     - pilaris.
     - senilis.
   - Molluscum epitheliale.
   - Callositas.
   - Clavus.
   - Cornu cutaneum.
   - Verruca.
   - Verruca necrogenica.
   - Nævus pigmentosus.
   - Xerosis.
   - Ichthyosis.
   - Onychauxis.
   - Hypertrichosis.
3. *Of connective tissue.*
   - Sclerema neonatorum.
   - Scleroderma.
   - Morphœa.
   - Elephantiasis.
   - Rosacea:
     - erythematosa.
     - hypertrophica.
   - Frambœsia.

CLASS V. ATROPHIES.

1. *Of pigment.*
   - Leucoderma.
   - Albinismus.
   - Vitiligo.
   - Canities.
2. *Of hair.*
   - Alopecia.
   - Alopecia furfuracea.
   - Alopecia areata.
   - Atrophia pilorum propria.
   - Trichorexis nodosa.
3. *Of nail.*
   - Atrophia unguis.
4. *Of cutis.*
   - Atrophia senilis.
   - Atrophia maculosa et striata.

CLASS VI. NEW GROWTHS.

1. *Of connective tissue.*
   - Keloid.
   - Cicatrix.
   - Fibroma.
   - Neuroma.
   - Xanthoma.
2. *Of muscular tissue.*
   - Myoma.
3. *Of vessels.*
   - Angioma.
   - Angioma pigmentosum et atrophicum.
   - Angioma cavernosum.
   - Lymphangioma.
4. Rhino-scleroma.
   - Lupus erythematosus.
   - Lupus vulgaris.
   - Scrofuloderma.
   - Syphiloderma:
     - erythematosum.
     - papulosum.
     - pustulosum.
     - tuberculosum.
     - gummatosum.
   - Lepra:
     - tuberosa.
     - maculosa.
     - anæsthetica.
   - Carcinoma.
   - Sarcoma.

CLASS VII. NEUROSES.

- Hyperæsthesia:
  - pruritus.
  - dermatalgia.
- Anæsthesia.

CLASS VIII. PARASITIC AFFECTIONS.

1. *Vegetable.*
   - Tinea favosa.
   - Tinea trichophytina:
     - circinata.
     - tonsurans.
     - sycosis.
   - Tinea versicolor.
2. *Animal.*
   - Scabies.
   - Pediculosis capillitii.
   - Pediculosis corporis.
   - Pediculosis pubis.

Cuta'neous inflamma'tion. Dermatitis. **C. nerve, mid'dle poste'rior,** see *Sciatic nerve, lesser.* **C. nerves,** cutaneal nerves, so called, of the upper extremity, two in number, are given off from the brachial plexus. The *internal cutaneous* descends along the inner part of the arm, and divides above the elbow into two branches; the outermost of which follows the outer edge of the biceps, and spreads over the anterior and inner part of the forearm; the innermost accompanies the basilic vein, passing to the corresponding side of the hand and little finger. The *external cutaneous* passes outward, perforates the coraco-brachialis, descends along the anterior and outer part of the arm, passes as far as the middle fold of the elbow under the median cephalic, and descends along the anterior and outer edge of the forearm. At some distance above the wrist it divides into two branches, distributed to the hand and fingers.

Cutaneous nerves, middle cutaneous, two in number, are branches of the crural or femoral nerve; they are distributed to the integument of the middle and lower part of the thigh and of the knee. Lesser internal cutaneous nerve, nerve of Wrisberg, takes its origin from the axillary plexus, but is more particularly connected with the ulnar nerve. It soon separates from the ulnar, running afterward between it and the inner side of the arm. Below the axilla it divides into two branches, distributed to the arm. The cephalic and basilic veins have also been called radial and cubital cutaneous. **C. re'flex,** see *Reflex.* **C. respira'tion,** passage of gases through the skin by transpiration.

Cuticle, ku'tik'l (dim. of **Cutis**). This membrane covers the whole surface of the body. Scarf-skin; epidermis. See *Cutis.* **C. of the enam'el,** see *Enamel.* **C., liq'uid,** collodion.

Cuticula, ku-tik'u-lah. Cuticle, epidermis. **C. den'tis,** Nasmyth's membrane; thin membrane which peels off the surface of the enamel of an unworn tooth, said by Tomes to be coronal cement, the homologue of a similar thick cement of herbivorous animals. **C. pi'li,** hair-cuticle.

Cutic'ular. Relating to the cuticle. **C. mem'brane,** cuticula dentis.

Cuticulum, ku-tik'u-lum. Cuticula. **C. cer'ebri,** dura mater; layer of epithelial cells under the pia mater on the surface of the cerebrum and cerebellum.

Cutification (*cutis,* skin, *fio,* to become). Formation of skin, as in healing of ulcers or wounds.

Cutio, ku'te-o. Oniscus, asellus.

Cutipunc'tor (*cutis*, skin, *punctum*, point). Instrument for puncturation of the skin, as in nævus.

Cutis, ku'tis. Skin. Dense, resisting membrane, of flexible and extensible nature, forming the general envelope of the body, and continuous with the mucous membranes through the different natural apertures. It is generally considered to be formed of three distinct layers—the epidermis, rete mucosum, or more properly corpus mucosum, and corium (*cutis vera, derma*). Some anatomists, however, separate it into several others. Its outer surface is covered by a number of small eminences, called papillæ, papillæ cutis or tactûs, which are generally regarded as essentially nervous and vascular. The skin is a medium of communication with external bodies. It protects the subjacent parts, is the seat of touch, and through it are exhaled the watery parts of the blood not needed in the nutrition of the body. Its color varies according to the age, sex, race, etc. As a rule, the skin is finer in the female and child than in the male and adult. In old age it becomes light-colored, thin, and dry. The following measurements have been made of the skin and its component parts, especially as regards the thickness of the skin (Krause):

	Mm.
Subcutaneous connective tissue free from fat:	
On the eyelids	0.6
On the superior and inferior part of the ear.	
On the penis	0.7
Membrane at vault of cranium, at forehead, and nose	2
In general	4–9
In fat people up to	30
Thickness of the entire abdominal wall:	
Anteriorly and laterally	15–30
Posteriorly (median plane)	90–110
In the lumbar region	60–70
Corium:	
Of eyelids, prepuce, and internal side of labia majora	0.6
Glans penis	0.3
Face, eyes, penis, scrotum, areola of nipple	0.7–1
Forehead	1.5
In general, usually	1.7–2
Back, seat, bottom of foot	2–3
Papillæ of the skin:	
Base and height	0.07
Large papillæ in the volar surface of the hand, foot, and sole of foot	0.1–0.2
Dorsal surface of hand and foot	0.09
Face, neck, in most of the regions of the nates and extremities	0.07–0.05
Glans penis	0.06–0.1
On one mm. (Moleschott) on the volar surface of the hand there were 80 papillæ.	
Epidermis:	
Deep and middle layer	0.03–1
Outer layer	0.03–2
Entire thickness of epidermis on most places of the body	0.07–0.17
Anterior side of neck, breast, abdomen, flexor side of arm and thigh, areola of nipple, prepuce, and glans penis	0.07–0.1
Volar surface of hand	0.6–1.2
Sole of foot	0.4–1.8
Below the sole and at anterior end of metatarsus, below the heads of metacarpal bones	2
Weight of epidermis (Moleschott) 488.5 grammes.	

C. aë'na or **aë'rea**, bronzed skin, as in Addison's disease; see *Capsule, renal*. **C. anseri'na**, goose-skin; horripilation; see *Horrida cutis*. **C. carno'sa**, panniculus carnosus. **C. exter'na, ex'tima**, or **extre'ma**, epidermis. **C. gallina'cea** or **hor'rida**, horrida cutis. **C. lax'a**, dermatolysis; molluscum fibrosum. **C. linguæ**, see *Tongue*. **C. pen'dula**, molluscum fibrosum; see *Dermatolysis*. **C. suil'la**, buffy coat. **C. sum'ma** or **supre'ma**, epidermis. **C. ten'sa chron'ica**, scleroderma; induration of the cellular tissue. **C. testa'cea**, ichthyosis sebacea of newborn children; seborrhœa generalis. **C. ul'tima**, epidermis. **C. unctuo'sa**, seborrhœa; stearrhœa. **C. variega'ta**, achroma. **C. ve'ra**, corium; see *Cutis*.

Cutisector, ku-te-sek'tor (*cutis*, skin, *seco*, to cut). Instrument for removing small pieces of skin for examination.

Cuti'tis (*cutis, itis*). Dermatitis; cytitis; erysipelatous inflammation.

Cut'leaf. Fucus vesiculosus; F. serratus; Laminaria digitata.

Cut-off mus'cle. Compressor urethræ.

Cut'ting on the gripe. See *Lithotomy*.

Cut'tlefish. Sepia.

Cuttubuth, kut'tu-buth. Species of melancholy accompanied with agitation and inability to remain tranquil.

Cut'weed. Fucus vesiculosus.

Cu'vier (French comparative anatomist), **an'gle of.** Facial angle. **C., ducts of**, two canals in fœtal life opening laterally into the sinus venosus, formed by the union of the anterior and posterior cardinal veins.

Cy'amos or **Cyamus**, se'am-us. Asellus; nipple.

Cyanæ'mia. Deficient oxidation of the blood, as in cyanosis.

Cyanæmocro'sis (*kuanos*, blue, *haima*, blood, *chrosis*, coloring). Cyanosis.

Cyanephidrosis (se-an-ef-id-ro'sis) or **Cyanhidrosis**, se-an-hid-ro'sis (*kuanos*, blue, *ephidrosis*, perspiration). Blue condition of the perspiration, staining the linen blue.

Cyanetum, se-an-a'tum. Cyanide.

Cyanhy'dric ac'id. Hydrocyanic acid.

Cyanhydrosis, se-an-hid-ro'sis (*cyano, hidros*, sweat). Blue sweat, or a light-blue discoloration of the sweat.

Cyanic, si-an'ik (*kuanos*, blue). Epithet for the blue stage of a malady, as cholera. **C. ac'id** (HCNO), cyanogen hydrate; volatile liquid forming cyanates.

Cy'anide of mer'cury and zinc. White powder, insoluble in water, and regarded as an antiseptic.

Cyanidrosis, se-an-id-ro'sis. Cyanephidrosis.

Cyano, si'an-o (*kuanos*, blue). In composition, blue.

Cyanochroia, se-an-o-kroi'ah (*kuanos*, blue, *chroa*, color). Blue discoloration of the skin; cyanosis.

Cyanochrous, si-an-ok'ro-us (same etymon). Having blue skin.

Cyanoder'ma or **Cyanodermia**, se-an-o-der'me-ah (*cyano, derma*, skin). Cyanopathy; cyanosis.

Cyanogen, si-an'o-jen (*cyano, gennao*, to generate). So called from being an ingredient in Prussian blue or ferric ferrocyanide. It forms, with oxygen, cyanic and other acids; with hydrogen, hydrocyanic acid; and with mercury, potassium, etc., cyanides of these metals.

Cyanohy'dric ac'id. Hydrocyanic acid.

Cyanopathy, si-an-op'ath-e (*cyano, pathos*, affection). *Blue jaundice.* Disease in which the surface of the body is colored blue, commonly depending on a direct communication remaining between the cavities of the right and left side of the heart, patency of the foramen ovale. Such communication does not, however, always occasion the blue disease, but it is generally thought that the disease probably never exists without some obstacle to the circulation in the right side of the heart. A child thus affected is said to be *cyanosed*.

Cyanosed, si'an-ozed. Affected with cyanosis.

Cyanosis, si-an-o'sis (blueness). Cyanopathy; lividity from plethora of the venous system. **C. bul'bi**, violet discoloration of sclerotic coat, seen at birth. **C. pulmona'lis**, see *Atelectasis pulmonum*.

Cyanotic, si-an-ot'ik. Relating or appertaining to cyanosis. **C. indura'tion**, chronic passive hyperæmia of the kidneys.

Cyanuret, si-an'u-ret. Cyanide.

Cyanure'tum. Cyanide.

Cyanurin, si-an'u-rin (*kuanos*, blue, *ouron*, urine). Blue coloring matter in urine, in which indican is present.

Cyanus, se'an-us (*kuanos*, blue). Centaurea cyanus. **C. Ægypti'acus**, Nymphæa nelumbo. **C. seg'etum**, blue bottle; blue flowers of this European plant, when distilled with water, are used in ophthalmia.

Cyar, se'ar (*kuar*, small hole). Eye of a needle; meatus auditorius internus.

Cyasma, se-as'mah. Freckled condition in pregnancy.

Cyathea (small cup) **arborea**, se-ath-e'ah ar-bor'e-ah. Species of arborescent ferns of S. America, root of which is demulcent and diuretic.

Cyathiscus, se-ath-is'kus (dim. of **Kuathos,** a bowl). Concave part of a sound, made like a small spoon; curette for the ear.

Cyathus, se'ath-us (a bowl). Measure, both of the liquid and dry kind, equal to about an ounce and a half; cup for receiving blood in venesection. **C. cer'ebri,** infundibulum of the brain.

Cybe, se'be. Head.

Cybistax antisyphilitica, sib-is'tax an-te-sif-il-it'-ik-ah. Brazilian tree, generally called caroba.

Cybiton, sib'it-on. Cubitus.

Cyboid, si'boid (*kubos,* cube, *eidos,* resemblance). Cuboid.

Cycas circinalis, se'kas sir-sin-al'is. See *Sago.* **C. revolu'ta,** see *Sago.*

Cyclamen Europæum, sik-lam'en u-ro-pe'um (*kuklamis,* a circle, from the shape of the leaves). Fresh root is acrid, bitter, drastic emmenagogue, and anthelmintic. For external use. See *Arthanita.* The powerful qualities of the root are due to its poisonous active principle, cyclamin or arthanitin or arthanita, acting like curare.

Cyclamin, sik-lam'in. $C_{20}H_{34}O_{10}$. See *Cyclamen Europæum.*

Cyc'lamis. Cyclamen.

Cycle, si'k'l (*kuklos,* circle). Period or revolution of a certain number of years or days; name formerly given to aggregate of curative means continued during a certain number of days, nine being the usual number; course of diet or exercise. **C., hebdom'adal** or **hep'tal,** period of seven days or years which, according to some, either in its multiple or submultiple, governs many phenomena of animal life.

Cyclencephalia, kik-len-sef-al'e-ah (*kuklos,* circle, *kephale,* head). Cyclocephalia.

Cyclencephalous, si-klen-sef'al-us (same etymon). Cyclocephalus.

Cycle'sis (*kuklos,* circle). Circulation.

Cyclicotomy, si-klik-ot'om-e (*kuklikos,* circular, *tome,* incision). Intraocular myotomy; division of ciliary body in glaucoma.

Cycliscus (sik-lis'cus) or **Cyclismus,** sik-liz'mus. Troche, trochiscus; circular rasp or knife used in treatment of fracture of the skull.

Cyclitis, sik-le'tis (*kuklos,* circle). Inflammation of the ciliary circle, neighboring parts of the sclerotica, and ciliary processes.

Cyclocephalia, sik-lo-sef-al'e-ah (*cyclus, kephale,* head). Kind of monstrosity referred to under *Cyclocephalus.*

Cyclocephalic, si-klo-sef-al'ik. Having head or eyes as described under *Cyclocephalus.*

Cyclocephalus, sik-lo-sef'al-us (*cyclus, kephale,* head). Monstrosity in which malformed or imperfectly developed eyes become approximated in the middle line or even fused; olfactory organs are absent. Term also applied to the shape of the head seen in hydrocephalus.

Cyclochorioïditis, sik-lo-ko-re-o-id-e'tis. Inflammation of the ciliary body and choroid.

Cycloganglion'ic nerves. See *Nerves.*

Cyclopanophthalmia, sik-lo-pan-of-thal'me-ah (*cyclo, pan, ophthalmos,* eye). Cyclopic condition, the eyeball being absent.

Cyclophoria, sik-lo-for'e-ah (*cyclus, phoreo,* to bear). Circulation of blood or other fluids.

Cyclopia, sik-lo'pe-ah (*cyclus, ops,* eye). State of a monster that has both eyes united into one, the orbits being fused; called also monopsia and rhinencephalia. **C. genistoï'des,** S. African plant, decoction and infusion of which are used as expectorants in chronic bronchitis and phthisis; the glucoside *cyclopin* is derived from it.

Cyclopleg'ia (*kuklos,* circle, *plege,* stroke). Paralysis of the ciliary muscle.

Cyclops, sik'lops (*cyclus, ops,* eye). Monster having but one eye, and that placed in the middle of the forehead, as in the fabulous Cyclops.

Cyclos, sik'los. Circle; cycle.

Cycloscope, si'klo-skope (*cyclus, skopeo,* to see). Instrument for measuring direction-circles of the eye in the field of fixation.

Cyclosis, sik-lo'sis (*kuklos,* circle). Circulation; gyration.

Cyclotome, si'klo-tome (*cyclus, tome,* incision). Instrument composed of a ring of gold and a cutting blade, by means of which the eyeball can be fixed whilst the cornea is cut for the extraction of cataract. The operation is called *Cyclot'omy.*

Cyclus, sik'lus. Circle.

Cy'der. Cider.

Cydo'nia (from Cydon in Crete). Pyrus cydonia. **C. Chinen'sis,** fruit of this Chinese tree is sedative, astringent, stomachic. **C. Europæ'a,** Pyrus cydonia. **C. malifor'mis,** Pyrus cydonia. **C. vulga'ris,** Pyrus cydonia.

Cydonia'tum or **Cydonatum,** sid-o-nat'um. Composition made of Cydonia mala or quinces with addition of spices.

Cydonium, sid-o'ne-um. See *Pyrus cydonia.* **C. ma'lum,** see *Pyrus cydonia.*

Cyema, se-a'mah (*kuema,* the fœtus). The product of conception. See *Embryo* and *Fœtus.*

Cyesicolica, se-es-e-o-kol'ik-ah (*kuesis,* pregnancy, *kolike,* colicky). Colic in a pregnant woman.

Cyesiodiarrhœa, se-es-e-o-de-ar-rhe'ah. Diarrhœa associated with pregnancy.

Cyesiognomon, se-es-e-og-no'mon (*cyesis, gnomon,* sign or token). Sign of pregnancy.

Cyesiognosis, se-es-e-og-no'sis (*cyesis, gnosis,* knowledge). Diagnosis of pregnancy.

Cyesiology, sy-es-e-ol'o-je (*cyesis, logos,* description). Doctrine or description of gestation.

Cyesis, se-a'sis. Conception; fecundation; pregnancy.

Cy'esteïne. Kiesteine.

Cyetic, si-et'ik. Relating to pregnancy.

Cy'la or **Cylades,** sil'ad-ees. Hollows below the eyelids; lower eyelids.

Cylich'ne, Cylich'nis, or **Cylichnion,** sil-ik'ne-on (dim. of **Culix,** a cup). Pillbox or small cup.

Cylicotomy, si-lik-ot'om-e (*kulix,* cup, *tome,* incision). Division of the ciliary (cup-shaped) muscle, as in glaucoma.

Cylindarthro'sis. Pivot and hinge-joint articulation.

Cyl'inder. Tube-cast. **C., ax'is,** axis. **C., cor'tical,** cell trabecula. **C., med'ullary,** see *Serous canaliculi.*

Cylindri, sil-in'dre. See *Villous membranes.* **C. membrana'cei re'num,** see *Calix.*

Cylin'drical lens. Lens having plane surface in one axis, and a concave or convex surface in axis at right angles to it.

Cylindrocephalic, sil-in-dro-sef-al'ik (*kulindros,* cylinder). Term applied to heads of cylindrical shape; the condition is called *Cylindroceph'aly.*

Cylin'dro-enchondro'ma. Cylindroma.

Cylindroid, sil-in'droid (*kulindros,* cylinder, *eidos,* form). Having the form of a cylinder, as cornu ammonis. **C. an'eurism,** see *Aneurism.*

Cylindroma, sil-in-dro'mah. Tumor having the appearance of myxoma, contents of which are made up of clear cylindrical masses. See *Chondroma.*

Cylindrosarcoma, sil-in-dro-sar-ko'mah. Tumor composed of cylindroma and sarcoma.

Cylindrotænium, sil-in-dro-te'ne-um. Microscopic parasitic vegetable growth found in choleraic discharges, approaching in form the oïdium and cylindrium.

Cylissocelorrhaphia, sil-is-so-sel-or-rhaf'e-ah (*kulisis,* revolution, *kele,* tumor, *rhaphe,* seam). Continuous suture used in hernia.

Cylloepus (sil-lo'ep-us) or **Cyllop'odes** (*kullos,* crooked, *pous,* foot). One who is affected with club-foot or bowlegs. See *Kyllosis.*

Cyllopo'dion. See *Kyllosis.*

Cyllos, sil'los. Having club-foot; bow-legged or bandy-legged.

Cyllosis, sil-lo'sis (*kullosis*). Lameness, mutilation, or vicious conformation; club-foot. See *Kyllosis.*

Cyllosomus, sil-lo-so'mus (*kullos,* crooked, *soma,* body). Malformation by defect, in which the fissure and eventration are lateral, chiefly in the lower part of the abdomen, the inferior extremity of the side affected with the fissure absent or very little developed. See *Celosoma.*

Cyllum, sil'lum. Knock-knee; dislocation of leg or foot outward.

Cy'ma. Fœtus in utero.

Cymatodes, sim-at-o'dees (undulating). Vacillating, undulatory character of the pulse in adynamic individuals.

Cymba, sim'bah (*kumbos,* a cavity). Scaphoid bone; vulva; fossa of concha situate above spine of helix.

Cymbalaria elatine, sim-bal-ar'e-a el-at-e'ne. Antirhinum elatine. **C. mura'lis,** Antirhinum linaria.

Cymbalaris, sim-bal-ar'is (*kumbalon,* cymbal). Cricoid.

Cymbecephalic, sim-be-sef-al'ik (*kumbe,* canoe, *kephale,* head). Having a boat-shaped skull.

Cymbiform, sim'be-form (*kumbe,* canoe, *forma,* shape). Term applied to scaphoid bone.

Cymbocephal'ic or **Cymbocephalous,** sim-bo-sef'-al-us (*kumbe,* canoe, *kephale,* head). Cymbecephalic, the condition being called *Cymboceph'aly.*

Cymbopogon schœnanthus, sim-bo-po'gon ske-nan'-thus. Juncus odoratus.

Cyminum, sim-e'num. Cuminum cyminum.

Cymling. See *Cucurbito pepo.*

Cymograph, si'mo-graf (*kuma,* a wave, *grapho,* to describe). Kymograph.

Cymop'teris or **Cymopterus** (sim-op'ter-us) **Fendle'ri.** New Mexican plant, used as stomachic tonic.

Cy'na. Artemisia vulgaris.

Cynagros'tis. Triticum repens.

Cynanche, sin-an'ke (*cyno, ancho,* to suffocate). *Angina;* sore throat; inflammation of the supradiaphragmatic portion of the alimentary canal, and of the lining membrane of the upper part of the air-passages. **C. cellula'ris malig'na gangræno'sa,** angina Ludovici. **C. contagio'sa,** diphtheritic cynanche. **C. dysarthrit'ica,** angina arthritica. **C. epidem'ica,** C. maligna. **C. exanthemat'ica,** angina variolosa. **C. exter'na,** C. parotidæa. **C. fau'cium,** C. tonsillaris. **C. gangræno'sa,** C. maligna. **C. laryngœ'a,** laryngitis. **C. malig'na,** this affection has been described usually as an isomorphous, putrid, or ulcerous or ulcerated sore throat, gangrenous or malignant inflammation of the pharynx; characterized by crimson redness of the mucous membrane of the fauces and tonsils, ulcerations covered with mucus; and spreading sloughs, of an ash or whitish hue; the accompanying fever, typhus: as being often epidemic, and frequently found accompanying scarlet fever, giving rise to scarlatina maligna or canker rash. Cynanche maligna is described sometimes as including both diphtheritic and gangrenous pharyngitis; see *Pharyngitis, diphtheritic.* The general treatment is the same as in typhus, and stimulant antiseptic gargles must be used, consisting, for example, of the decoction of bark and muriatic acid, a solution of potassium chlorate, etc. **C. maxilla'ris,** C. parotidæa. **C. mercuria'lis,** mercurial stomatitis. **C. œsophagœ'a,** œsophagitis. **C. parotidæ'a,** mumps, parotid bubo; characteristic symptoms are—a painful tumor of the parotid gland or of the areolar tissue surrounding it, or of both, not suppurative; frequently extending to the maxillary gland. It is very conspicuous externally, and is often accompanied with swelling of the testis or of the mammæ; the testes being sometimes absorbed afterward. It is generally epidemic, and apparently contagious. Treatment is very simple; under the antiphlogistic plan it usually soon disappears; inflammation of the mammæ or testes must be treated as if idiopathic. Epidemic parotitis or mumps is also called parotitis polymorpha, epidemica or specifica. **C. pharynge'a** or **pharyngæ'a,** inflammation of the pharynx; it can hardly be said to differ, in pathology or treatment, from cynanche tonsillaris. **C. prunel'la,** C. tonsillaris. **C. pur'puro-parotidæ'a,** C. maligna. **C. sim'plex,** simple angina; isthmitis. **C. strapito'ria** or **strid'ula,** C. trachealis; croup. **C. sublingua'lis malig'na,** angina Ludovici. **C. suffocati'va,** croup. **C. thyreoï'dea,** goitre. **C. tonsilla'ris,** inflammatory sore throat, common quinsy; characteristic symptoms of this affection are, swelling and florid redness of the mucous membrane of the fauces, and especially of the tonsils; painful and impeded deglutition, with inflammatory fever. It is generally ascribed to cold, and is a common affection of cold and temperate climates; it usually goes off by resolution, but frequently ends in suppuration. Common sore throat is usually of no consequence, requiring merely rest and the observance of the antiphlogistic regimen; when more violent—in addition to this—bleeding, local or general, or both; purgatives, inhalation of the steam of warm water; acid, or emollient gargles; rubefacients externally or sinapisms or blisters. When suppuration must inevitably occur, an opening must be made into the abscess as soon as pus shall have formed. If the patient is likely to be suffocated by the tumefaction, bronchotomy may be necessary. **C. trachea'lis,** laryngo-tracheitis with diphtheritic exudation, popularly called *Croup, Roup, Hives, Bold hives, Choak, Stuffing, Rising of the lights;* disease characterized by sonorous and suffocative breathing, harsh voice, cough ringing or like the barking of a dog, highly inflammatory fever. It is apt to be speedily attended with the formation of a false membrane, lining the trachea beneath the glottis, and occasioning violent dyspnœa and suffocation, but being sometimes expectorated. Dyspnœa, as in all other affections of the air-passages, has evident exacerbations. The inflammation is infinitely more inflammatory in some situations than in others; hence the success obtained from different modes of treatment. It chiefly affects children, and is apt to recur, but the subsequent attacks are usually less severe. It requires, as a rule, the most active treatment. The majority of cases of so-called croup are not of this inflammatory cast, but are more of a spasmodic character, being called false croup and spasmodic or catarrhal croup. They generally yield to an emetic and the warm bath. See *Diphtheria.* **C. trachea'lis spasmod'ica,** asthma acutum, A. thymicum. **C. ulcero'sa,** C. maligna.

Cynanchica, sin-an'kik-ah. Medicines used in cases of quinsy.

Cynanchorthopnœa, sin-an-kor-thop-ne'ah (*cynanche, orthos,* upright, *pneo,* to breathe). Orthopnœa of cynanche trachealis or croup.

Cynanchum, sin-an'kum. Genus of plants, ord. Asclepiadaceæ, of which several are used in medicine. **C. ar'gel,** C. oleæfolium. **C. ipecacuan'ha,** Tylophora asthmatica. **C. Monspeli'acum,** scammony of Montpellier; the plant furnishes a blackish and purgative gum-resin. **C. oleæfo'lium,** Egyptian, Nubian, and Arabian shrub, the leaves of which form a portion of most samples of Alexandrian senna; they resemble senna in their action. **C. tomento'sum,** Tylophora asthmatica. **C. vincetox'icum,** Asclepias vincetoxicum. **C. viridiflo'rum** or **vomito'rium,** Tylophora asthmatica.

Cynanthemis, sin-an'them-is (*cyno, anthemis*). Anthemis cotula.

Cynanthropy, si-nan'thro-pe (*cyno, anthropos,* man). Variety of melancholia in which the patient believes himself changed into a dog, and imitates the voice and habits of that animal.

Cynapine, sin'ap-een. Toxic alkaloid from Æthusa cynapium; æthusine.

Cyna'pium. Æthusa cynapium.

Cynara, sin'ar-ah (*kunaros,* dog briar). Systematic name of artichoke or garden artichoke, C. scolymus juice of which is diuretic, and leaves are used in arthritic affections and neuralgia; ord. Compositæ. Indigenous in southern parts of Europe; used as an agreeable article of diet; juice of the leaves, mixed with white wine, has been given in dropsies. **C. cardun'culus,** prickly artichoke of S. Europe. **C. scol'ymus,** see *Cynara.* **C. silves'tris,** C. cardunculus.

Cyniatri'a (*kuon*, dog, *iatreia*, medical treatment). Medical treatment of diseases of the dog.

Cynic (sin'ik) or **Cyn'ical.** Relating to or resembling a dog. **C. spasm,** convulsive contraction of muscles of one side of the face — dragging the eye, cheek, mouth, nose, etc., to one side. See *Canine.*

Cynips quercûs folii, sin'ips kwur'kus fo'le-e. See *Quercus infectoria.*

Cy'no (*kuon*, dog). In composition, dog.

Cynocepha'lia or **Cynocephalion,** si-no-sef-al'e-on (*kuon*, dog, *kephale*, head). Condition in which the head is shaped like that of a dog.

Cynocephalous, si-no-sef'al-us (same etymon). Having a head like that of a dog.

Cynocoprus, sin-ok'o-prus (*cyno*, *kopros*, excrement). Album græcum.

Cynocrambe, sin-o-kram'be (*cyno*, *krambe*, cabbage). Mercurialis perennis; Brassica silvestris.

Cynoctonon, sin-ok'ton-on (*cyno*, *kteinó*, to kill). Aconitum; mitreola.

Cynocytisus, sin-o-sit'is-us. Rosa canina.

Cynodectos, sin-o-dek'tos (*cyno*, *deko*, to bite). One who has been bitten by a dog.

Cynodes, sin-o'dees. Cynic.

Cynodes'ma, Cynodes'me, Cynodesmion (sin-o-dez'-me-on), or **Cynodes'mus** (*cyno*, *desmos*, band). Frænum penis. Infibulation; ring for infibulation.

Cynodesmesis, sin-o-des-me'sis (same etymon). Infibulation.

Cynodon dactylon (sin'o-don dak'til-on) or **officina'le** (*cyno*, *odous*, tooth). Bermuda grass; indigenous; roots have been used as a substitute for sarsaparilla; diuretic and alterative.

Cynodontes, sin-o-don'tees. Canine teeth.

Cynoglos'sum (*cyno*, *glossa*, tongue) **amplexicau'le.** C. virginicum. **C. bi'color,** hound's tongue; caballation; it is aromatic, mucilaginous, and narcotic. **C. ma'jus** or **officina'lis,** common hound's tongue; leaves and root are used in coughs and catarrhs and affections of the bowels, and externally as an application to burns, ulcers, etc. **C. Moriso'ni,** beggar's lice; Virginia mouse-ear; dysentery weed; root is tonic, astringent, and mucilaginous. **C. officina'le,** hound's tongue, cynoglossum. **C. virgin'icum,** wild comfrey; indigenous; has mucilaginous properties. The leaves are smoked, and are said to produce effects like those of tobacco.

Cynol'ophi or **Cynolophoi,** sin-ol'o-foi (*cyno*, *lophos*, eminence). Spinous processes of the vertebræ.

Cynolyssa, sin-o-lis'sah (*cyno*, *lussa*, madness). Hydrophobia; rabies.

Cynomet'ra agal'locha. Agallochum. **C. cauliflo'ra,** tree of E. and W. Indies, the root of which is cathartic; oil of the fruit is used in skin diseases. **C. ramiflo'ra,** E. Indian tree; root is applied externally in several skin diseases.

Cyno'mia or **Cynomoi'a.** Plantago psyllium.

Cynomo'rion or **Cynomo'rium coccineum,** sin-o-mo're-um kok-sin'e-um (*cyno*, *morion*, penis). Improperly called Fungus Melitensis, or scarlet fungus of Malta, as it is not a fungus. The powder is astringent in hemorrhage, dysentery, etc.

Cynopho'bia (*cyno*, *phobos*, fear). Fright at being bitten, not hydrophobia.

Cynorexia, sin-o-reks'e-ah (*cyno*, *orexis*, appetite). Boulimia; voracious appetite.

Cynor'rhodon (*cyno*, *rhodon*, a rose). Rosa canina; hips.

Cynos'batos (*cyno*, *batos*, bramble). Rosa canina.

Cynosor'chis (*cyno*, *orchis*, testicle). Orchis mascula.

Cynospasmus, sin-o-spaz'mus (*cyno*, *spasmos*, spasm). Cynical spasm. See *Cynic* or *Cynical.*

Cynospas'tum (*cyno*, *spao*, to draw). Rosa canina.

Cy'on. Frænum of prepuce; penis.

Cyonorrhaphia, si-on-or-rhaf'e-ah. Staphylorrhaphy.

Cyophoria, se-o-for'e-ah (*kuos*, fœtus, *phero*, to carry). Pregnancy.

Cy'opic (*kuanos*, blue, *puon*, pus). Coloring matter of blue pus.

Cyoto'cia (*kuos*, ovum, *tokao*, to bring forth). Parturition.

Cyotrophy, si-ot'ro-fe (*kuos*, fœtus, *trepho*, to nourish). Embryotrophy; nutrition of the embryo; fœtal nutrition.

Cyparissus, sip-ar-is'sus (*kuparissos*). Cupressus sempervirens.

Cyperus antiquorum, sip-a'rus an-tik-wo'rum. Lawsonia inermis. **C. articula'tus,** jointed sedge of W. Indies and S. America; anthelmintic. **C. canes'cens,** plant of E. Indies; leaves are used for colic and amenorrhœa. **C. distach'yos,** plant of E. Indies; root is diuretic and diaphoretic. **C. In'dicus,** Curcuma longa. **C. lon'gus** possesses aromatic and bitter properties; emmenagogue and stomachic tonic; see *Dorstenia contrayerva.* **C. odo'rus** or **Perua'nus,** Dorstenia contrayerva. **C. roman'us,** C. longus. **C. rotun'dus, Syri'acus,** or **tetras'tachys,** round cyperus, a more grateful aromatic bitter than C. longus; tonic, stimulant, diaphoretic, diuretic.

Cyphel, sif'el. Sempervivum tectorum.

Cyphoid, si'foid. Hump-like.

Cyphoma, sif-o'mah (*kuphos*, gibbous). Gibbosity of the spine; humpback. See *Cyphoma, Gibbositas,* and *Vertebral disease.* Used synonymously with cyphoma, it includes cretinism and rickets.

Cyphorthosis, sif-or-tho'sis (*kuphos*, gibbous, *orthos*, right). Orthopædics.

Cyphos, se'fos. Cyphoma.

Cyphoscoliosis, sif-o-skol-e-o'sis (*kuphos*, gibbous, *skolios*, crooked). Cyphoma; gibbosity.

Cyphosis, sif-o'sis. Spinal deformity. Cyphoma. See *Hump, Lordosis,* and *Scoliosis.*

Cyphotic, si-fot'ik. Relating to cyphosis, or one so affected.

Cypress, si'press. Cupressus sempervirens, Taxodium distichum. **C., Amer'ican,** Schubertia disticha. **C., bald,** Taxodium distichum. **C. tree,** liriodendron.

Cypripedium acaule, sip-re-pe'de-um ak-aw'le (*kupris*, Venus, *podion*, sock or buskin or slipper). *Stemless ladies' slipper, Moccasin flower, Noah's ark.* Indigenous; roots are used by steam-doctors in nervous diseases, like valerian; narcotic. **C. calce'olus,** C. luteum, C. spectabile. **C. Canaden'se,** C. spectabile. **C. flaves'cens,** C. luteum. **C. hu'mile,** C. acaule. **C. lu'teum,** *Yellow ladies' slipper, Moccasin flower, Moccasin plant, Yellows, Bleeding heart, American valerian, Yellow umbil, Male mervine, Noah's ark.* Indigenous plant, found all over the United States; the rhizome and rootlets of C. pubescens and C. parviflorum are officinal (Ph. U. S.) under name *Cypripedium;* are antispasmodic, and used in the same cases as valerian. **C. parviflo'rum, C. pubescens,** C. luteum. **C. spectab'ile,** showy ladies' slipper, the most beautiful of the genus, said to possess properties identical with those of C. luteum.

Cyprium, sip're-um (from **Cyprus**). Cuprum.

Cypsele. Capsule; small cavity, as of the ear; hollow of the ear; cerumen.

Cyrceon, sur'se-on. Anus.

Cyrsotomy, sur-sot'o-me. Cirsotomy.

Cyrtocoryphus, sur-to-kor'e-fus (*kurtos*, convex, *koruphe*, crown or head). Term applied to skulls in which the parietal angle of Lissauer is from 122° to 132°.

Cyrtograph, sur'to-graf (*kurtos*, curved, *grapho*, to write). Instrument for describing curves of the thorax; cyrtometer.

Cyrtoid, sur'toid. Crooked; humpbacked; gibbous.

Cyrtoma, sur-to'mah (*kurtos*, curved). Curvature, cyphoma.

Cyrtometer, sur-tom'et-ur (*kurtos*, curved, *metron*, measure). Instrument for measuring curved parts of the body.

Cyrtometopus, sur-to-met-o'pus (*kurtos*, curved, *metopon*, forehead). Term applied to skulls in which the angle between the lines projected from metopion to bregma and to nasion is from 130.5° to 120°.

Cyrtonosus, sur-ton'os-us (*kurtos*, curved, *nosos*, disease). Rickets.

Cyrtopisthocranius, sur-to-pis-tho-kran'e-us (*kur-*

tos, convex, *opisthokranion*, occiput). Term used to denote skulls in which the angulus summi occipitis is from 117° to 140°.

Cyrtosis, sur-to'sis. Cyphoma. Spinal curvature; rickets.

Cyrturanus, sur-tu'ran-us (*kurtos*, convex, *ouranos*, roof of mouth). Term used to denote skulls in which the angulus summi palati is from 147.5° to 132°.

Cys'arus or **Cyssarus**, sis'sar-us. Anus, rectum.

Cyssanthemon, sis-san'them-on. Cyclamen Europæum.

Cyssophyllon, sis-so-fil'lon. Cyclamen Europæum.

Cyssotis, sis'so-tis (*kusos*, anus). Lower part of the rectum. Tenesmus.

Cyssus, sis'sus. Anus.

Cyst, sist (*kustis*, bladder or pouch). Term generally applied to a pouch or sac—cystoma—without opening, and commonly of a membranous nature, accidentally developed in a natural cavity or in the substance of organs. Some cysts are formed by a thin, translucent membrane, having scarcely the thickness of the arachnoid; others of a whitish, fibro-cellular membrane, more or less thick; some contain cartilaginous or bony flakes. The greater part have but one cavity; others have several, separated by incomplete or imperfect septa, as is frequently seen in those developed in the ovaries. The matter contained in cysts is sometimes limpid, serous, yellowish-white, reddish, and at others more or less thick, albuminous, adipous, or caseous. The tumor formed by them is called encysted. Cysts are either simple (or barren) or compound (or proliferous), the former containing fluid or organized matter, the latter various organized bodies. According to the nature of their contents they are called serous, synovial, mucous, sebaceous, sanguineous, colloid, salivary, seminal, or dermoid. Cysts may be most conveniently classified according to their mode of origin (Green):

CLASSIFICATION OF CYSTS.

I. *Cysts formed by the Accumulation of Substances within the Cavities of Pre-existing Structures.*

1. RETENTION-CYSTS. Cysts resulting from the retention of normal secretions. These include—
   - *a. Sebaceous Cysts.* These are formed by the retention of secretions in the sebaceous glands. They possess a very thin connective-tissue wall lined by stratified epithelium. They contain a mass of fatty epithelium and its products, débris, cholesterin, etc.
   - *b. Mucous Cysts.* These are formed by the retention of secretions in the glands of mucous membranes.
   - *c. Cysts from the Retention of Secretions in other parts*, including ranula, when due to occlusion of the salivary ducts; encysted hydrocele, from occlusion of the tubuli testis; cysts in the mammary gland, from obstruction of the lacteal ducts; simple and some compound cysts of the ovary, from dilatation of the Graafian follicles; and simple cysts of the liver and kidneys.
2. EXUDATION-CYSTS. Cysts resulting from excessive secretion in cavities unprovided with an excretory duct. These include bursæ, ganglia, hydroceles, meningoceles, cystic bronchocele, and many cysts in the broad ligament.
3. EXTRAVASATION-CYSTS. Cysts resulting from extravasation into closed cavities. These include hæmatocele and some other forms of sanguineous cysts.

II. *Cysts of Independent Origin.*

1. CYSTS FROM SOFTENING OF TISSUES. These are especially common in new formations, as in chondroma, lipoma, sarcoma, etc.
2. CYSTS FROM EXTRAVASATION INTO SOLID TISSUES—*e. g.* brain, soft new growths.
3. CYSTS FROM EXPANSION AND FUSION OF SPACES IN CONNECTIVE TISSUE. These include—
   - *a. Bursæ*, originating from irritation and exudation into the tissues.
   - *b. Serous cysts in the neck*, hygroma (often congenital).
   - *c. Many compound ovarian cysts.*
4. CYSTS FORMED AROUND FOREIGN BODIES, EXTRAVASATED BLOOD, AND PARASITES.
5. CONGENITAL CYSTS. Many hygromata, dermoid cysts. Sometimes these appear to be the remains of blighted ova, but usually they are due to inclusion of a piece of epiblast. Their wall has more or less perfectly the structure of skin; they contain fatty matters, a coil of long, fair hair, and rarely teeth, bones, etc.

C., adventit'ious, cyst or enclosure around an extraneous body or effused fluid. **C., allan'toic**, C., urachus. **C., alve'olar**, cyst connected with alveolus of tooth. **C., aneuris'mal**, sac of aneurism. **C., arach'noid**, hæmatoma of arachnoid membrane. **C., atherom'atous**, atheroma. **C., blood**, cyst containing blood. **C. of the broad lig'ament**, see *Corpus Wolffianum*. **C., col'loid**, see *Cyst*. **C., com'pound**, multilocular cyst. **C., Cowpe'rian** or **Cow'per's**, see *Nabothi glandulæ*. **C., cuta'neous** or **cutic'ular**, C. of the skin; see *Dermoid*. **C., daugh'ter**, cyst developed within another. **C., dentig'erous**, see *Dentigerous*. **C., der'moid**, see *Cyst* and *Dermoid*. **C., dilata'tion**, see *Retention*. **C., epider'mal**, atheroma. **C., extravasa'tion** or **exuda'tion**, C., adventitious. **C., false**, C., adventitious. **C., follic'ular**, cyst of follicle. **C., hæmat'ic**, C., blood. **C., hydat'ic** or **hydat'id**, echinococcus, hydatid. **C., Meibo'mian**, chalaza. **C., milk**, cystic enlargement of lactiferous duct. **C., Morgagn'ian**, hydatid of Morgagni. **C., moth'er**, outer cyst of a multilocular cyst. **C., mu'cous**, see *Cyst*. **C., multiloc'ular**, cyst divided in several partitions from formation of daughter cells in mother cells. **C., Naboth'ian**, see *Nabothi glandulæ*. **C., oil**, lipomatous tumor whose contents are oily. **C. oöphorit'ic**, unilocular and multilocular cysts of the oöphoron, or egg-bearing portion of the ovary. **C., ova'rian**, see *Ovary*. **C., papillo'matous**, cyst containing papillomatous growth, especially ovarian. **C., pa'rent**, C., mother. **C., paroöphorit'ic**, cyst of the paroöphoron, usually unilocular. **C., parova'rian**, cyst connected with the parovarium. **C., prolifera'tion** or **prolif'erative**, mother cyst; cyst having solid matter growing out from its surface. **C., prolif'erous**, see *Cyst, proliferation*. **C., prolig'erous**, adenosarcoma. **C., re'nal**, cystlike enlargement of the kidney. **C., reten'tion**, see *Retention*. **C., sal'ivary**, see *Cyst* and *Retention*. **C., sanguin'eous**, see *Cyst* and *C., blood*. **C., seba'ceous**, atheroma. **C., sec'ondary**, cyst within a cyst. **C., sem'inal**, C. of seminiferous tubule; see *Cyst*. **C., se'rous**, C. containing thin, clear liquid, hygroma; see *Cyst*. **C., single**, cyst with a single cavity. **C., spermat'ic**, C., seminal. **C. sublin'gual**, see *Ranula*. **C., syno'vial**, cyst of synovial sheath; see *Cyst*. **C., tar'sal**, chalazion. **C., testic'ular**, C., seminal. **C., the'cal**, cystic tumor, or cystoma, found sometimes in the tendons about the wrist and ankle; usually called ganglion. **C., umbil'ical**, cyst at umbilicus, existing at birth. **C., uniloc'ular**, C. with a single cavity. **C., u'rachus**, dilatation of the urachus so as to form a cyst, sometimes as large as the bladder, and sometimes communicating with the latter. **C., u'rinary**, C. of cortical substance of kidney. **C., Wolff'ian**, see *Corpus Wolffianum*.

Cystadenoma, sist-ad-en-o'mah. Adenoma having cysts in its interior.

Cystalgia (sist-al'je-ah) or **Cystidalgia**, sist-id-al'je-ah (*cystis*, *algos*, pain). Pain in the bladder.

Cystanastrophe (sist-an-as'tro-fe) or **Cystanastrophia**, sist-an-as-trof'e-ah (*kustis*, bladder, *anastrophe*, inversion). Inversion of the bladder.

Cystanencephalia, sist-an-en-sef-al'e-ah (*cystis*, *anencephalia*, absence of brain). Monstrosity in which, in place of a brain, a bladder is found filled with fluid.

Cystatrophia, sist-at-rof'e-ah (*cystis, atrophia,* atrophy). Atrophy or wasting of the bladder.

Cystauchen, sist-aw'ken (*cystis, auchen,* neck). Neck of the bladder.

Cystauchenitis, sist-aw-ken-e'tis (same etymon). Inflammation of the neck of the bladder.

Cystauchenotomy, sist-aw-ken-ot'o-me (*cystis, auchen,* neck, *tome,* incision). Incision into the neck of the bladder. See *Lithotomy.*

Cystauxe, sist-awks'e (*cystis, auxe,* increase). Hypertrophy of the coats of the urinary bladder. See *Cysthypersarcosis.*

Cyste, sist'e. Cyst; vagina; bladder.

Cystectasy, sist-ek'tas-e (*cystis, ektasis,* dilatation). Dilatation of the bladder; lithectasy.

Cystelcosis (*cystis, helcosis,* ulceration). Ulceration of the urinary bladder.

Cystencephalus, sist-en-sef'al-us (*cystis, kephale,* head). Monster having a head with a vesicular brain.

Cysteogenesis, sist-e-o-jen'es-is. Formation of a cyst.

Cysteolaparotomy, sist-e-o-lap-ar-ot'o-me (*cystis, lapara,* belly, *tome,* incision). Suprapubic cystotomy, performed in lithotomy.

Cysteolithus, sist-e-ol'ith-us (*cystis, lithos,* stone). Stone in the bladder; medicine employed to dissolve or break stone.

Cysterethism, sist-er'ith-izm (*cystis, erethizo,* to irritate). Irritability of the bladder.

Cysthelcosis, sist-hel-ko'sis. Cystelcosis.

Cysthepatic, sist-hep-at'ik (*cystis, hepar,* liver). Belonging to the gall-bladder and liver; name given formerly to imaginary excretory ducts for the bile, supposed to pass directly from the liver to the gall-bladder.

Cysthepatolithiasis or **Cystidepatolithiasis,** sist-id-ep-at-o-lith-e'as-is (*cystis, lithiasis,* formation of calculus). Aggregate of phenomena caused by the presence of biliary calculi. See *Calculi, biliary.*

Cysthepatolithus, sist-hep-at-ol'ith-us (*cystis, hepar,* liver, *lithos,* stone). Concretion formed in the gall-bladder.

Cysthitis, sist-he'tis (*kusthos,* vagina). Inflammation of the vagina.

Cys'thos or **Cysthus,** sis'thus. Anus; vulva.

Cysthygro'ma. Lymphatic cyst.

Cysthypersarcosis, sist-hy-per-sar-ko'sis (*cystis, huper,* over, *sarcosis,* fleshy growth). Fleshy thickening of the coats of the bladder.

Cystic, sist'ik. Belonging to a cyst or cysts, to the bladder or gall-bladder. Containing cysts; cystous; cyst-like. **C. ar'tery** is given off from the right branch of the hepatic, and divides into two branches, which proceed to the gall-bladder. It is accompanied by two cystic veins which open into the vena porta abdominalis. **C. bile,** bile contained in the gall-bladder. **C. bron'chocele,** cystic goitre. **C. cal'culi,** calculi formed in the gall-bladder; see *Calculi.* **C. can'cer,** carcinoma with cysts. **C. degenera'tion,** degeneration of any organ from presence of cysts, as the kidney. Form of follicular degeneration of cervix uteri with loss of substance. **C. duct,** duct proceeding from the gall-bladder, which, by its union with the hepatic duct, forms the ductus communis choledochus. **C. fos'sa,** depression on under surface of liver for the gall-bladder. **C. hyperpla'sia,** excessive follicular degeneration of the cervix uteri resembling a new growth. **C. ox'ide,** oxide, cystic. **C. ox'ide cal'culi,** see *Calculi, urinary.* **C. plex'us,** plexus formed by branches of hepatic plexus to gall-bladder. **C. sarco'ma of Ab'ernethy,** tumor, cellulous or cystous; cells oval, currant-sized or grape-sized, containing serous fluid; sometimes caseous. Found in the thyroid gland (forming bronchocele), testis, ovaries, etc. **C. valve,** spiral duplication of mucous membrane at entrance of cystic duct. **C. worm,** scolex; cestode worm.

Cystica, sist'ik-ah. Medicines believed proper for combating diseases of the bladder.

Cysticercus, sist-e-sur'kus (*cystis, kerkos,* tail). Genus of entozoa of the family of the hydatids, distinguished by the caudal vesicle in which the cylindrical or slightly-depressed body of the animal terminates. The cysticercus cellulosæ or telæ cellulosæ has been often found in the areolar or cellular membrane, and is considered to be the offspring of the tape-worm in one stage of its growth, having the power of developing a large number of individuals resembling itself. Cysticercus tenuicollis is the offspring of tænia marginata. See *Generation* (alternate), *Metagenesis, Parasites, Echinococcus,* and *Worms.* **C. bo'vis,** C. saginata. **C. ca'nis,** C. cellulosæ. **C. cellulo'sæ,** see *Cysticercus.* **C. cerebra'tus,** larva of tænia cœnurus. **C. clava'tus,** C. tenuicollis. **C. cu'tis,** hydatid of the skin. **C. dicys'ta,** cysticercus in human skull. **C. fin'na,** C. cellulosæ. **C. globo'sa,** C. tenuicollis. **C. linea'ta,** C. tenuicollis. **C. mediocanella'ta,** C. saginata. **C. pyrifor'mis,** C. cellulosæ. **C. racemo'sa,** C. branching out into arachnoid membrane of brain. **C. sagina'ta,** larval state of tænia mediocanellata. **C. tæn'iæ mediocanellat'æ** or **saginat'æ,** C. saginata. **C. te'læ cellulo'sæ,** C. cellulosæ. **C. tenuicol'lis** or **viscera'lis,** scolex of tænia marginata in human intestines.

Cystidalgia, sist-id-al'je-ah (*cystis, algos,* pain). Cystalgia.

Cystidelcosis, sist-id-el-ko'sis (*cystis, helcosis,* ulceration). Suppuration or ulceration of the urinary bladder.

Cystidepatic, sist-id-ep-at'ik. Hepatocystic.

Cystidepatolithiasis, sist-id-ep-at-o-lith-e'as-is. Cysthepatolithiasis.

Cystidoblennorrhœa, sist-id-o-blen-nor-rhe'ah. Cystirrhœa.

Cystidocatarrhus, sist-id-o-kat-ar'rhus. Cystirrhœa.

Cystidocele, sist-id-o-se'le (Eng. sist'id-o-seel). Cystocele.

Cystidolaparotomy, sist-id-o-lap-ar-ot'o-me (*cystis, lapara,* flanks, *tome,* incision). Abdominal section into the bladder.

Cystidomyeloma, sist-id-o-me-el-o'mah. Myeloma or soft cancer of the bladder.

Cystidoplegia, sist-id-o-plej'e-ah (*cystis, plege,* stroke). Paralysis of the urinary bladder.

Cystidorrhagia, sist-id-or-rhaj'e-ah. Hemorrhage of the urinary bladder.

Cystidorrhexis, sist-id-or-rhex'is. Rupture of the urinary bladder.

Cystidorrhœa, sist-id-or-rhe'ah. Cystirrhœa.

Cystidosomatotomia, sist-id-o-so-mat-o-tom'e-ah. Incision into the body of the bladder.

Cystidospasmus, sist-id-o-spaz'mus. See *Cystospastic.*

Cystidostenochoria, sist-id-o-sten-o-kor'e-ah (*cystis, stenos,* narrow, *choros,* place). Stricture of the urinary bladder.

Cystidotomy, sist-id-ot'o-me. Cystotomy.

Cystidotrachelotomy, sist-id-o-trak-el-ot'o-me (*cystis, trachelos,* neck, *tome,* incision). Incision into the neck of the bladder.

Cystifelleot'omy (*cystis, fel,* bile, *tome,* incision). Cholecystotomy.

Cystine, sist'een. $C_6H_{12}N_2S_2O_4$. Cystic oxide.

Cystinuria, sist-in-u're-ah. Condition in which cystine is present in urine; several ptomaïnes are found in it, as putrescine and cadaverine. See *Urine, cystinic.*

Cystinx, sist'inks (a bladder). Vesicle.

Cystip'athy, (*cystis, pathos,* disease). Disease of the bladder.

Cystiphlogia, sist-e-flo'je-ah (*cystis, phlogoo,* to inflame). Cystitis.

Cystirrhagia, sist-ir-rhaj'e-ah (*cystis, rhegnumi,* to break forth). Hemorrhage from the bladder; cystirrhœa.

Cystirrheuma, sist-ir-rhu'mah. Rheumatism of the bladder.

Cystirrhœa, sist-ir-rhe'ah (*cystis, rheo,* to flow). Copious discharge of mucus from the bladder with the urine, generally attended with dysuria, and commonly dependent upon inflammatory or subinflammatory condition of the lining membrane; polyuria.

Cystis, sist'is. Cyst, follicle, urinary bladder. **C. bi'lis, choled'ochus**, or **fel'lea**, gall-bladder. **C. sero'sa**, see *Hygroma*.

Cystitis, sist-e'tis. Inflammation of the bladder characterized by pain and swelling in the hypogastric region, discharge of urine painful or obstructed, and tenesmus. Commonly it is confined to the mucous coat. The chronic condition is usually cystorrhœa. It must be treated upon the energetic principles required in other internal inflammations, as venesection, general and local, the warm bath, warm fomentations, warm soothing enemata, diluents, etc. Cantharides must be avoided, even in form of blister, unless with precautions, as the disease is often occasioned by them. Cystitis is sometimes described as catarrh of the bladder, which is usually, however, synonymous with cystirrhœa. See *Cystirrhœa*. **C., croup'ous** or **diphtherit'ic**, C. with plastic deposit on interior of bladder or of thickened dead mucous membrane. **C., exfo'liative**, C., croupous. **C. fel'lea**, cholecystitis. **C. parenchymato'sa**, inflammation of whole structure of bladder. **C., pseu'do-mem'branous**, C., croupous. **C. submuco'sa** or **subsero'sa**, C. parenchymatosa. **C. u'rica**, cystitis.

Cystitome or **Cystotome**, sist'o-tome (*cystis, tome*, incision). Instrument for dividing anterior part of the capsule of the crystalline in the operation for extracting cataract. It is formed like a pharyngotome.

Cystit'omy. Cystotomy.

Cystoadenoma, sist-o-ad-en-o'mah (*cyst, aden*, gland). Glandular tumor or adenoma, with cysts formed within its structure.

Cystoblast, sist'o-blast (*kustis*, bladder, *blastos*, germ). Cytoblast; cell-nucleus.

Cystoblennorrhœa, sist-o-blen-nor-rhe'ah. Cystirrhœa.

Cystobubonocele, sist-o-bu-bon-o-se'le (Eng. sist-o-bu-bon'o-seel) (*cystis, boubon*, groin, *kele*, tumor). Hernia of the bladder through the abdominal ring.

Cystocarcinoma, sist-o-car-cin-o'mah. Cystic degeneration complicating, or complicated with, cancer.

Cystocatarrhus, sist-o-kat-ar'rhus. Catarrh of the bladder; cystirrhœa.

Cystoce'le, Cystoce'lia, Cistoce'le, or **Cystidocele**, sist-id-o-se'le (Eng. sist'id-o-seel) (*cystis, kele*, tumor). Hernia of the bladder; it occurs most frequently at the abdominal ring, less so at the crural arch, perineum, and vagina—vesico-vaginal hernia—and foramen thyreoideum. It may exist alone or be accompanied by a sac containing some abdominal viscus. The tumor is soft and fluctuating, disappears on pressure, and increases in size when the urine is retained. It must be reduced and kept in position by a truss. Vaginal cystocele, hernia of the vagina, is kept in place by a pessary. **C. bilio'sa**, turgescence of the gall-bladder. **C., cru'ral**, crural or femoral hernia of bladder. **C., fem'oral**, C., crural. **C., in'guinal**, inguinal hernia of bladder. **C., perine'al**, hernia of bladder through the perineum. **C., vagi'nal**, see *Cystocele*.

Cystocephalus, sist-o-sef'al-us. Cystencephalus; monster having a cyst instead of a brain.

Cystochirurgia, sist-o-kir-ur'je-ah. Surgery of the bladder.

Cystochondro'ma. Enchondroma with cysts.

Cystococcus, sist-o-kok'kus (*kustis*, sac, *kokkos*, kernel). Nucleus of impregnated ovum.

Cystocolpicus, sist-o-kol'pik-us (*kustis*, bladder, *kolpos*, vagina). Vesico-vaginal.

Cystocolpitis, sist-o-kol-pe'tis (*kustis*, bladder, *kolpos*, vagina). Inflammation of bladder and vagina; colpocystitis.

Cystocolpocele, sist-o-kol-po-se'le (Eng. sist-o-kol'po-seel) (*cystis, kolpos*, vagina, *kele*, hernia). Prolapse of the bladder into the vagina.

Cystodynia, sist-o-din'e-ah (*cystis, odune*, pain). Pain, particularly rheumatic pain, of the bladder.

Cys'to-enteroce'le (Eng. ent'er-o-seel) (*cystis, enteron*, intestine, *kele*, hernia). Hernia, contents of which are bladder and intestine.

Cys'to-enteroëpiploce'le (Eng. ent-er-o-ep-ip'lo-seel) (*cystis, enteron*, intestine, *epiploön*, omentum, *kele*, hernia). Hernia of bladder, intestine, and omentum.

Cys'to-epiploce'le (Eng. e-pip'lo-seel) (*cystis, epiploön*, omentum, *kele*, hernia). Hernia of bladder and omentum.

Cystofibro'ma. Cystic degeneration of a fibroid tumor. See *Fibrocystic*.

Cystogenesis (sist-o-jen'es-is), **Cystogenia** (sist-o-jen'e-ah), or **Cystog'eny** (*cystis, genesis*, formation). Formation of a cyst.

Cystohæmia, sist-o-he'me-ah (*cystis, haima*, blood). Congestion of the bladder.

Cyst'oid (*cystis, eidos*, resemblance). Cyst-like; resembling a cyst.

Cystolipo'ma. Encysted form of lipoma.

Cystolith (*cystis*, bladder, *lithos*, stone). Vesical calculus.

Cystolithiasis, sist-o-lith-e'as-is (*cystis, lithiasis*, formation of calculi). Formation of vesical calculi; diathesis tending to such formation; gravel. See *Calculi, vesical*.

Cystolithic, sist-o-lith'ik (*kustis*, bladder, *lithos*, a stone). Relating to stone in the bladder.

Cysto'ma. Cystic tumor, as of the ovary. See *Cyst*.

Cystomerocele, sist-o-mer-o-se'le (Eng. sist-o-mer'o-seel) (*cystis, meros*, thigh, *kele*, hernia). Femoral hernia formed by the bladder protruding beneath the crural arch.

Cystomyxo'ma. Myxomatous tumor containing cysts.

Cystoncus, sist-on'kus (*cystis, onkos*, tumor). Swelling or tumor of the bladder.

Cystonephrosis, sist-o-nef-ro'sis (*kustis*, sac, *nephros*, kidney). Cyst of the kidney; cyst-like enlargement of the kidney.

Cystoneural'gia. Cystalgia.

Cystopapilloma, sist-o-pap-il-lo'mah. Hypertrophy of papillæ upon the surface or wall of a glandular cyst.

Cystoparal'ysis or **Cystidoparal'ysis** (*cysto, paralusis*, palsy). Paralysis of the urinary bladder; vesical palsy. See *Enuresis*.

Cystopexy, sist'o-pex-e (*cysto, pexis*, fastening). Treatment of cystocele by abdominal incision and passing catgut sutures through the edges of the wound and the superficial muscular layer of the anterior wall of the bladder.

Cystophlegmatic, sist-o-fleg-mat'ik (*cystis, phlegma*, mucus). Belonging to vesical mucus. **C. disease**, cystirrhœa.

Cystophlogia, sist-o-flog'e-ah (*cystis, phlogoo*, to inflame). Cystitis.

Cystophthisis (sist-o-te'sis) or **Cystoph'thöe** (*cystis, phthisis*, wasting). Consumption from ulceration or chronic disease of bladder; atrophy of bladder.

Cystoplast, sist'o-plast (*cystis, plasso*, to form). Nucleated cell having an envelope, such as the epithelial cells and red blood-cells.

Cystoplastic, sist-o-plas'tik. Epithet for the operation for the cure of fistulous openings into the bladder—*Cystoplasty*. Cure of malformation of the bladder by grafting, etc. Operation for vesico-vaginal fistula by grafting or plastic operation.

Cystoplegia (sist-o-plej'e-ah) or **Cystoplexia**, sist-o-pleks'e-ah (*cystis, plege*, stroke). Paralysis of the bladder.

Cystopleg'ic. Relating to paralysis of the bladder.

Cystoptosis, sist-o-to'sis (*cystis, ptosis*, falling). Relaxation of the inner membrane of the bladder which projects into the canal of the urethra.

Cystopyelitis, sist-o-pe-el-e'tis (*cystis, puelos*, pelvis). Inflammation of bladder and pelvis of kidney.

Cystopyic, sist-o-pi'ik (*cystis, puon*, pus). Relating to suppuration of the bladder.

Cystorrhagia, sist-or-rhaj'e-ah (*cystis, rhage*, rupture). Hemorrhage from the vessels of the urinary bladder.

Cystorrhaphy, sist-or'rhaf-e (*cystis, rhaphe*, suture). Suture of the bladder.

Cystorrheuma (sist-or-rhu'mah) or **Cystirrheu'ma**

(*cystis, rheuma,* defluxion). Rheumatism of the bladder.

Cystorrhex'is or **Cystidorrhexis,** sist-id-or-rheks'is (*cystis, rhexis,* rupture). Rupture of the urinary bladder.

Cystorrhœa, sist-or-rhe'ah. Cystirrhœa; catarrh of the bladder; polyuria.

Cystorrhonchus, sist-or-rhon'kus (*cystis, rhonchus,* râle). Vesicular râle.

Cystosarcoma, sist-o-sar-ko'mah. Tumor consisting of a combination of cysts and cystoids; sarcoma containing cysts.

Cystoschisis, sist-os'kis-is (*cystis, schisis,* fissure). Fissure of the bladder.

Cystoscirrhus, sist-o-skir'rhus. Scirrhus of the bladder.

Cystoscope, sist'o-skope (*cystis, skopeo,* to examine). Catheter with flattened extremity like a stethoscope, to enable the sound to be heard when the instrument strikes a stone in the bladder. Instrument for enabling the eye to observe by reflected light the interior of the bladder.

Cystoscopy, sist-os'ko-pe. Examination of the bladder with a cystoscope.

Cystose, sist'oze. Cystic.

Cystosis, sist-o'sis. Spinal curvature.

Cystosomatomia, Cystosomatotomia, or **Cystidosomatotomia,** sist-id-o-so-mat-o-tom'e-ah (*cystis, soma,* body, *tome,* incision). Incision into body of bladder.

Cystospasm, sist'o-spazm. See *Cystospastic.*

Cystospastic, sist-o-spas'tik (*cystis, spao,* to contract). Relating to spasm of the bladder, particularly of its sphincter—*Cystospasm.*

Cystospermitis, sist-o-spurm-e'tis (*cystis, sperma,* sperm). Inflammation of the vesiculæ seminales.

Cystosteatoma, sist-o-sta-at-o'mah. Sebaceous cyst.

Cystostenochoria or **Cystidostenochoria,** sist-id-o-sten-o-kor'e-ah (*cystis, stenos,* narrow, *choros,* place). Stricture, narrowness, inequality, or saccated condition of the urinary bladder.

Cystothromboid, sist-o-throm'boid (*cystis, thrombos,* clot). Relating to the presence of clots in the bladder.

Cystotome or **Cystitome,** sist'it-ome (*cystis, tome,* incision). Instrument intended for cutting the bladder; more frequently, although improperly, called lithotome. Instrument for division of anterior capsule of crystalline lens.

Cystotomy, sist-ot'o-me. Incision of the bladder; term commonly applied to puncturing of the bladder for the purpose of removing urine—*paracentesis vesicæ.* The term lithotomy has been employed for the incisions made with the view of extracting calculi from the bladder. It is termed *Rectal* or *Retrovesical* when the incision in the bladder is made between the prostrate gland and rectovesical pouch; *Suprapubic*—epicystotomy—when incision is made above the pubes, below the peritoneal sac in front of the bladder.

Cystotrachelotomy sist-o-trak-el-ot'o-me (*cystis, trachelos,* neck, *tome,* incision). Incision into the neck of the bladder. See *Lithotomy.*

Cystotrauma, sist-o-trau'mah (*cystis, trauma,* wound). Wound or injury of the bladder.

Cystous, sist'us. Cystic.

Cystovarium, sist-o-var'e-um (*cystis, oarion,* ovary). Formation of cysts in the ovary; ovarian cyst or cystoma.

Cysus, sis'us. Anus; aperture of vagina.

Cyten'chyma. Substance in reticulum of cytoplasm.

Cythæmol'ysis (*kutos,* cell, *haima,* blood, *lusis,* solution). Dissolution of the blood-corpuscles.

Cytherean, sith-e're-an (from Cythera, island sacred to Venus). Venereal. **C. shield,** condom.

Cytheromania, sith-er-o-man'e-ah. Nymphomania.

Cytinus hypocistis, sit'in-us hyp-o-sis'tis. Small parasitical plant, growing in the south of France and Greece, on the roots of the woody cistus; juice of the fruit is acid and very astringent; used in form of extract in hemorrhages, diarrhœa, etc.

Cytisine, sit'is-een. $C_{20}H_{27}N_3O$. Immediate, poisonous, vegetable, alkaloid principle in the seeds of Cytisus laburnum or bean-trefoil tree. It has analogous properties to emetine; in the dose of one or two grains produces vomiting and purging, and in a stronger dose acts as an acrid poison; seeds of the Cytisus laburnum produce vomiting and purging. The nitrate of the drug is usually administered; has been used hypodermically (dose, gr. $\frac{1}{20}$ to gr. $\frac{1}{12}$) in cases of paralytic migraine, having a hypnotic effect.

Cytisma eczema, sit-iz'mah ek-ze'ma. Eczema. **C. her'pes,** herpes.

Cytisogenista, sit-is-o-jen-is'tah. Spartium scoparium.

Cytisus (sit'is-us) **Antilla'rum,** species of leguminous plants; flowers and seeds are stomachic and antipyretic. **C. hirsu'tus,** leaves of this species of S. Europe are diuretic. **C. labur'num,** *Cytisine, Laburnum, False ebony, Golden chain;* used as nervous sedative and in some cutaneous diseases; poisonous in large doses. **C. scopa'rius,** Spartum scoparium.

Cytitis, sit-e'tis (*cutis,* skin). Inflammation of the skin.

Cy'toblast or **Cyst'oblast** (*kutos,* cell, *blastos,* germ). Cell-germ; cell-nucleus; granule from which all animal and vegetable bodies are presumed to be formed. See *Cell.*

Cytoblastema, se-to-blas-ta'mah (same etymon). Formative fluid; intercellular substance; hyaline substance. Fluid material in which it was supposed that cells originated by the combination and aggregation of particles of matter.

Cytoblastion, se-to-blas'te-on (*kutos,* cell, *blastos,* germ). Cell with spherical nuclei or cellules.

Cytode, si'tode. Non-nucleated protoplasmic cell.

Cytodiëresis (*kutos,* cell, *dieresis,* division). Cell-segmentation.

Cytogen'esis. Cytogeny.

Cytogenetic (si-to-jen-et'ik), **Cytogen'ic,** or **Cytogenous,** si-toj'en-us. Relating or belonging to cytogeny.

Cytogeny (si-toj'en-e) or **Cytogenesis,** si-to-jen'e-sis (*kutos,* cell, *genesis,* generation). Cell-genesis; cell-formation. Continuous development of cells, in tissue formation, has been called by Virchow proliferation of cells.

Cytoid, si'toid (*kutos,* cell, *eidos,* resemblance). Cell-like. Term applied to corpuscles, as those of lymph, chyle, pus, etc., seeming to resemble each other essentially in their chemical and microscopical characters. Leucocytes. **C. cor'puscles,** leucocytes.

Cytokine'sis (*cyto, kinesis,* movement). Movements and changes in ovum in the course of its progress and development.

Cytology, si-tol'o-je (*kutos,* cell, *logos,* description). Science of cells and cell-formation.

Cytoplasm, si'to-plazm (*kutos,* cell, *plasma,* formative matter). Protoplasm. Material constituting the body of the cell outside of the nucleus.

Cytostasis, se-tos'tas-is (*kutos,* cell, *stasis,* stagnation). Arrest of red or white blood-cells or corpuscles in the small vessels.

Cytotænia, se-to-te'ne-ah. Tænia.

Cytozo'a. Protozoa. Parasitic micro-organisms in cells; protoplasmic masses seen under the microscope to escape from blood-corpuscles, as of the frog, after mixture with a saline solution and defibrination.

Cyttaros, sit'tar-os. Glans.

Cyt'ula. Ovum that has been fecundated.

Czermak's (tzur'mak's) **spaces.** Interglobular spaces.

Czer'ny, su'ture of. Method of uniting fragments of ruptured tendon by splitting one of the pieces longitudinally and attaching it by suture to the other piece.

Czerny-Lembert, su'ture of, suture of Lembert, reinforced by a row of deep sutures, the stitch being extra-peritoneal, and the Czerny sutures being concealed by the Lembert sutures; a form of suture applicable to circular enterorrhaphy especially.

D.

D. See *Abbreviations.* Greek Δ, according to Galen, was the sign for quartan fever.

Dacry, dak're (*dakru,* tear). In composition, a tear.

Dacryadenalgia or **Dacryoadenalgia,** dak-re-o-ad-en-al'je-ah (*dacry, aden,* gland, *algos,* pain). Disease or pain in the lacrymal gland.

Dacryadeni'tis or **Dacryoadenitis,** dak-re-o-ad-en-e'tis (*dacry, aden,* gland). Inflammation of the lacrymal gland.

Dacryadenoscirrhus, dak-re-ad-en-o-skir'rhus (*dacry, aden,* gland, *scirrhus*). Scirrhus of lacrymal gland.

Dacryæmorrhysis, dak-re-e-mor'rhis-is (*dacry, haima,* blood, *rhusis,* flow). Hemorrhage from the lacrymal apparatus.

Dacryagogue, dak're-ag-og (*dacry, agogos,* leading). Tear-conducting, as lacrymal canals.

Dacryallœosis, dak-re-al-le-o'sis (*dacry, alloiosis,* change). Morbid condition of the tears.

Dacrydion, kak-rid'e-on (*dakry,* tear, from the gummy exudation). Convolvulus scammonia.

Dacryelcosis, dak-re-el-ko'sis (*dacry, helkosis,* ulceration). Ulceration of the lacrymal apparatus.

Dacrygelosis, dak-re-jel-o'sis (*dacry, gelao,* to laugh). Kind of insanity in which the patient weeps and laughs at the same time; it may be simply hysterical.

Dacryhæmorrhysis, dak-re-he-mor'rhis-is (*dacry, haimorrhusis,* hemorrhage). Sanguineous lacrymation; flow of bloody tears.

Dacryhelcosis, dak-re-hel-ko'sis. Ulceration of the lacrymal apparatus.

Dacryma, dak're-mah. Tear.

Dacryo (*dakruon,* tear). In composition, tear.

Dacryoadenalgia, dak-re-o-ad-en-al'je-ah. Pain or disease in the lacrymal gland.

Dacryoadenitis, dak-re-o-ad-en-e'tis. Inflammation of the lacrymal gland.

Dacryoblennorrhœa, dak-re-o-blen-nor-rhe'ah (*dacryon, blenna,* mucus, *rheo,* to flow). Discharge of tears mixed with mucus.

Dacryocele, dak-re-o-se'le (Eng. dak're-o-seel) (*dacry, kele,* tumor). Cyst of lacrymal sac.

Dac'ryocyst. Lacrymal sac.

Dacryocystalgia, dak-re-o-sist-al'je-ah (*dacry, kustis,* sac, *algos,* pain). Disease or pain in the lacrymal sac.

Dacryocystis, dak-re-o-sist'is (*dacry, kustis,* sac). Lacrymal sac.

Dacryocystitis, dak-re-o-sis-te'tis (*dacrocystis,* lacrymal sac). Inflammation of lacrymal sac; it may be catarrhal, blennorrhœal, phlegmonous, or purulent.

Dacryocystoblennorrhœa, dak-re-o-sist-o-blen-nor-rhe'a (*dacryocystis,* lacrymal sac, *blenna,* mucus, *rheo,* to flow). Chronic inflammation of the lacrymal sac and its appendages, characterized by a circumscribed, painless tumor, with obstruction and accumulation of tears, mucus, and pus.

Dacryocystoblennostasis, dak-re-o-sist-o-blen-nos'tas-is (*dacry, kustis,* sac, *blenna,* mucus, *stasis,* stagnation). Abnormal collection of mucus in the lacrymal sac.

Dacryocystocele, dak-re-o-sist-o-se'le (Eng. dak-re-o-sist'o-seel) (*dacry, kustis,* sac, *kele,* tumor). Hernia of the lacrymal sac.

Dacryocystoptosis, dak-re-o-sist-o-to'sis (*dacry, kustis,* sac, *ptosis,* falling). Prolapse of the lacrymal sac.

Dacryocystosyringokatakleisis, dak-re-o-sist-o-sir-in-go-kat-ah-kli'sis (*dacry, cystis, surinx,* pipe, fistula, *katakleisis,* locking up). Term proposed by Dieffenbach for the healing of lacrymal fistulæ by transplantation.

Dacryocystot'omy (*dacry, cystis,* sac, *tome,* incision). Incision into the lacrymal sac.

Dacryodes, dak-re-o'des. Weeping; resembling tears, as in some sores.

Dacryohæmorrhœa (dak-re-o-he-mor-rhe'ah) or **Dacryohæmorrhysis,** dak-re-o-he-mor'rhis-is. Hemorrhage from the lacrymal apparatus.

Dac'ryoid. Like a tear.

Dac'ryolin. Albuminoid derived from tears.

Dac'ryolite or **Dacryolith,** dak're-o-lith (*dacry, lithos,* stone). Lacrymal calculus; secretion found in the lacrymal passages. When in the nasal duct, it is termed *rhinolite, nasal calculus,* or *rhinodacryolite.*

Dacryolithi'asis (*dacry, lithiasis,* formation of calculi). Formation of concretions in the tears.

Dacryol'ithus. Dacryolite.

Dacryoma, dak-re-o'mah. Epiphora; effusion of tears occasioned by occlusion of the puncta lacrymalia. Lacrymal tumor.

Dacryon, dak're-on. Tear. Point of meeting of the frontal and lacrymal bones and ascending process of superior maxillary bone on the side of the root of the nose.

Dac'ryonome (*dacry, nome,* ulcer). Corrosive ulcer of the lacrymal apparatus.

Dacryopœus, dak-re-o-pe'us (*dacry, poieo,* to make). Substance which excites the secretion of tears, as the onion, horseradish, etc.

Dacryops, dak're-ops (*dacry, ops,* eye). Weeping eye. Tumefaction of the lacrymal ducts or lacrymal cyst. **D. fistulo'sa,** fistula of the lacrymal gland.

Dacryoptosis, dak-re-op-to'sis. Prolapse of the lacrymal sac.

Dacryopyorrhœa, dak-re-o-pe-or-rhe'ah (*dacry, puon,* pus, *rheo,* to flow). Discharge of tears mixed with purulent matter.

Dacryopyosis, dak-re-o-pe-o'sis (*dacry, puon,* pus). Suppuration in lacrymal apparatus.

Dacryorrhœ'a, Dacryor'rhysis, Dacryrrhœ'a, or **Dacryrrhysis,** dak-rir'rhis-is (*dacry, rheo,* to flow). Morbid flow of tears.

Dacryosolen, dak-re-o-so'len (*dacry, solen,* canal). Lacrymal canal.

Dacryosolenitis, dak-re-o-sol-en-e'tis (*dacry, solen,* lacrymal duct). Inflammation of the lacrymal duct.

Dacryostagia (dak-re-o-staj'e-ah) or **Dacryostag'ma** (*dacry, stazo,* to let fall). Continuous falling of tears.

Dacryosyrinx, dak-re-o-sir'inks (*dacryon, surinx,* fistula). Fistula lacrymalis. Syringe for lacrymal duct or canals.

Dacryrrhœa (dak-rir-rhe'ah) or **Dacryrrhysis,** dak-rir'rhis-is. Morbid flow of tears.

Dacryuria, dak-re-u're-ah (*dacry, ouron,* urine). Hysterical flow of urine in crying.

Dactyl, dak'til (*daktulos,* finger). Finger or toe.

Dac'tylate. Resembling a finger or fingers.

Dactylethra or **Dactylithra,** dak-til-ith'rah (covering for a finger). Ancient name for topical applications having the form of a finger, to be introduced into the throat to excite vomiting.

Dactyletus, dak-til-a'tus. See *Hermodactylus.*

Dactyl'ion or **Dactylium,** dak-til'e-um (finger). Webbed fingers; union of the fingers with each other; generally congenital, but may be owing to burns, ulcerations, inflammation, etc.

Dactylitis, dak-til-e'tus. Inflammation of a finger or toe; paronychia. **D. syphilit'ica,** gummatous state of the fingers or toes; see *Paronychia.*

Dactylium, dak-til'e-um. Little finger; syndactylism.

Dactylius, dak-til'e-us. A ring. Troch or lozenge shaped like a finger. The anus.

Dactylo, dak'til-o (*daktulos,* finger). In composition, finger.

Dactylocampsodynia, dak-til-o-kamp-so-din'e-ah (*dactylo, kampsis,* bending, *odune,* pain). Painful bending or contraction of the fingers.

Dactylodochme, dak-til-o-dok'me. Measure of the Greeks, equal to about four fingers' breadth.

Dactylogryposis, dak-til-o-grip-o'sis (*dactylo, grupos,* curved). Abnormal bending or curvature of the fingers or toes.

Dactyloid, dak'til-oid. Finger-like.

Dactylology, dak-til-ol'o-je (*dactylo, logos,* discourse). Conversing with the fingers, as by the deaf and dumb.

Dactylolysis, dak-til-ol'is-is (*dactylo, lusis,* separation). Ainhum.

Dactylosmyleu'sis (*dactylo, smileuo,* to cut with a chisel). Amputation with a pounded chisel.

Dactylospasmus, dak-til-o-spaz'mus. Spasmodic contraction of the fingers.

Dactylosymphysis, dak-til-o-sim'fis-is (*dactylo, symphusis,* union). Adhesion of the fingers to each other.

Dactylotheke, dak-til-o-tha'ke (*dactylo, theke,* case or sheath). Instrument for keeping the fingers extended when wounded.

Dactylus, dak'til-us. Finger. Smallest measure of the Greeks; the sixth part of a foot; date; digit.

Dædalea suaveolens, de-dal'e-ah swav-a'o-lens. Ord. Fungi. Champignon, growing on the trunks of old willows. It has a smell of anise, and has been recommended in phthisis pulmonalis.

Dædalus, de'dal-us. Mercury.

Dædion, de'de-on (dim. of **Dais,** torch). Bougie.

Dæmia (de'me-a) **exten'sa.** E. Indian shrub, infusion of which is administered in diseases of the lungs, and the juice applied locally in rheumatism.

Dæmonia, de-mon'e-ah. Demonomania.

Dæmoniacus, de-mon-e'ak-us (*daimon,* demon). Possessed.

Dæmonoma'nia or **Dæmonopathia,** de-mon-o-path-e'ah. Demonomania; monomania as to being possessed by an evil spirit.

Daf'fodil. Narcissus.

Daft. Insane.

Dahlia, dal'e-ah. Root of this plant, ord. Compositæ, is stomachic, diuretic, and diaphoretic.

Dais'y. Chrysanthemum leucanthemum, Erigeron Philadelphicum. **D., com'mon,** bellis. **D., dev'il's,** Chrysanthemum leucanthemum, Achillea millefolium, Anthemis cotula. **D., Eng'lish** or **Europe'an,** Bellis perennis. **D., ox-eye,** Chrysanthemum leucanthemum.

Dalbergia (dal-bur'je-ah) **Cochinchinen'sis** or **diphaca,** dif-ak'ah. Tree of China and other regions of the East, used in skin diseases. **D. frondo'sa,** tree of E. Indies; leaves are applied externally in skin diseases, bark as a stomachic, oil of the seeds in rheumatism. **D. scan'dens,** tree of E. Indies; seeds are cathartic, leaves are emollient. **D. sis'sos** and **D. sympathet'ica** are employed as alteratives.

Dal'by's carmin'ative (after the proposer). A celebrated empirical remedy much used as a carminative for children. A committee of the Philadelphia College of Pharmacy recommended the following form: Aquæ, Ox; Sacchar. alb., ℥xxxij; Potass. carbon., ℥ss; Magnes. carb., ℥xij; Tinct. opii., f℥vj; Ol. menth. pip., Ol. anethi fœnicul., āā ℈ij. M.

Dalea citriodora, dal'e-ah cit-re-o-do'rah. Leguminous plant of Mexico; antispasmodic.

Daltonian, dawl-to'ne-an. Absurd name given to one who cannot distinguish colors, because the celebrated physician Dalton had the defect. See *Achromatopsia.*

Dal'tonism. Color-blindness; achromatopsia.

Damarra or **Dammara Australis.** Dammar. See *Pinus damarra.* **D. res'in** or **tur'pentine,** see *Pinus damarra.*

Damia'na. Mexican plant considered aphrodisiac; various species of Turnera, T. aphrodisiaca especially. Leaves of Aplopappus discoideus applied in rheumatism.

Dammar' cement'ing flu'id. Preparation for mounting pathological sections, consisting of gum dammar, gum mastic, and benzole.

Damp, after or **black** (G. *dampf,* vapor). See *Hydrogen, carburetted.* **D., choke,** carbonic acid; see *Hydrogen, carburetted.* **D., cold,** term used for air in mines apparently loaded with carbonic acid, chilled and very moist from passing through the workings. **D., fire,** hydrogen, carburetted.

Dam'son (from Damascus). Prunum Damascenum; see *Prunum.* **D., moun'tain,** Quassia simarouba. **D. tree,** Prunus domestica.

Danaidine, dan-a'id-een. Alkaloid from Danais fragrans.

Dana'is fra'grans. Root and bark of this tree of Madagascar are tonic and antiperiodic, and used also in cutaneous affections. **D. rotundifo'lia** has similar properties.

Dance. See *Mania, dancing.* **D., St. Guy's,** chorea. **D., St. John's,** see *Mania, dancing.* **D., St. Vitus's,** chorea; see *Mania, dancing.*

Dan'cing ma'nia. See *Mania, dancing.* **D. plague,** see *Mania, dancing.*

Dande'lion. Leontodon taraxacum. **D., juice of,** succus taraxaci; see *Succus conii.*

Dan'der. See *Pityriasis.*

Dan'do. Old name for prostration before attack of fever.

Dan'driff or **Dan'druff.** See *Pityriasis.*

Dan'dy fe'ver. Dengue.

Dane's blood. Anemone pulsatilla; Sambucus ebulus.

Dane'weed or **Dane'wort.** Sambucus ebulus.

Daniell, dan'yel. Unit of electrical measurement, equivalent to 1.124 volts.

Daniellia thurifera, dan-e-el'yah thu-rif'er-ah. Frankincense tree of W. Africa, furnishing the product termed African frankincense.

Dansoma'nia. Epidemic form of cholera.

Daphne, daf'ne (after the nymph Daphne). Laurus. **D. Alpi'na,** sort of dwarf olive. An acrid, volatile, alkaline principle was separated from the bark, called *Daphnin,* to which its vesicating property is due. **D. can'dicans,** shrub of France and Italy, leaves of which are cathartic. **D. cneo'rum,** garland flower; bark is vesicant. **D., flax-leaved,** Daphne gnidium. **D. gnid'ium,** spurge flax, flax-leaved daphne; plant of S. Europe, furnishing garou bark, chiefly used for exciting iritation of the skin. Garou bark and grana gnidia are also obtained from Daphne laureola. The whole plant is poisonous. **D. laure'ola,** systematic name of dwarf bay, wood laurel, or spurge laurel, bark of which has similar properties to the last; it is a source of mezereum. **D. Liottar'di,** D. mezereum. **D. ma'jor,** D. laureola. **D. meze'reon** or **meze'reum,** systematic name of mezereon or spurge olive; bark of mezereon possesses analogous properties to the other varieties of Daphne. Mezereum (Ph. U. S. and Br.) is the bark of Daphne mezereum and other species of Daphne; is stimulant and diaphoretic, and in large doses emetic; it is employed in syphilis. Soaked in vinegar—mezereum acetatum—it has been employed to irritate the skin, especially to keep tissues open. Berries are drastic cathartic. **D. olæofo'lia** or **oleoi'des,** species growing in S. Europe; cathartic. **D. panicula'ta,** D. gnidium. **D. papyra'cea,** shrub of China and India; bark and root are purgative. **D. pil'lu,** Chilian shrub; emeto-cathartic. **D. salicifo'lia** grows in Mexico; leaves are vesicant. **D. thymelæ'a,** shrub of S. France and Spain; root is hydragogue cathartic; bark resembles mezereon.

Daphnelæon, daf-nel-e'on (*daphne,* laurel or bay tree, *elaion,* oil). Oil of bay; oil of berries of Laurus nobilis.

Daphnidium cubeba, daf-nid'e-um ku-be'bah. Species of Lauraceæ from China and S. Asia, berries of which resemble cubebs and are carminative. **D. myr'rha,** plant having similar habitat, resembling myrrh; excitant and diuretic; the root is anthelmintic and menstruant; the oil is employed in cutaneous affections.

Daph'nin. Bitter glucoside in mezereon bark; see *Daphne Alpina.*

Dark'nesses. See *Epilepsy.*

Dar'nel. Lolium temulentum.

Darseni (dar-se'ne) or **Darsi'ni.** Laurus cinnamomum.

Dar'sis (*darsis*, excoriation). Anatomical preparation consisting in removing the skin for exposure of the organs covered by it; excoriation.

Dart, caus'tic. Caustic pencil which disappears by solution in the part into which it is introduced.

Dar'ta. Impetigo. **D. excoriati'va** or **malig'na,** herpes exedens; lupus.

Darto'ic myo'ma, see *Myoma.*

Dar'tos (skinned). Second covering of the testicle, formerly conceived to be muscular, but which is merely areolar tissue containing unstriped muscular fibre. It has been considered that it proceeds from an expansion of the fibrous cord, known as the gubernaculum testis.

Dar'trous. Herpetic. Participating in the characters of herpes. Also one affected with herpes. **D. diath'esis,** peculiar state of health which renders its subject liable to general eruptions of different forms; always met with in the young, symmetrical, and controlled by arsenic; see *Herpes.*

Darwin'ian theory or **Dar'winism.** Theory that evolution of animals and plants has occurred through slight hereditary variations from simpler forms, and that the fittest variations have survived; in other words, that individuals that have the slightest advantage over others would be more likely to survive and perpetuate their kind, and injurious ones be destroyed. This was termed Natural Selection, or the survival of the fittest. **D. tu'bercle,** tubercle or prominence on margin of the helix of the ear, corresponding with the pointed ear of the ape.

Dasyma, das-e'mah (*dasus*, rough, hairy). Disease of the eye—the same as trachoma, but less in degree.

Dasys, das'is. Rough, as the tongue, when thick or rough; or urine, when cloudy or thick.

Dasytes, das'it-ees. Roughness, particularly of the tongue and voice. Hairiness, hirsuties.

Date. Fruit of the Phœnix dactylifera or excelsa, Palma dactylifera. Unripe date is astringent. When ripe it resembles the fig. Juice of the tree is refrigerant.

Date'plum, In'dian. Diospyrus lotus.

Datisca cannabina, dat-is'ka kan-nab'in-ah. Yellow hemp, of S. Europe; antiperiodic, and employed like cinchona. Glucoside from the root is called *Datiscin,* $C_{21}H_{22}O_{12}$.

Datura, dat-u'rah. D. stramonium. **D. a'lba,** E. Indian plant, having properties of D. stramonium. **D. fastuo'sa,** E. Indian species, narcotic and stimulant; used in epilepsy and herpes; seeds are hypnotic. **D. fe'rox,** of E. Indies, smoked in asthma. **D. metel'** or **meteloï'des,** E. Indian plant; febrifuge, and applied externally in arthritis. **D. nilhummatu,** shrub of Malabar; seeds are antiperiodic; juice is used externally in syphilis. **D. sanguin'ea,** red thornapple, grave-plant; plant from which the Peruvian Indians prepare a narcotic drink called tonga. **D. stramo'nium,** stramonium; *Thornapple, Apple of Peru, Jamestown weed, Jimston* or *Jimson weed, Stinkweed.* The leaves, Stramonii folia (Ph. U. S. and Br.), S. folium, and the seeds, Stramonii semen (Ph. U. S.), S. semina (Ph. Br.), and the root, Stramonii radix, are the parts used in medicine. They are narcotic, and applied externally, sedative, in the form of fomentation; the leaves are smoked like tobacco in asthma. **D. tat'ula,** properties are similar to those of D. stramonium.

Daturia (dat-u-re'ah), **Daturina** (dat-u're-nah), **Daturium** (dat-u're-um), or **Daturine,** dat'u-reen. $C_{17}H_{23}NO_3$. Active principle of Datura stramonium, employed for obtaining the effects of stramonium; its action resembles that of atropia.

Da'turine sul'phate. White granular crystals; hypnotic, given internally to control mania in doses of gr. $\frac{1}{120}$ to $\frac{1}{80}$.

Datyra, dat-ir'ah. Datura stramonium.

Daubenton (French scientific physician), **an'gle of.** Occipital angle. **D.'s line,** line drawn from opisthion to nasion. **D.'s plane,** line passing through opisthion and inferior margins of the orbits.

Dauci radix, daw'se rad'iks. See *Daucus carota.*

Daucus (daw'kus) **au'reus.** Plant of N. Africa, used in leprosy. **D. Candia'nus,** Athamanta Cretensis. **D. caro'ta,** systematic name of the carrot plant. The fruit—carrot seed, *Carota*—and the root have been used in medicine. The root is sweet and mucilaginous; the seeds have an aromatic odor and warm, pungent taste. The root is emollient, applied to fetid and ill-conditioned sores; seeds are stomachic, carminative, and diuretic. **D. Cre'ticus,** Athamanta Cretensis. **D. cyan'opus,** Pimpinella magna. **D. German'icus,** D. carota. **D. nos'tras, officina'rum, sati'vus,** or **vulga'ris,** D. carota. **D. seprin'ius,** Scandix cerefolium. **D. sylves'tris,** D. carota. **D. vulga'ris,** D. carota.

Daughter (daw'ter) **cells.** Cells originating from division of parent cells; spermatocytes, for example. **D. nu'clei,** nucleoli within nuclei.

Daura, daw'rah. Helleborus niger; Conocarpus latifolius.

Davallia aculeata, dav-al'le-ah ak-u-le-at'ah. Fern of W. Indies; astringent and expectorant.

Daviel's spoon. Curette used to promote the exit of the lens in the operation of extraction.

Davies and Col'ley's opera'tion. Operation for cleft of hard palate.

Davilla Brasiliana, dav-il'lah braz-il-e-an'ah. D. rugosa. **D. ellip'tica,** see *D. rugosa.* **D. rugo'sa** (after Dom Pedro Franco Davila, a Peruvian and Spanish naturalist). The whole of this Brazilian plant, as well as *Davilla elliptica,* is astringent.

Day sight or **vis'ion.** Hemeralopia.

Day-blind'ness. Nyctalopia.

Day'mare. See *Incubus vigilantim.*

Day'nettle. Lamium album; L. purpureum; Galeopsis tetrahit.

Day's eye. Daisy.

Dazz'ling (dim of **Dazing**). Momentary disturbance of sight, occasioned by the sudden impression of powerful light, or by some internal cause, as plethora.

D. D. Disk diameters.

De (F., *dés*), from, as a prefix, signifies at times a downward movement; at others a primitive power; at others again, intensity.

De ven'tre inspicien'do. "Of inspecting the belly." When there is reason to suppose that a woman feigns herself pregnant, a writ *de ventre inspiciendo* may be issued to determine whether she is so or not. In England, the decision was formerly left to twelve matrons and twelve respectable men, according to the strict terms of the ancient writ.

Dead (Sax. ðeað). Deprived of life; exanimate; paralyzed; cold, as if life was extinct in a part. **D. fin'gers,** paleness and coldness of the fingers, sometimes a precursor of senile gangrene. **D. space,** part of a fluid in which no reaction occurs between substances dissolved in it.

Dead'house. Morgue.

Dead'ly. Lethiferous; mortal. **D. night'shade,** Atropa belladonna.

Dead'men's bells. Digitalis.

Dead'nettle. Lamium album and other species of lamium.

Dead'tongue. Œnanthe crocata.

Dead'wort. Sambucus ebulus.

Deaf (Sax. ðeaþ). Devoid of hearing; hard of hearing.

Deaf-dumb'ness or **Deaf-mut'ism.** Deafness combined with dumbness.

Deaf-mute. One who is both deaf and dumb.

Deaf'ness. Hardness of hearing, or diminution or total loss of hearing, the effect of acute or chronic inflammation of the internal ear, closure of the Eustachian tube—throat deafness—paralysis of the auditory nerve or its pulpy extremity, or mechanical obstruction to the sonorous rays. In most cases the cause is not appreciable. **D., intellect'ual,** acoustic amnesia; condition in which, from lesion of certain

portions of the brain, sounds are heard, but not appreciated. **D., ner'vous,** deafness dependent primarily on lesion of some part of the nervous apparatus of the ear. **D., psych'ical,** D., intellectual. **D., throat,** deafness dependent upon morbid condition of the throat, especially if the Eustachian tube be involved. **D., vas'cular,** deafness dependent upon morbid condition of the blood-vessels, affecting those of the ear. **D., word,** a form of sensory aphasia dependent on lesion of the left temporal lobe, in which sounds are heard, but not understood.

Dealbation, de-al-ba'shun. Paleness; bleaching; whitening of bones for anatomical purposes.

Deambulatio, de-am-bu-lah'she-o (*de, ambulo,* to walk). Walking.

Dearticulatio, de-ar-tik-u-lah-she-o (*de, articulus,* joint). Diarthrosis; dislocation; disarticulation.

Deasciatio, de-as-se-ah'she-o (*de, ascia,* axe). Wound of the skull by a cutting instrument, as a hatchet or axe.

Death (Sax. ðeað). Decease; definitive cessation of all the functions, the aggregate of which constitute life. Real death, apothanasia, is distinguished from asphyxia or apparent death, the latter being merely a suspension of those functions. The only certain sign of real death is the commencement of putrefaction. Death is commonly preceded by distressing symptoms depending on lesion of respiration, circulation, or cerebral functions, and which constitute the agony of death. That which occurs suddenly, without any, or with few, precursory signs, is called sudden death, which is ordinarily caused by disease of the heart, apoplexy, rupture of an aneurism, or by some other organic affection. Death is natural when it occurs as the result of disease; violent, when produced by some forcible agency. It may affect the whole body or a part only; hence the difference between somatic and molecular death. The chief varieties of the modes of death may be thus given:

Death beginning at the heart,	Syncope (when death is sudden).	
	Asthenia (when death is gradual).	
" "	in the lungs,	Apnœa.
" "	in the brain,	Apoplexy.
" "	in gray matter of the medulla,	Paralysis of pneumogastrics, etc.
" "	in the blood,	Necræmia.

As it was at one time conceived that death must commence in the heart, lungs, or brain, these organs were called atria mortis, the halls of death. **D., appa'rent,** asphyxia; unconsciousness; see *Death.* **D., black,** black plague; plague of the 14th century, which is supposed to have proved fatal in Europe to 25,000,000 of people; see *Fever, purpuric, malignant.* **D., lo'cal** or **molec'ular,** gangrene; sphacelus. **D. of man,** Cicuta maculata. **D. rate,** number of deaths in a fixed number—as 1000—of the population; see *Mortality.* **D. rat'tle,** sound produced by air passing through mucus which collects in the throat of a dying person. **D., somat'ic** or **system'ic,** suspension of life in the body considered separately from its parts. **D. stiff'ening,** rigor mortis. **D. strug'gle,** agony. **D. trance,** see *Asphyxia.*

Death's herb. Atropa belladonna.

Deauration, de-or-a'shun (*deauro,* to gild). Gilding, as of pills.

Deaurentur pilulæ, de-aur-en'tur pil'u-le (let the pills be gilded). Direction given in accordance with a former practice of coating pills with silver or gold leaf.

Debilis, deb'il-is (weak). Infirm, unsteady.

Debilitants, de-bil'it-ants (*debilito,* to weaken). Remedies exhibited for the purpose of reducing excitement, such as antiphlogistics.

Debilitas, deb-il'it-as. Debility. **D. an'imi,** weak or ill-developed condition of the mental functions. **D. erethis'ica,** see *Irritable.* **D. memo'riæ,** amnesia. **D. nervo'sa,** neurasthenia; see *Irritable.* **D. vi'sus,** asthenopia; amblyopia.

Debilitated, de-bil'it-a-ted. Weakened.

Debilitating, de-bil-it-a'ting. Weakening.

Debilita'tion. Debility; therapeutic action of debilitant medicines.

Debility, de-bil'it-e. Weakness; atonic condition induced by a number of causes, and not to be confounded with fatigue, which is temporary; debility is generally more permanent; it may be real or apparent. At the commencement of fever, for example, there is often a degree of apparent debility, preventing the use of appropriate means. Excitement is more dangerous. See *Myxœdema.* **D., ner'vous,** neurasthenia. **D., spi'nal,** spinal weakness.

Débove's forced feeding. Method of forced feeding employed in tuberculosis, in which the stomach is washed out with cold water, and food is introduced through a stomach-tube. **D.'s mem'brane,** subjacent layer of germinal cells under the epithelium, in the bronchi especially.

Débridement (F.). Removal of filaments, etc. in a wound or abscess which prevent the discharge of pus. Cutting of a soft membranous or aponeurotic part which interferes with exercise of any organ or outlet of any fluid, as pus.

Débris (F.). Refuse; remains; fragments.

Decagramme, dek'a-gram (*deka,* ten, *gramma,* gramme). Weight of ten grammes, 154.34 grains Troy.

Decalcified, de-kal'se-fide. Deprived of lime or calcareous matter. The process is *Decalcification.*

Decal'cifying fluid. Fluid, such as weak hydrochloric acid, etc., used for the purpose of removing the lime and calcareous matter from hard tissues, etc., and to dissolve the cement in some tissues; employed in preparing pathological specimens.

Dec'alitre (F. *deka,* ten, *litre*). Ten litres, equivalent in the metric system to 610.28 English cubic inches.

Decal'vant (*de, calvus,* bare, bald). Depilatory; having the property of removing hair or rendering bald.

Dec'ametre (F.). Ten metres, in metric system equivalent to 393.704 English inches.

Decantation, de-kan-ta'shun. Pharmaceutical operation, consisting of pouring off gently, by inclining the vessel, any fluid which has a deposit.

Decapitatio, de-kap-it-ah'she-o. Separating the head from the body; decollation. See *Decapitation.* **D. articulo'rum** or **os'sium,** see *Resection.*

Decapita'tion (*de, caput,* head). Trachelotomy; derotomy; detruncation; decollation; embryotomy, with removal of the head from the body to make birth of the child practicable.

Decapitator, de-kap'it-a-tor (same etymon). Sharp-edged hook for decapitating the fœtus.

Decarbonization (de-kar-bon-i-za'shun) or **Decarburation,** de-kar-bu-ra'shun. Depriving any substance of carbon, as the blood in its passage through the lungs. See *Hæmatosis.*

Decay, de-ka'. Decline of health or strength; decomposition by putrefaction.

Decease' (*decedo, decessum,* to depart). Death.

Decephaliza'tion (*de, kephale,* head). Decapitation. Flatness of the frontal region.

Decerebration, de-ser-e-bra'shun (*de, cerebrum,* brain). Removal of the brain-mass, as in craniotomy.

Decerebrize, de-ser'e-brize. To remove the cerebrum.

Decessio, de-ses'e-o. Fracture of the skull.

Decidentia, des-id-en'she-ah (*decido,* to fall off). Fall of a patient with apoplexy or catalepsy; epilepsy; decay or decline in health.

Decidua (de-sid'u-ah) or **D. membra'na.** Deciduous membrane; so called on account of its being considered to fall off from the uterus. The present view as to the decidua is as follows (Gray): The decidua is formed from the mucous membrane of the uterus; even before the arrival of the fecundated ovum in the uterus the mucous membrane of the latter is vascular and

tumid, and when the ovum has reached the uterus it becomes imbedded in the folds of the mucous membrane, which grow up around it and finally completely encircle it, so as to cover it in entirely and exclude it from the uterine cavity. Thus two portions of the uterine mucous membrane (decidua) are formed—viz. that which coats the muscular wall of the uterus, *Decidua vera*, and that which is reflected over the ovum, *Decidua reflexa*. The decidua vera at the os internum and at the openings of the Fallopian tubes is continuous with the lining membrane of these canals, the thickening of the original mucous membrane of the uterus which converts it into decidua abruptly ceasing at these points. The neck of the uterus after conception is closed by a plug of mucus. The decidua vera is perforated by the openings formed by the enlarged uterine glands, which become much hypertrophied and developed into tortuous tubes. It contains at a later period numerous arteries and venous channels continuous with the uterine sinuses, and it is from it that the uterine part of the placenta is developed.

The portion of the decidua vera which takes part in the formation of the placenta is called the *Decidua serotina*. The decidua reflexa is shaggy on its outer aspect, but smooth within. The vessels which it contains at first disappear after about the third month. About the fifth or sixth month the space between the two layers of the decidua disappears, and toward the end of pregnancy the decidua reflexa is transformed into a thin yellowish membrane which constitutes the external envelope of the ovum. It seems to be well established that every discharge of an ovum, whether impregnated or not, is, as a rule, accompanied by the formation of a decidua, and that the essence of menstruation consists in the separation of a decidual layer of the mucous membrane from the uterus, *Decidua catamenialis* or *menstrualis;* while in the case of pregnancy there is no exfoliation of the membrane, but, on the contrary, it undergoes further development, as already described. **D. catamenia'lis**, see *Decidua*. **D. cho'rii**, D. reflexa; see *Decidua*. **D., epicho'rial**, D. reflexa; see *Decidua*. **D. exter'na**, D. vera; see *Decidua*. **D., interu'tero-placen'tal**, D. serotina; see *Decidua*. **D. menstrua'lis**, see *Decidua membrana*. **D. o'vulæ**, see *D. membrana*. **D., placen'tal**, see *Decidua*. **D. protru'sa**, decidua reflexa. **D. reflex'a**, see *Decidua*. **D. serot'ina, uteri'na**, or **ve'ra**, see *Decidua*. **D. tu'nica**, decidua. **D. tu'nica reflex'a**, D. reflexa. **D. tu'nica u'teri**, D. vera. **D. u'teri** or **uteri'na**, D. vera. **D. ve'ra**, see *Decidua*.

Decidual, de-sid'u-al. Relating to, or bearing resemblance to, the decidua.

Decid'uate. Having a decidua.

Deciduo'ma. New vascular connective-tissue growth in cavity of uterus, met with after abortion, produced by excessive development of part of decidua previously existing.

Deciduous, de-sid'u-us (falling off). Caducous; shedding, as in some forms of skin disease. Relating to the decidua. **D. cells**, nucleated cells in the connective tissue and endothelial cells of lining membrane of uterus. **D. endometri'tis**, see *Endometritis*. **D. mem'brane**, decidua (membrana). **D. teeth**, temporary or milk-teeth; see *Dentition*.

Decigramme, des'e-gram (*decimus*, tenth part, *gramma*, gramme). Tenth part of a gramme in weight, equal to a little less than two grains French, 1.543 Troy.

Dec'illitre (Fr.). One-tenth of a litre, equivalent in metric system to 6.1 English cubic inches.

Decimana (des-im'an-ah) (*decem*, ten) **fe'bris**. An intermittent whose paroxysms return every tenth day.

Decimetre, des'e-me-t'r (Fr.). One-tenth of a metre, in metric system equivalent to 3.937 English inches.

Declamation, dek-lam-a'shun (*de*, *clamo*, to cry out). Art of depicting the sentiments by inflections of the voice, accompanied by gestures. It may become a cause of disease when carried to excess, by affecting the pulmonary circulation, producing pneumonia, hæmoptysis, or apoplexy.

Declination, dek-lin-a'shun (*de*, *clino*, to bend). Deviation, as from normal standard. Decline.

Declinator, dek'lin-a-tor. Instrument for pushing away the dura mater in the operation of trephining.

Decline, de-kline'. Decay, wasting. Period of a disorder or paroxysm at which the symptoms begin to abate in violence. Decline of life, or of the powers, when the physical and moral faculties lose their usual activity and energy. Wasting disease, as phthisis and tabes.

Declive, de-klive' (*de*, *clivus*, sloping). Inclined part of monticulus cerebelli. Depending lowest part of a wound or abscess.

Decoction, de-kok'shun (*decoquo*, *decoctum*, to boil). Operation of boiling certain ingredients in a fluid, to extract the parts soluble at that temperature. Also product of this operation. **D. of al'oes, com'pound**, decoctum aloes compositum. **D. of bark, pale**, see *Decoctum cinchonæ*. **D. of bark, red**, see *Decoctum cinchonæ*. **D. of bark, yel'low**, see *Decoctum cinchonæ*. **D. of bar'ley**, decoctum hordei. **D. of bar'ley, com'pound**, decoctum hordei compositum. **D., bit'ter**, decoctum amarum. **D. of bit'tersweet**, decoctum dulcamaræ. **D. of broom**, decoctum scoparii. **D. of broom, com'pound**, decoctum scoparii compositum. **D. of cab'bage-tree bark**, decoctum Geoffrææ inermis. **D. of cas'sia**, decoctum cassiæ. **D. of cham'omile**, decoctum anthemidis nobilis. **D. of cincho'na**, decoctum cinchonæ. **D. of cincho'na, com'pound lax'ative**, decoctum kinæ-kinæ compositum et laxans. **D. of colom'ba, com'pound**, decoctum colombæ compositum. **D. of dan'delion**, decoctum taraxaci. **D. of dog'wood**, decoctum cornûs floridæ. **D. of elm bark**, decoctum ulmi. **D. of flax'seed, com'pound**, decoctum lini compositum. **D. of fox'glove**, decoctum digitalis. **D. of guai'acum, com'pound**, decoctum guaiaci compositum. **D. of guai'acum, com'pound pur'gative**, decoctum de guyaco compositum. **D. of harts'horn, burnt**, mistura cornu usti. **D. of hel'lebore, white**, decoctum veratri. **D. of Ice'land moss**, decoctum cetrariæ. **D. of lem'on**, unofficinal preparation of fresh unpeeled lemon; is reputed to possess marked antiperiodic properties. **D. of log'wood**, decoctum hæmatoxyli. **D. of mal'low, com'pound**, decoctum malvæ compositum. **D. of marsh'mallows**, decoctum althææ. **D. of meze'reon**, decoctum daphnes mezerei. **D. of oak bark**, decoctum quercûs. **D. of pare'ra bra'va**, decoctum pareiræ. **D. of pipsis'sewa**, decoctum chimaphilæ. **D. of pom'egranate root**, D. granati radicis. **D. of pop'py**, decoctum papaveris. **D. of quince seeds**, decoctum cydoniæ. **D. of sarsaparil'la**, decoctum sarsaparillæ. **D. of sarsaparil'la, compound**, decoctum sarsaparillæ compositum. **D. of sarsaparil'la, false**, decoctum araliæ nudicaulis. **D. of sen'ega**, decoctum senegæ. **D. of squill**, decoctum scillæ. **D. of tor'mentil**, decoctum tormentillæ. **D. of u'va ur'si**, decoctum uvæ ursi. **D., white**, mistura cornu cervi. **D. of white oak bark**, decoctum quercûs. **D. of the woods**, decoctum guaiaci compositum. **D. of wood'y night'shade**, decoctum dulcamaræ. **D. of Zitt'man**, decoctum Zittmanni.

Decoctum, de-kok'tum. Decoction. **D. al'bum**, mistura cornu usti. **D. al'oës** or **A. compos'itum** (Ph. Br.), *Balsam of life*, *Compound decoction of aloes* (extract of licorice, carbonate of potassium, aloes, myrrh, saffron, distilled water, and compound tincture of cardamom); gently cathartic; dose, f℥ss to ℥ij. **D. althæ'æ**, *Decoction* or *Mixture of marshmallows* (althæa root, dry, raisins, and water); demulcent. **D. ama'rum**, *Bitter decoction* (gentian root, water, and bitter species); tonic; dose, f℥ss to ℥ij. **D. am'yli**, mucilago amyli. **D. anthem'idis no'bilis**, *Decoction of chamomile* (chamomile flowers, caraway seed, and water); used as a vehicle for tonic powders, pills, etc., and in fomentations and glysters. **D. ara'liæ nudicaul'is**, *Decoction of false sarsaparilla* (Aralia nudicaulis and water); stomachic. **D. cas'siæ**, *Decoction of cassia* (cassia pulp, water, syrup of violets, and pure manna); laxative in dose of f ℥vj. **D. cetra'riæ** (Ph. U. S. and Br.), *Decoction of Iceland moss* (cetraria and water);

tonic, demulcent, and nutrient; dose, f℥j to ℥iv. **D. chamæme'li**, D. anthemidis nobilis. **D. chimaph'ilæ**, *Decoction of pipsissewa* (chimaphila, bruised, and water); a pint may be given in the twenty-four hours. **D. cincho'næ** (Ph. Br.), *Decoction of cinchona* or *of bark* (cinchona bark, bruised, and water); it can be given in place of powdered bark; dose, f℥j to ℥iv. **D. colom'bæ compos'itum**, *Compound decoction of colomba* (colomba, bruised, quassia, orange-peel, powdered rhubarb, potassium carbonate, and water); tonic and stomachic. **D. commu'ne pro clyste're**, D. malvæ compositum. **D. cor'nu cervi'ni**, mistura cornu usti. **D. cor'nûs flor'idæ**, *Decoction of dogwood* (dogwood, bruised, water); dose, f℥iss. **D. cydo'niæ**, *Decoction of mucilage of quince seeds* (quince seeds and water); solution of mucilage in water, used as a demulcent. **D. daph'nes meze're**i, *Decoction of mezereon* (mezereon, bruised licorice, water); somewhat stimulant; used in secondary syphilis; dose, f℥iij to ℥vj. **D. diaphoret'icum**, D. guaiaci compositum. **D. digita'lis**, *Decoction of foxglove* (digitalis leaves, dry, water); possesses properties of the plant; dose, f℥ij to ℥iij. **D. dulcama'ræ**, *Decoction of woody nightshade, D. of bittersweet* (dulcamara, bruised, water); diuretic and diaphoretic, and administered in skin diseases. **D. pro enem'ate**, D. malvæ compositum. **D. pro fomen'to**, D. papaveris. **D. Geoffræ'æ iner'mis**, *Decoction of cabbage-tree bark* (Geoffræa inermis bark, powdered, water); anthelmintic, purgative, and narcotic; dose, to children, as anthelmintic, f℥ij; to adults, f℥ss to ℥ij. **D. grana'ti radi'cis** (Ph. Br.), *Decoction of pomegranate root* (pomegranate root and distilled water); has virtues of the root. **D. guai'aci compos'itum** or **guai'aci officina'lis compos'itum**, *Compound decoction of guaiacum, Decoction of the woods* (guaiacum wood shavings, raisins, sassafras root, licorice root, and water). Stimulant, and given in syphilitic, cutaneous, and rheumatic affections. **D. guy'aco compos'itum et pur'gans**, *Compound purgative decoction of guaiacum* (guaiacum wood, sarsaparilla root, carbonate of potassium, senna leaves, rhubarb, sassafras wood, licorice root, coriander seeds, and water); the title indicates the properties of the composition. **D. hæmatox'yli** (Ph. Br.), *Decoction of logwood* (logwood and water); astringent. **D. helleb'ori**, D. veratri. **D. hor'dei** (Ph. Br.) or **hor'dei dis'tichi**, *Barley-water, Decoction of barley* (barley and water); nutritive and demulcent; chiefly used as a common drink and in glysters. **D. hor'dei compos'itum**, *Compound decoction of barley* (decoction of barley, figs, licorice root, raisins, and water); similar properties to the last. **D. ki'næ ki'næ**, D. cinchonæ. **D. ki'næ ki'næ compos'itum et lax'ans**, *Compound laxative decoction of cinchona* (cinchona bark, water, senna leaves, sodium sulphate, syrup of senna); its title indicates its properties. **D. liche'nis islan'dici**, decoctum cetrariæ. **D. ligno'rum**, D. guaiaci compositum. **D. li'ni compos'itum**, *Compound decoction of flaxseed* (flaxseed, licorice, and water); demulcent, nutritive. **D. mal'væ compos'itum**, *Compound decoction of mallow* (mallow, dried chamomile flowers, and water); chiefly used for clysters and fomentations. **D. meze're**i, D. daphnes mezerei. **D. papav'eris** (Ph. Br.), *Decoction of poppy* or *poppies* (poppy capsules and distilled water). It contains the narcotic principle of the poppy and mucilage in water; is anodyne and emollient, and employed as such in fomentation in painful swellings, ulcers, etc. **D. parei'ræ** (Ph. Br.), *Decoction of pareira* or *pareira brava* (pareira brava and distilled water); dose, f℥j to ℥ij. **D. pectora'le**, D. hordei compositum. **D. polyg'alæ sen'egæ**, D. senegæ. **D. quer'cûs** (Ph. Br.) or **quer'cûs al'bæ**, **D. quer'cûs ro'boris**, *Decoction of white oak* or *of white oak bark, D. of oak bark* (oak bark and water); astringent; used in injections in leucorrhœa, uterine hemorrhage, etc., and in fomentations to unhealthy ulcers. **D. sar'sæ** (Ph. Br.) or **sar'zæ**, decoctum sarsaparillæ. **D. sar'sæ compos'itum**, decoctum sarsaparillæ compositum. **D. sarsaparil'læ**, *Decoction of sarsaparilla* (sarsaparilla root and boiling distilled water); it is demulcent, and has been used in the sequelæ of syphilis; dose, f℥iv to Oss. **D. sarsaparil'læ compos'itum** (Ph. U. S. and Br.), *Compound decoction of sarsaparilla* (sarsaparilla, sassafras bark, guaiacum wood, licorice root, mezereon, and water); this is considered to possess analogous properties to the celebrated Lisbon diet-drink, decoctum Lusitanicum, which it resembles in composition. **D. scil'læ**, *Decoction of squill* (squill, juniper, senega, spirit of nitrous ether, and water); dose, f℥ss. **D. scopa'rii** (Ph. Br.), *Decoction of broom* (broom, dried, distilled water). **D. scopa'rii compos'itum**, *Compound decoction of broom* (broom, juniper, taraxacum, and distilled water); dose, half a pint to a pint in the day; diuretic in dropsy. **D. sen'egæ**, *Decoction of senega* or *seneka* (senega and water); diuretic, purgative, and stimulant; given in dropsy, rheumatism, etc. **D. smi'lacis sarsaparil'læ**, D. sarsaparillæ. **D. sudorif'icum**, D. guaiaci compositum. **D. tarax'aci** (Ph. Br.), *Decoction of dandelion* (taraxacum and distilled water); dose, f℥iss. **D. tormentil'læ**, *Decoction of tormentil* (tormentilla and distilled water); dose, as an astringent, one or two fluidounces. **D. ul'mi** or **ul'mi campes'tris**, *Decoction of elm bark* (slippery elm bark and distilled water); diuretic, and used in lepra and herpes; dose, f℥iv to Oss. **D. u'væ ur'si**, *Decoction of uva ursi* (uva ursi and water); dose, f℥iss. **D. vera'tri**, *Decoction of white hellebore* (veratrum root, water, and alcohol); stimulant, acrid, and cathartic, but used only externally. A useful wash in tinea capitis, psora, etc., alone or diluted with water. **D. Zittman'ni**, *Zittmann's decoction*; combination of remedies extolled by Theden in venereal diseases, and much employed in Germany in syphilis; composed of sarsaparilla, pulvis stypticus, calomel, and cinnabar, boiled in water with aniseed, fennel seed, and licorice root. A stronger and a weaker decoction were directed by Zittmann.

Decollation, de-kol-la'shun (*de*, *collum*, neck). Decapitation. Act of separating the fœtal head from the trunk by section of the neck, as in some cases of dystocia or difficult delivery.

Decollator, de-kol-la'tor. Instrument used for decollation or decapitation.

Decolora'tio. Decoloration. **D. argente'a**, discoloration from therapeutic use of silver preparations; argyriasis.

Decolora'tion or **Discoloration**, dis-kol-or-a'shun (*de*, *coloro*, to color). Loss of natural color. Condition of absence of color. In pharmacy, process by which liquids, or solids in solution, are deprived of color, as by passing them through animal charcoal.

Decolorization, de-kol-or-i-za'shun. Decoloration.

Decombus'tion. Deoxygenation.

Decomposition, de-kom-po-zish'un (*de*, *compono*, to put together). Resolution or separation of parts composing a body. Putrefaction.

Deco-ordination, de-ko-ord-in-a'shun. Interference with, or cessation of, co-ordination, as of movements.

Decortication, de-kort-i-ka'shun (*de*, *cortex*, bark). Operation consisting in separating the bark from roots, stalks, etc. Detachment of portions of enamel from a tooth is sometimes termed the decorticating process.

Decos'tate (*de*, *costa*, rib). Without ribs.

Decostis, de-kos'tis (same etymon). One who has no ribs.

Decrement, dek're-ment (*de*, *cresco*, to grow). Decline.

Decrepit, de-krep'it (*de*, *crepo*, to creak). See *Decrepitude*.

Decrepitation, de-krep-it-a'shun. Crepitation or crackling.

Decrepitude, de-krep'it-ude. Last period of old age and of human life, ordinarily occurring about the eightieth year; but it may be accelerated or protracted. One in this stage of existence is said to be *Decrepit*.

Decrescentia, de-kres-sen'she-ah. Decline.

Decretorii dies, dek-ret-o're-e de'ees (decisive days) Critical days.

Decrustation, de-krus-ta'shun. Removal or falling off of a crust.

Decubation, de-ku-ba'shun. Lying down.

Decubitus, de-ku'bit-us (*decumbo, decubitum,* to lie down). Lying down; assuming the horizontal posture. *Hora decubitús,* at bed-time. *Horizontal decubitus* is lying in the horizontal posture, on the back or side. **D. acu'tus,** acute sloughing over the gluteal region from continuous position; acute bed-sore. **D. chron'icus,** bed-sore. **D., dor'sal,** position on the back in bed. **D., lat'eral,** position on the side in bed. **D., prone, ster'no-cos'tal** or **ven'tral,** position on the belly in bed. **D., supine',** D., dorsal. **D. traumat'icus,** bed-sore.

Decum'bence, Decum'bency, or **Decum'biture.** Decubation; decubitus.

Decum'bent. Reclining.

Decur'sus. Duration or progress of disease.

Decurtation, de-kur-ta'shun (*de, curtus,* short). Shortening; removal of a part.

Decurtatus, de-kur-tah'tus (same etymon). Applied to the pulse, it signifies progressive diminution in the strength of arterial pulsations, which, at last, cease. If the pulsations return and gradually acquire all their strength, it is called *pulsus decurtatus reciprocus.*

Decurvature, de-kur'va-ture (*de, curvus,* curved). Curved downward.

Decussate, de-kus'sate. To cross like an X.

Decussatio, de-kus-sah'she-o. Decussation. **D. nervo'rum optico'rum,** optic commissure; chiasm. **D. pyram'idum,** see *Corpora pyramidalia.* **D. trac'tuum optico'rum,** optic commissure; chiasm.

Decussation, de-kus-sa'shun (to cross like letter X). Union in the shape of an X or cross. Term used chiefly in the case of nerves—as decussation of optic nerves, which cross each other within the cranium. **D., foun'tain,** crossing of nerve-fibres in cortex of anterior corpora quadrigemina. **D., infe'rior** or **mo'tor,** D. of the pyramids; see *Corpora pyramidalia.* **D., pin'niform,** D., sensory, of pyramids. **D. of the pyr'amids,** see *Corpora pyramidalia.* **D., sen'sory** or **supe'rior,** crossing of fibres from the funiculus cuneatus to the opposite side; crossing of external fasciculi of anterior pyramids of spinal cord. **D., sen'sory, of the pyr'amids,** crossing of nerve-fibres in the upper portion of the medulla oblongata, between the anterior pyramids and the floor of the fourth ventricle. **D., tegmen'tal,** D., fountain. **D., up'per pyram'idal,** D., sensory, of the pyramids. **D., ven'tral,** D. of the pyramids.

Decussorium, de-kus-so're-um (*decutio, decussum,* to shake down). Instrument for depressing the dura mater and facilitating the exit of substances effused on or under that membrane. See *Meningophylax.*

Dedentition, de-den-tish'un. Shedding of teeth; see *Dentition.*

Dedolation, ded-o-la'shun (*dedolo,* to hew with an axe). Action by which a cutting instrument divides obliquely any part of the body, and produces a wound with loss of substance; commonly observed in wounds on the head. **D. cra'nii,** see *Dedolation.*

Deduplication, de-du-ple-ka'shun (*de,* priv., *duplico,* to double). Segmentation.

Deer'balls. Elaphomyces granulatus.

Deer'berry. Gaultheria procumbens; Vaccinium stamineum.

Deer'food. Brasenia hydropeltis or peltata.

Deer's tears. Bezoar of the deer.

Deer'tongue. Liatris odoratissima.

Defæcatio, def-e-kah'she-o (*de, fæx,* excrement). Defecation.

Defatigatio, de-fat-e-gah'she-o. Fatigue; sensation of weakness and exhaustion caused by overtaxing the strength of the muscular or nervous system.

Defecation, def-e-ka'shun. Act by which excrement is extruded from the body. Feces generally accumulate in the colon, being prevented by the annulus at the top of the rectum from descending freely into that intestine. In producing evacuations, therefore, in obstinate constipation, it is well, by means of a long tube, to throw the injection into the colon. In pharmacy, defecation means separation of any substance from a liquid in which it may be suspended. See *Clarification.* **D. cen'tre,** ano-spinal centre.

Defect, de-fekt' (*deficio,* to be wanting). Want of perfectness in structure, function, or development.

Defectio, de-fek'she-o (*deficio, defectum,* to forsake). Defect. **D. an'imi,** syncope **D. mulie'rum,** syncope. **D. vir'ium,** loss of physical power.

Defec'tus. Defect. **D. an'imi,** syncope. **D. ca'vi,** absence of cavity. **D. colo'ris,** achromasia. **D. cor'dis,** acardia. **D. cra'nii,** acrania. **D. labio'rum,** acheilia. **D. lac'tis,** agalactia; see *Galactia.* **D. loque'læ,** aphonia. **D. mamma'rum,** amazia. **D. men'sium,** amenorrhœa. **D. ven'eris,** anaphrodisia. **D. vi'tæ,** abiosis. **D. volunta'tis,** abulia. **D. vul'væ,** atresia of vulva.

Defensi'vum (*defendo,* to defend). Preservative or defensive, as local applications to diseased parts to guard them from the impression of extraneous bodies, and particularly from the contact of air.

Deferens (def'er-ens) **vas** (carrying away). Spermatic duct; spermiduct. Excretory canal of the sperm, arising from the epididymis, describing numerous convolutions, and with the vessels and nerves of the testicles concurring in the formation of the spermatic cord, entering the abdominal ring, and terminating in the ejaculatory duct.

Deferent, def'er-ent. Relating to vas deferens; carrying away from a part, as ducts carrying semen from the testicles.

Deferen'tial. Deferent. **D. ar'tery,** artery of vas deferens.

Deferentitis, def-er-en-te'tis. Inflammation of the vas deferens.

Defervescence, de-fer-ves'sence (*de, fervesco,* to grow hot). Declination of morbidly elevated temperature of the body in fever toward the natural standard.

Defibrinated, de-fi'brin-a-ted (*de, fibrin*). Defibrinized.

Defibrination, de-fi-brin-a'shun. See *Defibrinized.*

Defibrinized, de-fi'brin-ized. Defibrinated; deprived of fibrin. Term applied to blood from which the fibrin has been removed, as by whipping. The act of removing fibrin from the blood has been termed defibrination.

Defiguration, de-fig-u-ra'shun (*de, figuro,* to shape). Deformation.

Definition, def-in-ish'un. Power of an object-glass to bring out upon the field of a microscope a sharp image of the object looked at.

Defixus, de-fix'us. Impotent.

Deflagration, def-lag-ra'shun (*deflagro,* to set on fire). In pharmacy, the rapid combustion of a substance with flame, great elevation of temperature, violent motion, and more or less noise, as in deflagration of the nitrate and the chlorate of potassium, of gunpowder, etc.

Deflectens, de-flek'tens (*de, flecto,* to bend). Bending from a definite course; derivative.

Deflec'tion or **Deflex'ion.** Derivation; act of bending from a definite course. Flexion, as of the uterus. Restoration of flexion of head of fœtus during delivery.

Defloration, de-flo-ra'shun (*defloresco,* to deflower). *Depucelation, Depudication, Devirgination.* Act of depriving a female of her virginity. Inspection is the chief criterion of defloration having been forcibly accomplished, but injury may have been caused by another body than the male organ. See *Stuprum.*

Deflow'ered. Deprived of virginity.

Defluvium, de-flu've-um (*de, fluo,* to flow). Emanation, effluvium, contagium. **D. capillo'rum,** alopecia; loss of hair. **D. pilo'rum,** alopecia.

Defluxio, de-flux'e-o. Catarrh; defluxion; diarrhœa; fever with mucous discharge. **D. capillo'rum,** falling out of the hair as a result of independent disease; also *Alopecia.* **D. catarrha'lis,** influenza. **D. cilio'rum,** falling out of eyelashes; madarosis. **D. dysente'ria,** dysentery. **D. supercilio'rum,** falling out of the eyebrows.

Defluxion, de-flux'yun. Flowing down; inflammation.

Defluxus dysentericus, de-flux'us dis-en-ter'ik-us. Dysentery.

Defœdatio (def-e-dah'she-o) (*de*, *fœdus*, dirty) or **Degeneratio unguium**, de-gen-er-ah'she-o un'gwe-um. Defœdation or degeneration of the nails. Morbid condition in which the nails are discolored and horny.

Deformed, de-formd'. Having an unnatural form.

Defor'mans. Deforming, as arthritis deformans.

Deforma'tion (*de*, *forma*, form). Production of morbid alteration in some part of the body, as disfiguration or deformity.

Deform'itas. Deformity; it is variously called *D. defectiva*, *D. excessiva*, *D. translatitia*, and *D. unitorum*, according as the parts are defective, in excess, displaced, or united with other parts. See *Deformation.* **D. colo'ris**, nævus.

Deform'ity. Morbid alteration in form of some part of the body, as the head, pelvis, spine, etc. See *Deformitas*, *Monstrosity*, *Monster*, etc.

Defurfuration, de-fur-fur-a'shun (*de*, *furfur*, bran). Branny desquamation.

Defusion, de-fu'zhun (*de*, *fundo*, *fusum*, to pour). Decantation.

Degeneracy, de-jen'er-a-se. Change to an inferior type or plane. See *Degeneration.*

Degeneratio, de-gen-er-ah'she-o. Degeneration. **D. adipo'sa cor'dis**, steatosis cordis. **D. a. re'nis**, kidney, fatty degeneration of. **D. fibro'sa re'nis**, kidney, fibroid degeneration of. **D. hep'atis adipo'sa**, fatty degeneration of the liver. **D. h. larda'cea**, liver, albuminous. **D. larda'cea**, see *Lardaceous.* **D. un'guium**, defœdatio unguium.

Degeneration, de-jen-er-a'shun (*de*, *genus*, family or kind). Change for the worse—degradation—in the intimate composition of the solids or fluids of the body; metamorphosis. In pathological anatomy, degeneration or degenerescence means the change occurring in the structure of an organ, when transformed into fat, for example, or into matter essentially morbid, as cancerous or tubercular degeneration. To be a true degeneration, chemical change must take place and the tissue become changed into a lower and simpler form. In other forms the fibrous tissue may increase abnormally at the expense of the parenchyma, or some foreign substance may be infiltrated in a tissue, as in amyloid degeneration, or calcareous matter may be deposited in it, as in atheroma. Necrobiosis is employed in a similar signification and for morbid metamorphosis in general. Also loss of properties characteristic of a race. **D., acute fat'ty**, acute yellow atrophy of the liver of lying-in women; foot-halt of young horses. **D., ad'ipose**, D., fatty. **D., albu'minoid**, D., amyloid. **D., albu'minous**, albuminous infiltration. **D., am'yloid**, see *Lardaceous.* **D., atherom'atous**, see *Atheroma.* **D., ba'cony**, see *Lardaceous.* **D., black**, melanosis; anthracosis. **D., calca'reous**, see *Calcareous* and *Cretefaction.* **D., ca'seous**, caseation. **D., cell'ulose**, see *Lardaceous.* **D., chees'y**, caseation. **D., choles'terine**, see *Lardaceous.* **D., col'loid**, see *Colloid* and *Lardaceous.* **D., cys'tic**, formation of cysts in any organ, or of a tumor which is a large cyst; vesicular mole. **D., cys'toid, of ret'ina**, form of œdema of that membrane. **D., descend'ing sec'ondary**, D. of nerve-fibres in a downward direction, caused by detachment from their centre of nourishment. **D., earth'y**, D., calcareous; cretefaction; calcification. **D., fascic'ular**, atrophy of paralyzed muscles from lesion of nervous centres. **D., fat'ty**, fatty metamorphosis; conversion of a substance, as muscle, into fat. **D., f., of the heart**, see *Steatosis cordis* **D., fi'broid**, transformation into substance having appearance of fibres; see *Fibroid.* **D., fi'brous**, this is not a true degeneration, being an increase of the normal fibrous tissue of a part or organ by the action of a chronic irritant; see also *Fibroma.* **D., gelat'iniform**, see *Colloid.* **D., gran'ular**, form of tissue-metamorphosis characterized by deposit of minute albuminous particles. **D., g., of the kid'ney**, kidney, Bright's disease of the. **D., gray**, change resulting in nervous tissue from chronic inflammation. **D., g., of spi'nal cord**, ataxy, locomotor. **D., hy'aline**, formation of homogeneous fibroid tissue, usually in the ovary, and probably caused by chronic neurotic irritation; it is also met with in sarcomatous growths, tuberculosis of the lungs, etc. **D., hy'aloid**, see *Lardaceous.* **D., larda'ceous**, see *Lardaceous.* **D., liquefac'tive**, see *Liquefactive.* **D. of the liv'er**, see *Adiposis hepatica.* **D., min'eral**, see *Cretefaction.* **D., mu'coid** or **myxom'atous**, jelly-like alteration in connective tissue. **D., ossif'ic**, ossification. **D., pig'mentary**, see *Pigmentation.* **D., pu'trid**, hospital gangrene. **D., Quain's**, cardiac cirrhosis; fibroid degeneration of the heart; see *Quain.* **D., the'roid**, mental degeneration to a level almost of that of brutes. **D., urat'ic** or **u'ric**, condition characterized by deposits of uric acid or urates. **D., Vir'chow's**, see *Lardaceous.* **D., vit'reous**, see *Lardaceous.* **D., Walle'rian**, adipose degeneration in the peripheral part of a mixed nerve, after division of the nerve. **D., wax'y**, see *Lardaceous.*

Degenerescence, de-jen-er-es'sence. Degeneration.

Deglutination, de-glu-ten-a'shun (*de*, *gluten*, glue). Separation of parts naturally associated together by destruction of connective tissue uniting them, as in case of burns, etc.

Deglutitio, deg-lu-tish'e-o. Deglutition. **D. diffic'ilis, impedi'ta**, or **læ'sa**, difficulty of swallowing.

Deglutition, deg-lu-tish'un (*de*, *glutio*, to swallow). Act by which substances are passed from the mouth into the stomach through the pharynx and œsophagus; the first step is voluntary, the remainder executed under spinal and involuntary nervous influence. **D. cen'tre**, centre in medulla oblongata supposed to control deglutition. **D., dif'ficult**, dysphagia. **D. pneumo'nia**, condition due to loss of sensitiveness of the larynx, in which nourishment or drink enter into the larynx and the bronchial tubes and give rise to inflammation.

Deg'mus (*dakno*, to bite). A bite, in general; gnawing sensation in the stomach.

De Graaf, follicles of. See *Follicles.*

Degradation, deg-ra-da'shun (*degredior*, to descend). Degeneration; progress toward an inferior type or plane.

Degree, de-gree'. Title conferred by a college, as the degree of doctor of medicine; generally after a certain period of attendance at a college and on its lectures; at others, *in absentiâ;* and at others, *causâ honoris.* Degree was formerly used to indicate the qualities of certain drugs. The term is sometimes used to indicate intensity of an affection, as a burn; particular stage of an incurable disease; graded division, as on a thermometric scale, etc.

Degusta'tion (*de*, *gusto*, to taste). Gustation; appreciation of sapid qualities by the gustatory organs.

Dehis'cence (*dehisco*, to break open in chinks). Separation of a shut organ along the line of union; regular and determinate separation, or even bursting open, taking place in a shut organ, as in the bursting of a Graafian follicle.

Dehiscen'tia. Dehiscence.

Dehumaniza'tion. Loss of usual characteristics of a human being.

Dehydra'tion (*de*, *hudor*, water). Loss or abstraction of water from a chemical substance or compound.

Dehydrodimethylphenylpy'razine. Antipyrine.

Deicticus dike'tik-us (*deiknumi*, to point out). Index finger.

Dei'ra or **Dei're.** Neck.

Deiron'cus (*deire*, neck, *onkos*, swelling). Bronchocele.

Dei'ters, cells of. Epithelial cells on basilar membrane and outer hair-cells of organ of Corti; cells like those of connective tissue in central nervous system. **D., nu'cleus of**, auditory nuclei. **D., phalan'ges of**, structures forming reticular lamina of Corti. **D., pro'cesses of**, axis-cylinder process. Of the various processes proceeding from a nerve-cell, Deiters discovered that one, the nerve process, keeps on

its course without division, while the others—protoplasma, protoplasmic, or ramified processes—undergo frequent subdivision. **D., ter'minal frames of,** plates in reticular lamina of organ of Corti, connecting the external phalanges with Hensen's cells.

Dejec'ta. Alvine evacuations.

Deject'edness. Depression.

Dejec'tio. Dejection. **D. al'vi** or **alvi'na,** excrement; defecation. **D. an'imi,** dejection.

Dejec'tion (*dejicio, dejectum,* to cast down). Expulsion of the feces; fecal discharge or stool; passage, evacuation, or movement; depression of spirits.

Dejectio'nes ni'græ (black dejections). Melæna.

Dejecto'rium. Cathartic.

Deka'mali. Resinous exudation from Gardenia lucida, used in E. Indies in dyspepsia.

Delacryma'tion (*de, lacryma,* tear) Epiphora.

Delacrymati'vus. See *Apodacrytic.*

Delacta'tion. Weaning; stoppage of lactation.

Delamina'tion. Splitting into layers; development of ectoderm by detachment from yelk over whole extent of ovum.

Delap'sion (*de, labi, lapsus,* to fall). Slight prolapsus uteri.

Delap'sus. Prolapsus. **D. pal'pebræ,** falling down of the upper lid; see *Blepharoptosis.*

Dela'tio (*defero, delatum,* to announce). Indication.

Delete'rious (*deleo,* to injure). Pernicious, noxious; that which produces destructive disorder in the exercise and harmony of the functions; poisonous.

Delete'rium. Poison.

Del'hi boil. Inveterate cutaneous affection, prevalent at Delhi in India, which assumed the form of a boil, ulcerating afterward, and forming the Delhi ulcer; it is called there Arungzebe, owing to the emperor of that name having died with it. **D. sore** or **ul'cer,** see *Delhi boil.*

De'lïa. Artemisia vulgaris.

Deliga'tio. Deligation; ligature; see *Bandage.*

Deligation, del-ig-a'shun (*deligo, deligatum,* to bind). Deligation of wounds formerly embraced the application of apparatus, dressings, etc. *Deligator plagarum* was synonymous with *Medicus vulnerarius,* and, in derivation, with the Wundarzt, wound physician or surgeon of the Germans.

Deligatura, de-lig-at-u'rah. Deligation.

Delimitation, de-lim-it-a'shun. Term used in physical diagnosis to designate the finding out and limiting the boundaries of organs.

Deliquesce, del-i-kwes'. To become liquid by attracting moisture.

Deliquescent, del-i-kwes'ent (*deliquesco,* to melt, to dissolve). Any salt becoming liquid by attracting moisture from the air. Deliquescent salts require to be kept in bottles well stopped. Chloride of lime, acetate of potassium, and carbonate of potassium are examples of such salts.

Deliquium animi, de-lik'we-um an'im-e (*delinquo,* to fail). Syncope.

Deliramentum, del-ir-am-en'tum. Delirium.

Delirans, del-e'rans. Delirious.

Deliratio, del-ir-ah'she-o. Delirium. **D. se'num** or **seni'lis,** senile insanity; dotage.

Deliria, del-ir'e-ah. Insanity.

Deliriant, de-lir'e-ant. Causing delirium.

Delirious, de-lir'e-us. Attended by delirium. Raving. One in a state of delirium.

Delirium, del-ir'e-um (perhaps from *de, lira,* ridge between two furrows; more probably from *de, lerema,* silly saying or action). *Ravery, Roving, Transport;* straying from rules of reason; wandering of the mind. Delirium is usually symptomatic. **D., acute,** sudden attack of acute delirious mania. **D. alcohol'icum,** D. tremens. **D., chron'ic,** insanity. **D. ebriosi'tis** or **ebrioso'rum,** delirium of drunkenness, also D. tremens. **D., epilep'tic,** see *Epilepsy.* **D. fe'rox,** D. attended with violent excitement. **D. furio'sum** or **furibun'dum,** mania. **D. of gran'deur,** form of delirium in which there exist in the patient's mind absurd and exalted ideas of his social standing, influence, and power. **D. mani'acale** or **mani'acum,** mania. **D. melancholi'cum,** melancholia. **D. mi'te,** quiet mental wandering with muttering. **D. nervo'sum,** D. from alcohol or psychic causes, or following surgical operations; also form of delirium accompanying nervous lesions. **D. palingnos'ticum,** delusional insanity, the patient believing that he has been a long time in a spot to which he has but recently come. **D. of persecu'tion,** delirium in which the patient imagines himself under surveillance and subject to persecutions. **D. a** or **e potû** or **potato'rum,** D. tremens. **D. seni'le,** see *Dementia.* **D., senso'rial,** D. from or with hallucinations. **D. traumat'icum,** delirium from wounds, surgical or other, especially when associated in sufferers with alcoholism. **D. tre'mens,** *Mania a potu;* state of delirium and agitation—often termed the *horrors* and *horrors of drink*—peculiar to those addicted to spirituous liquors, with great sleeplessness. It is preceded by indisposition, lassitude, watchfulness, headache, and anorexia, the delirium and tremors, *Tremor potatorum,* most commonly recurring in paroxysms. It is caused by the habitual and intemperate use of ardent spirits or of opium or tobacco, or by abandoning them after prolonged use. Treatment is various. Many have regarded stimulants, with large doses of opium to induce rest, to be indispensable. The expectant system, with large doses of potassium bromide and chloral, will often, if not generally, be successful; and it is probable that a cure effected in this manner will be more permanent than when produced by excitants. **D. tremifa'ciens,** D. tremens. **D. verbo'rum,** D. with marked loquaciousness.

Delirus, del-e'rus. Delirious.

Delitescence, del-it-es'sence (*delitesco,* to abscond, to lie hid). Sudden disappearance, as of a disease. See *Repercussion* and *Ballottement.*

Delitescentia, del-it-es-sen'she-ah. See *Repercussion.*

Deliver, de-liv'ur (*de, libero,* to set free). To put to bed; to disburden of a child.

Deliv'erance. Extrusion of the secundines, either spontaneously or by the efforts of art. This completion of delivery is produced by the same laws as the expulsion of the fœtus. Sometimes the after-birth follows the child immediately; at others it is retained, and requires manual interference to remove it. The latter procedure has been practised in intimate adhesion between the placenta and parietes of the uterus; in spasmodic contraction of the orifice of the uterus; in hour-glass contraction; in torpor or hemorrhage after the expulsion of the child; and in the insertion of the placenta at the orifice of the uterus.

Delivery, de-liv'ur-e. Parturition. **D., false,** water which sometimes collects between the amnion and chorion, and is commonly discharged before the birth of the child.

Delocatio, del-o-kah'shē-o (*de, locus,* place). Luxation.

Delomorphous, del-o-mor'fus (*delos,* visible, *morphe,* shape). Term applied to large cells easily seen in the secreting portion of peptic glands.

Delove's method. Operation for surgical fracturing of the bone in genu valgum.

Delpech's opera'tion. Ligation of axillary artery through space between pectoralis major and deltoid muscles.

Delphia, del'fe-ah. See *Delphinium staphisagria.*

Delphinia, del-fin'e-ah. See *Delphinium staphisagria.*

Del'phinine hydrochlo'ride. Compound of delphinine and hydrochloric acid; has been employed in medicine.

Delphinium, del-fin'e-um (*delphis* or *delphin,* dolphin, which the flowers resemble) **consol'ida** or **seg'etum,** delphinium; *Branching larkspur, Staggerweed,* ord. Ranunculaceæ. Has been employed as a vermifuge. The flowers have been used in ophthalmia, and the seeds have the same property as those of stavesacre. **D. staphisa'gria,** systematic name of *Stavesacre, Staphisagria;* seeds, *Staphisagria* (Ph. U. S. and Br.), are cathartic, emetic, and

vermifuge. Owing, however, to the violence of their operation, they are seldom given internally, and are chiefly used pulverized, mixed with hair powder, to destroy lice. A very poisonous alkaloid of this plant has been separated and received the name of *Delphinia*, *Delphia*, or *Delphinine;* has been used like veratria in tic douloureux, paralysis, and rheumatism. Used in the form of ointment or in solution in alcohol applied externally. **D. versic'olor**, delphinium.

Delphinoïdine, del-fin-o'id-een. Amorphous alkaloid separable from Delphinium staphisagria.

Delphinus globiceps, del-fe'nus glo'be-seps. See *Acidum valerianicum.*

Delphisine, del'fis-een. Crystallizable alkaloid obtained from seeds of Delphinium staphisagria.

Delphys, del'fis (*delphus*). Uterus; vulva.

Delta, del'tah (like the Greek letter Δ). Vulva. **D. for'nicis** (*fornix*, arch or vault), triangular space of lower surface of fornix over foramen commune anterius.

Deltiformis, del-te-for'mis (*delta* (Δ), *forma*, shape). Deltoid.

Deltoid, del'toid (*delta* (Δ), *eidos*, resemblance). Triangular muscle forming the fleshy part of the shoulder and covering the shoulder-joint; extends from the outer third of the clavicle, from the acromion and spine of the scapula, to near the middle and outer part of the os humeri, where it is inserted by means of a strong tendon. This muscle raises the arm directly upward when the shoulder is fixed, and carries it anteriorly or posteriorly, according to the direction of the fibres which are thrown into action. If the arm be rendered immovable, the deltoid acts inversely and depresses the shoulder. The term deltoid is also applied to process or sheath covering the muscle, *deltoid aponeurosis* or *fascia;* to the artery, branch of acromio-thoracic, descending between the deltoid and pectoralis major muscles, deltoid artery. **D. impres'sion**, rough surface furnishing attachment to the deltoid muscle on the external side of the humerus. **D. lig'ament**, internal lateral ligament of the ankle, so called from its shape. **D. ridge**, deltoid impression. **D. tu'bercle**, eminence to which deltoid muscle is attached on the clavicle.

Deltoï'deus. Deltoid. **D. accesso'rius**, independent muscular fascicle originating in base of acromion between deltoid and subscapularis, and inserted either on the capsule of the shoulder-joint or humerus between the deltoid and triceps.

Del'to-spina'lis. Muscle formed by separation of the fibres of the deltoid which are attached to the spine of the scapula.

Deluge, del'uje (*diluo*, to wash away). Shower bath; douche.

Delusion, de-lu'zhun. Hallucination. **D. of gran'deur**, exaltation of ideas, noticed particularly in mania, paretic dementia, etc.

Delu'sional insan'ity. Insanity occurring after fever, particularly typhoid fever, considered to be due to impaired nutrition and exhaustion of the nervous centres.

Demagnetization, de-mag-net-i-za'shun. Act of removing the condition of magnetization.

Demanus, de'man-us (*de*, *manus*, hand). Without a hand.

Demarca'tion. Boundary line. *Line of demarcation*, in surgery, denotes a line along which the dead and living parts touch.

Demented, de-men'ted. Insane. See *Dementia.*

Dementia, de-men'she-ah (*de*, *mens*, mind or reason). *Incoherency*, *Imbecility*, *Incoherent insanity.* In common parlance, and even in legal language, this word is synonymous with insanity. Physicians, however, have applied it to cases of unsound mind characterized by a total loss of the faculty of thought, or by such imbecility of intellect that the ideas are extremely incoherent, there being at the same time a total loss of the reasoning power. Mania and melancholy are apt to end in this, if possible, more deplorable state. *Dotage* is the dementia of the aged. *Senile insanity*, *Senile dementia*, *Insanity of the aged* is a form of insanity in which there is hopeless decadency or loss of the mental faculties. **D. accidenta'lis**, see *Lunatic.* **D. adventi'tia**, see *Lunatic.* **D. agita'ta**, D. with occasional attacks of excitement. **D. alcohol'ica**, D. from abuse of alcohol. **D. apoplec'tica**, D. as a result of apoplectic attack. **D. chore'ica**, D. as a result of chorea. **D., chron'ic**, D., secondary. **D. congen'ita**, idiocy. **D. epilep'tica**, D. as a sequel of epilepsy. **D. natura'lis**, idiotism. **D. organ'ica**, D. from various forms of change of structure of the brain. **D. paralyt'ica**, general paralysis of the insane. **D. paret'ica**, general paralysis of the insane. **D., pri'mary**, D. in young persons not mentally strong, usually due to mental shock. **D., sec'ondary** or **sequen'tial**, D. consequent on acute attacks; a form largely represented in hospitals for the insane. **D. seni'lis**, D. of old age. **D. tox'ica**, D. from abuse of alcohol, opium, hemp, etc., or from lead-poisoning.

Demephitize, de-mef'it-ize (*de*, *mephitis*, bad smell). To destroy foulness in the atmosphere.

Demerara (dem-e-rah'rah) **pink.** Spigelia anthelmintica.

Demesmerize, de-mes'mer-ize. To restore a person who has been under the influence of mesmerism to his normal condition.

Demi-aponeuroticus, dem'e-ap-on-u-rot'ik-us. Semimembranosus.

Demi-ar'cades. Arches of branches of renal artery in the kidney.

Demi-interos'seus. Flexor brevis pollicis.

Demi-membranosus, dem'e-mem-bran-o'sus. Semimembranosus.

Demi-monstros'ity. Condition in which only partial malformation exists.

Demi-nervosus, dem'e-ner-vo'sus. Semi-membranosus.

Demi-orbicularis, dem'e-or-bik-u-lar'is. Each half of the orbicularis oris muscle may be so called.

Demissio animi, de-mis'se-o an'e-me (*demitto*, *demissum*, to lower). Depression.

Demissor, de-mis'sor. Catheter.

Demi-tendinosus, dem'e-ten-din-o'sus. Semi-tendinosus.

Demodex folliculorum, dem-o-deks fol-lik-u-lo'rum (*demos*, fat, *dex*, boring worm). Acarus folliculorum.

Demography, de-mog'ra-fe (*demos*, people, *grapho*, to write). Study of population in its various aspects.

Demo'nia. Demonomania.

Demonolatry, de-mon-ol'at-re. Worship of demons.

Demonomania, de-mon-o-ma'ne-ah (*daimon*, demon, spirit of good or evil, *mania*, madness). Variety of madness in which the person conceives himself possessed of devils, and is in continual dread of malignant spirits, the pains of hell, etc. Also religious insanity.

Demonopathy, de-mon-op'ath-e (*daimon*, demon, *pathos*, affection). Demonomania.

Demonstrator, dem'on-stra-tor (*demonstro*, to exhibit). One who exhibits. Index finger; see *Digitus.* **D. of anat'omy**, one who exhibits the parts of the human body; teacher of practical anatomy.

Demotivus lapsus, de-mo-te'vus lap'sus (*demoveo*, to move off, remove, *lapsus*, a fall). Sudden death.

Demours, mem'brane of. See *Aqueous humor.*

Demulcents, de-mul'sents (*demulceo*, to assuage). Medicines supposed to be capable of correcting certain acrid conditions imagined to exist in the humors. Substances of a mucilaginous or saccharine nature belong to this class. Demulcents may act *directly* on the parts with which they come in contact; but in other cases, as in catarrh, their effect is produced by contiguous sympathy, the top of the larynx being soothed by them first, and *indirectly* the inflamed portion of the air-passages. In diseases of the urinary organs they have no advantage over simple diluents. Some demulcents are also emollients, but the former are generally considered as applicable to mucous membranes, the latter to the skin. See *Diluents* and *Emollients.*

Demusculatus, de-mus-ku-lah'tus (*de*, *musculus*, muscle). Emaciated; devoid of flesh.

Denan's method. Operation for uniting a divided intestine, including the introduction of cylinders of metal into the bowel.

Denarcotize, de-nar'kot-ize. To deprive of narcotin.

Denarcotized (de-nar'kot-ized) **opium.** Powdered opium freed from constituents soluble in ether. Narcotin and other constituents have thus been extracted and the residuum brought with sugar of milk to 14 per cent. morphine strength.

Denarius, den-ah're-us (*deni*, ten). Roman coin, equal in value to about 10 cents, or 8 pence English. Was marked with the letter X to signify 10 asses; also the seventh part of the Roman ounce.

Dendritic, den-drit'ik (*dendron*, tree). Tree-shaped; villous. **D. vegeta'tion**, see *Cancer, villous.*

Dendrolibanus, den-dro-lib'an-us (*dendron*, tree, *libanos*, frankincense). Rosmarinus.

Denervatio, de-ner-vah'she-o (*de*, *nervus*, tendon). Aponeurosis.

Dengue, den'ghu (Spanish name). *Dingee, Dunga, Dandy, Bouquet* or *Bucket fever, Eruptive articular fever, E. rheumatic fever, Breakbone, Neuralgic, Solar*, or *Sun fever.* Disease which first appeared in the years 1827 and 1828 in the West Indies and in the Southern States of North America; was extremely violent in its symptoms, but not often fatal. It usually commenced with great languor, chilliness, and pain in the tendons about the smaller joints. To these symptoms succeeded burning heat and redness of the skin, pains in the muscles of the limbs or in the forehead, with vomiting or nausea. The fever continued for one, two, or three days, and usually terminated by copious perspiration. In different places it put on different appearances, but seems in all to have been a singular variety of rheumatic fever. The usual antiphlogistic treatment was adopted, and successfully. See *Acrodynia.*

Denguis, den'gwis. Dengue.

Denidation, den'id-a-shun (*de*, from, *nidus*, nest). Dislodgment of epithelium during menstruation.

Denigratio, den-ig-rah'she-o (*denigro*, to become black). The act of becoming black, as in cases of sphacelus, suggillation, etc.

Denonvillier's operation. Rhinoplastic operation for the formation of a new ala of the nose, consisting in cutting a triangular flap with a peduncle from the intact side of the nose above the defective ala.

Dens. Tooth; see *Axis.* **D. acu'tus**, incisor tooth. **D. angula'ris**, canine tooth. **D. bicuspida'tus**, molar tooth. **D. bucca'lis**, premolar tooth. **D. cani'nus** or **cuspida'tus**, canine tooth. **D. clava'lis**, molar tooth. **D. columella'ris**, canine tooth. **D. cto'nes**, incisive teeth. **D. decid'uus**, milk tooth. **D. epistroph'ei**, see *Odontoid.* **D. incisi'vus**, incisor tooth. **D. infanti'lis** or **lac'teus**, milk tooth. **D. lania'rius**, canine tooth. **D. leo'nis**, Leontodon taraxacum. **D. maxilla'ris**, molar tooth. **D. mola'ris ante'rior** or **mi'nor**, premolar tooth. **D. mola'ris ma'jor, poste'rior, ve'rus, multicuspid'atus**, true molar teeth. **D. ocula'ris**, eye tooth. **D. opsig'onus**, see *Dentition.* **D. premola'ris**, premolar tooth; incisor tooth. **D. pro'lifer**, term used by Bartholin for a supernumerary tooth which appears to grow upon a primitive or parent tooth. **D. rasor'ius**, incisor tooth. **D. saphronis'ter, saphroret'icus, sapien'tiæ**, or **sophronis'tus**, third molar or wisdom tooth. **D. serot'inus**, permanent tooth. **D. tom'icus**, incisive tooth.

Densimeter, den-sim'et-ur (*densus*, dense, *metron*, measure). Areometer; instrument for determining specific gravity of any kind.

Dentagogum, dent-ag-o'gum (*dens*, *ago*, to expel). Tooth-forceps.

Dentagra, dent'ah-grah (*dens*, *agra*, seizure). Tooth-forceps; toothache.

Dental, den't'l. Concerning the teeth; see *Dentiformis.* **D. arch'es**, arches formed by the range of alveoli in each jaw. **D. ar'teries** are those which nourish the teeth. They proceed from several sources. The teeth of the upper jaw, *e. g.*, receive their arteries from the infraorbitar and superior alveolar, themselves branches of the internal maxillary. The teeth of the lower jaw receive their branches from the inferior dental or inferior maxillary, which is given off by the internal maxillary, and runs through the dental canal, issuing at the dental foramen, after having given numerous ramifications to the teeth and jaw. **D. canals'**, *Maxillary canals;* bony canals through which the vessels and nerves pass to the interior of the teeth. **D. car'tilage**, cartilaginous elevation, divided by slight fissures, on the biting margins of the gums in infants prior to dentition; is a substitute for the teeth. **D. cav'ity**, cavity in the interior of the teeth, in which is situate the dental pulp; see *Tooth.* **D. ex'cavator**, instrument for the removal of the decayed part of a tooth preparatory to filling it. **D. fol'licle**, membranous follicle, formed of double lamina, in which the teeth are contained before they issue from the alveoli, and which, consequently, aids in the formation of the alveolo-dental periosteum and of the membrane that envelops the pulp of the teeth. Dental follicles are lodged in the substance of the jaws. **D. fora'men**, orifice of dental canal on ramus of jaw. **D. gan'grene**, gangrene or caries of the teeth; see *Caries.* **D. germ**, germ of a tooth. **D. groove**, see *Groove, dental.* **D. machine**, light-running instrument, consisting of stand, wheel, and pulley and a treadle, by means of which the operator imparts rotary motion to various tools for removing caries and for cleansing surface of teeth. **D. nerves**, nerves which pass to the teeth. Those of the upper incisors and canines are furnished by the infraorbitar nerve, a branch of the superior maxillary, and those of the molars by the trunk of the same nerve; the teeth of the lower jaw receive the nerves from the inferior maxillary, which, as well as the superior maxillary, arises from the fifth pair. **D. papil'læ**, elevations in dental groove for development of the teeth. **D. plex'uses**, communications formed by looped anastomoses of dental nerves in the maxillary bones. **D. pro'cess**, alveolar process. **D. pulp**, pulp of the tooth; pultaceous substance of a reddish-gray color, very soft and sensitive, which fills the cavity of the teeth; well supplied with capillary vessels; it has been described as a special tissue with the epithet *phanerogenous* or *phanerophorous;* see *Phanerogenous.* **D. sac**, part of dental groove investing papilla and teeth before eruption. **D. sur'geon**, dentist. **D. sur'gery**, see *Surgery.* **D. tu'buli**, minute wavy and branching tubes, seen microscopically, which make up the ivory or dentine. **D. veins** have a similar distribution with the arteries.

Dentalis, den-tal'is. Odontoid. **D. for'fex**, dentagra.

Dentalium, den-tal'e-um. Genus of shells in the shape of a tooth; formerly entered into several pharmaceutical preparations, but were useless ingredients, consisting, like shells in general, of carbonate of lime and gelatin.

Dentaphone, den'ta-fone (*dens*, *phone*, sound). A box like a large watch with a diaphragm and a cord attached connected with a mouth-piece; through the latter, held between the teeth, vibrations are transmitted through the cranial wall to the auditory nerve.

Dentaria, den-tah're-ah. Anthemis pyrethrum, Plumbago Europæa. **D. diphyl'la**, pepper-root, native of North America; antiscorbutic, stimulant, and diuretic.

Dentarius, den-tah're-us. Dentist.

Dentarpaga, den-tar'pag-ah (*harpazo*, to force away). Dentagra.

Den'tary. Dental.

Dentata vertebra, den-tat'ah ver'te-brah. Axis.

Dentate, den'tate. *Dentated, Denticulate, Serrated.* Cut in the shape of teeth. **D. bod'y**, nucleus dentatus. **D. convolu'tion**, convolution of the brain lying within the hippocampal fissure. **D. fis'sure**, hippocampal fissure. **D. lam'ina**, portion of the spinal lamina. **D. nu'cleus**, collection of gray matter in the central white substance of the cerebellum. **D.**

su'ture of bone, suture in which the edges resemble teeth.

Dentatus, den-tat'us. Dentate.

Dentellaria, den-tel-lah're-ah. Plumbago Europæa.

Dentes, den'tees (pl. of **Dens**). Teeth. See *Tooth, Dens, Dental,* and *Dentition.* **D. angula'res**, canine teeth. **D. apparen'tes** or **haben'ulæ**, denticulate portions of labium tympanicum of inner ear. **D. bicuspida'ti**, molar teeth. **D. bucca'les**, molar teeth. **D. cani'ni**, canine teeth. **D. clava'les**, molar teeth. **D. columella'res**, canine teeth. **D. ctenes**, incisive teeth. **D. cuspida'ti**, canine teeth. **D. dichaste'res**, incisive teeth. **D. gelas'ini**, incisive teeth. **D. gom'phii**, molar teeth. **D. inciso'res**, incisive teeth. **D. lac'tei**, see *Dentition.* **D. lania'rii**, canine teeth. **D. maxilla'res**, molar teeth. **D. mola'res**, molar teeth. **D. morden'tes**, canine teeth. **D. ocula'res**, canine teeth. **D. opsig'oni**, see *Dentition.* **D. primo'res**, incisive teeth. **D. raso'rii**, incisive teeth. **D. sapien'tiæ**, see *Dentition.* **D. sero'tini**, see *Dentition.* **D. sophronis'ti**, see *Dentition.* **D. sophronis'teres**, see *Dentition.* **D. sophroret'ici**, see *Dentition.* **D. tom'ici**, incisive teeth.

Denticeps, den'te-seps (*dens, capio,* to seize). Tooth-forceps.

Denticola hominis, den-tik'o-lah hom'in-is (*dens, colo,* to inhabit). See *Odontolithus.*

Denticulate, den-tik'u-late. Dentate. **D. bod'y**, dentate nucleus. **D. lam'ina**, D. lamina. **D. lig'ament**, narrow fibrous band lying along entire length of spinal cord. **D. mus'cle**, serratus magnus.

Denticulatum, den-tik-u-lah'tum (**ligamen'tum**). A slender cord, situate between the anterior and posterior fasciculi of the spinal nerves, and between the tunica arachnoidea and pia mater. Attached to the dura mater where that membrane issues from the cranium, and accompanying the spinal marrow to its inferior extremity. It sends off, from its outer edge, about twenty slender processes, in the form of denticuli, each of which passes outward and connects itself with the dura mater in the intervals between the anterior and posterior roots of the nerves.

Denticulatus, den-tik-u-lah'tus. Dentate.

Denticulus, den-tik'u-lus (dim. of **Dens**, tooth). Crena.

Dentiducum, den-te-du'kum (*dens, duco,* to draw). Tooth-forceps.

Dentiform, den'te-form (*dens, forma,* form). Resembling a tooth in shape.

Dentiformis, den-te-form'is. Odontoid; dentiform.

Dentifrice, den'te-fris (*dens, frico,* to rub). *Tooth-powder, Tooth-paste.* Name given to different powders and pastes proper for cleansing the enamel of the teeth and removing the tartar which covers them. Orris root is a very common ingredient. Charcoal, finely powdered and mixed with chalk, forms a good dentifrice.

Dentigerous, den-tij'er-us (*dens, gero,* to carry). Tooth carrying, as dentigerous cysts, cysts containing teeth.

Dentilave, den'te-lave. Tooth-wash.

Dentili'oun. Leontodon taraxacum.

Dentinal, den'tin-al. Relating to the dentine of the teeth, as *dentinal fibres, dentinal cells,* etc.; see *Tooth.* **D. car'tilage**, residuum after action of dilute acid on dentine, the lime salts being dissolved. **D. cells**, see *Tooth.* **D. glob'ules**, spheroidal masses of matrix at outer edge of dentine. **D. mat'rix**, substance of close texture between the dentinal tubules. **D. sheath**, lining of the dentinal canals. **D. tu'bules**, tubes long and sinuous in the dentine.

Dentine, den'teen. See *Tooth.* **D. of repair'**, dentine which is deposited in dental pulp-cavity on inner surface of dentine when its outer surface becomes denuded of enamel. **D., sec'ondary**, see *Tooth.*

Dentinification, den-tin-i-fe-ka'shun. Process of formation of dentine.

Dentinoid, den'tin-oid. Like dentine or tooth structure, as a dentinal tumor, such as osteoma of the teeth.

Dentiscalpium, den-te-skal'pe-um (*dens, scalpo,* to scrape). An instrument used for scaling the teeth; toothpick or toothrake; the gum-lancet.

Den'tist. *Dental surgeon, Surgeon dentist.* One who devotes himself to the study of the diseases of the teeth and their treatment.

Dentistry, den'tis-tre. Dental surgery; the art of the dentist.

Dentitio, den-tish'e-o. Dentition.

Dentition, den-tish'un (*dentio, dentitum,* to breed teeth). Teething; exit of the teeth from the alveoli and gums, or rather the phenomena characterizing the different periods of their existence. The germs of the first teeth, *dentes lactei* or *milk-teeth,* are visible in the fœtus about the end of the second month, and begin to be ossified from the end of the third to that of the sixth month. At birth the corona of the incisors is formed, but that of the canine is not completed, and the tubercles of the molars are not yet all united. Gradually the fang becomes developed, and at about six or eight months begins what is commonly called the *first dentition.* The two middle incisors of the lower jaw commonly appear first; and, some time afterward, those of the upper jaw; afterward, the two lateral incisors of the lower jaw; and then those of the upper, followed by the four anterior molars; the canine or eye teeth at first, those of the lower, and afterward those of the upper jaw, next appear; and, subsequently and successively, the first four molars—two above and two below, one on each side. The whole number of the *primary, temporary, deciduous, shedding,* or *milk-teeth* (*dentes temporarii*) is 20.

The eruption of the milk-teeth takes place, approximately, in the following order:

Central incisors	6th to 8th month.
Lateral incisors	7th to 10th "
First molar	12th to 14th "
Canines	15th to 20th "
Second molar	20th to 30th "

The *second dentition* or shedding of the teeth begins about the age of 6 or 7. The germs or membranous follicles of these second teeth—to the number of 32—as well as the rudiments of the teeth themselves, are visible, even in the fœtus, with the exception of those of the small molars, which do not appear till after birth. They are contained in alveoli of the same shape as those of the first dentition. Their ossification commences at from 3 to 6 months after birth in the incisors and first molars; at 8 or 9 months in the canine; about 3 years in the molars; 3½ in the second great molars, and about 10 years in the last. As the alveolus of a new tooth becomes gradually augmented, the septum between it and that of the corresponding milk-tooth is absorbed and disappears. The root of the milk-tooth is likewise absorbed; its corona becomes loose and falls out, and all the first teeth are gradually replaced by the permanent teeth. This second dentition becomes necessary in consequence of the increased size of the jaws. The new teeth have neither the same direction nor shape as the old, and are more numerous, amounting, until the age of 25 (sooner or later), to 28. About this period a small molar appears at the extremity of each jaw, which is called the wisdom tooth or wit tooth, making the whole number of permanent teeth 32.

The eruption of the permanent teeth is remarkable for its general regularity, so that it constitutes an important means of ascertaining the age of the individual during the early period of life:

First molar	7th year.
Central incisors	8th "
Lateral incisors	9th "
First bicuspids	10th "
Second bicuspids	11th "
Canines	12th "
Second molars	13th "

The teeth of the lower jaw generally precede by a few weeks those of the upper.

During first dentition the infant is especially liable

to disease, the irritation produced by the pressure of the tooth on the superincumbent gum sometimes occasioning pyrexia, convulsions, diarrhœa, etc., symptoms often strikingly relieved by free division of the distended gum. This disordered condition is called teething.

Dentitis, den-te'tis (*dens, itis*). Dentition.

Dentium cortex, den'she-um kor'tex (bark of the teeth). Enamel of the teeth. **D. do'lor,** toothache. **D. ni'tor,** enamel of the teeth. **D. scalptu'ra** (lancing the gums), see *Gum lancet.* **D. vacillan'tia,** looseness of the teeth.

Den'to (*dens*). One whose teeth are prominent.

Den'toid (*dens, eidos,* resemblance). Odontoid.

Dentonomy, den-ton'om-e (*dens, nomos,* arrangement or law). Classification of the teeth.

Den'ture. Set or row of teeth mounted on metal or ivory, to be adjusted to the alveolar margin.

Denudation, de-nu-da'shun (*de, nudo,* to lay bare). Condition of a part deprived of its natural coverings, whether by wounds, gangrene, or abscess; particularly applied to the bones when deprived of periosteum, and to the teeth when they lose their enamel or dental substance, or when the gums recede from them and their sockets are destroyed.

Denud'ing pro'cess. Denudation.

Denutrition, de-nu-trish'un. Opposite to nutrition, as denutrition or breaking down of tissue.

Deob'struent (*de, obstruo,* to obstruct). Medicine given with the view of removing any obstruction. The word corresponds to aperient in its general, not in its particular, sense.

Deo'dorant (*de, odor,* smell). Destructive of odor; antibromic.

Deodorized tincture of opium, de-o'dor-ized tink'ture. Tinctura opii deodorata.

Deodorizer, de-o-dor-i'zur. Antibromic.

Deo'dorizing a'gent. Antibromic.

Deontology, de-on-tol'o-je (*deonta,* what are due, *logos,* description). Morals or the science of duties. **D., med'ical,** *Medical ethics, Medical etiquette;* the duties and rights of medical practitioners.

Deoppilans, de-op-pe'lans (*de, oppilo,* to stop up). Deobstruent.

Deoppilativum, de-op-pe-lah-te'vum. Deobstruent.

Deor'sum ter'gens. Downward direction of the eyes.

Deoxidation, de-oks-id-a'shun. Separation of oxygen from a compound.

Depascens, de-pas'sens (*de, pasco,* to eat). Phagedenic.

Depauperatus, de-paw-per-at'us (*de, paupero,* to make poor). Impoverished.

Deperditio, de-per-dish'e-o (*de, perdo,* to lose). Abortion.

Dephlegmation, de-fleg-ma'shun (*de,* from, *phlegma,* phlegm). Process of removing water from a body by distillation.

Dephlogisticated, de-flo-jis'ti-ka-ted (*de,* from, *phlogiston,* hydrogen). Deprived of phlogiston. **D. air,** oxygen gas. **D. muriat'ic ac'id,** chlorine.

Dephracticum, de-frak'tik-um (*de, phrasso,* to obstruct). Deobstruent.

Dep'ilate (*de, pilus,* hair). To remove or extract hair.

Depilatio, dep-il-ah'she-o (*de, pilus,* hair). Alopecia; depilation. **D. cap'itis,** baldness.

Depilation, dep-il-a'shun. Loss of hair, either spontaneously or by art; sometimes, but incorrectly, used synonymously with epilation, or pulling out the hair.

Depilatory, dep'il-a-to-re. Anything which causes loss of hair. Depilatories are usually caustic applications in which quicklime or some other alkaline substance, sulphuret of iron, etc., enters. A pitch plaster, pitch cap, is sometimes used as a depilatory; it, of course, pulls the hair out by the roots.

Depilis, dep'il-is. Devoid of hair.

Depletion, de-ple'shun (*depleo,* to unload). Act of emptying or unloading; for example, the vessels, by bloodletting and the different evacuants. Also inordinate evacuation.

Depletory, de-ple'to-re. Depleting. Having the power of causing depletion.

Deplumatio, dep-lu-mah'she-o (*de, pluma,* feather). Disease of the eyelids, in which they are swollen and the eyelashes fall out. See *Madarosis.*

Depolarization, de-po-lar-i-za'shun. Removal of polarity; neutralization of opposite magnetic poles, applying the term to electrical, magnetic, and light phenomena.

Deposit, de-pos'it (*de, pono,* to lay or put down). Anything laid or thrown down. In pharmacy, anything which is precipitated, and thus separated from chemical or mechanical mixture. In physiology and pathology, a structureless substance, separated from the blood or other fluid, as the typhous, tuberculous, purulent, melanic, diphtheritic, and urinary deposits. Feculence.

Depositive, de-pos'it-iv. Epithet used to express that condition of a membrane in which plastic lymph is exuded into the derma, giving rise to the production of small, hard elevations of the skin or pimples. *Depositive inflammation of the derma* comprises strophulus, lichen, and prurigo.

Depos'itum. Deposit.

Depravation, de-pra-va'shun (*de, pravus,* bad). Perversion, corruption; as depravation of the taste, etc.

Deprehensio, dep-re-hen'se-o (*deprehendo,* to seize upon). Diagnosis; epilepsy.

Depressants, de-pres'sants. Sedatives. **D., car'diac,** agents sedative to the action of the heart. **D., cer'ebral,** agents sedative to the action of the brain.

Depression, de-presh'un (*de, premo,* to depress). In anatomy, an excavation, hollow, or fossa. In surgery, a fracture of the cranium in which the portions of fractured bone are forced inward. Also operation for cataract; see *Cataract.* Depression also means dejection or dejectedness. **D., dig'ital,** descending cornua of cerebral lateral ventricles. **D., ner'vous,** nervous shock. **D., vi'tal,** nervous shock.

Depres'so-mo'tor. Checking the action of motor centres.

Depressor, de-pres'sor. Several muscles so called depress the parts on which they act. **D. a'læ na'si** arises from the superior maxillary bone immediately above the junction of the gums with the two incisor and canine teeth, and passes upward to be inserted into the upper lip and root of the ala nasi, which it pulls downward. **D. an'guli o'ris,** muscle situate at the lower part of the face, triangular in shape; arises from the outer oblique line on the lower jawbone, and terminates at a point at the commissure of the lips, which it pulls downward. **D. ap'icis na'ris,** naso-labialis muscle. **D. auricula're,** auriculo-glossus muscle. **D. cartila'ginis arytænoï'deæ,** muscular fibrous slip extending from the crico-arytænoideus lateralis of one side to arytænoideus obliquus of the other side. **D. c. Santori'ni,** ary-corniculatus rectus muscle. **D. clitor'idis,** see *Ischio-cavernosus.* **D. epiglot'tidis,** thyro-ary-epiglotticus muscle. **D. glan'dulæ thyroï'deæ,** fibres from the thyro-hyoid muscle inserted on middle lobe of thyroid gland. **D. la'bii inferio'ris,** small, thin, and quadrilateral muscle arising from the external oblique line of the lower jaw, and ascending to the lower lip, where it becomes confounded with the orbicularis oris; pulls the lip downward and outward. **D. l. superio'ris alæ'que na'si,** D. alæ nasi. **D. l. s. pro'prius,** D. alæ nasi. **D. labio'rum commu'nis,** D. anguli oris. **D. nerves,** nerves which when stimulated diminish blood-pressure; see *Inhibitory.* **D. oc'uli,** rectus inferior oculi. **D. pal'pebræ inferio'ris,** fleshy bundle forming part of the palpebralis muscle. **D. pupil'læ,** rectus inferior oculi. **D. sep'ti mo'bilis na'rium,** naso-labialis. **D., Sims's,** instrument used in gynæcology for the purpose of pressing the anterior vaginal wall forward; it is made of copper, and is provided with a ring at the end. **D. supercil'ii,** muscular slip from orbital portion of orbicularis oculi muscle to the skin of the eyebrow. **D. ten'dinis subscapula'ris majo'ris,** brachio-capsularis. **D. vesi'cæ,** pubo-vesical muscle.

Depressorium, de-pres-so're-um. Instrument for

depressing and protecting the dura mater in operations on the skull.

Deprimens auriculæ, dep're-mens aw-rik'u-le (*deprimo*, to depress). Retrahens auris. **D. maxil'læ biven'ter**, digastricus. **D. oc'uli**, rectus inferior oculi.

Deprimentia, dep-re-men'she-ah. Sedatives.

Depucelation, de-pu-sel-a'shun. Defloration.

Depudication, de-pu-di-ka'shun (*depudico*, to dishonor). Defloration.

Depurants, dep'u-rants (*de*, *purus*, pure). *Depuratives.* Formerly used to denote a class of medicines which were supposed to purify the system; in pharmacy, articles that clarify.

Depuration, dep-u-ra'shun. Process by which nature purifies the animal economy, either by the agency of some eruptive disease or some spontaneous evacuation, or by the assistance of medicine. See *Clarification* and *Depuratory*.

Dep'uratives. Depurants.

Depuratory, dep'u-ra-to-re. That which causes depuration, as the urinary and cutaneous depurations; also appropriated to medicines producing such action. See *Depuration*.

Deradelphus, der-ad-elf'us (*dere*, *adelphos*, brother). Double monocephalous monster, whose two trunks are united above the umbilicus, and separated below.

Deraden, der'ad-en (*dere*, *aden*, gland). Gland in the neck.

Deradenitis, der-ad-en-e'tis (*dere*, *aden*, gland). Inflammation of a gland or glands of the neck.

Deradenoncus, der-ad-en-on'kus (*dere*, *aden*, gland, *onkos*, swelling). Tumefaction of the glands of the neck.

Deranencephalia, der-an-en-sef-al'e-ah (*anencephalia*, absence of brain). Monstrosity in which only a small portion of the brain exists, resting on the cervical vertebræ—more properly *Derencepha'lia;* the monster is called *Deranceph'alus*. According to Is. G. St. Hilaire, a monstrosity characterized by the total absence of encephalon, and of the medulla spinalis in the cervical region; upper part of skull is rudimentary, and back part of occipital region entirely deficient.

Deranged, de-rainjd' (*de*, *ranger*, to put in order). Insane.

Derangement, de-rainj'ment. Insanity.

Derbia, dur'be-ah. Impetigo.

Derbyshire (dur'be-shur) **neck.** Bronchocele.

Dere (*dere*). Neck; in composition, neck.

Derencephalia, der-en-sef-al'e-ah. See *Deranencephalia.*

Derencephalus (*dere*, *kephale*, head). Monster whose brain is in the neck. See *Deranencephalia.*

De'ris. Skin.

Derivans, de-re'vans (*derivo*, to turn water from its regular course). Derivative.

Derivation, der-i-va'shun. Revulsion, counter-irritation. When a "centre of fluxion" is established in a part for the purpose of abstracting the excited vital manifestations from some other part, a derivation is operated. The term derivation has—like aspiration—been applied to the suction power of the heart, a presumed agency in the circulation of the blood.

Derivative, der-iv'at-iv. *Revellent, Revulsive, Apospastic.* Remedy which, by producing a modified action in some organ or texture, *derives* from the morbid condition of some other organ or texture. Revellents are among the most important remedies: they include, indeed, every physical and moral agent which is capable of modifying the function of innervation, and therefore almost every article of the materia medica. **D. circula'tion**, circulation through collateral vessels.

Derivatorius, der-iv-at-o're-us. Derivative.

Derma, dur'mah (*derma*). Cutis.

Dermad, der'mad. See *Dermal aspect.*

Dermahypertrophy, dur-ma-hi'per-tro-fe (*derma*, *hyper*, excess of, *trophe*, nourishment). Thickening of the skin.

Der'mal or **Der'mic.** Relating or belonging to the skin. **D. as'pect**, aspect toward the skin or external surface. *Dermad* is used adverbially to signify "toward the dermal aspect."

Dermalgia, durm-al'je-ah (properly **Dermatalgia**) (*derma*, *algos*, pain). Pain in the skin; neuralgia of the skin. *Rheumatic dermalgia* or *Rheumatism of the skin* is a form of neuralgia referred at times to the nervous trunks, muscles, etc., but appears to be seated in the cutaneous nerves.

Dermaphyl'la penduli'na. Plant of Brazil, root of which, payenya, is an alterative in syphilitic and cutaneous affections.

Dermaphyte, dur'ma-fite. Dermatophyte.

Dermaphyticide, dur-ma-fit'is-ide (*derma*, *phuton*, vegetable, *cædo*, to kill). Agent that will destroy vegetable parasites of the skin.

Dermaplasty (durm'a-plas-te) or **Dermatoplasty**, durm'at-o-plas-te (*derma*, skin, *plasso*, to form). Plastic operation for the restoration of skin.

Dermapostasis, dur-mah-pos'tas-is (*derma*, *apostasis*, defection or loss). Constitutional skin disease.

Der'mata. See *Epidermata.*

Dermatagra, dur-mat'ag-rah (*derma*, *agra*, seizure). Pellagra.

Dermatalgia, dur-mat-al'je-ah (*derma*, *algos*, pain). Dermalgia.

Dermataneuria, dur-mat-an-u're-ah (*derma*, *a*, priv., *neuron*, nerve). Paralysis or loss of sensibility of the skin.

Dermatauxe, dur-mat-owks'e (*derma*, *auxe*, increase). Tumefaction of the skin.

Dermatempodismus, dur-mat-em-pod-iz'mus (*derma*, skin, *empodismos*, obstruction). Obstruction or interference with the functions of the skin.

Dermathæmia, dur-mat-he'me-ah (*derma*, *haima*, blood). Congestion of the blood-vessels of the skin.

Dermathæmorrhois, dur-mat-he-mor'rho-is (*derma*, *haimorrhois*, discharge of blood). Sweating of blood.

Dermatiatria, dur-mat-e-at-re'ah (*derma*, *iatreia*, healing). Healing of cutaneous diseases; treatment of diseases of the skin.

Dermatic, dur-mat'ic. Relating to the skin.

Dermatica, dur-mat'ik-ah. Remedies applied in cutaneous affections.

Dermatitis, dur-mat-e'tis. Inflammation of the skin; erysipelatous inflammation. **D. ambustio'nis**, burn. **D. a. bullo'sa**, see *Burn.* **D. a. erythemato'sa**, see *Burn.* **D. a. escharot'ica**, see *Burn.* **D. calor'ica**, inflammation of the skin produced by the action of heat or cold, as burns and frostbites. **D. circumscrip'ta herpetifor'mis**, inflammation of the skin, herpetic in character, characterized by small red papules having a bluish-white centre, which form thick brown plates with excoriations underneath their surface. **D. congelatio'nis**, see *D. calorica.* **D. contusifor'mis**, erythema nodosum. **D. exfolia'cea**, pityriasis rubra. **D. exfoliati'va**, inflammation of the skin accompanied with excessive desquamation. **D. e. infan'tum**, infantile disease in very young children, with pronounced redness of skin and plentiful furfuraceous and foliaceous desquamation. **D. fe'rox**, a form of inflammation of the skin with repeated desquamation and constitutional disturbances. **D. herpetifor'mis**, variety of dermatitis described by Duhring, which consists of vesicles resembling herpes; this disease is very itchy, and has a tendency to relapse at intervals. **D. medicamento'sa**, from injection of certain drugs, as belladonna, quinine, iodide of potassium, etc. **D. papillomato'sa**, yaws. **D. phlegmono'sa**, see *Erysipelas.* **D. sanamo'sa**, pityriasis rubra. **D. symptomat'ica**, erysipelas. **D. traumat'ica**, inflammation of the skin produced by mechanical agencies. **D. venena'ta**, inflammation of the skin produced by acrid or poisonous agents.

Dermatobia, dur-mat-o'be-ah (*derma*, skin, *bioo*, to live). The bot-fly, the eggs of which are often deposited beneath the skin and give rise to swelling.

Dermatocellulitis, dur-mat-o-sel-u-le'tis. See *Ethmyphitis.*

Dermatocholosis, dur-mat-o-kol-o′sis (*derma, chole,* bile). Icterus.

Dermatochysis, dur-mat-ok′is-is (*derma, chusis,* effusion). Anasarca.

Dermatocoptes, dur-mat-o-kop′tes (*derma, kopto,* to injure). Minute insects which feed on blood, serum, and young epidermic scales.

Dermatocratia, dur-mat-o-krat-e′ah (*derma, kratos,* power). See *Dermatiatria.*

Dermatodes, dur-mat-o′dees (*derma, odes*). Dermatoid.

Dermatodynia, dur-mat-o-din′e-ah (*derma, odune,* pain). Dermalgia.

Dermatodyschroia, dur-mat-o-diz-kroi′ah (*derma, duschroia,* discoloration). Skin discoloration.

Dermatography, dur-mat-og′raf-e (*derma, grapho,* to describe). Description of the skin.

Dermatohæmia, dur-mat-o-he′me-ah (*derma, haima,* blood). Congestion of the skin.

Dermatoid, dur′mat-oid (*derma, eidos,* form). *Dermoid.* Similar to the skin; a name given to different tissues resembling the skin, as dermoid tumors, etc. The dura mater has been so called (dermoid). *Morbi dermatoïdes* are chronic cutaneous diseases.

Dermatokelidosis, dur-mat-o-kel-id-o′sis (*derma, kelidoo,* to stain). Spotted condition of the skin.

Dermatokeras, dur-mat-o-ke′ras (*derma, keras,* horn. Horny growth on the skin.

Der′matol. Bismuth subgallate.

Dermatoleucasmus, dur-mat-o-lu-kaz′mus (*derma, leukos,* white). Achroma; morbid whiteness of skin.

Dermatologist, dur-mat-ol′o-jist (*derma, logos,* discourse). Specialist in skin diseases.

Dermatology, dur-mat-ol′o-je (*derma, logos,* discourse). *Dermology.* Discourse or treatise of the skin.

Dermatolysis, dur-mat-ol′is-is (*derma, lusis,* loosing). Abnormal extension and relaxation of the skin.

Dermatoma, dur-mat-o′mah. Form of perverted nutrition of the skin accompanied with hypertrophy, as mole, nævus, etc.

Dermatomalacia, dur-mat-o-mal-ah′se-ah (*derma, malakia,* softening). An abnormal softening of the skin

Dermatome, dur′ma-tome (*derma, temno,* to cut). Needle-bladed knife used in skin affections.

Dermatomelasma, dur-mat-o-mel-az′mah. Disease of the skin, consisting of augmentation of black pigment. See *Melanopathia.*

Dermatomycoses, dur-ma-to-me-ko′sees (*derma, mukes,* mushroom). Diseases of the skin and its appendages dependent upon vegetable parasites or fungi, such as tinea favosa or tinea tonsurans.

Dermatoneuria (dur-mat-o-nu′re-ah) or **Dermatoneurosis,** dur-mat-o-nu-ro′sis (*derma, neuron,* nerve). Neurosis of the skin.

Dermatonoses, dur-mat-on-o′sees. Diseases of the skin which are simple abnormalities of secretion.

Dermatopathology, dur-mat-o-path-ol′o-je (*derma, pathos,* disease, *logos,* discourse). Pathology of the skin.

Dermatopathy, dur-mat-op′ath-e (*derma, pathos,* affection). Cutaneous disease.

Dermatoperisclerismus, dur-mat-o-per-e-skler-iz′mus (*derma, peri,* around, *skleros,* hard). Induration of the cellular tissue.

Dermatoperisclerosis, dur-mat-o-per-e-skler-o′sis. Induration of the cellular tissue.

Dermatophilus, der-mat-of′il-us (*derma, phileo,* to love). Chique, a parasite infesting the skin, called by various names, as chiggre, jigger, etc.

Dermatophone, dur′mat-o-fone (*derma, phone,* sound). Stethoscope whose ends are covered with thin, tense rubber.

Dermatophthalmus, dur-mat-of-thal′mus (*derma, ophthalmos,* eye). Condition of retraction of the eyelid so that it does not cover the eye during sleep.

Dermatophyma, dur-mat-o-fe′mah (*derma, phuma,* tumor). Tumefaction of the skin.

Dermatophymata venerea, dur-mat-o-fe′mat-ah ven-e′re-ah. Condylomata.

Dermatophytæ (dur-mat-of′it-e), properly **Dermatoph′yti (mor′bi)** (*derma, phuton,* vegetable). Fungous parasites of the skin. Order of cutaneous diseases, including those that depend on or are characterized by the presence of parasitic plants. It is made to include porrigo and sycosis. See *Schizophyta.*

Dermatophytic, dur-mat-o-fit′ik. Relating or appertaining to dermatophytes.

Dermatoplasty, dur′mat-o-plas-te. Plastic operation for the restoration of skin.

Dermatorrhagia, dur-mat-or-rhaj′e-ah (*derma, rhage,* rupture). Discharge of blood from the skin; hæmatidrosis.

Dermatorrhœa, dur-mat-or-rhe′ah (*derma, rheo,* to flow). Morbidly increased secretion from the skin; hyperidrosis.

Dermatosclerosis (dur-mat-o-skler-o′sis) or **Dermatoscleroma** (*derma, skleros,* hard). Callosity.

Dermatoscrofula, dur-mat-o-skrof′u-lah. Manifestation of scrofula in the skin by ulcers, etc.

Dermatoses, dur-mat-o′sees. Cutaneous diseases.

Dermatosis, dur-mat-o′sis. Growth or formation of skin.

Dermatospasmus, dur-mat-o-spaz′mus (*derma, spasmos,* spasm). Horrida cutis, goose-flesh.

Dermatostruma, dur-mat-o-stru′mah. Manifestation of scrofula in the skin by ulcers, etc.

Dermatosyphilis, dur-mat-o-sif′il-is. Exanthematous affections connected with syphilis; syphiloderma.

Dermatotherapeia, dur-mat-o-ther-ap-e′ah (*derma, therapeia,* care or treatment). Treatment of cutaneous affections; introduction of remedies through the skin.

Dermatotomy (dur-mat-ot′o-me), **Dermat′omy,** or **Dermatotrau′ma** (*derma, trauma,* wound). Injury or wound of the skin.

Dermatotyloma, dur-mat-o-te-lo′mah (*derma, tulos,* callosity). Callosity.

Dermatotylosis (dur-mat-o-te-lo′sis) or **Dermatotylus,** dur-mat-ot′il-us. Callosity.

Dermatoxerasia, dur-mat-o-zer-ah′ze-ah (*derma, xeros,* dry). Diminution of secretion of sebaceous glands.

Dermatozoa, der-mat-o-zo′ah (*derma, zoon,* animal). Parasitic animalculæ in the skin. See *Ectozoa.*

Dermatozöonoses, dur-mat-o-zo-on′o-sees. Diseases caused by dermatozoa.

Dermatrophia, dur-mat-rof′e-ah (*derma, atrophia*). An atrophied condition of the skin.

Dermectasia, dur-mek-taz′e-ah (*derma, ektasis,* extension). Abnormal stretching or relaxation of the skin.

Dermenchysis, dur-men′kis-is (*derma, encheo,* to pour into). Hypodermic or subcutaneous injection.

Dermepenthesis, dur-mep-en′thes-is (*derma, epenthesis,* insertion). Skin-grafting.

Dermexanthesis, durm-eks-an-the′sis (*derma, exantheo,* to blossom). Exanthematous disease of the skin.

Dermic, dur′mik. *Dermatic, Dermal.* Relating to the derma or skin.

Dermis, dur′mis. Used erroneously at times for derma.

Dermitis, dur-me′tis. Inflammation of the skin.

Dermocymus, dur-mo-sim′us (*derma, kuma,* fœtus in utero). Fœtus within a fœtus.

Dermodes, dur-mo′des. Dermatoid.

Dermography, dur-mog′raf-e (*derma, grapho,* to describe). Anatomical description of the skin.

Dermohæmia, dur-mo-he′me-ah (*derma, haima,* blood). Hyperæmia or congestion of the skin.

Dermoic, dur-mo′ik. Dermal.

Dermoid, dur′moid. Resembling skin. **D. cysts,** cysts containing skin and analogous structures, as hair, nails, etc. **D. sys′tem,** this embraces the skin, together with the parts belonging thereto.

Dermology, dur-mol′o-je. Dermatology.

Dermomycoses, dur-mo-my-ko′sees. Dermatomycoses.

Dermonosologia, dur-mo-no-so-loj′e-ah (*derma, nosos,* disease, *logos,* description). Description of or treatise on skin diseases.

Dermophymata venerea, dur-mo-fe'mat-ah ven-e're-ah. Condylomata.

Dermophyte (dur'mo-fite) or **Der'matophyte** (*derma, phuton,* a vegetable). Parasitic vegetable growth on the skin.

Dermophytic, dur-mo-fit'ik. Relating or appertaining to dermophytes.

Dermoskeleton, dur-mo-skel'et-un. See *Skeleton.*

Dermostenosis, durm-o-sten-o'sis (*derma, stenosis,* narrowing). Morbid contraction of the skin.

Dermostosis, dur-mos-to'sis (*derma, osteon,* bone). Ossification of the cutaneous surface.

Dermosynovitis, ulcerating, dur-mo-sin-o-ve'tis, ul'ser-a-ting (*derma, synovitis*). Perforating ulcer of the foot. Inflammation seated in the sole of the foot, between the derma and epidermis, which becomes enlarged and ulcerates, leaving a fistulous opening. This soon involves also the bursa mucosa lying below, and, if neglected, the periosteum and articular synovial membrane. Said to be a form of lepra anæsthetica, a neuro-paralytic inflammation of malignant character, and may, therefore, be termed *ulcus leprosum.*

Dermo-syphilides, dur'mo-sif'il-eeds. Cutaneous eruption of a syphilitic character.

Dermotomy, dur-mot'o-me (*derma, tome,* incision). Anatomy treating of the structure of the skin; incision of the skin.

Dermotylosis, dur-mo-til-o'sis (*derma, tulosis,* hardening). Hardening of the skin.

Dermyperphlebosis, dur-me-per-fleb-o'sis (*derma, hyper,* over, *phleps,* vein). Morbid increase of blood-supply to the skin.

Dermypertrophia, dur-me-per-trof'e-ah (*derma, hyper, trophe,* nourishment). Hypertrophy of the skin.

Derodenitis (der-od-en-e'tis) or **Deradenitis,** der-ad-en-e'tis (*dere,* neck, *aden,* gland). Inflammation of the glands of the neck.

Derodymus, der-od'e-mus (*dere, didumos,* twin, *duo,* to mingle). See *Dicephalus.*

Deroncus, der-on'kus(*dere, onkos,* swelling). Bronchocele or goitre.

Derot'omy (*dere,* neck, *tome,* incision). Decapitation to facilitate delivery.

Dertron, dur'tron. Omentum or peritoneum; according to others, the small intestine. See *Epiploon.*

De Salle's line. Line of the nose.

Desault's appara'tus or **band'age.** Bandage, sling, and pad for fracture of the clavicle. **D.'s splint,** long splint employed to set fractures of the femur.

Descemet (des-em-a'), **mem'brane of.** See *Aqueous humor* and *Cornea.*

Descemetitis, des-sem-e-te'tis. Term improperly formed, and really signifying inflammation of Descemet, the anatomist. Inflammation of the membrane of Descemet, *Aquomembranitis.*

Descendens noni, des-sen'dens no'ne. See *Hypoglossus.*

Descending, de-send'ing. Anatomical term employed to designate structures that tend in a downward direction to the body, as descending cava, descending colon. **D. convolu'tion,** gyrus descendens. **D. degenera'tion,** degeneration of the whole thickness of gray matter of the cortex of the brain, followed by degeneration of the fibres of the pyramidal tract. **D. neuri'tis,** neuro-retinitis. **D. sclero'sis,** form of sclerosis of the cord in which the process extends from above downward.

Descensio, des-sen'she-o (*descendo,* to descend). Expulsion downward. Descent, as of the testicles.

Descensus, de-sen'sus. Descensis. **D. testiculo'rum,** descent of the testicles.

Descent, de-sent'. Tendency, action, or movement downward. **D. of the o'varies,** descent in the fœtus of the ovaries from their primitive position beside the lumbar vertebræ to their final situation in the broad ligament. **D. of the tes'ticles,** passage of the testicles through the inguinal canal into the scrotum.

Deschamps, angles of. The system of craniometry of Deschamps, circumscribing the head with three lines, forming a triangle.

Desectus, de-sek'tus (*de, seco,* to cut). Castrated.

Desh'ler' s salve. Ceratum resinæ compositum.

Desiccantia, des-sik-an'she-ah (*de, sicco,* to dry). See *Desiccativa.*

Desiccatio, de-sik-kah'she-o. Draining; drying. **D. herba'rum,** drying of plants.

Desiccation, des-sik-a'shun. Drying.

Desiccativa, des-ik-kat-e'vah. Remedies which, when applied externally, dry up the humors or moisture from a wound.

Desipientia, des-ip-e-en'she-ah (*de, sapio,* to be wise). Delirium.

Desma, dez'mah. Bandage; ligament.

Desmalgia, des-mal'je-ah (*desmos,* band, *algos,* pain). Pain in the ligaments.

Desmanomalia, des-man-o-mal'e-ah (*desmos, anomalia,* anomaly). Abnormal condition of a ligament.

Desmaturgia, des-mat-ur'je-ah (*desma, ergon,* work). Doctrine of bandaging; bandaging.

Desme, des'ma. Bandage; ligament.

Desmectasis, des-mek-tas'is (*desmos, ektasis,* extension). Stretching of a ligament.

Desmedion (dim. of **Desme**), des-ma'de-on. Fasciculus.

Desmiognathus, des-me-og-nath'us (*desmos,* bond, *gnathos,* jaw). Double parasitic monster, characterized by supernumerary imperfect head, united under the neck by muscular and cutaneous—not bony—attachments to the principal subject.

Desmitis, des-me'tis. Inflammation of a ligament.

Desmobacteria, des-mo-bak-te're-ah. Elongated bacteria; tribe of Bacteria, including bacillus and vibrio. See *Bacteria.*

Desmochaunosis, kes-mo-kaun-o'sis (*desma, chaunosis,* relaxation). Relaxation of an articular ligament.

Desmodium (des-mo'de-um) **Ganget'icum.** Native of India, supposed to possess febrifugal and anti-catarrhal properties.

Desmodynia, des-mo-din'e-ah (*desma, odune,* pain). Pain in the ligaments.

Desmography, des-mog'raf-e (*desma, graphe,* description). Anatomical description of the ligaments.

Desmohæmoblast, des-mo-he'mo-blast (*desmos,* band, *haima,* blood, *blastos,* germ). That part of the blastoderm which furnishes blood-vessels and connective tissue of the embryo.

Desmoid, des'moid (*desma, eidos,* resemblance). Having the character of, or resembling, ligament. See *Tumor, fibrous.* **D. carcino'ma,** scirrhus. **D. tis'sue,** *Ligamentous tissue*; very generally diffused over the human body; has a very close connection with the areolar tissue, and is continuous with it in divers places; it constitutes the ligaments, aponeuroses, etc.

Desmology, des-mol'o'je (*desma, logos,* discourse, treatise). That part of anatomy describing ligaments; also treatise on bandaging.

Desmoma, des-mo'mah. Abnormal perverted condition of the connective-tissue layer of the skin, seen in fibroma, osteoma, chondroma, neuroma, etc.

Desmoneoplasm, des-mo-ne'o-plazm (*desma, neos,* new, *plasma,* formation). New formation or growth of connective tissue.

Desmonosology, des-mo-no-zol'o-je (*desma, nosos,* disease, *logos,* description). Description or classification of diseases of ligaments.

Desmopathol'ogy. Desmonosology.

Desmopathy, des-mop'ath-e (*desma, pathos,* disease). Disease of the ligaments.

Desmophlogia, des-mo-flo'ge-ah (*desma, phlogoo,* to inflame). Inflammation of a ligament.

Desmorrhexis, des-mor-rheks'is (*desma, rhexis* rupture). Rupture of an articular ligament.

Desmoses, des-mo'sees. Connective-tissue diseases of the skin.

Desmosus, des-mo'sus. Ligamentous.

Desmotomy, des-mot'o-me (*desma, tome,* incision). The part of anatomy teaching the mode of dissecting ligaments.

Desmus, des'mus. Ligament.

Desozyaliza'ria. Anthrarobin.

Desprez's operation. Operation for naso-pharyngeal polyp, in which the cartilaginous part of the nose

is separated, for the purpose of obtaining more room for removal of the polyp.

Despumation, des-pu-ma'shun (*de, spumo,* to skim, to remove the froth). Separation of froth and other impurities which rise, by the action of fire, to the surface of any fluid.

Desquamation, des-kwam-a'shun (*desquamo,* to scale off). Moulting; exfoliation, or separation of the epidermis, in the form of scales of a greater or less size—furfuratio, defurfuratio. This form of exfoliation is a common sequence of exanthematous diseases.

Desquamatorius, des-kwam-at-o're-us. Exfoliative.

Dessert (*de, servir,* to serve, to clear the table). In the United States it means puddings, pies, etc., which in England precede the true dessert—fruits, etc.

Destillatio, des-til-lah'she-o (*de, stillo,* to drop). Coryza; distillation. **D. pec'toris,** catarrh. **D. u'teri,** leucorrhœa.

Destructio, des-truk'she-o (*de, struo,* to build). Destruction; corruption in general.

Desudatio, de-su-dah'she-o (*de, sudo,* to sweat). Profuse and inordinate sweating. An eruption of small pimples, similar to millet seed, appearing chiefly on children, due to want of cleanliness.

Desulphurize (de-sulf'ur-ize) or **Desulphurate,** de-sulf'ur-ate. To deprive of sulphur.

Desymphysize, de-sim'fe-size (*de, sumphuo,* to grow together.) Section of symphysis to facilitate childbirth. Symphyseotomy.

Detentio, de-ten'she-o (*detineo,* to hold down). Catalepsy.

Detergens, de-tur'jens (*de, tergeo,* to cleanse). Abstergent.

Detergents, de-tur'jents. Medicines possessing the power to deterge or cleanse parts, as wounds, ulcers, etc. They belong to the class of stimulants, or to that of emollients.

Determination, de-turm-in-a'shun (*de, terminus,* boundary). Strong direction to a given point, as determination of blood to the head.

Detersives, de-tur'sivs. Detergents.

Detersoria, de-turs-o're-ah. Detergents.

Detersorium, de-turs-o're-um. The place, in ancient bathing establishments, where the bather was cleansed and dried.

Detestatio, de-tes-tah'she-o (*de, testis,* testicle). Castration.

Detractio sanguinis, de-trak'she-o san'gwin-is. Bloodletting.

Detrition, det-rish'un. Wasting or wearing away of a part, the teeth, for example.

Detritus, det-re'tus (*de, tero,* to rub, to bruise or wear out). Residuum occupying the place of the organic texture of parts which have undergone disorganization.

Detruncation, de-trun-ka'shun (*de, truncus,* trunk). Separation of the trunk from the head of the fœtus, the latter remaining in the uterus.

Detrusion, de-tru'zhun (*de, trudo,* to thrust down or from). The act of thrusting or forcing down or away; applied to lateral displacement of the heart by extraneous pressure. Expulsion by alternate contraction and expansion of parts.

Detru'sor fæ'cium. Folds of the rectum. **D. u'rinæ,** muscular coat of the urinary bladder; also the longitudinal fibres of that organ; it was also named *Constrictor vesicæ urinariæ.*

Deunx, de'unks. Ancient name of a weight of 11 ounces, supposing the pound to consist of 12.

Deurens febris, de-u'rens feb'ris (*deüro,* to burn up). A highly ardent fever.

Deus copulationis, de'us kop-u-lah-she-o'nis (god of copulation). Cupido.

Deustio, de-us'te-o (*de, uro,* to burn). A burn; the act of burning.

Deutencephalon, du-ten-sef'al-on (*deuteros,* second, *enkephalos,* brain). Embryologically the posterior portion of the anterior vesicle; thalamencephalon.

Deuteranœa, dute-er-an-e'ah (*deuteros,* second, *anoia,* imbecility). Dementia.

Deuteria, dute-er'e-ah (*deuteros,* second). Symptoms produced by retention of the secundines; the secundines themselves; also applied by the Greeks to an inferior wine.

Deuterion, dute-er'e-on. Secundines.

Deutero-albumose, du'ter-o-al'bu-moze. Variety of hemi-albumose precipitated by sodium chloride with an acid.

Deutero-globulose, du'ter-o-glob'u-loze. Substance similar to deutero-albumose, result of the action of the gastric juice on globulin.

Deuterop'athy (*deuteros,* second, *pathos,* disease). Secondary disease; one produced by another, and of which it is only, in some measure, symptomatic or the sympathetic effect.

Deuteropine, du-ter-o'pin. One of the unimportant alkaloids of opium.

Deuteroplasm, du'ter-o-plasm (*deuteros, plasma,* formation). Proteid substance of the egg, which nourishes, but does not form, the body of the embryo.

Deuteroscopy, du-ter-os'ko-pe (*deuteros,* second, *skopeo,* to view). Second sight; fancied power of seeing future things or events; also a form of hallucination in which the patient sees a spectral image of himself.

Deuto, du'to (*deuteros,* second). Prefix denoting two or double—as *deutoxide,* having two degrees of oxidation; deuto-sulphate, deuto-sulphide, etc.

Deutoplasm, du'to-plazm (*deuto,* second, *plasma,* formation). Yellow of the egg.

Deutoscolex, (*deuto, skolex,* worm). Cysticercus.

Deutoxide, du-toks'id. Dioxide, binoxide; compound containing two equivalents of oxygen to one of another substance.

Devalgate, de-val'gate (*de, valgus,* bow-legged). Bow-legged.

Devehens, de've-hens (*de, veho,* to carry). Efferent.

Development, de-vel'op-ment. In physiology it means growth or increase; and in pathology its signification is similar. It—as well as *Differentiation*—is at times used, in physiology, for the kind of increase which takes place by the formation of new tissues from those already existing, as in the embryo, whilst *Growth* is restricted to the increase of the same tissues. By development of the pulse is understood an increase in its strength and fulness. Diseases of development, *Morbi evolutionis,* are such as are peculiar to the period of growth. **D. of the fœ'tus,** growth of the embryo from conception to the period of parturition. (See *Fœtus* for full table of development of embryo and fœtus). **D. tak'ing,** term used by practical craniologists to signify the act of measuring prominences of the skull, which are regarded by them as indicating the size of corresponding cerebral organs. **D., ves'icle of,** see *Vesicle of development.*

Developmental (de-vel-op-men'tal) **diseases.** Special diseases, the incidental result of the formative, reproductive, and nutritive powers.

Deventer (de-ven'tur), **diam'eter of.** Oblique diameter of the pelvis.

Deverticulum, de-vurt-ik'u-lum. Diverticulum.

Deviation, de-vi-a'shun (*de, via,* way) In a course or direction out of the usual way. By this word is meant a vicious curvature of the spine or other bones; faulty direction of the teeth or other part; the passage of blood, bile, urine, milk, etc. into vessels not natural to them. **D., pri'mary,** deviation of the visual axis in strabismus. **D., sec'ondary,** condition existing in paralysis of the ocular muscles; the sound eye deviates, while the affected eye fixes.

Dev'il bit. Veratrum viride. **D. in a bush,** nigella.

Dev'il's bit. Aletris farinosa, Scabiosa succisa, Chamelirium luteum. **D.'s bite,** liatris. **D.'s dung,** asafœtida. **D.'s shoestrings,** Galena Virginiana, Zephrosia Virginiana.

Devirgination, de-vur-jin-a'shun (*de, virgo,* virgin). Defloration. See *Stuprum.*

Devisceration, de-vis-sur-a'shun (*de*, *viscus*, entrail). Operation of taking out the bowels.

Devitalize, de-vi'tal-ize. To remove vitality.

Devonshire colic, dev'on-shir kol'ik. Lead colic.

Dewberry, American, du'ber-e, a-mer'ik-an. See *Rubus cæsius*. **D. plant**, Rubus cæsius.

Dewclaws, du'klaws. Morbid secretion from the horse—knee scab—formerly used in epilepsy.

De Wecker's opera'tion. Operation for removal of staphyloma of the cornea.

Dexiocardia, deks-e-o-kar'de-ah (*dexios*, right, *kardia*, heart). Case in which the heart is found to beat on the right side; met with occasionally in pleurisy and pneumothorax. See *Ectocardia* and *Ectopia cordis*.

Dexis, deks'is. See *Degmus*.

Dextans, deks'tans. Weight of ten ounces, supposing the pound to consist of twelve.

Dexterina, deks-ter-e'nah. Dextrine.

Dextrad, deks'trad (*dexter*, right-handed). Term used to signify "toward the dextral aspect." See *Mesial*.

Dextral aspect, deks'tral as'pekt. See *Mesial*. **D. pre-em'inence**, greater use and strength of the right arm and leg compared with the left.

Dextrality, deks-tral'it-e (*dexter*, right). State of being on the right side; the state of being right-handed.

Dextrin, deks'trin (*dexter*, right-handed). *Dextrine*, *British gum*, *Artificial gum*. (So called from its refracting the rays, in the polarization of light, more to the right hand than any substance known.) It is obtained by the continued action of diluted sulphuric acid upon starch at the boiling-point; it is isomeric with starch, and used in the treatment of fractures by the immovable apparatus. Bandages are soaked in a solution, in water, of the dextrine, previously moistened thoroughly with tincture of camphor to prevent it from leaking when the water is added; the solution should be of the consistence of molasses. **D., an'imal**, glycogenic matter. **D., hepat'ic**, glycogenic matter.

Dextrinum, deks-tre'num. Dextrin.

Dextrocardia, deks-tro-kar'de-ah (*dexter*, right, *kardia*, heart). Dexiocardia.

Dextrogyrate (deks-tro-ji'rat) or **Dextrog'yrous** (*dexter*, on the right, *guros*, turn). Rotating plane of polarization to the right.

Dextrorse, deks'trorse. Turning toward the right, as glucose.

Dextrose, deks'troze. Glucose; so called on account of its action on polarized light.

Dextroversion, deks-tro-vur'shun (*dextro*, *verto*, to turn). Turning to the right, as dextroversion of the uterus, the fundus of which turns to the right of the middle line.

Dhatu'ra. Datura alba.

Dhobie's itch. Name given in India to tinea circinata tropica of the thighs and genital region.

Di, Dis. In composition, *bis*, twice, double; also, as well as *Dif* and *Dis*, separation or division, and, at times, negation and privation.

Dia, de-ah. In composition, through, asunder, out of, separated; when prefixed to any therapeutical agent it meant, in ancient pharmacy, a preparation into which that agent entered.

Diabebos, de-ab'eb-os. Astragalus, malleolus.

Diabetes, di-ab-e'tees (*dia*, *baino*, to pass). Disease characterized by great augmentation, and often manifest alteration, in the secretion of urine, with excessive thirst and progressive emaciation. Two species are usually described—*Diabetes insipidus* and *D. mellitus;* the former being simply a superabundant discharge of limpid urine, of its usual urinary taste; the latter, *D. mellitus*—saccharine diabetes—falls under the definition given above. The quantity of urine discharged in the 24 hours is sometimes excessive, amounting to 30 pints and upward, each pint containing sometimes 2¼ oz. of saccharine matter. The whole system of nutrition seems to be morbidly implicated. A part of the urine must be formed at the expense of the system generally, as the egesta frequently far exceed the solid and liquid ingesta. The pathological appearances on dissection are such as may be the consequence, rather than the cause, of the disease. The exciting causes are often found in diseases of the nervous centres, tumors, and injuries, especially those involving the fourth ventricle. Fehling's test is the most useful means of detecting sugar in the urine. See *Fehling*. Bouchardat's formula for estimating the amount of sugar by a knowledge of the specific gravity is as follows: The last two figures of the specific gravity are multiplied by 2, the product is multiplied by the amount of urine (in litres) in 24 hours, and then 30–40 (if large quantity of urine, 50–60) are subtracted; the result gives the amount of sugar in grammes. For example, the specific gravity being 1.025, the amount of urine is 4 litres:

$$25 \times 2 = 50.$$
$$50 \times 4 = 200.$$
$$200 - 30 = 170 \text{ g. of sugar.}$$
$$40 = 160 \text{ g. } \text{“} \quad \text{“}$$

The treatment of diabetes includes a number of articles of the materia medica, but there is no specific remedy for it. Many of the remedies that have been used have been found insufficient in *D. mellitus*. Particular attention must be paid to the diet (which should exclude saccharine and starchy articles), in view of the fact that the greater portion of the glucose in the blood is derived from saccharine and starchy substances. Simple glycosuria is frequently cured according to the method of Cantani, by restricting the patient to a diet of meat and fat. *Diabetes insipidus* or *Ureal diabetes*, which occurs in hysterical habits, and has hence been called *D. hystericus*, is of comparatively trifling moment. Exclusive diet and attention to the state of the cutaneous transpiration, which have sometimes produced good effects in D. mellitus, have most commonly failed in this affection. **D. An'glicus**, see *Diabetes*. **D. bark**, caju; bark of Anacardium occidentale; employed in treatment of diabetes insipidus. **D. chylo'sus**, chyluria. **D. insip'idus**, see *Diabetes*. **D. lac'teus**, chyluria. **D. melli'tus**, see *Diabetes*. **D., phosphat'ic**, form of diabetes accompanied with polyuria, loss of flesh, and thirst, and in which the phosphates are excreted in excess; usually the urine does not contain sugar. **D., sac'charine**, D. mellitus. **D. spu'rius**, see *Diabetes*. **D., ure'al**, see *Diabetes*. **D. ve'rus**, diabetes mellitus.

Diabetic, di-ah-bet'ik. Relating to diabetes; one having diabetes. **D. cat'aract**, cataract depending on complicated disturbances in the nutrition of the crystalline lens in diabetes. **D. cen'tre**, centre on floor of fourth ventricle of the brain; puncture of this spot is followed by diabetes mellitus. **D. co'ma**, coma occurring usually in that form of diabetes characterized by rapid emaciation and cachexia. The urine is reduced in quantity, dyspnœa is generally present, there are nausea and vomiting, and the coma is fatal within two or three days. **D. gan'grene**, sphaseloderma. **D. su'gar**, see *Glucose*.

Diabetometer, di-ab-et-om'et-ur (*diabetes*, *metron*, measure). Instrument consisting of a polariscope for estimating the quantity of sugar in diabetic urine.

Diabotanum, de-ah-bot'an-um (*dia*, *botane*, herb). Medicine prepared with herbs.

Diabrosis, de-ah-bro'sis (*dia*, *brosko*, to eat). Erosion, corrosion.

Diabrotic, di-ah-bro'tik. Substance capable of causing erosion of the part to which it is applied; ordinarily a medicine whose activity places it between escharotics and caustics. See *Corrosive*.

Diacaryon, de-ah-kar'e-on (*dia*, *karuon*, nut). The rob of nuts or of walnuts.

Diacassia (de-ah-kas'se-ah) **cum mannâ.** Confectio cassiæ.

Diacatholicon (de-ah-kath-ol'ik-on) or **Diacathol'icum** (*dia*, *katholikos*, universal). Name of a purge, so called from its general usefulness. It was an

electuary, and composed of the pulp of cassia, tamarinds, leaves of senna, root of polypody, flowers of the violet, rhubarb root, aniseed, sugar, licorice, and fennel.

Diacausis, de-ah-kaw'sis (*dia, kaio,* to burn). Excessive heat; overheating. Application of cautery.

Diacaustic, de-a-kawst'ik. That which is caustic by refraction, as a double convex lens, which has sometimes been used for cauterizing an ulcer by directing the sun's rays upon it.

Diaceturia, de-as-et-u're-ah (*dia, acetum,* acetic product, *ouron,* urine). Excretion of acetic acid in urine; of diacetic acid in abnormal urine, as in diabetes.

Diacetylpiperazine. Derivative of piperazine.

Diachalasis, de-ah-kal-as'is (*dia, chalao,* to be opened or relaxed). Fracture of the bones of the skull; or relaxation and separation of the sutures, in consequence of a wound of the head.

Diachalasma, de-ah-kal-az'mah (*dia, chalasma,* dislocation). A fissure.

Diacheirismus (de-ah-ki-riz'mus) or **Diacheir'isis** (*dia, cheir,* hand). Preparation, administration, and dispensing of medicines.

Diachorema (de-ah-kor-a'mah) or **Diachore'sis** (*dia, choreo,* to retire, to separate from). Every kind of excreted matter and excretion, particularly the feces and alvine excrement. **D. xysmato'des,** evacuation of shreds or patches of the mucous membrane of the bowels in malignant dysentery.

Diachoresis, de-ah-kor-a'sis. Excretion.

Diachoretic, de-ah-kor-et'ik. Laxative.

Diachrisis, de-ak'ris-is (*dia, chrio,* to anoint). Inunction.

Diachrisma, de-ak-ris'mah. Ointment.

Diachrista, de-ah-christ'ah. Medicines applied as abstergents to the velum palati, the palate itself, the tongue, etc.—probably gargles.

Diachylon (de-ak'il-on) or **Diach'ylum** (*dia, chulos,* juice; *i. e.* composed of juices). A plaster of this name was formerly made of certain juices. The term is now confined to emplastrum plumbi or lead plaster. **D. gommé,** emplastrum cum gummiresinis. **D. gum,** emplastrum gummosum. **D. cum gum'mi,** emplastrum gummosum. **D. mag'num cum gum'mi,** emplastrum galbani comp. **D. oint'ment,** unguentum diachyli; Hebra's lead ointment; see *Unguentum.* **D. sim'plex,** emplastrum plumbi. **D., white,** emplastrum plumbi. **D., yel'low,** emplastrum gummosum.

Diachyma, de-ak'im-ah (*dia, chuma,* fluid). Parenchyma.

Diachytica, de-ak-it'ik-ah (*dia, chuo,* to pour out, to melt). Medicines which discuss tumors.

Diacinema, de-ah-sin-a'mah (*dia, kineo,* to move). Slight dislocation; subluxation.

Diaclasia, de-ah-klaz'e-ah (*diaklao,* to break in two). Former method in which the bone was first broken and then followed by amputation.

Diaclasis, de-ak'las-is (*dia, klao,* to break). Refraction.

Diaclast, di'ah-klast (*dia, klao,* to break off). Screw-pointed instrument for perforating the fœtal skull.

Diaclysis (de-ak'lis-is) or **Diaclys'mus** (*dia, kluzo,* to wash out). Rinsing or cleansing, especially of the mouth.

Diaclysma, de-ah-kliz'mah. Gargle.

Diaclysmus, de-ah-kliz'mus. Washing out the mouth; gargling.

Diacodion (de-ah-ko'de-on) or **Diacodium,** de-ah-ko'de-um. Ancient preparation of poppies. The syrup of poppies—syrupus papaveris—is now substituted for it.

Diacœl, de'ah-seel (*dia,* through, *koilia,* cavity). Third ventricle of the brain.

Diacope, de-ak'o-pe (*dia, kopto,* to cut). Abscission, dissection, intersection. **D. cra'nii,** opening the head and separation of the bones of the cranium. **D. en'cope,** cut, incision, fissure, or longitudinal fracture; generally an oblique incision made in the cranium by a sharp instrument, without the piece being removed.

Diacoprægia, de-ah-kop-re'je-ah (*dia, kopros,* excrement, *aix,* goat). Medicine composed of goat's dung, which the ancients praised in diseases of the spleen, parotid, etc.

Diacorallion, de-ah-kor-al'le-on. Ancient medicine which contained coral.

Diacoustic, de-ak-oo'stik. Relating to diacoustics.

Diacranian, de-ah-kra'ne-an (*dia,* lightly, *kranion,* skull). Attached to the skull by movable articulation, as the lower jaw.

Diacrises, de-ak'ris-ees (*dia, krino,* to separate). Class of diseases characterized by alterations of secretion.

Diacrisiography, di-ak-ris-e-og'raf-e (*diakrisis,* separation, *graphe,* description). Description of the organs of secretion.

Diacrisis, de-ak'ris-is (*dia, krino,* to separate). Critical discharge. Diagnosis from character of the crisis.

Diacritic, di-ah-krit'ik. Diagnostic; distinguishing.

Diacritica signa, de-ah-krit'ik-ah sig'nah (same etymon as **Diacrises**). Signs by which one disease can be accurately discriminated from another—differential diagnosis.

Diactinic, di-ak-tin'ik (*dia,* through, *aktis,* ray). Having the power of transmitting actinic rays.

Diactinism, di-ak'tin-izm. The condition of being diactinic.

Diad, di'ad (*dis,* twice). A bivalent element.

Diadema, de-ah-da'mah (*dia, deo,* to bind, to bind round). A sort of bandage advised in headache in which relaxation of the sutures was apprehended.

Diaderm, di'ah-durm (*dis,* twice, *derma,* skin). Blastoderm consisting of two layers, the ectoderm and entoderm.

Diadermiatria, de-ah-dur-me-at-re'ah (*dia, derma,* skin, *iatreia,* medical treatment). Endermic method.

Diadexis, de-ah-deks'is (*dia, dechomai,* to take or receive, to transfer, to succeed to). Transformation of a disease into another differing from the former both in its nature and seat.

Diadoche, de-ad'ok-e. Diadexis.

Diadosis, de-ah-do'sis (*diadidomi,* to distribute). Distribution of nutritive matter—in other words, nutrition—over the whole body. Also remission or cessation of a disease. See *Anadosis.*

Diædœus, de-e-de'us (*di, aidoia,* parts of generation). Monster whose organs of generation and urinary bladder are double; condition only observed in animals.

Diæresis, de-a'res-is (*dia, haireo,* to take away, to divide). Division or solution of continuity. Surgical operation consisting in dividing any part of the body. *Hemorrhagia per diæresin* is hemorrhage owing to separation or division of vessels. **D. un'guiæ,** falling off of the nails.

Diæretic, di-e-ret'ik. Caustic.

Diæta, de-e'tah. Diet. **D. car'nis,** meat diet. **D. ju'ris,** see *Diet.* **D. jus'culi,** see *Diet.* **D. lac'tea** or **lac'tis,** milk diet; see *Diet.* **D. sic'ca,** dry diet.

Diætema, de-e-ta'mah. Diet; hygiene.

Diætetica, de-et-et'ik-ah (*techne*). Dietetics.

Diætheralysis, de-eth-er-al'is-is (*dia, aither,* ether, *luo,* to dissolve). Pharmaceutical process of extracting vegetable substances by maceration and displacement with ether.

Diagnose, di-ag-noze'. Diognosticate.

Diagnosis, di-ag-no'sis (*dia, ginosko,* to know). Discrimination. That part of medicine whose object is the discrimination of diseases and the knowledge of the pathognomonic signs of each; one of the most important branches of general pathology. See *Symptom.* **D., clin'ical,** diagnosis based upon symptoms which present themselves independently of the pathological changes which cause them. **D., differen'tial,** study of the signs by which one disease can be accurately discriminated from another. **D. by exclu'sion,** diagnosis obtained by critically comparing diseases which have analogous points with the affection under consideration, and after reviewing and finding some of the more important features lacking, arriving at but one possible conclusion. **D., patholog'-**

ical, diagnosis based on the character of a lesion irrespective of its location. **D., phys'ical,** discrimination of diseases by physical signs afforded by auscultation, percussion, etc.; see *Symptom.* **D., presump'tive,** diagnosis which is not based on facts. **D., retrospec'tive,** diagnosis based on a previous affection, the true character of which can only be arrived at by studying the history of the case and the effects which present themselves. **D., symptomat'ic,** diagnosis based on the most salient symptoms presented by a case. **D., topograph'ical,** diagnosis in which the situation of a lesion is located.

Diagnostic, di-ag-nos'tik. Symptom which is characteristic of a disease.

Diagnos'ticate, sometimes **Diagnose'.** To discriminate one disease or phenomenon from another.

Diagnostication, di-ag-nost-i-ka'shun. The act of making a diagnosis.

Diagnostician, di-ag-nost-ish'an. One experienced in diagnosis.

Diagnos'tics. Art of diagnosis.

Diagogometer (di-ah-go-gom'et-ur) or **Diagometer,** di-ah-gom'et-ur (*diagoge,* transmission, *metron,* measure). Apparatus for estimating the conductivity of different bodies.

Diagonal conjugate, di-ag'on-al kon'ju-gate. Conjugate diameter. See *Pelvis.*

Diagram, di'ah-gram. Schematic representation of the main points of a structure for the purpose of illustration.

Diagraph, di'ah-graf (*dia, grapho,* to write). Instrument for delineating the outlines of the cranium.

Diagrydium, de-ă-grid'e-um (*dakrudion*). Convolvulus scammonia. **D. cydonia'tum, D. glycyrrhiza'tum, D. sulphura'tum,** combinations of scammony with quince-juice, extract of licorice, and sulphur, respectively; energetic purgatives.

Diahydric, di-ah-hi'drik (*dia,* through, *hudor,* water). Applied to a sound, elicited by percussion, which is heard through intervening fluid.

Dialeim'ma. Apyrexia.

Dialeipsis, de-ah-leip'sis (*dialeipo,* to intermit). Apyrexia, intermission.

Dialeipyra, de-ah-leip'er-ah (*dialeipo,* to intermit, *pur,* fever). Intermittent fever.

Dialemma, de-ah-lem'mah (an interval). Apyrexia.

Dialepsis, de-ah-lep'sis (*dialambano,* to intercept). Interstice or interval left between the turns of a bandage.

Diallon, de-al'e-on. Heliotropium Europæum.

Dialipsis, de-a-lip'sis (*dialeipo,* to intermit). Apyrexia, intermission.

Dialysatus, de-al-is-a'tus. Dialyzed.

Dialysis, di-al'is-is (*dia, lusis,* solution). Dissolution or loss of strength; weakness of the limbs; solution of continuity. Dialysis is the separation of liquids—crystalloids and colloids, for example—as by an intervening piece of bladder or well-soaked parchment paper.

Dialytic, di-al-it'ik. Pertaining to dialysis.

Dialyzed, di'al-ized. Prepared by dialysis.

Dialyzer, di'al-i-zur. Apparatus for dialyzing, which floats in pure water the crystalloids of the substance undergoing treatment passing through its membrane, while the colloids are retained by the same membrane.

Diamagnet'ic. Movement eastward or westward, of copper or antimony and other substances, when introduced into the magnetic field.

Diamassena, de-ah-mas-sa'nah (*dia, masaomai,* to chew). Masticatory.

Diamastema, de-ah-mas-ta'mah. Masticatory.

Diamba. Congo tobacco.

Diambræ species, de-am'bre spe'shees. Name given by the ancients to powders.

Diamenia, de-ah-me'ne-ah. Interruption of the menstrual flow.

Diamesosteomyces, de-am-es-ost-a-om'is-ees (*diamesos,* in the middle line, *osteon,* bone, *mukes,* fungus). Fungous growth in the substance of a bone.

Diameter of Baudelocque. External conjugate diameter of the pelvis. **D. of Deven'ter,** see *Pelvis.*

Diameters (di-am'et-urz) **of the fœ'tal head.** See *Fœtal head.* **D. of the pel'vis.** See *Pelvis.*

Diamet'ros or **Diamet'rum.** Diameter.

Di'amine. Hydrazine.

Diamines, di-am'eens. Compound formed by two hydrogen atoms in ammonia being replaced by a base.

Diammonic, de-am-mon'ik. Having two molecules of ammonium.

Diamnes, de-am'nes. Incontinence of urine.

Diamond, di'mund. Most precious of all stones, and formerly conceived to possess extraordinary cordial virtues. **D.-field fever,** fever which prevails at times at the Cape of Good Hope. **D.-fig mar'ygold,** see *Mesembryanthemum crystallinum.*

Diamorphosis, de-ah-morf-o'sis (*dia, morphosis,* shaping). Growing out or shaping.

Diamorum, de-ah-mo'rum (*dia, moron,* mulberry). Syrup prepared with honey and mulberry-juice; employed as a gargle in sore throat.

Diamotosis, de-a-mo-to'sis (*dia, motos,* charpie, lint). Introduction of lint into an ulcer or wound.

Diamyl, di-am'il. Double molecule of amyl.

Diamylic, di-am-il'ik. Containing diamyl.

Diana, di'an-ah (after the goddess Diana). Silver.

Dianancasmus, de-an-an-kas'mus (*dia, anankazo,* to force). Coaptation; reduction of a fractured or luxated limb.

Diandria, de-and're-ah (*dis,* twice, *aner,* male). Condition in which the male organs are double.

Diangeious, de-an'je-us (*dis,* twice, *angeion,* vessel). Possessing two vessels.

Dianœa, de-an-e'ah. Thought, faculty of thinking.

Dianoëma, de-ah-no-a'mah (*dia, noeo,* to perceive). Imagination.

Dianthera (de-an-the'rah) **bifida.** Species of East Indies, employed in infusion in rice-water against bites of venomous serpents.

Dianthus caryophyllus, de-an'thus kah-re-o-fil'lus (*dis,* Jove, or *dios,* divine, *anthos,* flower, *caryophyllum,* clove). *Clove pink, Clove July flower, Gilliflower, Carnation.* Flowers were once much used, but are now only employed in syrup as a useful and pleasant vehicle for other medicines.

Diapalma, de-ah-pal'mah. Plaster composed of equal parts of litharge, olive oil, axunge, water, a certain quantity of sulphate of zinc dissolved in water, and white wax; classed among the topical, desiccative, emollient, resolvent, detersive, and cicatrizing medicines. With olive oil it forms the *Cerate of diapalma.*

Diapasma, de-ah-paz'ma (*dia, passo,* to sprinkle). Powder for sprinkling on a surface.

Diapason, di-ah-pa'zun. Tuning-fork. **D. ver'tex,** process of determining hearing-power for a vibrating fork by placing the foot of the latter on the cranial vertex.

Diapedesis, de-ah-ped-a'sis (*dia, pedao,* to leap through). Exhalation, as of blood, in the form of dew, at the surface of the skin or of any membrane; sweating of blood.

Diapedetic, de-ah-ped-et'ik. Relating to diapedesis.

Diapensia cortusa, de-ah-pen'se-a kor-tu'sah. Sanicula.

Diapentes (de-a-pen'tees) or **Diapente,** de-ah-pen'te (*dia, pente,* five). Medicine composed of five ingredients. See *Diatessaron.*

Diaphane, di'ah-fane. Transparent membrane enclosing a sac or cell.

Diaphaneity, di-ah-fan-e'it-e. Transparency.

Diaphanic, di-ah-fan'ik. Transparent.

Diaphanometer, di-ah-fan-om'et-ur (*dia,* through, *phaino,* to appear, *metron,* measure). Apparatus for determining the amount of solids contained in a liquid by noticing the degree of its transparency.

Diaph'anoscope (*diaphanes,* transparent, *skopeo,* to examine). See *Diaphanoscopy.*

Diaphanoscopy, di-a-fan-os'kop-e (*diaphanes,* transparent, *skopeo,* to examine). Examination of the interior of the body by the introduction of a power-

ful light into it, either reflected or electric, as through a *diaphanoscope*.

Diaphanous, di-af'an-us. Transparent; said of serous membranes.

Diaphemetric, di-af-em-et'rik. Relating to measurements of the tactile sensibility of parts, as diaphemetric compasses.

Diaphœnicon, de-a-fe'nik-on (*dia, phoinix,* date). Drastic electuary of which the date was the chief excipient.

Diaphonic, di-ah-fon'ic. Relating to diaphonics.

Diaphonics, di-ah-fon'iks (*dia,* through, *phone,* sound). Doctrine of refracted sounds.

Diaphoresis, de-ah-for-e'sis (*dia, phoreo,* to convey, to dissipate). Greater degree of perspiration than natural, but less than in sweating; every kind of cutaneous evacuation.

Diaphoretic, di-a-for-et'ik. Medicine which excites diaphoresis, that is, increases the secretion of sweat. This is effected by its action on the terminations of nerves in the glands, or on the sweat-centres, or by reflex actions through stimulation of the sensory nerves, or by mental stimuli. Diaphoretics are very uncertain as a class. They are all indirect agents, some sedative, others excitant, and cannot therefore be used indiscriminately in disease; see *Sudorific.* The epithet diaphoretic has also been given by some to continued fever accompanied with constant perspiration. **D. min'eral,** antimonium diaphoreticum.

Diaphoret'ico-sedati'vus. Diaphoretic and sedative.

Diaphoreticum joviale, de-a-for-et'ik-um jo-ve-al'e. White oxide of antimony.

Diaphotoscope, di-ah-fo'to-skope. Electric apparatus by means of which hollow organs or canals can be illuminated.

Diaphragm, di'ah-fram (*dia, phrasso,* to close). Large azygous muscle, stretched transversely between the thoracic and abdominal cavities, which it separates from each other; tendinous in the centre; thin, almost circular, and unequally convex upward. It is fleshy at its circumference, which is attached to the ensiform cartilage, to the last six ribs, to the aponeurosis stretched from the last rib to the transverse process of the first lumbar vertebræ, and, lastly, to the bodies of the first three or four lumbar vertebræ. When it contracts, its fibres become straight, the chest is enlarged, and the abdomen diminished. It is then an inspiratory muscle. It may also diminish the capacity of the chest, and be an expiratory muscle. This muscle plays an important part in sighing, yawning, coughing, sneezing, laughing, sobbing, crying, hiccoughing, singing, vomiting, and in the excretion of the feces and urine, the expulsion of the fœtus, etc. **D., pil'lars of,** crura of the diaphragm.

Diaphragma, de-ah-frag'ma. Diaphragm. **D. au'ris,** see *Tympanum.* **D. cer'ebri,** tentorium. **D. hypophys'eos,** see *Operculum sellæ.* **D. na'rium,** septum narium. **D. or'is,** mylohyoïdeus. **D. pel'vis,** levator ani. **D. pel'vis accesso'rium,** urogenital diaphragm. **D. pel'vis pro'prium,** rectal diaphragm. **D. secunda'rium,** mesocolon transversalis. **D. sel'læ,** fold of dura mater between the anterior and posterior clinoid processes of the sphenoid bone. **D. urogenita'le,** urogenital diaphragm. **D. ventriculo'rum latera'lium cer'ebri,** septum lucidum.

Diaphragmalgia, de-ah-frag-mal'je-ah (*diaphragm, algos,* pain). Pain in the diaphragm.

Diaphragmatalgia, de-ah-frag-mat-al'je-ah. Diaphragmalgia.

Diaphragmatapostema, de-ah-frag-mat-ap-ost-a'mah. Abscess in the diaphragm.

Diaphragmatic, di-ah-frag-mat'ik. Phrenic; belonging to the diaphragm; name given to several vessels and nerves. **D.** or **Phren'ic ar'teries,** these are distinguished into *superior* and *inferior.* The former, called also *supradiaphragmatic,* are two in number, one on each side. They arise from the internal mammary, and descend along the phrenic nerve, to be distributed on the upper surface of the diaphragm. The latter, or *infradiaphragmatic,* are also two in number; they arise from the upper part of the abdominal aorta or from the cœliac artery, and divide into two principal branches, which are distributed on the lower surface of the diaphragm and in its substance. The *superior diaphragmatic veins* follow the same course as the arteries, and empty themselves—the right, into the vena cava superior; the left, into the corresponding subclavian vein. The two *inferior diaphragmatic veins* open into the vena cava inferior. **D. her'nia,** *Phrenic hernia, Diaphragmatocele.* The abdominal viscera are occasionally protruded through the diaphragm, either through some of the natural apertures in the muscle, or through deficiencies or wounds or lacerations in it. **D. nerves,** *Phrenic nerves, Internal respiratory* of Sir Charles Bell, are two in number, one on the left side, the other on the right. They arise from the second and third nerves of the cervical plexus, about the middle of the neck, and receive two or three filaments from the brachial plexus, after which they descend into the chest at the sides of the pericardium, and are distributed to the diaphragm. **D. pleu'risy,** inflammation of that part of pleura which invests the diaphragm. **D. plex'uses** are two in number, one right, and the other left. They arise from the upper part of the solar plexus by a small number of branches, which are distributed to the diaphragm, following exactly the branches of the inferior diaphragmatic arteries. **D. ring,** the irregularly quadrilateral aperture by which the vena cava inferior passes through the diaphragm.

Diaphragmatitis, de-ah-frag-mah-te'tis. Inflammation of the diaphragm.

Diaphragmatocele, de-ah-frag-mat-o-se'le (Eng. di-ah-frag-mat'o-seel) (*diaphragm, kele,* rupture). Diaphragmatic hernia.

Diaphragmelcosis (de-ah-frag-mel-ko'sis) or **Diaphragmatelco'sis** (*diaphragma, helcosis,* ulceration). Ulceration of the diaphragm.

Diaphragmitis, de-ah-frag-me'tis. Inflammation of the diaphragm, the essential symptoms of which are painful constriction around the præcordia, with small, quick, laborious breathing; a rare disease.

Diaphragmocele, de-ah-frag-mo-se'le (Eng. di-ah-frag'mo-seel). Diaphragmatocele.

Diaphragmodynia, de-ah-frag-mo-din'e-ah (*diaphragm, odune,* pain). Muscular or other pain of the diaphragm.

Diaphratton hymen, de-ah-frat'ton he'men (separating membrane). Mediastinum. **D. membra'na,** mediastinum.

Diaphraxis, de-ah-fraks'is. Diaphragm.

Diaphtherin. *Oxychinaseptol.* Said to possess marked antiseptic properties.

Diaphthora, de-af'thor-ah (*dia, phtheiro,* to corrupt). Corruption in general; more especially corruption of the fœtus in utero. Also corruption of the blood in the stomach. See *Abortion.*

Diaphthoroscopium, de-af-thor-o-skop'e-um (*diaphthora,* corruption, *skopeo,* to examine). Apparatus for examining the purity of the atmosphere.

Diaphylactic, de-a-fil-ak'tik (*dia, phulasso,* to preserve). Prophylactic.

Diaphyseal, de-ah-fis'e-al. Relating to a diaphysis.

Diaphysis, de-af'is-is (*diaphuo,* to rise between). An interstice, interval, division. Anything separating two bodies. Middle part or body of a long bone. A ligament of the knee.

Diaphysitis, de-ah-fis-e'tis. Inflammation of the diaphysis of a bone.

Diapia, de-ah'pe-ah. Diapyesis or suppuration; word also employed in opposition to Myopia.

Diaplasis, de-ap'las-is (*dia, plasso,* to form). Conformation, reduction.

Diaplasmatic, di-a-plas-mat'ik. Name given to very small vessels which are supposed to connect capillaries and lymphatics.

Diaplasmus, de-ah-plaz'mus. Conformation; reduction.

Diaplexus, de-ah-pleks'us. Choroid plexus of third ventricle of the brain.

Diapne, de-ap'ne. Involuntary micturition.

Diapneusis, de-ap-nu'sis (*dia*, *pneo*, to breathe or exhale). Perspiration.

Diapnoe, de-ap'no-e. Perspiration.

Diapnœa, de-ap-ne'ah. Perspiration.

Diapnogenous (de-ap-noj'en-us) **appara'tus** (*diapnoe*, *gennao*, to generate). See *Perspiration*.

Diapnoicus, de-ap-no'ik-us. Diaphoretic.

Diapnoid, di-ap'noid. Promotive of perspiration; diaphoretic.

Diapodimorphine, de-ap-o-de-morf'een. Base, $C_{62}H_{72}N_4O_{10}$, obtained by treating codeine with hydrochloric acid at a temperature of 100°.

Diapophyses, de-ap-of'is-ees. Articular transverse processes, as of the vertebræ.

Diaporema, de-ah-po-ra'mah (*diaporeo*, to doubt). Anxiety; jactitation.

Diaprunum, de-ah-pru'num. Purgative electuary, of which the pulps of prunes and rhubarb formed the basis.

Diapyema, de-ah-pe-a'mah (*dia*, *puon*, pus). Empyema; suppuration.

Diapyemata, de-ah-pe-a'mat-ah. Medicines which promote suppuration.

Diapyesis, de-ah-pe-a'sis. Suppuration. **D. oc'uli**, hypopyon.

Diapyetica, de-ah-pe-et'ik-ah. Medicines which promote suppuration.

Diapyeticus, de-ah-pe-et'ik-us. Suppurative.

Diapyon, de-ah'pe-on. Suppuration; empyema.

Diaræmia, de-ah-re'me-ah (*dia*, *rheo*, to flow, *haima*, blood). Pathological condition in sheep in which the globules of the blood are diminished in quantity; the blood itself thinner, and transuding through the coats of the vessels into the cavities.

Diaria, de-ah're-ah (*dies*, day). Ephemera.

Diarrhage, de-ar'rhag-e (*dia*, *rhegnumi*, to break). Fracture.

Diarrhea, di-ar-rhe'ah. Diarrhœa.

Diarrheal, di-ar-rhe'al. Diarrhœal.

Diarrhectus, de-ar-rhek'tus. Severed.

Diarrhetic, di-ar-rhet'ik. Diarrhœal.

Diarrhodon, de-ar'rod-on (*dia*, *rhodon*, rose). Name given to different compound medicines into which the red rose entered.

Diarrhœa, di-ar-rhe'ah (*dia*, *rheo*, to flow). *Diarrhea, Lax, Looseness, Purging, Scouring.* Disease characterized by frequent liquid alvine evacuations, and generally owing to inflammation or to irritation of the mucous membrane of the intestines. It is commonly caused by errors in regimen, the use of food noxious by its quality and quantity, etc., constituting the *Diarrhœa stercoraria, D. crapulosa* of writers; may be acute or chronic. Many varieties have been made by some nosologists—*e. g. mucous*, diarrhœa mucosa, blennochesia, blennochezia, mycodiarrhœa; and by some authors enteria, enteritis, diarrhœa catarrhosa or catarrhale, and erythemoides, under the idea that it is associated with an erythematous congestion of the mucous surface; *bilious*, ileocholosis, cholodiarrhœa, diarrhœa biliosa; *serous*, hydrochezia, hydrodiarrhœa, orrhochezia—dependent upon the matters evacuated. Diarrhœa alba is a form of bowel disease sometimes epidemic in Barbadoes, the stools being white and milky. Diarrhœa requires different treatment, according to its nature. If caused, as it often is, by improper matters in the intestinal canal, these must be evacuated; and the astringent plan of treatment must not be adopted unless the discharges seem kept up by irritability of the intestines, or unless they are colliquative. Indiscriminate use of astringents is to be deprecated. A very fatal diarrhœa prevailed among the native inhabitants of India—diarrhœa hectica, because, like hectic fever, it seems to obtain habitual possession of the constitution, to operate upon it with scarcely any perceptible intermission, and in general to defy the most powerful remedies.

Diarrhœa ablactato'rum, brash weaning. **D. ac'ida**, characterized by green stools which smell sour, and by pains in the abdomen. **D. adipo'sa**, diarrhœa with fatty evacuations and great emaciation. **D. al'ba**, see *Diarrhœa*. **D., albu'minous**, stools containing albumin. **D. cum apep'siâ**, lientery. **D. ab aph'this**, diarrhœa due to aphthæ. **D. arthrit'ica**, cœliagra. **D. bilio'sa**, see *Diarrhœa*. **D., camp**, variety of diarrhœa occurring among soldiers. **D. carno'sa**, dysentery. **D. catarrho'sa** or **catarrha'le**, see *Diarrhœa*. **D., cholera'ic**, cholerine. **D. chylo'sa**, cœliac flux. **D. chymo'sa**, cœliac flux. **D., Co'chin Chi'na**, see *Cochin China*. **D., colliq'uative**, see *Colliquative*. **D. crapulo'sa**, see *Diarrhœa*. **D. cruen'ta**, mixture of blood with excessive discharges from the bowels. **D. dysenter'ica**, stools contain much mucus. **D. dyspep'tica**, lientery. **D. erythemoï'des**, see *Diarrhœa*. **D., fat'ty**, stools are liquid and contain fat or oil, frequently indicating a cancerous affection of the pancreas. **D. hepat'ica**, species of diarrhœa in which the excreted matters are much mixed with bile. **D. ab hypercathar'si**, diarrhœa due to purging with drugs. **D. ingesto'rum**, lientery. **D. ab inglu'vie**, diarrhœa caused by excess in eating, and indigestion resulting therefrom. **D. lienter'ia** or **lienter'ica**, lientery. **D. muco'sa**, see *Diarrhœa*. **D., pab'ular**, symptom of membranous enteritis. **D. purulen'ta**, diarrhœa accompanied with purulent discharges. **D. sanguinolen'ta**, D. cruenta. **D. stercora'ria**, see *Diarrhœa*. **D., sudo'ral**, diarrhœa associated with a disturbance of the functions of the skin, preventing the secretion of sweat, as in fevers accompanying suppuration, exanthematous fevers, etc. **D. in uri'nâ**, diabetes. **D. urino'sa**, diabetes.

Diarrhœal, di-ar-rhe'al. *Diarrheal, Diarrhœic, Diarrhetic, Diarrhœtic.* Relating to diarrhœa.

Diarrhœophthisis, de-ar-rhe-o-te'sis. Wasting away caused by chronic diarrhœa.

Diarrhœticus, de-ar-rhet'ik-us. Relating to or causing diarrhœa.

Diarrhoicus, de-ar-rho'ik-us. Diarrhœal.

Diarrhoischesis, de-ar-ro-is'ke-sis (*diarrhœa*, *schesis*, arrest). Arrest of a diarrhœa.

Diarsenious, de-ar-sen'e-us. Containing two atoms of arsenic in the molecule. **D. sul'phide**, arsenic disulphide.

Diarthrodial, di-ar-thro'de-al. Relating to diarthrosis or movable articulations; as diarthrodial articulation. Diarthrodial cartilages, or incrusting cartilages, are cartilages which invest the articular extremities of bones. See *Articulations*.

Diarthrodic, di-ar-thro'dik. Diarthrodial.

Diarthrosis, de-ar-thro'sis (*dia*, *arthroo* to articulate). Movable articulation, one permitting the bones to move freely on each other in every direction, as in case of the shoulder-joint. **D. rotato'rius**, *lateral ginglymus*. Movement is limited to rotation; the joint is formed by a pivot-like process turning within a ring, or the ring around a pivot, as in the atlo-axoid articulation.

Di'ary fe'ver. See *Diaria*.

Diasatyrion, de-ah-sat-ir'e-un (*dia*, *saturion*, the Orchis mascula). Electuary, of which this plant formed the basis, supposed to excite the organs of generation.

Diaschisis, de-as'kis-is. Division.

Diascinci antidotus, de-as-sin'se an-tid'o-tus (*dia*, *skinkos*, kind of lizard). Mithridate.

Diascordium, de-as-kor'de-um (*dia*, *skordion*, water germander). Electuary so called because this plant entered into its composition, containing, according to the Codex, seventeen ingredients. Employed in diarrhœa and dysentery as a tonic, stomachic, and astringent. See *Pulvis cretæ compositus*.

Diasostic, di-ah-sos'tik (*dia*, *sozo*, to preserve). Prophylactic.

Diaspasis, de-as'pas-is (*dia*, *spao*, to draw). Rupture or laceration of organs by external violence.

Diaspasma, de-ah-spaz'mah. Secretion.

Diaspasmus, de-ah-spaz'mus. Rupture or laceration of organs by external violence.

Diaspermaton, de-ah-spur'mah-ton (*dia*, *sperma*, seed). Ancient name of two cataplasms composed of seeds.

Diasphyxis, de-ah-sfiks'is (*dia*, *sphuzo*, to strike, to beat). Pulse; also a violent beat of the pulse.

Diastaltic, di-ah-stal'tik (*dia*, *stello*, to send). Epithet applied by Dr. Marshall Hall to the reflex or excito-motory system of nerves, because the actions they induce are performed through the spinal marrow as their essential centre.

Diastasæmia, de-as-tah-sa'me-ah (*diastasis*, separation, *haima*, blood). Pathological condition characterized by a separation of the elements of the blood-globules, the fibrin and albumen separating also from the coloring matter, while the fibrin attaches itself to the valves of the heart.

Diastase, di'as-taze (same etymon as **Diastasis**). Vegetable principle, allied in its general properties to gluten, which appears in the germination of barley and other seeds, and by its presence converts the starch into grape-sugar and gum. See *Maltine*.

Diastasic, di-as'ta-sik. Relating to diastase.

Diastasimetry, di-as-tas-im'et-re (*diastase*, *metron*, measure). Measurement of quantity of diastase.

Diastasis, de-as'tas-is (*dia*, *histemi*, to place; separation; division). Separation of bones, and particularly of the bones of the cranium, from each other; of the radius from the ulna, and the fibula from the tibia. The ancients used this word to designate the three dimensions of the body—length, breadth, and thickness; for the interval separating the patient from the physician; the swelling of varicose veins; the time at which some change occurs in disease, etc. **D. dissiden'tia**, separation of bones.

Diastatecphlogia, de-ah-stat-ek-flo'ge-ah (*diastatlikos*, standing apart, *ekphlogezo*, to inflame). Discrete small-pox.

Diastatic, di-as-tat'ik. Relating to diastase. Possessing the power of converting starch into sugar.

Diastema, de-ah-sta'mah. Diastasis; interstice.

Diastematelytria, de-ah-stem-at-el-it're-ah (*diastema*, *elutron*, vagina). Organic deviation characterized by a longitudinal division or fissure of the vagina.

Diastematencephalia, de-ah-stem-at-en-sef-ah'le-ah (*diastema*, *enkephalos*, brain). Organic deviation consisting in a longitudinal division of the brain.

Diastematenteria, de-ah-stem-at-ent-er'e-ah. Fissure of intestinal canal which extends longitudinally.

Diastematia, de-ah-stem-ah'she-ah (*diastema*). Organic deviation characterized by the presence of a fissure in the mesial line of the body.

Diastematocaulia, de-ah-stem-at-o-kawl'e-ah (*diastema*, *kaulos*, trunk). Organic deviation characterized by a longitudinal division of the trunk.

Diastematocheilia, de-ah-stem-at-o-ki'le-ah (*diastema*, *cheilos*, lip). Organic deviation consisting in a longitudinal division or fissure of the lip.

Diastematocrania, de-ah-stem-at-o-kran'e-ah (*diastema*, *kranion*, cranium). Organic deviation consisting in a longitudinal division of the cranium.

Diastematocystia, de-ah-stem-at-o-sis'te-ah (*diastema*, *kustis*, bladder). Organic deviation characterized by a longitudinal division of the urinary bladder.

Diastematogastria, de-ah-stem-at-o-gas'tre-ah (*diastema*, *gaster*, stomach). Organic deviation characterized by a longitudinal division of the stomach.

Diastematoglossia, de-ah-stem-at-o-glos'se-ah (*diastema*, *glossa*, tongue). Organic deviation characterized by a longitudinal division or fissure of the tongue.

Diastematognathia, de-ah-stem-at-o-nath'e-ah (*diastema*, *gnathos*, jaw). Organic deviation characterized by a longitudinal division of the jaw.

Diastematometria, de-ah-stem-at-o-met're-ah (*diastema*, *metra*, womb). Organic deviation characterized by a longitudinal division or fissure of the womb.

Diastematomyelia, de-ah-stem-at-o-me-el'e-ah (*diastema*, fissure, *muelos*, marrow). Congenital division of spinal cord into two lateral halves; it occurs with anencephalia.

Diastematopyelia, de-ah-stem-at-o-pe-el'e-ah (*diastema*, *puelos*, pelvis). Organic deviation characterized by a longitudinal division or fissure of the pelvis.

Diastematorachia, de-ah-stem-at-o-rah'ke-ah (*diastema*, *rhachis*, spine). Organic deviation characterized by a longitudinal division or fissure of the spine.

Diastematorhinia, de-ah-stem-at-o-rhin'e-ah (*diastema*, *rhis*, nose). Organic deviation characterized by a longitudinal division of the nose.

Diastematostaphylia, de-ah-stem-at-o-staf-il'e-ah (*diastema*, *staphule*, uvula). Organic deviation characterized by a longitudinal division of the uvula.

Diastematosternia, de-ah-stem-at-o-sturn'e-ah (*diastema*, *sternon*, sternum). Organic deviation characterized by a longitudinal division of the sternum.

Diastementeria, de-ah-stem-en-ter'e-ah (*diastema*, *enteron*, intestine). Organic deviation characterized by a longitudinal division of the intestine.

Diaster, de-as'tur. See *Amphiaster*.

Diastole, de-as'to-le (*dia*, *stello*, to dilate, to open). Dilatation of the heart and arteries when the blood enters their cavities; it is the opposite movement to systole, in which the heart and arteries contract to send forth the blood. Diastole and systole are consequently successive movements. Diastole, *Motus cordis diastalticus*, like systole, occurs simultaneously in the two ventricles; the almost inappreciable time which elapses between the diastole and systole has been called *perisystole*, and that which succeeds to the diastole, *peridiastole*. When we speak of the contraction or systole of the heart, as well as of its diastole or dilatation, we mean only that of the ventricles; this dilatation is active.

Diastoleus, de-as-tol'e-us. Dilator.

Diastolic, de-as-tol'ik. Belonging to the diastole of the heart. **D. im'pulse of the heart**, see *Impulse*, *diastolic*. **D. mur'mur**, murmur heard over the heart during dilatation of that organ. **D. thrill**, vibration or thrill heard in the cardiac region during dilatation of the ventricle.

Diastomotris, de-as-to-mo'tris (*diastomoo*, to dilate an aperture). Dilating instruments, such as the different kinds of specula for the mouth, anus, vagina, etc.

Diastremma, de-ah-strem'mah (*dia*, *strepho*, to turn). Distortion, perversion, sprain.

Diastrophe, de-as'trof-e. Distortion, perversion, sprain.

Diastrophometry, de-as-trof-om'et-re (*diastrophe*, deformity, *metron*, measure). Art of measuring deformities.

Diatasis, de-at'as-is (*dia*, *teino*, to stretch, to distend). Tension. Reduction of a fracture by extension and counter-extension.

Diatele, de-ah-ta'le. Roof of third ventricle of the brain.

Diateretic, de-ah-ter-et'ik. Prophylactic.

Diatessadelton, de-ah-tes-sah-del'ton. Bichloride of mercury.

Diatessaron, de-ah-tes'sar-on (*dia*, *tessares*, four). Electuary into the composition of which entered four medicines; formerly employed in cases of stings and bites of venomous animals, and as a tonic.

Diathermal, di-a-thur'mal. Possessing the property of diathermancy.

Diathermancy, di-a-thur'man-se (*dia*, through, *thermaino*, to heat). Property of transmitting radiant heat.

Diathesis, de-ath'es-is (*dia*, *tithemi*, to place, to dispose). Disposition, constitution, affection of the body; predisposition to certain diseases rather than to others. The principal diatheses mentioned by authors are the cancerous (*cancerism*), scrofulous (*scrofulism*), scorbutic, rheumatic, gouty (*podagrism*), and calculous. **D., aneuris'mal**, see *Aneurism*. **D., dar'trous**, see *Dartre*. **D. hæmorrhoïda'lis**, see *Hemorrhoids*. **D., hemorrhag'ic**, see *Hæmatophilia*. **D. nervo'sa**, nervous diathesis. **D. purulen'ta**, see *Pyæmia*. **D., rheumat'ic**, see *Rheumatic*. **D. sthen'ica**, sthenia.

Diathetic (di-a-thet'ik) or **Diathet'ical**. Relating or appertaining to a diathesis, as "diathetical diseases," *Diathetici morbi*, gout and cancer, for example.

Diatresis, de-ah-tra'sis (*dia*, *trao*, to perforate). Perforation.

Diatrimma, de-ah-trim'mah (*dia, tribo,* to rub). Chafing.

Diatritarii, de-ah-trit-ah're-e (*dia, tritos,* third). Those were so called who pretended to cure diseases by subjecting the patient to treatment every third day.

Diatritos, de-at'rit-os. Relating to every third day, and the means then used by the Methodists to cure diseases.

Diatrypesis, de-ah-trip-a'sis (*diatrupao,* to perforate). Arrangement of serrations of a cranial suture, interlocking with one another.

Diazoma, de-ah-zo'mah (*dia, zonnumi,* to girdle). Diaphragm.

Dia'zo-reac'tion (known as Ehrlich's reaction). Method employed in typhoid fever for determining the quantity of urea. To equal quantities of urine and sulphanilic acid in a test-tube sodium nitrate is added; ammonia (1 cubic cm.) is then added carefully, which forms a brownish-red ring at the junction of the two liquids.

Diazoster, de-ah-zos'tur (*zoster,* girdle). Twelfth vertebra of the back, because it corresponds to the girdle.

Diazostra, de-ah-zos'trah. Diaphragm.

Dibasic, di-ba'zik (*dis,* twice, *basis*). Relating to acids in which two atoms of hydrogen are replaceable by a base.

Diblas'tic (*di, blastos,* germ). Having two sources of origin in some diseases.

Dibothrium latum, de-both're-um lat'um (*di, bothrion,* a small pit). Bothriocephalus latus.

Dibro'methane. Ethylene bromide.

Dicelyphous, di-sel'e-fus (*dis,* twice, *keluphos,* shell). Possessing a double shell; said of eggs.

Dicentra Canadensis, de-sen'trah kan-ad-en'sis (*di, kentron,* spur). *Squirrel corn, Colic weed.* Indigenous plant, the flowers having the odor of hyacinths; given internally in syphilis, and applied externally in syphilis and gonorrhœa. **D. exim'ia,** North American species; root is said to have tonic, alterative, and diuretic virtues. **D. succulla'ria,** Dutchman's breeches; has same medicinal properties as D. Canadensis.

Dicephalium, de-sef-al'e-um (*di, kephale,* head). Large sarcoma on the head, seeming to form a double head.

Diceph'alous. Double-headed. See *Dicephalus.*

Dicephalus, de-sef'al-us (where the duplication extends to the neck). *Janus.* Monster with two heads. **D. dian'cheros,** each head has a separate neck. **D. dibrach'ius,** dicephalus with two arms. **D. heteroceph'alus,** two-headed monster in which one head is larger than the other. **D. monan'cheros,** dicephalus in which there is one neck. **D. tetrabrach'ius,** variety of dicephalus having four arms. **D. tribrach'ius,** variety of dicephalus having three arms. **D. trip'us,** dicephalus having three feet.

Diceras rudis, de'ser-as ru'dis (*di, keras,* horn). Ditrachyceras rudis. See *Worms.*

Dichalcon, de-kal'kon. Weight equal to a third part of the obolus.

Dichastic, di-kas'tic (*dichazo,* to divide into two parts). Capable of spontaneous division.

Dicheterocephalus, dik-et-er-o-sef'al-us (*dicha,* twofold, *heteros,* different, *kephale,* head). Dicephalus heterocephalus.

Dichloracetic acid, de-klor-as-e'tik as'id. Colorless liquid of disagreeable odor and possessing caustic properties; derived from acetic acid by substituting two atoms of chlorine for two atoms of hydrogen.

Dichlorethane, de-klor-e'thane. Colorless transparent liquid, soluble in alcohol and ether; product of ethane by substituting two atoms of chlorine.

Dichlormethane, de-klor-me'thane. Dichloride of methane; methylene chloride.

Dichonchonine, di-kon'cho-neen. Dicinchonicine.

Dichophyia, dik-o-fe'ah (*dicha,* double, *phuo,* to grow). Disease of the hairs in which they split and grow forked.

Dichop'sis gut'ta. Isonandra gutta.

Dichot'omous (*dicha,* double, *tome,* division). Dividing regularly into pairs, as the branching of arteries.

Dichroism, dik'ro-izm. Property possessed by some transparent bodies, by which, depending upon the direction in which rays of light pass through them with reference to the position of the eye, they assume two different colors; hæmoglobin crystals then appear bluish-red and scarlet-red.

Dichromic vision, di-kro'mik vizh'un. Dichromism; achromatopsia.

Dichromism, dik-ro'mizm (*di, chroma,* color). *Dichromic vision.* Form of color-blindness in which one of the primary colors, usually red, is not recognized. See *Achromatopsia* and *Dichroism.*

Dichromus, dik-ro'mus (*di, chroma,* color). Verbena officinalis.

Diciatria, dis-e-at-re'ah (*dike,* justice, *iatreia,* medicine). Medicine, legal.

Dicinchonicine, di-sin-kon'is-een. Alkaloid from cinchonine and cinchonidine.

Dicinchonine, di-sin'kon-een. $C_{38}H_{44}N_4O_2$. Alkaloid obtained from bark of Cinchona rosulenta and C. succirubra.

Diclidon'osus (*diklis,* double door, *nosos,* disease). Disease of the valves of the heart.

Diclidostosis, dik-lid-os-to'sis (*diklis,* locked, *ostosis,* ossification). Ossification of the valves of the heart.

Diclis, dik'lis. Valve.

Dicochemia, dik-o-kem-e'ah (*dike,* jurisprudence, *chemeia,* chemistry). Forensic chemistry; medical jurisprudence.

Diconchinine, di-kon'chin-een. Diquinidine; alkaloid of cinchona.

Dicoryphus, de-kor'if-us (*di, koruphe,* crown of the head). Monster with a double vertex or cranium. **D. dihypogas'trius,** monster in which twins are united from the navel to the vertex.

Dicranus, dik'ran-us (*di, kranion,* skull). Monster with a double vertex or cranium.

Dicrotal (dik-ro'tal) or **Dicrotic,** dik-rot'ik. Dicrotous.

Dicrotism, dik-ro'tizm. Dicrotous condition of pulse.

Dicrotous, dik'ro-tus (*di, kroteo,* to strike). *Dicrotic, Dicrotal.* Epithet given to the pulse when it seems to beat twice as fast as usual; also synonymous with the term *rebounding,* the artery rebounding after striking, so as to convey the sensation of a double pulsation. It has been considered, and with truth, to frequently foretell hemorrhage. In bad cases of typhus it certainly announces such a tendency. See *Pulse, dicrotic.*

Dictamnus albus, dik-tam'nus al'bus (*Dikte,* a mountain of Crete). *White fraxinella, Bastard dittany.* Fresh root is nervine, anthelmintic, and emmenagogue. **D. Cre'ticus,** Origanum dictamnus. **D. fraxinel'la,** Dictamnus albus.

Dictoïdes, dik-to-e'dees (*diktuon,* net, *eidos,* resemblance). Reticular.

Dictyitis, dik-te-e'tis. Retinitis.

Dictyon, dik'te-on. Network.

Dictyopsia, dik-te-op'se-ah (*diktuon,* net, *opsis,* vision). Morbid condition in which net-like objects are floating before the eyes.

Dicypellium (dis-e-pel'le-um) **caryophylla'tum** (*dis,* twice, *kupellon,* cup). Brazilian tree; bark furnishes cassia caryophyllata.

Didactyle, di-dak'til (*dis,* twice, *daktulos,* finger). Possessing only two fingers or toes.

Didactylia, de-dak-til'e-ah (*dis, daktulos*). Condition in which there are only two fingers or two toes on hands or feet.

Did'ay's opera'tion for webbed fingers consists in separating the fingers, and securing flaps from the dorsal side of one finger and the palmar side of the other.

Didelphys, de-del'fis (*di, delphus,* uterus). State in which there is a double uterus. **D. cancrir'ora,** crab-eating opossum of S. America; said to enter into the preparation of curare.

Diductio epiphysium, de-duk'she-o ep-if-is'e-um. See *Epiphyses.*

Didymalgia, did-im-al'je-ah (*didumoi*, testicles, *algos*, pain). Pain in the testicles.

Didymis, did'im-is. Epididymis.

Didymitis, did-im-e'tis Hernia humoralis.

Didymus, did'im-us. Gemellus; testicle. **D. symphyogas'trius,** gastrodidymus. **D. symphyohypogas'trius,** hypogastrodidymus. **D. symphyoperinæ'us,** pygodidymus. **D. symphyothoracogas'trius,** thoracogastrodidymus.

Die. See *Expiration*.

Diecbolion, de-ek-bol'e-on (*di*, *ekballo*, to cast out). Name given by the ancients to a remedy which they believed capable of producing abortion.

Dieffenbach'ia segui'na. Dumb cane; native of West Indies; juice is exceedingly poisonous; plant has been recommended in dropsy.

Dieffenbach's operation. 1. For restoring the upper lip when the central part of the lip is deficient; consists in two incisions from the apex of the defect and extending them to the alæ of the nose. The two flaps obtained by these incisions are detached and connected in the median line; the mucous membrane forms the margin of the new lip. 2. For ectropium of lower lip with cicatrix; a flap of normal tissue is used to replace the cicatrix.

Dielectric, di-el-ek'trik. Medium admitting of the passage of electricity either by induction or disruptive discharge.

Diencephalon, de-en-sef'al-on (*di*, *encephalon*). One of the principal secondary divisions of the primordial medullary tube, the *Interbrain*, corresponding to the German Zwischenhirn. It includes the thalami optici, pineal gland, pituitary body, third ventricle, and optic nerve.

Dieret'ic. Escharotic; corrosive.

Diervilla trifida, de-ur-vil'lah trif'id-ah. *Bush honeysuckle.* Indigenous plant of the Honeysuckle tribe; has been used as a diuretic, and in gonorrhœa and syphilis.

Dies, de'es (*a day*). The day is, properly, the period during which the solar light illumines our horizon; but commonly, also, we designate by the word *day* the period of 24 hours. In antiquity great importance was attached to the observation of days in disease. The medical day is usually reckoned at 24 hours—universally, in estimating the duration of a disease. As regards the administration of medicine, if a medicine be ordered to be taken four times a day, it is generally understood to mean during the 12 hours of day. **D. canicula'res,** see *Canicula*. **D. contemplab'iles,** critical days. **D. contemplan'tes,** indicating days. **D. crit'ici,** critical days. **D. decreto'rii,** critical days. **D. indican'tes,** indicating days. **D. indicato'rii,** indicating days. **D. in'dices,** indicating days. **D. internun'tii,** critical days. **D. judicato'rii,** critical days. **D. radica'les,** critical days.

Diet, di'et. Originally it signified nearly the same thing as Hygiene and Regimen. At the present day it usually signifies a particular kind or system of food and drink. Also abstinence, as putting any one upon diet to deprive him of his usual nourishment. The terms milk diet, Diæta lactis; flesh or meat diet, Diæta carnis; soup or broth diet, Diæta juris or jusculi, etc., explain themselves. See *Aliment*, *Hygiene*, and *Regimen*. **D., broth,** see *Diet*. **D., drink,** decoction or potion, variously composed, and used in considerable quantity, for the purpose of purifying the blood. The Decoctum Lusitanicum, or Lisbon diet-drink, is one of the most celebrated. See *Decoctum sarsaparillæ compositum*. **D., dry,** diet in which there is but a small or no allowance of fluid. **D., flesh,** see *Diet*. **D., meat,** see *Diet*. **D. scale,** dietary. **D., slop,** slops. **D., soup,** see *Diet*.

Dietary, di'et-a-re. A regulated diet or allowance of food. Every large hospital, military or civil, every prison and eleemosynary institution of every kind, has certain dietetic regulations, and many of them have tables of dietary or diet scales, which are more or less implicitly followed. See *Diet* and *Food*.

Dieters (de'ters), **cells of.** See *Corti*. **D., pro'cesses of,** see *Processes of Dieters*.

Dietetic, di-et-et'ik. Relating or appertaining to dietetics or to diet.

Dietetics, de-et-et'iks. Branch of medicine comprising the rules to be followed for preventing, relieving, or curing diseases by diet. Dietetics is diet administered according to principle, an important part of hygiene. A well-regulated system of diet may check disease and also prevent it. Knowledge of dietetics is, indeed, as important as that of the materia medica.

Dietetists, di-et-et'ists. Physicians who apply only the rules of dietetics to the treatment of disease.

Diethylamine, di-eth-il'am-een. Secondary amine of ethyl; colorless, inflammable liquid with marked ammoniacal odor. Also a non-poisonous ptomaïne generated during putrefaction of some fish, poisonous sausage, etc. See *Ptomaïnes* (table).

Diethylendiamine, di-eth-il-en'de-am-een. Piperazin.

Diethylsulphondiethylme'thane. Tetronal.

Diethylsulphondimethylmethane, di-eth-il-sul'fon-di-meth-il-meth'an. Sulphonal.

Diethylsulphonmethylethylme'thane. Trional.

Dietic, di-et'ik. Relating or appertaining to diet. **D. diseases,** such as are produced by diet in its enlarged sense, as scurvy, rickets, alcoholism, etc.

Dieurysmus, de-u-riz'mus (*dia*, *euruno*, to dilate). Dilatation.

Diexodus, de-eks'od-us (*dia*, *exodos*, exit or way out). Any excretory opening.

Dif, as a prefix. See *Di*.

Differential diagnosis, dif-fer-en'shal di-ag-no'sis. See *Diacritica*.

Differentiation, dif-fer-en-she-a'shun (*differo*, to be different). Development of membranes, organs, functions, etc. That phenomenon which, as affecting living matter, Herbert Spencer defines as passage from an indefinite incoherent homogeneity to a definite coherent heterogeneity.

Difficultas intestinorum, dif-fe-kul'tas in-tes-tin-o'rum (difficulty of the intestines). Dysentery.

Diffiatio, dif-flah'she-o (*dif*, *flo*, to blow away). Perspiration.

Dif'fluence. Condition of being diffluent.

Dif'fluent. Semi-fluid.

Diffraction, dif-frak'shun. The deflection rays of light experience when passing close to the edge of a body or through a narrow aperture.

Diffuse'. To spread over a surface or through a mass, either by the production of greater tenuity in matter or by dissemination with force, as with electricity. Also used adjectively in the sense of diffused, as diseases—inflammation, aneurism, etc.

Diffusible, dif-fu'zib'l (*dif*, *fundo*, to pour—to pour apart or abroad). Stimulating medicines are so called which speedily pass through the system and augment the action of the vascular and nervous systems in an acute but transitory manner.

Diffusion, dif-fu'zhun. Dissemination. **D. cir'cle,** imperfect image resulting from incomplete focussing. **D., liquid,** intermixing of fluids or solutions with each other directly. See *Dialysis*.

Digas'tric (*di*, *gaster*, belly). Having two bellies, as a muscle so arranged. **D. fos'sa,** see *Fossa*.

Digastricus, de-gas'trik-us (*gaster*, belly). Name formerly given to several muscles, now restricted to one of the muscles of the superior hyoid region. The digastricus is thick and fleshy at its extremities, thin and tendinous at its middle; is attached to the mastoid groove of the temporal bone, and to a fossette at the side of the symphysis menti. Its tendon passes through an aponeurotic ring which is attached to the os hyoides. The digastricus depresses the lower jaw or raises the os hyoides, and carries it forward or backward, as in deglutition. The strong double-bellied muscle which forms the gizzard of birds is also called *Digastricus*. **D. cran'ii,** occipitofrontalis. **D. maxil'læ inferio'ris** or **D. os'sis hyoï'dei,** digastric muscle. **D. nerve,** see *Nervus digastricus*.

Digenesis, de-jen'es-is (*dis,* twice, *genesis*). See *Generation.*

Digenetic, di-jen-et'ik. Relating to diseases.

Digenia, de-jen'e-ah. See *Generation.*

Digeny, dij'en-e (*di, genesis,* generation). See *Generation.*

Digerens, dij'er-enz. Digestive.

Digerentia, dij'er-en-she-ah (*di, gero,* to carry, to digest). Digestives.

Digest'ant. Remedying or aiding digestion, as pepsin, ptyalin, etc. Ferment or acid that produces solution of the food in the alimentary canal.

Digestibility, de-jes-tib-il'it-e. Capability with which food can be digested.

Digestible, di-jes'tib'l (*digero,* to digest, *habilis,* able). Capable of being digested. All food is not equally digestible, and some of the most important are the least so—the fat of meat, for example. Certain substances, again, are entirely rebellious. As a general rule, albuminous aliments—as tender mutton and beef—are the most easily appropriated.

Dr. Beaumont, from his experiments on Alexis St. Martin, who had a gastric fistula, prepared the following table of the digestibility of various articles of food, based on the length of their stay in the stomach; although this is not an absolute proof of digestibility:

Food.	Mode of preparation.	Time required for digestion. Hours.	Min.
Rice	cooked	1	
Pigs' feet	"		
Eggs, beaten			
Mountain trout	cooked	1	30
White sweet apples	raw		
Sago	cooked	1	45
Brain	"		
Milk	"		
Ox liver	fried		
Codfish	cooked		
Sour apples	raw	2	
Eggs	"		
Salad	"		
Milk	uncooked	2	15
Turkey, wild	roasted	2	18
" tame	cooked	2	25
Wild goose	roasted		
Sucking pig			
Boiled beans		2	30
Potatoes	roasted		
Lamb	cooked		
Marrow of backbone		2	40
Chicken fricassé		2	45
Beef			
Hard sour apples		2	50
Oysters		2	55
" with bread		3	
"	steamed	3	30
Eggs	cooked but little		
Beefsteak			
Ham	raw	3	
Lean beef	roasted		
Cake			
Wheat bread			
Old cheese			
Potatoes	cooked		
Hard eggs			
Mutton soup		3	30
Oyster "			
White turnips	cooked		
Sausage			
Very fat beef		3	38
Mutton			
Dry bread with potatoes		3	45
Bread and butter and coffee			
Beans	cooked		
Pork	roasted	3	50
Tame fowl	cooked		
Beef	roasted		
Salted salmon	cooked	4	
Veal	fried		
Soup made of tough beef			
Cartilage	cooked		
Tame duck	roasted		
Soup made of pork and vegetables		4	15
Corned beef			
Wild duck	roasted	4	30
Tendons	cooked	5	30
Suet			

The time given in above table applies in reality only to the time in which the food leaves the stomach, not to the time actually required for true digestion and solution.

Digestio, de-jes'te-o. Digestion. **D. deprava'ta,** dyspepsia. **D. diffic'ilis,** dyspepsia. **D. læ'sa,** dyspepsia.

Digestion, di-jest'yun (*digero,* to digest). *Digestive process.* The function by means of which alimentary substances, when introduced into the digestive canal, undergo different alterations. See *Canal, alimentary.* The object of it is to convert them into two parts: the one, a reparatory juice, destined to renew the perpetual waste occurring in the economy; the other, deprived of its nutritious properties, to be rejected from the body. This function is composed of a series of organic actions, differing according to the particular organization of the animal. In man they are eight in number—viz. prehension of food, mastication, insalivation, deglutition, action of the stomach, action of the small intestine, action of the large intestine, expulsion of the feces. Digestion is also a pharmaceutical operation which consists in treating certain solid substances with water, alcohol, or other menstruum, at a slightly elevated temperature, in a sand-bath for example, or by leaving them exposed for some time to the sun. **D., artific'ial,** that which is effected outside of the stomach by admixture of materials like those of the gastric juice, or by the gastric juice itself.

Digestive, di-jes'tiv. Relating to digestion. See *Digestives.* **D. appara'tus,** see *Digestion.* **D. fer'ments,** enzymes contained in digestive fluids, as pepsin, trypsin, etc.; see *Ferments.* **D. juices,** see *Gastric juice, Pancreatic juice, Succus entericus,* etc., and *Ferments, digestive.* **D. or'gans,** the alimentary canal and its appendages. **D. prin'ciple,** pepsin. **D. pro'cess,** digestion. **D. text'ure,** the particular organic condition of substances affecting their digestibility. **D. tube,** canal, alimentary.

Diges'tives. Substances which, when applied to a wound or ulcer, promote suppuration; as ceratum resinæ, warm cataplasms, fomentations, etc. Such substances are vulgarly termed *drawing.* Also remedies which aid digestion.

Digestivus, de-jes-te'vus. Relating or appertaining to digestion; see also *Digestives.*

Digit, dij'it. Digitus. **D., supernu'merary,** supernumerary finger; may be owing to hereditary transmission.

Digital, dij'it-al (*digitus,* a finger). Having the shape of a finger; *digitated.* Belonging to or produced by the fingers, as digital compression, digital examination. The appendix vermiformis cæci is sometimes called the *digital appendix.* **D. ar'teries, veins,** and **nerves** are those distributed to the fingers. **D. bur'sæ,** small subcutaneous bursæ over the knuckles and the backs of the joints of the fingers. **D. cav'ity,** *Ancyroid cavity;* occipital portion of the lateral ventricle of the brain. **D. compres'sion,** see *Compression.* **D. dilata'tion,** dilatation of a canal or cavity with the finger. **D. examina'tion** or **explora'tion,** examination of any part with the finger. **D. fos'sa of fe'mur,** see *Fossa, trochanteric.* **D. f. of tu'nica vagina'lis,** depressions occurring where the tunic is reflected from the testes to the epididymis. **D. impres'sions,** slight depressions observable on the inner surface of the bones of the cranium, which correspond to the cerebral convolutions; see *Impressions.*

Digitalacrin, dij-it-al-ak'rin. Resin derived from digitalis.

Digitale, dij-it-al'e. Finger-stall. Small iron instrument for measuring the dimensions of the pelvis, which, when placed at the end of the index finger, adds to its length and enables it to reach the promontory of the sacrum.

Digitalein, dij-it-al'e-in. Glucoside from digitalis having properties of digitaline and digitoxin.

Digitaletin, dij-it-al-et'in. Principle derived from digitalis.

Digitalia, dij-it-al'e-ah. See *Digitalis.*

Digitalic, dij-it-al'ik. Appertaining or relating to digitalis, as *digitalic poisoning.*

Digitaline, dij'it-al-een. See *Digitalis.*

Digitalinum, dij-it-al-e'num. See *Digitalis.*

Digitaliretin, dij-it-al-ir-e'tin. Product of dilute acid upon soluble digitaline. See *Digitalis.*

Digitalis, dij-it-al'is (*digitale,* because its flower resembles a finger-stall). *Bacchar, Baccar, Foxglove,* order Scrophularineæ. The leaves of this plant, collected from plants of the second year's growth, *Digitalis* (Ph. U. S. and Br.), indigenous in Great Britain, are cardiac tonics, diuretic, and sorbefacient. Digitalis stimulates the cardiac muscle, and renders its contractions slower and stronger; in moderate doses tending to remove already existing irregularity of the heart's contractions. In over-doses digitalis causes vomiting, purging, dimness of sight, vertigo, delirium, hiccough, convulsions, and death—all the symptoms, in short, which characterize the acronarcotic class of poisons. Its active principle is called *Digitaline* or *Digitalin, Digitalia, Digitalium, Digitalinum, Digitin, Digitoxin.* The dose, to commence with, is gr. $\frac{1}{60}$ or gr. $\frac{1}{30}$. Several other principles have also been obtained from digitalis, as *Digitaliretin, Digitalose, Digitallin, Digitin, Digitoxin,* etc. Digitalis has been administered in inflammatory diseases, phthisis, active hemorrhage, dropsy, delirium tremens, etc. The average dose is one grain, in pill, repeated every six or eight hours; it is usually administered in tincture in the dose of five or ten drops, but as the drug is cumulative in its action it must not be continued, especially in full doses, more than a few days. When cardiac tonics are pushed too far syncope may ensue and be fatal, so that the patient should be kept in a recumbent position. **D. min'ima,** Gratiola officinalis.

Digitalium, dij-it-al'e-um. See *Digitalis.*

Digitalose, dij'it-al-oze. See *Digitalis.*

Digitalosmin, dij-it-al-oz'min (*digitalis, osme,* odor). Odoriferous principle of digitalis.

Digitaria (dij-it-ah're-ah) **dac'tylon.** Cynodon dactylon.

Digitate, dij'it-ate. Possessing finger-like processes.

Digitation, dij-it-a'shun. Division into processes having the form of fingers; several muscles, as the *serrati,* exhibit digitations similar to those which the fingers form when held separate.

Digitationes tubarum Fallopii, dij-it-ah-she-o'nees tu-bah'rum fal-lo'pe-e. See *Tube, Fallopian.*

Digitin, dij'it-in. One of the principles existing in digitalis; crystallizable, tasteless substance, devoid of physiological action.

Digitium, dij-ish'e-um. Desiccation or atrophy of the fingers. See *Paronychia.*

Dig'ito-fib'ular ar'teries. Digital arteries on fibular side.

Digitonin, dij-it'o-nin. Principle found in German digitalis, resembling saponin.

Digito-radial, dij'it-o-ra'de-al. Situated on radial side of fingers, as digito-radial arteries.

Digitorum tensor, dij-it-o'rum ten'sor. Extensor brevis digitorum pedis.

Digito-tibial, dij'it-o-tib'e-al. Situated on tibial side of the toes, as digito-tibial arteries.

Digito-ulnar, dij'it-o-ul'nar. Situated on ulnar side of fingers, as digito-ulnar arteries.

Digitox'in. Poisonous glucoside from digitalis; dose, gr. $\frac{1}{200}$ to $\frac{1}{100}$.

Digitus, dij'it-us. *Digit, Hallex, Allex.* Finger. Name given to the prolongations forming the extremity of the hand. There are five on each hand: the first, the thumb; the second, the index; the third, the middle or long finger; the fourth, ring finger; and the fifth, the little finger or ear finger. All of these have three phalanges, except the first, which has only two. **D. annula'ris,** ring finger. **D. auricula'ris,** fourth finger. **D. cor'dis,** fourth finger. **D. demonstrati'vus** or **demonstrato'rius,** index finger. **D. famo'sus,** middle finger. **D. Hippocrat'icus,** finger, Hippocratic. **D. impudi'cus,** middle finger. **D., in'dex,** index finger. **D. indicato'rius,** index finger. **D. infa'mis,** middle finger. **D. mag'nus,** thumb, pollex. **D. medicina'lis** or **med'icus,** ring finger. **D. me'dius,** middle finger. **D. min'imus,** little finger. **D. my'ops,** little finger. **D. obscœ'nus,** middle finger. **D. oti'tes** or **par'vus,** little finger. **D. pe'dis,** toe. The toes are five in number, and distinguished numerically, reckoning from within to without; the first is the great toe; the fifth, the little toe; they have nearly the same organization as the fingers. **D. pri'mus,** pollex. **D. quar'tus,** fourth finger. **D. quin'tus,** little finger. **D. saluta'rius** or **salutato'rius,** index. **D. secun'dus,** index. **D., semimor'tuous,** half-dead finger; torpid condition of fingers met with in connection with chlorosis and cerebrospinal affections. **D. supernumera'rius,** supernumerary finger; occasional monstrosity occurs in which there are supernumerary fingers, at times owing to hereditary transmission. **D. ter'tius,** third finger. **D. ver'pus,** see *Digitus.*

Diglossia, de-glos'se-ah (*dis,* double, *glossa,* tongue). Condition in which there is a double tongue.

Dignathus, dig-nath'us (*di, gnathos,* lower jaw). Monster having two lower jaws.

Dignotio, dig-no'she-o (*dignosco,* to discriminate). Diagnosis.

Dihomocinchonine, di-ho-mo-sink'o-neen. $C_{38}H_{44}N_4O_2$. Amorphous alkaloid having dextrorotatory property, obtained from Cinchona rosulenta.

Dihydrolu'tidine. $C_7H_{11}N$. Colorless alkaline liquid. A ptomaïne found in cod-liver oil; see *Ptomaïnes* (table); poisonous, producing insensibility, paralysis, and a fatal result.

Dihydroxyl-quinine, de-hid-roks'il-kwi'nine. Substance contained in secretions while quinine is being administered.

Dihypogastrius, de-hip-o-gas'tre-us (*di, hypogastrium*). Monster whose pelvis, together with the lower portion of the abdomen, is double.

Dihysteria, de-his-te're-ah (*di, hustere,* uterus). The state in which there is a double uterus.

Dii'od-betanaph'thol. Naphthol-aristol; combination of iodine, betanaphthol, potassium iodide, and sodium carbonate and hyperchloride; has antiseptic properties similar to betanaphthol.

Di-i'odide-hy'dro-i'odate of caf'fein. Caffein triiodide.

Di-i'odide of naph'thol-be'ta. Iodo-naphthol-beta.

Di-i'odide of thio'phen. See *Thiophen di-iodide.*

Di-io'dosalicylate of so'dium. Sodium di-iodosalicylate.

Di-iodparaphenolsulphon'ic ac'id. Sozoiodol.

Di-isobutylor'tho-cre'sol i'odide. Europhen.

Dijudicatio, de-ju-de-kah'she-o (*di, judico,* to judge). Crisis.

Diktyi'tis or **Dictyi'tis** (*diktuon,* net). Retinitis.

Dilaceration, di-las-er-a'shun (*di, lacero,* to tear). Laceration.

Dilalia, dil-al'e-ah. Ventriloquism.

Dilatable, di-late'a-b'l. Capable of being dilated.

Dilatatio, de-lat-ah'she-o. Dilatation. **D. bronchio'rum,** bronchia, dilatation of the. **D. intestino'rum,** dilatation of the intestines, as in tympanites. **D. ventric'uli,** dilatation of the stomach.

Dilatation, dil-at-a'shun (*dilato,* to enlarge). Augmentation of the bulk of a body, occasioned by a separation of some of the molecules, as by heat. In surgery, accidental or preternatural augmentation of a canal or opening, as in aneurisms, varices, etc., or the process of enlarging any aperture or canal. When used to obtain a view of parts, as by the speculum, it is termed dioptrismus. The termination *ectasis* signifies dilatation; bronchiectasis, cardiectasis, and splenectasis, for example, denote dilatation of the bronchial tubes, of the heart, and of the spleen. **D. cyst** or **tu'mor,** see *Retention tumor.*

Dilatator (dil-at-ah'tor) **con'chæ.** Muscle of external ear not always present, the intertragicus muscle. **D. laryn'gis,** name given to a group of muscles embracing the crico-arytænoideus posticus, crico-thyreoideus posticus, and kerato-arytænoideus. **D. pharyn'gis,** stylo-pharyngeus. **D. pupil'læ,** muscular fibres commencing at the ciliary margin of the iris and extending to the sphincter pupillæ.

Dilatatorium, dil-at-at-o're-um. Dilator.

Dilatatorius, dil-at-at-o're-us. Dilator.

Dilating agents, di-la'ting a'jents. Substances used in surgery to keep parts separate which have a tendency to unite, as the edges of an incision, or to increase and dilate openings of canals, either when natural or formed accidentally or artificially. The chief agents of this kind are prepared sponge tents, bougies, sounds, etc. See *Dilator.*

Dilator, di-la'tor (*di, fero,* to carry). Muscle which dilates certain parts; as the inspiratory muscles, which dilate the chest. Also an instrument to dilate tubular openings, a wound, excretory canal, or other natural or artificial opening. When employed to obtain an inspection of internal parts, it is termed speculum, dioptra, or dioptron, named, from the part to which it is applied, the speculum oris, speculum nasi, speculum vaginæ, etc. **D., Ar'nott's,** dilator for strictures of the urethra. **D., Goodell's,** instrument used for dilating the os uteri and cervical canal, provided with two blades. **D., Palm'er's,** this instrument is used for the same purpose, an improvement of the original dilator of Ellinger of Stuttgart. **D. pylo'ri,** muscular fibres of the stomach passing over the pylorus, supposed to act as a dilator to it. **D. tu'bæ Eustach'ii,** tensor palati. **D. vestib'uli laryn'gis,** thyreo-epiglotticus muscle.

Dilato'res ala'rum na'si. Compressor naris.

Dila'tor, cer'vical. Instrument conveniently used for dilating the cervical canal of the uterus, consisting of a syringe and rubber tubes.

Dilatris tinctoria, dil-at'ris tink-to're-ah. Lachnanthes tinctoria.

Dill (Sax. bile). Anethum graveolens.

Dilldoo, dil'du. *Dildoe.* Artificial penis.

Dill-fruit. See *Anethum graveolens.*

Dill-water. See *Anethum graveolens.*

Dilly, dil'le. Anthemis cotula.

Diluentia, dil-u-en'she-ah (pl. of **Diluens**). Diluents.

Dil'uents (*di, luo,* wash away). Medicines which have been conceived proper for augmenting the fluidity of the blood and other animal liquids. All aqueous drinks are diluents. They are administered with great advantage in various diseases. In fever, water, which is the most familiar diluent, may be freely allowed; the only precaution is to give it *hot* in the cold stage, *cold* in the hot, and *tepid* in the sweating. In diseases where it is considered necessary to abstract blood largely, diluents should not be given too freely. The abstraction of blood occasions activity of absorption, and the mass is speedily restored. When demulcents are exhibited in cases of urinary disease, they act simply as diluents; their mucilaginous portion is digested in the stomach and small intestines, the watery portion alone being separated by the kidney.

Dilute, di-lute'. Diluted. In pharmacy these terms are generally used synonymously. By some, however, a dilute acid, for example, means a weak acid, while a diluted acid is one that has been rendered weaker by the addition of water.

Dilution, di-lu'shun. With the homœopathist, the action by which the dose of a medicine is diminished, as by dissolving a grain of any medicinal article in a certain quantity of a liquid; then taking a grain of the solution and adding it to a like quantity of the liquid, and this may be repeated until the "thirtieth dilution."

Diluvium, de-lu've-um. Deluge.

Dil'weed. Anthemis cotula.

Dimethylamine, di-meth'il-am-een. Substance in Peruvian guano. Ptomaïne of a non-poisonous character $(CH_3)_2,NH$, gaseous at ordinary temperatures. It has been found in putrefying gelatin, in decomposing yeast, herring-brine, and in poisonous sausage. See *Ptomaïnes* (table).

Dimethylben'zine. Xylol.

Dimethylether, de-meth-il-e'thur. A gas generated by subjecting methylic alcohol to heat with sulphuric acid; anæsthetic.

Dimethylethylcar'binol. Amylene hydrate.

Dimethylketone, di-meth-il-ke'tone. Acetone.

Dimethyloxychinicine (di-meth-il-ok-se-kin'is-een) or **Dimethyloxyquin'izine.** Antipyrine.

Dimethylphenylpyraz'olon. Antipyrine.

Dimethylxanthine, di-meth-il-zan'theen. Theobromine.

Dimetra, de-met'rah (*di, metra,* uterus). State in which there is a double uterus.

Dimorphism, de-mor'fizm (*di, morphe,* shape). Condition of being dimorphous; term given to compounds which crystallize in two different forms.

Dimor'phous (*di, morphe,* shape). Existing in two forms.

Dingee, din'ge. Dengue.

Dinic, din'ik (*dinos,* vertigo). Antidinic.

Dinitrocellulose, di-ni-tro-sel'u-loze. Pyroxylin.

Din'ner pills. See *Pilulæ aloës et mastiches.*

Dinomania, din-o-mah'ne-ah (*dinos,* whirl). Tarantismus; choreomania.

Dinus, de'nus. Vertigo. **D. scoto'ma,** giddiness with impaired sight, often succeeded by headache and perhaps scotomata or fixed blind spots in the field of vision. **D. ver'tigo,** vertigo.

Diobolon, de-o'bo-lon (*di, obolos*). Scruple.

Diodoncephalus, de-o-don-sef'al-us (*di, odous,* tooth, *kephale,* head). Monster with a double range of teeth or a double jaw.

Diodus, de'o-dus (*dia, hodos,* way). Opening by which an excretion takes place.

Dicœcesis, de-ek-e'sis (*dia, oikeo,* to manage a house). Dispensation.

Dicœchius, de-e'ke-us (*dia, oikia,* habitation). Animals are so called in which the reproductive elements are found in separate individuals belonging to opposite sexes.

Diog'enes' cup. Hollow, resembling a cup, formed by bending the fingers of the hand.

Dioncosis, de-on-ko'sis (*dia, onkos,* tumor). Tumefaction or plethora occurring either directly from too great a quantity of fluid circulating in the system, or owing to the retention of substances which ought to be excreted. See *Intumescence.*

Dionysianus, de-on-is-e-an'us (*Dionusos,* Bacchus, represented by the poets as wearing horns). One having long or hornlike excrescences.

Dionysiscus, de-on-is-is'kus (same etymon). One having long hornlike excrescence on the frontal region.

Diophthalmus, de-of-thal'mus (*di, ophthalmos,* eye). Bandage applied over both eyes.

Diopsimeter, de-op-sim'et-ur (*diopsis,* clear vision, *metron,* measure). Instrument for measuring the visual field.

Dioptometer, de-op-tom'et-ur. Instrument for measuring the refraction of the eye.

Dioptometry, de-op-tom'et-re. Measurement of refraction and accommodation of the eye by means of the dioptometer.

Dioptra, de-op'trah (*dia, optomai,* to see). Speculum. See *Dilator.*

Dioptre, de-op'tre. Unit of refraction of lenses; having a lens of the focal distance of a metre.

Dioptric, di-op'trik. Relating to dioptrics.

Diop'trics. That branch of optics which treats of refraction.

Dioptrismus, de-op-triz'mus (*dioptron*). See *Dilatation.*

Dioptrom'etry. Dioptometry.

Dioptron, de-op'tron. Speculum. See *Dilator.*

Dioptry, de-op'tre. See *Dioptre.*

Diorthosis (*diorthroo,* to make straight). Reduction of a fractured or luxated limb.

Dioscorea, de-os-ko're-ah (after Dioscorides). See *Yam.* **D. villo'sa,** *Wild Yamroot, Colic root*; indigenous; order Dioscoriaceæ. Decoction of the root has been prescribed in bilious colic. Said to be expectorant, diaphoretic, and, in large doses, emetic.

Diosma, de-os'mah (*dios,* divine, *osme,* odor). D. crenata. **D. crena'ta,** South African plant, the powder of whose leaves—*Buchu leaves, Diosma buchu,*

Bucku, Bocchoe, Boocho, Buckho, ord. Rutaceæ—is used by the Hottentots to perfume their bodies. Buchu (Ph. U. S.) is stated to be derived from Barosma betulina, B. crenulata, B. serratifolia, and other species of Barosma. Employed in chronic affections of the bladder and urinary organs in general, and has also been given in cholera. Often adulterated in commerce by the substitution of less potent plants of the same family, as Diosma serratifolia and Eupleurum serrulatum. *Bucco, Buchu*, is referred by the British Pharmacopœia to *Barosma betulina, B. crenulata*, and *B. serratifolia*.

Diosmin, de-os'min. Active principle contained in buchu.

Diospyrus (de-os'pir-os) (*dios*, divine, *puros*, wheat) **embryop'teris.** An East Indian species bearing a very astringent fruit. **D. kax'i** grows in China and Japan. **D. lo'tus**, *Faba Græca, Indian date-plum*, ord. Ebenaceæ. Tree grown in Southern Europe; fruit very astringent, and used in dysentery and hemorrhage. **D. melanox'ylon**, ebony tree of Malabar and Coromandel, with an astringent tonic bark. **D. Virginia'na**, *Persimmon*. Common tree in the middle parts of the United States. Fruit: persimmons, yellow plums, winter plums, seeded plums. The unripe fruit, *Diospyros*, is distressingly acerb and astringent; has been used as an astringent. Bark of the tree is extremely bitter, and may be used where bitters are indicated.

Dioxide, di-oks'id. Binoxide.

Diphallia, de-fal'le-ah (*dis, phallos*, penis). Condition of having a double penis.

Diphorus, dif'or-us. Diphrus.

Diphrus (dif'rus) or **Diph'orus** (*di, phero*, to carry). Properly, a seat for two; close stool. **D. maieu'ticus**, obstetric chair.

Diphryges, dif're-gees (*di*, twice, *phrugo*, to torrefy). Oxide of copper, more or less pure.

Diphtheria, dif-the're-ah (*diphthera*, skin or membrane). *Diphtheritis*. An infectious disease characterized by profound vital depression and the formation, through exudation and necrosis, of a false membrane, usually on the tonsils and pharynx, but affecting sometimes the mouth, nose, or larynx. The membrane formed is grayish-white and adherent, leaving, when detached, a raw surface. Ulceration and gangrene sometimes follow, and other organs, as the glands, become involved. The symptoms, of course, vary with the part affected, whether the seat of it be the fauces, larynx, or nose. In about one-sixth of the cases diphtheritic paralysis occurs usually in the pharynx. It has been ascribed to a specific bacillus; see *Bacillus, Klebs-Löffler*. **D., larynge'al**, D. involving the larynx, sometimes producing suffocation. **D., malig'nant**, D. characterized by typhoidal symptoms. **D., na'sal**, D. extending to the nasal passages. **D., sec'ondary**, D. complicated with typhoid fever, scarlatina, etc.

Diphtherial, dif-the're-al. Diphtheric.

Diphtheric, dif-ther'ik (same etymon as **Diphtheritis**). Diphtheritic, diphtherial. Relating or appertaining to diphtheria.

Diphtheritic, dif-ther-it'ik. Diphtheric. **D. chan'cre**, see *Chancre*. **D. nephri'tis**, acute parenchymatous nephritis as the sequela of diphtheria. **D. paral'ysis**, paralysis of the muscles of the soft palate and larynx, after subsidence of the chief symptoms in diphtheria.

Diphtheritis, dif-ther-e'tis (*diphthera*, skin or membrane). Diphtheria, diphtheritic inflammation or phlegmasia, pellicular inflammation. Class of diseases characterized by a tendency to the formation of false membranes, and which affect the dermoid tissue, as the mucous membranes and even the skin. See *Cynanche maligna* and *Pharyngitis, diphtheritic*. **D. of the throat**, pharyngitis, diphtheritic. **D. trachea'lis**, cynanche trachealis.

Diphtheroid, dif'ther-oid. Resembling diphtheria. **D. chan'cre**, chancre with membrane simulating the diphtheritic, as a secondary lesion on the glans penis.

Diphthon'gia (*dis*, twice, *pthongos*, distinct sound). Condition in which two sounds are produced in the larynx simultaneously, but differing in pitch; due to incomplete unilateral paralysis of the recurrent laryngeal nerve, or to a lesion of the vocal cord.

Diplacu'sis. Diplakousis.

Diplakousis (dip-lak-oo'sis) or **Diplacusis**, dip-lak-u'sis (*diploos*, double, *akouo*, to hear). Abnormal condition of hearing, characterized by a note being duplicated in sound for the same ear, as in *D. monauralis*, or as in *D. binauralis* for the two ears, although the secondary note may be too sharp or too flat.

Diplasiasmus, dip-las-e-az'mus (*diplasios*, double). Duplication.

Diplecoia, dip-le-koi'ah (*diplo, akoe*, hearing). Double hearing.

Diplegia, dip-lej'e-ah (*di, plege*, blow). Double symmetrical paralysis. **D. facia'lis**, double facial paralysis. **D., spas'tic**, birth palsy.

Dip'lo (*diploos*, double). In composition, double.

Diploblastic, dip-lo-blas'tik (*diploos*, double, *blastos*, sprout). Provided with two germinal layers.

Diplocephalia, dip-lo-sef-al'e-ah (*diplo, kephale*). Monstrosity characterized by the presence of two heads on the same body.

Diplococcus, dip-lo-kok'kus (*diplo, coccus*, berry). Minute cocci united in pairs. See *Micrococci* and *Bacteria*. **D. pneumo'niæ**, bacillus of pneumonia.

Diplocoria, dip-lo-ko're-ah (*diploos, kore*, pupil). Condition of the eye in which two pupils are present.

Diploë, dip'lo-e (*diploos*, double). Areolar structure separating the two tables of the skull from each other. The diploë has the same use as the cellular structure of the bones in general. See *Cancelli*.

Diploëtic, dip-lo-et'ik. Diploic.

Diplogastria, dip-lo-gas'tre-ah (*diploos, gaster*, belly). Monster having two abdomens.

Diplogenesis, dip-lo-jen'es-is (*diplo, genesis*, generation). Organic deviation consisting in the duplication of parts; monstrosity by duplication, *Duplicitas monstrosa*, constituting *double monsters*.

Diploic (dip-lo'ik) or **Diploët'ic.** Relating or appertaining to the diploë. **D. veins**, veins in the flat cranial bones, the trunks and larger branches of which, veins of Breschet, run mostly separately in special arborescent larger canals, *Breschet's bone canals*, which terminate in the *Emissoria Santorini*.

Diplolepis gallæ tinctoriæ, dip-lo'lep-is gal'le tink-to're-e. See *Quercus infectoria*.

Diploma, dip-lo'mah (*diploo*, to fold double). Letter or writing conferring some privilege; usually applied to a document certifying that a person has obtained the title of doctor. It was so called because formerly written on waxed tables folded together. Diploma is also used in pharmacy for a vessel with double walls, as a water-bath.

Diplomyelia, dip-lo-me-el'e-ah (*diploos, muelos*, marrow). Congenital malformation of spinal cord, with duplication of cord, appearing in various forms of double monsters.

Diplophony, dip-lof'on-e (*diploos, phone*, voice). Diphthongia.

Diplo'pia (*diplo, optomai*, to see). Double vision. Affection of the sight in which two distinct sensations are produced by the same object, which consequently seems double. Sometimes more than two are seen. The affection arises from some derangement in the visual axes, in consequence of which the images are not impressed on corresponding parts of the retina of each eye. In *homonymous* or *direct diplopia* the image to the right of the patient belongs to his right eye, the left image to his left eye. This occurs in convergent squint. Crossed double image, in which the image to the right belongs to the left eye, and *vice versâ*, arises in divergent squint, *heteronymous diplopia*. At times the diplopia affects one eye, or each eye when used alone, owing to some irregularity in the curvature, density, or position of the dioptric media. It is then called *Uniocular diplopia, Monodiplopia*. Diplopia of both eyes has been termed *Binocular diplopia, Amphodiplopia, Amphoterodiplopia, Amphamphoterodiopsia*.

Diplo'py. Diplopia.

Diplosis, dip-lo'sis. Diploë; duplication.

Diplosoma (dip-lo-so'mah) (*diplo, soma,* body) **crena'tum.** An imperfectly described entozoon which has been passed from the urinary bladder; varies in length from four to six or eight inches, and in the middle is bent at an acute angle upon itself, so that the two halves hang nearly parallel, and give to it an appearance as if two worms had been tied together by their heads. See *Parasites.*

Diplosomatia (dip-lo-so-mat'e-ah) or **Diplosomia,** dip-lo-so'me-ah. Organic deviation characterized by the presence of two complete bodies united by one or more of their parts.

Diploteratography (dip-lo-ter-at-og'raf-e) or **Diploteratol'ogy** (*diploos, teras,* monster, *grapho,* to write). Description or study of double monstrosities.

Dipnous, dip'no-us (*di, pnoe,* breath). *Bispirus.* Having two vent-holes; epithet applied to wounds which pass through a part and admit the air at both ends.

Dipodacephalus, dip-od-ah-sef'al-us (*dis,* twice, *pous,* foot, *kephale,* head). Monster having two feet, but devoid of head.

Dipolar, di-po'lar. Bipolar; having two poles.

Dip'pel's an'imal oil. Oleum animale Dippelii.

Diprosopia, dip-ro-so'pe-ah (*dis, prosopon,* face). Condition of being a diprosopus.

Diprosopus, dip-ro-so'pus (*di, prosopon,* countenance). Monster with double face. **D. diædœ'us** (*di, aidoia,* parts of generation), double monster in which the duplication affects superiorly the face and inferiorly the anterior pelvic region. **D. dihypogas'trius,** double monster in which the duplication affects superiorly the face and inferiorly the lower part of the body, four lower extremities being always present. **D. diophthal'mus,** double monster with two eyes. **D. tetrophthal'mus,** double monster with four eyes. **D. tetro'tus,** diophthalmus with four ears. **D. triophthal'mus,** diophthalmus with three eyes. **D. trio'tus,** diophthalmus with three ears.

Dipsa, dip'sah. Thirst.

Dipsacus, dip'sak-us (*dipsa,* said to be so called owing to the leaves being able to hold water). Diabetes. **D. fullo'num** has had similar properties with the next ascribed to it; both have been also regarded as stomachic. **D. pilo'sus,** shepherd's rod; regarded as sudorific. **D. sati'vus,** D. fullonum. **D. sylves'tris,** *Cultivated teasel*; the roots of this European plant are diuretic and sudorific; the water which collects at the base of the leaves has been recommended as an eye-water. **D. vulga'ris,** D. fullonum.

Dipsesis, dip-se'sis. See *Dipsosis.*

Dipseticus, dip-set'ik-us (*dipsa*). Remedy believed to be capable of exciting thirst. See *Alterative.*

Dipsodes, dip-so'dees (*dipsa, odes*). Thirsty; causing thirst.

Dipsomania, dip-so-man'e-ah (*dipsa, mania*). Really thirst-mania; often, however, applied to habitual drunkenness and to delirium tremens; insatiable desire for intoxicating liquors—*Alcoholophilia.*

Dipsomaniac, dip-so-ma'ne-ak. One suffering with dipsomania.

Dipsopathy, dip-sop'ath-e (*dipsa, pathos,* affection). Mode of treatment consisting in abstaining from drinks.

Dip'sos. Thirst.

Dipsosis, dip-so'sis (*dipsa*). Morbid thirst; desire for drinking, excessive or impaired. **D. a'vens,** constant desire for drink, as in fevers, dropsy, diabetes, etc. **D. ex'pers,** absence of thirst.

Dipterix (dip'ter-iks) **odora'ta.** *Coumarouna odorata.* The fruit of this large tree of Guiana is a pod enclosing a single seed; the bean, Tonka bean, has a strong, agreeable, aromatic odor, and is used to flavor snuff and as a substitute for the vanilla bean.

Dipterocarpus, dip-ter-o-kar'pus (*di, pteron,* wing, *karpos,* fruit). Genus of large trees, nat. ord. Dipteraceæ, natives of India, which yield a resinous oil that has been employed, like copaiba, in gonorrhœa. The *Gurjun* or *Gurgina* or *Garjina balsam* or *wood-oil* is the product of *Dipterocarpus turbinatus*; the resinous secretion of *D. trinervis* has been used as an excitant ingredient of salves to inveterate ulcers.

Dipygus, de-pe'gus (*di, puge,* nates). Double monster, the duplication being confined to the posterior portion of the lower end of the trunk, the coccygeal region; also used as a synonym of Deradelphus. **D. dibrach'ius,** D. with two arms. **D. tetrabrach'ius,** D. with four arms.

Dipyrenon, dip-ir-a'non (*di, puren,* kernel). Specillum or probe with two buttons or kernels—one at each end.

Dipyrites, dip-ir'it-ees (twice baked). Biscuit.

Dipyros, dip'ir-os (*di, pur,* fire). Biscuit.

Diquinicine, de-kwi'nis-een. $C_{40}H_{46}N_4O_3$. Amorphous alkaloid in commercial chinoidine.

Dirca palustris, dir'kah pal-us'tris. *Leatherwood, Swamp leatherwood, Moosewood, Ropebark.* Indigenous shrub, analogous to mezereon in its action; applied to the skin, the bark vesicates.

Director, di-rek'tor (*di, rego,* to rule, to direct). *Conductor.* Grooved sound for guiding a knife in dividing any part. **D. pe'nis,** ischiocavernosus.

Diribitorium, di-rib-it-o're-um (*diribeo,* to separate). Mediastinum.

Dirt-eat'ing. See *Chthonophagia* and *Geophagism.*

Diruptio, de-rup'she-o (*di, rumpo,* to break). Spontaneous opening or rupture, as of an abscess. **D. cor'dis,** rupture of the heart.

Dis, as a prefix. See *Di.*

Disarticulation, dis-ar-tik-u-la'shun. Amputation through a joint.

Disassimilation, dis-as-sim-il-a'shun. Retrogressive metamorphosis; katabolism.

Disc. See *Disk.*

Discharge, dis-charge' (*dis, charge*). Increased outflow from any part which naturally secretes a fluid. In electricity, the passing off of the electric fluid in a charged Leyden jar by bringing by a conductor the external coating into metallic proximity with the internal one. **D., disrup'tive,** discharge of electricity with emission of sound and light.

Dischroa, dis-kro'ah. Sickly and unhealthy color of the skin.

Dis'ciform. Having the shape of a disk.

Discission, dis-sizh'un. Operation for cataract, in which the capsule of the lens is incised with a needle with sharp edges. **D. nee'dle,** needle employed in cataract operation.

Discoblastic, dis-ko-blas'tik (*diskos, blastos,* shoot). Term applied to separation of a disk from an ovum.

Dis'coid, (*diskos, eidos,* shape). Disk-shaped.

Discoloration, dis-kul-ur-a'shun. See *Decoloration.*

Discreta purgatio, dis-kra'tah pur-gah'she-o. Purgation or expulsion of some particular matter.

Discrete, dis-kreet' (*dis, cerno,* to separate). Epithet given to certain exanthemata in which the spots or pustules are separated from each other; opposed to confluent.

Discretivus, dis-kra-te'vus. Diagnostic.

Discretorium, dis-kre-to're-um. Diaphragm.

Discrimen, dis-kre'men (separation, division). Bandage used in bleeding from the frontal vein; so called because, in passing along the sagittal suture, it divides the head into two equal parts. **D. calva'riæ me'dium,** diploë. **D. na'rium,** septum narium. **D. na'si,** bandage in the form of letter X, intended to support the nose in transverse wounds of that organ. **D. thora'cis et ven'tris,** diaphragm.

Discs. See *Disks.*

Discus, dis'kus. Disk. Quoit; plate or platter or anything resembling it in form. **D. ge'nu,** patella. **D. lentifor'mis,** see *Nucleus lenticularis.* **D. oöph'orus,** discus proligerus. **D. op'ticus,** optic disk. **D. prolig'erus,** see *Proligerous.* **D. vitelli'nus,** proligerous disk.

Discuss, dis-kus'. To dissolve and remove; said of tumors.

Discussion, dis-kush'un (*dis, quateo,* to shake, to shake apart). Resolution.

Discussiva, dis-kus-se'vah. Discutients.

Discussoria, dis-kus-so're-ah. Discutients.

Discutients, dis-ku'she-ents. Substances possessing the power of repelling or resolving tumors.

Disdiaclasis, dis-de-ak'las-is (*dis,* twice, *diaklao,* to break). Double refraction.

Disdiaclasts, dis-di'ak-lasts (*dis, diaklasis*). Sarcous elements; small doubly refractive contractile disks observed when muscular fibre is examined under the polarization microscope.

Disease, dis-eez'. *Malady, Complaint, Sickness, Distemper, Distemperature, Egritude, Ail, Ailment, Illness.* Opposite state to that of health, consisting in change either in position and structure of parts, or in the exercise of one or more of their functions, or in both. By some, disease is applied to structural change, while *disorder* is restricted to functional derangement. The following table comprises, under the two heads *Diseased Nutrition* and *Altered Mechanism,* the chief elements of structural disease, all of which are dependent on modified cell-action:

- Diseased Nutrition.
  - Increased—Hypertrophy,
  - Diminished—Atrophy.
  - Perverted . .
    - Inflammation,
    - Induration,
    - Softening,
    - Transformation and degeneration.
    - Deposits. . .
      - Enplastic . . . . — Cicatrices, False membranes.
      - Cacoplastic . . . . — Cirrhosis, Fibro-cartilage, Gray tubercle, Atheroma.
      - Aplastic . . . . . — Yellow tubercle, Calcareous matter.
    - Growths . . .
      - Non-malignant . — Cysts, Tumors, Hydatids.
      - Malignant . . . . — Carcinoma, Encephaloma, Melanosis.
- Altered Mechanism.
  - Contraction,
  - Dilatation,
  - Obstruction,
  - Compression,
  - Displacement,
  - Rupture, etc.

D., acute, see *Acute.* **D. of Ad'dison,** see *Capsule, renal.* **D., Al'ibert's,** fungoid mycosis. **D., autog'enous,** see *Autogenous.* **D., bad,** syphilis. **D., bark'ing,** mal de Laira. **D., Base'dow's,** see *Exophthalmia.* **D., Baz'in's,** psoriasis of the mouth. **D., Béclard's,** hernia through the saphenous opening. **D., Bell's,** paralysis of seventh cranial nerve. **D. of blood,** see *Blood disease.* **D., blue,** cyanopathy. **D. of Bright,** kidney, Bright's disease of the. **D., Brown-Se'quard's,** paralysis from unilateral lesion of spinal cord. **D., caisson,** see *Caisson.* **D., Caz'enave's,** lupus erythematodes. **D., Charcot's,** amyotrophic lateral sclerosis; see *Charcot.* **D., chronic,** see *Chronic.* **D., Corrigan's,** aortic valvular insufficiency. **D. of Cotun'nius,** sciatica. **D., Cruveil'hier's,** atrophy, progressive muscular; simple gastric ulcer. **D., Dressler's,** paroxysmal hæmoglobinuria. **D., Dubini's,** electrical chorea. **D. of Duchenne,** ataxia, locomotor, progressive; pseudo-hypertrophic paralysis. **D., Duh'ring's,** dermatitis herpetiformis. **D., Eichstedt's,** pityriasis versicolor. **D., Eng'lish,** rachitis. **D., Erb's,** paralysis of brachial plexus. **D., Erb-Charcot's,** spasmodic locomotor ataxia. **D., extrin'sic,** external disease. **D., fam'ily,** see *Hereditary.* **D., feigned,** feigned disease. **D., Foth'ergill's,** neuralgia of trigeminal nerve. **D., Fouchard's,** alveolo-dental periostitis. **D., foul,** syphilis. **D., Fried'rich's,** hereditary ataxic paraplegia. **D., func'tional,** disturbance of function without appreciable structural lesion. **D., fun'goid,** encephaloid. **D., gastroenter'ic,** gastroenteritis. **D., Gerier's,** paralytic vertigo. **D., Gibert's,** pityriasis rubra. **D. of Graves,** see *Exophthalmia.* **D., grind'er's,** asthma, grinder's. **D., hæmatocere'briform,** encephaloid. **D., Har'ley's,** paroxysmal hæmoglobinuria. **D., Heb'erden's,** nodular rheumatism. **D., Hebra's,** polymorphous erythema; chronic pityriasis rubra. **D., Hen'och's,** purpura with abdominal symptoms. **D., hered'itary,** see *Hereditary.* **D., Hodgkin's,** pseudoleucocythæmia. **D., Hodgson's,** aortic atheroma. **D., Huguier's,** fibromyoma of uterus. **D., Hunt'ingdon's,** hereditary chorea. **D., idiopath'ic,** one not dependent on any other discase. **D., intercur'rent,** see *Intercurrent.* **D., Jack'son's,** epilepsy, Jacksonian. **D., Ja'cob's,** rodent or lupous ulcer. **D., Jaksch's,** pseudoleucocythæmia of infants. **D., Kapo'si's,** xeroderma pigmentosa. **D., Kopp's,** thymic asthma. **D., Laënnec's,** cirrhosis or chronic interstitial inflammation of the liver. **D., Lan'dry's,** acute ascending paralysis. **D., Leber's,** hereditary optic atrophy. **D., Littré's,** diverticular hernia. **D., Lob'stein's,** sarcoma of retroperitoneal glands. **D., lu'cifer match'maker's,** see *Phosphorus.* **D. Lud'wig's,** infectious inflammation of sublingual and submaxillary regions. **D., Malas'sez's,** cyst of the testicle. **D., Marie's,** acromegaly. **D., Menière's,** auditory vertigo. **D., Millar's,** laryngismus stridulus. **D., Mor'van's,** analgesic paralysis of the extremities. **D., nutri'tional,** D. connected with processes of development and growth. **D., occupa'tion,** D. dependent on or connected with personal occupation, as grinder's asthma. writer's cramp, etc. **D., organ'ic,** disease dependent upon or associated with structural lesion. **D., Pa'get's,** hypertrophic osteitis; precancerous eczema of the mamma. **D., Park'inson's,** paralysis agitans. **D., Par'rot's,** syphilitic pseudo-paralysis; syphilitic osteophytes of the skull. **D., Par'ry's,** exophthalmic goitre. **D., Par'sons',** exophthalmic goitre. **D., Pa'vy's,** intermittent albuminuria. **D., period of incubation of,** see *Incubation.* **D., phos'phorus jaw,** see *Phosphorus.* **D., por'cupine,** ichthyosis. **D., Pott's,** caries of the vertebræ. **D., pretend'ed,** feigned disease. **D., Raynaud's,** vaso-motor symmetrical gangrene; paralysis after parotiditis. **D., Reclus's,** cystic disease of the breast. **D., sim'ulated,** feigned disease. **D., specif'ic,** disease due to a specific poison, as syphilis. **D., struc'tural,** D., organic. **D., sur'gical,** external disease. **D., Syd'enham's,** ordinary chorea. **D., symptomat'ic,** see *Symptomatic.* **D., Thom'sen's,** myotonia congenita. **D., Torn'wald's,** inflammation of pharyngeal tonsil. **D., Tourette's,** motor incoordination. **D., Volk'mann's,** congenital tibio-tarsal dislocation. **D., War'drop's,** malignant onychia. **D., Weil's,** acute infectious jaundice. **D., Werthoff's,** purpura hæmorrhagica. **D., Wil'lard's,** tubercular lupus. **D., Wil'son's,** universal exfoliative dermatitis. **D., Winck'el's,** cyanosis neonatorum. **D., zymot'ic,** see *Zymotic.*

Diseased, dis-eezd'. Sick.

Disecoia, dis-ek-oi'ah (*dis,* twice, *akoe,* hearing). Diplacusis.

Disengagement, dis-en-gaje'ment. The act of releasing or detaching; term employed in obstetrics to denote the appearance of the fœtus, or any part thereof, from the canal of the pelvis.

Disfiguration, dis-fig-u-ra'shun (*dis, figuro,* to form). Deformation.

Disgorgement, dis-gorj'ment (*dis, gorge,* throat). Opposite condition to that of engorgement. Discharge or abstraction of a certain quantity of fluid which had previously collected in a part, as disgorgement of bile. It also means vomiting.

Disgust, dis-gust' (*dis, gusto,* to taste). Loathing.

Aversion for food. Disgust is not the same as anorexia. The latter is only a want of appetite; the former consists in real repugnance for food.

Disinfect'. To render innocuous by disinfection.

Disinfectant, dis-in-fek'tant (*dis, inficio,* to infect). This term has been restricted by some to agents that are capable of neutralizing morbific effluvia; but it really includes also antiseptics or agents that are capable of removing any incipient or fully-formed septic condition of the living body or any part of it. Disinfectants are agents destructive to the specific poisons of communicable diseases; and as these are usually due to micro-organisms, the disinfectants become also antizymotics. They are employed to destroy morbific germs in the excreta of those suffering from such diseases or in the rooms occupied by them.

Disinfecting liquid (dis-in-fek'ting lik'wid), **Sir Wil'liam Bur'nett's.** See *Burnett's disinfecting liquid.* **D. liq'uid of Con'dy,** see *Condy's disinfecting fluid.* **D. liq'uid of Dar'by,** see *Condy's disinfecting liquid.* **D. liq'uid, Labarraque's,** liquor sodæ chlorinatæ. **D. liq'uid of Ledoyen,** see *Ledoyen's disinfecting liquid.*

Disinfection, dis-in-fek'shun. Act of attempting to destroy miasmata with which the air, the clothing, etc. may be infected. Various means have been proposed for this purpose. The agents most commonly employed are chlorine, sulphurous and chlorohydric acid gases, vapors of vinegar, nitrous acid, carbolic acid, and what is, perhaps, the most manageable of any, chlorinated lime, or any of the chlorides of the alkalies. It is more than questionable whether the chemical action that occurs between these agents and the miasmata is capable of thoroughly destroying morbific miasms. Disinfection also includes the action of antiseptics. The most valuable disinfecting agents are heat, preferably at 230° to 250° F., either by burning or steaming, or by boiling in soda solution; chloride of lime and milk of lime; and corrosive sublimate, the latter being the most destructive to septic organisms.

Disinfec'tol. Brownish-dark liquid, composed of carbolic acid, soap, hydrocarbons, and soda, used as a disinfectant.

Disintegrate, dis-in'te-grate (*dis, integro,* to make whole). To reduce to small fragments or particles.

Disjuncti morbi, dis-junk'te mor'be (*dis, jungo,* to join). Disjoined diseases. Diseases which occupy different organs, and are not produced by each other.

Disjunction, dis-junk'shun. Separation of parts which are normally close together.

Disk. Discus. **D., blood,** globule of the blood. **D., Bow'man's,** see *Sarcous elements.* **D., choked,** see *Choked, Papillitis,* and *Optic neuritis.* **D., cupped,** hollowed condition of the optic disk, natural and not pathological, or resulting from glaucoma, atrophy of the optic nerve, etc. **D., engorged,** see *Optic neuritis.* **D., ger'minal,** see *Germinal.* **D., interver'tebral,** intervertebral cartilage. **D., op'tic,** see *Optic nerve.* **D., prolig'erous,** see *Proligerous disk.* **D., vitel'line,** germinal disk of the fowl.

Disks. Lamellæ; thin disks of gelatin, containing a medicinal ingredient, used locally in affections of the conjunctiva. **D. of at'ropine,** each disk contains gr. $\frac{1}{5000}$ of atropine sulphate (Ph. Br.). **D. of co'caine,** each contains gr. $\frac{1}{200}$ of cocaine hydrochlorate. **D. of physostig'mine,** each contains gr. $\frac{1}{1000}$ of physostigmine.

Dislocate, dis'lo-kate. To cause dislocation, as of an articulation.

Dislocatio, dis-lo-kah'she-o (*dis, loco,* to place). Dislocation, luxation; see *Ectopia.* **D. lie'nis** or **sple'nis,** dislocation or abnormal situation of the spleen; splenectopia.

Dislocation, dis-lo-ka'shun. Displacement of the bones at a joint, or of an organ from its usual situation; see *Luxation.* **D. of mem'ory,** condition in which there exists entire forgetfulness, but only for a short time.

Dismal, diz'mal. Melancholy.

Disodicus, dis-od'ik-us (*dis, hodos,* threshold). Having a double opening.

Disomata, dis-o'mat-ah (*dis, soma,* body). Double monstrosities.

Disomatous, dis-o'mat-us. See *Disomus.*

Disomus, dis-o'mus (*di, soma,* body). Monster with two bodies. Such a monster is said to be *Disomatous.*

Disorder, dis-or'dur (*dis, order*). See *Disease.*

Disordered, dis-or'durd. Sick.

Disorganization, dis-or-gan-iz-a'shun. Complete morbid change in the structure of an organ, or even total destruction of its texture, as in sphacelus and sloughy ulcers.

Disparate, dis'par-ate. Unequal; term applied in optics to indicate points of both retinæ which do not correspond.

Dispareu'nia. See *Dyspareunia.*

Dispensary, dis-pen'sa-re (*dis, pendo,* to weigh, to take from a weight or mass, to distribute). Shop or place in which medicines are prepared. Also an institution in which the poor are furnished with advice and necessary medicines.

Dispensation, dis-pen-sa'shun. Composition and distribution of medicines according to prescription.

Dispensator, dis-pen-sa'tor. Apothecary.

Dispensatory, dis-pen'sa-to-re. Book treating of the composition of medicines. A Dispensatory differs from a Pharmacopœia in containing the physical and medical history of the various substances, while the Pharmacopœia is mainly restricted to the mode of preparing them. The Pharmacopœia, too, is published under the official authority of, by the members of, a college or association, while a Dispensatory contains the whole of the Pharmacopœia or Pharmacopœias, with additions by the author, under whose authority alone it usually appears. Formerly, the words were used indiscriminately. See *Formulary* and *Pharmacopœia.*

Dispenser, dis-pens'ur. One who dispenses medicines.

Dispen'sing. Filling a prescription as directed.

Dispermine, di-sperm'een. Piperazine.

Dispersion, dis-per'shun. Scattering, as in case of inflammation. **D., error of,** aberration of refrangibility.

Dispersus, dis-purs'us. Dispersed; sporadic, said of diseases.

Displace'ment. Percolation. Also the condition of being displaced, as displacement of the uterus or other organs when they are not in proper position. **D., dor'sal, of the arm,** position of arm of the fœtus in which that organ is turned outward or inward across the dorsum, thus offering an obstacle to delivery.

Dispora Caucasica, dis-po'rah kaw-kas'ik-ah. Bacillus Caucasicus.

Disposition, dis-po-zish'un (*dis, pono,* to put or set). Particular condition of the body, which renders it susceptible of altering suddenly to a state of health or disease—of improving, or becoming changed for the worse. See *Diathesis.*

Disproportion, dis-pro-por'shun. Obstetrical term used to denote want of proper proportion between pelvis and fœtus.

Disputatio, dis-pu-tah'she-o (*dis, puto,* to reason). Thesis.

Disruption, dis-rup'shun (*dis, rumpo,* to break off). Puncture which involves deep-seated parts.

Dissect'. To cut in pieces; to cut with care, so as to preserve the structure of an organ.

Dissecting aneurism, dis sek'ting an'u-rizm. See *Aneurism.* **D. wound,** dissection wound.

Dissectio, dis-sek'she-o. Dissection. **D. cartilag'inis et ligamento'rum os'sium pu'bis,** symphyseotomy. **D. fœ'tûs,** embryotomy. **D. ten'dinum,** tenotomy.

Dissection, dis-sek'shun (*dis, seco,* to cut, to cut open). *Practical anatomy, Necrotomy.* Operation by which the different parts of the dead body are exposed for the study of their arrangement and structure. Dissection has received various names, according to the organ concerned, as *Osteotomy, Syndesmotomy, Myotomy, Angiotomy, Neurotomy, Desmotomy,* etc. **D. wound,** wound received in the dissection of dead

bodies. The term *Autopsy* or *Dissection wound* has been applied to wounds received in the examination of bodies recently dead and before putrefaction has set in, especially of those who have died from pyæmia, malignant erysipelas, cancer, puerperal fever, etc.

Dissector, dis-sek'tor. Prosector. Practical anatomist; one who prepares parts for the anatomical lecture; also a book treating on the science of dissecting, or an instrument employed in dissection.

Disseminated, dis-sem'in-a-ted. Scattered. **D. myeli'tis,** see *Myelitis.* **D. sclero'sis,** insular sclerosis; see *Sclerosis.* **D. tuberculo'sis,** a form of tuberculosis usually marked for a while by interstitial pleurisy, chronic bronchitis, or emphysema; afterward resembling fibroid phthisis.

Dissemination, dis-sem-in-a'shun. The spread of disease from one part of the body to other parts, or into the surrounding atmosphere.

Dissepimentum narium, dis-sep-e-men'tum nar'e-um (*dissepio,* to separate). Septum narium. **D. thora'cis,** mediastinum.

Disseptum, dis-sep'tum (*dissepio,* to separate). Diaphragm.

Dissertatio, dis-ser-tah'she-o (*dissero,* to discuss, to treat of). Thesis.

Dissertation, inaugural, dis-ser-ta'shun, in-awg'-u-ral. Thesis.

Dissidentia, dis-sid-en'she-ah (*dis, sedo,* to sit). Diastasis.

Dissimilation, dis-sim-il-a'shun. Retrograde metamorphosis; katabolism.

Dissipium, dis-sip'e-um (*dissepio,* to separate). Diaphragm.

Dissociation, dis-so-si-a'shun. In chemistry, disunion of the elements of chemical compounds.

Dissolubility, dis-sol-u-bil'it-e. Capacity of being dissolved by heat or moisture and converted into a fluid.

Dissoluble, dis'sol-u-b'l. Capable of being dissolved.

Dissolutio, dis-so-lu'she-o. Dissolution, solution. **D. san'guinis,** dissolution of the blood. **D. ventric'uli,** softening of the stomach.

Dissolution, dis-so-lu'shun (*dis, solvo,* to loosen, to melt). Decomposition or putrefaction of the blood, or diminution in its consistence; solution; also death.

Dissolventia, dis-sol-ven'she-ah. Solvents; medicines believed to be capable of dissolving swellings, concretions, etc.; discutients; resolvents.

Distad, dis'tad (*disto,* to stand apart). Away from a centre; toward the far extremity; in anatomy, used adverbially to signify "toward the distal aspect."

Dis'taff cane. Arundo donax. **D. this'tle,** Carthamus lanatus.

Distal. At the farthest distance from a prominent part, as the trunk, heart, or middle line. **D. as'pect,** aspect of a bone from the trunk or toward the extremity.

Distalia, dist-al'e-a. Distal carpal bones (comparative anatomy).

Distantial aberration, dis-tan'she-al ab-er-ra'shun. See *Aberration of sphericity.*

Distearyllecithin, dis-te-ar-il-les'i-thin. Form of lecithin found in nerve-tissue.

Distemper, dis-tem'pur (*dis, tempero,* to proportion duly). Disease. **D., French,** syphilis. **D. louse,** louse met with in phtheiriasis.

Distemperantia, dis-tem-per-an'she-ah. Bad habit of body.

Distemperature, dis-tem'per-a-ture. Disease.

Distempered, dis-tem'per'd. Sick.

Distensio, dis-ten'she-o (*distendo,* to stretch). Reduction of a fracture by extension and counter-extension; tension; tetanus. **D. articula'ris,** sprain. **D. membro'rum,** convulsion. **D. muscula'ris,** strain of a muscle. **D. nervo'rum,** convulsion.

Distension, dis-ten'shun. Abnormal increase in size, turgescence.

Distichiasis, dis-tik-e'a-sis (*dis, stichos,* a row). Increased number of eyelashes—some turned toward the eye and irritating the organ, whilst others preserve their natural direction. See *Entropion.*

Distillate, dis-til'late. See *Distillation.*

Distillation, dis-til-la'shun (*de, stillo,* to drop little by little). Operation by which, by the aid of heat and in closed vessels, the volatile are separated from the fixed parts of bodies, with the view of collecting the former when condensed in appropriate receivers. The product of distillation is the distillate. In *fractional distillation* the ingredients are volatilized at different degrees of heat and separated from each other during the process. When dry organic matter is placed in an apparatus for distillation and heat is applied until all volatile matter is driven out, the process is called *Dry* or *Destructive distillation.*

Distocia, dis-to-se-ah (*dis, tokos,* birth). *Ditocia.* Delivery of twins.

Distœchia (dis-te'ke-ah) or **Distœchi'asis.** Distichiasis.

Distœchiasis, dis-tek-e'as-is. Distichiasis.

Distoma, dis'tom-ah (*di, stoma,* mouth). Small worm found in the small intestines; see *Parasites* and *Worms.* **D. conjunc'tum** occurs in liver of American fox and in dogs of India. **D. cras'sum,** variety met with in the human gall-bladder and intestines in Asia and East Indies. **D. endem'icum,** D. found in the liver in the disease called distomiasis, which occurs in certain parts of Japan. **D. hæmato'bium,** distomum hæmatobium. **D. hepat'icum,** *Gourdworm, Fluke, Liver fluke;* obovate, flat worm, an inch in length and nearly half an inch broad, sometimes found in the gall-bladder of man, whence it occasionally passes into the intestinal canal; one of the most common varieties of worms, infesting the livers of the sheep, goat, ox, horse, ass, hog, hare, etc.; causes rot in sheep and cattle. **D. heterophy'es,** small worm detected in the small intestines; see *Parasites* and *Worms.* **D. lanceola'tum,** different species, has been found in the biliary ducts of man and of different phytivorous mammalia; see *Parasites* and *Worms.* **D. oc'uli huma'ni,** parasite observed in the eye of a child who had suffered from lenticular cataract. **D. pernicio'sum,** D. considered to be identical with D. endemicum. **D. Ringeri,** bronchial fluke; parasite found in the bronchial tubes in an epidemic disease, associated with cough and hæmoptysis, occurring in parts of Formosa, China, and Japan.

Distomi'asis. Disease due to the presence of trematodes or flukes in man, and occurring in Japan, Egypt, Arabia, Africa, China, and on the island of Formosa. See *Distoma* and *Distomum.*

Distomum hæmatobium, dis'tom-um he-mat-o'be-um. Intestinal parasite giving rise to an endemic disease consisting in a disturbance of the uropoietic functions; its favorite habitat is the portal veins and those of the bladder; see *Parasites.* **D. hepat'icum** or **lanceola'tum,** distoma hepaticum. **D. ophthalmo'bium** or **oc'uli huma'ni,** distoma oculi humani.

Distortio, dis-tor'she-o. Distortion, sprain, strabismus. **D. o'ris,** canine laugh.

Distortion, dis-tor'shun (*dis, torqueo,* to wrest aside). Preternatural curvature of a bone, as distortion of the spine, limbs, etc. It signifies also a morbid state of the muscles of the eye, constituting squinting or strabismus. Distortions are said to be paralytic, spastic, or spasmodic, etc.

Distor'tor o'ris. Zygomaticus major.

Distrain' of the heart. Dilatation of the heart occurring suddenly without being preceded by disease.

Distributoria lactea thoracica, dis-trib-u-to're-ah lak'te-ah tho-ras'ik-ah. Thoracic duct.

Districhia, dis-trik'e-ah (*dis, thrix,* hair). Distichiasis.

Districhiasis, dis-trik-e'as-is. Distichiasis.

Distrix, dis'triks (*dis, thrix,* hair). Hairs of the scalp, weak, slender, and splitting at their extremities.

Disulphate, di-sul'fate. Combination of two parts of sulphuric acid with one part of a base.

Disulphide, di-sul'fid. Combination of two atoms of sulphur with one atom of an element. **D. of car'bon,** carbon disulphide.

Disymmetria, dis-im-met're-ah. Bilateral symmetry.

Di'ta bark. Bark of Alstonia scholaris; possesses tonic, antiperiodic, and anthelmintic virtues.

Ditaine, de'ta-een. Alkaloid from bark of Alstonia scholaris.

Dit'amine. Ditaine.

Dita'na digitifo'lia. Mexican plant which promotes the secretion of milk.

Ditch stonecrop. Penthorum sedoïdes.

Dithiosal'icylate of so'dium. Sodium dithiosalicylate.

Dithiosalicyl'ic ac'id. Yellow powder formed from equal weights of salicylic acid and sulphur chloride. Two salts of sodium, sodium dithiosalicylates, are employed medicinally: one used as a powerful antiseptic, speedily destroying bacilli; the other as an antiseptic, antiarthritic, and antipyretic.

Dith'marsch disease. Form of endemic syphilis.

Dithymol-diïodide. Aristol.

Dithymol-triïodide. Annidalia.

Ditocia, dit-o'se-ah. Distocia.

Ditrachyceras, de-trak-is'er-as (*di, trachus,* rough, *keras,* horn). Genus of intestinal worms. See *Parasites.*

Dittander, dit'tan-der. Lepidium sativum.

Dittany, dit'an-e. (See *Dictamnus*). Cunila mariana.

D., Amer'ican, Cunila mariana. **D., bas'tard,** Dictamnus albus. **D. of Crete,** Origanum dictamnus. **D., moun'tain,** Cunila mariana.

Dittecoia, dit-te-koi'ah (*dittos,* double, *akoe,* hearing). Double hearing.

Dittel's porte remède. Instrument consisting of a tube with a flexible obturator, into which a suppository or nitrate of silver is introduced, for making applications to the deep urethra.

Dittopia (dit-to'pe-ah) or **Dittopsia,** dit-top'se-ah (*dittos,* double, *ops,* eye). Diplopia.

Dit'trich's plugs. Dirty yellow pea- or bean-sized masses occasionally found in the sputum of putrid bronchitis.

Diuresiæsthesis, de-u-re-se-es-the'sis (*di, oureo,* to pass urine, *aisthesis,* feeling). Desire to pass urine.

Diuresis (de-u-ra'sis) or **Di'urism** (*dia, oureo,* to pass urine). Abundant excretion of urine.

Diuretic, di-u-ret'ik. Medicine which has the property of increasing the secretion of urine. Diuretics act on the circulation in the kidney, raising the arterial pressure in the glomeruli, or they act on the secreting cells of the tubules, and may increase the amount of water and the amount of solids excreted by them. Their mode of action is more clearly exhibited in the following table (Brunton):

MODE OF ACTION OF DIURETICS.

- Raise arterial pressure.
  - Generally
    - Increased action of the heart . . . . . digitalis, alcohol.
    - Contraction of vessels in intestines and throughout the body. . . . . Digitalis, Erythrophlœum, Strophanthus, Squill, Convallaria, Strychnine, Caffeine, Cold to surface.
  - Locally in kidney.
    - Contract efferent vessels or arteriæ rectæ, so as to raise pressure in glomerulus and lessen absorption in tubules, or both.
      - By action on vaso-motor centres. — The same as in preceding list.
      - By local action on vessels or nervous structures in the kidney itself. — Broom, Turpentine, Juniper, Copaiba, Cantharides.
    - Dilate afferent vessels . . . . . Paralyze vaso-motor nerves or involuntary muscular fibre, or stimulate vaso-dilating nerves. — Nitrites, Alcohol, Urea.
- Act on the secreting nerves, or secreting cells of the kidney itself.
  - Increase water excreted . . Urea, Caffeine, Calomel.
  - Increase solids excreted . . Liquor potassæ, Potassium acetate, etc., and other saline diuretics.

Diuretics are used therapeutically to remove excess of fluid, as in dropsy, to promote the removal of deleterious products of waste or poisonous materials from the blood, or to dilute the urine. The following are the principal diuretics (Brunton):

Refrigerant Diuretics.

Water in large quantities.
Carbonic acid (aërated waters).
Sodium salts—*e. g.* common salt.
Potassium salts, especially the Acetate, Bitartrate, Chlorate, Citrate, Nitrate.

Hydragogue Diuretics.

Adonis vernalis.
Broom.
Caffeine.
Colchicum.
Digitalis.
Erythrophlœum.
Nitrous ether.
Squill.
Strophanthus.

Stimulant Diuretics.

Alcohol,
Gin,
Hock.
Cantharides.
Blatta orientalis.
Oleo-resins, resins, and volatile oils:
Turpentine,
Juniper,
Savin,
Copaiba,
Cubebs,
Black pepper,
Matico,
Kawa,
Guaiac.
Umbelliferous plants, chiefly containing volatile oils:
Parsley,
Carrot,
Dill,
Fennel.
Cruciferous plants:
Mustard,
Horseradish,
Asparagus.
Uva ursi.
Sarsaparilla.
Buchu.
Pareira.
Chimaphila.
Taraxacum.
Ononis spinosum,
Santonica.

D. pow'der, pulvis diureticus. **D. salt,** potassium acetate. **D. wine,** see *Wine, diuretic.*

Diuretica, de-u-ret'ik-ah. Arnica montana.

Diureticoæsthesis, de-u-ret-e-ko-ees-the'sis. Desire or want to pass the urine.

Diure'tin. Sodio-theobromine salicylate, a double compound of sodium theobromine and sodium salicylate. White soluble powder; diuretic, and said to excite the action of the heart; used in dropsy, œdema, cirrhosis of the liver, etc. The dose is 15 grains, four or five times a day.

Diurism, di'u-rizm. Diuresis.

Divagation, di-va-ga'shun. Rambling, incoherent speech of the insane.

Divaricatio, div-ar-e-kah'she-o (*di, varico,* to straddle). Ectropion.

Divellent, di-vel'lent. Bringing about separation; term used in chemistry.

Divergence, di-vur'jence. Term used in ophthalmology to designate the separation of the eyes from one another by the action of the muscles.

Divergent, di-vur'jent. Extending from a common point in different directions. **D. rays,** see *Rays.* **D. strabis'mus,** see *Strabismus.*

Di'ver's paral'ysis. Caisson disease.

Diversorium chyli, de-ver-so're-um ke'le. Receptaculum chyli.

Diverticula, div-er-tik'u-lah (pl. of **Diverticulum**) **spirit'uum anima'lium.** See *Ganglions.*

Diverticular hernia, di-vur-tik'u-lar hur'ne-ah. A prolongation of the bowel, either a congenital diverticulum or a blind pouch of the mucous and serous coats, the muscular coat having given way.

Diverticulum (div-er-tik'u-lum) or **Devertic'ulum** (*di*, *verto*, to turn aside). Turning. Blind tube or cul-de-sac branching out of the course of a longer one, as the D. cæcum. An organ capable of receiving an unusual quantity of blood, when the circulation is obstructed or modified elsewhere, is said to act as a diverticulum. Also malformation or diseased appearance of a part, in which it passes out of its regular course. Sometimes applied to such a condition of the alimentary canal. Also a hole to get out at; a by-passage. See *Ectrope*. **D. cæ'cum** or **Meckel's**, sacculated condition of the ileum in the embryo, due to non-obliteration of the vitelline duct. **D. Nuck'ii**, canal of Nuck. **D. pharyn'gis**, pharyngocele. **D. Vate'ri**, vertical projection formed at the back part of the duodenum by the mucous membrane.

Dividing, div-i'ding (*divido*, to part or portion). That which divides or separates. **D. band'age**, bandage employed for the purpose of keeping parts separated from each other. Used particularly to prevent improper union, as in cases of burns of the neck or other parts.

Division, div-izh'un (same etymon as **Dividing**). Accidental separation of parts naturally united, as a wound or solution of continuity. Also an operation consisting in cutting certain parts to fulfil some therapeutical indication.

Divul'sio uri'næ. Cloudiness of urine. See *Enærema*.

Divulsion, di-vul'shun (*di*, *vello*, to pull asunder). Rupture or laceration of organs by external violence. Divulsion used in the treatment of strictures has now been almost entirely abandoned.

Divulsor. Instrument for dilating strictures of the urethra.

Diylisis (de-il'is-is) or **Diylismus**, de-il-is'mus. Straining or filtering a liquid.

Diylister (de-il-ist'ur) or **Diylistrion**, de-il-ist're-on. Filter, percolator.

Dizziness, diz'ze-nes. Vertigo. **D., abdom'inal**, vertigo dependent upon or associated with disordered stomach.

Dizzy, diz'e. Vertiginous.

Djur'nang. Dragon's blood.

Doche, dok'e. Receptacle.

Docheion, dok-i'on. Receptacle.

Dochme, dok'me. Grecian measure equal to about four fingers' breadth.

Dochmiosis, dok-me-o'sis. Ankylostomiasis.

Dochmius ankylostomus, dok'me-us an-ke-los'to-mus. Ankylostoma duodenale; occurs in intestinal canal of man, causing disease called ankylostomiasis. **D. duodenal'is**, see *Ankylostomiasis*.

Docimasia, dos-e-mah'se-ah (*dokimazo*, to try or prove the quality of anything). Act of assaying. **D. medicamento'rum et veneno'rum**, testing of medicines and poisons. **D. pulmo'num**, *Lung proof*, *Respiration proof*. Different proofs to which the organs of respiration of a newborn child are subjected for the purpose of detecting whether it has or has not respired after birth; in other words, whether it was born alive or dead. 1. In testing lungs with water, for the purpose of seeing whether they are specifically heavier or lighter than that fluid—*docimasia pulmonum hydrostatica*, or *hydrostatic test*. If lighter, it would be some evidence that the fœtus had respired. 2. In comparing the weight of the lungs with that of the whole body, the weight of lungs in which respiration has taken place being nearly twice as great—*docimasia pulmonum statica*, or *Ploucquet's static test*; but, according to Casper, unworthy of attention. 3. By measuring the circumference of the thorax and lungs and comparing their dimensions with those of an infant which has not respired—*Daniel's test*. These tests, singly, afford only probable evidence, but when united the deductions may be more conclusive.

Docimasiologia, dos-e-mas-e-o-loj'e-ah (*docimasia*, *logos*, treatise). Docimasia.

Docimaster, dos-e-mas'tur. Examiner or tester.

Docimastic, dos-e-mas'tik. Relating to docimasia.

Docimastice, dos-e-mas'tis-e. Docimasiologia.

Docimasy, dos'i-ma-se. Docimasia.

Dock. Rumex. **D., bit'ter**, Rumex obtusifolius. **D., blood'y**, Rumex sanguineus. **D., blood'y-veined**, Rumex sanguineus. **D., blunt'leaved**, Rumex obtusifolius. **D. cresses**, lapsana. **D., curled**, Rumex crispus. **D., sour**, Rumex acetosus, R. crispus. **D., sour, bo'real**, Oxyria reniformis. **D., spat'ter**, Nuphar advena. **D., wa'ter**, Rumex hydrolapathum. **D., wild, sharp-point'ed**, Rumex acutus. **D., yel'low**, Rumex crispus.

Doctor, dok'tor (*doctus*, learned). Frequently applied to any one practising medicine, although properly confined to him who has received his degree of Doctor of Medicine. See *Physician*. "To doctor" is sometimes used, vulgarly, for "to treat with drugs." **D. gum**, resin of Rhus metopium.

Doctrina Galliana, dok-tre'nah gal-le-an'ah (doctrine of Gall). Craniology. **D. sote'ria**, medicine.

Doctrine, medical, dok'trin, med'ik'l. Principles or positions of any medical sect or master. **D., physiolog'ical**, Broussaism.

Dod. Typha latifolia.

Dod'der. Cuscuta glomerata. **D., Amer'ican**, Cuscuta glomerata. **D. of thyme**, Cuscuta epithymum.

Dodecadactylitis, do-dek-ah-dak-til-e'tis. Duodenitis.

Dodecadactylon, do-dek-ah-dak'til-on (*dodeka*, twelve, *daktulos*, finger). Duodenum.

Dodecapharmacum, do-dek-ah-far'mah-kum (*dodeka*, twelve, *pharmakon*, a medicine). Ancient name given to all medicines which consisted of twelve ingredients.

Dodecasulphide, do-dek-ah-sulf'id. Compound in which an element or radical is combined with twelve atoms of sulphur.

Dodecatheon, do-dek-ath'e-on (*dodeka*, twelve, *tithemi*, to put, or *theos*, a god, after the twelve Grecian gods). Antidote consisting of twelve simple substances. Sanicula. **D. Plin'ii**, Pinguicola vulgaris.

Dodging (doj'ing) **time**. Menopause.

Dodonæa, do-don-e'ah (after R. Dodoens of Leyden). Myrica gale. **D. angustifo'lia**, species growing in India and the Antilles; in the last-named country a decoction of the wood is used in fevers and as a purgative. **D. salicifo'lia**, Dodonæa angustifolia. **D. Thunbergia'na**, shrub growing at Cape of Good Hope; gentle cathartic.

Dodrans, dod'rans. Measure of twelve fingers' breadth, or about nine inches.

Dog but'ton. Nux vomica. **D. cham'omile**, Matricaria chamomilla. **D. fen'nel**, Eupatorium fœniculatum. **D. rose**, see *Rosa canina*.

Dog'choak. Cynanche.

Dog'days. During these days, comprised between the 24th of July and the 23d of August, the temperature of the air is generally high and oppressive; formerly believed to be a period particularly unpropitious to health. They have received this name from the dogstar, *Canicula*, *Seirios*, *Sirius*, very brilliant star in the constellation of the *Great Dog*, which rises and sets at this time with the sun.

Dog'grass. Triticum repens.

Dog'hip. See *Rosa canina*.

Dog'ma. Authoritative belief or statement.

Dogmatic, dog-mat'ik (*dogma*, from *dokeo*, to think). Name of an ancient medical sect, so called because its members endeavored by reasoning to discover the essence of diseases and their occult causes; while the *Empirics*, their rivals, confined themselves strictly to experience—*i. e.* to the observation of facts. The union of the two modes of investigation makes the rational physician. These sectarians are likewise called *Dogmatists*, and their doctrine *Dogmatism*.

Dogs' bane. Apocynum androsæmifolium. **D. bane, bit'ter**, Apocynum androsæmifolium. **D. grass**, Triticum repens. **D. stones**, Orchis mascula.

Dog'star. Canicula.

Dog's-tooth vi'olet. Erythronium Americanum.

Dog'tree. Cornus florida.

Dog'wood. Cornus florida, Rhus venenata. **D.,**

blue'berried, Cornus sericea. **D., fe'male,** Cornus sericea. **D., flor'id,** Cornus florida. **D., great-flowered,** Cornus florida. **D., Jamai'ca,** Piscidia erythrina. **D., New Eng'land,** Cornus sericea. **D., pan'icled,** Cornus paniculata. **D., pond,** Cephalanthus occidentalis. **D., round'leaved,** Cornus circinata. **D., sil'kyleaved,** Cornus sericea. **D., striped,** Acer Pennsylvanicum. **D., swamp,** Cornus sericea, Ptelea trifoliata. **D., Virgin'ian, male,** Cornus florida. **D., white,** Cornus paniculata.

Doke. Contusion.

Dolabra, dol-ab'rah (*dolo,* to hew). Bandage, in shape of an axe, in which the turns are so placed that each one covers two-thirds of that which is immediately beneath it. See *Bandage.*

Dol'beau's opera'tion. Lithotomy in the median line, in which the calculus is crushed previous to its extraction.

Doliarin, dol-e'ar-in. Active principle obtained from juice of Urostigma doliarium; possesses purgative and anthelmintic properties.

Dolichocephalæ, dol-e-ko-sef'al-e (**gentes**) (*dolichos,* long, *kephale,* head). Longheads. Nations whose cerebral lobes completely cover the cerebellum, as the Kelts, Germans, negroes, etc.

Dolichocephalia, dol-e-ko-sef-al'e-ah. Monstrosity in which the head is abnormously long.

Dolichocephalic, dol-e-ko-sef-al'ik. Having a long head, in which the antero-posterior diameter exceeds the transverse in length.

Dolichocephalus, dol-e-ko-sef'al-us. Dolichocephalic.

Dolichofacial, dol-e-ko-fa'se-al (*dolichos, facies,* face). Having a long face.

Dolichohieric, dol-e-ko-hi-er'ik (*dolichos, hieron,* sacrum). Relating to a sacrum in which the length exceeds the breadth.

Dolichopel'lic or **Dolichopelvic,** dol-e-ko-pel'vik. Relating to a pelvis in which the antero-posterior diameter exceeds the transverse.

Dolichopodous, dol-e-kop'od-us (*dolichos, pous,* foot). Having long feet.

Dolichos, dol'e-kos (*dolichos,* long, as applied to the pods). Genus of plants of the leguminous family; includes a number of species, generally indigenous in India or America. *Dolichos lablab,* or *Lablab,* is found in Egypt; the fruit is eaten. *Dolichos Sinensis* is eaten in China, and is stored up as a provision for long voyages. *Dolichos tuberosus,* of Martinique, has tuberous roots, and the consistence and taste of the turnip. *Dolichos bulbosus,* of the W. Indies, resembles the turnip; and from the seeds of the *Dolichos soja* the Japanese prepare the well-known sauce *Soy,* which they term *Sooja.* The most important in medicine is the **D. pru'riens,** *Cowhage, Cowitch,* order Leguminosæ. The stiff hairs of the *Dolichos pods, Mucuna,* are the parts used in medicine. They excite an intolerable, prurient sensation when applied to the skin, but do not irritate the mucous membrane over which they pass when administered internally. The dolichos is a mechanical anthelmintic, and is useful in cases of ascarides lumbricoides and oxyures vermiculares. Dose, gr. v–x of the pubes, in molasses. *Mucuna prurita,* a distinct species, but possessing similar properties, grows in the East Indies.

Do'lor. Pain. **D. a'ni,** pain in the anus, generally symptomatic of hemorrhoids, etc. **D. cap'itis,** cephalalgia. **D. cephal'icus,** headache. **D. col'icus,** colic. **D. cru'cians facie'i,** neuralgia, facial. **D. den'tium,** toothache. **D. d. a strido're,** great sensibility of the teeth. **D. facie'i,** neuralgia, facial. **D. ischiad'icus nervo'sus,** neuralgia, femoro-poplitæal. **D. le'nis,** slight pain. **D. mi'tis,** slight pain. **D. nephret'icus,** pain in the kidney. **D. pec'toris exter'nus,** pleurodynia. **D. pudendo'rum,** pain in the genital region. **D. rheumat'icus et arthrit'icus,** rheumatism.

Dolores (do-lo'rees) (pl. of **Dolor**) **intestino'rum.** Colic. **D. osteoc'opi** (*osteon,* bone, *kopto,* to break), variety of syphilitic pains referred to the superficial bones especially, and to the shoulders, elbows, etc. **D. ad par'tum,** pains, labor. **D. parturien'tis,** pains, labor. **D. post-par'tum,** after-pains. **D. presagien'tes,** irregular uterine pains occurring before commencement of labor. **D. puerpera'rum,** after-pains. **D. roden'tes,** pains, gnawing.

Dolorific, do-lor-if'ik (*dolor,* pain, *facio,* to make). Causing pain.

Dombeya excelsa, dom-be'ah ek-sel'sah (after Dombey, French botanist). Tree of Chili furnishing *Dombeya turpentine,* a glutinous, milky-looking fluid of strong odor and taste.

Domestic, do-mes'tik (*domus,* house). The term *Domestic* or *Popular medicine* has been given to treatises written to enable those who are not of the profession to treat diseases which may occur in their families without calling in a physician; it also signifies medicine when thus practised.

Domicilium, dom-e-sil'e-um. Choroid coat of the eye.

Domus leprosaria, do'mus lep-ro-sar'e-ah. A house or hospital for the leprous.

Donda ndugu (brother ulcer). A disease occurring frequently on the east coast of Africa in form of an ulcer on the lower extremities; supposed to be due to a parasite.

Donders's glauco'ma. Simple atrophic glaucoma.

Don'do. Albino.

Donesis, do-ne'sis. Agitation.

Donné, gran'ular bodies of. Colostrum corpuscles. **D., test of,** for detection of pus in urine, with hydrate of potash, the pus becoming thicker and more gummy.

Donovan's solu'tion. See *Arsenic and Mercury, iodide of.*

Doom bark. Erythrophlœum.

Door'weed. Polygonum.

Dora, do'rah. Cutis.

Doradilla, dor-ah-dil'lah. Asplenium ceterach.

Dorcadizans, dor-kad-e'zans (*dorkadizo,* to leap like a roe, *dorcas*). Bounding, as the pulse.

Dorea, do're-ah. One affected with hemeralopia.

Dorema ammoniacum, do-re'mah am-mo-ni'ak-um. See *Ammoniac, gum.* **D. an'cheri,** Persian species, yielding ammoniac. **D. au'reum,** Indian species, yielding gum resembling officinal ammoniac. **D. robus'tum,** Persian species, yielding a gum simulating ammoniac.

Dor'mant. Sleeping, inactive.

Dormitatio, dor-me-tah'she-o (*dormito,* to be sleepy). Somnolency.

Dormitio, dor-mish'e-o (*dormio,* to sleep). Sleep. **D. lucumoria'na,** sleep continuing for several days.

Dor'mitive. Tending to produce sleep; hypnotic.

Doronicum arnica, do-ron'ik-um ar'nik-ah. Arnica montana. **D. corda'tum,** D. pardalianches. **D. German'icum,** Arnica montana. **D. officina'le,** D. pardalianches. **D. oppositifo'lium,** Arnica montana. **D. pardalian'ches,** *Roman leopard's bane;* root resembles Arnica montana in its properties. **D. plantag'inis fo'lio,** Arnica montana. **D. Roma'num,** D. pardalianches.

Dor'sad. See *Dorsal aspect.*

Dorsal, dor'sal (*dorsum*). *Notal, Tergal.* Relating or appertaining to the back of the body or one of its parts, as the dorsal vertebræ, nerves, etc.; dorsal artery of the tongue, penis, etc.; dorsal region of the foot, hand, etc. **D. as'pect,** aspect toward the dorsum or backbone. *Dorsad* is used also to signify "toward the dorsal aspect." **D. decu'bitus,** recumbent position on the back. **D. re'flex,** see *Reflex.*

Dorsalis, dor-sal'is. Dorsal. **D. hallu'cis** (arteria), dorsal artery of the thumb, branch of the dorsalis pedis. **D. in'dicis radia'lis ar'tery,** dorsal artery of index finger. **D. lin'guæ,** see *Lingual* and *Artery.* **D. na'rium** or **na'si ar'tery,** dorsal artery of nose. **D. na'si mus'cle,** pyramidalis nasi. **D. pe'dis,** continuation of the anterior tibial artery, passing forward from the bend of the ankle along the tibial side of the foot to the back part of the first interosseous space, where it divides into two branches. **D. pe'nis,** branch of the internal pudic nerve distributed to the upper part of the male organ and the clitoris of the female. **D. p. ar'tery,** dorsal artery of penis. **D. pol'licis radia'lis ar'tery,** dorsal artery of thumb on radial side.

D. p. ulna'ris ar'tery, dorsal artery of thumb on ulnar side. **D. scap'ulæ,** dorsal artery of scapula.

Dorsi-lumbar nerve. Small nerve connecting the last dorsal with the first lumbar nerve.

Dorsispi'nal or **Dorsospi'nal veins.** Veins placed on the exterior of the spinal column.

Dorso-anterior, dor'so-an-te're-or. Obstetrical term given to position of fœtus when its back is pointing toward anterior surface of mother.

Dorsodyn'ia. Rheumatism of the dorsal region.

Dorso-epitrochlearis, dor'so-ep-e-trok-le-ah'ris. Muscular fascicle occasionally met with extending from inferior margin of latissimus dorsi to interior muscular brachial septum.

Dorso-intercos'tal. Relating to the back and the intercostal spaces, as dorso-intercostal neuralgia.

Dorsolum'bar. Relating to the dorsal and lumbar regions. **D. curve,** double curve formed by the back in the lumbar regions.

Dorsona'sal veins. Nasal veins.

Dorsoposterior, dor'so-pos-te're-or. Obstetrical term given to position of fœtus when its back points toward the posterior surface of the mother.

Dorsoradial, dor'so-ra'de-al. Situated on dorsal surface and radial border of arm, hand, or finger.

Dorsoscap'ular. Relating to back and shoulder; the dorsoscapular muscle is the rhomboid muscle.

Dorsospi'nal. See *Dorsispinal.*

Dorsosseus, dors-os'se-us (*dorsum, os,* bone). Dorsal interosseous muscle.

Dorsosu'pra-acromia'lis mus'cle. Trapezius.

Dorso-ul'nar. Situated on dorsal surface and ulnar border of arm, hand, or finger.

Dorstenia Brasiliensis, dor-ste'ne-ah braz-il-e-en'sis (after Dr. Dorsten, botanist, of Marburg). The root of this Brazilian plant is emetic and antidiarrhœic. **D. contrayer'va,** *Lisbon contrayerva,* order Urticaceæ. Plant of S. America, whose root, *contrayerva,* is aromatic, bitter, and astringent. The plant is tonic, stimulant, and sudorific. **D. cordifo'lia, placentoï'des,** or **vitel'la,** D. Brasiliensis.

Dorsua'lis. Dorsalis.

Dor'sum. The back. Posterior part of the trunk, extending from the inferior and posterior region of the neck as far as the loins. The back of the foot, *Dorsum pedis,* is the upper part of that organ opposite the sole. The back of the hand, *Dorsum manûs,* is the part opposed to the palm, as *Dorsum penis* and *Dorsum nasi* are the back part of the penis and of the nose. Also vertebral column. **D. ephip'pii,** see *Sella turcica.* **D. ma'nûs,** the back of the hand.

Doryphora (do-rif'o-rah) **decemlinea'ta.** Potato-bug; possesses vesicating power.

Do'sage. The study of the subject of doses.

Dose (*didomi,* to give). Quantity of any substance which ought to form part of a compound medicine, or ought to be exhibited singly, to produce a desired effect. *Divided doses* are those taken in fractional parts at brief intervals. A *maximum dose* is the largest amount to be prescribed compatible with safety or justice to the patient's condition. Many circumstances influence the doses of medicines. Women require smaller doses, as a general principle, than men. Habit has a great effect, as well as climate, age, and idiosyncrasy. All these and other circumstances must be taken into account. *To dose* is to give medicine, and also to drug, or give to excess. When a medicine is given in small portions it is said to be in *broken* or *divided doses.*

The following table is a convenient plan of determining the dose applicable at different ages from childhood to the age of 24:

Table of Doses according to Age.

Age 24	Let the full dose be	1	1 drachm.
18	will require	2-3ds.	2 scruples.
14	. . . . .	half.	½ drachm.
7	. . . . .	1-3d.	1 scruple.
4	. . . . .	1-4th.	15 grains.
3	. . . . .	1-6th.	10 grains.
2	. . . . .	1-8th.	8 grains.
1	. . . . .	1-12th.	5 grains.

The table of doses, according to age, recommended by Dr. Thomas Young affords a general approximation. His rule is: For children under twelve years of age the doses of most medicines must be diminished in the proportion of the age to the age, increased by twelve. Thus, at two years, to 1-7th; i. e. 1-7th $= \frac{2}{2+12}$.

At twenty-one the full dose is given.

Dr. Cowling's rule is to divide the number of the young person's next birthday by 24; thus, for a child three years old the fraction representing the dose would be $\frac{4}{24}=\frac{1}{6}$; for a child five years old, $\frac{6}{24}=\frac{1}{4}$.

Dr. Brunton suggests a convenient rule for calculating the dose, especially when the metric system is used. He divides by 25 instead of 24. It is very easy to divide by 25 by simply multiplying by 4 and dividing by 100. *When the metrical system is used,* all that is necessary is to multiply the full dose by the number of the child's next birthday, then by 4, and remove the decimal point two places to the left. Thus, if the full dose for an adult be 1 gramme, the dose for a child of three will be $\frac{1\times4\times4}{100}$=.160 gramme, or 16 centigrammes. If the full dose for an adult be .3 gramme, the dose for a child of three will be $\frac{.3\times4\times4}{100}$=.048, or 48 milligrammes. If the full dose be 1 gramme, the dose for a child of five will be $\frac{1\times6\times4}{100}$=.240 gramme, or 24 centigrammes. If the full dose be .3 gramme, the dose for a child of five will be $\frac{.3\times6\times4}{100}$=.072 gramme, or 72 milligrammes. To put this rule shortly, the number of grammes in the full dose multiplied by the child's next birthday and by 4 gives the result in centigrammes. The number of decigrammes multiplied in the same way gives the result in milligrammes.

The following table gives the ordinary doses of the principal articles of the Materia Medica:

DOSES OF MEDICINES.

dr. = drachm; *fl. dr.* = fluidrachm; *fl. oz.* = fluidounce; *gr.* = grain; *gm.* = gramme; *min.* = minim; *oz.* = ounce.

REMEDY.	DOSE. Apothecaries' Weights and Measures.	DOSE. Metric System.
Acetal	2–3 dr.	8.0–12.0 gm.
Acetanilide	1–8 gr.	0.06–0.5 gm.
Acetone	5–10 min.	0.3–0.6 gm.
Acetophenone	5–20 min.	0.3–1.25 gm.
Acetphenetidin	2–5 gr.	0.12–0.3 gm.
Acetum lobeliæ	15–30 min.	1.0–2.0 gm.
opii	5–10 min.	0.3–0.6 gm.
sanguinariæ	15–30 min.	1.0–2.0 gm.
scillæ	10–30 min.	0.6–1.8 gm.
Acid, acetic, diluted	1–2 fl. dr.	4.0–8.0 gm.
arsenious	$\frac{1}{60}$–$\frac{1}{20}$ gr.	0.001–0.003 gm.
solution of (Ph. U. S.)	2–8 min.	0.12–0.5 gm.
benzoic	5–15 gr.	0.3–1.0 gm.
boric	5–10 gr.	0.3–0.6 gm.
carbolic	½–1 gr.	0.03–0.06 gm.
chrysophanic	½–5 min.	0.008–0.3 gm.
citric	5–20 gr.	0.3–1.25 gm.
fluoric, dilute	10–20 min.	0.6–1.2 gm.
gallic	3–15 gr.	0.2–1.0 gm.
hydriodic, dilute	½ fl. dr.	2.0 gm.
hydrobromic, dilute	½–2 fl. dr.	2.0–8.0 gm.
hydrochloric	2–5 min.	0.12–0.3 gm.
dilute	10–20 min.	0.6–1.2 gm.
hydrocyanic, dilute	2–5 min.	0.12–0.3 gm.
lactic	1–3 dr.	4.0–12.0 gm.
nitric	2–5 min.	0.12–0.3 gm.
dilute	10–25 min.	0.6–1.5 gm.
nitrohydrochloric or nitromuriatic	2–5 min.	0.12–0.3 gm.
phosphoric, dilute	5–25 min.	0.3–1.5 gm.
picric	1–5 gr.	0.06–0.3 gm.
polygalic	½–1 gr.	0.015–0.06 gm.
salicylic	5–15 gr.	0.3–1 gm.
sulphuric	2–5 min.	0.12–0.3 gm.
aromatic	5–20 min.	0.3–1.2 gm.
dilute	5–20 min.	0.3–1.2 gm.

Remedy.	Dose. Apothecaries' Weights and Measures.	Dose. Metric System.
Acid, sulphurous	½–1 fl. dr.	2–4 gm.
tannic	2–10 gr.	0.12–0.6 gm.
tartaric	10–30 gr.	0.6–2 gm.
valerianic	3–4 min.	0.2–0.25 gm.
Aconite, abstract of	¼–½ gr.	0.015–0.03 gm.
leaves, extract of	¼–½ gr.	0.015–0.03 gm.
fluid extract of	1–5 min.	0.06–0.3 gm.
tincture of	10–15 min.	0.6–1.0 gm.
root, extract of	⅛–¼ gr.	0.01–0.016 gm.
fluid extract of	½–1 min.	0.03–0.06 gm.
tincture of	1–3 min.	0.06–0.18 gm.
Aconitine	$\frac{1}{250}$–$\frac{1}{300}$ gr.	0.00015–0.0002 g.
Adonidin	$\frac{1}{12}$–$\frac{1}{6}$ gr.	0.005–0.01 gm.
Æsculin	15 gr.	1.0 gm.
Æther. See *Ether.*		
Agaricin	$\frac{1}{12}$–¼ gr.	0.005–0.015 gm.
Ailanthus glandulosa, bark of	5–30 gr.	0.3–2.0 gm.
fluid extract of	10–30 min.	0.6–2.0 gm.
Aletrin	1–2 gr.	0.06–0.12 gm.
Aletris, fluid extract of	15–30 min.	1.0–2.0 gm.
Aloes	2–6 gr.	0.1–0.35 gm.
extract of	2–6 gr.	0.1–0.35 gm.
and myrrh, tincture of	1–2 fl. dr.	4.0–8.0 gm.
tincture of	1–2 fl. dr.	4.0–8.0 gm.
watery extract	½–2 gr.	0.03–0.12 gm.
wine of	1–2 fl. dr.	4.0–8.0 gm.
Aloin	1–3 gr.	0.06–0.18 gm.
Alstonia constricta, fluid extract	1–2 fl. dr.	4.0–8.0 gm.
Alumen	5–10 gr.	0.3–0.6 gm.
(as emetic)	30 gr.–1 dr.	2.0–4.0 gm.
Aluminium hydrate	5–15 gr.	0.3–1.0 gm.
Ammonia, aromatic spirit	30 min.–1 fl. dr.	2–4 gm.
solution of acetate of	1–2 fl. dr.	4–8 gm.
spirit of	5–15 min.	0.6–1.0 gm.
water of	2–6 gr.	0.1–0.35 gm.
Ammoniacum	10–30 gr.	0.6–2 gm.
mixture	½–1 oz.	16–32 gm.
Ammonium benzoate	10–20 gr.	0.6–1.2 gm.
bromide	10–30 gr.	0.6–2 gm.
carbonate	3–10 gr.	0.18–0.6 gm.
chloride	5–10 gr.	0.3–0.6 gm.
iodide	3–5 gr.	0.18–0.3 gm.
phosphate	10–20 gr.	0.6–1.2 gm.
picrate	¼–½ gr.	0.016–0.03 gm.
sulphate	3–10 gr.	0.18–0.6 gm.
valerianate	2–8 gr.	0.12–0.48 gm.
Amygdala amara, water of	1–2 fl. dr.	4.0–8.0 gm.
Amyl nitrite	2–3 min.	0.12–0.18 gm.
by inhalation	3–5 min.	0.18–0.3 gm.
Amylene hydrate	10–30 min.	0.6–2.0 gm.
Amylum iodatum	5–30 gr.	0.3–2.0 gm.
Anethum, oil of	3–10 min.	0.18–0.6 gm.
Angelica root, fluid extract	30–60 min.	2.0–4.0 gm.
Angustura bark	10–30 gr.	0.6–2.0 gm.
Aniline camphorate	3–4 gr.	0.2–0.25 gm.
Anise, oil of	1–5 min.	0.06–0.3 gm.
spirit of	1–2 fl. dr.	4.0–8.0 gm.
Anthemis	½–1 dr.	2–4 gm.
extract	2–10 gr.	0.12–0.6 gm.
fluid extract	30–60 min.	2.0–4.0 gm.
Antimonial powder	1–3 gr.	0.06–0.18 gm.
Antimony oxide	2–3 gr.	0.12–0.18 gm.
oxysulphuret	½–2 gr.	0.03–0.12 gm.
and potassium tartrate, as diaphoretic	$\frac{1}{16}$–½ gr.	0.004–0.03 gm.
as emetic	½–1 gr.	0.03–0.06 gm.
sulphide	½–2 gr.	0.03–0.12 gm.
sulphurated	1–2 gr.	0.06–0.12 gm.
sulphuret	½–2 gr.	0.03–0.12 gm.
wine of	10 min.–1 fl. dr.	0.6–4 gm.
Antipyrin	5–15 gr.	0.3–1.0 gm.
Apiol	2–5 gr.	0.12–0.3 gm.
Apocynin	½–2 gr.	0.03–0.12 gm.
Apocynum cannabinum	10–20 gr.	0.6–1.2 gm.
fluid extract of	10–30 min.	0.6–2.0 gm.
Apomorphine hydrochlorate	$\frac{1}{15}$–$\frac{1}{10}$ gr.	0.004–0.006 gm.
Aralia hisp., fluid extract of	30–60 min.	2.0–4.0 gm.
nudicaulis, fluid extract	30–60 min.	2.0–4.0 gm.
racemosa, fluid extract of	30–60 min.	2.0–4.0 gm.
spinosa, fluid extract of	30–60 min.	2.0–4.0 gm.
Arbutin	1–10 gr.	0.06–0.6 gm.
Areca, fluid extract of	30–60 min.	2.0–4.0 gm.
Argentum and compounds. See *Silver.*		
Arnica flowers, extract of	2–5 gr.	0.12–0.3 gm.
fluid extract of	5–15 gr.	0.3–1.0 gm.
root, extract of	2–5 gr.	0.12–0.3 gm.
fluid extract of	5–15 gr.	0.3–1.0 gm.
Arnica root, tincture of	10–20 gr.	0.6–1.2 gm.
Aromatic powder	10–30 gr.	0.6–2.0 gm.
Arseniate of sodium, sol. of	3–5 min.	0.18–0.3 gm.
Arsenic. See *Acid, arsenious.*		
bromide	1–4 min.	0.06–0.024 gm.
iodide	$\frac{1}{16}$–⅛ gr.	0.004–0.008 gm.
and mercury iodide, sol. of (Donovan's sol.)	5–10 min.	0.3–0.6 gm.
Arsenite of potassium, sol. of (Fowler's sol.)	2–5 min.	0.12–0.3 gm.
Arum triphyllum	15–30 gr.	1.0–2.0 gm.
Asafœtida	5–20 gr.	0.3–1.2 gm.
mixture	½–1 fl. oz.	15–30 gm.
tincture	30 min.–1 fl. dr.	2–4 gm.
Asarum, fluid extract of	15–30 min.	1.0–2.0 gm.
Asclepias incarnata, fluid extract of	15–30 min.	1.0–2.0 gm.
Syriaca, fluid extract of	15–30 min.	1.0–2.0 gm.
tuberosa	15–30 min.	1.0–2.0 gm.
Aspidium, fluid extract of	1–2 fl. dr.	4.0–8.0 gm.
oleo-resin of	30 min.–1 fl. dr.	2.0–4.0 gm.
Aspidosperma, abstract of	5–20 gr.	0.3–1.2 gm.
fluid extract of	15–30 min.	1.0–2.0 gm.
Atropine sulphate	$\frac{1}{120}$–$\frac{1}{60}$ gr.	0.0005–0.0015 g.
Aurantii cortex, fluid ext.	15 min.–2 fl. dr.	1.0–8.0 gm.
Azedarach, fluid extract of	15–60 min.	1.0–4.0 gm.
Balsam of gurjun	20–30 min.	1.2–2.0 gm.
of tolu	10–30 min.	0.6–2.0 gm.
Baptisia, extract of	2–10 gr.	0.12–0.6 gm.
fluid extract of	10–30 min.	0.6–2.0 gm.
Baptisine	2–5 gr.	0.12–0.3 gm.
Bebeerine sulphate	2–5 gr.	0.12–0.3 gm.
Belladonna, abstract of	⅛–1½ gr.	0.03–0.1 gm.
alcoholic extract of	¼–½ gr.	0.016–0.03 gm.
leaves, fluid extract of	3–6 min.	0.18–0.36 gm.
tincture of	10–20 min.	0.6–1.2 gm.
root, extract of	⅛–¼ gr.	0.008–0.016 gm.
fluid extract of	1–2 min.	0.06–0.12 gm.
Benzanilide	1–5 gr.	0.06–0.3 gm.
Benzoin, compound tinct.	30 min.–1 fl. dr.	2.0–4.0 gm.
tincture of	½–1 fl. dr.	2.0–4.0 gm.
Benzol	5–10 min.	0.3–0.6 gm.
Berberina	3–10 gr.	0.18–0.6 gm.
sulphate	3–10 gr.	0.18–0.6 gm.
Berberis aquifolium, fluid extract of	15–30 min.	1.0–2.0 gm.
vulgaris, fluid extract of	15–30 min.	1.0–2.0 gm.
Bismuth and ammonium, citrate of	1–10 gr.	0.06–0.6 gm.
citrate	3–15 gr.	0.18–1.0 gm.
salicylate	5–15 gr.	0.3–1.0 gm.
subcarbonate	5–20 gr.	0.3–1.2 gm.
subnitrate	5–20 gr.	0.3–1.2 gm.
tannate	5–30 gr.	0.3–2.0 gm.
valerianate	1–3 gr.	0.06–0.18 gm.
Bistort, root of	20 gr.	1.2 gm.
Boldo, fluid extract of	5–15 min.	0.3–1.0 gm.
oil of	5 min.	0.3 gm.
tincture of	8 min.	0.5 gm.
Brayera	2–3 dr.	8.0–12.0 gm.
fluid extract of	½–1 fl. oz.	15.0–30.0 gm.
infusion of	4–8 oz.	118.0–236.0 gm.
Bromal	2–3 gr.	0.12–0.2 gm.
Bromoform	5–10 min.	0.3–0.6 gm.
Brucina	$\frac{1}{32}$–$\frac{1}{16}$ gr.	0.002–0.004 gm.
Bryonia, fluid extract of	15–60 min.	1.0–4.0 gm.
tincture of	15–30 min.	1.0–2.0 gm.
Buchu, fluid extract of	½–1 fl. dr.	2.0–4.0 gm.
Buckthorn, fluid extract of	15–30 min.	1.0–2.0 gm.
Cactus grandiflora, fluid extract of	5–10 min.	0.3–0.6 gm.
Caffeine	2–5 gr.	0.12–0.3 gm.
citrate of	2–5 gr.	0.12–0.3 gm.
Cahinca or Cainca, bark of extract of	20–40 gr.	1.2–2.5 gm.
	10–20 gr.	0.6–1.2 gm.
Cajeput, oil of	5–20 min.	0.3–1.2 gm.
Calamus, fluid extract of	15–60 min.	1.0–4.0 gm.
Calcium benzoate	10 gr.	0.6 gm.
bromide	10–20 gr.	0.6–1.2 gm.
carbonate	15–30 gr.	1.0–2.0 gm.
chloride	5–10 gr.	0.3–0.6 gm.
hypophosphite	10–30 gr.	0.6–2.0 gm.
iodide	1–3 gr.	0.06–0.18 gm.
lactophosphate, syrup of	1–2 fl. dr.	4.0–8.0 gm.
phosphate	15–30 gr.	1.0–2.0 gm.
sulphide	½–½ gr.	0.012–0.03 gm.
Calendula, fluid extract of	15–60 min.	1.0–4.0 gm.
tincture of	15–30 min.	1.0–2.0 gm.
Calomel. See *Mercury, mild chloride of.*		

Remedy.	Dose. Apothecaries' Weights and Measures.	Dose. Metric System.
Calotropis gigantea, bark of	5 gr.	0.3 gm.
Calumba, extract of	3–10 gr.	0.18–0.6 gm.
fluid extract of	15–60 min.	1.0–4.0 gm.
tincture of	1–4 fl. dr.	4.0–16.0 gm.
Calx chlorata	2–5 gr.	0.12–0.3 gm.
sulphurata	½–1 gr.	0.016–0.06 gm.
Camphor	2–10 gr.	0.12–0.6 gm.
bromide	2–5 gr.	0.12–0.3 gm.
monobromated	2–5 gr.	0.12–0.3 gm.
spirit of	5–30 min.	0.3–2.0 gm.
water	½–2 fl. oz.	16.0–64.0 gm.
Camphoric acid	15–30 gr.	1.0–2.0 gm.
Canella, fluid extract of	15–60 min.	1.0–4.0 gm.
Cannabin tannate	5–10 gr.	0.3–0.6 gm.
Cannabis Americana, fluid extract of	3–15 min.	0.18–1.0 gm.
Indica, abstract of	1–3 gr.	0.06–0.18 gm.
extract of	¼–1 gr.	0.015–0.06 gm.
fluid extract of	3–6 min.	0.18–0.36 gm.
tincture of	5–20 min.	0.3–1.2 gm.
Cantharides	½–1 gr.	0.03–0.06 gm.
tincture of	2–5 min.	0.12–0.3 gm.
Capsicum	½–2 gr.	0.03–0.12 gm.
fluid extract of	½–1 min.	0.03–0.06 gm.
oleoresin of	¼–1 min.	0.015–0.06 gm.
tincture of	5–20 min.	0.3–1.2 gm.
Caraway, oil of	1–5 min.	0.06–0.3 gm.
Carbon bisulphide	½–1 min.	0.03–0.06 gm.
Cardamom, compound tincture of	1–2 fl. dr.	4.0–8.0 gm.
fluid extract of	15–45 min.	1.0–3.0 gm.
tincture of	1–2 fl. dr.	4.0–8.0 gm.
Caryophyllus, oil of	1–5 min.	0.06–0.3 gm.
Cascara sagrada	2–8 gr.	0.12–0.5 gm.
extract of	2–8 gr.	0.12–0.5 gm.
fluid extract of	10–30 min.	0.6–2.0 gm.
Cascarilla	20–30 gr.	1.2–2.0 gm.
fluid extract of	1–2 fl. dr.	4.0–8.0 gm.
Cassia fistula, pulp of	1–2 dr.	4.0–8.0 gm.
Castanea vesca, fluid ext. of	½–1 fl. dr.	2.0–4.0 gm.
Castor	10–30 gr.	0.6–2.0 gm.
tincture of	2–4 fl. dr.	8.0–16.0 gm.
Cataria, fluid extract of	15 min.–1 fl. dr.	1.0–4.0 gm.
Catechu	10–30 gr.	0.6–2.0 gm.
compound tincture of	½–2 fl. dr.	2.0–8.0 gm.
fluid extract of	10–30 min.	0.6–2.0 gm.
Caulophyllin	½–½ gr.	0.015–0.03 gm.
Caulophyllum, infusion of	1–2 oz.	16.0–64.0 gm.
Cava-cava	10–30 gr.	0.6–2.0 gm.
Cerium nitrate	1–2 gr.	0.06–0.12 gm.
oxalate	1–2 gr.	0.06–0.12 gm.
Chalk, compound powder	10–30 gr.	0.6–2.0 gm.
mixture	1–2 fl. oz.	32–64 gm.
prepared	15–30 gr.	1.0–2.0 gm.
Chamomile, oil of	5–15 min.	0.3–1.0 gm.
Charcoal, animal, purified	10–30 gr.	0.6–2.0 gm.
Chelidonium majus	½–1 dr.	2.0–4.0 gm.
extract of	5–10 gr.	0.3–0.6 gm.
fluid extract of	15–30 min.	1.0–2.0 gm.
Chenopodium, oil of	½–8 min.	0.24–0.5 gm.
Cherry-laurel water	5–30 min.	0.3–2.0 gm.
Chimaphila, fluid ext. of	1–2 fl. dr.	4.0–8.0 gm.
Chinoidin	10–30 gr.	0.6–2.0 gm.
Chinoline tartrate	5–15 gr.	0.3–1 gm.
Chionanthus, fluid ext. of	30–60 min.	2.0–4.0 gm.
Chiretta, fluid extract of	½–1 fl. dr.	2.0–4.0 gm.
tincture of	15–60 min.	1.0–4.0 gm.
Chloral hydrate	5–20 gr.	0.3–1.2 gm.
Chloralamide	15–30 gr.	1.0–2.0 gm.
Chlorine-water	1–4 fl. dr.	4.0–15.0 gm.
Chloroform, mixture of	1–4 fl. dr.	4.0–15.0 gm.
purified	5–10 min.	0.3–0.6 gm.
spirit of	10 min.–1 fl. dr.	0.6–4.0 gm.
Chrysarobin	5–20 gr.	0.3–1.2 gm.
Cimicifuga, fluid ext. of	10–30 min.	0.6–2.0 gm.
tincture of	½–1 fl. dr.	2.0–4.0 gm.
Cinchona bark	10 gr.–1 dr.	0.6–4.0 gm.
aromatic fluid extract	30–60 min.	2.0–4.0 gm.
compound tincture of	1–2 fl. dr.	4.0–8.0 gm.
extract of	10–30 gr.	0.6–2.0 gm.
fluid extract of	10–30 min.	0.6–2.0 gm.
tincture of	1–2 fl. dr.	8.0–15.0 gm.
Cinchonia sulphate	10–20 gr.	0.6–1.2 gm.
Cinchonidia or Cinchonidine sulphate	10–30 gr.	0.6–2.0 gm.
Cinchonine sulphate	10–30 gr.	0.6–2.0 gm.
Cinnamon	5–20 gr.	0.3–1.2 gm.
oil of	1–5 min.	0.06–0.3 gm.
spirit of	5–20 min.	0.3–1.2 gm.
tincture of	½–2 fl. dr.	2.0–8.0 gm.
Cloves. See *Caryophyllus.*		

Remedy.	Dose. Apothecaries' Weights and Measures.	Dose. Metric System.
Coca, fluid extract of	20 min.–1 fl. dr.	1.2–4.0 gm.
leaves of	½–1 dr.	2.0–4.0 gm.
Cocaine	½–1 gr.	0.03–0.06 gm.
Cocculus, fluid extract of	1–3 min.	0.06–0.2 gm.
tincture of	2–10 min.	0.12–0.6 gm.
Codeine or Codeia	1–2 gr.	0.06–0.12 gm.

Colchicum, acetic ext. of	1–2 gr.	0.06–0.12 gm.
root	2–5 gr.	0.12–0.3 gm.
extract of	¼–½ gr.	0.015–0.03 gm.
fluid extract of	2–5 min.	0.12–0.3 gm.
wine of	10–20 min.	0.6–1.2 gm.
seed	2–10 gr.	0.12–0.6 gm.
fluid extract of	2–8 min.	0.12–0.5 gm.
tincture of	10–30 min.	0.6–2.0 gm.
wine of	20–40 min.	1.2–2.4 gm.
Collinsonia, fluid ext. of	30–60 min.	2.0–4.0 gm.
Colocynth	2–8 gr.	0.12–0.5 gm.
compound extract of	5–10 gr.	0.3–0.6 gm.
extract of	2–5 gr.	0.12–0.3 gm.
Colocynthidine	1/12–⅛ gr.	0.005–0.01 gm.
Colocynthin	¼–1 gr.	0.015–0.06 gm.
Condurango, fluid ext. of	10–30 min.	0.6–2.0 gm.
Conine	1/64–3/32 gr.	0.001–0.002 gm.
hydrochlorate	1/64–3/32 gr.	0.001–0.002 gm.
Conium, abstract of	1–2 gr.	0.06–0.12 gm.
fluid extract of	5 min.	0.3 gm.
fruit, alcoholic extract of	½–1 gr.	0.03–0.06 gm.
fluid extract of	1–2 min.	0.06–0.12 gm.
tincture of	10–20 min.	0.6–1.2 gm.
leaves, extract of	1–2 gr.	0.06–0.12 gm.
fluid extract of	1–3 min.	0.06–0.18 gm.
Convallamarin	½–2 gr.	0.03–0.12 gm.
Convallaria, extract of	2–10 min.	0.12–0.6 gm.
fluid extract	15–30 min.	1.0–2.0 gm.
Copaiba	20 min.–1 fl. dr.	1.2–4.0 gm.
oil of	10–20 min.	0.6–1.2 gm.
oleo-resin of	2–10 gr.	0.12–0.6 gm.
Copper, acetate	¼–½ gr.	0.015–0.03 gm.
ammoniated	⅛–1 gr.	0.01–0.06 gm.
sulphate, astringent, tonic	¼–½ gr.	0.015–0.03 gm.
emetic	5 gr.	0.3 gm.
Coptis, fluid extract of	30–60 min.	2.0–4.0 gm.
Coral root	10–30 gr.	0.6–2.0 gm.
Cornus florida, fluid ext.	30–60 min.	2.0–4.0 gm.
Corrosive sublimate. See *Mercury.*		
Corydalis, fluid extract of	15–30 min.	1.0–2.0 gm.
Coto	1–2 gr.	0.06–0.12 gm.
fluid extract of	5–15 min.	0.3–1.0 gm.
tincture of	2–10 min.	0.12–0.6 gm.
Cotoïn	1/12–⅛ gr.	0.005–0.008 gm.
Cotton-root bark. See *Gossypium.*		
Creasote	1–3 min.	0.06–0.18 gm.
water	1–4 fl. dr.	4.0–15 gm.
Creolin	½ gr.	0.03 gm.
Crocus, tincture of	1–2 fl. dr.	4.0–8.0 gm.
Croton-chloral hydrate	2–10 gr.	0.12–0.6 gm.
Croton oil	½–1 min.	0.03–0.06 gm.
Cubebs	10 gr.–1 dr.	0.6–4.0 gm.
fluid extract of	15–30 min.	1.0–2.0 gm.
oil of	10–20 min.	0.6–1–2 gm.
oleo-resin of	5–20 gr.	0.3–1.2 gm.
tincture	1–2 fl. dr.	4.0–8.0 gm.
Curare	1/12–⅛ gr.	0.002–0.008 gm.
Curarin	1/64–1/32 gr.	0.001–0.002 gm.
Cusparia bark	10–30 gr.	0.6–2.0 gm.
extract of	5–10 gr.	0.3–0.6 gm.
fluid extract of	15–30 min.	1.0–2.0 gm.
Cypripedium	15 gr.	1.0 gm.
fluid extract of	15–30 min.	1.0–2.0 gm.
Damiana, fluid extract of	30 min.–2 fl. dr.	2.0–8.0 gm.
tincture	1–3 fl. dr.	4.0–12.0 gm.
Daturine	1/100–1/80 gr.	0.0006–0.0012 g.
Delphinium, fluid extract	1–3 min.	0.06–0.2 gm.
Digitaline	1/60–1/30 gr.	0.001–0.002 gm.
Digitalis, abstract of	1–2 gr.	0.06–0.12 gm.
extract of	⅙–¼ gr.	0.01–0.03 gm.
fluid extract of	1–6 min.	0.06–0.35 gm.
infusion of	2–4 fl. dr.	8.00–16.00 gm.
powder of leaves of	½–1 gr.	0.03–0.06 gm.
tincture of	5–15 min.	0.3–1.0 gm.
Dill, oil of	3–10 min.	0.18–0.6 gm.
Dioscorea, fluid extract of	15–30 min.	1.0–2.0 gm.
Dita, fluid extract of	1–4 min.	0.06–0.25 gm.
Dogwood, bark of root	20–60 gr.	1.2–4 0 gm.
fluid extract of	30–60 min.	2.0–4.0 gm.
Donovan's solution. See *Arsenic.*		
Dover's powder	5–10 gr.	0.3–0.6 gm.

Remedy.	Dose. Apothecaries' Weights and Measures.	Dose. Metric System.
Dracontium	10–20 gr.	0.6–1.2 gm.
fluid extract of	½–1 fl. dr.	2.0–4.0 gm.
Drosera, fluid extract of	5–10 min.	0.3–0.6 gm.
Drumine	½–1 gr.	0.3–0.06 gm.
Duboisine	1/100 gr.	0.0006 gm.
Dulcamara, extract of	5–10 gr.	0.3–0.6 gm.
fluid extract of	½–1 fl. dr.	2.0–4.0 gm.
Elaterin	1/60–1/30 gr.	0.001–0.003 gm.
Elaterium	1/10–¼ gr.	0.006–0.015 gm.
Emetin, diaphoretic	1/120–1/30 gr.	0.0005–0.002 gm.
emetic	⅛–¼ gr.	0.008–0.015 gm.
Ergot	15–60 gr.	1.0–4.0 gm.
extract of	2–10 gr.	0.12–0.6 gm.
fluid extract of	15 min.–1 fl. dr.	1.0–4.0 gm.
tincture of	½–2 fl. dr.	2.0–8.0 gm.
wine of	1–3 fl. dr.	4.0–12.0 gm.
Ergotin, Bonjean's (purified extract of ergot)	2–8 gr.	0.12–0.5 gm.
Erigeron, oil of	5–15 min.	0.3–1.0 gm.
Eriodictyum, extract	2–5 gr.	0.12–0.3 gm.
fluid extract	15–30 min.	1.0–2.0 gm.
Erythrophlæin	1/16–⅛ gr.	0.004–0.008 gm.
Erythroxylon. See *Coca.*		
Eserine	1/60–1/30 gr.	0.001–0.003 gm.
Ether, acetic	10–20 min.	0.6–1.2 gm.
compound spirit of (Hoffman's anodyne)	30 min.	2.0gm.
nitrous, spirit of (sweet spirit of nitre)	½–1 fl. dr.	2.0–4.0 gm.

Eucalyptus, fluid ext. of	15–30 min.	1.0–2.0 gm.
oil of	5–10 min.	0.3–0.6 gm.
Euonymin	2–5 gr.	0.12–0.3 gm.
Euonymus, extract of	1–3 gr.	0.06–0.18 gm.
fluid extract of	½–1 fl. dr.	2.0–4.0 gm.
Eupatorium, fluid ext. of	½–1 fl. dr.	2.0–4.0 gm.
Euphorbia pilulifera, fluid extract	5–30 min.	0.3–2.0 gm.
Fel bovis purificatum	3–6 gr.	0.18–0.36 gm.
Fennel, oil of	2–5 min.	0.12–0.3 gm.
Ferrum. See *Iron.*		
Frangula, fluid extract	1–2 fl. dr.	4.0–8.0 gm.
Galls, aromatic syrup of	1–2 fl. dr.	4.0–8.0 gm.
fluid extract	1–2 fl. dr.	4.0–8.0 gm.
tincture of	½–2 fl. dr.	2.0–8.0 gm.
Gamboge	½–4 gr.	0.03–0.25 gm.
Gaultheria, oil of	2–10 min.	0.12–0.6 gm.
Gelsemium, abstract of	1–2 gr.	0.06–0.12 gm.
extract of	½–1 gr.	0.03–0.06 gm.
fluid extract of	2–5 min.	0.12–0.3 gm.
tincture of	5–10 min.	0.3–0.6 gm.
Gentian, compound infusion of	1–4 fl. dr.	4.0–8.0 gm.
extract of	2–3 gr.	0.12–0.2 gm.
fluid extract of	½–1 fl. dr.	2.0–4.0 gm.
tincture of	1–2 fl. dr.	4.0–8.0 gm.
Geranium, fluid extract of	20–30 min.	1.2–2.0 gm.
Geum, fluid extract of	15–30 min.	1.0–2.0 gm.
Gillenia, fluid extract of	15–30 min.	1.0–2.0 gm.
Ginger, fluid extract of	10–30 min.	0.6–2.0 gm.
oleo-resin of	1–3 gr.	0.06–0.18 gm.
tincture of	15–30 min.	1.0–2.0 gm.
Glycyrrhiza. See *Licorice.*		
Goa powder	5–20 gr.	0.3–1.2 gm.
Gold bromide	⅛–½ gr.	0.008–0.03 gm.
and sodium chloride	1/60–1/30 gr.	0.001–0.003 gm.
Gossypium root, fluid extract of bark of	½–1 fl. dr.	2.0–4.0 gm.
Granati radicis cortex, fluid extract	1–2 fl. dr.	4.0–8.0 gm.
Grindelia, fluid extract of	½–1 fl. dr.	2.0–4.0 gm.
Guaiac, ammoniated tincture of	30–60 min.	2.0–4.0 gm.
resin of	10–20 gr.	0.6–1.2 gm.
tincture of	30–60 min.	2.0–4.0 gm.
Guaiacol	½–3 gr.	0.03–0.18 gm.
Guarana	10–30 gr.	0.6–2.0 gm.
fluid extract of	10–30 min.	0.6–2.0 gm.
Gurjun. See *Balsam.*		
Hæmatoxylon	10–20 gr.	0.6–1.2 gm.
extract of	10–20 gr.	0.6–1.2 gm.
fluid extract of	30–60 min.	2.0–4.0 gm.
Hamamelis, fluid ext. of	30 min.–2 fl. dr.	2.0–8.0 gm.
Hedeoma, oil of	2–5 min.	0.12–0.3 gm.
Helleborein	1/10–¼ gr.	0.006–0.016 gm.
Helleborus niger, ext. of	½–2 gr.	0.03–0.12 gm.
fluid extract of	5–15 min.	0.3–1.0 gm.
tincture of	10–15 min.	0.6–1.0 gm.
Helonia, fluid extract of	10–30 min.	0.6–2.0 gm.
Hemidesmus, syrup of	1–2 fl. dr.	4.0–8.0 gm.
Hepatica, fluid extract of	30–60 min.	2.0–4.0 gm.
Hops, extract of	3–15 gr.	0.2–1.0 gm.
fluid extract of	30–60 min.	2.0–4.0 gm.
tincture of	1–2 fl. dr.	4.0–8.0 gm.
Hydrangea, fluid ext. of	30–60 min.	2.0–4.0 gm.
Hydrastine	¼–½ gr.	0.015–0.03 gm.
Hydrastis, extract of	3–10 gr.	0.2–0.6 gm.
fluid extract of	10–30 min.	0.6–2.0 gm.
tincture of	30–60 min.	2.0–4.0 gm.
Hydroquinone	10–15 gr.	0.6–1.0 gm.
Hyoscine hydrobromate	1/100–1/60 gr.	0.0006–0.001 gm.
Hyoscyamine sulphate	1/120–1/60 gr.	0.0005–0.001 gm.
Hyoscyamus, abstract of	2–3 gr.	0.12–0.2 gm.
alcoholic extract of	1–2 gr.	0.06–0.12 gm.
extract of	2–3 gr.	0.12–0.2 gm.
fluid extract of flowers	5–15 min.	0.3–1.0 gm.
of seeds	5 min.	0.3 gm.
tincture of flowers	15–30 min.	1.0–2.0 gm.
of seeds	15–30 min.	1.0–2.0 gm.
Hypnal	½–1 gr.	0.03–0.06 gm.
Hypnone	1–5 gr.	0.06–0.3 gm.
Hypophosphites, syrup of	1 fl. dr.	4.0 gm.
with iron, syrup of	1 fl. dr.	4.0 gm.
Ichthyol	2–4 gr.	0.1–0.25 gm.
Ignatia, abstract of	1–3 gr.	0.06–0.2 gm.
extract of	¼–1 gr.	0.015–0.06 gm.
fluid extract of	1–6 min.	0.06–0.35 gm.
tincture of	5–15 min.	0.3–1.0 gm.
Ingluvin	10–20 gr.	0.6–1.2 gm.
Iodine, compound solution	5 min.	0.3 gm.
tincture of	5–15 min.	0.3–1.0 gm.
Iodoform	1–3 gr.	0.06–0.2 gm.
Iodol	½–2 gr.	0.03–0.12 gm.
Ipecacuanha, emetic	15–30 gr.	1.0–2.0 gm.
expectorant	⅛–1 gr.	0.01–0.06 gm.
abstract of	5–30 gr.	0.3–2.0 gm.
fluid extract of, emetic	15–30 min.	1.0–2.0 gm.
syrup of	½–1 fl. dr.	2.0–4.0 gm.
wine of, emetic	3–6 fl. dr.	12.0–24.0 gm.
expectorant	5–15 min.	0.3–1.0 gm.
Iridin or Irisin	1–5 gr.	0.06–0.3 gm.
Iris, extract of	1–3 gr.	0.06–0.18 gm.
fluid extract of	5–15 min.	0.3–1.0 gm.
Iron acetate, tincture of	15–30 min.	1.0–2.0 gm.
and ammonium citrate	5–10 gr.	0.3–0.6 gm.
sulphate	5–10 gr.	0.3–0.6 gm.
tartrate	5–15 gr.	0.3–1.0 gm.
arseniate	1/60–1/30 gr.	0.0015–0.003 gm.
benzoate	1–5 gr.	0.06–0.3 gm.
bitter wine of	1–2 fl. dr.	4.0–8.0 gm.
bromide	1–5 gr.	0.06–0.3 gm.
syrup of	15–60 min.	1.0–4.0 gm.
carbonate, saccharated	5–15 gr.	0.3–1.0 gm.
chloride	1–3 gr.	0.06–0.18 gm.
tincture of	10–30 min.	0.6–2.0 gm.
and cinchonidia, citrate	5–10 gr.	0.3–0.6 gm.
citrate	5–10 gr.	0.3–0.6 gm.
compound mixture of	1–2 fl. oz.	30.0–60.0 gm.
dialyzed	5–15 min.	0.3–1.0 gm.
solution of	10–30 min.	0.6–2.0 gm.
hydrated oxide of	Tablespoonful antidote to arsenic.	doses freely, as
hypophosphite	5–10 gr.	0.3–0.6 gm.
syrup of	1 fl. dr.	4.0 gm.
iodide	1–5 gr.	0.06–0.3 gm.
syrup of	10–30 min.	0.6–2.0 gm.
lactate	1–5 gr.	0.06–0.3 gm.
magnetic oxide of	5–10 gr.	0.3–0.6 gm.
malate	5–15 gr.	0.3–1.0 gm.
nitrate, solution	8–15 min.	0.5–1.0 gm.
phosphate	1–5 gr.	0.06–0.3 gm.
pomate	5–15 gr.	0.3–1.0 gm.
and potassium, tartrate	10–30 gr.	0.6–2.0 gm.
pyrophosphate	2–5 gr.	0.12–0.3 gm.
and quinia citrate	5–10 gr.	0.3–0.6 gm.
reduced	3–6 gr.	0.2–0.4 gm.
saccharated carbonate of	5–15 gr.	0.3–1.0 gm.
and strychnine citrate	1–3 gr.	0.06–0.18 gm.
subcarbonate	5–30 gr.	0.3–2.0 gm.
subsulphate	1–3 gr.	0.06–0.18 gm.
sulphate	1–3 gr.	0.06–0.18 gm.
dried	½–2 gr.	0.03–0.12 gm.
valerianate	1–3 gr.	0.06–0.18 gm.
wine of the citrate of	½–1 fl. dr.	2.0–4.0 gm.
Jaborandi, extract of	2–5 gr.	0.12–0.3 gm.
fluid extract of	10–60 min.	0.6–4.0 gm.
Jalap	5–30 gr.	0.3–2.0 gm.
abstract of	5–10 gr.	0.3–0.6 gm.
compound powder of	½ dr.	2.00 gm.
extract of	5–10 gr.	0.3–0.6 gm.

Remedy.	Dose. Apothecaries' Weights and Measures.	Dose. Metric System.
Jalap, alcoholic extract of	3–6 gr.	0.18–0.35 gm.
fluid extract of	15–30 min.	1.0–2.0 gm.
resin of	4–8 gr.	0.25–0.5 gm.
tincture of	½–2 fl. dr.	2.0–8.0 gm.
Juglans, extract of	5–20 gr.	0.3–1.2 gm.
fluid extract of	1–2 fl. dr.	4.0–8.0 gm.
Juniperus, fluid extract	30–60 min.	2.0–4.0 gm.
Kairin	2–10 gr.	0.12–0.6 gm.
Kamala	1–2 dr.	4.0–8.0 gm.
fluid extract of	30–60 min.	2.0–4.0 gm.
Kino	10–30 gr.	0.6–2.0 gm.
fluid extract of	15–30 min.	1.0–2.0 gm.
tincture of	½–2 fl. dr.	2.0–8.0 gm.
Koosso. See *Brayera*.		
Krameria	10–20 gr.	0.6–1.2 gm.
extract of	5–15 gr.	0.3–1.0 gm.
fluid extract of	20–30 min.	1.2–2.0 gm.
syrup of	1–4 fl. dr.	4.0–16.0 gm.
tincture of	½–2 fl. dr.	2.0–8.00 gm.
Lactuca, extract of	5–10 gr.	0.3–0.6 gm.
fluid extract of	15–60 min.	1.0–4.0 gm.
Lactucarium	10–15 gr.	0.6–1.0 gm.
fluid extract of	10–30 min.	0.6–2.0 gm.
syrup of	1–3 fl. dr.	4.0–12.0 gm.
Lappa, fluid extract of	30–60 min.	2 0–4.0 gm.
Larix, fluid extract of	30 min.–2 fl. dr.	2.0–8.0 gm.
Lead acetate	½–3 gr.	0.03–0.18 gm.
iodide	½–3 gr.	0.03–0.18 gm.
Leontin	¼–½ gr.	0.015–0.03 gm.
Leonurus, fluid extract of	30–60 min.	2.0–4.0 gm.
Leptandra	20–40 gr.	1.2–2.5 gm.
extract of	3–10 gr.	0.18–0.6 gm.
fluid extract of	30–60 min.	2.0–4.0 gm.
Leptandrin	2–4 gr.	0.12–0.25 gm.
Licorice, compound mixture of	1–4 fl. dr.	4.0–16.0 gm.
powder of	½–1 dr.	2.0–4.0 gm.
Lime, solution of	1–4 dr.	4.0–15.0 gm.
syrup of	15–30 min.	1.0–2.0 gm.
Liquor potassæ, sodæ, etc. See *Potassa*, *Soda*, etc.

compound powder of	½–1 dr.	2.0–4.0 gm.
extract of	5–15 gr.	0.3–1.0 gm.
fluid extract of	15–40 min.	1.0–2.5 gm.
and soda, mixture of	½–1 fl. dr.	2.0–4.0 gm.
sweet tincture of	1–4 fl. dr.	4.0–16.0 gm.
syrup of	1–4 fl. dr.	4.0–16.0 gm.
tincture of	1–4 fl. dr.	4.0–16.0 gm.
wine of	1–2 fl. dr.	4.0–8.0 gm.
Rhus, aromatic fluid ext.	15–60 min.	1.0–4.0 gm.
glabra (cortex), fluid ext.	30–60 min.	2.0–4.0 gm.
(fructus), fluid extract	30–60 min.	2.0–4.0 gm.
toxicodendron	1–6 min.	0.06–0.4 gm.
Roses, fluid extract of	½–2 fl. dr.	2.0–8.0 gm.
syrup of	1–2 fl. dr.	4.0–8.0 gm.
Rubus, fluid extract of	½–2 fl. dr.	2.0–8.0 gm.
Rumex, fluid extract of	30–60 min.	2.0–4.0 gm.
Ruta, fluid extract of	15–30 min.	1.0–2.0 gm.
Sabbatia, fluid extract of	30–60 gr.	2.0–4.0 gm.
Sabina, fluid extract of	5–15 min.	0.3–1.0 gm.
Saccharin	½–4 gr.	0.03–0.25 gm.
Salicin	10–30 gr.	0.6–2.0 gm.
Salix, fluid extract of	½–2 fl. dr.	2.0–8.0 gm.
Salol	10–20 gr.	0.6–1.2 gm.
Salvia, fluid extract of	½–2 fl. dr.	2.0–8.0 gm.
Sambucus, fluid extract of	½–2 fl. dr.	2.0–8.0 gm.
Sandal-wood, oil of	15–20 min.	1.0–1.2 gm.
Sanguinaria	1–5 gr.	0.06–0.3 gm.
fluid extract of	5–10 min.	0.3–0.6 gm.
tincture of	10–40 min.	0.6–2.5 gm.
Santonica	10–30 gr.	0.6–2.0 gm.
fluid extract of	15–60 min.	1.0–4.0 gm.
Santonin	1–4 gr.	0.06–0.25 gm.
Sarsaparilla, compound fluid extract of	½–2 fl. dr.	2.0–8.0 gm.
compound syrup of	1–4 fl. dr.	4.0–16.0 gm.
fluid extract of	½–2 fl. dr.	2.0–8.0 gm.
Sassafras, fluid extract of	½–2 fl. dr.	2.0–8.0 gm.
Savine, oil of	2–5 min.	0.12–0.3 gm.
Scammony	5–15 gr.	0.3–1.0 gm.
resin of	2–10 gr.	0.12–0.6 gm.
Scoparius, fluid extract of	½–1 fl. dr.	2.0–4.0 gm.
Scutellaria, fluid extract	1–2 fl. dr.	4.0–8.0 gm.
Scutellarine	1–3 gr.	0.06–0.18 gm.
Senega, abstract of	4–10 gr.	0.25–0.6 gm.
fluid extract of	8–15 min.	0.5–1.0 gm.
syrup of	½–2 fl. dr.	2.0–8.0 gm.
Senna	10–60 gr.	0.6–4.0 gm.
compound infusion of	1–2 oz.	32.0–64.0 gm.
confection of	1–2 dr.	4.0–8.0 gm.
fluid extract of	1–4 fl. dr.	4.0–15.0 gm.
infusion of	4 fl. oz.	125.0 gm.
syrup of	1–4 fl. dr.	4.0–16.0 gm.
tincture of	2 fl. dr.–1 fl. oz.	8.0–30.0 gm.
Serpentaria, fluid ext. of	30 min.–1 fl. dr.	2.0–4.0 gm.
tincture of	½–2 fl. dr.	2.0–8.0 gm.
Silver iodide	½–2 gr.	0.03–0.12 gm.
nitrate	¼–½ gr.	0.015–0.03 gm.
oxide	⅛–1 gr.	0.03–0.06 gm.
Simaruba, fluid extract	15–30 min.	1.0–2.0 gm.
Soda, solution of (liquor sodæ)	5–20 min.	0.3–1.2 gm.
Sodium acetate	15 gr.–1 dr.	1.0–4.0 gm.
arseniate	$\frac{1}{60}$–$\frac{1}{10}$ gr.	0.001–0.006 gm.
benzoate	5–30 gr.	0.3–2.0 gm.
bicarbonate	10–30 gr.	0.6–2.0 gm.
Sodium bisulphite	10–30 gr.	0.6–2.0 gm.
borate	10–30 gr.	0.6–2.0 gm.
bromide	10–30 gr.	0.6–2.0 gm.
carbonate	10–30 gr.	0.6–2.0 gm.
chlorate	5–30 gr.	0.3–2.0 gm.
citrate	1–10 dr.	4.0–40.0 gm.
hypophosphite	5–15 gr.	0.3–1.0 gm.
hyposulphite	10–30 gr.	0.6–2.0 gm.
iodide	5–20 gr.	0.3–1.2 gm.
nitrite	1–4 gr.	0.06–0.25 gm.
phosphate	2–10 gr.	0.12–0.6 gm.
salicylate	10–20 gr.	0.6–1.2 gm.
sulphate	1–4 dr.	4.0–16.0 gm.
sulphite	10–30 gr.	0.6–2.0 gm.
Solidago, fluid extract of	30–60 min.	2.0–4.0 gm.
Sparteine sulphide	$\frac{2}{15}$ gr.	0.002 gm.
Spigelia, fluid extract of	15–60 min.	1.0–4.0 gm.
and senna, fluid extract	½–2 fl. dr.	2.0–8.0 gm.
Squill, compound fl. ext. of	5–30 min.	0.3–1.8 gm.
syrup of	15–30 min.	1.0–2.0 gm.
fluid extract of	5–30 min.	0.3–1.8 gm.
syrup of	½–1 fl. dr.	2.0–4.0 gm.
tincture of	10–60 min.	0.6–4.0 gm.
Stillingia, fluid extract of	15–60 min.	1.0–4.0 gm.
Stramonium, extract of	½ gr.	0.03 gm.
fluid extract of	1–4 min.	0.06–0.25 gm.
leaves, alcoholic ext. of	¼–½ gr.	0.015–0.03 gm.
tincture of	8–15 min.	0.5–1.0 gm.
seeds, extract of	¼–½ gr.	0.015–0.03 gm.
tincture of	6–15 min.	0.4–1.00 gm.
Strontium bromide	20–30 gr.	1.2–2.0 gm.
iodide	10–20 gr.	0.6–1.2 gm.
lactate	20–30 gr.	1.2–2.0 gm.
phosphate	20–30 gr.	1.2–2.0 gm.
Strophanthus, tincture of	3–8 min.	0.2–0.5 gm.
Strophantin	$\frac{1}{120}$–$\frac{1}{60}$ gr.	0.0005–0.001 gm.
Strychnine and its salts	$\frac{1}{64}$–$\frac{1}{16}$ gr.	0.001–0.004 gm.
Sulphonal	15–30 gr.	1.0–2.0 gm.
Sulphur	1–3 dr.	4.0–12.0 gm.
Sumbul, fluid extract of	15–60 min.	1.0–4.0 gm.
tincture of	10–30 min.	0.6–2.0 gm.
Taraxacum, extract of	5–15 gr.	0.3–1.0 gm.
fluid extract of	½–1 fl. dr.	2.0–4.0 gm.
Terebene	5–10 min.	0.3–0.6 gm.
Terpine hydrate	2–5 gr.	0.12–0.3 gm.
Terpinol	$\frac{2}{30}$ gr.	0.003 gm.
Thallin, sulphate of	1–5 gr.	0.06–0.3 gm.
tartrate of	1–5 gr.	0.06–0.3 gm.
Theine	1–2 gr.	0.06–0.12 gm.
Thuja, fluid extract of	10–15 gr.	0.6–1.0 gm.
Thymol	1–5 gr.	0.06–0.3 gm.
Toxicodendron, fluid ext.	1–5 min.	0.06–0.3 gm.
Triticum, fluid extract of	1–2 fl. dr.	4.0–8.0 gm.
Turpentine, oil of	5–30 min.	0.3–2.0 gm.
Tussilago, fluid extract of	30–60 min.	2.0–4.0 gm.
Urethane	10–30 gr.	0.6–2.0 gm.
Ustilago maidis, fluid ext.	15–60 min.	1.0–4.0 gm.
Uva ursi, fluid extract of	½–1 fl. dr.	2.0–4.0 gm.
Valerian, abstract of	10–15 gr.	0.6–1.0 gm.
ammoniated tincture of	½–2 fl. dr.	2.0–8.0 gm.
extract of	5–15 gr.	0.3–1.0 gm.
fluid extract of	½–1 fl. dr.	2.0–4.0 gm.
oil of	4–5 min.	0.24–0.3 gm.
tincture of	½–2 fl. dr.	2.0–8.0 gm.
Veratrine	$\frac{1}{60}$–$\frac{1}{30}$ gr.	0.001–0.003 gm.
Veratrum viride, abstract of	1–2 gr.	0.06–0.12 gm.
fluid extract of	1–5 min.	0.06–0.3 gm.
tincture of	3–5 min.	0.18–0.3 gm.
Verbena, fluid extract of	15–60 min.	1.0–4.0 gm.
Viburnum, fluid extract of	1–2 fl. dr.	4.0–8.0 gm.
Vinegar. See *Acetum.*		
Wahoo. See *Euonymus.*		
Wild cherry bark	½–1 dr.	2.0–4.0 gm.
fluid extract of	30–60 min.	2.0–4.0 gm.
infusion of	1–2 fl. oz.	30.0–60.0 gm.
syrup of	2–4 fl. dr.	8.0–16.0 gm.
Wintergreen, oil of	1–20 min.	0.06–1.2 gm.
Wormseed, oil of	4–8 min.	0.24–0.5 gm.
Xanthoxylum bark, fluid extract of	15–30 min.	1.0–2.0 gm.
fruit, fluid extract of	15–30 min.	1.0–2.0 gm.
Zinc acetate	1–2 gr.	0.06–0.12 gm.
bromide	½–2 gr.	0.03–0.12 gm.
iodide	½–3 gr.	0.03–0.18 gm.
oxide	2–8 gr.	0.12–0.5 gm.
phosphide	$\frac{1}{20}$–$\frac{1}{10}$ gr.	0.003–0.006 gm.
sulphate (alterative)	¼–1 gr.	0.015–0.06 gm.
(emetic)	10–30 gr.	0.6–2.0 gm.
syrup of iodide of	20–40 min.	1.2–2.5 gm.
valerianate	1–4 gr.	0.06–0.2 gm.
Zingiber. See *Ginger.*		

In Germany physicians are not permitted to prescribe heroic medicines in larger doses than those given in the following table, without adding the sign ! indicating that the larger dose has been intentionally ordered. All the doses mentioned are intended for adults. The following table of maximum doses is based upon one in the Pharmacopœia Germanica (Stillé and Maisch):

TABLE OF MAXIMUM DOSES.

	For a single dose.		For a day.	
	Gram.	Grain.	Gram.	Grain.
Acidum arseniosum	.005	1/13	.02	3/10
carbolicum (crystal)	.1	1½	.5	7½
hydrocyanicum dilutum	.05	¾	.20	3
Aconitina	.004	1/18	.03	5/10
Aconiti radix	.1	1½	.5	7½
Antimonii et potassii tartras	.2	3	.5	7½
Apomorphinæ hydrochloras	.01	2/10	.05	¾
Aqua amygdalæ amaræ and Aqua laurocerasi	2.0	30⅜	8.0	123½
Argenti nitras	.03	3/10	.2	3
Arsenici iodidum	.025	⅜	.05	¾

Dosia (do'se-ah) **pow'der.** A celebrated secret remedy in Japan, which for a thousand years has caused high honors to be paid to Kobodaisi, its discoverer.

Dosimet'ric. Relating to dosimetry.

Dosimetry, do-sim'et-re (*dosis, metron,* measure). System of medicine in which granules of definite strength are administered in certain doses.

Dosiology, do-se-ol'o-je (*dosis, logos,* doctrine). Doctrine of giving doses; posology.

Do'sis. Dose.

Dotage, do'taje (raving). Senile mental decrepitude. See *Dementia.*

Dothien, doth'e-en. Furunculus.

Dothienenteria, doth-e-en-en-ter'e-ah (*dothien, enteron,* intestine, *itis*). Dothinenteritis.

Dothinenteritis, doth-in-en-te-re'tis, properly **Dothienenteritis.** *Follicular gastroenteritis.* Inflammation and ulceration of the glands or follicles of Peyer and Brunner, as in typhoid fever.

Dothion, doth'e-on. Furunculus.

Dottrina medica Italiana, dot-tre'nah med'ik-ah it-al-e-an'ah (Italian medical doctrine). Controstimulus (doctrine of).

Double consciousness, dub'l kon'shus-nes. See *Consciousness.* **D. hearing,** the action of the one ear unaccordant with that of the other; sounds heard doubly, and in different tones or keys. **D. mon'sters,** see *Duplication.* **D. refrac'tion,** see *Refraction.* **D. salts,** see *Salt.* **D. stain'ing,** process employed in staining specimens, consisting in using two colors, the one of which will stain the connective tissue and cell protoplasma, and the other the nuclei, thus rendering the different elements more easily discernible. **D. touch,** combined vaginal and rectal digital examination, in which the thumb is introduced into one organ and the finger into the other. **D. vision,** diplopia.

Doublet, dub'let. Microscope with two lenses.

Douche, doosh (modern Latin, *ducia*). Term applied to a column of fluid, of a determinate nature and temperature, let fall upon the body. Deluge pumping is a variety of the douche. In this bath the fluid is directed upon the part on which we are desirous of acting. In the *descending douche* the fluid falls from a height. In the *ascending douche* the fluid is thrown upward, as in those administered in diseases of the

uterus. In the *horizontal douche* the fluid is impelled horizontally, etc. Douches may be cold or warm. The douche communicates a considerable and peculiar shock to the nervous system, and is one of the most successful means for taming the furious maniac. It is also useful in chronic rheumatism, stiff joints, etc. *Nasal douches* are applications of this form of treatment to the nasal passages. *Douches of air* are occasionally used, as in cases of obstruction of the Eustachian tube by mucus. They are sent from an air-press and through a catheter introduced through the nose into the Eustachian tube. **D., spi'nal** consists of a single stream of water applied to the spine; stimulant in melancholia, cerebral anæmia, and general debility. **D., transi'tion,** *Scotch douche,* consists in the successive use of hot and cold water.

Douche-pan. Vessel made of zinc, which is filled with water and provided with a rest, on which the patient sits while syringing the vagina.

Douglas (dug'las), **cul-de-sac of** (after Dr. James Douglas, the obstetrician and anatomist). See *Uterus.* **D.'s pouch,** see *Uterus.* **D., semilu'nar fold of,** see *Semilunar.*

Doundake, down-dak'e. Sarcocephalus esculentus.

Doundakine, down'dak-een. Alkaloid derived from doundake.

Douse. Douche.

Do'ver's pow'der. See *Pulvis ipecacuanhæ compositus.*

Down. See *Attack.* Also short, soft hairs.

Doy'ère's papil'læ. Slight eminences at entrance of a nerve-filament into sarcolemma of a muscular fibre.

Doyle. Strabismus.

Dracæna draco, dra-se'nah drah'ko. Tree native of East Indies and Canary Islands; dragon's blood is obtained from it.

Drachion, drak'e-on. The quantity of any substance which may be taken with the ends of two or three fingers.

Drachm, dram. *Drachma, Dram.* Ancient name of a piece of money weighing the eighth part of an ounce. At the present day it is used for this weight. Eighth part of an ounce, apothecaries' weight.

Dracic acid, dras'ik as'id. Anisic acid.

Dracin, dra'sin. Draconin.

Draco, drak'o (*drakon,* dragon). In composition, a dragon or large serpent. **D. mitiga'tus,** hydrargyri submurias. **D. sylves'tris,** Achillea ptarmica.

Dracocephalum Canariense, drak-o-sef'al-um kan-ah-re-en'se (*draco, kephale,* head, from the shape of the corolla). *Turkey* or *Canary balsam, Balm of Gilead tree.* Turkish and Siberian plant, used as a tonic. **D. Virginia'num,** Physostegia Virginiana.

Draconic acid, drak-on'ik as'id. Prussic acid.

Draconin, drak'on-in. Red resin of dragon's blood.

Draco'nis san'guis, See *Dragon's blood.*

Draconisatus, drak-on-iz-at'us. Containing dragon's blood.

Draconthæma, drak-on-tha'mah (*draco, haima,* blood). See *Calamus rotang.*

Dracontiasis, drak-on-te'as-is. See *Dracunculus.*

Draconticus, drak-ont'ik-us. Relating to comedones.

Dracontisomus, drak-ont-e-so'mus (*drakon,* dragon, *soma,* body). Celosomus.

Dracontium, drak-on'she-um. Dracunculus. See also *Dracontium fœtidum.* **D. angustis'patha,** narrow-spathed skunk cabbage, is possessed of properties similar to those of **D. fœ'tidum,** *Skunk cabbage, Skunkweed, Polecat collard, Cow collard, Collard, Itchweed, Stinkpoke, Swamp cabbage, Polecat weed, Hellebore, Ellebore, Irish cabbage.* Indigenous plant, extremely fetid. The property on which its medical virtues are dependent resides in a volatile principle. The dose of the dried root is from ten to twenty grains. Resembles asafœtida and other fetid gums in its properties, belonging to the class of reputed antispasmodics. **D. polyphyl'lum,** poisonous species.

Draconyl, drak'on-il. Solid substance obtained from dragon's blood by distillation.

Dracunculus, drak-un'ku-lus (dim. of **Draco**) **medinen'sis,** muscular hairworm, bicho, Guinea worm or threadworm. Genus of worms frequently met with in Indian and African climes; characterized by a filiform body, and smooth, and nearly of equal thickness throughout. When small, it insinuates itself through the cutaneous pores, and penetrates into the areolar membrane and between the muscles, especially between those of the lower limbs, where it occasions a tumor like a boil—*Guinea-worm disease*—which suppurates, and the head of the worm gradually emerges. Morbid phenomena induced by the dracunculus have been termed *Dracontiasis.* See *Parasites* and *Artemisia dracunculus.* **D. polyphyl'lus,** Arum dracunculus. **D. praten'sis,** Achillea ptarmica. **D. vulga'ris,** snake-root, European dragon-root; poisonous plant with a fetid odor; root is used for the same purposes as the root of Arum maculatum.

Dragées, drah-zha' (F.). Almonds or dried preserves, covered with white sugar; sugar-plums. Used in pharmacy for sugar-coated medicines.

Dragge. Lolium temulentum.

Dragma (drag'mah) or **Dragmis,** drag'mis. Quantity of any substance which may be taken with the ends of two or three fingers.

Drag'on claw (scaly). Pterospora andromedea. **D., great,** Arum maculatum. **D., green,** Arum dracontium. **D.'s head,** Antirrhinum majus. **D. root,** Arum tryphyllum, Pterospora andromedea. **D. tur'nip,** Arum triphyllum. **D.'s wa'ter,** Calla palustris **D. wort,** Dracunculus vulgaris.

Dragon's blood. See *Calamus rotang.*

Drain. As a verb, to produce drainage. In surgery, arrangement for procuring proper drainage of a wound; a hollow perforated tube or bundle of catgut, to ensure drainage of a wound. **D. throat,** diphtheroid conditions of throat.

Drainage. Act of depriving parts gradually of their redundant humidity. In surgery, gradual drawing off of purulent fluids from deep-seated abscesses by means of hollow sounds, drainage-tubes, tubing, etc. **D., antisep'tic,** drainage according to the rules of antiseptic surgery. **D. tube, Keith's,** tube for draining the peritoneal cavity; it is open above and below, perforated at the lower third, and provided with a projecting ridge near the orifice. **D. tube, Koeberle's,** resembling test-tube in shape, provided with perforations, and having a round smooth end; employed similarly to Keith's drainage-tubes.

Drain'ing (*trainer* (F.), to draw). See *Drain* and *Drainage.* Act of drawing off water from marshes, to destroy the unhealthy emanations proceeding from them. From marshes arise certain emanations or miasmata, which are the fertile source of intermittents and other diseases. Draining the soil and converting it into arable land changes its character, and the malaria ceases to be given off.

Drakena, dra-ke'nah (after Sir Francis Drake). Dorstenia contrayerva.

Dram. Drachm.

Dramatism, dram'at-izm. Tendency to talk pompously or dramatically.

Draper's teasel, drap'urz te'z'l. Dipsacus fullonum.

Drapetomania, drap-et-o-man'e-ah (*drapetes,* deserter). Mental aberration in which the individual has a desire to run away.

Drastic, dras'tik (*drao,* to be active). Active; epithet given to purgatives which operate powerfully, as elaterium, oil of croton, etc.

Draught, draft. Liquid medicinal preparation to be swallowed at once. Sudden rush of blood to the mammæ, occasioned in the mother by the sight, or even thought, of her infant, and which occasions a greatly increased secretion of milk. Current of air. **D., black,** see *Infusum sennæ compositum.*

Draw'ing. See *Digestives*

Draw-sheet. Sheet folded and so placed under a patient in bed that it may be partially withdrawn as it becomes soiled, without necessitating the removal of the entire sheet.

Draw-tube. Interior tube to lengthen a microscope.

Dray'man's bot'tom. Enlarged condition of bursa mucosa over tuberosity of ischium.

Dream. See *Somnium.* **D., wak'ing,** see *Hallucination.*

Dregister, dreg'is-tur. Druggist.

Dregs, dregz (G. *daeck,* dirt). Feculence; sequelæ.

Drench. To give liquid physic by force, as in veterinary practice; also medicine so given.

Drepanid'ium pana'rum. Parasite found in the red blood-corpuscles of frogs.

Drepanocar'pus (*drepane,* sickle, *karpos,* fruit). Genus of trees and shrubs, natives of Africa and tropical America. **D. Senegalen'sis,** species of Western Africa furnishing kino.

Drepanoïdes, drep-an-o-e'dees (*drepanon,* falx or scythe, *eidos,* resemblance). Falciform.

Dress. To cleanse wounds ulcers, etc., and to apply the necessary bandages. See *Vestitus.*

Dress'er. Hospital assistant whose office it is to dress wounds, ulcers, etc. He corresponds in function to the *élève externe* of the French hospitals.

Dress'ing. Methodical application of any remedy or apparatus to a diseased part; also the remedy or apparatus itself. **D., absorb'ent,** dressing with material intended to absorb the discharges. **D., alcohol'ic,** dressing saturated with an alcoholic fluid. **D., antisep'tic,** dressing impregnated with a substance which prevents putrefaction; see *Antiseptic.* **D., chlor-al'cohol,** antiseptic and cicatrisant dressing of calcium chloride and tincture of camphor, equal parts of each. **D., dry,** dressing in which dry absorbent cotton-wool, wood-wool wadding treated with corrosive sublimate, etc., is used for the purpose of absorbing secretions from a wound and to prevent external infection. **D., earth,** consists of yellow clay, after being deprived of grit and organic material, applied to a wound or discharging ulcer, and considered to have deodorizing properties. **D., fixed,** see *Bandage, starch.* **D. for'ceps, Mundé's u'terine,** forceps for the purpose of introducing sponge or absorbent cotton into the vagina. **D. forceps, Thomas's,** used for the same purpose. **D., immov'able,** see *Bandage, plaster of Paris.* **D., i'solating,** the wounded part is immersed in a continuous bath of carbolized oil, thus seeking to give protection to the wound and to remove discharges. **D., Lister's,** antiseptic and impermeable dressing introduced by Sir Joseph Lister, in which carbolic acid is generally used; it aims at preventing the access of putrefaction germs. **D., Scott's,** employed in the treatment of fungous arthritis; compound mercurial ointment is first applied, and then followed by a plaster consisting of pitch or leather. **D., water,** method employed to keep a wound constantly wet by application of wet compresses or immersion in tepid water.

Dress'ler's disease. Paroxysmal hæmoglobinuria.

Drill. Instrument used for boring holes. **D. bone,** *Exercise bone;* triangular piece of bone arising in the left deltoid muscle from pressure of the musket. The *Riding bone, Rider's bone,* in the adductor muscle of the thigh, is produced from pressure in the saddle.

Drilling. Operation sometimes necessary on bones, as for insertion of pegs, etc. Drilling of the crystalline lens has been practised in cataract.

Drimia ciliaris, drim'e-ah sil-e-ah'ris. Plant of Southern Africa, possessing vesicant, emetic, expectorant, and diuretic properties.

Drimyphagia, drim-e-fah'je-ah (*drimus,* acrid, aromatic, *phago,* to eat). Aromatic and exciting diet.

Drimys Winteri, drim'is win-te're (*drimus,* sharp, acrid). Winteria aromatica.

Drimytes, drim'it-ees. Acridity.

Drink. Beverage. Liquid introduced into the alimentary canal for repairing loss of fluid parts of the body; the necessity for it is indicated by the sensation of thirst. Fluid taken during a meal aids in digestion of food. Drinks are used to appease thirst prevailing in febrile affections, or act as diluents in those and other cases. The ordinary drinks are—Water: spring-water, river-water, well-water, etc. Juices and infusions of animal and vegetable substances: lemon-juice, currant-juice, whey, tea, coffee, mate, etc. Fermented liquors: wines, ale, beer, cider, perry, etc. Spirituous liquors: brandy, alcohol, ether, kirschwasser, rum, arack, gin, whiskey, ratafias, cordials, etc.

Drip-cup. Vessel for catching the liquid which has been removed from a galvanic cell.

Drivelling, driv'el-ing. Slavering.

Dri'ving in. Checking a disease, eruption, etc. suddenly and driving it into the interior, as is supposed, of the body.

Dromograph, dro'mo-graf (*dromos,* course, *grapho,* to write). Instrument for estimating the rapidity with which the blood circulates in an artery.

Droop'ing a'vens. Geum rivale. **D. tu'lip,** Fritillaria meleagris.

Drop. A quantity of liquid generally valued at the weight of a grain. This weight, however, varies according to the degree of tenacity of the fluid, extent of moist surface to which the drop is attached before it falls, size of the bottle and angle of inclination during the dropping. The following is *the number of drops of different liquids equivalent to a fluidrachm,* according to Prof. J. P. Remington of Philadelphia:

Name.	Drops in ℥j (60 min.).	Name.	Drops in ℥j (60 min.).
Acetum opii	90	Liquor hydrarg. nit.	131
Acetum sanguinariæ	78	Liquor iodi comp.	63
Acetum scillæ	68	Liquor plumbi subacet.	74
Acid. aceticum	108	Liquor potassæ	62
Acid. aceticum dilut.	68	Liquor potassii arsen.	57
Acid. carbolicum	111	Liquor sodæ chloratæ	63
Acid. hydrochloricum	70	Liquor zinci chloridi	89
Acid. hydrochlor. dilut.	60	Oleores. aspidii	130
Acid. hydrocyanicum	60	Oleores. capsici	120
Acid. lacticum	111	Oleores. cubebæ	123
Acid. nitricum	102	Oleum æthereum	125
Acid. nitricum dilut.	60	Oleum amygd. amaræ	115
Acid. nitrohydrochlor.	76	Oleum amygd. expres.	108
Acid. phosphoric. dilut.	59	Oleum anisi	119
Acid. sulphuricum	128	Oleum bergamii	130
Acid. sulphur. aromat.	146	Oleum cari	132
Acid. sulphuric. dilut.	60	Oleum caryophylli	130
Acid. sulphurosum	59	Oleum cinnamomi	126
Æther fortior	176	Oleum copaibæ	123
Alcohol	146	Oleum cubebæ	125
Alcohol dilutum	137	Oleum fœniculi	125
Aqua	60	Oleum gaultheriæ	125
Aqua ammoniæ fortior	66	Oleum juniperi	148
Aqua destillata	60	Oleum lavandulæ	138
Balsam Peruvianum	101	Oleum limonis	129
Bromum	250	Oleum menthæ piperitæ	129
Chloroform. purificatum	250	Oleum ricini	77
Copaiba	110	Oleum rosæ	132
Creasotum	122	Oleum rosmarini	143
Ext. belladon. fluid.	156	Oleum sassafras	133
Ext. buchu fluidum	150	Oleum terebinthinæ	136
Ext. cimicifugæ fluid.	147	Oleum tiglii	104
Ext. cinchonæ fluid.	138	Spiritus æther. comp.	148
Ext. colchici rad. fl.	160	Spiritus æther. nitrosi	146
Ext. colch. sem. fluid.	158	Spiritus ammon. arom.	142
Ext. conii fruct. fluid.	137	Spiritus camphoræ	143
Ext. digitalis fluid.	134	Spiritus chloroformi	150
Ext. ergotæ fluidum	133	Spiritus menthæ pip.	142
Ext. gelsemii fluid.	149	Syrupus	65
Ext. glycyrrhizæ fl.	133	Syrupus acaciæ	44
Ext. hyoscyami fluid.	160	Syrupus ferri iodidi	65
Ext. ipecac. fluidum	120	Syrupus scillæ	75
Ext. pareiræ fluidum	140	Syrupus scillæ comp.	102
Ext. rhei fluidum	158	Syrupus senegæ	106
Ext. sarsap. comp. fl.	134	Tinctura aconiti	146
Ext. senegæ fluidum	137	Tinctura belladonnæ	137
Ext. serpentariæ fl.	148	Tinc. benzoini comp.	148
Ext. uvæ ursi fluid.	137	Tinctura cantharidis	131
Ext. valerianæ fluid.	150	Tinct. cinchon. comp.	140
Ext. verat. virid. fl.	159	Tinctura digitalis	128
Ext. zingiberis fluid.	142	Tinctura ferri chlorid.	150
Glycerinum	67	Tinctura iodi	148
Hydrargyrum	150	Tinctura nucis vom.	140
Liquor ammonii acet.	75	Tinctura opii	130
Liquor acid. arseniosi	57	Tinctura opii camph.	130
Liquor arsenici et hydrargyri iodidi	58	Tinctura opii deodor.	110
Liquor ferri chloridi	71	Tinctura valerianæ	130
Liquor ferri citratis	71	Tinctura verat. virid.	145
Liquor ferri nitratis	59	Tinctura zingiberis	144
Liquor ferri subsulph.	73	Vin. colchici radicis	107
Liquor ferri tersulph.	83	Vin. colchici seminis	111
		Vin. opii	100

Drop, a'gue, taste'less. Liquor potassii arsenitis. **D., black,** acetum opii. **D. serene',** amaurosis. **D., wrist,** see *Wrist.*

Dropacismus, dro-pah-siz'mus. See *Depilation.*

Dropax, dro'paks. See *Depilatory.*

Dropped hands or **wrists.** See *Hands.*

Drop'per, eye. Instrument made of glass, either straight or curved, consisting of a hollow tube opening at both ends, and provided with rubber at one end for drawing up liquids, which can be applied, drop by drop, to the eye.

Drops (pl. of **Drop**). A form in which medicine is sometimes put up to make it palatable and easy to take, as cough drops and many others. See *Guttæ.* **D., Abbé Rousseau's,** laudanum Abbatis Rousseau. **D., an'odyne,** liquor morphiæ acetatis. **D., antivene'real,** see *Tinctura ferri muriatis.* **D., a'gue, Fowler's,** liquor potassii arsenitis. **D., cham'omile,** see *Anthemis nobilis.* **D., Dutch,** balsam of sulphur, balsam of turpentine. **D., fit,** spiritus ammoniæ fœtidus; see *Fuligo.* **D., Jes'uits',** tinctura benzoini composita. **D., lav'ender,** spiritus lavandulæ compositus. **D., ni'tre,** spiritus ætheris nitrici. **D., pep'permint,** pastilli de menthâ piperitâ. **D., soot,** see *Fuligo.* **D., taste'less a'gue,** liquor potassii arsenitis.

Dropsical, drop'se-kal. Hydropic.

Dropsied, drop'seed. Hydropic.

Dropsy, drop'se. See *Hydrops.* **D. of the abdo'men,** ascites. **D., amniot'ic,** hydramnios. **D., anæ'mic,** dropsy caused by anæmia. **D., arach'noid,** collection of fluid in arachnoid sac. **D. of the are'olar tis'sue,** œdema. **D., artic'ular,** hydrarthrosis. **D. of the bel'ly,** ascites. **D. of the brain,** hydrocephalus. **D., cachec'tic,** dropsy due to cachexia, in which the watery constituents of the blood preponderate. **D., car'diac,** dropsy dependent on heart disease. **D. of the cel'lular mem'brane,** anasarca. **D., cer'ebral,** hydrocephalus. **D. of the chest,** hydrothorax. **D. of the eye,** hydrophthalmia. **D. of the Fallo'pian tube,** hydrosalpinx. **D., fi'brinous,** effused fluid containing fibrin. **D. of the flesh,** anasarca. **D., gen'eral,** anasarca. **D. of the head,** hydrocephalus. **D. of the heart,** hydropericardium. **D., hepat'ic,** D. dependent on disease of the liver. **D. of the kid'ney,** hydronephrosis. **D. of the lac'rymal sac,** fistula lacrymalis; lacrymal hernia. **D. of the lar'ynx,** œdema of glottis. **D. of the lungs,** œdema pulmonum. **D., ova'rian,** hydroarion. **D. of the pericar'dium,** hydropericardium. **D. of the peritone'um,** ascites. **D. of the pleu'ra,** hydrothorax. **D. of preg'nancy,** dropsy occurring in pregnant women, due to pressure of the gravid uterus. **D., re'nal,** dependent on disease of the kidney. **D., spi'nal,** hydrorachis. **D. of the tes'ticle,** hydrocele. **D., wa'ter of,** serum of serous membrane. **D., wind,** emphysema. **D. of the womb,** hydrometra.

Dropwort, drop'wurt. Spiræa filipendula. **D., hem'lock,** œnanthe. **D., wa'ter, hemlock,** œnanthe. **D., west'ern,** Gillenia trifoliata.

Drosera rotundifolia, dro'ser-ah ro-tun-de-fo'le-ah (*droseros,* dewy, the leaf glands exuding a clear fluid like dew-drop). Systematic name of the *Sun-dew,* a plant used internally as an expectorant, and externally as a rubefacient and to destroy warts and corns.

Drosisticon, dros-is'te-kon. See *Bosa.*

Drosium, dro'se-um. Drosera rotundifolia.

Drosobotanon, dro-so-bot'an-on (*drosos,* dew, *botane,* plant). Drosera rotundifolia.

Drosomeli, dros-om'el-e (*drosos,* dew, *meli,* honey). Fraxinus ornus.

Drown'ing, asphyxia (as-fiks'e-ah) **by.** See *Asphyxia by submersion.* **D., resuscita'tion from.** The following general directions are based on those in use in a number of Government services, at home and abroad: If attempts at breathing be made while the patient is in the water, water may pass into the air-passages; but this is not a necessary condition of drowning. Hence attempts need not be made to remove water from the chest by rolling the body, face downward, on a barrel, etc. The efforts to restore breathing must be commenced energetically, and persevered in for one or two hours, or until life has been pronounced extinct by a medical man. Efforts to promote warmth and circulation must not be made until the appearance of natural breathing; for if circulation be induced before respiration, restoration will be endangered. Treat the patient *instantly* on the spot, in the open air, with the face downward, exposing the face, neck, and chest to the wind, except in severe weather, and removing all tight clothing from the neck and chest, especially the braces. Prevent unnecessary crowding around the body. Do not allow the body to remain on the back unless the tongue is secured. Do not hold the body up by the feet, or place it in a warm bath, unless under medical direction as a momentary excitant.

1. *Dr. Marshall Hall's Method.*—To restore the breathing, first clear the throat by placing the patient on the ground with the face downward and one arm under the forehead, in which position fluids will more readily escape by the mouth, and the tongue will fall forward, leaving the entrance into the windpipe free. Wipe and cleanse the mouth. If satisfactory breathing commences, use treatment to promote warmth; but if necessary to excite breathing, turn the patient well and instantly on the side, support the head, and excite the nostrils with snuff, hartshorn, or smelling salts, or tickle the throat with a feather, etc. Rub the chest and face warm, and dash cold water, or cold and hot water alternately, on them. If there be no success, instantly, to imitate breathing, replace the patient on the face, raise and support the chest well on a folded coat or other article of dress, turn the body gently on the side and a little beyond, and briskly on the face, back again, repeating these measures cautiously and perseveringly once every four or five seconds, occasionally varying the side. On each occasion that the body is replaced on the face make uniform but efficient pressure with brisk movement on the back between and below the shoulder-blades, removing pressure immediately before turning the body on the side. By placing the patient on the chest the air is forced out, as in expiration; when turned on the side the pressure is removed, and air enters the chest, as in inspiration. During the whole operation let one person attend solely to the movements of the head and of the arm under it. Whilst these operations are being proceeded with, dry the hands and feet, strip the body, and cover it with dry clothing or blankets, taking care not to interfere with the efforts to restore breathing.

2. *Dr. Silvester's Method.*—Should these efforts not prove successful in from two to five minutes, imitate breathing by the following method: Place the patient on the back on a flat surface, inclined a little upward from the feet; raise and support the head and shoulders on a small firm cushion or folded article of dress placed under the shoulder-blades. Cleanse the mouth and nostrils, draw forward the patient's tongue, and keep it projecting beyond the lips by an elastic band over the tongue and under the chin; or a piece of string or tape may be tied around them, or, by raising the lower jaw, the teeth may be made to retain the tongue in that position. Remove all tight clothing from about the neck and chest, especially the braces. Standing at the patient's head, grasp the arms just above the elbows, draw them gently and steadily upward above the head, and keep them stretched upward for two seconds; *air is thus drawn into the lungs.* Then turn down the patient's arms, and press them gently and firmly for two seconds against the sides of the chest. *Air is thus pressed out of the lungs.* Repeat these measures alternately and perseveringly, about fifteen times in a minute, until a spontaneous effort to respire is perceived, immediately upon which proceed to induce circulation and warmth.

To promote warmth and circulation after natural breathing has been restored, wrap the patient in dry blankets; commence rubbing the limbs upward, with firm grasping pressure and energy, using handkerchiefs, flannels, etc., the blood being thus propelled

along the veins toward the heart, and continue friction under the blanket or over the dry clothing. Promote warmth by hot flannels, bottles or bladders of hot water, heated bricks, etc. to the pit of the stomach, armpits, between the thighs, and soles of the feet. On restoration of life a teaspoonful of warm water should be given, and then, if the power to swallow has returned, small quantities of wine, warm brandy and water, or coffee. The patient should be kept in bed, and a disposition to sleep encouraged. This treatment should be persevered in for several hours.

3. *Dr. Howard's Method.*—Instantly turn the patient downward, with a large, firm roll of clothing under his stomach and chest. Place one of his arms under his forehead, so as to keep his mouth off the ground. Press with all your weight, two or three times, for four or five seconds each time, upon the patient's back, so that the water is pressed out of his lungs and stomach and drains freely out of his mouth. Then quickly turn the patient, face upward, with roll of clothing under his back, just below the shoulder-blades, and make the head hang back as low as possible. Place the patient's hands above his head. Kneel with the patient's hips between your knees, and fix your elbows firmly against your hips. Grasping the lower part of the patient's naked chest, squeeze his two sides together, pressing gradually forward with all your weight for about three seconds, until your mouth is nearly over the mouth of the patient; then, with a push, suddenly jerk yourself back. Rest about three seconds, then begin again, repeating these bellows-blowing movements with perfect regularity, so that foul air may be pressed out and pure air be drawn into the lungs, about eight or ten times a minute, for at least an hour or until the patient breathes naturally. A moment's delay in using this method, and success may be hopeless. Be careful not to interrupt the first short natural breaths. If they be long apart, carefully continue between them the bellows-blowing movements, as before. After breathing is regular have the patient rubbed, etc., and put to bed to sleep, as previously mentioned.

Drow'siness. Somnolency.

Drug. Name ordinarily applied to simple medicines, but, by extension, to every substance employed in the cure of disease. A strictly physiological classification of drugs is impossible. The following table presents a satisfactory and clear arrangement of the subject (Hare):

1. Alteratives.
2. Anæsthetics.
3. Antacids.
4. Anthelmintics.
5. Antiseptics (see also *Disinfectants*).
6. Antiperiodics.
7. Antipyretics.
8. Antispasmodics.
9. Astringents.
10. Cardiac sedatives.
11. Cardiac stimulants.
12. Counter-irritants.
13. Diaphoretics.
14. Digestants.
15. Disinfectants (see also *Antiseptics*).
16. Diuretics.
17. Eliminatives.
18. Emmenagogues.
19. Emetics.
20. Expectorants.
21. Hypnotics.
22. Nervous sedatives.
23. Nervous stimulants.
24. Oxytocics.
25. Tonics.
26. Vasomotor depressants.
27. Vasomotor stimulants.

Drug also signifies to prescribe or administer drugs; most commonly, perhaps, to dose to excess with drugs; one who so doses is sometimes called "a drugger." "To drug" also means to tincture with some medicinal article. **D. disease,** morbid condition which is—or is presumed to be—caused or kept up by the administration of drugs. **D. grind'er,** see *Pulverization.* **D. mill,** see *Pulverization.* **D. rash,** see *Dermatitis medicamentosa.*

Drugger. Druggist; one who is fond of giving drugs. See *Drug.*

Drug'ging. Mania for prescribing or for taking medicine.

Drug'gist. *Drugger, Drugster.* One who sells drugs.

Drugs, antag'onism of. See *Antagonism.*

Drugster, drug'stur. Druggist.

Drum of the ear. Tympanum.

Drumbel'ly. Tympanites.

Drumhead. Membrane of the tympanum.

Drumine, drum'een. Alkaloid obtained from Euphorbia Drummondii; has anodyne and anæsthetic properties.

Drummond's whiff. Phenomenon in which a whiff can be distinguished while the mouth is open during expiration following rest; considered to be an indication of aneurism of the thoracic aorta.

Drumsieve, drum'siv. See *Cibration.*

Drunk'ard's liv'er. Cirrhosis of the liver.

Drunk'enness. See *Temulentia.*

Drunk'wort. Nicotiana tabacum.

Dry ca'ries. Parisitic disease of the nails. **D. casea'tion.** See *Caseation.* **D. cup'ping,** see *Cupping.* **D. gan'grene,** see *Gangrene.* **D. la'bor,** labor which is not preceded by, nor attended with, discharge of liquor amnii. **D. nurse,** see *Nurse.* **D. scall,** psoriasis. **D. wines,** those in which the saccharine matter is not in excess. **D. yeast,** yeast from which moisture has been expressed, as in Vienna yeast, by which means it can be kept for a long time.

Dry'ad. Yellow-flowered Dryas Drummondii.

Dry'in (*drus,* oak). Quercin.

Dry'ing. *Desiccation.* Evaporation or removal of the superfluous humidity in a body.

Dryobalanops camphora, dre-o-bal'an-ops kam'pho-rah. See *Camphor.*

Drys'dale's cell. Fluid from ovarian cyst which under the microscope is seen to contain granular cells, some free granular matter, and small oil-globules, and often epithelial cells of various shapes and crystals of cholesterin.

Drysomeli, dris-om'e-le (*drus,* oak, beech, *meli,* honey). See *Fraxinus ornus.*

Dualism, du'al-izm. Doctrine that there exist two varieties of venereal poison, the one producing chancre, the other chancroid.

Du'alist. One believing in dualism.

Duality, du-al'it-e (*duo,* two). State or quality of being two. **D. of the mind** or **brain.** As the organ consists of two hemispheres, they have been regarded by some as separately and distinctly concerned in the mental and moral manifestations.

Dubi'ni's disease. Electric chorea. See *Chorea.*

Dub'lin meth'od. Method of treating aneurism by compressing the affected vessel on the cardiac side of the tumor.

Duboisia myoporoïdes, du-boi'se-ah me-o-por-o-e'dees. Shrub resembling a tree, native of Australia; the leaves furnish duboisine.

Duboisine, du-boi'seen. Alkaloid obtained from leaves of Duboisia myoporoïdes; it is a mydriatic, resembling atropine in its action, but is more rapid in its effects. The sulphate has similar properties. It is also hypnotic.

Duchenne's (du-shane's) **disease, pal'sy,** or **paral'ysis.** Locomotor ataxia; pseudohypertrophic muscular sclerosis of spinal cord. **D.'s tro'car,** exploring instrument for removal of small portion of a tumor or deposit for minute examination.

Duckbill forceps, duk'bill for'seps. Instrument resembling a duck's bill formerly used in craniotomy.

Duck'foot. See *Kyllosis.*

Ducklegged, duk'leg'd. Having short legs like a duck.

Ducks'foot. Podophyllum montanum.

Duct. Canal; meatus; see also *Ducts* and *Ductus.* **D., aber'rant,** vasculum aberrans. **D., alimen'tary,** canal, alimentary; thoracic duct. **D. of Bar'tholin,** tube formed by the union of one or two of the excretory ducts of the sublingual gland, and opening into the duct of Wharton. **D. of Belli'ni,** uriniferous tube. **D., bil'iary,** excretory passage of gall-bladder. **D., cys'tic,** see *Gall-bladder.* **D. of Gaert'ner,** prolongation from the epoöphoron, the remains of the Wolffian duct. **D., hepat'ic,** main passage of liver-ducts. **D., lymphat'ic,** see *Lymphatic vessels.* **D. of Mül'ler,** see *Ducts of Müller.* **D., na'sal,** lacrymal

duct. **D., pancreat'ic,** see *Pancreas.* **D. of paro'tid,** see *Parotid.* **D. of Pecquet,** thoracic duct. **D., prostat'ic,** ducts of prostate gland. **D., spermat'ic,** deferens vas. **D. of Ste'no** or **Sten'son,** see *Parotid.* **D., thora'cic,** see *Thoracic.* **D., vit'elline,** see *Vesicula umbilicatus.* **D. of Whar'ton,** ductus salivalis inferior. **D. of Wir'sung,** see *Pancreas.*

Ductio præputii, duk'she-o pre-pu'she-e. Masturbation.

Duct'less glands. See *Ganglion.*

Ductor canaliculatus, duk'tor kan-al-ik-u-lat'us. Gorget. **D. uri'næ,** ureter.

Ducts. See also *Duct* and *Ductus.* **D. of Cuvier,** ducts formed by the junction of the anterior and posterior cardinal veins of each side in the embryo of some animals. These again unite into a short trunk, which at an early period opens into the single auricle. **D., ejac'ulatory,** ejaculatory ducts. **D., galactoph'orous** or **lactif'erous,** lactiferous vessels of kidney; see *Kidney.* **D. of Mül'ler,** *Müllerian ducts* (called after the physiologist, Johannes Müller of Berlin). Two canals which descend at the outer border of the Wolffian bodies, of which the vesicula prostatica is the relic in the male, as the Fallopian tubes are in the female. **D., parot'id,** ductus salivalis superior. **D. of Rivi'nus,** ductus Riviniani. **D., sem'inal,** see *Testicle.* **D., thora'cic,** see *Thoracic duct.*

Ductuli (duk'tu-le) (pl. of **Ductulus,** small duct) **rec'ti.** See *Rete testis.*

Ductus, duk'tus (*duco,* to lead). Canal; meatus; see *Duct* and *Ducts.* **D. aber'rans,** vasculum aberrans. **D. Aran'tii,** canal, venous. **D. arterio'sus,** arterial duct. **D. aur'is palati'nus,** Eustachian tube. **D. Bartholinia'nus,** duct of Bartholin. **D. Bellinia'ni,** uriniferous tubes. **D. bilia'rii,** ducts which receive the bile from the penicilli of the liver and convey it to the hepatic duct. **D. bilia'rius commu'nis,** common bile-duct. **D. bilif'eri,** D. biliarii. **D. Botal'li,** arterial duct. **D. choled'ochus,** choledoch duct. **D. chylif'erus,** thoracic duct. **D. ciba'rius,** canal, alimentary. **D. cochlea'ris,** three-sided tube in the cochlea, interposed between the scala vestibuli and scala tympani; see *Corti.* **D. commu'nis choled'ochus,** choledoch duct. **D. cys'ticus,** see *Gall-bladder.* **D. def'erens,** see *Deferens.* **D. ejaculato'rii,** ejaculatory ducts. **D. endolymphat'icus,** little canal situated in the aqueduct of the vestibule, connecting with the saccule and the utricle. Externally it expands into a sinus resembling a flask, called the saccus endolymphaticus. **D. excreto'rius,** excretory duct. **D. Ferrei'ni,** Ferrein, canal of. **D. galactoph'ori,** lactiferous vessels. **D. hemithorac'icus,** branch of thoracic duct which empties into the lymphatic duct. **D. hepat'icus,** hepatic duct. **D. hygrobleph'ari or hygrophthal'mici,** duct of Meibomian glands. **D. incisi'vus,** palatine duct (anterior). **D. interlobula'res,** interlobular bile-ducts. **D. intestina'lis,** canal, alimentary. **D. lacryma'lis,** lacrymal duct. **D. lac'tei,** lactiferous vessels. **D. lac'teus,** thoracic duct. **D. lactif'eri,** lactiferous vessels. **D. lumbothorac'icus,** thoracic duct. **D. Müller'i,** ducts of Müller. **D. nasa'lis,** lacrymal canal or duct. **D. nasalpalati'nus,** palatine duct (anterior). **D. nasolacryma'lis,** lacrymal canal or duct. **D. ad na'sum,** lacrymal or nasal duct. **D. nutri'tii,** canals, nutritive. **D. omphalomesenter'icus,** see *Vesicula umbilicalis.* **D. pancreat'icus,** see *Pancreas.* **D. p. mi'nor,** see *Pancreas.* **D. p. recur'rens,** see *Pancreas.* **D. p. supe'rior,** see *Pancreas.* **D. Pecqueti,** thoracic duct. **D. Pecqueti'a'nus,** thoracic duct. **D. perilymphat'icus,** canal conveying lymph in aquæductus cochleæ. **D. pneumat'icus,** see *Air-bladder.* **D. puncto'rum lacryma'lium,** lacrymal ducts. **D. reces'sus vestib'uli,** ductus endolymphaticus. **D. Rivinia'ni,** see *Sublingual gland.* **D. ro'rifer,** thoracic duct. **D. saliva'lis infe'rior,** *Duct of Wharton;* excretory duct of submaxillary gland. **D. saliva'lis supe'rior,** *Steno's duct;* excretory duct of the parotid gland, which opens into the mouth opposite the second upper molar tooth. **D. Santori'ni,** see *Pancreas.* **D. semicircula'res labyrin'thi,** semicircular canals. **D. semina'les** or **semini'feri,** see *Testicle.* **D. sero'si,** lymphatic vessels. **D. spermat'icus,** deferens vas. **D. spira'les coch'leæ,** scalæ of the cochlea. **D. Stenonia'nus,** ductus salivalis superior. **D. sublingua'les mino'res,** ducts of Rivini. **D. sublingua'lis ma'jor,** duct of Bartholin. **D. submaxilla'ris,** see *Submaxillary gland.* **D. thorac'icus,** thoracic duct. **D. thy'mici,** lymphatic ducts coming from the thymus gland. **D. thyreoglos'sus,** duct existing in the embryo and ending as the foramen cæcum. **D. uri'næ,** ureter. **D. urina'rius,** urethra. **D. urinif'eri Belli'ni,** uriniferous tubes. **D. varico'si u'teri,** Fallopian tubes. **D. veno'sus,** canal, venous. **D. veno'sus Aran'tii,** vein which takes its course through the liver in the fœtus. **D. vitella'rius,** see *Vesicula umbilicalis.* **D. vitel'lo-intestina'lis,** see *Vesicula umbilicalis.* **D. Waltheria'ni,** see *Sublingual gland.* **D. Whartonia'nus,** ductus salivalis inferior. **D. Wirsungia'nus,** duct of the pancreatic gland; see *Pancreas.*

Duella, du-el'lah. Ancient name of a weight equivalent to eight scruples.

Duellum (war) **venereum,** du-el'lum ven-e're-um. Coition.

Dug (Sw. *dægga,* to give suck). Nipple.

Dugass's test. A test for dislocation of the shoulder. Inability to place the hand upon the opposite shoulder, or to have it placed there by an assistant, while at the same time the elbow touches the breast.

Du'gong oil. Derived from an Australian herbivorous cetaceous animal, and employed as a substitute for cod-liver oil in tuberculous and other affections.

Duh'ring's disease (after Dr. L. A. Duhring of Philadelphia). Dermatitis herpetiformis.

Dulcamara, dul-kam-ar'ah (*dulcis,* sweet, *amarus,* bitter). Solanum dulcamara. **D. flexuo'sa,** Solanum dulcamara.

Dulcamarin, dul-kam-ar'in. Glucoside, $C_{22}H_{34}O_{10}$, in the form of a yellowish powder, obtained from dulcamara.

Dulcamarrhetin, dul-kam-ar-rhet'in (*dulcamara, rhetine,* resin). Resinous substance obtained by subjecting dulcamarin to the action of dilute acid.

Dulcarine, dul'kar-een. Alkaloid of dulcamara.

Dulcedo (dul-se'do) **amo'ris** (sweetness of love). Clitoris. **D. sputato'rum,** see *Salivation.*

Dulcify, dul'se-fi. To make agreeable to the taste by sweetening.

Dull. Deaf.

Dulse. Rhodomela palmata. **D. edu'lis,** used for food. **D., pep'per,** Laurentia pinnatifida.

Dumb, dum. See *Dumbness.* **D. a'gue,** obscure form of intermittent fever.

Dumb-bell crystals, kris'tals. Crystals of oxalate of lime resembling dumb-bells, occurring occasionally in urine, and visible with the microscope.

Dumb'ness, dum'ness. Impossibility of articulating sounds; a condition often congenital and associated with deafness, of which it is an effect.

Dumreicher's method. Method employed to facilitate the passage of bougies through tight urethral strictures, which consists in injecting warm oil into the urethra and forcing the oil with the fingers through the stricture.

Dung. See *Fimus.*

Dunga, dun'gah. Dengue.

Duodenal, du-o-de'nal. Relating or appertaining to the duodenum. **D. glands,** Brunner's glands.

Duodenectomy, du-o-den-ek'tom-e (*duodenum, ektome,* excision). Excision of a portion of the duodenum.

Duodenitis, du-o-den-e'tis. Inflammation of the duodenum.

Duodeno-cholecystomy, du-o-de'no-kol-e-sis'to-me (*duodenum, cholecystis,* gall-bladder, *tome,* incision). Operation for removal of portion of the duodenum and gall-bladder.

Duodeno-jejunal, du-o-de'no-je-ju'nal. Relating to the duodenum and jejunum; a term applied to the fold, flexure, or fossa made by the two portions of the intestine named, in common.

Duode'no-re'nal. Relating to duodneum and kidney. **D.-r. lig'ament,** fold of peritoneum between transverse mesocolon and posterior wall of the abdomen.

Duodenostomy, du-o-den-os'to-me (*duodenum, tome,* incision). Operation of making a fistula between the duodenum and abdominal wall.

Duodenotomy, du-o-den-ot'o-me. Operation of making an incision into the duodenum.

Duodenum, du-o-de'num (*duodeni,* twelve). The first part of the intestinal canal, commencing at the pyloric orifice of the stomach and terminating in the jejunum. Its length was estimated by the ancients to be about twelve fingers' breadth. As it is only partially covered by the peritoneum, it is susceptible of considerable dilatation. In the duodenum, chylification takes place after the admixture of the biliary and pancreatic fluids with the chyme.

Duosternal, du-o-stur'nal. Second osseous portion of the sternum, corresponding to the second intercostal space.

Duplay's spec'ulum. Nasal speculum with two valves.

Duplication, du-ple-ka'shun (*duo,* two, *plico,* to fold). Species of malformation or monstrosity characterized by the parts concerned being doubled; see *Diplogenesis.* **D. of the fœ'tus,** evolution, spontaneous.

Duplicature, du'plik-at-ure. Reflection; folding or reflection of a membrane upon itself, as duplicature or reflection of the pleura, peritoneum, etc.

Duplicitas monstrosa, du-plis'it-as mon-stro'sah (*duplex,* double). See *Diplogenesis.*

Dupondium, du-pon'de-um. Weight of four drachms.

Dupuytren's (du-pe'tran's) **compres'sor.** See *Compressor.* **D.'s contrac'tion** or **disease,** contraction of the fingers due to injury of palmar fascia. **D.'s hy'drocele,** encysted hydrocele. **D.'s intes'tinal su'ture,** method of suturing intestines, which consists in inverting the margins of the wound and bringing the opposite serous membranes together by continuous suture, in which the mucous membrane is not included.

Du'ra arachni'tis. Inflammation of the dura mater. **D. ma'ter** (hard mother, called *dura* because of its great resistance, and *mater* because it was believed to give rise to every membrane of the body), fibrous, semi-transparent membrane, of a pearly-white color, thick, and very resisting, lining the cavity of the cranium and containing the spinal marrow. It protects the brain and marrow, and by its various expansions—the falx cerebri, tentorium, etc.—supports the different parts of the cerebral mass. The largest artery of the dura mater is the A. meningæa media. **D. m., lat'eral pro'cesses of the,** tentorium. **D. m. tes'tis,** albuginea.

Dural, du'ral. Pertaining to dura mater.

Duration (du-ra'shun) **of life.** See *Life, Expectation of life,* and *Longevity.* **D. of preg'nancy,** see *Pregnancy.*

Durematoma, dur-a-mat-o'mah (*dura, hæmatoma*). Hæmatoma of dura mater.

Duroziez's mur'mur. Murmur heard in the femoral artery in insufficiency of the aorta.

Dur'ra or **Dur'rah.** Panicum Italicum.

Durus, du'rus. Hard.

Dusting pow'ders. Powders to be dusted over excoriated or otherwise affected surfaces, to aid in the healing process, protect from the air, etc.

Dutch liquid, lik'wid. Ethylene bichloride. See *Oleſiant gas.* **D. myr'tle,** Myrica gale.

Dutch'man's pipe. Aristolochia hirsuta.

Dutroa, du-tro'ah. Datura stramonium.

Duverger's method of su'ture. Method of uniting wounds of the intestines; it consists in introducing the trachea of a calf into the gut, and bringing the wound together over it by means of interrupted sutures.

Duver'ney's gland. Bartholin's or Cowper's gland.

Dwale, common. Atropa belladonna.

Dwarf. Any animal or plant that is much below the usual stature. **D. blue'berry,** Vaccinium Pennsylvanicum. **D. el'der,** Sambucus ebulus. **D. flag,** Iris lacustris. **D. net'tle,** Urtica urens. **D. sage'bush,** Artemisia arbuscula. **D. su'mach,** Rhus copallina.

Dwarfish, dwarf'ish. Much below the usual stature.

Dwarf'ishness. A state in which the entire body, with all its parts, is much smaller than common.

Dyad, de'ad. Bivalent element.

Dy'er's al'kanet. Anchusa tinctoria. **D.'s broom,** Genista tinctoria. **D.'s cleav'ers** Galium trifidum. **D.'s mad'der,** Rubia tinctorum. **D.'s oak,** Quercus Lusitanica. **D.'s saf'fron,** Carthamus tinctorius. **D.'s weed,** Genista tinctoria, Reseda luteola.

Dynameter, di-nam'et-ur. Dynamometer.

Dynamia, din-am'e-ah (*dunamis,* power). Vital activity.

Dynamic (di-nam'ik) or **Dynam'ical** (*dunamis,* power). Relating to or endowed with power. In mechanics, *Dynamics* investigates the powers whereby bodies are put in motion and the laws connected therewith; in biology, that which relates to the vital forces, to the organism in action—*Vital dynamics.* The influences of other agents on the organism are sometimes termed *dynamic.* The homœopathists maintain that, by certain processes called, in the aggregate, *dynamization* and *potentizing,* the dynamic powers of a medicine may be set free and developed—as by shaking the bottle in which it is contained, or by mixing an unlimited number of unmedicated globules with one that is medicated, and shaking them together. **D. diseases,** see *Organic diseases.*

Dynamics, vital, di-nam'iks, vi'tal. See *Dynamic.*

Dynamicus, din-am'ik-us. Dynamic.

Dynamiometer, di-nam-e-om'et-ur. Dynamometer.

Dynamis, din'am-is. Faculty, force, power.

Dynamism, di'nam-izm (*dunamis,* force). Faculty, power, in the theory of vital force.

Dynamite, di'nam-ite. Highly explosive mixture of nitro-glycerin and siliceous earth.

Dynamization, di-nam-iz-a'shun. See *Dynamic.*

Dynamo, di'nam-o. Magnetic electric machine, which, being actuated by mechanical power, causing a magnet to play in face of coils of wire, or vice versâ, generates an electric current.

Dynamo-elec'tric. Relating to the motive power of electricity.

Dynamogeny, di-nam-oj'en-e (*dunamis, gennao,* to engender). Production or increase of nervous power.

Dynamograph, di-nam'o-graf (*dunamis, grapho,* to write). Instrument devised to register, after the principle of the sphygmograph, the muscular power and tone of the individual.

Dynamography, di-nam-og'raf-e. Instrument for recording facts obtained by the dynamometer.

Dynamometer, di-nam-om'et-ur (*dunamis, metron,* measure). Called also *Dynamiometer, Myodynamiometer, Myodynamometer* Instrument for measuring the comparative muscular strength of man and animals. It consists of a spring, which, when pressed upon, causes a needle to move upon a portion of a circle furnished with a scale of kilogrammes and one of myriagrammes, A man 25 or 30 years of age exerts a force commonly equal to 50 kilogrammes or 100 pounds. **D., medic'inal,** instrument to show the quantity of active matter in a given weight or measure of any officinal compound, with the dose of any preparation which will be equivalent in strength to a given quantity of any other of the same class.

Dynamopathy, di-nam-op'a-the (*dunamis, pathos,* affection). Homœopathy.

Dyne. Unit of force which imparts to a mass weighing one gramme a velocity of one centimetre in a second.

Dyota, de-o'tah. Diota.

Dys. As a prefix, difficult, faulty; sometimes privative; mostly answering to the particles *dis, in, mis,* or *un* in English.

Dysacusis (dis-ak-u'sis) or **Dysaku'sis** (*dys, akousis,* hearing). Difficulty of hearing.

Dysæmia, dis-e'me-ah (*dys, haima,* blood). Morbid condition of the blood.

Dysæsthenia, dis-ees-then-e'ah. Distressing morbid vibratory sensation, ascending toward the central

portion of a limb and descending toward its extremity, excited by slightest touch or application of a cold body to the surface.

Dysæsthesia (dis-ees-the'ze-ah) or **Dysæsthe'sis** (*dys, aisthanomai*, to feel). Obscure, diminished, or even abolished sensation. **D. audito'ria**, diminution or loss of hearing. **D. gustato'ria**, diminution or loss of taste. **D. inter'na**, loss of memory. **D. olfacto'ria**, diminution or loss of smell. **D. visua'lis**, sense of sight vitiated or lost.

Dysæsthesis, dis-ees-the'sis. Dysæsthesia.

Dysalbumose, dis-al'bu-mose. Variety of hemialbumose, insoluble in salt water.

Dysanagnosia, dis-an-ag-no'se-ah (*dus, anagnosis*, recognition). Alexia.

Dysanagogus, dis-an-ag-o'gus (*dys, anago*, to bring up). Expectorated with difficulty, as from too great viscidity.

Dysannarrhophesis (dis-an-nar-ro-fe'sis) or **Dysannarrhoph'ia** (*dys, anarrhophesis*, absorption). Diminished absorption from morbid causes.

Dysaphe (dis'af-e) or **Dysaph'ia** (*dys, haphe*, feeling). Morbid touch.

Dysapocatastasis, dis-ap-o-kat-as'tas-is. Condition of unrest and dissatisfaction.

Dysaponotocy, dis-ap-on-ot'o-se (*dus, a, ponos*, painful, *tokos*, birth). Labor accompanied with difficulty, but without pain.

Dysapulotus, dis-ap-u-lo'tus (*dys, apouloo*, to heal). Healing with difficulty.

Dysapulous, dis-ap-u'lus. Healing with difficulty.

Dysarthria, dis-arth're-ah. Difficulty of articulation.

Dysarthric, dis-arth'rik. Relating to difficult articulation.

Dysarthritis, dis-arth-re'tis (*dys, arthritis*, gout). Gout, irregular.

Dysarthrosis, dis-arth-ro'sis (*dus, arthrosis*, articulation). Difficulty of articulation; also congenital defect of a joint.

Dysbasia, dis-bah'ze-ah (*dys, basis*, step). Difficulty in walking.

Dysblennia, dis-blen'ne-ah (*dus, blenna*, mucus). Morbid formation or state of mucus.

Dysbulia, dis-bu'le-ah. Morbid state affecting the exercise of the will.

Dyscatabrosis, dis-kat-ah-bro'sis (*dys, katabrosis*, act of eating up). Difficulty of swallowing.

Dyscataposis, dis-kat-ap'os-is (*dys, kataposis*, deglutition). Difficulty of swallowing.

Dyscatapotia, dis-kat-ap-o'she-ah (dread of liquids). Term suggested as a substitute for hydrophobia, which means dread of liquids.

Dyschezia, dis-ke'ze-ah (*dys, chezo*, to go to stool). Difficult and painful defecation.

Dyschrœa (dis-kre'ah) or **Dischroi'a** (*dys, chroa* or *chroia*, color). Sickly and unhealthy color of the skin. Maculæ.

Dyschroma, dis-kro'mah (*dys, chroma*, color). Morbid discoloration of skin.

Dyschromasia, dis-kro-mah'se-ah (*dys, chroma*, color). See *Decoloration*.

Dyschromatodermia, dis-kro-mat-o-dur'me-ah (*dys, chroma, derma*, skin). Morbid discoloration of skin.

Dyschromatopsia, dis-kro-mat-op'se-ah (*dys, chroma*, color, *opsis*, vision). Achromatopsia.

Dyscinesia, dis-sin-a'ze-ah (*dys, kineo*, to move). Difficulty or utter incapability of moving.

Dyscœlia, dis-se'le-ah (*dys, koilia*, abdomen). Constipation.

Dyscœlius, dis-se'le-us. Constipated.

Dyscophos, dis'ko-fos. Deaf.

Dyscophosis, dis-ko-fo'sis (*dys, kophoo*, to be deaf). Defective sense of hearing.

Dyscopria, dis-kop're-ah (*dys, kopros*, excrement). Condition in which the feces are abnormal.

Dyscoria, dis-ko're-ah (*dys, kore*, pupil). Irregularity of shape of the pupil.

Dyscras'ia (*dys, krasis*, temperament). Bad or depraved habit of body. See *Dysthetica*. **D. herpet'ica**, herpetic condition of the blood. **D., mala'rial**, cachexia due to malaria. **D., metastat'ic sup'purative**, pyæmia. **D., palu'dal**, cachexia due to malaria. **D. potato'rum**, dyscrasia of drinkers; cachectic phenomena exhibited in alcohol-drinkers. **D. saturni'na**, saturnine cachexia from lead-poisoning. **D. scrofulo'sa**, scrofula. **D. tuberculo'sa**, see *Tubercle*. **D., u'ric-ac'id**, uric-acid diathesis.

Dyscrasiacum, dis-kraz-e'ak-um. Relating to poverty of the blood.

Dyscrasic, dis-kraz'ik. Relating to dyscrasia or bad habit of body.

Dyscrasy, dis'kra-ze. Dyscrasia. **D., bil'ious**, cholosis, icterus.

Dyscrinia, dis-krin'e-ah. Name given diseases in which there are difficult or pathological secretions.

Dyscritos, dis'krit-os (*dys, krisis*, judgment). That which it is difficult to judge of.

Dysdacria, dis-dak're-ah (*dys, dakruon*, tear). Morbid condition of the tears.

Disdacryosis, dis-dak-re-o'sis. Morbid condition of the tears.

Dysdiachoresis, dis-de-ah-kor-a'sis (*dys, diachoreo*, to pass through). Passage of food through the intestinal canal accompanied by slowness or difficulty; also a variety of rheumatism in which locomotion is difficult.

Dysdiachoreticus, dis-de-ah-kor-et'ik-us. Relating to or suffering with dysdiachoresis.

Dysdynamia, dis-din-am'e-ah (*dys, dunamis*, power). Defective vital activity.

Dysecbolia, dis-ek-bol'e-ah (*dys, ekbole*, expulsion). Impeded evacuation; also stricture of the urethra.

Dyseccrisia, dis-ek-kriz'e-ah (*dys, ekkrisis*, excretion). Difficult or defective excretion.

Dyseccrisis, kis-ek'kris-is. Difficult or defective excretion.

Dysecoia (dis-e-koi'ah) or **Dysecoe'a** (*dys, akoe*, audition). Difficulty of hearing; deafness.

Dysecous, dis-e'kus. Hard of hearing.

Dysecpneusis, dis-ek-nu'sis (*dis, ekpneusis*, expiration). Difficult expiration.

Dysecpneustus, dis-ek-nu'stus. Affected with difficulty of expiration.

Dysecpnœa, dis-ek-ne'ah (*ekpnoe*, expiration). Difficult expiration.

Dysegertos, dis-e-gur'tos. Difficult to awaken.

Dyselceia (dis-el-se'ah) or **Dyselcia**, dis-el'se-ah (*dys, helkos*, ulcer). An ulcer difficult to heal.

Dysembolisis (dis-em-bol'is-is) or **Dysembolismus**, dis-em-bol-iz'mus (*dys, emballo*, to insert). Difficulty in giving an enema.

Dysemesia, dis-em-e'ze-ah (*dys, emesis*, vomiting). Vomiturition.

Dysem'esis. Dysemesia.

Dysenteria, dis-en-ter'e-ah. Dysentery. **D. acu'ta**, D., acute. **D. adynam'ica**, D., adynamic. **D. al'ba**, D., white. **D. bilio'sa**, colocholosis. **D. castren'sis**, camp, diarrhœa. **D. catarrha'lis**, catarrhal dysentery. **D. cruen'ta**, D., bloody. **D. hæmate'ra**, D., bloody. **D. hepat'ica**, dysenteric discharge mixed with bile. **D. inflammato'ria**, D., inflammatory. **D. malig'na**, adynamia or malignant dysentery. **D. nephrit'ica**, diabetes mellitus. **D. nos'tras**, common dysentery. **D. pu'trida**, adynamic or malignant dysentery. **D. scorbu'tica**, adynamic scrofulous form of dysentery. **D. sic'ca**, checking of dysentery; condition when checked. **D. splen'ica**, melæna. **D. sporad'ica**, sporadic dysentery. **D. typho'des**, adynamic dysentery. **D. vermino'sa**, dysentery caused by the presence of worms in the intestines.

Dysenteric, dis-en-ter'ik. Relating to dysentery.

Dysenterium, dis-en-ter'e-um. Dysentery.

Dysenteronervia, dis-en-ter-o-nur've-ah (*dys, enteron*, intestine, *neuron*, nerve). Colic. **D. saturni'na**, colica metallica.

Dysentery, dis'en-ter-e (*dys, enteron*, intestine). *Bloody flux, Flux.* Inflammation of the mucous membrane of the large intestine, the chief symptoms of which are fever, more or less inflammatory, with frequent mucous or bloody evacuations, violent tormina, and tenesmus. When the evacuations do not contain

blood it has been called *Simple dysentery*. The seat of the disease is generally in the colon and rectum; it occurs particularly during the summer and autumnal months, and in hot climates more than in cold; frequently, also, in camps and prisons, from impure air and imperfect nourishment, and is often epidemic. Sporadic cases of dysentery are generally easily managed, but when epidemic it often exhibits great malignancy. Frequently it yields to mild laxatives, as castor oil, combined with diaphoretic narcotics and counter-irritants to the abdomen; but at times the inflammation runs on speedily to ulceration and death. The whole management in acute dysentery must, of course, be strictly antiphlogistic. **D., bil'ious,** D. accompanied with bilious discharges.

Dysepuloticus, dis-ep-u-lot'ik-us (*dys, epi,* upon, *ouloo,* to heal). Healing with difficulty.

Dysepulotus, dis-ep-u-lo'tus. Healing with difficulty.

Dyserethisia, dis-er-e-thiz'e-ah (*dys, erethizo,* to exasperate). Decreased sensibility.

Dyserethisiæ, dis-er-e-thiz'e-e. Diseases in which decreased sensibility exists.

Dysgalactia, dis-gal-ak'te-ah. Dysgalia.

Dysgalia (dis-gal'e-ah) or **Dysgalac'tia** (*dys, gala,* milk). Unhealthy condition or depravation of milk.

Dysgennesia, dis-gen-na'ze-ah (*dys, gennesis,* generation). Lesion of the generative organs or functions.

Dysgeusia (dis-goo'se-ah) or **Dysgeus'tia** (*dys, geusis,* taste). Morbid condition of the sense of taste.

Dysgraph'ia (*dys, grapho,* to write). Difficulty in expressing one's ideas in writing.

Dyshæ'mia. Morbid condition of the blood.

Dyshæmorrhœa, dis-he-mor-rhe'ah (*dys, haima,* blood, *rheo,* to flow). Difficulty in the flow of blood, as of the hemorrhoidal flux. Also symptoms occasioned by its diminution or suppression.

Dyshaphia (dis-haf'e-ah) or **Dysaph'ia** (*dys, haphe,* touch). Morbid condition of the sense of touch.

Dyshidria (dis-hid're-ah) or **Dysid'ria** (*dys, hidros,* sweat). Morbid state of the perspiration. See *Dysidrosis.*

Dyshidro'sis. Dysidrosis.

Dysiatos, dis-e'at-os (*dys, iaomai,* to heal). Difficult to cure.

Dysidria, dis-id're-ah. Morbid state of perspiration. See *Dysidrosis.*

Dysidrosis, dis-id-ro'sis (*dys, hidros,* sweat). Disease characterized essentially by retention in the follicles of the skin of sweat rapidly and freely secreted, leading to distension and congestion of the follicles, dermatitis, etc., a condition similar to that of the sebaceous follicles in acne.

Dysidrous, dis-id'rus. Perspiring with difficulty.

Dyskataposis, dis-kat-ap'os-is (*dys, kataposis,* a drinking down). Drinking attended with difficulty.

Dyskinesia, dis-kin-a'ze-ah (*dys, kineo,* to move). Difficulty in moving, due to lack of nervous co-ordination.

Dyskoria, dis-ko're-ah (*dys, kore,* pupil). Condition in which an abnormal shape of the pupil exists.

Dyslalia, dis-lal'e-ah (*dys, laleo,* to speak). Stuttering or stammering; difficulty of speech, the cause of which may be mechanical, or in the teeth, lips, larynx, nose, or palate.

Dyslexia, dis-leks'e-ah (*dys, lego,* to read). Inability in reading to take in by the eye-impression the normal number of words; a symptom of very grave cerebral disease.

Dyslochia, dis-lok-e'ah (*dys, lochios,* relating to parturition). Diminution or suppression of the lochial discharge.

Dyslogia, dis-lo'je-ah (*dys, logos,* speech). Speech attended with difficulty.

Dyslysin, dis'lis-in (*dys, luo,* to dissolve). Product of decomposition of cholic acid, with the formula $C_{24}H_{36}O_3$.

Dysmasesis, dis-mas-e'sis (*dys, masesis,* mastication). Difficult or impeded mastication.

Dysmenia, dis-men'e-ah (*dys, menes,* menses). Dysmenorrhœa.

Dysmenorrhœa, dis-men-or-rhe'ah (*dys, menorrhœa*). Laborious, painful, or difficult menstruation. Catamenia passed with great local pain, especially in the loins, with sometimes membranous discharge. It is very difficult of removal, and prevents conception. In the married female the morbid action may be broken in upon by gestation, and a perfect cure be obtained. The affection generally depends upon erethism of the interior of the uterus, called into action at each catamenial period. It may also be of ovarian origin (see *Dysootocia*) or dependent upon obstruction of the Fallopian tube—*Tubal dysmenorrhœa.* **D., conges'tive,** D. membranacea. **D., inflam'matory,** D. membranacea. **D., intermen'strual** or **interme'diate,** severe pain occurring between the menstrual periods, ceasing when the flow sets in, probably due to commencing ovulation-process in the ovaries, affected by thickening of the indusium. **D. membrana'cea,** *Congestive* or *Inflammatory dysmenorrhœa;* disease whose pathognomonic feature is the expulsion of a membrane resembling decidua within a day or two of the advent of menstruation, or even during extra-menstrual periods. **D., neural'gic,** form of dysmenorrhœa chiefly met with in young, delicate women at puberty, or in those who have never borne children. **D., obstruc'tive,** caused by anything acting as an impediment to the menstrual flow, as malposition of the uterus, fibromata, etc.

Dysmenorrhœal, dis-men-or-rhe'al. Relating to dysmenorrhœa. **D. mem'brane,** see *Dysmenorrhœa membranacea.*

Dysmimia, dis-mim'e-ah (*dys, mimeomai,* to imitate). Difficulty in using signs and gestures when speaking.

Dysmnesia, dis-ne'se-ah (*dys, mnesis,* memory). Defective memory.

Dysmorphe, dis-mor'fe (*dys, morphe,* shape). Deformation.

Dysmorphia, dis-morf'e-ah. Deformation.

Dysmorphosis, dis-mor-fo'sis. Deformation.

Dysmyotonia congenitalis, dis-me-o-to'ne-ah conjen-it-al'is. Congenital atony and rigidity of muscles existing in Thomsen's disease.

Dysneu'ria (*dys, neuron,* nerve). Failing condition of the senses; weak-mindedness.

Dysnusia, dis-nu'se-ah (*dys, noeo,* to understand). Impairment of intellect.

Dysodes, dis-o'dees. Fetid.

Dysodia, dis-o'de-ah (*dys, ozo,* to smell). Diseases characterized by fetid emanations, from whatever part proceeding—from the mouth, nasal fossæ, bronchia, stomach, axillæ, groins, etc.; also a stench or stink.

Dysodmia, dis-od'me-ah. Dysodia.

Dysodontiasis, dis-o-don-te'as-is (*dys, odontiasis,* dentition). Difficult dentition.

Dysodynia, dis-o-din'e-ah (*dys, odune,* pain). Labor pains attended with difficulty.

Dysomphalotocia, dis-om-fal-o-to'se-ah (*dys, omphalos,* navel, *tokos,* birth). Difficulty in delivering the umbilical cord.

Dysoneirus, dis-o-ni'ros (*dys, oneiros,* dream). Insomnia with restlessness.

Dysoötocia, dis-o-o-tosh'e-ah (*dys, ootokeo,* to lay eggs). Difficult ovulation—*Ovarian dysmenorrhœa*—as distinct from difficulty in secretion and excretion of the menstrual fluid, which is the duty of the uterus.

Dysopia, dis-o'pe-ah (properly **Dysop'sia**) (*dys, optomai,* to see). Difficulty of seeing; obscurity of vision. **D. dissito'rum,** myopia. **D. latera'lis,** *Skuesight, Skewsight, Sight askew.* Vision only accurate when the object is placed obliquely; this state is generally caused by some opacity of the cornea. **D. lu'minis,** day-blindness; see *Nyctalopia.* **D. proximo'rum,** near-sightedness. **D. tenebra'rum,** hemeralopia.

Dysopsia, dis-op'se-ah. Dysopia.

Dysorasis, dis-o-rah'sis (*dys, orasis,* vision). Dysopia.

Dysorexia, dis-o-rek'she-ah (*dys, orexis,* appetite). Diminution of appetite.

Dysosmia, dis-os'me-ah (*dys*, *osme*, smell). Diminution of smell.

Dysosphresia, dis-os-fre'se-ah (*dys*, *osphresis*, sense of smell). Morbid state of the sense of smell.

Dysostosis, dis-os-to'sis (*osteon*, bone, *osis*). Faulty conformation or morbid condition of bone.

Dyspareunia, dis-par-oo'ne-ah (*dys*, *pareunos*, bedfellow; unhappily bedded together). Condition of difficult or painful performance of the sexual function, whether from congenital or acquired causes.

Dyspathia, dis-path-e'ah (*dys*, *pathos*, affection). Disease attended with danger.

Dyspepsia, dis-pep'se-ah (*dys*, *pepto*, to concoct). *Dyspepsy*, *Indigestion*. Difficulty of digestion. State of the stomach in which its functions are disturbed, without the presence of other diseases, or when, if other diseases be present, they are of but minor importance. The numerous forms of disorder of the digestive organs have occasionally been termed *the indigestions*. Symptoms of dyspepsia are very various. Those affecting the stomach itself are loss of appetite, nausea, pain in epigastrium or hypochondrium, heartburn, sense of fulness or weight in the stomach, acrid or fetid eructations, pyrosis, and sense of fluttering or sinking at pit of the stomach. Sympathetic affections are of the most diversified character. Dyspepsia is generally functional, but when arising from disease of the stomach itself is, of course, serious. Dyspepsia may be of duodenal origin, *Duodenal* or *Intestinal dyspepsia*, and is generally accompanied with pain over that bowel some hours after food has been taken. As dyspepsia is usually dependent on irregularity of living, either in quantity or quality of the food taken, the most successful treatment is to put the patient on a diet easy of digestion; to combat the causes where such are apparent; and, by proper remedies and regimen, to strengthen the system in every practicable manner. It is often connected with inflammatory or subinflammatory condition of the mucous lining of the stomach. It is often attended with too great a secretion of the gastric acids; but these sometimes appear to be too small in quantity, so as to constitute *Alkaline* or *Neutral indigestion*. **D. chloro'sis**, chlorosis. **D. hypochondri'asis**, hypochondriasis. **D. pyro'sis**, pyrosis. **D., sal'ivary**, dyspepsia connected with alterations in the quality or quantity of the salivary secretion.

Dyspepsiodynia, dis-pep-se-o-din'e-ah (*dyspepsia*, *odune*, pain). Cardialgia.

Dyspepsodynia, dis-pep-so-din'e-ah. Cardialgia.

Dyspepsy, dis-pep'se. Dyspepsia.

Dyspeptic, dis-pep'tik (*apeptic*). Having no relation to dyspepsia, as dyspeptic bread. One suffering from dyspepsia.

Dyspepticus, dis-pep'tik-us. Dyspeptic.

Dyspeptodynia, dis-pep-to-din'e-ah (*dys*, *pepto*, to concoct, *odune*, pain). Cardialgia.

Dyspeptone, dis-pep'tone. Non-available residue of gastric digestion.

Dyspeptus, dis-pep'tus. Dyspeptic.

Dysperistalsis, dis-per-e-stal'sis. Violent contractions which occur when the plexus myentericus, a nervous plexus between the circular and longitudinal fibres of the intestines, is stimulated.

Dyspermasia, dis-pur-mah'se-ah (*dys*, *sperma*, sperm). *Dyspermatism*. Difficulty—sometimes incapacity—of voiding the sperm.

Dyspermatism, dis-pur'mah-tizm (*dys*, *spermatismos*, discharge of sperm). Slow emission of sperm.

Dysphagia, dis-fah'je-ah (*dys*, *phago*, to eat). Difficulty of deglutition. It is almost always symptomatic either of inflammation or of other disease of the organs of deglutition, or of incomplete obstruction of the œsophagus, by some obstacle within it, or by a neighboring tumor. At times it is produced by spasms or paralysis of the œsophagus. The prognosis and treatment vary according to the cause. **D. aton'ica**, D. from paralysis of the pharynx or œsophagus. **D. callo'sa**, D. constricta. **D. constric'ta**, stricture of the pharynx and œsophagus, is an affection which may be the result of pharyngitis or œsophagitis, but more frequently of malignant disease in the parietes of the tube. The only remedy is the bougie. **D. globo'sa** or **D. hyster'ica**, a feeling of strangulation, with dread of suffocation. **D. inflammato'ria**, cynanche tonsillaris. **D. linguo'sa**, D. due to swelling of the tongue. **D. nervo'sa**, œsophagismus. **D. œsophage'a**, D. constricta. **D. paralyt'ica**, D. from paralysis of the pharynx or œsophagus. **D. pharynge'a**, D. constricta. **D. ran'ula**, ranula. **D. scirrho'sa**, hæmoscirrhus. **D. spasmod'ica** or **spas'tica**, D. from spasm of the œsophagus. **D. tor'pida**, D. from torpor or paralysis of the pharynx. **D. uvulo'sa**, D. from relaxation and tumefaction of the uvula.

Dyspha'sia (*dys*, *phasis*, speech). Difficult speech due to cerebral lesion.

Dysphonia, dis-fo'ne-ah (*dys*, *phone*, voice). *Dysphony*. Difficulty of producing and articulating sounds; voice imperfect or depraved. Aphonia (of some). **D. clerico'rum**, clergyman's sore throat. **D. immodula'ta nasa'lis**, speaking through the nose. **D. l. palati'na**, defective articulation from diseased palate.

Dysphoria, dis-for'e-ah (*dys*, *phero*, to bear). Dissatisfaction; restlessness; suffering; indisposition. **D. anxi'etas**, anxiety. **D. nervo'sa**, fidgets. **D. sim'plex**, fidgets.

Dysphotia, dis-pho'she-ah (*dys*, *phos*, light). Myopia.

Dysphrasia, dis-frah'ze-ah (*dys*, *phrazo*, to speak). Difficult speech due to disordered intellect or to paralysis.

Dysphrenia, dis-fren'e-ah (*dys*, *phren*, mind). Intellectual disorder.

Dyspionia, dis-pe-o'ne-ah (*dys*, *pion*, fat). Morbid condition of the adipous substance.

Dysplasmatic, dis-plas-mat'ik (*dys*, *plasso*, to form). Susceptible of only a low degree of organization.

Dysplastic, dis-plas'tik (*dys*, *plasso*, to form). Unorganizable.

Dysplasticum, dis-plas'tik-um. Relating to blood deficient in red corpuscles.

Dyspnœa, disp-ne'ah (*dys*, *pneo*, to breathe). *Pseudo-asthma*. Anhelation, short breath, difficulty of breathing. It may be idiopathic or symptomatic. The latter accompanies almost all thoracic diseases. **D. convulsi'va**, asthma. **D. hydrothorac'ica**, hydrothorax. **D. monta'na**, mountain sickness; see *Puna*. **D. physothorac'ica**, pneumothorax. **D. pinguedino'sa**, D. accompanied with oppressive fatness. **D. pneumat'ica**, pneumothorax. **D. pyothorac'ica**, empyema.

Dyssialia, dis-se-al'e-ah (*dys*, *sialon*, saliva). Morbid condition of the saliva.

Dysspermatismus, dis-spur-mat-iz'mus (*dys*, *sperma*, sperm). Difficulty in ejaculation of sperm.

Dyssper'mia. Disordered condition of the semen.

Dyssynodus, dis-sin'od-us (*dus*, *sunodos*, coition). Difficulty in coition.

Dyssynusia, dis-sin-u'ze-ah (*dys*, *sunousia*, coition). Difficulty in coition.

Dystasia, dis-taz'e-ah (*dys*, *histemi*, to stand). Difficulty in standing.

Dystaxia, dis-tak'se-ah (*dys*, *taxis*, order). Want of regulation of the movements, like that of paralysis agitans. **D. ag'itans**, paralysis agitans.

Dysteleology, dis-te-le-ol'o-je (*dys*, *teleos*, complete, *logos*, discourse). The study of the theory of the lack of usefulness of rudimentary structures in organisms, as the vermiform appendix.

Dysthanasia, dis-than-ah'ze-ah (*dys*, *thanatos*, death). Slow and painful death.

Dysthanatus, dis-than'at-us (*dys*, *thanatos*, death). That which causes a slow and painful death. One who experiences this kind of death.

Dysthelasia, dis-thel-ah'ze-ah (*dys*, *thelazo*, to give suck). Inaptitude for suckling.

Dystherapeutus, dis-ther-ah-pu'tus (*dys*, *therapeia*, medical treatment). Difficult of cure.

Dysthermasia, dis-thur-mah'ze-ah (*dys*, *therme*, heat). Insufficient production of animal heat.

Dysthesia, dis-the'ze-ah (*dys, tithemi,* to be situate). Morbid habit; bad humor; impatience in disease.

Dysthet'ica. Morbid condition of the system of nutrition, connected with a faulty state of the blood, producing a diseased habit.

Dysthymia, dis-thim'e-ah (*dys, thumos,* mind). Depression, despondency, melancholy; a bad sign in acute diseases.

Dystitia, dis-tish'e-ah (*dys, titthe,* nurse). Nursing attended with difficulty.

Dystocia, dis-tosh'e-ah (*dys, tokos,* accouchement). Laborious or morbid or difficult labor. See *Laborious.* **D. aborti'va,** abortion. **D. dyscye'sis,** pregnancy, morbid. **D. d. extra-uteri'na,** see *Pregnancy, preternatural.* **D., fœ'tal,** D. due to malposition or deformity of the fœtus. **D., mater'nal,** D. due to abnormal conditions in the mother. **D., placen'tal,** difficulty in delivering the placenta.

Distœchiasis, dis-te-ke'as-is (*dys, stoichos,* order). Irregular position of the eyelashes.

Dystonia, dis-ton'e-ah (*dys, tonos,* tone). Morbid condition of the tone of a tissue or organ.

Dystopia, dis-top'e-ah (*dys, topos,* situation). Displacement, malposition.

Dystraumia, dis-trawm'e-ah (*dys, trauma,* wound). Condition of wounds when they heal with difficulty, as in some persons and climates.

Dystrophy, dis'trof-e (*dys, trophe,* nourishment). Imperfect or defective nutrition. **D. muscula'ris progressi'va,** progressive muscular atrophy.

Dysulotus, dis-u-lo'tus (*dys, oule,* cicatrix). Healing with difficulty.

Dysuresia (dis-u-re'ze-ah) or **Dysure'sis** (*dys, ouresis,* passing urine). Defective secretion and evacuation of the urine.

Dysuria, dis-u're-ah. Difficulty of passing the urine, which is voided with pain and a sensation of heat in some part of the urethra. It is the first degree of retention of urine; differs from strangury, in which the urine can only be passed in drops and with great straining. **D. calculo'sa,** dysuria from presence of calculi. **D. irrita'ta,** D. from vesical calculi. **D. muco'sa,** copious discharge of mucus from the bladder with the urine.

Dysury, dis'u-re. Dysuria.

E.

E (L.). As a prefix, out of, from.

Eaglestone. Ætites.

Eaglewood. Agallochum.

Ear (Sax. *eare*). Organ of audition, composed of a series of more or less irregular cavities, in which the sonorous rays are successively received and reflected until they agitate the nerves which are destined to convey the impression to the brain. The ear is contained partly in the substance of the temporal bone, and a part projects externally behind the joint of the lower jaw. It may be divided into three portions: the *Outer* or *External ear*, formed by the auricle and meatus auditorius; the *Middle ear*, comprising the cavity of the tympanum and its dependencies; and the *Internal ear*, comprehending the three semicircular canals, the cochlea, and the vestibule, which together constitute the *Osseous labyrinth*. Within the cavity of this labyrinth are contained membranes having nearly the shape of the vestibule and semicircular canals, but not extending into the cochlea. These membranes form the *Membranous labyrinth*. Between the osseous and the membranous labyrinth is situate the liquor of Cotunnius, and within the membranous labyrinth is a fluid, vitreous humor of the eye, from its supposed analogy to the vitreous humor of the eye. The membranous vestibule is not an exact imitation of the osseous cavity, being composed of two distinct sacs which open into each other, the one termed the *Sa'culus vestibuli;* the other, *Sacculus*. Each sac contains in its interior a small mass of white calcareous matter, which seems to be suspended in the fluid of the sacs by nervous filaments proceeding from the auditory nerve. The auditory nerve is distributed to the cavities of the internal ear. **E., asy'lum**, hæmatoma auris. **E. cough**, cough excited by titillation of the external ear, by a reflected sensation from sympathy between the ear and the larynx, through a branch of the fifth pair of nerves. **E. doc'tor**, aurist. **E. drum**, tympanum. **E. fin'ger**, the little finger. **E. flap**, lobe of the ear, broad, loose, and pendent from birth. **E., insane'**, hæmatoma auris. **E., Keck'er**, tonsil.

Ear-ache. Pain in the ear; otalgia.

Ear-bones. See *Ossicula auditus.*

Ear-crys'tals. Otoliths.

Earning, urn'ing (from [G.] *gerinnen*, to coagulate). Rennet.

Ear-pick. Species of small scoop for extracting hardened cerumen from the meatus auditorius externus, or to remove foreign bodies from the ear.

Ear-pow'der. See *Otoliths.*

Ear-sand. See *Otoliths.*

Ear-stones. Otoliths.

Ear-sur'geon. Aurist. **E. sur'gery**, the business of the aurist; the surgical management of diseases of the ear.

Earth clos'et. Arrangement proposed as a substitute for the water closet, the excrementitious matter being received in earth in an appropriate vessel. **E. club**, Orobanche Americana. **E. eat'er**, geophagist. **E. eat'ing**, geophagism. **E., ful'ler's**, Cimolia purpurescens. **E. gall**, Veratrum viride. **E., heav'y**, baryta. **E., Japan'**, catechu. **E., Lem'nian**, terra Lemnia. **E. nut**, Bunium bulbocastanum, pignut. **E. oil**, petroleum. **E., pon'derous**, baryta. **E., Sa'mian**, Sami terra. **E., sealed**, terra sigillata. **E., talc**, magnesia. **E. treat'ment**, method of treatment of wounds, etc.; yellow clay or clayey earth, well dried, finely pulverized, sifted, and changed as soon as it is saturated with the discharge, is applied as a deodorizing agent, exerting also an influence in checking putrefaction and facilitating the healing process.

Earths, urths. Solid, tasteless, inodorous, and incombustible substances known in chemistry as metallic oxides, as alumina, magnesia, etc. **E., al'kaline**, similar oxides, possessing slight alkaline reaction, as lime, baryta, strontia, etc.

Earth-wax. Cerumen. See *Ozokerite.*

Earthy degeneration, urth'e de-jen-e-ra'shun. Cretefaction. **E. phos'phates**, phosphates of ammonium, magnesium, and calcium occurring in urine.

Ear-trum'pet. Instrument for collecting sound and increasing its intensity, used by those who are hard of hearing; commonly a kind of cone, formed of silver, tin, or elastic gum, the base of which is turned toward the person who is speaking, and the apex placed in the entrance of the meatus auditorius externus.

Earwax. Cerumen.

Ear'wig (*eruca*, caterpillar). Technically, the forficula auricularia, an insect which occasionally enters the external auditory meatus and excites intense pain.

East In'dia ar'row root. See *Arrow root.* **E. I. bdel'lium**, see *Bdellium.* **E. I. gum**, gum acacia. **E. I. ki'no**, see *Kino.* **E. I. rhu'barb**, see *Rheum.* **E. I. sarsaparil'la**, see *Hemidesmus Indicus.* **E. I. sen'na**, see *Senna.* **E. I. tac'amahac**, see *Fagara octandra.*

East'ningwort. Scabiosa.

Eat'able. Esculent; edible.

Eat'ing tet'ter. Lupus.

Eau de Cologne. *Cologne water.* Celebrated perfume, so called from the place where it is made. For the officinal preparation of the U. S. Pharmacopœia, see *Spiritus odoratus.*

Eberth's bacil'lus. See *Bacillus typhi abdominalis.*

Eb'ner's glands. See *Glands.*

Ebonite, eb'on-ite (*ebenos*, ebony). Hard or vulcanized rubber.

Ebriecasum, eb-re-ek-ah'sum (*ebrius*, drunk). Disturbance of reason, similar to that which occurs in drunkenness.

Ebrieca'tion. Mental affection due to indulgence in alcoholic stimulation.

Ebrietas, eb-re'et-as. Drunkenness.

Ebriety, e-bri'et-e. Drunkenness.

Ebriositas, eb-re-os'it-as. Drunkenness.

Eb'strius' meth'od. Method employed for the reduction of corpulence, consisting in excluding the carbohydrates and in the use of fat.

Ebullitio, eb-ul-lish'e-o. Ebullition; strophulus. **E. stomachi**, heartburn; pyrosis.

Ebullition, eb-ul-lish'un (*e, bullio*, to bubble up). Boiling; motion of a liquid by which it gives off bubbles of vapor by heat or fermentation. The boiling point of liquids varies according to the pressure to which they are subjected. (For the point of ebullition of different substances, see *Heat.*)

Ebulus, eb'u-lus. Sambucus ebulus. **E. den'tis**, dentine. **E. us'tum**, animal charcoal.

E'bur. Ivory. See *Tooth.*

Eburnation, e-bur-na'shun. See *Eburnification.*

Eburneatio, e-bur-ne-ah'she-o. Eburnification.

Eburnification, e-bur-nif-e-ka'shun (*ebur*, ivory, *fio*, to be made). *Eburnation.* Incrustation of the cartilages of articular surfaces of bones with phosphate of lime, which gives them the whiteness and hardness of ivory.

Ec—before a vowel, **Ex.** As a prefix, out of, from, of.

Ecapatli. Cassia occidentalis, Mexican plant; leaves are used in place of official senna.

Ecbalia elaterium, ek-bal'e-ah el-at-e're-um (*ec, ballo*, to throw). Momordica elaterium. **E. fruc'tus**, see *Momordica elaterium.*

Ecbalin, ek'bal-in. See *Momordica elaterium.*

Ecbal'ium agres'te. Momordica elaterium. **E. officina'rum**, Momordica elaterium.

Ecbesomenon, ek-be-som'en-on (*ekbaino*, to come out). Issue of a disease.

Ecblepharos, ek-blef'ar-os (*blepharon*, eyelid). Form

of artificial eye, consisting of a leather plate on which is painted a representation of the natural eye; placed in front of the orbit when it is impossible to introduce the ordinary artificial eye into the orbital cavity.

Ecbloma, ek-blo'mah (*ek*, *ballo*, to throw). See *Abortion*.

Ecbole, ek'bo-le. Abortion.

Ecbolic (ek-bol'ik) or **Ecbolicus**, ek-bol'ik-us. Abortive.

Ecbolics, ec-bol'iks (*ekbole*, birth, *oxus*, quick, *tokos*, birth). *Oxytocics*. Medicines which produce abortion by stimulating the gravid uterus to contract.

Ecboline, ek'bol-een. Alkaloid derived from ergot.

Ecbolium elaterium, ek-bol'e-um el-at-e're-um (*ec*, *ballo*, to throw). Momordica elaterium.

Ecbolius, ek-bol'e-us. Abortive.

Ecbrasmata, ek-braz'mah-tah (pl. of **Ecbrasma**) (*ekbrazo*, to boil up). Burning eruptions.

Eccanthis, ek-kan'this. See *Encanthis*.

Eccathartícus, ek-kath-ar'ti-cus. Cathartic.

Eccentricity, ek-sen-tris'it-e. Condition of being peculiar in disposition or habits, sometimes amounting almost to insanity.

Eccephalosis, ek-sef-al-o'sis (*ek*, *kephale*, head, *osis*). Removal of the brain of the child to facilitate delivery.

Ecchelysis, ek-kel'is-is (*chelusso*, to cough). Expectoration.

Ecchondroma, ek-kon-dro'mah. See *Chondroma*.

Ecchondrosis, ek-kon-dro'sis. Chondroma.

Ecchoresis, ek-ko-re'sis (*choreo*, to make room). Defecation.

Ecchyloma, ek-ke-lo'mah (*ec*, *chulos*, juice). Expressed juice.

Ecchymata, ek-kim'at-ah (pl. of **Ecchyma**) (*ec*, *chuo*, to pour). Burning eruptions.

Ecchymoma, ek-ke-mo'mah (*ec*, *chumos*, humor). *Ecchymosis*. Livid, black, or yellow spot produced by blood effused into the areolar tissue from a contusion, as of the conjunctiva—subconjunctival hemorrhage, black eye. Spontaneous effusions, occurring as the result of disease or after death, are called suggillations. **E. arterio'sum**, see *Aneurism*. **E. cap'itis re'cens nato'rum**, cephalæmatoma. **E. hypon'ychon**, hyponychon. **E. lymphat'icum**, phlegmasia dolens. **E. melas'ma**, melasma.

Ecchymosis, ek-ke-mo'sis. Ecchymoma. *Tabetic ecchymoses* are patches of discolored skin scattered irregularly over the lower extremities and lower part of the abdomen in locomotor ataxia, appearing suddenly near the end of paroxysms of intense pain and severe gastric attacks.

Ecchymotic, ek-kim-ot'ik. Pertaining to ecchymosis.

Ecchysis, ek'kis-is (*chuo*, to pour). Effusion.

Ecclisis, ek'klis-is (*klino*, to bend or give way). Luxation.

Ecclysis, ek'klis-is (*ek*, out, *klusis*, a washing). Washing out by enema.

Eccope, ek'kop-e (*ec*, *kopto*, to cut). The act of cutting out; also a perpendicular division of the cranium by a cutting instrument.

Eccopeus, ek-kop'e-us. Knife or instrument for cutting; ancient instrument—the raspatory—used in trepanning.

Eccoprosiæsthesis, ek-kop-ros-e-ees-tha'sis (*ek*, *kopros*, excrement, *aisthesis*, sensation). Sensation or desire to evacuate the bowels.

Eccoprosis, ek-kop-ro'sis (*ec*, *kopros*, excrement). Defecation.

Eccoprotic, ek-kop-rot'ik. Ectoprotic; mild purgatives or laxatives, whose operation is confined to simply clearing out the intestinal canal.

Eccorthaticus, ek-kor-that'ik-us (*ec*, *korthuo*, to collect). Ancient epithet for remedies to which was attributed the property of evacuating collections of humors.

Eccrinology, ek-krin-ol'o-je (*ec*, *krino*, to separate, *logos*, discourse). Treatise on, or description of, secretions.

Eccrinopathia, ek-krin-o-path-e'ah. Disease of excretion or secretion.

Eccrisiology, ek-kriz-e-ol'o-ge (*ekkrisis*, *logos*, discourse). Treatise on, or description of, secretions.

Eccrisionosi (ek-kriz-e-on'o-se) or **Eccrisionu'si** (*ekkrisis*, *nosos*, disease). Disease of excretion.

Eccrisioschesis, ek-kriz-e-os'kes-is (*ekkrisis*, *schesis*, retention). Arrest or retention of excretions or of a critical evacuation.

Eccrisis, ek'kris-is (*ec*, *krino*, to separate). Excretion.

Eccritica, ek-krit'ik-ah. Diseases of the excernent functions; also medicines that act on the excernent system; eliminatives.

Eccyesis, ek-se-a'sis (*ec*, *kueo*, to conceive). Pregnancy, extra-uterine. **E. abdomina'lis**, pregnancy, abdominal. **E. ova'ria**, pregnancy, ovarial. **E. tuba'lis**, pregnancy, tubal.

Eccyliosis, ek-sil-e-o'sis (*ec*, *kulio*, to turn round). Disease of evolution or development.

Eccystis, ek-sis'tis (*ek*, *kustis*, bladder). Prolapse or extroversion of bladder.

Ecdemic, ek-dem'ik (*ekdemos*, foreign). Name given to diseases which do not arise in the locality or become epidemic.

Ecdemiomania (ek-dem-e-o-man'e-ah) (*ekdemeo*, to travel about) or **Ecdemoman'ia**. Morbid desire to be travelling about; the antithesis to nostalgia.

Ecdemionosus, ek-dem-e-on'os-us (*ekdemeo*, to travel about). Ecdemiomania.

Ecdermoptosis, ek-dur-mop-to'sis. Acne variolifórmis; Molluscum contagiosum.

Ecdora, ek'dor-ah (*ec*, *dero*, to flay). Excoriation in general, but more especially of the urethra.

Ecdysis, ek'dis-is (*ekduo*, to put off). Moulting of the skin of animals; desquamation.

Ecgonine, ek'gon-in. Alkaloid derived from cocaine by subjecting the latter to the influence of hydrochloric acid.

Echecollon, ek-e-kol'lon (*echo*, to have, *kolla*, glue). Any topical glutinous remedy.

Echeneis, ek-ken-e'is. Remora Hildani.

Echetro'sis. Bryonia alba.

Echicaoutchin, ek-e-kah-out'chin. Resin of an elastic nature, derived from bark of Alstonia scholaris.

Echicerin, ek-is'er-in. Crystallizable substance found in dita bark.

Echidna ocellata, ek-id'nah o-sel-lah'tah. A most formidable viper in the forests of Peru, the bite of which is so rapidly fatal that it kills a strong man in two or three minutes.

Echidnia, ek-id'ne-ah. Ptyaline principle found in viper venom.

Echinacea purpurea, ek-in-ah'se-ah pur-pu're-ah (*echinos*, owing to the spiny chaff of the disk). Purple coneflower, black Sampson; indigenous in the W. United States. Root is aromatic, and used popularly as a carminative.

Echinococcus (ek-in-o-kok'kus) **altricipa'riens** (*echinos*, hedgehog, *kokkos*, grain or berry). Echinococcus in which daughter cysts originate from the head and are embraced in the mother cyst. **E. endog'enus**, echinococcus altriciparíens. **E. exog'enus**, echinococcus scoleciparíens. **E. hom'inis**, or **human'us**, see *Hydatid* and *Parasites*. **E. multilocula'ris**, echinococci of small size situated close together. **E. scolecipa'riens**, echinococcus in which the daughter cysts originate from outside the mother cyst.

Echinodermi, ek-in-o-dur'me (*echinos*, hedgehog, *derma*, skin). See *Porcupine men*.

Echinoglossum, ek-in-o-glos'sum (*echinos*, hedgehog, *glossa*, tongue). Ophioglossum vulgatum.

Echinophthalmia, ek-in-of-thal'me-ah (*echinos*, hedgehog, *ophthalmia*, inflammation of the eye). Ophthalmia of the eyelids, in which the cilia project like the quills of the hedgehog.

Echinops, ek'in-ops (*echinos*, hedgehog, *ops*, appearance). Globe thistle. Root and seeds are reputed to be moderately diuretic.

Echinopus, ek-in'o-pus (*echinos*, hedgehog, *pous*, foot). Echinops.

Echinorrhynchus (ek-in-or-rhink'us)(*echinos*, hedgehog, *runchos*, snout). Genus of the Acanthocephala or thorn-headed worms. **E. gigas**, parasite of large size found in the intestines of the hog, and sometimes in man. **E. monilifor'mis**, parasite occurring in a case described by two Italian observers.

Echinus scandens, ek-e'nus skan'dens. Allamanda.

Echirrhetin, ek-ir-rhet'in. Resinoid mass obtained from bark of Alstonia scholaris.

Echitamine, ek-it'am-een. Ditaine.

Echit'ein. Crystallizable resinoid substance derived from dita bark.

Echitenine, ek-it'en-een. Amorphous brown alkaloid derived from bark of Alstonia scholaris.

Echi'tes acumina'ta. Growing in Peru; furnishes a variety of condurango. **E. antidysenter'ica**, Holarrhena antidysenterica. **E. difformis**, Forsterania difformis. **E. hirsu'ta**, growing in Peru; furnishes a variety of condurango. **E. Malabar'ica** grows in India; root is employed in fevers. **E. schola'ris**, Alstonia scholaris. **E. suberec'ta**, see *Curare*. **E. syphilit'ica**, tree of Surinam; employed in syphilis.

Ech'ium vulga're. Blueweed, ord. Borragineæ; growing in Europe and N. United States; root is aperient.

Echmasis, ek'mas-is (*echmazo*, to hinder). Retention, obstruction.

Echo sign. Disorder of speech in epileptics, in which words are repeated several times in succession.

Echokine'sis. Affection occurring in convulsive tic, in which the child mimics the actions of others.

Echola'lia (*echos*, sound, *laleo*, to speak). Automatic repetition of words heard; a form of insanity.

Echop'athy (*echo*, sound, *pathos*, disease). Abnormal nervous action in which the patient repeats words or actions.

Echophrasia, ek-o-fraz'e-ah (*echo*, *phrasis*, speech). Echolalia.

Echos, ek'os. Sound; tinnitus aurium.

Echoscope, ek'o-skope (*echo*, sound, *skopeo*, to examine). Auscultation.

Echoscopium, ek-o-skop'e-um. Stethoscope.

Echthysterocyesis, ek-this-ter-o-se-a'sis (*hustera*, uterus, *kuesis*, pregnancy). Pregnancy, extra-uterine.

Echtysterus (ek-tis'ter-us) or **Ecthys'terus** (*ektos*, out, *hustera*, uterus). Relating to extra-uterine pregnancy.

Eclactisma, ek-lak-tiz'mah (*eklaktizo*, to kick). Epilepsy; convulsions.

Eclampsia, ek-lamp'se-ah (*ec*, *lampo*, to shine). Brilliancy; flashes of light before the eyes; convulsion, as the convulsions of children (probably *ek*, *lambano*, to seize hold of). **E. gravida'rum et parturien'tium**, puerperal convulsions; convulsions of pregnant and parturient women. **E. infan'tum**, see *Eclampsia*. **E. nu'tans**, convulsion with bowing of the head; convulsion, salaam. **E. typho'des**, convulsive disease, a form of ergotism; see *Raphania*.

Eclampsic (ek-lamp'sik) or **Eclamptic**, ek-lamp'tik. Relating to or suffering with eclampsia.

Eclectic (ek-lek'tik) **physicians** (*eklektikos*, selecting, *ek*, *lego*, to choose). Sect of physicians who professed to choose from other sects all the opinions which appeared to them best founded. The doctrine was called *Eclectism*, *Eclecticism*, *Medicina eclectica*, *Eclectic medicine*. Every judicious physician must really be an eclectic in the sense alluded to, but the term Eclectic is frequently applied in the United States to one who chooses to adopt exclusive views—the so-called eclectic physicians generally belonging to the class of botanical physicians.

Eclectism (ek-lek'tizm) or **Eclec'ticism.** See *Eclectic*.

Eclectus (*eklektos*) ek-lek'tus (*ec*, *leicho*, to lick). Medicine of a thick, syrupy consistence, chiefly used to allay cough, and consisting of pectoral remedies. Although the linctus is usually exhibited in thoracic affections, it may have tonic virtues combined with it.

Eclegma, ek-leg'mah. Eclectus. **E. al'bum**, looch album. **E. gummo'so-oleo'sum**, looch album.

Eclepisis, ek-lep'is-is (*ec*, *lepis*, scale). Desquamation, exfoliation.

Eclepisitrepanon, ek-lep-is-e-trep'an-on (*eklepisis*, *trupanon*, trepan). Exfoliative trepan.

Ecligma, ek-lig'mah. Eclectos.

Eclimia, ek-lim'e-ah (*ec*, *limos*, hunger). Inordinate appetite.

Eclipsis, ek-lip'sis (*ec*, *leipo*, to leave). Syncope.

Eclyses, ek'lis-ees (pl. of **Eclysis**). Adynamiæ.

Eclysis, ek'lis-is (*ekluo*, to loosen). Resolution, prostration of strength, faintness. **E. pneumocardi'aca**, asphyxia.

Ecmne'sia. Loss of memory of events from a certain date, memory of preceding events remaining intact.

Ecmyzesis, ek-miz-a'sis (*ekmuzao*, to suck out). The action of sucking.

Ecnœa, ek-ne'ah (*eknoia*, *ec*, *noos*, mind). Dementia.

Economy, e-kon'o-me (*oikonomia*, *oikos*, a house, family, *nemo*, to rule). By the term *animal economy* is understood the aggregate of the laws governing the organism. The word *economy* is also used for the aggregate of parts constituting man or animals.

Ecouvillonage (F.). Introduction of remedies into the uterus by a brush.

Ecphlogosis, ek-flo-go'sis (*phlogoo*, to set on fire). Inflammation.

Ecphlysis, ek'flis-is (*phluo*, to boil). Vesicula. **E. ecze'ma**, eczema. **E. her'pes**, herpes. **E. her'pes circina'tus**, herpes circinatus. **E. her'pes ex'edens**, herpes exedens. **E. her'pes milia'ris**, herpes phlyctænodes. **E. her'pes zos'ter**, herpes zoster. **E. pom'pholyx**, pompholyx. **E. rhy'pia**, rupia.

Ecphractic, ek-frak'tik (*ekphraktikos*). Removing obstruction.

Ecphraxis, ek-fraks'is (*ekphrasso*, to remove obstruction). Action of ecphractic or deobstruent remedies.

Ecphronia, ek-fron'e-ah (*phren*, mind). Insanity. **E. ma'nia**, mania. **E. melancho'lia**, melancholy.

Ecphyas, ek'fe-as (*ekphuo*, to grow). Appendix vermiformis cæci.

Ecphyma, ek-fe'mah (*ekphuo*, to grow). Excrescence, tumor. **E. cal'lus**, callosity. **E. carun'cula**, caruncle. **E. cla'vus**, corn. **E. molluscifor'me**, molluscum fibrosum. **E. œdemat'icum**, œdema, phlegmasia dolens. **E. physco'nia**, physconia. **E. tricho'ma**, plica. **E. verru'ca**, verruca.

Ecphymata, ek-fe'mat-ah (pl. of **Ecphyma**). Rubeola.

Ecphysesis, ek-fis-e'sis (from *ekphusao*, to breathe through). Quick and forced expulsion of air from the lungs.

Ecphysis, ek'fis-is (*ekphuo*, to grow). Apophysis. **E. ventric'uli**, duodenum.

Ecpiesma, ek-pe-es'mah (*ec*, *piezo*, to compress). Impaction. Fracture of the cranium, with depression of the fragments and compression of the brain.

Ecpiesmus, ek-pe-es'mus. Forcing of the eye from the orbitar cavity, with apparent but not real augmentation of the organ. See *Exophthalmia*.

Ecpleroma, ek-pler-o'mah (*ec*, *pleroo*, to fill). Cushion or pad. Small pad or ball of leather or other substance intended to fill the hollow of the arm-pit; used probably in reducing luxations of the shoulder.

Ecplexia, ek-pleks'e-ah (*ekplesso*, to stun). Stupor.

Ecplexis, ek-pleks'is. Stupor.

Ecpneumatosis, ek-nu-mat-o'sis (*pneuma*, air). Expiration.

Ecpneusis, ek-nu'sis. Expiration.

Ecpnoe, ek'no-e. Expiration.

Ecptoma, ek-to'mah (*ec*, *pipto*, to fall out). This word has been used synonymously with luxation; also for the separation of gangrenous parts; expulsion of the secundines, prolapsus of the womb, and intestinal or omental hernia.

Ecptosis, ek-to'sis. Luxation.

Ecpyctica, ek-pik'te-kah (*pukazo*, to thicken). Medicines which are supposed to thicken the humors or fluids of the body.

Ecpyema, ek-pe-a'mah (*ec, puon,* pus). Abscess, suppuration, empyema.

Ecpyesis, ek-pe-a'sis. Abscess, empyema, pustule. **E. ecthy'ma,** ecthyma. **E. impeti'go,** impetigo. **E. porri'go,** porrigo. **E. porri'go crustacea,** porrigo larvalis. **E. porri'go favo'sa,** porrigo favosa. **E. porri'go furfura'cea,** porrigo furfurans. **E. porri'go galea'ta,** porrigo scutulata. **E. porri'go lupino'sa,** porrigo lupinosa. **E. sca'bies,** psora.

Ecpyetic, ek-pe-et'ik. Suppurative.

Ecraseur (F.) a-kras-ur' (*écraser,* to crush). A crusher. Surgical instrument invented by M. Chassaignac of Paris, consisting of a wire rope or steel chain attached at both ends to a steel mandril which passes through a hollow steel cylinder. The tightening of the chain is made slowly and with great force, and the slow bruising it makes is rarely followed by hemorrhage, even in the case of hemorrhoids and other vascular tumors. The operation with the *écraseur* has been termed *écrasement* or dry amputation.

Ecrexis, ek-reks'is (*ec, regnumi,* to break). Rupture, laceration.

Ecrhythmus, ek-rith'mus (*ec, rhuthmos,* rhythm). Out of rhythm; applied to the pulse, particularly when irregular.

Ecröe, ek'ro-e (*rhoe,* flow). Discharge.

Ecrysis, ek'ris-is (*ekreo,* to run from). Discharge.

Ecsarcoma, ek-sar-ko'mah (*ec, sarx,* flesh). Fleshy excrescence of various kinds. See *Fungosity* and *Sarcoma.*

Ecsesma, ek-ses'mah. Eczema.

Ecstaltic, ek-stal'tik. Name given to nervous activity from the spinal centre.

Ecstasis, ek'stas-is (*ec, histemi,* to place, to be beside one's self). State in which certain ideas so completely absorb the mind that the external sensations are suspended, voluntary movements arrested, and even the vital actions retarded. In catalepsy there is, in addition, complete suspension of the intellectual faculties—a condition generally described as *trance.* See *Luxation.*

Ec'stasy. Ecstasis.

Ecstrophe, ek'strof-e. Extroversion of the bladder. See *Exstrophia.*

Ec'tad (*ektos,* out of). Directed toward the surface of the body.

Ectal, ek'tal (*ektos*). Relating to the exterior.

Ectasia, ek-tah'se-ah. Aneurism. **E. vena'rum,** varix.

Ectasis (ek'tas-is) or **Ec'tasy** (*ec, teino,* to stretch). Extension; expansion. **E. i'ridis,** extension or expansion of the iris, occasioning diminution of the pupil.

Ectasy, ek'tas-e. Ectasis.

Ectental, ek-ten'tal (*ektos,* outward, *entos,* inward). Relating to the line of junction between ectoderm and entoderm.

Ec'teron. External and internal epithelial layer.

Ectexis, ek-teks'is (*ec, teko,* to melt). Colliquation.

Ecthetobrephotropheum, ek-thet-o-bref-o-trof'e-um (*ekthetos,* placed out, *brephotropheum*). Foundling hospital.

Ecthetotropheum, ek-thet-o-trof'e-um (*ekthetos,* placed out, *tropheo,* to nourish). Foundling hospital.

Ecthlimma, ek-thlim'mah (*ekthlibo,* to express, to bruise). Attrition. Chafing or excoriation produced by external violence.

Ecthlipsis, ek-thlip-sis. Expression.

Ecthyma, ek-thi'mah (*ekthuo,* to break out). A papulous scale. A cutaneous eruption characterized by large, round pustules, always distinct and seated upon an indurated and highly inflamed base, which soon break, and olive-brown incrustations are formed which adhere firmly to the skin and separate in time. *Ecthymata* are also hard, unequal tumors which appear transitorily on the skin. See *Efflorescence, Exanthem,* and *Pustule.* **E. antimonia'le,** ecthymatous eruption from contact with antimony. **E. bullo'sum,** pustular syphiloderm. **E. cachec'ticum,** pompholyx epinyctis. **E. febri'le,** small-pox. **E. gangræno'sum,** rupia escharotica. **E. lu'ridum,** purplish pustules of the aged. **E. syphilit'icum,** rupia.

Ecthy'maform syph'ilide. See *Syphilide.*

Ecthymatiform, ek-thi-mat'i-form. Resembling ecthyma.

Ecthymatodes, ek-thim-at-o'dees. Ecthymatiform.

Ecthymosis, ek-thim-o'sis. Ecthyma.

Ecthysterocye'sis (*ecto, hustera,* uterus, *kuesis,* pregnancy). Pregnancy, extra-uterine.

Ectillot'ic (*ec, tillo,* to pluck). Depilatory.

Ectil'mus. Evulsion.

Ectme'sis (*ec, tmesis,* cutting). Excision.

Ec'to (*ektos,* outside). As a prefix, outside.

Ec'toblast (*ecto, blastos,* germ). Ectoderm. Wall of a cell. See *Cytoblast* and *Molecule.*

Ectocar'dia (*ecto, kardia,* heart). Dislocation or malposition of the heart. From the nature of the misplacement it has been divided into *E. cervicalis, E. pectoralis,* and *E. abdominalis.* See *Dexiocardia, Mesocardia, Cardiocele.*

Ectocondylar, ek-to-kon'dil-ar. Pertaining to the external condyle. **E. ridge,** ridge of the humerus.

Ectocuneiform, ek-to-ku'ne-i-form. External cuneiform.

Ec'toderm (*ecto, derma,* skin). Exterior cell-membrane; ectoblast; epiblast.

Ectodermic (ek-to-dur'mik) or **Ectodermal,** ek-to-dur'mal. Pertaining to the ectoderm.

Ectogenous, ek-toj'en-us (*ecto, gennao,* to engender). Possessing the power of developing without a host.

Ectome, ek'to-me (*ec, tome,* incision). Castration; excision.

Ectomere, ek'to-mere (*ecto, meros,* part). One of the cells due to segmentation which finally help to form the ectoderm.

Ectom'ia. Castration.

Ectom'ias. Castrated.

Ec'tomon. Helleborus niger.

Ec'tomos. Castrated.

Ecto-orbital (ek-to-or'bit-al) or **Ectorbital,** ekt-or'bit-al. Connected with or located upon the lateral portion of the orbits.

Ectopa'gia (*ecto, pegnumi,* to put together). Genus of double monsters having a common umbilicus, comprising those which are united laterally throughout the whole extent of the thorax; such a monster is called *Ectop'agus.*

Ectopar'asites (*ecto, parasite*). Parasitic animals which infect the exterior of the body.

Ec'tophyte or **Ectoph'yton** (*ecto, phuton,* vegetable). Vegetable parasite growing on the surface of the body.

Ectop'ia (*ec, topos,* out of place). Morbid displacement of parts. See *Luxation.* **E. a'ni,** proctocele. **E. cer'ebri,** encephalocele. **E. cor'dis,** displacement, dislocation, or unnatural position of the heart. See *Cardiocele.* **E. hernio'sa,** hernia. **E. intestino'rum,** enterocele. **E. len'tis,** dislocation of the crystalline lens, which may take place into the vitreous humor, the anterior chamber, or under the conjunctiva. **E. pulmo'num,** pneumocele. **E. sple'nis,** splenectopia. **E. vesi'cæ,** exstrophy of the bladder.

Ectopic, ek-top'ik. Out of place. **E. gesta'tion,** extra-uterine pregnancy. **E. menstrua'tion,** vicarious menstruation.

Ectoplasm, ek'to-plazm. Outer layer of a vegetable cell.

Ectoplastic, ek-to-plas'tik. Relating to ectoplasm.

Ectopocys'tic (*ektopos,* out of place, *kustis,* bladder). Disease dependent upon displacement of the bladder.

Ectopous, ek'to-pus. Ectopic.

Ectoprot'ic. Eccoprotic.

Ectosarc, ek'to-sark (*ecto, sarx,* flesh). Ectoplasm.

Ectoskeletal, ek-to-skel'et-al. Relating to the ectoskeleton.

Ectoskeleton, ek-to-skel'et-on. Superficial or external support of the animal body, as the skin, hairs, feathers, hoofs, etc.

Ectosteal, ek-tos'te-al (*ecto, osteon,* bone). Relating to external surface of a bone.

Ectostosis, ek-tos-to'sis (*ecto*, *osteon*, bone). Ossification beginning within the perichondrium and reaching to the cartilage.

Ectozo'a (sing. **Ectozo'on**) (*ecto*, *zoon*, animal). Parasitic animals infesting the exterior of the body, *Dermatozoa*, as lice—a term which, like *Helminthia erratica*, *Pseudohelminthes*, *Pseudelminthes*, and *Pseudoparasites*, is applied also to worms or larves of insects that have been introduced into the intestinal canal by accident. The animalcules most frequently swallowed are the hair-worm, leech, grub of the fly, caddy insect, the larve of the bee, the spider, etc. In animals bots are produced by swallowing the ova of the œstrus or gad-fly. See *Helminthia erratica*.

Ectrimma, ek-trim'mah (*ec*, *tribo*, to rub off). Ulceration of the skin, particularly from pressure of the bed on different parts of the body, after protracted confinement.

Ectrodactylia, ek-tro-dak-til'e-ah (*ektrosis*, *daktulos*, finger). Malformation in which one or more fingers or toes are wanting.

Ectrogeny, ek-troj'en-e (*ektrosis*, abortion, *genesis*, generation). Monstrosity by defect.

Ectroma, ek-tro'mah. Abortion.

Ectromeles, ek-tro'me-lees (*ektrosis*, abortion, *melos*, limb). Genus of monsters in which the limbs are nearly or altogether deficient, as in the ordinary cetacea. The monster is called *Ectrom'elus*.

Ectrope, ek'tro-pe (*ec*, *trepo*, to turn off, to divert). Any duct by which peccant or morbific matter was supposed to be drawn off.

Ectropion (ek-tro'pe-on) or **Ectro'pium**. Eversion of the eyelids, so that they do not completely cover the globe of the eye; more common in the lower than the upper eyelid. It may be owing to the retraction of the skin after the cure of an ulcer, wound, or burn of the eyelid, or may depend on tumefaction or relaxation of the conjunctiva. Removal of a portion of the conjunctiva will usually effect a cure; but many cases defy the efforts of art. The ancients called ectropion of the upper eyelid *lagophthalmia*. **E. of os u'teri**, condition characterized by projection of the swollen and granulated mucous membrane from the gaping os uteri, particularly when a large speculum is introduced. **E. vesi'cæ**, exstrophy of the bladder.

Ectrosis (ek-tro' sis) or **Ectrosmus**, ek-tros' mus. Abortion.

Ectrotic, ek-trot'ik (*ectroma*, *ek*, *titrosko*, to wound, abortion). Abortive. Applied to methods for preventing the development or causing the abortion of any disease—as of chancres by the use of caustic, small-pox pustules by the use of mercurial ointment, fevers, etc.

Ectyloticus, ek-til-ot'ik-us (*ec*, *tulos*, protuberance). Catheretic.

Ectympanosis, ek-tim-pah-no'sis. Tympanites.

Eczem fluidum, ek'zem flu'id-um. See *Eczema*.

Eczema, ek-ze'mah (*ec*, *zeo*, to boil out, to effervesce). *Humid scall* or *tetter*, *Moist tetter*, *Running scall*. Heat eruption. Eruption of small vesicles on various parts of the skin, usually set close or crowded together, with little or no inflammation around their bases, and unattended by fever. The fluid of eczema Hebra calls *Eczem fluidum*. To eczema of the legs the term *Fluxus salinus* has occasionally been given, on account of the copious secretion from it. **E. cap'itis**, E. of the hairy scalp. **E. epizoöt'icum**, foot-and-mouth disease; contagious, and accompanied with fever characterized by a vesicular eruption in the mouth and feet of cattle; may also attack human beings. **E. erythemato'sum**, characterized by redness of the skin and exudation. **E. of the face**, at an advanced stage and occurring in young children, has been described under the names *Crusta lactea* and *Porrigo larvalis*. **E. figura'tum**, lesions are well defined. **E. fis'sum**, chronic eczema with a raw, red, exuding, and cracked surface. **E. of the hair'y scalp**, *Eczema capitis*, *Vesicular scall*, is often confounded with other affections under the names porrigo and tinea, which are pustular, not vesicular, in their form. It occurs during dentition, and even afterward; the discharge is profuse and apparently glutinous; it dries into crusts and mats the hair. The scalp gives evidence of inflammatory excitement, and the lymphatic ganglions of the neck become inflamed and suppurate. **E. hu'midum**, moist eczema. **E. hypertroph'icum**, eczema with hypertrophy of cutaneous structures. A variety of humid scalled head, in which the secretion runs down upon the hairs and encloses them in little silvery particles or sheaths, is named *Asbestos scall*. **E. ichoro'sum**, chronic eczema attended with a free and irritating discharge. **E. impetigino'des** or **impetiginoï'des** or **impetigino'sum**, *Gall*, *Grocer's* or *Bricklayer's itch*; eczema produced by the irritation of sugar or lime. **E. infanti'le**, porrigo larvalis. **E. intertri'go**, eczema affecting parts of the body which come into contact with each other, as about the joints, the inner surface of the nates, in the groins, and beneath the mammæ. **E. labia'le**, eczema of the lips with small pustules. **E. lot'ricum**, eczema of the hands; washerwoman's itch. **E. mad'idans**, eczema rubrum. **E. mamilla'rum**, eczema of the nipples. **E. margina'tum**, eruption at the inner part of the thigh; but different diseases—as intertrigo, superficial ringworm, lepra vulgaris, etc.—are probably included under it. **E. mercuria'le**, *Mercurial lepra* or *rash*; variety of eczema arising from the irritation of mercury. **E. muco'sum**, eczema in which the lesions have a similar appearance to mucous membrane. **E. neuro'sum**, variety of eczema accompanied with pain and great sensibility of the skin. **E. neurotraumat'icum**, eczema due to injury to a nerve. **E. nummula're**, form of eczema in which the lesions are shaped like coins. **E. pustulo'sum**, impetigo. **E. rimo'sum**, eczema fissum. **E. ru'brum**, an inflammatory form of eczema. **E. sclero'sum**, eczema accompanied with cutaneous hardening. **E. sic'cum**, eczema unaccompanied by discharge. **E. sim'plex**, eczema. **E. sola're**, eczema following exposure to the sun. **E. squamo'sum**, chronic eczema accompanied with continuous scaliness or even crustiness. **E. tuberculo'sum**, form of eczema characterized by elevations in shape of tubercles on the skin. **E. vesiculo'sum**, eczema characterized by very numerous vesicles, which become filled with fluid and accompanied with intense itching after the vesicles rupture; the fluid spreads over the surface and dries into crusts.

Eczematoses, ek-zem-at-o'sees. Family of diseases including morbid conditions of the cutaneous secretions, as the perspiration, sebaceous and coloring matters, etc.

Eczematous, ek-zem'at-us. Relating or appertaining to eczema.

Eczesis, ek'ze-sis. Effervescence.

Eczesma, ek-zes'mah. Eczema; lichen tropicus.

Edacity, e-das'it-e. Voracity; gluttony.

Edda-padelle. Ophthalmia occurring in epidemic form in Malabar.

Ed'does. See *Arum esculentum*.

Edematous, e-dem'at-us. Œdematous.

Edenta'tion (*e*, *dens*, tooth). Deprivation of teeth.

Edentatus (e-den-tat'us) or **Eden'tate.** Without teeth.

Edentuli, e-den'tu-le. Persons devoid of teeth.

Edentulous (e-den'tu-lus) or **Eden'tated** (*e*, *dens*, tooth). Without teeth.

Edera, ed'er-ah. Hedera helix.

Edge'weed. Œnanthe phellandrium.

Edible, ed'i-b'l (*edo*, to eat, *habilis*, able). Esculent.

Edoceph'alus (*aidoia*, sexual organs, *kephale*, head). Monster which has the two ears near each other or united under the head, the jaws atrophied, no mouth, and above the eye a tube or proboscis resembling a penis.

Edulcoration, e-dul-ko-ra'shun (*e*, *dulcis*, sweet). Operation for depriving a substance of its acrid and disagreeable taste, or at least for disguising it; also the addition of a saccharine substance to a medicine to modify its taste.

Edulis, ed-u'lis. Eatable.

Eelgrass. See *Pila marina*.

Ef, as a prefix, like *e* and *ex*.

Effemina'tion (*ef, fœmina*, female). In the male, change of feeling or inclination, as of a sexual character, to those of the female; in the female, loss of feminine characteristics or qualities.

Efferent, ef'fer-ent (*e, fero*, to carry, to transport). Centrifugal; exodic; conveying outward, as from the centre to the periphery. *Vasa efferentia* are lymphatic or chyliferous vessels issuing from the glands to convey their lymph to the thoracic duct; those which pass to these glands have been termed *vasa afferentia* or *inferentia*. Also nerves that convey the nervous influence from the nervous centres to the circumference. See *Afferent*. At the upper extremity of the mediastinum testis the ducts of the rete testis terminate in from nine to thirty small ducts, called vasa efferentia or excretoria or Graafiana, which form the coni vasculosi.

Effervescence, ef-fur-ves'sence (*ef, fervesco*, to grow hot). Agitation produced by the escape of gas through a liquid, independently of the heat of the mixture, as from the mixture of acetic acid and carbonate of potassium. In the language of the humorists, it expresses a sort of ebullition in the fluids of the living body, produced by elevation of temperature or by reaction on each other of the principles contained in the fluids in circulation.

Efferves'cent cit'ro-tar'trate of so'dium. Sodii citro-tartras effervescens.

Effervescing draught. Prepared by neutralizing an aqueous solution of potassium bicarbonate with lemon-juice. **E. magne'sium cit'rate**, granulated citrate of magnesium. Dose, ʒij-ʒj. **E. pow'ders**, see *Powders, effervescing*.

Effetus, ef-fe'tus (*ef, fetus* or *fœtus*, producing). Impoverished.

Effila, ef'fil-ah. Ephelides.

Effilation, ef-fla'shun. Quick and forced expulsion of air from the lungs.

Efflatus, ef-flat'us (*ef, flo*, to blow). Quick and forced expulsion of air from the lungs.

Effleurage (Fr.). Gentle shampooing or rubbing of the surface. See *Massage*.

Efflora'tio, ef-flor-ah'she-o (*ef, floreo*, to bloom). Exanthem.

Efflorescence, ef-flor-es'sence (*ef, floresco*, to bloom as a flower). Exanthem; cutaneous blush; conversion of a solid substance into a pulverulent state by exposure to the air; in salts, generally owing to the loss of a part of their water of crystallization.

Efflorescentia, ef-flor-es-sen'she-ah. Efflorescence; exanthem.

Efflorescentiæ, ef-flor-es-sen'she-a. Generic name including all the exanthemata in which there is tumefaction of skin tissue.

Effluvium, ef-flu've-um (*ef, fluo*, to flow). Emanation from persons or things, often offensive. **E. latri'na'rium**, ammoniacal emanation from latrines or privies. **E. palus'tre**, miasm, marsh. **E. pilo'rum**, alopecia.

Effluxion, ef-fluks'yun. See *Abortion*.

Effort, ef'fort (*ef, fortis*, strong). Muscular contraction of greater or less strength to resist an external force, or to accomplish a function which has become naturally laborious, as the act of pushing away or of drawing a body toward us, the painful efforts of the mother to expel the fœtus, etc.

Effossio, ef-fos'se-o (*ef, fodio*, to dig). Exhumation.

Effraction, ef-frak'shun. Breaking through.

Effractura, ef-frak-tu'rah (*ef, frango*, to break). Fracture. **E. cran'ii**, fracture of the cranium with depression.

Effrenitatio, ef-fren-e-tah'she-o (*effrenus*, unbridled). Excessive purgation.

Effusio, ef-fu'zhe-o. Effusion. **E. sem'inis**, ejaculation.

Effusion, ef-fu'shun (*ef, fundo*, to pour out). The pouring out of blood or of any other fluid into the areolar membrane or into the cavities of the body; effusion of serum or of coagulable lymph, for instance, is a common result of inflammation of serous membranes. *Infiltration* is the term generally employed for effusion into the areolar membrane.

Egeria, e-ge're-ah. In ancient mythology, a nymph, by some supposed to have been identical with Lucina, to whom pregnant females offered sacrifices *ut conceptus alvus facilius egeretur*.

Eger'sis (waking). Intense wakefulness.

Egertic, e-jer'tik. Arousing, stimulating.

Egesta, e-jes'tah (*e, gero*, to carry). See *Excretion*.

Egestas, e-jes'tas. Want.

Egestion, e-jest'shun. Defecation, dejection, excretion.

Egg (Sax. *æg*). Ovum. **E. albu'men**, albumen ovi. **E. bed**, ovarium. **E. bran'dy**, see *Ovum*. **E. plant**, Solanum melongena. **E., white of**, albumen ovi. **E., yolk of**, see *Ovum*.

Egg-albu'men. Albumen ovi.

Egg-cell. See *Ova*. **E.-c. nu'cleus**, nucleus of egg-cell prior to maturation.

Egg-shell. Testa ovi. See *Membrana putaminis*.

Egg-tubes. Tubes of the ovaries.

Egobronchophony, e-go-bron-kof'o-ne. See *Egophony*.

Egophonic e-go-fon'ik. Having the character of, or relating to, egophony.

Egophony, e-gof'on-e (*aix*, goat, *phone*, voice). *Goat's voice, Bleating voice*. Resonance of the voice heard through the stethoscope when we examine the chest of one laboring under moderate effusion into one of the pleuræ. The voice which strikes the ear through the cylinder is more sharp and harsh than usual, and tremulous and broken, like that of the goat. By some the bronchial and bleating voice (*egobronchophony*) is regarded as a symptom of pleuropneumonia. Egophony exists, however, in cases of hepatization where there is no pleural disease.

Egregorsis, e-greg-or'sis (*egregoreo*, to watch). Watchfulness; morbid want of sleep.

Egressus (e-gres'sus) **ventric'uli.** Pylorus.

Egritude, e'gre-tude (*æger*, sick). Disease.

Egyp'tian chloro'sis. See *Chlorosis*. **E. ophthal'mia**, see *Ophthalmia*. **E. o'pium**, commercial variety of opium from Egypt, of inferior quality.

Ehrenrit'ter's gan'glion. Ganglion jugulare.

Ehr'lich's meth'od. Method employed for staining tubercle bacilli with methyl violet; nitric acid is then used for decolorization. **E.'s reac'tion in ty'phoid fe'ver.** See *Diazo-reaction*.

Eich'horst's cor'puscles. Microcytic formation in the blood in pernicious anæmia.

Eich'stedt's disease. Pityriasis versicolor.

Eidoptometry, i-dop-tom'et-re. Measurement of acuteness of vision.

Eidos, i'dos (form, resemblance). The *ei* is sometimes changed into *o* at the termination of a word. Thus *Hæmatodes* for *Hæmatoïdes*.

Eilamides, i-lam'id-ees (*eileo*, to involve). Meninges or membranes.

Eilema, i-la'mah (*eileo*, to roll, convolution). Fixed pain in some portion of the intestinal canal, like that which would be produced by a nail driven into the part.

Eileon, i'le-on. Ileon.

Eileus, i'le-us. Ileus.

Eiloid, i'loid (*eileo*, to roll, *eidos*). Morbid growth of the cutis, coiled or folded.

Eisanthema, ise-an-tha'mah (*eis, anthema*, efflorescence). Eruption on a mucous membrane; aphthæ, for example.

Eisbole, ise'bo-le (*eis*, within, *ballo*, to throw). Attack; injection.

Eispnoe, ise'no-e (*eis*, within, *pneo*, to breathe). Inspiration.

Ejaculatio, e-jak-u-la'she-o. Ejaculation. **E. sem'inis impedi'ta**, slow emission of sperm.

Ejaculation, e-jak-u-la'shun (*e, jaculor*, to throw out). Vulg. *Spending*. Emission of sperm. That occurring during coition has also been termed *insemination*. Act by which the fluid is projected out of the urethra. **E. cen'tre**, see *Centre*.

Ejaculator, e-jak'u-la-tor. That which effects the

emission of sperm. See *Transversus perinæi.* **E. sem'inis,** accelerator urinæ. **E. ure'thræ,** see *Transversus perinæi.* **E. uri'næ,** bulbo-cavernosus.

Ejaculatory, e-jak'u-la-to-re. Concerned in the ejaculation of sperm. **E. ducts or canals'** are formed by union of the vasa deferentia with the ducts of the vesiculæ seminales. They open at the lateral and anterior parts of the verumontanum, and convey into the urethra the sperm which is discharged from the vesiculæ, as well as that which comes directly from the testicle by the vas deferens. Between them there is often a depression, sometimes of a large size, which is termed *Utriculus, Sinus pocularis,* or *Weberian organ* or *corpuscle* or *vesicle;* regarded as the analogue to the uterus, and hence called *uterus masculinus.*

Ejectio, e-jek'she-o. Ejection; excretion. **E. fæ'cum,** defecation.

Ejection, e-jek'shun (*e, jacio,* to throw out or eject). Excretion of feces, urine, sputa, etc.

Ek'thyma. Ecthyma.

Elaboration, e-lab-or-a'shun (*e, laboro,* to work). Changes which assimilable substances undergo, through the action of living organs, before they are capable of serving for nutrition. The food is elaborated in the stomach during the formation of chyme; the chyme in the small intestine before it is chyle, etc.

Elæa, el-e'ah (*elaia*). The olive.

Elæagnus, el-a-ag'nus (*elaia,* olive, *agnos,* chaste). Myrica gale. **E. cor'do,** Myrica gale.

Elærin, el-e'er-in (*elaion,* oil, *erion,* wool). Oil of sheep's wool, called by raisers of sheep "yolk."

Elæocarpus copalliferus, el-e-o-kar'pus ko-pal-lif'er-us (*elaia,* olive, *karpos,* fruit). Copal.

Elæolate, el-e'ol-ate. Liquid in which a volatile oil forms the base.

Elæomeli, el-e-om'el-e (*elæon, meli,* honey). Oil thicker than honey, and of a sweet taste, flowing from the trunk of a tree in Syria; acrid and purgative.

Elæometer, el-e-om'et-ur (*elæon, metron,* measure). Very delicate glass hydrometer, for testing the purity of olive or almond oil by determining its density.

Elæon, el-e'on (*elaion*). Oil.

Elæophanes, el-e-of'an-ees (*elæon, phainomai,* to appear). Having the appearance of oil.

Elæoptene, el-e-op'teen (*elaion,* oil, *ptenos,* volatile). That portion of oxygenated volatile oils remaining after the stearopten has been separated.

Elæosaccharum, el-e-o-sak'kar-um (*elæon, sakchari,* sugar). Medicine composed of essential oil and sugar.

Elæothesion, el-e-o-thes'e-on (*elæon, thesis,* the act of putting or placing). Oil chamber in the ancient gymnasia, where the body was rubbed with oil.

Elaidin, el-a'id-in. Substance isomeric with olein, obtained by exposing olive or castor oil to action of nitric acid.

Elain, el-ah'in (*elaion,* oil). Eleoptene. See *Fat.*

Elais Guineensis, el-a'is gin-e-en'sis (*elæa*). See *Cocos butyracea.* **E. occidenta'lis,** see *Cocos butyracea.*

Elaldehyde, el-al'de-hide. Paraldehyde.

Elaphoboscum, el-af-o-bos'kum (*elaphos,* deer, *bosko,* to eat). Pastinaca sativa.

Elaphomyces granulatus, el-af-om'e-sees gran-u-lat'us (*elaphos,* stag, *mukes,* fungus). *Hart's truffles, Deer balls, Lycoperdon nuts.* Fungus formerly used in the preparation of *Balsamus apoplecticus,* and to promote labor and the secretion of milk; also as an aphrodisiac.

Elaphrium elemiferum, el-af're-um el-e-mif'er-um (*elaphos,* light). See *Amyris elemifera.* **E. tomento'sum,** Fagara octandra.

Elapsus, e-lap'sus (*e, labor,* to fall). Luxation.

Elasma, el-as'mah (*elauno,* to impel). Clyster pipe.

Elastes, el-as'tes (a driver). Elasticity.

Elastic, e-las'tik. Possessing elasticity. **E. band'age,** see *Bandage, elastic,* and *B., Esmarck's.* **E. lam'ina, poste'rior,** see *Lamina, elastic.* **E. lay'er of cor'nea, ante'rior,** see *Lamina, elastic.* **E. mem'brane** or **tis'sue,** variety of connective tissue; see *Membrane.*

Elasticity, e-las-tis'it-e (*elauno,* to impel, *elastes,* driver). *Tone, Tonicity.* Property by which certain bodies return to their proper size and shape, where these have been modified by pressure or otherwise, if only the violence to which they have been subjected be not beyond their specific limit of elasticity.

Elastin, e-las'tin. Peculiar substance from the continued action of boiling water on yellow elastic tissue.

Elate, el'at-e. Pinus picea. **E. thelei'a,** Pinus rubra.

Elater, el'at-ur. Elasticity.

Elater'ic ac'id. Acid obtained from elaterium.

Elaterid, el-at'er-id. Bitter principle found in Ecballium elaterium.

Elaterin, el-at'er-in. See *Momordica elaterium.*

Elaterinum, el-at-er-e'num. See *Momordica elaterium.*

Elaterium, el-at-e're-um (*elater,* driver). Extractum elaterii, Momordica elaterium. **E. cordifo'lium,** Momordica elaterium.

Elates, el'at-ees. Elasticity.

El'atin. See *Momordica elaterium.*

Elatine, el-at'in-e. Antirhinum elatine. **E. cymbala'ria,** Antirhinum linaria. **E. hasta'ta,** Antirhinum elatine.

Elbow, el'bo (Sax. elboga). The bend of the ulna; literally, the angle formed by the union of two straight bodies, but particularly applied to the articulation of the arm with the forearm, and especially to the projection of the olecranon process at the back part of the joint. The anterior part of the joint is the bend of the elbow. **E., mi'ner's,** see *Miner's elbow.*

Elcoma, el-ko'mah. Ulcer.

Elcoplasty, el'ko-plas-te. Operation for healing an ulcer by grafting or plastic operation.

Elcosis el-ko'sis (*helkos,* ulcer, *osis*). Ulceration in general; ulcer; deep ulceration of the cornea from a blow or violent inflammation; a state of the body in which there are obstinate ulcerations complicated with caries, putrescency, low fever, etc.

Elcuster, el-kus'ter (*helkuo,* to draw). Crotchet for extraction of the fœtus.

Elder, el'dur. Sambucus. **E. ber'ries,** see *Sambucus.* **E., com'mon,** S. Canadensis. **E., dwarf,** Aralia hispida, Sambucus ebulus. **E. flow'ers,** see *Sambucus.* **E. f. wa'ter,** see *Sambucus.* **E., prick'ly,** Aralia spinosa. **E., red'berried,** Sambucus pubens.

Elecampane, el-e-kam-pane'. Inula campana, Inula helenium.

Electarium, el-ek-tah're-um. Electuarium.

Electary, el-ek'ta-re. Electuarium.

Elective, e-lek'tiv. Term used in chemistry; showing a preference.

Electric (e-lek'trik) or **Electrical,** e-lek'trik-al. Relating to electricity. **E. bath,** see *Electricity.* **E. chore'a,** see *Chorea, electric,* and *Dubini's disease.*

Electric'ian. One skilled in the study or application of electricity.

Electricitas, e-lek-tris'it-as. Electricity. **E. anima'lis, galvan'ica,** or **metal'lica,** galvanism.

Electricity, e-lek-tris'it-e (*elektron,* amber, the substance in which it was first noticed). A physical force manifested in several forms, as magnetism, static electricity or franklinism, dynamic electricity—as galvanism or faradism—and thermo-electricity. Electricity is used medicinally as an excitant in paralysis, rheumatism, deafness, amaurosis, amenorrhœa, uterine disease, etc. The *electric bath* consists in placing the patient upon an insulated stool and connecting him with the prime conductor, of which he thus becomes a part; the fluid may be communicated by points, sparks, or by shocks, according to the required intensity. See *Electrization.* A hot-air or vapor electric bath is also employed. **E., chem'ical,** galvanism. **E., con'tact,** galvanism. **E., farad'ic,** induced electricity. **E., franklin'ic,** static electricity. **E., fric'tional,** electricity due to friction. **E., galvan'ic,** static electricity. **E., induc'tive,** electricity produced in the primary or secondary coil of an induction apparatus. **E., localiza'tion by,** electro-diagnosis. **E., magnet'ic,** electro-magnetism. **E., med'ical,** application of electricity to medical practice. **E., stat'ic** or **stat'ical,** electricity due to friction developed by means of the plate, cylinder, or Holtz

machine, and applied in neuralgia, hysteria, paralysis, and various neuroses. **E., volta'ic,** galvanism.

Electrify, e-lek'tre-fi. *Electrize.* To produce the electrical condition in a body or to render it susceptible of producing electrical phenomena; term especially applicable to static electricity, *electrolize* being the more proper term to use of current electricity. Electrify is often used to signify the act of communicating the electric fluid to man.

Electrization, e-lek-tre-za'shun. Medical application of electricity. *Localized electrization* consists in concentrating the electric action in particular parts without electro-puncture or any surgical operation. Electrization may also be employed for diagnostic purposes, diverse morbid conditions acting differently in response to it. See *Galvanization, localized.*

Electro, e-lek'tro. As a prefix, electricity.

Electro-biology, e-lek'tro-bi-ol'o-je. Science of animal electricity.

Electro-bioscopy, e-lek'tro-bi-os'kop-e. Application of electricity to know whether life is extinct.

Electro-chemistry, e-lek'tro-kem'is-tre. Science pertaining to chemical effects of electricity.

Elec'tro-contractil'ity. Power possessed by muscles of being excited to contractions by electricity.

Electro-cystos'copy (*electro, kustis,* bladder, *skopeo,* to see). Examination of the bladder by aid of electricity.

Electrode, e-lek'trode (*electro, hodos,* way). Poles of a galvanic battery are called electrodes. Rheophore.

Electrodes, e-lek-tro'dees (*elektron,* amber). Epithet for evacuations which shine like amber.

Elec'tro-diagno'sis. Diagnostic use of a current of electricity. In this both galvanic and faradic currents are used, the choice depending on circumstances, the principal diagnosis by it being for paralysis, although doubtless it could be extended with advantage to other affections. Electricity is a means of diagnosis in the localization of lesions of the nervous system. See *Localization by electricity.*

Electro-dynamometer, e-lek'tro-di-nam-om'et-ur (*elektron, dunamis,* force, *metron,* measure). Apparatus for estimating the force of electric currents.

Electro-genesis, e-lek'tro-jen'es-is. Production of electricity.

Electro-lithotrity, e-lek-tro-lith-ot'rit-e. Disintegration of calculi in the bladder by mechanical force of electrical discharge appropriately applied.

Electrolysis, e-lek-trol'is-is (*electro, lusis,* solution). Decomposition by the electric current.

Electrolyte, e-lek'tro-lite. Fluid so constituted that by the passage of the electric current through it it is decomposed. Substance analyzed by electricity.

Electrolytic, e-lek-tro-lit'ik (*electro, luo,* to dissolve, to decompose). Relating or appertaining to electrolysis or chemical decomposition induced by electricity; as electrolytic treatment of tumors.

Electrolyzation, e-lek-trol-iz-a'shun. Process by which, outside or inside of the body, inert or living matter, the phenomenon of electrolysis is effected.

Electrolyze, e-lek'tro-lize. Application of current electricity in fluids in such manner as to make rapid chemical change by the phenomenon called electrolysis, the fluid being, if so capable of change, known as an electrolyte.

Electro-magnetism, e-lek'tro-mag'net-izm. That phenomenon of electricity which is exhibited in the conjoint action of electricity and magnetism. An electro-magnetic apparatus is used in cases of paralysis, or when a powerful excitant has to be applied to a part of the organism.

Electro-massage, mas-sazh'. Use of electricity in connection with massage.

Electrometer, e-lek-trom'et-ur. Instrument for measuring electro-motive force; volt-meter. In electro-therapeutics, preferably milliampère-meter, instrument for measuring potential of static electricity.

Electro-motive (e-lek'tro-mo'tiv) **force** (contracted **E. M. F.**). Force of current electricity according to potential.

Electro-mus'cular. Relating to the action exerted by electricity on muscles. **E.-m. contractil'ity,** see *Electro-contractility.*

Elec'tro-neg'ative. Element appearing at positive electrode in electrolysis. See *Electro-positive.*

Electro-otiatrics, e-lek'tro-o-te-at'riks (*elektro, ous,* ear, *iatreia,* medical treatment). Applications of electricity in treatment of aural affections.

Electro-pathol'ogy. Diagnosis of disease by aid of electricity.

Electroph'orus (*elektro, phero,* to carry). Instrument for producing electricity and repeating the charge by induction.

Electro-physiology, e-lek'tro-fiz-e-ol'o-je. Physiology treating of the relations between function and electricity.

Electroporus, e-lek-trop'or-us. Instrument for accumulating a number of charges of static electricity.

Electro-pos'itive. Element which appears at the negative electrode or pole in electrolysis. The following substances—those generally employed—may be mentioned in the order of electro-motive force, ranging from sodium, the most electro-positive, to carbon, the most electro-negative: sodium, magnesium, zinc, iron, lead, copper, silver, mercury, platinum, carbon.

Electro-punctura'tion or **Electro-puncture,** e-lek'tro-punk'ture. *Electro-puncturation, Galvano-puncture.* Operation of inserting two or more wires, and then connecting them to the electrodes of the electric or galvanic apparatus; employed therapeutically in cases in which electricity, galvanism, and acupuncturation have been indicated.

Electroscope, e-lek'tro-skope. Apparatus with which the presence of static electricity is detected, and its kind determined, whether plus or minus.

Electro-sensibility, e-lek'tro-sen-si-bil'it-e. Sensibility of surfaces or organs developed by electricity.

Electro-statics, e-lek'tro-stat'iks. Science of static electricity.

Electrostixis, e-lek-tro-stiks'is (*electro, stixis,* puncturation). Electro-puncture.

Electro-surgery, e-lek'tro-sur'jer-e. Use of electricity in surgery for generating heat of high intensity in surgical instruments, with reference to puncture, excision, and cauterization.

Electro-therapeutics (e-lek-tro-ther-a-pyu'tiks) or **Electro-therapy,** elek-tro-ther'ah-pe (*electro, therapeia*). Treatment of disease by electricity.

Electrotonic, e-lek-tro-ton'ik. Relating to electrotonus.

Electrotonus, e-lek-trot'on-us. *Electrotonic state.* Peculiar condition of a motor nerve when a continuous galvanic current of equable strength is passed along it.

Electrum, e-lek'trum. Amber.

Electuarium, e-lek-tu-ah're-um (*eligo,* to make choice). *Electary, Electuary.* Pharmaceutical composition of a soft consistence, somewhat thicker than honey, and formed of powders, pulps, extracts, syrup, honey; confection. **E. de al'oë,** see *Opiatum mesentericum* **E. ape'riens,** confectio sennæ. **E. aromat'icum,** confectio aromatica. **E. cas'siæ,** confectio cassiæ. **E. cas'siæ fis'tulæ,** confectio cassiæ. **E. cas'siæ sen'næ,** confectio sennæ. **E. cassiæ tamarinda'tum** or **leniti'vum,** confectio cassiæ. **E. cat'echu,** confectio catechu compositum. **E. catho'licum commu'ne,** confectio sennæ. **E. cincho'næ,** see *Opiatum febrifugum.* **E. de cro'co emenda'tum,** confectio hyacinthi. **E. dentifri'cium,** dentifrice electuary. **E. diapru'num,** confectio sennæ. **E. diascor'dium,** diascordium. **E. eccoprot'icum,** confectio sennæ. **E. de ki'nâ ki'nâ,** see *Opiatum febrifugum.* **E. laxati'vum,** confectio cassiæ. **E. leniti'vum,** confectio sennæ. **E. opia'tum,** confectio opii. **E. opia'tum astrin'gens,** see *Diascordium.* **E. pip'eris,** confectio piperis. **E. scammo'nii,** confectio scammoniæ. **E. è scammo'nio,** confectio scammoniæ. **E. sen'næ,** confectio sennæ. **E. sen'næ compos'itum,** confectio sennæ. **E. sen'næ cum pul'pis,** confectio sennæ. **E. sol'idum,** tablet; see *Tabella.* **E. theba'icum,** confectio opii.

Electuary, e-lek'tu-a-re. Electuarium. **E., len'itive,** confectio sennæ.

Eleidin, el-e'id-in. See *Keratohyalin.*

Elelisphacus, el-el-is'fak-us. Salvia.

Element, el'e-ment (akin to ancient *eleo,* for *oleo,* to grow). Simple, ultimate constituent or principle in the human body, forming the basis of a fibre or tissue. Also a constituent of a compound organ. Inorganic elements are simple principles. An organic element, proximate principle, or compound of organization results from the union of certain inorganic elements; fibrin, albumen, casein etc. are organic elements. The following table gives the name of each inorganic element known, with the symbol and atomic weight. Many of them are important chemically or therapeutically, especially in their combinations (Brunton):

TABLE OF ELEMENTS.

Element.	Symbol.	Atomic Weight, B. P.	Atomic Weight, U.S. P.
Aluminium	Al	27.0	27.0
Antimony (Stibium)	Sb	120.0	120.0
Arsenic	As	75.0	74.9
Barium	Ba	137.0	136.8
Beryllium or Glucinum	Be or G	9.0	9.0
Bismuth	Bi	209.0	210.0
Boron	B	11.0	11.0
Bromine	Br	80.0	79.8
Cadmium	Cd	111.8	111.8
Cæsium	Cs	133.0	132.6
Calcium	Ca	40.0	40.0
Carbon	C	12.0	12.0
Cerium	Ce	141.0	141.0
Chlorine	Cl	35.5	35.4
Chromium	Cr	52.5	52.4
Cobalt	Co	58.9	58.9
Columbium, *vide* Niobium.			
Copper (Cuprum)	Cu	63.4	63.2
Didymium	Di	145.4	144.6
Erbium	Er or Eb		
	or E	166.0	165.9
Fluorine	F	19.0	19.0
Gallium	Ga	70.0	68.8
Gold (Aurum)	Au	196.5	196.2
Glucinum, *vide* Beryllium.			
Holmium.			
Hydrogen	H	1.0	1.0
Indium	In	113.4	113.4
Iodine	I	127.0	126.6
Iridium	Ir	192.7	192.7
Iron (Ferrum)	Fe	56.0	55.9
Lanthanum	La	139.0	138.5
Lead (Plumbum)	Pb	207.0	206.5
Lithium	Li	7.0	7.0
Magnesium	Mg	24.0	24.0
Manganese	Mn	55.0	54.0
Mercury (Hydrargyrum)	Hg	200.0	199.7
Molybdenum	Mo	95.5	95.5
Nickel	Ni	58.0	58.0
Niobium or Columbium	Nb	94.0	94.0
Nitrogen	N	14.0	14.0
Osmium	Os	198.5	198.5
Oxygen	O	16.0	16.0
Palladium	Pd	105.7	105.7
Phosphorus	P	31.0	31.0
Platinum	Pt	195.0	194.4
Potassium (Kalium)	K	39.0	39.0
Rhodium	Rh	104.0	104.1
Rubidium	Rb	85.3	85.3
Ruthenium	Ru	104.2	104.2
Samarium	Sm	150.0	—
Scandium	Sc	44.0	44.0
Selenium	Se	78.8	78.8
Silicon	Si	28.0	28.0
Silver (Argentum)	Ag	108.0	107.7
Sodium (Natrium)	Na	23.0	23.0
Strontium	Sr	87.4	87.4
Sulphur	S	32.0	32.0
Tantalum	Ta	182.0	182 0
Tellurium	Te	128.0	128.0
Terbium.			
Thallium	Tl or Th	203.7	203.7
Thorium	Th	233.0	233.0
Thulium.			
Tin (Stannum)	Sn	118.0	117.7
Titanium	Ti	49.8	48.0
Tungsten	W	184.0	183.6
Uranium	U	240.0	238.5
Vanadium	V	51.3	51.3
Ytterbium	Yb	172.8	172.7
Yttrium	Y	89.8	89.8
Zinc	Zn	65.0	64.9
Zirconium	Zr	90.0	90.0

Elementary (el-e-men'ta-re) **cell.** See *Cell.*

Elementology, el-e-men-tol'o-je. The study of elements; also histology.

El'ements, organ'ic. Principles, immediate. **E., sar'cous,** see *Sarcous.*

Elementum, el-e-men'tum. Element. **E. acidif'icum,** oxygen.

Elemi, el'em-e. See *Amyris elemifera.*

Elemic acid, el-em'ik as'id. Acid in crystals procured from elemi.

Elenium, el-en'e-um. Inula helenium.

Eleocharis palustris, el-e-o'kar-is pal-us'tris (*helos,* marsh, *chairo,* to delight in). Indigenous. Flowering tops, seeds, and roots are astringent in diarrhœa and hemorrhage.

Eleoptene, el-e-op'teen (*elaion,* oil, *ptenos,* volatile). Liquid component of volatile oils.

Eleoselinum, el-e-o-sel-e'num (*helos,* marsh, *selinon,* parsley). Apium petroselinum.

El'ephant ap'ple. See *Feronia elephantum.* **E.'s foot,** Elephantopus tomentosa. **E. leg,** elephantiasis.

Elephantia, el-e-fan'she-ah. Elephantiasis. **E. alba,** leprosy.

Elephantiasis, el-e-fan-te'as-is. Ordinarily and generally applied to a condition in which the skin is thick, livid, rugous, tuberculate, and insensible to feeling. Various affections have been described under this name, by adding an epithet. **E. anæsthet'ica,** lepra anæsthetica, *Anæsthetic leprosy.* Form of elephantiasis with insensibility and atrophy. **E. of the Antilles,** *Barbadoes leg, Glandular disease of Barbadoes,* elephantiasis of many writers, *Bucnemia, Boucnemia.* Characterized by the leg being enormously tumid and misshapen; skin thickened, livid, and rugous, often scaly; the scrotum, arms, or other parts sometimes participating in the affection. *Bucnemia tropica, Cochin leg,* is an affection of this kind. **E. Arab'ica** or **Ar'abum.** The tubercles are chiefly on the face and joints. There is loss of hair, except on the scalp; voice is hoarse and nasal; the disease is said to be contagious and hereditary; most frequently attacks the feet, and gives the lower extremity a fancied resemblance to the leg of an elephant. The seat of the disease seems to be in the lymphatic vessels and glands and in the subcutaneous areolar tissue, the inflammatory condition of which is accompanied with general morbid symptoms. See *Lepra.* **E. Asturien'sis,** variety of elephantiasis; pellagra. **E. of Cayenne,** a variety of lepra, with red and yellow spots on the forehead, ears, hands, loins, etc., afterward extending and becoming scaly, with deformity, particularly of the face; ultimately producing cracks, ulcers, caries, and sometimes death. **E. eczemato'sa,** elephantiasis accompanied with eczema. **E. fus'ca,** elephantiasis accompanied with brown pigmentation. **E. framboesioï'des,** E. Arabica. **E. glab'ra,** anæsthetic leprosy. **E. of the Greeks,** *Spedalkshed* of Norway, *true leprosy;* probably the same disease as lepra. See *Lepra.* **E. of In'dia,** characterized by red, livid, or yellowish spots, slightly prominent, to which succeed indolent tumors in the areolar texture; the phalanges swell and become ulcerated; the bones of the nose carious, the lips thickened, the body emaciated. It likewise belongs to lepra. **E. Ital'ica,** pellagra. **E. of Java,** a variety of lepra characterized by large white tumors on the toes and fingers, resembling scrofulous tumefactions which ulcerate, the ulcerations spreading from the extremities toward the trunk, destroying even the bones. **E. leonti'na,** leontiasis. **E. lymphangeiecto'des,** new skin growth accompanied with lymphangeiectasis. **E. mu'tilans,** lepra. **E. ni'gricans** or **ni'gra,** elephantiasis Arabica associated with excessive black pigmentation. **E. sclero'sa,** scleroderma. **E. sim'plex,** elephantiasis Arabica. **E. syphilit'ica,** elephantiasis accompanied with lymphangeitis, due to syphilis. **E. teleangeiecto'des,** elephantiasis in which the blood-vessels are enlarged. **E. tuberculo'sa,** leprosy.

Elephantoid, el-e-fan'toid (*elephas,* elephant, *eidos,* resemblance). Elephant-like.

Elephantomma, el-e-fan-tom'mah (*elephas*, elephant, *omma*, eye). Buphthalmia.

Elephantopus, el-e-phan'to-pus (*elephas*, elephant, *pous*, foot). One affected with elephantiasis. **E. tomento'sa**, herb; diuretic, emetic, expectorant.

El'ephant-skin disease. Elephantiasis.

Elephantusia, el-e-fan-tu'se-ah (*elephas*, ivory). Phytelephas macrocarpa.

Elephas, el'e-fas. Elephantiasis; ivory.

Elettaria cardamomum, el-et-tah're-ah kar-dam-o'-mum. Amomum cardamomum; cardamomum. **E. ma'jor**, native plant of East India, considered to be a variety of Elettaria cardamomum; fruit furnishes long cardamoms.

Eleutheria, el-u-the're-ah. Croton cascarilla.

Elevatio uteri, el-e-vah'she-o u'ter-e. Ascent of the uterus, a displacement occasionally occurring in the unimpregnated state in connection with fibrous uterine and enlarged ovarian tumors.

Elevator, el'e-va-tor (*e*, *levo*, to lift up). Muscle which raises the part into which it is inserted; also a kind of pessary. See *Levator*. Surgical instrument for raising depressed bone, for raising and detaching the portion of bone separated by the crown of the trepan, and for removing stumps of teeth. See *Lever*. **E. a'ni**, levator ani. **E., com'mon**, a mere lever, the end of which is somewhat bent and roughened, that it may less readily slip away from the portion of bone which is to be raised. **E. la'bii inferio'ris**, levator labii inferioris. **E. la'bii superio'ris pro'prius**, levator labii superioris proprius. **E. labio'rum commu'nis**, levator anguli oris. **E. of Louis**, elevator in which the screw-peg is united to the bridge by a pivot instead of a hinge. **E. oc'uli**, rectus superior oculi. **E. patien'tiæ**, levator scapulæ. **E. of Petit**, a lever mounted on a handle and straight throughout its whole length, except at its very end, which is slightly curved, that it may be more conveniently put under the portion of bone intended to be elevated. The lever is pierced with several holes for the reception of a movable screw-peg. **E. scap'ulæ**, levator scapulæ. **E. testic'uli**, cremaster. **E., triploid**, elevator consisting of three branches, uniting above in one common trunk. **E. ure'thræ**, see *Transversus perinæi*. **E., u'terine**, see *Pessary*, *intra-uterine*.

Elflock, elf'lok. Condition of the hair in which it is matted and twisted into locks, as in plica; supposed in olden times to have been the work of elves or fairies.

Eliaster, el-e-as'ter. Ilech.

Elichrysum, el-ik'ris-um (*helios*, light of day, *chrusos*, gold). Solidago virgaurea. **E. monta'num**, Antennaria dioica.

Elicoïdes, el-e-ko-e'des (*helix*, tendril, *eidos*, resemblance). Twisted, like a tendril.

Eligma, el-ig'mah. Eclectos.

Eliminantia, e-lim-in-an'she-ah (*elimino*, to turn out of doors). Medicines that act on the excernent system.

Elimination, e-lim-in-a'shun. Act of separating and expelling; as the elimination of a morbid passion, or of a fancied *materies morbi*. See *Eccritica*.

Eliminatives, e-lim'in-a-tives. Eccritica.

Eliquatio, el-ik-wah'she-o (*e*, *liqueo*, to melt). Colliquation.

Elixation, e-liks-a'shun (*elixus*, boiled, sodden). Decoction; act of boiling.

Elixir, e-liks'ur (Arab.). Medicine composed of various substances held in solution, aromatic or sweetened spirituous fluids. Elixir of orange is alone officinal, under the name Elixir aurantii. Many apothecaries have their own formulæ for elixirs, the proportion of the ingredients, etc. varying according to the taste of the compounder. The name has been used also for preparations which contain no spirit of wine. **E. ac'idum Halle'ri**, a mixture of concentrated sulphuric acid and alcohol; employed as an astringent in hemorrhages, etc. **E. al'oës**, tinctura aloes composita. **E. ama'rum**, bitter elixir. **E. anthelmin'ticum succo'rum**, tinctura jalapii composita. **E., antiasthmat'ic, of Boerhaave**, alcohol, aniseed, camphor, orris, asarabacca root, calamus aromaticus, licorice, and elecampane; given in asthma. **D. antihypochondri'acum**, tincturæ cinchonæ amara. **E. antinephret'icum**, E. acidum Halleri. **E. aperiti'vum**, tinctura aloës composita. **E. auran'tii**, elixir of orange, simple elixir; only officinal elixir in the U. S. P.; mixture of oil of orange, sugar, alcohol, and water; employed to disguise the taste of drugs. **E. auran'tii compos'itum**, compound elixir of orange. **E., Boer'haave's**, see *Tinctura aloes composita* and *Elixir, antiasthmatic*. **E. of Calisa'ya**, Calisaya bark, fresh orange-peel, cinnamon, coriander, and angelica seeds, caraway, aniseed, and cochineal, brandy, water, and syrup; tonic and cordial. Other formulæ are mentioned in medical or pharmaceutical works for this elixir. **E., carmin'ative, of Syl'vius**, tinctura carminativa Sylvii. **E. Dano'rum**, E. pectorale regis Daniæ. **E. fœt'idum**, tinctura castorei composita. **E. of Ga'rus**, tinctura de croco composita. **E. guai'aci vola'tilis**, tinctura guaiaci ammoniata. **E. jal'apæ compos'itum**, tinctura jalapii composita. **E. of long life**, tinctura aloes composita. **E. of o'pium**, under this name have been included different liquid preparations of opium. McMunn's elixir is a watery infusion prepared from opium which has been exhausted by ether of narcotina, etc., and alcohol then added. The strength was intended to be the same as that of laudanum. **E., paregor'ic**, tinctura camphoræ composita. **E., p., Ed'inburgh**, tinctura opii ammoniata. **E. pectora'le dul'ce** or **pectora'le re'gis Da'niæ** (licorice-juice, fennel-water, ammoniated alcohol). Formula formerly in several European pharmacopœias. With the addition of opium it constitutes the *Elixir ammoniato-opiatum*, *Extractum thebaicum ammoniacale* of some pharmacopœias. **E. proprieta'tis**, tinctura aloes composita. **E. p. Paracel'si**, tinctura aloes composita. **E. pur'gans**, tinctura jalapii composita. **E., Rad'cliffe's**, see *Tinctura aloes composita*. **E. rhe'i dul'ce**, vinum rhei palmati. **E. ro'borans Whyt'tii**, tinctura cinchonæ amara. **E. sac'rum**, tinctura rhei et aloës. **E. salu'tis**, tinctura sennæ comp. **E. stomach'icum**, tinctura gentianæ composita. **E. s. spirituo'sum**, tinctura cinchonæ amara. **E. ex suc'co glycyrrhi'zæ**, E. pectorale regis Daniæ. **E. ex s. liquiri'tiæ**, E. pectorale regis Danorum. **E. sulphu'rico-ac'idum**, E. acidum Halleri. **E. traumat'icum**, tinctura benzoini composita. **E. viscera'le Hoffman'ni**, tinctura gentianæ composita. **E. vi'tæ of Mathi'olus** (alcohol and 22 aromatic and stimulating substances), formerly employed in epilepsy. **E. of vit'riol**, acidum sulphuricum aromaticum. **E. of v., sweet**, spiritus ætheris aromaticus. **E. vitri'oli**, sulphuricum acidum aromaticum. **E. vitrioli ac'ido-aromat'icum**, acidum sulphuricum aromaticum. **E. vitri'oli dul'ce**, spiritus ætheris aromaticus; acidum sulphuricum aromaticum. **E. vitri'oli Edinburgen'sium**, acidum sulphuricum aromaticum. **E. vitri'oli Mynsich'ti**, acidum sulphuricum aromaticum. **E. vitri'oli cum tinctu'râ aromat'icâ**, acidum sulphuricum aromaticum.

Elixis, el-iks'is. See *Eclectus*.

Elixiviation, e-liks-iv-e-a'shun (*e*, *lixivium*, lye). Lixiviation.

Elk (Sax. *ælc*). Cervus alces. **E. bark**, Magnolia macrophylla. **E. tree**, Andromeda arborea. **E. wood**, Andromeda arborea, Magnolia macrophylla.

Elkoplasty, elk'o-plas-te. Plastic operation to restore surface lost by ulceration, etc.

Ellagic (el-laj'ik) **acid.** Acid produced by boiling a watery solution of gallic acid with arsenic acid.

Ellarne, el'larn. Sambucus.

Elleboraster, el-le-bo-ras'ter. Helleborus fœtidus.

Ellebore, el'le-bore. Dracontium fœtidum. See *Hellebore*.

Elleborismus, el-le-bor-iz'mus. See *Helleborismus*.

Elleborum album, el-leb'or-um al'bum. Veratrum album. See *Helleborus*.

Elleborus albus, el-leb'or-us al'bus. Veratrum. See *Helleborus*. **E. ni'ger**, Helleborus niger.

Ellipsoid, el-lip'soid. Resembling an ellipse, all plane sections of which are ellipses or circles.

Elliptic, el-lip'tik. Oval.

Ellychnia, el-lik'ne-ah. Stelliform plexus of veins at the surface of the kidney.

Ellychniotus, el-lik-ne-o'tus (*elluchnion,* wick of a lamp). A sort of tent used by the ancient surgeons, so called because it was shaped like a wick.

Elm, common. Ulmus. **E., red,** Ulmus Americana. **E., rough-leaved,** Ulmus Americana. **E., slip'pery,** Ulmus Americana.

Elminthes, el-min'thees. Worm. See *Helmins.*

Elminthocorton, el-min-tho-kor'ton (helminthocorton). Corallina Corsicana.

El'norne. Sambucus.

Elodes, el-o'dees (*helos,* a marsh). *Paludal, Marshy.* Marsh fever. Also a kind of fever characterized by great moisture or sweating.

Elome, el'o-me. Orpiment.

Elongation, e-lon-ga'shun (*elongo,* to lengthen, to extend). Incomplete luxation, in which the ligaments of an articulation are stretched and the limb lengthened, without total luxation. Also extension required in the reduction of fractures and luxations, and for the increased length of limb in diseases and dislocations of the hip-joint.

Elutriatio, e-lu-tre-ah'she-o. Decantation; elutriation.

Elutriation, e-lu-tre-a'shun (originally *eluo,* to wash away, to rinse). In pharmacy, a process by which finer particles of a powder are separated from the coarser by diffusing the powder in water, allowing the larger and heavier particles to subside, and then decanting the liquor. See *Levigation.*

Eluvies, e-lu've-ees (washing away). Inordinate discharge of any fluid, and also the fluid itself. Mucus flowing from the vagina in cases of leucorrhœa.

Eluxation, e-luks-a'shun. Luxation.

Elytra, el'it-rah (pl.). See *Elytron.*

Elytratresia, el-it-rah-trees'e-ah (*elytro, atretos,* imperforate). Atresia of the vagina.

Elytreurynter, el-it-rur-in'tur (*elytro, euruno,* to dilate). Speculum vaginæ.

Elytritis, el-it-re'tis (*elytro, itis*). Inflammation of the vagina; leucorrhœa.

Elytro, el'it-ro (*elutron,* a vagina or sheath). In composition, vagina.

Elytroblennorrhœa, el-it-ro-blen-nor-rhe'ah (*elytro, blennorrhœa*). Leucorrhœa (vaginal).

Elytrocaustic, el-it-ro-kaws'tik (*elytro, kaio,* to burn). Combination of mechanical compression and cauterization of the vagina by a forceps designed for the purpose.

Elytrocele, el-it-ro-se'le (Eng. el-it'ro-seel) (*elytro, kele,* tumor), Vaginal hernia; colpocele. See *Hernia.*

Elytrocyesis, el-it-ro-se-a'sis (*elutron,* vagina, *kuesis,* pregnancy). Vaginal pregnancy.

Elytrodes, el-it-ro'dees. Vaginal coat of the testicle.

Elytrœdema, el-it-red-e'mah (*elytro, oidema,* œdema). Œdema of the vagina.

Elytroid, el'it-roid (*elytro, eidos,* resemblance). Form of pessary, so called from its resembling, in shape, the vaginal canal.

Elytroïtis, el-it-ro-e'tis (*elytro, itis*). Inflammation of the vagina.

Elytromochlion, el-it-ro-mok'le-on (*elytro, mochlos,* lever). Pessary consisting of a steel spring terminating in wooden extremities, for distending the vagina in a horizontal direction.

Elytron, el'it-ron (*eluo,* to involve). Sheath; vagina. Membranes enveloping the spinal marrow are called *Elytra.*

Elytroncus, el-it-ron'kus (*elytro, onkos,* tumor). Swelling of the vagina.

Elytropappus rhinoceratis, el-it-ro-pap'pus rhin-os-er-o'tis. S. African bush, the whole of which is bitter and resinous.

Elytrophyma, el-it-ro-fe'mah (*elytro, phuma,* swelling). Swelling of the vagina.

Elytroplastic, el-it-ro-plas'tik (*elytro, plasso,* to form). Pertaining to elytroplasty.

Elytroplasty (el'it-ro-plas-te) or **Elytroplas'tice** (*elytro, plasso,* to form). Operation for restoration of the vagina.

Elytropneumato'sis (*elutron,* vagina, *pneuma,* air). Collection of air in the vagina.

Elytropolypus, el-it-ro-pol'ip-us (*elytro, polypus*). Vaginal polypus.

Elytroptosis, el-it-rop-to'sis (*elytro, ptosis,* falling). Prolapsus vaginæ.

Elytrorrhagia, el-it-ror-rha'je-ah (*elytro, rhage,* breaking forth). Discharge of blood from the vagina.

Elytrorrhaphy, el-it-ror'raf-e (*elytro, rhaphe,* suture). *Colporrhaphy, Kolporrhaphy.* Operation of closing the vagina by suture in cases of procidentia uteri.

Elytrotome, el-it'ro-tome (*elytro, tome,* incision). Scissors employed in elytrotomy.

Elytrotomy, el-it-rot'o-me (*elytro, temno,* to cut). Incision into the vaginal wall.

Em and En (in, into, within; also excess). Common prefix, generally answering to the prefixes *im* and *in* in English.

Emaciate, e-ma'se-ate (*emacio,* to grow lean). To lose flesh, to become lean, to waste away.

Emaciation, e-ma-se-a'shun. Condition of the body, or of a part of the body, in which it grows lean. State of one who is lean—leanness.

Emanation, em-an-a'shun (*emano,* to issue or flow from). Term applied to a body which proceeds or draws its origin from other bodies, such as the light which emanates from the sun; miasm arising from the putrid decomposition of animal or vegetable substances, etc. See *Miasm.*

Emansio mensium, e-man'se-o men'se-um (*e, maneo,* to stay). Amenorrhœa, or obstruction of the menses before they have been established; also, according to some, retention which occurs after they have been established. See *Amenorrhœa.*

Emargination, e-mar-jin-a'shun (*e, margo,* margin). Notch.

Emarginatura, e-mar-jin-at-u'rah. Notch.

Emasculation, e-mas-ku-la'shun (*emasculo, e, masculus,* male, to render impotent). Removal or destruction of generative organs of a male animal.

Emasculatus, e-mas-ku-lat'us. Castrated; eunuch.

Embalming, (*em, balsamum,* balsam). Operation consisting in impregnating the dead body with substances capable of preventing it from becoming putrid, and thus putting it in a condition to be preserved.

Embamma, em-bam'ma (*embapto,* to immerse). Medicated pickle or sauce.

Embar'ras gastrique' (F.). Disorder of the stomach, with loss of appetite, bitterness and clamminess of the mouth, white and yellow tongue, sense of epigastric oppression or pain, nausea, vomiting, headache, lassitude, pain in the back and limbs, etc.

Embe'lia ribes. Juice of fruit of Asia; anthelmintic.

Emblica officinalis, em'blik-ah of-fis-in-al'is. Tree of East India; fruit, *emblicæ* or *myrobalani fructus,* formerly employed in diarrhœa; used in Turkestan as a collyrium in ophthalmia.

Embolæmia, em-bo-le'me-ah (*embolos,* plug, *haima,* blood). State of the blood supposed to have a tendency to produce embolism.

Embole, em'bol-e (*em, ballo,* to put in place). Reduction of a luxated bone; also wedge or plug (*embole*).

Emboliah, em-bol'e-ah. Diseases produced by plugging or obstruction of the blood-vessels. See *Embolism.*

Embolic, em-bol'ik (*embole,* wedge or plug). Relating to plugging or obturation of the vessels, as embolic apoplexy. **E. ab'scess,** see *Abscess, metastatic.* **E. infarc'tion,** see *Infarction.* **E. pneumo'nia,** see *Pneumonia, embolic.*

Emboliform, em-bol'e-form (*embole, forma*). Resembling an embolus.

Embolimos, em-bol'im-os (*ballo,* to cast). Intercalary.

Embolism, em'bol-izm. Obstruction of a blood-vessel by any body—*embolus* or plug—detached from the interior of the heart or some vessel, and borne

along in the current of the circulation to the point of obstruction. Two varieties have been described, arterial and capillary. Arterial emboli directly impede the circulation, while capillary emboli are important from the secondary changes to which they give rise. The plug may be a blood-clot, a fibrinous concretion, or a fragment of endocardium, etc. These obstructions are sometimes met with in diseases of debility or exhaustion; they may cause sudden death, as in embolism of the pulmonary artery, or give rise to hemiplegia, as in embolism of an important cerebral artery. See *Thrombosis*, *Polypus*, and *Infarction*. **E., air,** obstruction of a blood-vessel by air. **E., apoplec'tiform cer'ebral,** see *Embolism, cerebral*, and *Apoplexy*. **E., arte'rial,** see *Embolism*. **E., cap'illary,** see *Embolism*. **E. of the cen'tral ar'tery of the ret'ina,** E. due to an embolus lodging in the central artery of the retina. **E., cer'ebral,** obstruction of an artery or arteries of the brain, as described under embolism. When accompanied by symptoms of apoplexy the condition has been called embolic apoplexy or apoplectiform cerebral apoplexy. See *Apoplexy*. **E., mul'tiple,** obstruction of a vessel by a number of emboli. **E., pye'mic,** obstruction by purulent emboli. **E., ret'inal,** obstruction by embolus in the central artery of the retina. **E., ve'nous,** obstruction of veins in certain organs, as the liver and lungs.

Embolum, em'bol-um. Embole. **E. cer'ebri,** infundibulum of the brain.

Embolus, em'bol-us. See *Embole* and *Embolia*. **E., air,** E. due to air-bubbles entering the circulation through a punctured vein. **E., fat,** occurs in fractures, the embolus being formed by marrow of bone.

Emboly, em'bol-e. Formation of the gastrula by a blastophere; term employed in embryology.

Embon'point (F., in good point or plight). The state of the animal body when in full health. Excessive embonpoint constitutes corpulence and obesity, and may become a morbid condition.

Embow'elling. Operation of taking out the bowels.

Embregma, em-breg'mah. Embrocation.

Embrocation, em-bro-ka'shun (*embrecho, em, brecho*, to wet, to dip in). Fluid application to be rubbed on any part of the body; often used synonymously with liniment. Originally it was employed in the sense of fomentation.

Embroche, em'bro-ke. Embrocation.

Embryo, em'bre-o (*em, bruo*, to grow). Fecundated germ in the early stages of its development in utero. At a certain period of its increase the name *fœtus* is given to it. Generally the embryo state is considered to extend to the period of quickening. (For a full account of the development of the embryo and of the embryo into the fœtus, see *Fœtus*.) The following table (Chapman) exhibits the

MEMBRANES AND LAYERS OF THE EMBRYO AND ORGANS DEVELOPED FROM THEM.

Membranes.	Layers.	Organs.
External blastodermic membrane or epiblast.	Skin, sensory.	Epidermis.
		Central nervous system.
		Primitive kidneys.
Middle blastodermic membrane or mesoblast.	Skin, sensory.	Dermis.
		Peripheral nervous system.
		Osseous nervous system.
		Muscular nervous system
		Testes.
	Intestinal fibrous.	Vascular system.
		Mesentery.
		Wall of alimentary canal and appendages.
		Ovaries.
Internal blastodermic membrane or hypoblast.	Intestinal glandular.	Epithelium of alimentary canal and appendages.

Embryocardia, em-bre-o-kar'de-ah (*embryo, kardia*, heart). State of the heart in which the beats resemble those of the fœtal heart.

Embryoctony, em-bre-ok'to-ne (*embryo, ktonos*, destruction). Destruction of a fœtus in utero when insurmountable obstacles, as certain deformities of the pelvis, oppose delivery.

Embryogenet'ic ves'icle. Vesicle in some animals destined to form plastic matter to aid in the development of the new being.

Embryogenic, em-bre-o-jen'ik. Relating or appertaining to embryogeny.

Embryogeny, em-bre-oj'en-e (*embryo, gennao*, to generate). Generation or formation of the embryo.

Embryograph, em'bre-o-graf. Instrument to aid in the graphic representation of embryos.

Embryography, em-bre-og-raf'e (*embryo, graphe*, description). Part of anatomy which describes the embryo.

Embryology, em-bre-ol'o-je (*embryo, logos*, a description). Doctrine of, or a treatise on, embryonic development.

Embryon, em'bre-on. Embryo.

Embryonic, em-bre-on'ik. Relating or appertaining to an embryo, as embryonic life. **E. a'rea** or **spot,** see *Area germinativa*.

Embryoparous, em-bre-op'ar-us (*embryon, pario*, to produce). Producing an embryo.

Embryoplas'tic, (*embryo, plasso*, to form). Relating to formation of embryo.

Embryoscope, em'bre-o-skope (*embryon, skopeo*, to view). Apparatus for studying the development of embryo in eggs.

Embryothlasis, em-bre-o-thlas'is (*embryo, thlasis*, a crushing). Cephalotripsy. See *Embryothlasta*.

Embryothlasta, em-bre-oth-las'tah (*embryo, thlao*, to break). Crotchet or other instrument, used in certain cases of laborious parturition to break the bones of the fœtus, for the purpose of extracting them with greater facility; the process being called *Embryothlasis*.

Embryot'ic. See *Embryonic*.

Embryotocia, em-bre-o-tosh'e-ah (*embryo, tokos*, delivery). Abortion.

Embryotome, em'bre-o-tome (*embryo, temno*, to cut). Instrument used in embryotomy.

Embryotomy, em-bre-ot'o-me (*embryotomia*, from *embryo, tome*, incision). Division of the fœtus into fragments, to extract it by piecemeal, when the narrowness of the pelvis or other faulty conformation opposes delivery.

Embryotrophy, em-bre-ot'rof-e (*embryo, trophe*, nourishment). Fœtal nutrition.

Embryulcia (em-bre-ul'she-ah) or **Embryusterul'cia** (*embryo, helko*, to extract, to draw). Surgical operation by which the fœtus is extracted by means of appropriate instruments when faulty conformation or other circumstances prevent delivery by the natural efforts.

Embryulcus, em-bre-ul'cus. Iron hook or crotchet, used to extract the fœtus in some cases of laborious labor.

Embryusterulcia, em-bre-us-tur-ul'she-ah (*embryo, hustera*, uterus, *helko*, to extract). Embryulcia.

Ememorphine, em-e-mor'feen. Apomorphine.

Emendans, em-en'dans (*emendo*, to amend). Corrigent.

Em'erald green. Arsenite of copper.

Emeraudes (em'er-o-dees), **Emerods** (em'er-ods), or **Emeroids,** em'er-oids. Hemorrhoids.

Emery, em'ur-e. Coarse kind of corundum, used for polishing metals and stones.

Emesia, em-e'se-ah. Vomiturition.

Emesis, em'es-is. Vomiting.

Emetatrophia, em-et-at-rof'e-ah (*emeo*, to vomit, *atrophia*, want of nourishment). Atrophy induced by vomiting.

Emetia, em-e'she-ah. Emetine.

Emet'ic (*emetikos, emeo*, to vomit). *Vomitory, Vomit, Puke.* Subject capable of producing vomiting. Topical or local emetics produce their effect by acting locally on the pharynx, œsophagus, or stomach, or generally through the medium of the circulation, but some emetics act both locally and generally. Emetics may be classified as follows (Brunton):

Local Emetics.	*General Emetics.*
Alum.	Apomorphine.
Ammonium carbonate.	Ipecacuanha and emetine.
Copper sulphate.	Senega.
Mustard.	Squill.
Salt.	Tartar emetic.
Strong infusions of vegetable bitters, as camomile, quassia, etc.	Digitalis and its congeners, Muscarine, Urechitine, } not used medicinally as emetics.
Subsulphate of mercury.	
Water (lukewarm and in copious draughts).	
Zinc sulphate.	

They are valuable agents in disease, and may either act *primarily* on the stomach, or *secondarily* on other parts of the system by sympathy with the stomach. **E. root**, Euphorbia corollata. **E., tar'tar**, antimonium tartarizatum. **E. weed**, Lobelia inflata.

Emeticology, em-et-ik-ol'o-je. Emetology.

Emetine, em'et-een. Vegetable alkali in ipecacuanha, to which it owes its emetic power; it is obtained from different ipecacuanhas. Three grains of impure emetia or one grain of pure are equal to eighteen of ipecacuanha. See *Ipecacuanha.*

Emetinum coloratum, em-et-e'num ko-lo-rat'um. Dry extract of ipecac in powder.

Emetize, em'et-ize. To cause nausea or emesis with an emetic.

Emeto-catharsis, em'et-o-kath-ar'sis. Vomiting and purging combined.

Emeto-cathartic, em'et-o-kath-ar'tik (*emetus, kathartikos*, purgative). Remedy which excites both vomiting and purging.

Emetology, em-et-ol'o-je (*emetus, logos*, a discourse). Treatise on vomiting and on emetics.

Emetomania, em-et-o-man'e-ah (*emeo*, to vomit, *mania*). Morbid desire for emetics or for vomiting.

Emetopœum, em-et-o-pe'um (*emetus, poieo*, to make). Emetic.

Emetus, em'et-us (*emetos*). Vomiting.

Emiction, e-mik'shun (*e, mingo*, to urinate). Micturition.

Emigration, em-e-gra'shun. The passage of leucocytes through the walls of blood-vessels.

Eminence, em'in-ence (*emineo*, to project). Projection at the surface of a healthy or diseased organ. **E. of aquæduc'tus Fallo'pii**, prominentia canalis facialis. **E. of Doyère**, see *Sarcoglia.* **E., il'io-pectine'al**, ridge on superior part of the pubic bone.

Eminentia, em-in-en'she-ah. Eminence; protuberance. **E. annula'ris**, pons Varolii. **E. arcua'ta**, see *Jugum petrosum.* **E. bicipita'lis**, prominence observed on the arm when the biceps is in contraction. **E. capita'ta**, head of a bone. **E. car'pi radia'lis**, elevation on radial side of palmar surface of the wrist, due to prominence of trapezium and trapezoid bones. **E. car'pi ulna'ris**, elevation on ulnar side of palmar surface of the wrist, due to prominence of pisiform and unciform bones. **E. cauda'ta**, caudate lobe of liver. **E. collatera'lis**, pes accessorius. **E. costa'ria**, projections on transverse processes of the five lower cervical vertebræ. **E. crucia'ta**, figure resembling a cross on inner side of the occipital bone. **E. cuneifor'mis**, crista capituli costæ. **E. foss'æ triangula'ris**, prominence situated posteriorly on external surface of the ear, which corresponds to fossa triangularis. **E. fronta'lis**, eminence of frontal bone. **E. intercondyl'ea, E. intercondyl'ica**, or **E. intercondyloï'dea**, spine of tibia. **E. pyramida'lis**, crest dividing the vestibule of the ear into two fossæ. **E. thyreoï'dea**, pomum Adami. **E. tym'pani**, pyramid of the tympanum.

Eminentiæ (em-in-en'she-e) (pl. of **Eminentia**) **bigem'inæ**. Quadrigemina tubercula. **E. candican'tes**, mammillary tubercles. **E. car'pi**, carpal eminences. **E. lenticula'res**, corpora striata. **E. mag'næ cer'ebri**, thalami nervorum opticorum. **E. mammilla're**s, see *Mammillary eminence.* **E. media'næ inter'næ**, corpora pyramidalia. **E. oliva'res**, corpora olivaria. **E. ova'les latera'les**, corpora olivaria. **E. pisifor'mes**, corpora albicantia. **E. planta'res**, prominences caused by muscles of the foot. **E. pyramida'les**, corpora pyramidalia. **E. quadrigem'inæ**, quadrigemina tubercula. **E. ter'etes**, processus teretes.

Emissaria (em-is-sah're-ah) (pl. of **Emissarium**, outlet) **Santori'ni**. Small veins communicating with sinuses of the dura mater by apertures in the cranium, as the parietal, posterior condyloid, mastoid veins, etc.

Emissarium, em-is-sah're-um. An outlet; emissary; a canal or channel whose direction is outward. **E. foram'inis lac'eri anti'ci**, emissary of foramen lacerum. **E. hypoglos'si**, anterior condylar emissary vein. **E. occipita'le**, occipital emissary vein. **E. occipita'le infe'rius**, posterior condylar emissary vein. **E. occipita'le supe'rius**, occipital emissary vein.

Emissary, em'is-sa-re. Canal acting as an outlet.

Emissio, e-mish'e-o. Emission. **E. sem'inis**, ejaculation of semen; spermatism.

Emission, e-mish'un (*emitto*, to send out, to drive out). Act by which any matter whatever is thrown from the body, as emission of urine or of semen.

Emmenagogues, em-men'ag-ogs (*emmenia, ago*, to drive or expel). *Menagogues.* Medicines believed to have the power of favoring the discharge of the menses when absent, deficient, or irregular. According to different conditions of the system the most opposite remedies may produce such effect. Emmenagogues have been divided into those which seem to stimulate directly the uterus itself—*direct emmenagogues*—and those which act indirectly by correcting conditions, such as anæmia, debility, etc., on which the disordered menstruation may depend—*indirect emmenagogues.* The chief emmenagogues (Brunton) are :

Indirect Emmenagogues.	*Direct Emmenagogues.*
Baths { Hot foot, Hot hip, Mustard.	Ergot.
Leeches { To genitals, To thighs.	Digitalis.
Mustard { Baths, Poultices, Stupes.	Savin.
Purgatives, as aloes.	Quinine.
Iron.	Asafœtida.
Manganese.	Myrrh.
Cod-liver oil.	Guaiacum.
Strychnine.	Cantharides.
	Borax.
	Rue.
	Hydrastis.

Emmenagology, em-men-ag-ol'o-je (*emmenia, logos*, discourse). Treatise on emmenagogues.

Emmenia, em-men'e-ah (*em, men*, a mouth). Menses.

Emmeniagoga, em-men-e-ah-go'gah. Emmenagogues.

Emmeniopathy, em-men-e-op'ath-e (*emmenia, pathos*, affection). Affection or disorder of menstruation.

Emmenological, em-men-o-loj'ik'l. Relating or appertaining to menstruation.

Emmenology, em-men-ol'o-je (*emmenia, logos*, a discourse). Treatise on, or description of, menstruation.

Em'merick's bacil'lus. Bacillus coli communis.

Em'mert's su'ture. Suture employed to unite wounds of the intestines.

Emmetropia, em-met-ro'pe-ah (*em, metron*, measure, *optomai*, to see). Condition of the healthy eye in which the limits of clear vision lie between the nearpoint of myopia and the far-point of hypertropia. The term *ametropia* expresses that an eye is not emmetropic.

Emmetropic, em-met-rop'ik. Relating or appertaining to emmetropia.

Em'met's but'tonhole opera'tion. Consists in making an opening in the female urethra, halfway between the meatus and the neck of the bladder. **E.'s opera'tion**, operation for laceration of the cervix uteri—called trachelorrhaphy by Emmet, or hystero-trachelorrhaphy—and also for rupture of the perineum. See *Trachelorrhaphy* and *Perineorrhaphy.*

Emmyxium articulare, em-miks'e-um ar-tik-u-lah're (*em, mucus*). Hydrarthron.

Emodin, em'od-in. Principle found in Rheum and in bark of Rhamnus frangula.

Emollientia, e-mol-le-en'she-ah. Emollients.

Emollients, e-mol'le-ents (*e, mollio*, to soften). Substances which relax and soften parts that are inflamed or too tense. They are used both internally and externally: as the former, however, consist of mucilaginous substances, they are generally reckoned as demulcents; the latter, or proper emollients, consist of oils, cataplasms, fomentations, etc. Oleaginous bodies, rubbed on a part, act by diminishing its cohesion. Fomentations, in cases of internal inflammation, act probably through contiguous sympathy. The following are the chief emollients: adeps, amygdalæ oleum, avenæ farina, cera, cetaceum, linum, olivæ oleum, sesamum, tritici farina, and ulmus.

Emollities, e-mol-lish'e-ees. Mollities. **E. morbo'sa**, mollities. **E. os'sium**, mollities ossium. **E. u'teri morbosa**, softness of the uterus from disease.

Emollitio, e-mol-lish'e-o. Mollities. **E. ventric'uli**, gastromalacia.

Emoptöe, e-mop'to-e. Hæmoptysis.

Emotio, e-mo'she-o (*moveo*, to move). Delirium, luxation, passion.

Emotional, e-mo'shun-al. Relating to emotion or passion independently of the will. **E. insan'ity**, insanity in which the emotions are conspicuously prominent.

Emotivity, e-mo-tiv'it-e. The degree in which a person is capable of emotion.

Empasma, em-paz'mah (*em, passo*, to sprinkle). Powder for dusting or sprinkling over any diseased surface.

Empathema, em-path-a'mah (*em, pathos*, suffering). Ungovernable passion, fixed delusion.

Empeiria, em-pi're-ah (*em, peira*, trial). Experience.

Empetrum, em'pet-rum (*em, petra*, rock). Hernia ria glabra.

Emphlysis, em'flis-is (*em, phlusis*, vesicular tumor or eruption). *Ichorous exanthem.* Eruption of vesicular pimples, filled progressively with an acrid and colorless or nearly colorless fluid, terminating in scurf or laminated scabs. **E. aph'tha**, aphthæ; aphthous stomatitis. **E. erysip'elas**, erysipelas. **E. mili-a'ria**, miliary fever. **E. pem'phigus**, pemphigus. **E. vacci'na inser'ta**, vaccina. **E. varicel'la**, varicella.

Emphractica, em-frak'tik-ah. Large abdominal tumor, neither fluctuating nor sonorous; excessive corpulency.

Emphracticus, em-frak'tik-us (*emphraktikos, em, phrasso*, to shut up, to close, to obstruct). Any substance which, when applied to the skin, is presumed to close the pores.

Emphragma, em-frag'mah. Anything that obstructs. Obstacle to delivery on the part of the fœtus when the presentation is preternatural. **E. lacryma'le**, fistula lacrymalis. **E. saliva're**, ranula.

Emphraxis, em-fraks'is. Infarction; obstruction. A detention in canals or cavities of any substance either morbid from quantity or quality. **E. hep'atis**, hepatic obstruction; see *Infarction.*

Emphyma, em-fe'mah (*em, phuma*, swelling). Tumor. **E. encys'tis**, encysted tumor. **E. e. athero'ma**, atheroma. **E. e. gan'glion**, ganglion; encysted tumor resembling shell of a turtle. **E. e. meliceris**, encysted tumor filled with substance resembling honey. **E. e. steato'ma**, steatoma. **E. exosto'sis os'sea**, exostosis. **E. e. perios'tea**, node. **E. sarco'ma**, sarcoma. **E. s. adipo'sum**, adipose sarcoma. **E. s. cellulo'sum**, cystic sarcoma. **E. s. mamma'rum**, mammary sarcoma. **E. s. pancreat'icum**, pancreatic sarcoma. **E. s. scirrho'sum**, scirrhous sarcoma. **E. s. tuberculo'sum**, tuberculate sarcoma. **E. s. vasculo'sum**, vascular sarcoma.

Emphysema, em-fis-e'mah (*em, phusao*, to blow, to inflate). *Inflation, Wind-dropsy.* Term applied to any white, crepitant, shining, elastic, indolent tumor of the integuments, caused by the introduction of air into the areolar texture. Injuries of the larynx, trachea, or lungs, and fractures of the ribs or wounds penetrating the chest, are the most frequent causes of this affection, which is owing to the air escaping from the air-passages and insinuating itself into the areolar texture surrounding the wound. Some cases of emphysema are owing to internal causes, and hence a division has been made into accidental and symptomatic and spontaneous and idiopathic. **E. abdom'inis**, tympanites. **E., compen'satory**, pulmonary emphysema due to deficient expansion of part of a lung. **E., interlob'ular**, see *Emphysema of the lungs.* **E. of the lungs**, *Pneumectasis.* Considerable pressure or contusion of the chest, or violent concussion of the lung, may produce a laceration in that viscus, without injury being done to the parietes of the thorax, and may give occasion to infiltration of air into the areolar texture—*Interlobular emphysema. Vesicular emphysema*—consists in excessive dilatation of the air-cells, some of which become as large as hemp-seed, ultimately break, and give rise to irregular vesicles at the surface of the lung, some of which are as large as a hazel-nut; the thorax appears unnaturally convex and prominent; the intercostal spaces are widened, but depressed; the inspiratory efforts are increased; the sound on percussion is morbidly clear, but not tympanitic. On auscultation the inspiratory murmur is feeble or suppressed. Expiration, which is more frequently audible, is prolonged, laborious, and wheezing. **E. orbita'le**, collection of air in orbital tissue. **E. palpebra'le**, emphysema of eyelids. **E. pec'toris**, pneumothorax. **E. pulmo'num**, emphysema of the lungs. **E. scro'ti**, emphysematous tumor of the scrotum. **E. seni'le**, *Senile atrophy of the lungs;* thinning and gradual wasting of the vesicular walls; condition in old persons especially, dependent on imperfect nutrition of the lung. **E. tympani'tes** or **tympanit'icum**, tympanites. **E. u'teri**, distension of the uterus with air; or abdominal distension, with wind occasionally discharged through the os uteri. **E., vesic'ular**, see *Emphysema of the lungs.* **E., vica'rious**, emphysema, compensatory.

Emphysematous, em-fis-em'at-us. Relating to emphysema; containing air or gas.

Emphytiatreusis, em-fit-e-at-ru'sis (*emphutos*, innate, *iatreusis*, medical treatment). Medical treatment by a person professing to be gifted with great natural ability or medical knowledge.

Em'phytic. Inborn.

Emphytum thermum, em'fit-um ther'mum (*emphutos*, innate, *therme*, heat; to have naturally innate heat). Natural heat of the body.

Empies'ma. Compression; depression; compression of the brain from fractured bone.

Em'pigo. Elephantiasis, in Brazil.

Empimelium polysarcia, em-pe-mel'e-um pol-e-sar'ke-ah (*em, pimele*, fat). Fatty tumor; polysarcia adiposa.

Empiric (em-pir'ik) or **Empirical**, em-pir'ik-al (*empeirikos*, experimental). One who follows only experience; sect of physicians who took for their guide experience alone. At the present day the word is employed in nearly the same signification as *charlatan* or *quack.*

Empirice, em-pir'is-e. Empiricism.

Empiricism, em-pir'is-izm. Medicine founded on experience. Generally, at the present day, signifies quackery.

Emplasticus, em-plas'tik-us (*emplastikos*, fit to spread). Remedy which adheres, as a plaster, to the surface.

Emplastra'tion. Application of a plaster.

Emplastro-endermic, em-plas'tro-en-dur'mik. Endermic.

Emplastrum, em-plas'trum. Solid and tenacious compound, which is adhesive at the ordinary heat of the human body. Some plasters owe their consistence to wax and resin, and others to the chemical union taking place between the semivitreous oxide of lead and oil. **E. aconi'ti**, *Aconite plaster* (aconite, alcohol, and resin plaster). **E. adhæsi'vum**, emplastrum resinæ. **E. adhæsi'vum Woodstock'ii**, see *Sparadrapum adhæsivum.* **E. Alexan'dri**, Alexandrine. **E. de althæ'â**, unguentum de althæâ. **E. ammoni'aci** (Ph. U. S.), *Ammoniac plaster, Plaster of ammoniac*

(ammoniaci, ℥v; acidi acetici dil., Oss.). Discutient plaster. **E. ammoni'aci cum hydrar'gyro** (Ph. U. S.), *Plaster of ammoniac with mercury* (ammoniacum, ℥xiij; hydrargyrum, ℥iij, ℥ij; oleum olivæ, gr. lx.; sulphur. sublimat., gr. viij; acid. acetic. dilut., f℥xvij; lead plaster, q. s.). In the Ph. Br., ammoniacum, ℥xij; hydrargyrum, ℥iij avoir.; olive oil, gr. lvj.; sublimed sulphur, gr. viij. **E. An'dreæ de Cru'ce**, E. de pice et resinis glutinans. **E. An'glicum** or **Anglica'num**, see *Sparadrapum adhæsivum*. **E. antimo'nii**, *Antimonial plaster* (antimon. et potass. tart., pix Burgundic.). Excitant or warming plaster. **E. ar'nicæ** (Ph. U. S.), *Arnica plaster* (ext. arnicæ alcoholic., ℥iv; emplast. resinæ, ℥viij). Warm strengthening plaster. **E. aromat'icum**, *Aromatic plaster* (thus, cera flava, pulv. cort. cinnam., ol. ess. piment., ol. ess. limon.). Stimulating plaster. A *spice plaster*, made with powdered cinnamon and other spices, has been used in cholera infantum and in other conditions. Another, for extemporaneous use, is by mixing powdered spices with meal or flour and spirits. One formula for this consists of powdered capsicum, cinnamon, and cloves, each ℥ij; rye meal, spirits, and honey, q. s. To be rubbed together on a plate, spread upon a close fabric, and applied as a cataplasm. **E. asafœt'idæ** (Ph. U. S), *Asafœtida plaster* (emplastrum plumbi, asafœtida, āā ℥xiij; galbanum, cera flava, āā ℥vss; alcohol, Oiij). Antispasmodic and anodyne in flatulence and whooping cough. **E. at'trahens**, E. ceræ. **E. auricula're**, plaster applied behind or under the ear. **E. belladon'næ** (Ph. U. S.), *Belladonna plaster* (belladonnæ radix in pulv. subtil., ℥xvj; alcohol, emplast. resinæ, āā q. s.). The process is similar to that for emplastrum aconiti. In the Ph. Br., extract. belladonnæ alcoholic., ℥iv av.; emplast. resinæ and emplast. saponis, āā ℥viij av. Anodyne application in neuralgia and rheumatism. **E. calefa'ciens** (Ph. Br., cantharides, oil of nutmeg, yellow wax, resin plaster, soap plaster, boiling water), *E. picis cum cantharide* (Ph. U. S.), *Plaster of pitch with cantharides, Calefacient plaster, Warm plaster, Warming plaster* (cerat. cantharid. Ph. U. S., ℥ij; pix abiet., ℥xxiij). Rubefacient and stimulant. **E. canthar'idis** (Ph. Br.), E. lyttæ. **E. canthar'idis vesicato'rii compos'itum**, E. lyttæ comp. **E. cap'sici** (Ph. U. S.), *Capsicum plaster* (resin plaster, oleoresin of capsicum). Rubefacient. **E. cephal'icum**, E. picis compositum. **E. ce'ræ**, *Wax plaster* (cera flava, sevum. præparat., resina flava). Stimulating and drawing. **E. cera'ti sapo'nis**, *Soap cerate plaster* (hard soap, yellow wax, olive oil, oxide of lead, and vinegar). **E. cerus'sæ** (litharge plaster, lead carbonate, and olive oil). **E. cicu'tæ**, *Hemlock plaster* (resina abietis, cera flava, pix alba, oleum cicutæ per decoct. præparat., folia cicutæ recent., acetum scillæ, gum ammoniac). Discutient, especially to scirrhous tumors. **E. cine'reum**, E. hydrargyri. **E. cit'rinum**, unguentum de althæâ. **E. commu'ne**, E. plumbi. **E. commu'ne cum resi'nâ**, E. resinæ. **E. coni'i**, E. cicutæ. **E. cumi'ni**, *Cummin plaster* (cummini semina, carui semina, lauri baccæ, pix arida, cera flava). Warm discutient plaster. **E. cu'pri aceta'tis**, preparation of the French Codex, containing yellow wax, subacetate of copper, Burgundy pitch, and Venice turpentine. **E. diach'ylon**, diachylon, E. plumbi. **E. diapal'ma** (lead plaster, white wax, zinc sulphate). **E. divi'num Nicola'i**, see *Magnet*. **E. emoi'liens**, unguentum de althæâ. **E. epispas'ticum**, E. lyttæ. **E. ferra'tum**, E. ferri. **E. ferri** (Ph. U. S.). *Iron plaster, Strengthening plaster, Chalybeate plaster* (ferri oxidum hydratum, ℥j; emplast. plumbi, ℥vij; pix Burgund., ℥j; terebinth. Canadensis, ℥j). **E. fer'ri ru'bri**, E. oxidi ferri rubri. **E. fla'vum**, unguentum de althæâ. **E. fœt'idum**, E. asafœtidæ. **E. ad fontic'ulos**, ceratum Galeni. **E. gal'bani** (Ph. U. S.), *Galbanum plaster* (galbanum, ℥viij; terebinth, ℥j; pix Burgund., ℥iij; emplast. plumbi, ℥xxviij). In the Ph. Br., galbanum, ammoniacum, yellow wax, each ℥j; lead plaster, ℥viii. **E. gal'bani compos'itum**, *Galbanum* or *Compound galbanum plaster* (galbanum, emp. plumbi, terebinth, pix Burgund.). Stimulant and discutient. **E. glutino'sum**, see *Sparadrapum adhæsivum*. **E. cum gummat'ibus**, E. gummosum. **E. e gummat'ibus resino'sis**, E. gummosum. **E. cum gummiresi'nis**, *Plaster of gum resins* (emplast, simpl., cera flava, pix alba, terebinth., gum ammoniac, bdellium, galbanum, sagapenum, and alcohol). Discutient. **E. gummo'sum**, *Gum plaster, Yellow* or *Gum diachylon* (emp. plumbi, ammoniac., galbanum, cera flava). Properties and uses like the last. **E. hydrar'gyri** (Ph. U. S.), *Mercurial plaster* (hydrarg., ℥iij; ol. oliv., resin, āā ℥j; emplast. plumbi, ℥v); stimulant, resolvent, and discutient to venereal and other tumors. In the Ph. Br., mercury, ℥iij; olive oil, gr. lvj; sublimed sulphur, gr. viij; lead plaster, ℥vj. **E. h. compos'itum**, *Compound plaster of mercury* (empl. simpl., cera flava, resin, pulv. gum ammoniac., bdellium, olibanum, myrrh, saffron, mercury, pure turpentine, liquid and pure storax, essential oil of lavender); same properties as the last. **E. ichthyocol'læ** (Ph. U. S.) (isinglass, gr. clv; alcohol, f℥j, f℥vj; glycerin, ℥xij; water, tincture of benzoin, āā q. s.); an adhesive plaster, court plaster. **E. i. te'læ induc'tum**, see *Sparadrapum adhæsivum*. **E. ir'ritans**, E. lyttæ. **E. lithar'gyri**, E. plumbi. **E. l. compos'itum**, E. galbani compositum. **E. l. cum gum'mi**, E. gummosum. **E. l. cum hydrar'gyro**, E. hydrargyri. **E. l. cum resi'nâ**, E. resinæ. **E. lithargyr'icum cum resi'nâ pi'ni**, E. resinæ. **E. lyt'tæ**, *Plaster of cantharides, Plaster of Spanish* or *blistering fly, Blistering plaster, Fly plaster* (cantharides, emplastrum ceræ, adeps præp.). This is the common blistering plaster. It requires to remain on six or eight hours before the full effect is induced, and it acts sufficiently well provided even a piece of thin gauze or tissue-paper be placed between it and the skin, whilst absorption of the flies is thus prevented. See *Blister*. *Blistering cerate, Ceratum cantharidis* (Ph. U. S.), *Cantharides cerate*, has the following ingredients: cantharides, ℥vij; cera flava, resina, āā ℥iv; adeps, ℥v. The Ph. U. S. also has a *Ceratum extracti cantharidis, Cerate of extract of cantharides*, formed by adding to an alcoholic extract of cantharides resin, yellow wax, and lard. **E. l. compos'itum**, *Compound plaster of cantharides* or *Spanish flies* (resina liq. pini laricis, resina concret. pini abietis, meloë vesicat., cera flava, subacetas cupri, semina sinapis alb., fructus piperis nigr.); same properties as the last, but more energetic and speedy in its action. **E. martia'le**, E. ferri. **E. mel'oës vesicato'rii**, E. lyttæ. **E. mel'oës vesicato'rii comp.**, E. lyttæ comp. **E. e min'io**, see *Emplastrum plumbi*. **E. mucilagino'sum**, unguentum de althæâ. **E. ni'grum of Augsburg**, see *Magnet*. **E. Norimbergen'se**, *Nuremberg plaster* (oxidum plumbi rubrum, ol. oliv., aqua, camphor); desiccative, and employed in gangrene. **E. nygmat'icum**, E. resinæ. **E. o'pii** (Ph. U. S.), *Opium plaster* (ext. opii, ℥j; pix Burgund., ℥iij; emplastrum plumbi, ℥xiiss; aquæ, f℥iss). **E. ox'idi fer'ri ru'bri**, *Plaster of red oxide of iron, Strengthening plaster* (empl. oxid. plumb. semivitr., resina pin., cera flava, oleum oleæ Europ., oxidi ferri rubr.); strengthening plaster. **E. ox'idi plum'bi semivit'rei**, E. plumbi. **E. ox'idi plum'bi semivit'rei gummo'sum**, E. gummosum. **E. ex ox'ido plum'bi ru'bro compos'itum**, E. Norimbergense. **E. ex ox'ido plum'bi semivit'reo**, E. plumbi. **E. oxycro'ceum** (resin, wax, ammoniac, galbanum, turpentine, mastic, myrrh, olibanum, and crocus). **E. Phœnic'eum**, diapalma. **E. pica'tum**, E. picis Burgundicæ. **E. de pi'ce et resi'nis glu'tinans**, *Adhesive plaster of pitch and resins* (pix alba, resin elemi., terebinth. pur., ol. laur.); used in contusions and fractures as a support. **E. pi'cis** (Ph. Br.), *Pitch plaster, E. picis Burgundicæ, E. picis compositum* (Burgundy pitch, frankincense, resin, yellow wax, expressed oil of nutmeg, olive oil, water); rubefacient. **E. pi'cis Burgun'dicæ** (Ph. U. S.), *Burgundy pitch* or *Pitch plaster* (pix Burgund., ℥ix; cera flava, ℥j). **E. pi'cis Canaden'sis** (Ph. U. S.), *Canada* or *Hemlock pitch plaster* (pix Canadens., ℥ix; cera flava, ℥j). **E. pi'cis cum canthar'ide** (Ph. U. S.), E. calefaciens. **E. pi'cis compos'itum**, *Cephalic plaster, Compound pitch plaster* (pix Burgund., abies resinæ, resina flava, cera flava,

ol. oliv., aqua); stimulant and rubefacient; sometimes used in headache, applied to the temples; see *Depilatory*. **E. plum'bi** (Ph. U. S.), *Diachylon simplex, White diachylon, Plaster of lead, Oleate of lead plaster, Lead* or *diachylon plaster* (plumbi oxid. in pulv., ℥xxxij; oleum oliv., f℥lxiij; aquæ, q. s.). In the Ph. Br. it has the following ingredients: plumbi oxidum, lb. v; ol. olivæ, lb. x; aquæ, lb. v. *A plaster of red lead, Emplastrum e minio,* was formerly officinal; prepared much in the same way as emplastrum plumbi, but it was called black plaster. See *Emplastrum oxidi ferri rubri*. **E. plum'bi io'didi,** *Iodide of lead plaster,* is officinal in the Ph. Br.; made by mixing iodide of lead, lead plaster, and resin. **E. polychres'tum,** E. resinæ. **E. potas'sii io'didi,** *Plaster of iodide of potassium* (potass. iodid., thus, cera, ol. oliv.). Spread on leather, it is applied to indolent tumors. **E. resi'næ** (Ph. U. S.), *Resin plaster, Common adhesive* or *sticking plaster* (resin. pulv., ℥vij; emp. plumb., ℥xl; cera flava, ℥iij); employed in wounds and ulcers as a retaining dressing. **E. resino'sum,** E. resinæ. **E. resol'vens** (soap plaster, conium plaster, plaster of gum resins, and mercurial plaster). **E. ro'borans,** E. ferri (Ph. U. S.); E. oxidi ferri rubri. **E. rube'fians,** E. lyttæ. **E. sapona'ceum** or **sapona'tum,** E. saponis. **E. sapo'nis** (Ph. U. S.), *Soap plaster* (sapon., ℥j; emplast. plumb., ℥ix; aquæ, q. s.); mild discutient to tumors, corns, etc. **E. sapo'nis fus'cum,** brown soap plaster (curd soap, yellow wax, olive oil, oxide of lead, vinegar); this is not strictly a plaster; it is the analogue of soap cerate, formerly officinal in Ph. U. S. **E. sim'plex,** E. ceræ. **E. sper'matis ce'ti,** ceratum cetacei. **E. thap'siæ,** thapsia plaster. **E. thu'ris,** *Frankincense plaster* (emp. lithargyri, thus, oxid. ferri rubr.); use, same as plaster of red oxide of iron. **E. ves'icans,** E. lyttæ. **E. vesicato'rium,** blister; E. lyttæ. **E. de Vi'go cum mercu'rio emenda'tum,** E. hydrargyri compositum.

Emplattomenus, em-plat-tom'en-us (*emplasso,* to spread upon). Substance which, when applied to the skin, is supposed to close the pores.

Empleu'rum serrula'tum. Plant of S. Africa, sometimes used as substitute for buchu.

Empneumatosis, em-nu-mat-o'sis (*em, pneuma,* air). Emphysema; inspiration; tympanitis.

Empodis'tic (*empodizo,* to hinder). Preventive.

Emporium, em-po're-um (*em, poreuo,* to transport or send). The brain, because all mental affairs are transacted in it. **E. spirit'uum,** sensorium.

Emposis, em'po-sis (*em, posis,* drink). Imbibition.

Empresiomania, em-pres-e-o-man'e-ah (*empresmos,* burning). Pyromania.

Empresis (em-pre'sis) (*em, presis,* burning), **Empres'ma,** or **Empres'mus.** Inflammation. **E. bronchi'tis,** cynanche trachealis. **E. bronchlemmi'tis,** cynanche trachealis. **E. cardi'tis,** carditis. **E. cephali'tis,** phrenitis. **E. cysti'tis,** cystitis. **E. enteri'tis,** enteritis. **E. gastri'tis,** gastritis. **E. hepati'tis,** hepatitis. **E. hysteri'tis,** metritis. **E. nephri'tis,** nephritis. **E. orchi'tis,** hernia humoralis. **E. oti'tis,** otitis. **E. paristhmi'tis,** cynanche. **E. paristhmi'tis pharynge'a,** cynanche pharyngea. **E. paristhmi'tis tonsilla'ris,** cynanche tonsillaris. **E. paristhmi'tis tonsilla'ris malig'na,** cynanche maligna. **E. paroti'tis,** cynanche parotidæa. **E. peritoni'tis,** peritonitis. **E. peritoni'tis mesenter'ica,** mesenteritis. **E. peritoni'tis omenta'lis,** epiploitis. **E. pleuri'tis,** pleuritis. **E. pleuri'tis diaphragmat'ica,** diaphragmitis. **E. pneumoni'tis,** pneumonia. **E. spleni'tis,** splenitis.

Empresmomania, em-pres-mo-man'e-ah (*empresmos,* burning). Pyromania.

Empresmus, em-pres'mus. Empresma.

Emprion, em'pre-on (*em, prion,* a saw). Serrated. The pulse when the sensation produced by the artery under the fingers is like that caused by the unequal teeth of a saw.

Emprosthocyrtoma (em-pros-tho-sur-to'mah) or **Emprosthocyrto'sis** (*emprosthen,* forward, *kurtos,* bent). Curvature of the vertebral column forward.

Emprosthomeloph'orus (*emprosthen,* forward, *melos,* member, *phoreo,* to possess). Monstrosity having supernumerary parts of the neck or thorax.

Emprosthotonus (em-pros-thot'on-us) or **Emprosthotonia,** em-pros-tho-ton'eah (*emprosthen,* forward, *teino,* to stretch, to extend). Variety of tetanus in which the body is drawn forward by permanent contraction of the muscles.

Empsychosis, em-se-ko'sis (*em, psuche,* life; to animate, to vivify). Act of animating. Union of the soul with the body.

Emptoe (em'to-e) or **Empto'ica pas'sio,** or **Emptysis,** em'tis-is. Hæmoptysis.

Emptysma, em-tis'mah. Sputum; saliva.

Empye, em'pe-e. Empyema.

Empyema, em-pe-a'mah (*em, puon,* pus). Collection of pus and, conventionally, of other fluid in some cavity of the body, and particularly in that of the pleura. One of the terminations of pleuritis. **E. artic'uli,** abscess of a joint. **E. necessita'tis,** empyema in which an external pulsating tumor is present, caused by the pus burrowing through the intercostal spaces. **E. pul'sans** or **pulsat'ing,** variety of thoracic empyema in which a collection of pus pulsates with the respiratory movements or the beats of the heart. **E., true,** pleural empyema, suppuration being from the pleura itself.

Empyesis, em-pe-a'sis. Suppuration; abscess of internal organs; eruption of phlegmonous pimples, gradually filling with a purulent fluid and terminating in thick scabs, frequently leaving pits or scabs, *Pustulous exanthem.* **E. oc'uli,** hypopyon; suppuration of ball of eye. **E. pec'toris,** empyema. **E. vari'ola,** variola.

Empy'isis or **Empyis'mus** (*empueo,* to cause expectoration of pus). Production of purulent disease of the lungs.

Empyocele, em-pe-o-se'le (Eng. em-pi'o-seel) (*em, puon,* pus, *kele,* tumor). Tumor formed by an accumulation of pus in the scrotum; suppuration of the testicle; empyema of the tunica vaginalis; accumulation of pus in the cavity of a hernial sac; abscess in the areolar texture of the scrotum.

Empyomphalus, em-pe-om'fal-us (*em, puon,* pus, *omphalos,* navel). Suppurating tumor at the umbilicus; umbilical hernia, the sac of which is filled with blood.

Empyos, em'pe-os. Purulent.

Empyreuma, em-pir-oo'mah (*em, pur,* fire). Burnt smell and acrid taste which volatile products contract when animal or vegetable substances are decomposed by a strong heat; due to *empyreumatic oil,* result of its decomposition.

Empyreumatic, em-pir-oo-mat'ik. Belonging to empyreuma. Produced by destructive distillation of animal or vegetable matters. **E. oil,** volatile oil resulting from destructive distillation of organic matters.

Empyrus, em'pir-us (*em, pur,* fire). Feverish.

Empyus, em'pe-us (*em, puon,* pus). Purulent.

Emulgent, e-mul'jent (*emulgeo,* to milk out). Renal artery and vein were so called because the ancients imagined they milked, as it were, the urine from the kidneys. See *Renal.*

Emulsifica'tion. Formation of emulsion, as in pharmacy; in digestion of oily matters in the duodenum; in last stages of fatty degeneration, etc.

Emulsify, e-mul'se-fi (*emulsio, fio,* to become). To make or form an emulsion.

Emulsin, e-mul'sin. Ferment derived from almonds. See *Amygdalin.*

Emulsio, e-mul'se-o (same etymon as **Emulgent**). Emulsion; pharmaceutical preparation, of a milky-white opaque appearance, composed of oil divided and held in suspension in water by means of mucilage. Emulsions are composed of resinous substances, balsams, or camphor, rubbed up with dilute alcohol, mucilage, or yolk of egg. **E. aca'ciæ,** *Gum arabic emulsion.* This was formerly in the Ph. E., consisting of decorticated almonds, sugar, water, and mucilage. *Mistura acaciæ, Gum arabic mixture,* was a similar preparation. **E. ammoni'aci,** ammoniac mixture. **E. am-**

yg'dalæ (Ph. U. S.), *Almond emulsion, mixture,* or *milk;* consisted also of sweet almonds, gum arabic, sugar, and water; diluent and demulcent. **E. antihyster'ica,** mistura asafœtidæ. **E. Arab'ica,** emulsio acaciæ Arabicæ. **E. cam'phoræ,** *Camphor emulsion,* made of camphor, almonds, sugar, and water, was used as a convenient form for giving camphor. **E. chlorofor'mi,** chloroform mixture. **E. guaiaci'na,** mistura guaiaci. **E. len'iens,** looch ex ovo. **E. o'lei amygdala'rum,** *Emulsion of oil of almonds;* made of oil of almonds, gum arabic, syrup, and water; a good pectoral or cough mixture. **E. o. rici'ni,** *Castor oil emulsion;* aperient. **E. o. terebin'thinæ,** *Emulsion of oil of turpentine;* made as follows: ol. tereb. rect., ℈ij; sacch. alb., ℥ss; vitell. ovi, j; emuls. amygd. or aquæ destill., ℥vj; in rheumatic and nephritic affections. Dose, f℥iss. **E. pur'gans cum jalap'æ resi'nâ,** *Purging emulsion with resin of jalap;* a mixture of resin of jalap, white sugar, and yolk of egg, simple emulsion, and orange-flower water. **E. p. cum o'leo ric'ini,** *Purging emulsion with castor oil;* contained in the French Codex, the emulsion being made with castor oil, powdered gum arabic, distilled peppermint-water, water, and syrup. **E. p. cum scammo'nio,** *Purging emulsion with scammony;* made by rubbing up scammony with white sugar, and adding milk and cherry-laurel water (French Codex). **E. resi'næ guai'aci,** mistura guaiaci. **E. sim'plex,** E. amygdalæ.

Emulsion, e-mul'shun. Emulsio. **E., al'mond,** emulsio amygdalæ. **E., cam'phor,** emulsio camphoræ. **E., cas'tor oil,** emulsio olei ricini. **E., gum ar'abic,** emulsio acaciæ Arabicæ. **E. of oil of almonds,** emulsio olei amygdalarum. **E. of oil of tur'pentine,** emulsio olei terebinthinæ. **E., pancreat'ic,** see *Pancreatin.* **E., purg'ing, with resin of jalap,** emulsio purgans cum jalapæ resinâ. **E., purg'ing, with scam'mony,** emulsio purgans cum scammonio.

Emulsive, e-mul'siv. Term for seeds whence oil may be expressed, as almonds, hemp, etc., of nuts, and cucurbitaceous and cruciferous plants in general.

Emulsum, e-mul'sum. Emulsion.

Emunctorium, e-munk-to're-um. Emunctory. **E. cer'ebri,** the nose.

Emunctory, e-munk'to-re (*emungo,* to drain off). Organ or canal for issue of excrementitious matters.

Emun'dant (*e, mundo,* to cleanse). Detergent.

Emusculatus, e-mus-ku-lat'us. Without muscles; applied to limbs when so extenuated that the muscles cannot be distinguished.

Emydin, em'id-in (*emus,* tortoise). Albuminoid of turtles' eggs.

En. In composition, see *Em.*

Enadelphia, en-ad-el'fe-ah (*en, adelphos,* a brother). Fœtus developed or born within a fœtus; f. in fœtu.

Enæma, en-e'ma (*en, haima,* blood). Hematostatic.

Enæmon, en-e'mon. Styptic.

Enæorema, en-e-o-ra'mah (*en, aioreo,* to lift up). Cloud suspended in the urine as it cools.

Enamel (en-am'el), **E. of the teeth.** Adamantine or vitreous substance. Substance covering coronæ of the teeth; of a milky white color, and very hard. It consists of a congeries of minute hexagonal rods. The fibres of the enamel are perpendicular to the surface of the teeth, on the ivory of which they seem planted, as it were, giving them a velvety appearance when examined by the microscope. The enamel has no blood-vessels, and is not renewed when removed. It is formed of phosphate of lime, with traces of other calcium and magnesium salts, and a very small portion of animal matter. A delicate membrane covers the enamel—cuticula, cuticle of the enamel, Nasmyth's membrane, persistent capsule of Nasmyth—but closely united with it; can be demonstrated only by the use of chlorohydric acid. See *Cuticula.* **E. cap,** portion of enamel organ on top of dental papilla. **E. cells,** cells forming enamel organ. **E. cu'ticle,** see *Enamel.* **E. germ,** see *Groove, dental.* **E. mem'brane,** columnar epithelium covering the enamel. **E. or'gan,** later stage of development of enamel germ; see *Tooth.* **E. rods,** see *Enamel.*

Enanthema, en-an-tha'mah (*en, antheo,* to bloom). Eruption of the mucous membrane; exanthema being an eruption of the skin.

Enanthesis, en-an-tha'sis. Rash exanthem. Eruption of red, level, or nearly level diffused patches, often confluent, terminating in cuticular exfoliations, as scarlet fever, measles, etc. **E. rosa'lia,** scarlatina. **E. urtica'ria,** urticaria.

Enantiopathic, en-an-te-o-path'ik (*enantios,* opposite, *pathos,* affection). Palliative.

Enantiop'athy (same etymon). One disease opposed to another; allopathy.

Enantio'sis (*enantios,* contrary). Allopathy.

Enarthro'dial (*en, arthron,* joint). Relating to enarthrosis. **E. joint,** ball-and-socket joint; enarthrosis.

Enarthrosis, en-arth-ro'sis (*en, arthrosis,* articulation). *Ball-and-socket joint.* Diarthrodial articulation, in which the head of a bone is received into the cavity of another, and can be moved in all directions, as the hip joint.

Enarthrum, en-arth'rum (*en, arthron,* joint). Foreign body in a joint.

Enau'lia. Inner chamber; cavity of vulva.

Enausma, en-aus'mah (*en, auo,* to kindle). Substance supposed to retain contagious effluvia.

Encanthis, en-kan'this (*en, kanthos,* angle of the eye). Tumor formed by an increase in size, or a degeneration, of the caruncula lacrymalis. Morbid growth in the inner angle of the eye. **E. benig'na,** simple excrescence of the caruncula; commonly yields to astringent collyria. **E. calculo'sa,** tumor formed of concretions or calculi in the caruncle of the eye. **E. carcinomento'sa** or **fungo'sa,** condition of the semilunar fold and lacrymal caruncle in which they are the seat of morbid growths. **E. inflammato'ria,** inflammation with enlargement of the semilunar fold and lacrymal caruncle. **E. malig'na,** often cancerous, and requires early extirpation. **E. scirrho'sa,** E. maligna.

Encarditis, en-kar-de'tis. Endocarditis.

Encarpus, en-kar'pus (*en, karpos,* fruit). Pregnant.

Encasing, en-ka'sing. Inclusion of germs.

Encatalep'sis. Apoplexy; correctly, catalepsy.

Encatarrhaph'ia (*en, katarrhaphos,* stitched together). Operation of stitching together the edges of a cut made around a portion of skin.

Encathisma, en-kath-iz'mah (*en, kathizo,* to seat upon). Vapor-bath taken sitting.

Encauma, en-kaw'mah (*en, kauo,* to burn). Ulcer of transparent cornea, occasioning loss of humors.

Encausis, en-kaw'sis. Burn; moxibustion; cauterization.

Encaustum, en-kaw'stum. Enamel.

Enceinte (F.) (*en, cingo,* to surround). Pregnant.

Encephalæ'mia. Hyperæmia of the brain.

Encephalal'gia (*encephalon, algos,* pain). Headache. **E. hydrop'ica,** hydrocephalus internus.

Encephalanalosis, en-sef-al-an-al-o'sis (*analosis,* wasting away). Atrophy of the brain.

Encephalauxe, en-sef-al-awx'e (*auxe,* increase). Hypertrophy of the brain.

Encephalelcosis, en-sef-al-el-ko'sis (*helcosis,* ulceration). Ulceration of the brain.

Enceph'alin. A nitrogenous glucoside derived from brain-tissue; $C_{68.4}H_{11.6}N_3O_{17}$.

Encephal'ion (dim. of **Encephalon**). Cerebellum.

Encephalis, en-sef'al-is. Situate in the head; relating to the brain. **E. nerves,** cranial nerves. **E. ves'icles,** cerebral vesicles.

Encephalitis, en-sef-al-e'tis. Synonymous with *Cephalitis* and *Phrenitis.* Inflammation of the brain, in contradistinction to that of the membranes of the brain. *Meningo-cerebritis.* **E. exsudato'ria** or **infan'tum,** hydrocephalus internus. **E. insolatio'nis,** insolation. **E. membrano'sa** or **peripher'ica,** meningitis. **E. potato'rum,** delirium tremens. **E. suppurati'va,** abscess of the brain.

Encephal'ium (dim. of **Encephalon**). Cerebellum.

Encephalocele, en-sef-al-o-se'le (Eng. en-sef'al-o-seel) (*encephalon, kele,* tumor). Hernia of the brain; may be congenital or accidental; in the former case dependent upon tardy ossification of the fontanelles or faulty conformation; in the latter, owing to con-

siderable loss of substance in the parietes of the cranium from fractures, wounds, caries, the application of the trephine, etc. Protrusion of the membranes of the brain, containing fluid, but no cerebral substance, is called meningocele and hydromeningocele. **E., ante'rior** or **fron'tal**, condition of a monster whose encephalon is situate, in a great measure, out of, and in advance of, the cranium, which is open in the frontal region. **E., or'bital**, congenital condition consisting of cyst containing cephalo-spinal fluid and brain matter, protruding through the fissure between the ethmoid and frontal bones.

Encephalochysis, en-sef-al-ok'is-is (*encephalon, chuo*, to pour out). Hydrocephalus internus. **E. seni'lis**, apoplexy, serous.

Encephalodialysis (*dialusis*, dissolution). Dissolution or softening of the brain.

Encephalodynia, en-sef-al-o-din'e-ah (*encephalon, odune*, pain). Cephalalgia; encephalalgia.

Encephalœdema, en-sef-al-e-de'mah. Œdema of the brain.

Encephalohæmia, en-sef-al-o-he'me-ah (*encephalon, haima*, blood). Cephalæmia.

Encephaloid, en-sef'al-oid (*encephalon, eidos*, resemblance). Resembling brain. Cephaloid, cephaloma. Soft cancer; name given to it in consequence of its resemblance, when fully developed, to the medullary substance of the brain. It has also been called *Spongoid inflammation, Miltlike tumor, Medullary cancer* or *sarcoma, Cellular cancer, Fungoid* or *Hæmato-cerebriform disease* or *cancer*. See *Cancer*.

The following table exhibits the distinctive characteristics of encephaloid and scirrhus:

Encephaloid.	Scirrhus.
Resembles lobulated cerebral matter.	Resembles rind of bacon traversed by cellulo-fibrous septa.
Is commonly opaque from its earliest formation.	Has a semi-transparent glossiness.
Is of a dead-white color.	Has a clear whitish or bluish-yellow tint.
Contains a multitude of minute vessels.	Is comparatively ill supplied with vessels.
Is less hard and dense than scirrhus.	Is exceedingly firm and dense.
Is frequently found in the veins issuing from the diseased mass.	Has not been distinctly detected in this situation.
The predominant microscopical elements are globular, not always distinctly cellular, and caudate corpuscula.	The main microscopical constituents are juxtaposed nuclear cells; caudate corpuscula do not exist in it.
Occasionally attains an enormous bulk.	Rarely acquires larger dimensions than an orange.
Has been observed in almost every tissue of the body.	Its seat, as ascertained by observation, is somewhat more limited.
Very commonly co-exists in several parts or organs of the same subject.	Is not usually solitary.
Is remarkable for its occasional vast rapidity of growth.	Ordinarily grows slowly.
Is frequently the seat of interstitial hemorrhage and deposition of black or bistre-colored matter.	Is comparatively rarely the seat of these changes.
When softened into a pulp, appears as a dead-white or pink opaque matter of creamy consistence.	Resembles, when softened, a yellowish-brown, semitransparent gelatinous matter.
Subcutaneous tumors are slow to contract adhesion with the skin.	Scirrhus thus situate usually becomes adherent.
Ulcerated encephaloid is frequently the seat of hemorrhage, followed by rapid fungous development.	Scirrhous ulcers much less frequently give rise to hemorrhage; and fungous growths (provided they retain the scirrhous character) are now more slowly and less abundantly developed.
The progress of the disease after ulceration is commonly very rapid.	There is not such a remarkable change in the rate of progress of the disease after ulceration has set in.
It is the most common form under which secondary cancer exhibits itself.	
Is the species of cancer most frequently observed in young subjects.	Is much less common before puberty.

Encephalolith, en-sef'al-o-lith (*encephalon, lithos*, stone). Calcareous or other concretion in the brain. The formation of such concretions is called *Encephalolithiasis*.

Encephalology, en-sef-al-ol'o-je (*encephalon, logos*, description). Description of the encephalon or its anatomy and physiology.

Encephaloma, en-sef-al-o'mah. Tumor of the brain; encephaloid tumor. **E. melano'des**, melanotic cancer. **E. vulga're**, medullary carcinoma; M. sarcoma.

Encephalomalacia, en-sef-al-o-mal-ah'se-ah (*encephalon, malakia*, softness), **Encephalomalacosis** (en-sef-al-o-mal-ak-o'sis), or **Encephalomalaxis**, en-sef-al-o-mal-aks'is. Softening of the brain; mollities cerebri.

Encephalomeningi'tis. Meningocephalitis. Cerebral meningitis.

Encephalomeningocele, en-sef-al-o-men-in-go-se'le (Eng. en-sef-al-o-men-in'go-seel). Hernia of the encephalon and its membranes.

Encephalom'eter. Instrument to determine corresponding points in the brain and on the skull.

Encephalo-myalopathy, en-sef'al-o-mi-al-op'ath-e. Simultaneous morbid condition of the brain and spinal cord.

Encephalon, en-sef'al-on (*en, kephale*, head). That which is situate in the head. The brain, cerebellum, and mesocephalon; at times including the medulla spinalis, when it is also called the cerebro-spinal and neural axis. Under the cranio-spinal axis or centre of automatic action have been included the sensory ganglia—the respiratory and stomato-gastric ganglia, forming the centre of the medulla oblongata and the spinal ganglia or true spinal cord.

Encephalonarcosis, en-sef-al-o-nar-ko'sis. Stupefaction of the brain; stupor.

Encephalopathia, en-sef-al-o-path-e'ah (*encephalon, pathos*, disease). Encephalopathy; disease of the encephalon. **E. literato'rum**, condition of the brain produced by overtasking it. **E. puerpera'lis**, puerperal mania. **E. saturni'na**, encephalic disorder produced by lead-poisoning.

Encephalopathy, en-sef-al-op'ath-e. Disease of the brain. **E., albuminu'ric**, E., uræmic. **E., crap'ulous**, delirium tremens. **E., gout'y**, cerebral gout. **E., rheumat'ic**, cerebral rheumatism. **E., syphilit'ic**, cerebral syphilis. **E., uræ'mic**, albuminuric convulsions.

Encephalophthisis, en-sef-al-o-te'sis. See *Encephalopyosis*.

Encephalophyma, en-sef-al-o-fe'mah (*encephalon, phuma*, tumor). Tumor or tubercle of the brain.

Encephalopyosis, en-sef-al-o-pi-o'sis (*encephalon, puon*, pus). Suppuration of the brain; when accompanied with emaciation and hectic, it is called *Encephalophthisis*.

Encephalorhachidian, en-sef-al-o-rak-id'e-an. Cephalospinal.

Encephalorrhagia, en-sef-al-or-rhaj'e-ah (*encephalon, rhage*, breaking forth). Hemorrhage of the brain. See *Apoplexy*.

Encephalorrhois, en-sef-al-or'rho-is. Brain symptoms due to stoppage of hemorrhoidal discharge.

Encephaloscopy, en-sef-al-os'ko-pe (*encephalon, skopeo*, to examine). Cranioscopy; craniology.

Encephalosepsis, en-sef-al-o-sep'sis (*encephalon, sepo*, to corrupt). Softening of the brain.

Encephalosis, en-sef-al-o'sis. Encephaloid tumor; formation of an encephaloma. **E. of the liver**, cancer of the liver.

Encephalosismus, en-sef-al-o-sis'mus (*encephalon, seismos*, shaking). Concussion of the brain.

Encephalo-spinal, en-sef'al-o-spi'nal. Cerebro-spinal.

Encephalospon'gia (*spongia*, sponge). Fungous disease of the brain.

Encephalostrumosis, en-sef-al-o-stru-mo'sis (*encephalon, struma*, scrofula). See *Hydrocephalus internus*.

Encephalothlipsis, en-sef-al-o-thlip'sis (*thlipsis*, pressure). Compression of the brain.

Encephalothliptus, en-sef-al-o-thlip'tus (same etymon). Affected with compression of the brain;

monster whose brain is absent or has been compressed during labor until it is a shapeless mass.

Enceph'alotome. Knife or instrument with which to perform encephalotomy, or to obtain sections of the brain for examination.

Encephalotomy, en-sef-al-ot'o-me (*encephalon, tome,* incision). Dissection of the brain; incision into the brain; emptying the fœtal brain by operation on it during parturition.

Encephalotrauma, en-sef-al-o-traw'mah (*encephalon, trauma,* wound). Injury to the brain by violence or external causes.

Encephalotrausis, en-sef-al-o-traw'sis (same etymon). Act of wounding the brain.

Encephalotyloma, en-sef-al-o-til-o'mah (*tuloma,* callosity or growth). Tumor or tubercle of the brain.

Encephalotyphus, en-sef-al-o-ti'phus. Cerebral typhus.

Encephalozoa, en-sef-al-o-zo'ah. Animals having their habitat in the brain; those having a brain.

Enceph'alum or **Encephalus,** en-sef'al-us. Encephalon. **E. opis'thius** (*opisthios,* behind), cerebellum.

Encerosis (*en, keros,* wax). Inceration.

Encharaxis, en-kar-aks'is (*en, charasso,* to scarify). Scarification.

Encharus, en'kar-us. Pancreas.

Encheire'sis, Enchire'sis, or **Enchei'ria** (*en, cheir,* hand). Dissection; manual treatment of any subject; manipulation.

Enchilema, en-kil-a'mah. Enchylema.

Enchon'drial (*en, chondros,* cartilage). Relating to the interior of cartilage.

Enchondroma, en-kon-dro'mah (*en, chondros,* cartilage). Cartilaginous tumor on bone; chondroma. **E., gelat'inous,** E. molle. **E. of lung,** secondary growths in the lungs, generally succeeding tumors in other organs. **E. mol'le,** jelly-like form of enchondroma. **E. muco'sum** or **myxomato'des,** E. mainly composed of cartilage, but having mucous or mucoid tissue intermingled with it. **E., perios'teal** or **periph'eric,** E. growing from the periosteum.

Enchondrosis, en-kon-dro'sis (same etymon). Local outgrowth from pre-existing cartilage; enchondroma.

Enchorionosus, en-ko-re-on'o-sus (*en, choros,* place, *nosos,* disease). Endemic.

Encho'rius. Endemic; indigenous.

Enchrio'ma or **Enchriston,** en-kris'ton (*en, chrio,* to anoint). Liniment.

Enchusa, en-ku'sah. Anchusa.

Enchyle'ma (*en, chulos,* juice). Any matter formed in the reticulum of protoplasm.

Enchylosis, en-kil-o'sis (*enkulizo,* to press out juice). Extraction; suggillation.

Enchyma, en'kim-ah (*en, chuo,* to pour). Infusion; plethora; blastema.

Enchymoma (en-kim-o'mah) or **Enchymo'sis** (same etymon). Sudden effusion of blood into the cutaneous vessels from emotion; blushing, for example. In *Ecchymosis* there is extravasation of blood into the areolar tissue from external cause, as contusion.

Enchysis, en'kis-is. Infusion.

Enchyta, en'kyt-ah. Syringe or material employed for injection.

Enclisis, en'klis-is. Bending or inclination.

Enclitic, en-klit'ik. Oblique or inclined, as the fœtal head. See *Synclitic.*

Enclydastic, en-kle-das'tik (*en, kluzo,* to wash). Floating in or between; applied to liquids, as serum, pus, etc., contained in a cavity.

Enclysma, en-kliz'mah (*en, kluzo,* to wash). Clyster.

Encœlia, en-se'le-ah (*en, koilia,* belly). Abdominal viscera.

Encœlialgia, en-se-le-al'je-ah (*encœlia, algos,* pain). Abdominal pain; tormina. **E. inflammato'ria,** encœlitis.

Encœlitis or **Encœliïtis,** en-se-le-e'tis. Inflammation of any abdominal viscus.

Encœl'ius. Within the abdomen.

Encoleosis, en-kol-e-o'sis (*koleos,* sheath). Invagination.

Encolpismus, en-kol-piz'mus (*kolpos,* vagina). Injection or introduction of anything into the vagina. Material employed for this purpose.

Encolpitis, en-kol-pe'tis (*en, kolpos,* vagina). Inflammation of the lining membrane of the vagina.

Encope, en'ko-pe (*en, kopto,* to cut). Diacope, incision.

Encranial, en-kra'ne-al. Within the skull; intracranial.

Encranion (en-kran'e-on) or **Encranis,** en-kran'is (*en, kranion,* the skull). Cerebellum.

Encyesis, en-ce-a'sis (*en, kuesis,* pregnancy). Fecundation; pregnancy.

Encymon, en'sim-on (*en, kuo,* to be pregnant). Pregnancy.

Encymoplasma, en-sym-o-plaz'mah (*en, kuo,* to be pregnant, *plasma*). Product of parturient uterus.

Encymosia, en-sim-o'ze-ah. Fecundation; pregnancy.

Encyocolica, en-se-o-kol'ik-ah (*en, kuo,* to be pregnant, *kolikos,* colicky). Colic during pregnancy.

Encysis, en'sis-is. Pregnancy, parturition.

Encystation (en-sist-a'shun) or **Encystment,** en-sist'ment. State of being encysted.

Encysted, en-sis'ted (*en, kustis,* bladder). *Saccated, Sacculated, Pouched.* Enclosed in a cyst or pouch. Epithet given to certain solid or fluid collections enclosed in a particular envelope or cyst. Such enclosure has been termed *Encystment.*

Encystes or **Encystis,** en-sis'tis. Encysted tumor.

End. Extremity. **E. bulbs** or **buds,** terminal nerve-corpuscles, similar to the Pacinian and touch-corpuscles, first particularly described by Krause; seen in the lips, tongue, palate, genitals, etc. **E. or'gan,** apparatus for ending of nerve-fibres at the surface of the body. **E. o., tac'tile,** end bulb. **E. plates,** small bodies in which nerves terminate, varying from $\frac{1}{5000}$ to $\frac{1}{350}$ of an inch in diameter, formed of an expansion of the end of a nerve-fibre with a small quantity of connective tissue. They are fixed to the muscular fibres.

Endadelphia, end-ad-el'fe-ah (*endo, adelphos,* brother). Enadelphia. Condition of fœtus developed or born within a fœtus—*Endadelphus.*

Endangeitis, end-an-ge-e'tis. Inflammation of the endangium.

Endangeium (end-an'ge-um) or **Endangium,** properly **Endangion** (*endo, angeion,* vessel). Serous or lining membrane of vessels.

Endaortitis, end-ah-or-te'tis (*endo,* within, *aorta, itis,* inflammation). Inflammation of lining membrane of the aorta.

Endarteritis or **Endarteriïtis,** end-ar-ter-e-e'tis (*endo, arteriitis,* inflammation of an artery). Inflammation of the inner coat of an artery. **E. chron'ica defor'mans** or **nodo'sa,** chronic inflammation of the lining membrane of an artery, with degeneration and deposits—*arteriosclerosis.* **E. oblit'erans** or **obliterati'va,** occlusive inflammation of arteries, chiefly the smaller ones. **E. syphilit'ica,** E. obliterans. **E. tuberculo'sa,** endarteritis of tuberculous origin.

Endeictic, en-dike'tik. Indicant.

Endeixiology, en-dikes-e-ol'o-je (*endeixis, logos,* discourse). Doctrine of indications.

Endeixis, en-dikes'is (*en, logos, deiknumi,* to show). Indication.

Endemia, en-dem'e-ah. Endemic disease.

Endem'ic or **Endemical,** en-dem'ik-al (*en, demos,* the people). Disease is said to be endemic or to arise from *endemicity* when owing to some peculiarity in situation or locality. Thus, ague is endemic in marshy countries; goitre at the base of lofty mountains, etc. Indigenous. **E. hæmatu'ria,** variety of hæmaturia caused by a fluke, the Bilharzia hæmatobia.

Endemicity, en-dem-is'it-e. See *Endemic.*

Endem'io-epidem'ic. Having the characters of an endemic and epidemic combined. See *Epidemy.*

Endemiology, en-dem-e-ol'o-je. Doctrine of endemic diseases.

Endemy, en'dem-e. Endemic.

Endepidermis, en-dep-e-dur'mis. Epithelium.

Endermic (en-dur'mic) or **Endermatic,** en-dur-mat'ik (*en, derma,* skin). *Emplastro-endermic.* Literally, in the skin; epithet given to the method of treating diseases by placing the therapeutical agent in contact with the skin, especially after the cuticle has been removed—*endermic method, endermism.* Morphia, strychnia, etc. are sometimes administered in this way.

Endermism, en-dur'mizm. See *Endermic.*

Endermoses, en-dur-mo'zees. Eruptive diseases of the intestinal canal.

Endermosis, en-dur-mo'sis. Endermic method.

Enderon, en'dur-on (*en, deros,* skin). Subepithelial layer of the whole body.

Endesis, en'des-is (*en, deo,* to bind). Ligature, bandage, connection; ankle-joint.

Endesma, en-dez'mah. Ligature.

Endin'ion. Point on internal surface of cranium corresponding to the inion externally.

Endive, en'div. Cichorium endivia. **E., wild,** Cichorium intybus.

Endivia, en-div'e-ah. Cichorium endivia.

Endixis, en-diks'is (*en, deiknumi,* to show). Indication.

End-lobe. Round extremity of occipital lobe of brain.

En'do (*endon,* within). As a prefix, within.

En'do-abdom'inal. Within the abdomen.

Endo-aortitis, en'do-ah-or-te'tis (*endo, aortitis,* inflammation of the aorta). Inflammation of the lining membrane of the aorta.

Endo-arteritis, en'do-art-er-e'tis (*endo, arteritis*). Inflammation of the lining membrane of an artery.

Endoblast, en'do-blast (*endo, blastos,* germ). Cell-nucleus. See *Periblast, Entoblast.*

Endoblastomere, en-do-blas'to-mere (*endo, blastos,* germ, *meros,* part). Segment produced by division of an ovum in a direction parallel to its equator.

Endocardiac or **Endocardial,** en-do-kar'de-al. Within the heart. Relating to the endocardium or the interior of the heart; in contradistinction to *exocardiac, exocardial,* or *extracardial,* relating to the exterior of the heart.

Endocarditis, en-do-kar-de'tis. *Internal carditis, Inflammation of the internal membrane of the heart, Bouillaud's disease.* The heart's action is visibly increased and very manifest to the touch; the hand is strongly repelled, and at moments is sensible of a trembling, vibratory motion. Percussion gives a dull sound over a surface of several inches. On auscultation, a bellows sound is generally heard, masking one or both sounds of the heart, and the ear is sensible of a metallic ringing with each systole of the ventricle. Pulsations are rapid as well as strong, and, with few exceptions, irregular, unequal, and intermittent. The pulse does not always indicate the force or number of the heart's contractions. **E., fi'brinous,** E. in which some of the connective tissue of the heart is converted into fibrous tissue. **E., infec'tious,** endocarditis, ulcerative. **E., pari'etal,** E. limited to the cardiac wall, not affecting the valves. **E., plas'tic,** E. with plastic effusion, affecting the action of the valves, and contraction and dilatation of the heart, thus causing abnormal murmurs, etc. **E., sclerot'ic,** E. attended with thickening and increased development of connective tissue of the valves of the heart. **E., ul'cerative,** septic form of endocarditis; generally a sequence of blood-poisoning, the ulcers passing through the valves and invading the muscular walls of the heart.

Endocardium, en-do-kar'de-um (*endo, kardia,* heart). Membrane lining the interior of the heart.

Endocervicitis, en-do-sur-ve-se'tis. Inflammation of lining membrane of cervix uteri.

Endochondral, en-do-kon'dral (*endo, chondros,* cartilage). Within cartilage, as E. ossification, development of bone within temporary cartilage.

Endochorion, en-do-ko're-on. See *Chorion.*

Endocolitis, en-do-ko-le'tis (*endo, colon, itis*). Dysentery.

Endocolpitis, en-do-kol-pe'tis. Inflammation of the vagina.

Endocranitis, en-do-kran-e'tis. Inflammation of external layer of the dura mater.

Endocranium, en-do-kran'e-um. Inner surface of the skull.

Endocrome, en'do-krome (*endo, chroma,* color). Pigment in interior of cells.

Endocular, end-ok'u-lar (*endo,* within, *oculus,* eye). Within the eye; intraocular.

Endocyme (*endo, kuma,* product of conception). Double monster by inclusion.

Endocymia, en-do-sim'e-ah. Monstrosity alluded to under *Endocyme.*

Endocyst, en'do-sist. Lining membrane of a hydatid.

Endocystomati'tis. Inflammation of lining membrane of a cystic tumor.

Endocytic, en-do-sit'ik. Within a cell.

Endode'ca serpenta'ria. Aristolochia serpentaria.

En'doderm. Innermost layer or lining of simple organisms; hypoblast.

Endodontitis, en-do-don-te'tis (*endo, odous,* tooth). Inflammation of the lining membrane of a tooth.

Endoenteritis, en-do-en-ter-e'tis. Inflammation of the lining membrane of the bowels. See *Enteritis.*

Endogastric, en-do-gas'trik (*endo, gaster,* stomach). Within the stomach or abdomen; intra-abdominal.

Endogastritis, ed-do-gas-tre'tis (*endo, gastritis,* inflammation of the stomach). Inflammation of the lining membrane of the stomach.

Endogastrius, en-do-gas'tre-us. Engastrius.

Endogenesis, en-do-jen'es-is. Endogenous formation.

Endogenetic, en-do-jen-et'ik (same etymon). Having origin from internal causes.

Endogenous, en-doj'en-us (*endo, gennao,* to engender). Growing by increase in number or size of internal cells or membranes, as E. cells, or cells formed within cells, as in the sperm-vesicles. **E. an'eurism,** aneurism originating spontaneously from lesions of the inner coat of the arteries.

Endogeny, en-doj'en-e. Endogenesis.

Endoglobular, en-do-glob'u-lar. Within the blood-globules.

Endognathion, en-do-nath'e-on. Middle part of the upper jawbone that has not been united before birth.

Endokarditis, en-do-kar-de'tis. Endocarditis.

Endolarynge'al. Within the larynx.

Endolemma, en-do-lem'mah. Neurilemma.

Endolymph, en'do-limf. Fluid contained within the membranous labyrinth.

Endolymphangial, en-do-limf-an'je-al. Within the lymphatic vessels.

Endolymphat'ic. Within the lymphatic vessels.

Endometritis, en-do-met-re'tis (*endo, metritis,* inflammation of the uterus). Inflammation of the lining membrane of the uterus. When accompanied with a diphtheritic exudation, it is called E. crouposa; when the fundus is alone involved, fundal endometritis; when of a syphilitic character, E. syphilitica. Corporeal and cervical endometritis express inflammation of the body and neck of the uterus. **E., catar'rhal,** E. accompanied with discharge of mucus. **E., cer'vical,** inflammation of the cervical portion of the uterus. **E. decid'ual,** inflammation of decidua reflexa or uterina, or of both membranes. **E., diphtherit'ic,** form of E. occurring at childbirth from invasion of the vagina, uterus, and appendages by diphtheritic virus introduced through some exposed part of the generative organs. **E. disse'cans,** E. with tendency to ulcerative disintegration. **E. exfoliati'va,** membranous dysmenorrhœa. **E., fun'dal,** E. of fundus of uterus. **E. fungo'sa,** decidual E. accompanied with fungoid or polypoid growths. **E., mem'branous,** E. with formation of false membrane; E., diphtheritic. **E., sep'tic** or **septicæ'mic,** E. caused by presence of putrid matter or its absorption.

Endometrium, en-do-met're-um (*endo, metra,* uterus). Lining membrane of the uterus.

Endometrorrhag'ia (*endo, metra,* uterus, *rhegnumi,* to

break forth). Hemorrhage in interior of the uterus; metrorrhagia.

Endometry, en-dom'et-re (*endo, metron,* measure). Measurement of the brain within the cavity of the skull.

Endomyocarditis, en-do-me-o-kard-e'tis (*endo, mus,* muscle, *kardia,* heart). Endocarditis combined with myocarditis or inflammation of the cardiac muscle.

Endomysium, en-do-mis'e-um (*endo, mus,* muscle). Connective-tissue formation between muscular fibres.

Endonarteritis, en-don-art-er-e'tis. See *Arteritis.*

Endonenteritis, en-don-en-ter-e'tis. Endoënteritis.

Endonephritis, en-do-nef-re'tis (*endo, nephritis,* inflammation of kidney). Inflammation of the lining membrane of the pelvis of the kidney; nephritis; pyelitis.

Endoneural, en-do-nu'ral (*endo, neuron,* nerve). Enteritis. Relating to the endoneurium. In the interior of a nerve.

Endoneurium, en-do-nu're-um (same etymon). Connective tissue between nerve-fibrils.

Endoœsophagitis, en-do-e-sof-ah-je'tis. Inflammation of lining membrane of the œsophagus.

Endoöstitis, en-do-os-te'tis (*endo, osteon,* bone). Inflammation of medulla of bone.

Endoparasite, en-do-par'as-ite. Parasite in the interior of the body.

Endopathic, en-do-path'ik (*endo, pathos,* disease). Relating to diseases whose causes are within the body.

Endopericarditis, en-do-per-e-kar-de'tis. Inflammation of the endocardium and pericardium.

Endoperimyocarditis, en-do-per-e-me-o-kard-e'tis. Simultaneous existence of endocarditis, pericarditis, and myocarditis.

Endophacine, en-do-fas'een (*endo, phake,* lens). Colorless albuminous fluid obtained from the crystalline lens.

Endophlebitis, en-do-fleb-e'tis (*endo, phleps,* vein, *itis*). Inflammation of the inner coat of a vein; phlebitis. **E. porta'lis,** inflammation of the portal vein; pyephlebitis.

Endophyte, en'do-fite (*endo, phuton,* plant). Vegetable parasite in the interior of the body.

Endoplasm, en'do-plazm (*endo, plasso,* to form). Inner part of protoplasm of a cell.

En'doplast. Nucleus of cell and cell-body.

Endoplastic, en-do-plas'tik. Relating to or formed of endoplasm.

Endoplastule, en-do-plas'tule. Nucleolus.

En'dosarc. Endoplasm.

Endoscope, en-do'skope (*endo, skopeo,* to view). Instrument for inspecting internal parts, as the speculum uteri, laryngoscope, etc. Specular arrangement for viewing the urethra and bladder. See *Cystoscope, Urethroscope, Speculum.* **E., u'terine,** modification of endoscope for inspection of the interior of the uterus.

Endoscopy, en-dos'ko-pe. Examination of internal parts, especially the urethra, with an endoscope.

Endosepsis, en-do-sep'sis (*endo, sepsis,* infection). Septic infection from internal causes.

Endosis, en-do'sis (*endosis,* giving up). Remission; intermission.

Endoskel'eton. Inner skeleton. See *Skeleton.*

Endos'mic. Endosmotic.

Endosmometer, en-dos-mom'et-ur. Graduated tube closed by membrane for estimating the amount of osmosis.

Endosmose, en-dos-moze' (*endo, osmos,* impulse). Double imbibition. Action by which fluids pass from without to within organic membranes. Action of two fluids on each other when separated by a membrane. Endosmose is sometimes used to signify the passage of the more transmissible fluid, while exosmose signifies that of the least transmissible, although, strictly speaking, the terms denote passage of fluids inward and outward.

Endosmo'sis. Endosmose.

Endosmotic (en-dos-mot'ik) or **Endosmic,** en-dos'mik. Relating to endosmose.

Endosperm, en'do-spurm (*endo, sperma,* seed). Embryo situate in a mass of albumen; albumen.

Endospore, en'do-spore (*endo, sporos,* seed). Spore within a minute organism.

Endosteal, en-dos'te-al (*endo, osteum,* bone). Relating to the interior of bone, or to ossification in its earliest cartilaginous stages.

Endosteïtis (en-dos-te-e'tis) or **Endosti'tis.** Inflammation of the internal periosteum or medullary membrane of bone; osteomyelitis.

Endosteum, en-dos'te-um (*endo, osteon,* bone). Medullary membrane of bone.

Endostoma, en-dos-to'mah (same etymon). Morbid bony growth in interior of bone.

Endostosis, en-dos-to'sis (same etymon). Bony deposit in hyaline cartilage. Development of bone in interior of cartilage.

Endothelial, en-do-the'le-al. Relating to the endothelium. **E. carcino'ma,** endothelioma.

Endothelioid, en-do-the'le-oid. Resembling endothelium.

Endothelio'ma. Tumor connected with the endothelium.

Endothe'lium (*endo, thele,* nipple). Essential connective constituent of the blood-vessels, formed of flat cells or a delicate nucleated membrane, the endothelial or perithelial tube, cell-membrane of Remak.

Endothoracic, en-do-thor-as'ik. Within the thorax or chest.

En'dotome (*endo, tome,* incision). Shears adapted to decollation of the fœtus in utero.

Endotoscope, en-do'to-skope (*endo, ous,* ear, *skopeo,* to see). Instrument for examining accessible parts of the ear.

Endotrachelitis, en-do-trak-el-e'tis (*endo, trachelos,* neck). Inflammation of the neck of the uterus; cervical endometritis.

Endo-uteri'tis (*endo, uteritis*). Inflammation of lining membrane of uterus; metritis.

Endovascular, en-do-vas'ku-lar. Intravascular; within the vessels.

Endusium, en-du'se-um. See *Indusium.*

Endyma, en'dim-ah (*enduma,* garment). Membrane. **E., paracœl'ian,** lining membrane of lateral ventricle of the brain. **E. ventriculo'rum,** lining of cavities of ventricles; ependema ventriculorum.

Enechema (en-ek-a'mah) or **Eneche'sis** (*en, echema,* sound). Tinnitus aurium.

Ene'cia (*enecho,* to retain). Continued fever; synocha. **E. cau'ma,** synocha; inflammatory fever. **E. syn'ochus,** synochus. **E. synochus puerpera'rum,** see *Peritonitis.* **E. ty'phus,** typhoid fever.

Enema en'e-mah (vulg. en-e'mah) (*en, iemi,* to send in). Clyster; liquid for injection into the lower bowel or bowels. **E. aloës,** *Enema* or *Clyster of aloes* (aloës, potass. carbon., mucilag. amyli). Used in ascarides and amenorrhœa. **E. anod'ynum,** *Enema opii, Anodyne* or *Starch-and-opium clyster* (decoct. amyli, tinct. opii). Used in severe diarrhœa or dysentery. **E. antihyster'icum,** E. asafœtidæ. **E. asafœ'tidæ,** E. fœtidum. **E. carthart'icum,** *Cathartic* or *Purging clyster* (oleum oliv., magnes. sulph., mucilag. amyli). **E. colocynth'idis,** *Clyster of colocynth* (ext. colocynth, sapo mollis, aqua). Efficient cathartic clyster. **E. commu'ne,** *Common* or *Domestic clyster* (water gruel or molasses and water, Oss or Oj; add a little oil or lard and a spoonful of common salt). Cathartic; without the salt, emollient. **E. fœ'tidum,** *Fetid clyster, Clyster of asafetida* (asafœt., aqua destillat.). Antispasmodic and anodyne. **E. magne'siæ sulpha'tis,** E. catharticum. **E. nicotia'næ,** *Tobacco clyster* (tabacum, aqua bullient). Employed in strangulated hernia, but occasionally a fatal poison when given in this way. Smoke of tobacco is sometimes thrown up the rectum to produce the same medicinal effects as the infusion. **E. o'pii,** E. anodynum. **E. pur'gans,** purgative enema. **E. sedati'vum,** E. opii. **E. of sul'phate of magne'sium,** E. catharticum. **E. tab'aci,** E. nicotianæ. **E. terebin'thinæ,** *Enema of turpentine, Turpentine clyster* (ol. tereb., mucilag. amyli). Administered in cases of ascarides, oxyuris especially. **E. of tobac'co,** E. nicotianæ.

Enemion, en-em'e-on. Anemone pulsatilla.

Enepiderm'ic or **Enepidermatic**, en-ep-e-dur-mat'-ik (*en*, *epi*, upon, *derma*, skin). Method of treating diseases by application of medicines, as plasters, blisters, etc. to the skin.

Energia, en-ur-je'ah. Action, energy, force; used in this sense as associated with a body in motion—*kinetic energy*—or at rest—*potential energy*.

Energy, en'er-je (*en*, *ergon*, work). Action, vigor, force.

Enervatio, en-ur-vah'she-o. Aponeurosis, enervation.

Enervation, en-ur-va'shun (*e*, *nervus*, nerve, strength). Act of weakening; state of being weakened. Excision of a nerve.

Enervationes tendineæ, en-ur-vah-she-o'nees tendin'e-e. Tendinous portions crossing several abdominal muscles.

Ener'vis or **Enervus**, en-ur'vus. In a condition of enervation.

Enervitas, en-ur'vit-as. Inertia.

Engagement, en-gage'ment. Passage of presenting portion of fœtus into the brim of the pelvis; the stage of the descent of the fœtus.

Engastrimyth, en-gas'trim-ith (*en*, *gaster*, belly, *mutheomai*, to discourse). Gastriloquist, ventriloquist. One who possesses the art of modifying his natural voice so that it seems to come from a greater or less distance and from different directions. It was believed that such persons spoke from the belly. It is an imitative art, called engastrimythism, ventriloquism, ventriloquy, ventrilocution.

Engastrius, en-gas'tre-us. Monster formed by development of fœtus in the interior of the gastro-intestinal region of another fœtus.

Engeiso'ma, **Engisoma** (en-gis-o'mah), or **Engizo'ma** (*engizo*, to approximate). Species of fracture of the skull, in which a splinter passes beneath the sound portion of the bone and compresses the brain. Instrument used in fractures of the clavicle.

Engenes, en'jen-ees. Congenital, indigenous.

Eng'lish cham'omile. Anthemis nobilis. **E. chol'era**, cholera morbus. **E. disease**, hypochondriasis; rachitis **E. gar'lic**, Allium sativum. **E. mal'ady**, hypochondriasis; rachitis. **E. plas'ter**, court plaster. **E. rhu'barb**, Rheum raponticum. **E. sweat'ing sick'ness**, miliary fever. **E. wal'nut**, Juglans regia.

Englottogastor, en-glot-to-gas'tor (*en*, *glotta*, tongue, *gaster*, stomach). Engastrimyth.

Engomphosis, en-gom-fo'sis. Gomphosis.

Engoniomele, en-gon-e-o-ma'le (*engonios*, angular, *mele*, probe). Bent probe.

Engonus, en'gon-us (*en*, *gennao*, to engender). Endemic; also, fœtus.

Engorged disk. See *Disk*.

Engorge'ment. Obstruction or choking up of the vessels of a part, giving rise to augmentation of volume; vascular congestion.

Engraft'. Graft.

Enhæmatosis, en-he-mat-o'sis. Hæmatosis.

Enixa, en-iks'ah (*enitor*, to bring forth). Woman in childbirth.

Enix'io or **Enixus** (en-ix'us) **fœ'tûs.** Parturition.

Enizesis, en-idz-a'sis (*enizo*, to place in). Use of sitz-bath.

Enkephalon, en-kef'al-on. Encephalon.

Enmetritis, en-met-re'tis. Inflammation of lining membrane of uterus; endometritis.

Enneurosis, en-nu-ro'sis (*en*, *neuron*, nerve). Innervation.

Enœsophagitis, en-e-sof-aj-e'tis. Inflammation of lining membrane of the œsophagus.

Enoman'ia (*en*, *oinos*, wine, *mania*) Delirium tremens.

Enophthalmia, en-of-thal'me-ah (*en*, *ophthalmos*, eye). Retraction of the globe of the eye. One so affected is called *Enophthal'mus*.

Enorchismus, en-or-kiz'mus (*en*, *orchis*, testicle). Concealed testicle; cryptorchidism.

Enormis, en-or'mis (*e*, *norma*, rule). Abnormal.

Enormitas cordis, en-or'mit-as kor'dis. Heart, hypertrophy of.

Enormon, en-or'mon (*en*, *ormao*, to rouse). Vital principle.

Enosis, en-o'sis (union). Insertion; union.

Enosmosis, en-os-mo'sis. Endosmose.

Enosomania, en-o-so-man'e-ah (*enosis*, agitation). Mania associated with delusions as to commission of crimes.

Enosto'sis or **Entostosis**, en-tos-to'sis (*en*, *osteon*, bone). Morbid growth of bone inward into interior of medullary canal; bony tumor growing from interior of the skull; opposite of exostosis.

Enrhythmus, en-rhith'mus (*en*, *rhuthmos*, number). Having rhythm; epithet applied to the pulse when its beats occur with some degree of order.

Enryth'mus. Enrhythmus.

Ens. Being; existence. **E. mar'tis**, ferrum ammoniatum. **E. ven'eris Boyl'ei**, ferrum ammoniatum.

En'sal (*ensis*, sword). Sword-shaped. Cardamom.

En'sate. Ensiform.

Ensiform, en'se-form (*ensis*, sword, *forma*, form). Swordlike; xiphoid. **E. apoph'yses** or **pro'cesses**, lesser alæ of sphenoid bone. **E. appen'dage** or **appen'dix** or **car'tilage** or **pro'cess**, xiphoid appendix of the sternum; see *Xiphoid*.

Ensisternal, en-se-stur'nal. Relating to the ensiform process of the sternum, the last osseous portion of the sternum.

Ensomatosis, en-so-mat-o'sis (*en*, *soma*, body). Incorporation.

Enstac'ton or **Enstactum**, en-stak'tum. Collyrium.

Enstalaxis, en-stal-aks'is (*en*, *stalazo*, to drop). Instillation.

Enstasis, en'stas-is (obstruction). Obstruction, as of pores of the skin.

Enstrophe, en'strof-e (*en*, *strepho*, to turn). Inversion of a part, as the eyelids.

Entacoustic, ent-ak-oo'stik (*ento*, *akouo*, to hear). Relating to sonorous movements originating in the ear or adjacent structures.

En'tad (*entos*, within). In an inward direction or toward the interior.

Enta'da gingalo'bium. W. Indian tree; seeds are emetic and antisyphilitic, and antidotal to poison.

En'tal. Relating to the interior; internal.

Entallantoic, ent-al-lan'to-ik. Within the allantoic cavity.

Entamniotic, ent-am-ne-ot'ik. Within the amniotic cavity.

Entankyloblepharitis, ent-an-ke-lo-blef-ar-e'tis. Blepharitis with adhesion of the lids to the ball of the eye, *Entankyloblepharon*.

Entanthema, ent-an-tha'mah. Enanthema; eruption on mucous membrane.

Entarthrochondrus, ent-ar-thro-kon'drus (*ento*, within, *arthron*, joint, *chondros*, cartilage). Interarticular cartilage. Loose cartilage in an articulation.

Entarthrotic, ent-ar-throt'ik (same etymon). Within a joint; interarticular.

Enta'sia or **Entasis**, ent'as-is (*en*, *teino*, to stretch). Contracture; tension; tonic spasm. **E. acrotis'mus**, weak pulse with epigastric pain. **E. articula'ris**, tonic spasm or distortion of a joint. **E. lox'ia**, torticollis. **E. lys'sa**, rabies. **E. orch'eos**, epididymitis. **E. priapis'mus**, priapismus. **E. systrem'ma**, cramp. **E. tet'anus**, tetanus. **E. tet'anus anti'cus**, emprosthotonos. **E. tris'mus**, trismus.

Entat'ic (*entatikos*, stretching). Medicine which invigorates the venereal appetite; aphrodisiac.

Entelmintha, ent-el-min'thah (*ento*, *helmins*, worm). Worms.

Entepicon'dyle. Inner condyle of humerus.

En'tera (pl. of **Enteron**, intestine). Intestines; abdominal organs.

Enteradelphia, ent-er-ad-el'fe-ah (*enteron*, *adelphos*, brother). Enadelphia.

Enteradenes, ent-er-ad'en-ees (*enteron*, *aden*, gland). Glands of the intestines.

Enteradenography, ent-er-ad-en-og'raf-e (*enteron*, *aden*, gland, *graphe*, description). Description of intestinal glands.

Enteradenology, ent-er-ad-en-ol'o-je (*enteron, aden,* gland, *logos,* treatise). Anatomy of intestinal glands.

Enteræ'mia (*enteron,* intestine, *haima,* blood). Intestinal congestion.

Enteraërectasis, ent-er-ah-er-ek'tas-is (*enteron, aër,* air, *ektasis,* dilatation). Tympanites; flatulence.

Enteragra, ent-er'ag-rah (*enteron, agra,* seizure). Gout in the intestines.

Enteralgia, ent-er-al'je-ah (*enteron, algos,* pain). Pain in the intestines; colic. **E. acu'ta,** enteritis. **E. inflammato'ria,** enteritis. **E. saturni'na,** colica metallica.

Enterangemphrax'is or **Enterangiemphraxis,** ent-er-an-je-em-fraks'is (*enteron, angeion,* vessel, *emphrasso,* to obstruct). Obstruction of vessels of the intestines.

Enterata, ent-er-at'ah. Animals having distinct and independent intestinal organs.

Enteratrophia, ent-er-at-rof'e-ah (*enteron, atrophia,* want of nutrition). Atrophy of the coats of the intestines.

Enterauxe, ent-er-awks'e (*enteron,* intestine, *auxe,* increase). Hypertrophy of the muscular coat of the intestines.

Enterechema, ent-er-ek-a'mah (*enteron, echema,* sound). Sound of movement of the intestines.

Enterecta'sia or **Enterectasis,** ent-er-ek'tas-is (*enteron, ektasis,* dilatation). Dilatation of the intestines, as in tympanites.

Enterectomy, ent-er-ek'to-me (*enteron, ektomia,* excision). Excision of part of intestine.

Enterelco'sis or **Enterhelcosis,** ent-er-hel-ko'sis (*enteron, helcosis,* ulceration). Ulceration of the intestines.

Enterele'sia or **Enterelosis,** ent-er-el-o'sis (*enteron, eileo,* to involve). Ileus, volvulus.

Enterem'bole (*enteron, embole,* insertion). Intussusception of the bowels.

Enteremphraxis, ent-er-em-fraks'is (*enteron, emphraxis,* obstruction). Obstruction of the intestines.

Enteren'chyta or **Enterenchytes,** ent-er-en'kit-ees (*enteron, en, cheo,* to pour). Instrument for administering injections.

Enterepiplocele, ent-er-ep-ip-lo-se'le (Eng. ent-er-ep-ip'lo-seel). Enteroëpiplocele.

Enterepiplomphalocele, ent-er-ep-ip-lom-fal-o-se'le (Eng. ent-er-ep-ip-lom'fal-o-seel) (*enteron, epiploön,* omentum, *omphalos,* navel, *kele,* rupture). Hernia of the umbilicus, with protrusion of the omentum and intestine.

Enterhelcosis, ent-er-hel-ko'sis (*enteron, helcosis,* ulceration). Ulceration of the intestines. **E. nervo'sa,** typhoid fever.

Enterhypertrophia, ent-er-hip-er-trof'e-ah (*enteron, hypertrophia,* excessive nutrition). Hypertrophy of the coat of the intestines.

Enteria, ent-er'e-ah. Diarrhœa.

Enteric, ent-er'ik (*enteron,* intestine). Intestinal. **E. fe'ver,** typhoid fever.

Enterica, ent-er'ik-ah. Diseases affecting the alimentary canal. Medicines acting upon the alimentary canal.

Enterici morbi, ent-er'is-e mor'be. Diseases of the intestines.

Enterischiocele, ent-er-is-ke-o-se'le (Eng. ent-er-is'-ke-o-seel) (*enteron,* intestine, *ischion,* hip, *kele,* hernia). Intestinal hernia through the greater sciatic notch.

Enteritis, ent-er-e'tis. Inflammation of the intestines. Essential symptoms are violent abdominal pain, increased on pressure, with vomiting and inflammatory fever. Enteritis may affect both the peritoneal and the mucous coat of the intestines, and, in violent cases, all the coats. Inflammation of the serous coat resembles that of the cellular membrane; the inflammation of the mucous coat, that of the skin. The former is usually, therefore, the more active. Inflammation of the mucous coat is generally attended with diarrhœa; inflammation of the peritoneal coat with constipation. Sometimes enteritis passes into a chronic state, requiring much careful management. **E. arthrit'ica,** gout of the abdomen or its contained viscera. **E. catarrha'lis,** intestinal catarrh; superficial e. with mucous discharge. **E., choler'iform,** cholera infantum. **E. col'ica,** colitis. **E., croup'ous,** E., membranous. **E., diphtherit'ic,** E. with adherent white deposit on the lining membrane of the bowels. **E. epiploï'cus,** epiploitis. **E. erythemat'ica,** E., catarrhal. **E., follic'ular,** typhoid fever. **E. folliculo'sa,** typhoid fever; cholera infantum. **E. ili'aca,** E. confined to the ilium. **E., mem'branous,** pellicular inflammation of the bowels in which deposits collect on the lining membrane. **E. mesenter'ica,** mesenteritis; typhoid fever. **E., mu'cous,** E., catarrhal; see *Enteritis.* **E., pellic'ular,** E., membranous. **E., phleg'monous,** severe e., with disposition to formation of abscess. **E. polypo'sa,** chronic catarrhal e., with polypoid growths from the lining membrane. **E., pseudo-mem'branous,** E., membranous; E., diphtheritic. **E. pustulo'sa,** dothinenteritis. **E., stru'mous,** E. folliculosa. **E., ul'cerative,** E. often occurring after middle life, in which the mucous membrane of the colon is partially destroyed by ulceration, and sometimes accompanied by increase of the lumen of the colon and hypertrophy of the muscular parietes. Sometimes contraction of the bowel exists.

Entero (*enteron,* intestine). In composition, intestine.

Entero-arctia, ent'er-o-ark'te-ah (*enteron, arctus,* narrow). Stricture of the bowel.

Enterobius, ent-er-o'be-us (*enteron, bios,* life). Oxyuris vermicularis.

Enterobrosis, ent-er-o-bro'sis (*enteron, brosis,* act of gnawing). Perforation of the intestines.

Enterocace, ent-er-ok'as-e (*enteron, kakos,* evil). Adynamic dysentery, accompanied by phenomena indicating a pseudo-membranous and gangrenous state of the lining membrane of the large intestine.

Enterocatarrhus, ent-er-o-kat-ar'rhus. Catarrh of the intestines.

Enterocele, ent-er-o-se'le (Eng. ent'er-o-seel) (*enteron, kele,* tumor). Abdominal hernia, containing portion of intestine. When it encroaches upon the vaginal canal, it is called enterovaginal hernia, vaginal enterocele, or hernia of the intestine into the vagina. **E., cru'ral** or **fem'oral,** femoral hernia containing intestine. **E., in'guinal,** inguinal hernia containing intestine. **E., par'tial,** hernia involving a portion of bowel only, which may become strangulated and gangrenous. **E., perine'al,** perineal hernia containing intestine. **E., puden'dal,** pudendal hernia containing intestine. **E., rec'tal,** proctocele; rectocele. **E., scro'tal,** inguinal hernia that has passed into the scrotum. **E., vagi'nal,** see *Enterocele.*

Enteroceletes (ent-er-o-sel-a'tees) or **Enterocelicus,** ent-er-o-sa'lik-us (*enteron, kele,* tumor). Affected with intestinal hernia.

Enterocentesis, ent-er-o-sen-ta'sis (*enteron, kentesis,* puncture). Operation of puncturing the bowel.

Enterocephalopyra (ent-er-o-sef-al-op'ir-ah) **infan'tum** (*enteron, kephale,* head, *pur,* fever). Hydrocephalus internus.

Enterocestrion (ent-er-o-ses'tre-on) or **Enteroces'tris,** ent-er-o-ses'tris (*enteron, kestra,* an awl). Instrument for puncturing the bowel.

Enterochirur'gia. Surgery of the intestines.

Enterochlor'ophyll (*enteron, chloros,* green, *phullon,* leaf). Green pigment in the liver and other organs of some of the lower forms of animal life.

Enterocholecystostomy, ent-er-o-kol-e-sis-tost'o-me (*enteron, chole,* bile, *kustis,* bladder, *stoma,* mouth). Cholecystenterostomy.

Enterocholecystotomy, ent-er-o-kol-e-sis-tot'o-me (*enteron, chole,* bile, *kustis,* bladder, *tome,* incision). Operation of making fistulous communication between the gall-bladder and intestine.

Enterocleisis, ent-er-o-kli'sis (*enteron, kleisis,* occlusion). Occlusion or obstruction of the bowel.

Enteroc'lysis. See *Enteroclysm.*

Enteroclysm, ent'er-o-klizm (*enteron, klusma,* wash). Enema; the application or action is called *Enteroclysis.* Especially applied to the injection of nutritive or saline material into the intestine in cholera.

Enterocœle, ent-er-o-ce'le (Eng. ent'er-o-seel) (*enteron, koilia,* abdomen). Cavity of pleura and peritoneum regarded as formed from the primitive alimentary canal; abdominal cavity.

Enterocœ'lic or **Enterocœliac,** ent-er-o-se'le-ak (*enteron, koilia,* abdomen). Relating to the cavity of the abdomen.

Enterocolitis, ent-er-o-ko-le'tis (*enteron, colitis,* inflammation of the colon). Inflammation of the small intestine and colon.

Enterocystocele, en-ter-o-sis-to-se'le (Eng. ent-er-o-sis'to-seel) (*enteron, kustis,* bladder, *kele,* tumor). Hernia of the bladder and intestine.

Enterocystoma, ent-er-o-sis-to'mah. Cystoma or cystic tumor caused by non-obliteration of part of the omphalo-mesenteric duct.

Enterocystoscheocele, ent-er-o-sist-os-ke-o-se'le (Eng. ent-er-o-sist-os'ke-o-seel) (*enteron, kustis,* bladder, *oscheon,* scrotum, *kele,* hernia). Scrotal hernia, contents of which are bowel and bladder.

Enterodarsis, ent-er-o-dar'sis (*enteron, darsis,* skinning). Excoriation of the mucous membrane of the intestines.

Enterodialysis, ent-er-o-de-al'is-is (*enteron, dialusis,* separation). Division of the intestine, as by a cut or other traumatic cause.

Enterodomycodoritis, ent-er-od-o-mik-o-der-e'tis. Enteromycodoritis.

Enterodothie'nia or **Enterodothienosis,** ent-er-o-doth-e-en-o'sis (*enteron, dothien,* pustule). Dothinenteritis; enteric fever.

Enterodynia, ent-er-o-din'e-ah (*enteron, odune,* pain). Pain in the bowel: colic.

Entero-ectasia (ent-er-o-ek-tah'se-ah) or **Enteroectasis,** ent-er-o-ek'tas-is (*enteron, ektasis,* dilatation). Dilatation of the intestines.

Enteroëpiplocele, ent-er-o-ep-ip-lo-se'le (Eng. ent-er-o-ep-ip'lo-seel) (*enteron, epiploön,* omentum, *kele,* tumor). Hernia formed by intestine and omentum. Enterepiplocele.

Enteroëpiplomphalocele, ent-er-o-ep-ip-lom-fal-o-se'le (Eng. ent-er-o-ep-ip-lom'fal-o-seel). Enteroëpiplomphalus.

Enteroëpiplomphalus, ent-er-o-ep-ip-lom'fal-us (*enteron, kele,* omentum, *omphalos,* umbilicus). Umbilical hernia, containing intestine and omentum.

Enterogastrocele, ent-er-o-gas-tro-se'le (Eng. ent-er-o-gas'tro-seel) (*enteron, gaster,* belly, *kele,* tumor). Hernia of stomach and intestine; abdominal or gastric enterocele.

Enterography, ent-er-og'raf-e (*enteron, graphe,* description). Part of anatomy which describes the intestines.

Enterohæmorrhagia, ent-er-o-he-mor-rhaj'e-ah. Passage of blood with the fecal evacuations. See *Entorrhagia.*

Enterohelcosis, ent-er-o-hel-ko'sis. Ulceration of the intestines.

Enterohepatitis, ent-er-o-hep-at-e'tis. Inflammation of bowel and liver.

Enterohydrocele, ent-er-o-hi-dro-se'le (Eng. ent-er-o-hi'dro-seel) (*enteron, hudor,* water, *kele,* tumor). Intestinal hernia complicated with hydrocele.

Enterohydrom'phalus (*enteron, hudor,* water, *omphalos,* navel). Umbilical hernia in which the sac contains, along with a portion of intestine, a quantity of serum.

Enteroïschiocele, ent-er-o-is-ke-o-se'le (Eng. ent-er-o-is'ke-o-seel) (*enteron, ischion,* ischium, *kele,* tumor). Ischiatic hernia formed of intestine.

En'terolith. Calculus or concretion of the intestines. See *Calculi of stomach and intestines.*

Enterolithiasis, ent-er-o-lith-e'as-is (*enteron, lithiasis,* formation of stone). Formation or presence of concretions in the intestines.

Enterolithus, ent-er-ol'ith-us (*enteron, lithos,* stone). Concretion in intestines, sometimes of large size in lower animals. See *Calculi of the stomach and intestines.* **E. bezoar'dus,** bezoar. **E. scyb'alum,** scybala.

Enterology, ent-er-ol'o-je (*enteron, logos,* discourse). Part of anatomy which treats of the intestines.

Enteromala'cia, Enteromalaco'sis, or **Enteromalaxis,** ent-er-o-mal-aks'is (*enteron, malasso,* to soften). Softening of the mucous or other coats of the intestine.

Enteromantis, ent-er-o-man'tis (*enteron, mantis,* a diviner). Engastrimyth.

Enteromelanorrhœa, ent-er-o-mel-an-or-rhe'ah. Melæna.

Enteromenia, ent-er-o-men'e-ah (*enteron, men,* month). Menstruation by the intestines.

Enteromerocele, ent-er-o-mer-o-se'le (Eng. ent-er-o-mer'o-seel) (*enteron, meros,* thigh, *kele,* tumor). Crural hernia, formed of intestine. Femoral enterocele.

Enteromesenteric, ent-er-o-mes-en-ter'ik. Relating to the intestine and mesentery. **E. fe'ver,** typhoid fever in which the intestines are ulcerated, with enlargement of the corresponding mesenteric glands.

Enteromesenteritis, ent-er-o-mes-en-ter-e'tis. Tabes mesenterica.

Enteromorpha compressa, ent-er-o-mor'fa kompres'sah (*enteron, morphe,* shape). One of the Algæ, used by the Sandwich Islanders as an esculent.

Enteromphaloce'le, Enterom'phalus, or **Enterom'phalocele** (*enteron, omphalos,* umbilicus). Umbilical hernia, formed of intestines.

Enteromycoderma, ent-er-o-mik-o-dur'mah (*enteron, mukes,* fungus, *derma,* skin). Mucous membrane of the intestines. When inflamed, the condition is called *Mycodermitis.*

Enteromycodora, ent-er-o-mik-o-do'rah. Enteromycoderma.

Enteromycodoritis. ent-er-o-me-ko-do-re'tis (*enteron, mukos,* mucus, *dora,* skin). Inflammation of the mucous membrane of the intestines.

Enteromycosis, ent-er-o-mik-o'sis (*enteron, mukes,* fungus). Generation of fungi in the intestines.

Enteromyiasis, ent-er-o-me-e'as-is (*enteron, muia,* common fly). Morbid condition of the intestines from larvæ developed in them.

En'teron (*entos,* within). Intestine, uterus.

Enteron'cos or **Enteroncus,** ent-er-on'kus (*enteron, onkos,* tumor). Tumor of the intestines.

Enteronervia (ent-er-o-nur've-ah) or **Enteroneuria,** ent-er-o-nu're-ah (*enteron, nervus* or *neuron,* nerve). Morbid condition of the intestines from disturbed action of the nerves.

En'tero-oscheoce'le (Eng. ent-er-o-osk'e-o-seel). See *Enteroscheocele.*

Enteroparalysis, ent-er-o-par-al'is-is. Paralysis of the intestines.

Enteroparisagoge, ent-er-o-par-is-ag-o'ge (*enteron, para, eis,* in, *ago,* to lead). Intussusception of the bowels.

Enteropathi'a. Enteropathy.

Enteropathy, ent-er-op'ath-e (*enteron, pathos,* disease). Disease of the intestines in general. **E., can'cerous,** cancer of the intestines.

Enteroperistole, ent-er-o-per-is'to-le (*enteron, peristello,* to contract). Constriction or obstruction of the intestines, from a cause acting either within the abdomen or without it, as in strangulated hernia. Peristaltic action of the intestines.

Enteroperitonitis, ent-er-o-per-it-o-ne'tis. Inflammation of the peritoneal coat of the intestines.

Enterophlo'gia or **Enterophlogosis,** ent-er-o-flog-o'sis (*enteron, phlogoo,* to inflame). Enteritis.

Enterophthisis, ent-er-o-te'sis (*enteron, phthisis,* consumption). Consumption of the bowels. Consumption due to suppuration in the intestines.

Enterophymata, ent-er-o-fe'mat-ah (sing. **Enterophy'ma**) (*enteron, phuma,* swelling). Tubercles of the intestines.

Enteroplastic, ent-er-o-plas'tik. Relating to enteroplasty.

Enteroplastice, ent-er-o-plas'tis-e. Enteroplasty.

Enteroplasty, ent'er-o-plas-te (*enteron, plasso,* to form). Plastic operation for restoration of the intestine.

Enteroplegia, ent-er-o-plej'e-ah (*enteron, plege,* stroke). Paralysis of the intestine.

Entero-pneumatosis, ent-er-o-nu-mat-o'sis (*enteron,*

pneuma, air). Morbid generation and accumulation of intestinal gas.

Enteroponus, ent-er-op'on-us (*enteron, ponos*, pain). Enteralgia, colic.

Enteroproctia, ent-er-o-prok'te-ah. Artificial anus. Colostomy.

Enteroptosis, ent-er-o-to'sis (*enteron, ptosis*, falling). *Glenard's disease.* Falling or dragging down (prolapse) of the bowel from relaxed condition or decreased tension of the walls of the abdomen, frequently with movable kidney or liver and narrowness of the bowel. Prolapsus ani.

Enteropyra, ent-er-op'ir-ah (*enteron, pur*, fever). Enteritis. Intestinal fever; typhoid fever. Enteromesenteric fever. **E. Asiat'ica**, cholera Asiatica. **E. bilio'sa**, bilious fever.

Enterorrhagia or **Enterorrhagy**, ent-er-or'rhaj-e (*enteron, rhage*, rupture), Hemorrhage or excessive discharge from the bowels. **E., sim'ple**, discharge of blood with the fecal evacuations.

Enterorrhaphy, ent-er-or'rhaf-e (*enteron, rhaphe*, suture). Suture of the intestines, for the relief of injuries to them.

Enterorrheuma, ent-er-or-rhu'mah (*enteron, rheuma*, defluxion, rheumatism). Rheumatism of the intestines.

Enterorrhexis, ent-er-or-rheks'is (*enteron, rhesso*, to break). Rupture or laceration of the intestines.

Enterorrhœa, ent-er-or-rhe'a (*enteron, rheo*, to flow). Diarrhœa; melæna.

Enterorrhois, ent-er-or'rho-is (*enteron, rhoos*, a stream). Slight hemorrhage or oozing of blood from the bowels.

Enterosarcocele, ent-er-o-sar-ko-se'le (Eng. ent-er-o-sar'ko-seel) (*enteron, sarx*, flesh, *kele*, tumor). Intestinal hernia complicated with fleshy excrescence, or sarcocele.

Enterosarcoma, ent-er-o-sar-ko'mah (*enteron, sarx*, flesh). Sarcoma or cancer of the intestines.

Enteroscheocele or **Enteroschocele**, ent-er-os-ko-se'le (Eng. ent-er-os'ko-seel) (*enteron, oscheon*, scrotum, *kele*, tumor). Scrotal hernia consisting of intestine; scrotal enterocele.

Enteroscirrhus, ent-er-o-skir'rhus. Scirrhus or cancer of the intestines.

Enteroscope, ent'er-o-skope (*enteron, skopeo*, to see). Instrument for inspection of the bowel by aid of reflected light, the process being called *Enteroscopy.*

Entero'ses. Diseases of the intestines.

Enterospasmus, ent-er-o-spaz'mus. Spasmodic colic.

Enterosphigma, ent-er-o-sfig'mah (*enteron, sphingo*, to bind tightly). Intestinal constriction; strangulated hernia. See *Enteroperistole.*

Enterosphinxis, ent-er-o-sfinks'is (same etymon). Formation of intestinal stricture or enterosphigma.

Enterosphongio'ma (*enteron, sphongos*, fungus). Fungous growth of the intestines.

Enterostenosis, ent-er-o-sten-o'sis (*enteron, stenosis*, stricture). Stricture or constriction of the intestines; ileus. **E. organ'ica**, cancer of intestines. **E. scirrho'sa**, cancer of the intestines. **E. vol'vulus**, ileus.

Enterostomy, ent-er-os'to-me (*enteron, stoma*, mouth). Operation for making fistulous opening in the bowel by incision and suture, so that food may be administered by this channel in case of obstruction in any part of the alimentary canal above it.

Enterosymphore'ma or **Enterosymphoresis**, ent-er-o-sim-for-a'sis (*enteron, sumphoreo*, to bring together). Congestion of the intestines.

Enterotome, ent'er-o-tome (*enteron, tome*, incision). Instrument for promptly opening the intestinal canal through its whole extent, for autopsies. Clamp used in artificial anus to cut through the spur.

Enterotomy, ent-er-ot'o-me (same etymon). Dissection of the intestines. In surgery, operation to open the intestines in order to evacuate the fecal matters, as in hernia accompanied with contraction of the intestinal canal; or to create an artificial anus in the new-born where the rectum is imperforate or not existing, etc.

Enteroty'phus. Enteric fever.

Enterovaginal, ent-er-o-vaj-i'nal. Intestinovaginal; relating to the intestine and vagina, as E. fistula, artificial opening between the two parts mentioned.

Enterozoa, ent-er-o-zo'ah (*entero, zoön*, animal). Intestinal worms or other parasites.

Ent'erum. Intestine; uterus.

Enteruria, ent-er-u're-ah (*enteron, ouron*, urine). Excretion of the component parts of urine by the bowels.

Enterydrocele, ent-er-id-ro-se'le (Eng. ent-er-id'-ro-seel) (*enteron, hudor*, water, *kele*, rupture). Intestinal hernia with hydrocele; scrotal enterocele with hydrocele.

Enterydromphalus, ent-er-id-rom'fal-us (*enteron, hudor*, water, *omphalos*, navel). Umbilical intestinal hernia, with effusion into the hernial sac.

Enteryperpathia, ent-er-ip-er-path-e'a (*enteron, hyper*, over, *pathos*, suffering). Severe disease of the intestines.

Enterypopathia, ent-er-ip-o-path-e'ah (*enteron, hypo*, under, *pathos*, suffering). Slight disease of the intestines.

Enthelminta or **Enthemata**, enth-em'at-ah (*entithemi*, to place in). Medicines that check inflammation or hemorrhage in wounds.

Enthelminthes, enth-el-minth'ees (*ento, helmins*, worm). Intestinal worms.

Entheoma'nia (*en, theos*, God, *mania*). Demonomania; religious mania.

Enthet'ic (*enthetos*, introduced). Introduced from without; as enthetic diseases, those produced by inoculation or infection.

Enthlasis, enth'la-sis (*en, thlao*, to break). Fracture, especially of the cranium, with comminution, in which the bone is depressed or has lost its level, *E. cranii.*

Enthusiasm, en-thu'ze-azm. Term sometimes applied to maniacal raving.

Enthysterophyma, ent-his-ter-o-fe'mah (*en, hustera*, uterus, *phuma*, growth). Abnormal growth in the uterus or projecting into it.

Entity, ent'it-e (*ens*, being). Being or essence of anything. General or essential disease, the nature of which cannot be determined.

Ento (*entos*, within). In composition, within.

Entobainontes, ent-o-bi-non'tees (*ento*, within, *baino*, to go). Sensory nerves.

En'toblast (*ento, blastos*, germ). Nucleus; rudimentary hypoblast; nucleolus. See *Cytoblast* and *Molecule.*

Entocarotid, ent-o-kar-ot'id. Internal carotid artery.

Entocele, ent-o-se'le (Eng. ent'o-seel) (*ento, kele*, rupture). Internal hernia. **E. len'tis**, dislocation of the crystalline into the anterior chamber of the eye.

Entocephalic, ent-o-sef-al'ik (*ento, kephale*, head). Intercranial.

Entocinerea, ent-o-sin-e're-ah (*ento, cinereus*, gray). Central gray matter of brain and spinal cord.

Entocœlial, ent-o-se'le-al. Between the ventricles of the brain; intraventricular.

Entocœlic, ent-o-se'lik (*ento, koilia*, intestines). Within the intestines.

Entocranial, ent-o-cra'ne-al. Within the cranium.

Entocuneiform, ent-o-ku'ne-e-form. Internal cuneiform bone.

Entoderm, ent'o-durm (*ento, derma*, skin). Internal germ-layer; hypoblast; blastoderm.

Entogas'tric (*ento, gaster*, stomach). Within the stomach or abdominal organs.

Entogastrocnemius, ent-o-gas-trok-ne'me-us. Gastrocnemius internus muscle.

Entogenous, ent-oj'en-us (*ento, gennao*, to produce). Developing from within.

Entoglossal, ent-o-glos'sal (*ento, glossa*, tongue). Within the substance of the tongue.

Entogluteus, ent-o-gloo-te'us. Glutæus minimus muscle.

Entogonyancon, ent-o-gon-e-an'kon (*ento, genu*, knee, *ankon*, bend). Calf-knee, X leg. Bending of

the knees inward. State of being knock-kneed or in-kneed.

Entohyaloid, ent-o-hi'al-oid. Within the vitreous humor. **E. mus'cæ,** see *Metamorphopsia.*

Entome, en'to-me (*en, tome,* incision). Scarificator for stricture of the urethra.

Entomere, ent'o-mere (*ento, meros,* part). Cell resulting from early segmentation of the ovum, entering afterward into formation of the hypoblast.

Entomiasis, ent-o-me'asis (*entoma,* insects). Disease caused by insects.

Entomion, ent-o'me-on. Anterior point of mastoid angle of parietal bone.

Entomol'ogy (*entomon,* insect, *logos,* discourse). Description of, or treatise on, insect life.

Entomo'ses. Erosive catarrhs of the skin due to animal parasites, as lice, fleas, etc.

Entonia, en-ton'e-ah. Tension; tonic spasm.

Entonic, en-ton'ik (*en, tonos,* tone). Having great tension or exaggerated action.

En'tonus. Entonic.

Entopar'asites. Intestinal worms.

Entoparasitism, ent-o-par'a-sit-izm. Existence or presence of a parasite in the interior of the body or of any organ.

Entophthalmia, ent-of-thal'me-ah. Ophthalmia affecting the interior of the eye.

Entophyte, ent'o-fite (*ento, phuton,* vegetable). Vegetable parasite, especially one growing in the interior of the body. See *Parasites* and *Fungus.*

Entophytic, ent-o-fit'ik. Of or belonging to an entophyte.

Entopic (en-top'ik) (*en, topos,* place). In a natural place. **E. preg'nancy,** see *Pregnancy, natural.* **E. pulse** is due to pulsation of arteries which act as mechanical irritants to the rods situated outside of them.

Entoplastic, ent-o-plas'tik (*ento, plasso,* to form). Epithet for tissues developed through changes within the cells themselves.

Entopterygoid, ent-o-ter'e-goid. Internal alæ or wings of sphenoid; internal pterygoid muscle.

Entoptic (ent-op'tik) or **Entop'tical** (*ento, opsis,* vision). Relating to the vision of objects within the organ of sight, as of the blood-vessels of the retina. **E. phenom'ena,** phenomena depending upon perception of objects which are present within the eyeball.

Entoptoscopy, ent-op-tos'ko-pe (*ento, ops,* eye, *skopeo,* to see). Examination of interior of the eye of another; or examination of the media and retinal coat of one's own eye.

Entorbital, ent-or'bit-al. On the inner side of the orbit or orbital lobes.

Entorganism, ent-or'gan-izm. Entoparasite.

Entorrhinal, ent-or-rhi'nal (*ento, rhis,* nose). On or to the inner side of the nose.

Entoscope, ent'o-skope. Endoscope.

Entosphenoid, ent-o-sfe'noid. On or to the inner side of the sphenoid bone. **E. bone,** anterior sphenoid bone of fishes.

Entosteomyces, ent-ost-e-om'is-ees (*ento, osteon, mukes,* fungus). Fungous growth in interior of a bone.

Entostethid'ia or **Entosthia,** ent-os'the-ah. Intestines.

Entosthoblast, ent-os'tho-blast (*entosthe,* within, *blastos,* germ). Granule within a cell-nucleus. See *Cytoblast* and *Molecule.*

Entostosis, ent-os-to'sis (*ento, osteon,* bone). Enostosis.

Entosylvian, ent-o-sil've-an. Within the fissure of Sylvius.

Entotentorial, ent-o-ten-to're-al. To the inner side of the tentorial convolution or fissure.

Entothalamus, ent-o-thal'am-us. Inner gray thalamic zone.

Entotic, ent-ot'ik (*ento, ous,* ear). Within the ear; relating to the internal ear.

Entotorrhœa, ent-o-tor-rhe'ah (*ento, otorrhœa*). Discharge of purulent or puriform matter into the middle or internal ear; internal otorrhœa.

Entotrochanter, ent-o-tro-kan'tur. Trochanter minor of femur.

Entotympanic, ent-o-tim-pan'ik. Within the tympanum.

Entoxica'tio, Entoxicis'mus, or **Entoxismus,** ent-ox-iz'mus (*en, toxicon,* poison). Poisoning.

Entozæna, ent-o-ze'nah (*ento, ozæna*). Ozæna.

Entozoa, ent-o-zo'ah (*ento, zoön,* animal) (pl. of **Entozoon**). Animals adapted to living in the interior of other animals. See *Parasites* and *Worms.*

Entozo'al. Relating to entozoa.

Entozoaria, ent-o-zo-ar'e-ah. Entozoa. See *Parasites* and *Worms.*

Entozoögenesis, ent-o-zo-o-jen'is-is (*entozoa, genesis,* generation). Generation of worms. Helminthiasis.

Entozoölogy, ent-o-zo-ol'o-je (*entozoa, logos,* description). Helminthology.

Entozoöma, ent-o-zo-o'mah (*ento, zoon,* animal). Tumor produced by collection of fluid, being made up of entozoa cysts, as the echinococcus.

Entozoön, ent-o-zo'on. Entoparasite. See *Entozoa.* **E. folliculo'rum,** Acarus or Demodex folliculorum.

Entozoö'sis. Entozoögenesis.

En'trails (*enteralia,* word of low Latin, from *enteron,* intestine). Viscera enclosed in the splanchnic cavities, especially those in the abdomen; the bowels or intestines, taken collectively.

Entrichiasis, en-trik-e'as-is. Trichiasis; see *Entropion.*

Entrichoma, en-trik-o'mah (*en, thrix,* hair). Tarsal cartilage, and the edge of the eyelids, in which the cilia are implanted. Trichiasis. See *Entropion.*

Entropion (en-tro'pe-on) or **Entro'pium** (*en, trepo,* to turn). Inversion of the eyelids, so that the eyelashes irritate and inflame the globe of the eye, giving rise to the affection called *Trichiasis.* **E. muscula're,** E. of the eyelid from irritation of the cornea or conjunctiva, or affection of the ball producing contraction of the orbicularis muscle. **E. palpebra'le,** E. of the eyelid. **E. seni'le,** E. caused by shrinking of the eyeball in old persons. **E. spasmod'icum** or **spas'ticum,** E. musculare. **E. tarsa'le,** E. of the eyelid, the tarsus being mainly implicated from chronic conjunctivitis of the lids.

Entyposis, en-tip-o'sis. Glenoid cavity of scapula.

Enucleation, e-nu-kle-a'shun (*enucleo,* to take out a kernel). Operation of removing tumors, eyeball, etc., by detaching them from their connections, without cutting into them.

Enucleator, e-nu'kle-a-tor. Instrument for performing enucleation.

Enucleolar, e-nu-kle'o-lar (*e, nucleolus*). Devoid of nucleolus.

Enula (en'u-lah). Inula. **E. campana,** kam-pan'ah, Inula helenium.

Enulon, en-u'lon (*en, oulon,* the gum). Inner part of the gums.

Enuresis, en-u-re'sis (*en, oureo,* to void the urine). Involuntary discharge of urine; incontinence of urine. It is most common in advanced life, and may depend on the irritability of the bladder, distension or injury of the fibres about its neck, paralysis of the organ, *cystoparalysis, cystoplegia;* the presence of calculus in the urethra; rupture of the bladder and urethra; renal disease; pressure exerted on the bladder by a distended womb or a tumor, or after difficult labor. **E. noctur'na,** nocturnal incontinence of urine. **E. spas'tica,** E. dependent upon spasm of the bladder.

En'velopes, fœ'tal. Chorion and amnion. **E., nu'clear.** See *Nuclear.*

Envi'ronment. Influences or surroundings affecting the life of an individual.

Enypnion, en-ip'ne-on (*en, hupnos,* sleep). Dream.

Enystron, en-is'tron (*anuo,* to complete). Abomasus.

Enzoon, en-zo'on. Entozoon.

Enzoono'mia (*en, zoon,* animal, *nomos,* law). Natural history of entozoa.

Enzoötia or **Enzoöty,** en-zo'o-te (*en, zoon,* animal). Endemic disease attacking animals.

Enzoötic, en-zo'ot-ik. Relating to enzoöty. **E. parapleg'ia,** grass staggers of horses.

Enzymes, en'zimes (*en, zume,* ferment). Ferments produced in the human body, and resembling ferments generally in their action; restricted by some to such ferments as diastase, ptyalin, and pepsin; see *Ferments.* The chief enzymes, according to Brunton, are the following:

TABLE OF ENZYMES.

DIASTATICOR AMYLOLYTIC FERMENTS.	Which convert starch and amyloids into maltose	Diastase from malt. Ptyalin from saliva. Amylopsin from pancreas. Other ferments having a similar action from other parts of the body.
	Which convert maltose into glucose	From small intestine.
INVERSIVE FERMENTS.	Which convert cane-sugar into dextrose and levulose	Invertin from the intestinal juice. " " mucus of the mouth. " " tissue of the testis.
	Which decompose glucosides	Emulsin from bitter almonds. Myrosin from mustard.
	Decomposing sugar	Rennet.
	Decomposing fats	From stomach. From pancreas (Stearopsin).
PROTEOLYTIC FERMENTS.	Which decompose proteids and form peptones	Pepsin from stomach. Trypsin from pancreas. Others from saliva. Histozyme.

Enzymology, en-zi-mol'o-je (*en, zume,* ferment, *logos,* description). Description of ferments; science of fermentation.

Enzymosis, en-ze-mo'sis (same etymon). Fermentation caused by pressure of an enzyme.

Eosin, e'o-sin (*eos,* daylight). $C_{20}H_8Br_4O_5$. Red dye from coal-tar, used for microscopic staining.

Eosinophile, e-os-in'o-file (*eosin, phileo,* to love). Taking eosin stain promptly. **E. gran'ules.** granules in blood-cells in leukæmia, staining with eosin or other aniline dyes.

Ep, Eph, Epi (upon, above). In composition, generally mean augmentation, addition, increase, reciprocal action, repetition. Hence—

Epacmastic, ep-ak-mas'tik (*ep, akmazo,* to increase). Epithet applied to fevers whose symptoms go on augmenting in violence.

Epactal, e-pak'tal (*epaktos,* acquired). Foreign or adventitious. **E. bone,** interparietal bone.

Epagogiitis, ep-ag-o-ge-e'tis (*epagogion,* prepuce, *itis,* inflammation). Inflammation of the prepuce.

Epagogiolith, ep-ag-o'ge-o-lith (*epagogion,* prepuce, *lithos,* stone). Preputial calculus.

Epagogium (ep-ag-o'ge-um) (*ep, ago,* to draw) or **Epigo'gion** (*epagogion,* prepuce). Phimosis.

Epanadiplosis, ep-an-ad-ip-lo'sis (*ep, anadiplosis,* redoubling). Redoubling occurring in a paroxysm of an intermittent when its type is double.

Epanalepsis, ep-an-al-ep'sis (*ep, analepsis,* convalescence). Convalescence.

Epanastasis, ep-an-as'tas-is (*epanistemi,* to cause to rise up). Formation of a tumor; breaking out of an eruption; pustule.

Epanastema, ep-an-as-te'mah. Exanthem; swelling; pustule; caruncle,

Epanesis, ep-an'es-is (*epaniemi,* to remit). Remission.

Epanetus, ep-an'et-us. Remittent. **E. hec'ticus,** hectic fever. **E. malig'nus,** remittent fever. **E. malig'nus fla'vus,** fever, yellow. **E. mi'tis,** mild remittent fever.

Epanorthosis, ep-an-or-tho'sis (*ep, anorthoo,* to make straight). Restoration to health or to normal place or condition.

Epanthe'ma, Epanthe'sis, or **Epanthisma,** ep-anthiz'mah (*ep, anthos,* flower). Exanthem.

Epaphæresis, ep-af-e'res-is (*ephaireo,* to take away). Repeated abstraction or evacuation, as by bloodletting.

Epaphrismus, ep-af-riz'mus (*ep, aphros,* froth). Despumation.

Epar'ma or **Eparsis,** ep-ar'sis (elevation). Tumor.

Eparterial, ep-ar-te're-al (*epi, arteria*). Above an artery. **E. bron'chus,** portion of right bronchus given off above place of crossing of the pulmonary artery.

Epaxial, ep-aks'e-al (*epi, axis*). Above the axis; episkeletal. **E. arch'es,** arches formed by pedicles, laminæ, and spine of vertebra. **E. car'tilages,** cartilages designed to become afterward vertebral arches. **E. mus'cles,** muscles formed above the spinal axis, as internal portion of erector spinæ and muscles continuous with it.

Epechonto'cic (*epecho,* to restrain, *tokos,* parturition). Restraining the contractile action of the uterus.

Epencephalic, ep-en-sef-al'ik (*epi, enkephalos,* brain). Above the brain; relating to the epencephalon. **E. arch,** neural arch of occipital vertebra.

Epencephalon, ep-en-sef'al-on (same etymon). One or two primary divisions of the posterior vesicle, consisting of cerebellum and pons Varolii, with upper portion of fourth ventricle.

Epenchyma, ep-en'ke-mah (*epi, enchuma,* blastema). Tissue superimposed over another, as mucous membrane; fibro-vascular tissue.

Epencranis, ep-en-kran'is (*ep, en, kranion,* skull). Cerebellum.

Epen'dyma or **Ependymus,** ep-en'dim-us (upper garment or cloak). Membrane. **E. ventriculo'rum,** lining membrane of the ventricles of the brain and spinal canal, formed by a prolongation of the pia mater.

Ependymi'tis. Inflammation of the ependyma.

Epacme, ep-ak'me (*epi,* upon, *akme,* summit). Increased activity; exacerbation (of fever or other disease).

Epagoge, ep-ag-o'ge (*epago,* to bring in). Congestion; compression.

Eph, in composition. See *Ep.*

Epheba, ef-e'bah. Girl at age of puberty.

Ephebæ'on or **Ephebæum,** ef-eb-e'um (*eph, hebe,* pubes). Parts of generation; region of the pubes; hair upon the pubes; part of the ancient gymnasium.

Ephebe'ia or **Ephebia,** ef-e-be'ah. Age of puberty.

Ephebosyne (ef-e-boz'in-e) or **Ephebotes,** ef-e-bo'tees. Puberty.

Ephebus, ef-e'bus. One who has attained the age of puberty.

Ephedra andina, ef'ed-rah and-e'nah. Pingopingo. Small roots are diuretic, and used in affections of the bladder. **E. antisyphilit'ica,** teamster's tea; canutillo; shrub of W. United States, used in venereal diseases. **E. distach'ya,** shrubby horsetail; plant of Europe, berries of which are used in diarrhœa and excessive menstrual discharge. **E. equiseti'na,** species growing in Asia; used in syphilis. **E. fla'va,** species from Asia; diaphoretic and astringent. **E. frag'ilis,** species of S. Europe and Africa; astringent. **E. marit'ima,** E. distachya. **E. monostach'ya** or **polygonoi'des,** species of E. Europe and N. Asia; diaphoretic. **E. trifurca'ta,** shrub used in gonorrhœa, leucorrhœa, and diseases of the kidney. **E. vulga'ris,** steppe raspberry of Russia; used in rheumatism and syphilis.

Ephedrana, ef-ed'ran-ah (*eph, hedra,* seat). Nates.

Ephedrine, ef'ed-reen. Alkaloid derived from Ephedra vulgaris; the hydrochloride is used to dilate the pupil. Also a cardiac depressant.

Ephelcis, ef-el'sis (*eph, helcos,* ulcer). Crust or scab of an ulcer; clotted bloody sputum.

Ephelides, ef-el'id-ees (*eph, helios,* sun). Freckles; sun-spots; sunburn. Yellow lentigines appearing on persons of fair skin, and larger brown patches also arising from exposure to the direct rays of the sun. Similar dusky patches may occur on parts constantly covered. See *Chloasma, Lentigo,* and *Epichrosis.*

Ephelis, ef-e'lis. *See Ephelides.* **E. al'ba,** vitiligo, achroma. **E. gravida'rum,** chloasma gravidarum. **E. hepat'ica,** chloasma hepaticum. **E. lenticula'ris,** lentigo; see *Ephelides.* **E. lenti'go,** ephelides. **E. lu'tea,** icterus neonatorum. **E. sola'ris,** erythema caloricum; chloasma caloricum. **E. a so'le,** ephelides. **E. umbro'sa,** chloasma.

Ephelkosis, ef-el-ko'sis (*epi, helko,* to draw). Operation of pulling or drawing upon an organ, as the uterus, thus utilizing it for closure of a fistula or ruptured septa. See *Hystero-ephelkosis.*

Ephelotes, ef-e'lot-ees (*eph, helos,* nail). Leucoma.

Ephemera, ef-em'er-ah (*epi, hemera,* day). That which continues a day. Epithet given to diseases, particularly fevers, which last only a day or a very short time, as ephemeral, diary, or simple fever. The term prolonged ephemera is used for fevers which cease after two or three days' duration. **E. An'glica pes'tilens, Britan'nica,** or **malig'na,** sudor Anglicus. **E. mortif'era,** plague. **E. pestilentia'lis,** plague. **E. puerpera'lis,** weed; fever occurring a few days after delivery, generally accompanied by diminution of milk and of the lochia. **E. sudato'ria,** sudor Anglicus.

Ephemeral, ef-em'er-al. Lasting for a day; transitory, as ephemeral fever or ephemeral mania.

Ephemerocnido'sis (*ephemera, knidosis,* stinging sensation like that of nettles). Ephemeral urticaria.

Ephemeron, ef-em'er-on. Colchicum autumnale.

Ephemeropyra, ef-em-er-op'ir-ah (*ephemera, pur,* fever). Ephemeral fever.

Ephemerus, ef-em'er-us. Ephemeral; quotidian.

Ephialtes, ef-e-al'tees (*eph, allomai,* to leap). Nightmare; incubus. **E. hypochondri'aca,** incubus vigilantium. **E. noctur'na,** incubus. **E. vigilan'tium,** incubus vigilantium.

Ephidroses, ef-id-ro'sees. Morbid varieties of sweating

Ephidrosis, ef-id-ro'sis (*eph, hidroo,* to sweat). Sweating; critical sweat; copious sweat. **E. areno'sa,** perspiration which leaves, on drying, particles like sand. **E. cæru'lea,** blue-colored sweat, a form of chromidrosis. **E. cruen'ta,** sweating of blood; sudor Anglicus. **E. dis'color,** colored sweat. **E. of the eye'lids,** hyperidrosis of the sweat-glands of the eyelids. **E. fla'va,** yellow sweat, form of chromidrosis. **E. idiopath'ica,** hyperidrosis. **E. lac'tea,** milky sweat, galactidrosis. **E. mel'lea** or **oleagino'sa,** sweat resembling honey; seborrhœa oleosa. **E. o'leus,** sweat having an unusual odor. **E. partia'lis,** local sweating. **E. profu'sa,** excessive or colliquative sweating, generally owing to debility, and requiring the use of tonics, especially of the mineral acids, opium, etc. **E. sacchara'ta,** discharge of saccharine matter by perspiration, as in diabetes mellitus. **E. spontan'ea,** hyperidrosis. **E. urino'sa,** urinous sweating. **E. vir'idis,** green sweat, as in the axillæ.

Ephippial, ef-ip'pe-al. Relating to the ephippium or sella turcica. **E. an'gle,** sphenoidal angle.

Ephippium, ef-ip'pe-um (*eph, hippos,* horse). Sella turcica.

Eph'odos or **Eph'odus** (*epi, hodos,* way). Invasion of disease. Outlet for discharge of excrement.

Epi, in composition. See *Ep.*

Epialos, ep-e'al-os. Fever in which the hot stage is mingled with irregular chills. Cold stage of fever.

Epialtes, ep-e-al'tees (*epi, allomai,* to leap). Incubus.

Epiama, ep-e-am'ah (relief). Palliative medicine.

Epian, ep-e'an. Frambœsia.

Epiblast, ep'e-blast (*epi, blastos,* germ). External germ-layer, or upper layer of blastoderm, from which the nerve-centres and epidermis are developed. Ectoderm. **E., neu'ral,** portion of epiblast from which the nervous system is developed.

Epiblastic, ep-e-blas'tik. Relating to the epiblast. **E. sphere,** ectomere.

Epiblepharon, ep-e-blef'ar-on. Duplication or fold of the upper lid near the inner canthus of the eye; epicanthis.

Epibole, ep-ib'o-le (*epi, ballo,* to cast). Incubus. See *Epiboly.*

Epibolic, ep-e-bol'ik (*epi, ballo,* to cast). Investing, as **E. mem'brane,** investing membrane.

Epiboly, ep-ib'o-le. Development of gastrula when the outer germ-layer grows over and encloses the yolk. Epibole.

Epibul'bar. Upon the eyeball. Epithet applied to tumors growing on the outer surface of the eye.

Epicanthis (ep-e-kan'this) or **Epican'thus** (*epi, kanthos,* the angle of the eye). Defective formation in which a fold of skin passes from the root of the nose over the inner canthus of the eye. In the plural, *epicanthides*—the angles of the eye.

Epicardium, ep-e-kar'de-um (*epi, kardia,* the heart). Visceral layer of the pericardium.

Epicarpium, ep-e-kar'pe-um (*epi, karpos,* the wrist). Application made to the wrists or to the region of the pulse.

Epicau'ma or **Epicausis,** ep-e-kow'sis (*epi, kauo,* to burn). Burn. Blister from a burn. Perforating ulcer of the cornea; gangrenous inflammation of the eyelids.

Epicentral, ep-e-sen'tral. Upon or attached to the centre of a vertebra.

Epicephalus, ep-e-sef'al-us. Epicomus.

Epicerastic, ep-e-ser-as'tik (*epi, kerannumi,* to temper). Emollient.

Epicerebral, ep-e-ser'e-bral. Above or over the brain; that is, below the pia mater.

Epicholous, ep-ik'o-lus (*epi, chole,* bile). Bilious.

Epichord'al (*epi, chorde,* cord). Above the notochord.

Epichordis, ep-e-kor'dis (*epi, chorde,* gut). Mesentery.

Epichorial, ep-e-ko're-al. Relating to the epichorion. On the chorion or corium.

Epichorion, ep-e-ko're-on (*epi, chorion,* skin). Decidua flexa; epidermis.

Epichor'ium. Epidermis.

Epichrisis, ep-ik'ris-is (*epi, chriso,* to anoint). Inunction.

Epichrosis, ep-ik-ro'sis (*epi, chroma,* color). Simple discoloration of the skin. Ephelides. **E. alpho'sis,** albinism. **E. auri'go,** peculiar yellowish color of skin of new-born children; jaundice of the new-born. **E. ephe'lis,** see *Chloasma.* **E. lentic'ula,** lentigo. **E. leucas'mus,** partial privation of color of skin. **E. partia'lis,** liver-spot; partial discoloration of skin. **E. pescil'ia,** partial loss of color of skin. **E. spi'li,** see *Nævus.* **E. spi'lus,** mote; see *Nævus.*

Epichysis, ep-ik'is-is (*epi, chuo,* to pour). Affusion.

Epicœ'le or **Epicœl'ia** (*epi, koilia,* cavity). Fourth ventricle.

Epicœlides, ep-e-se'lid-ees (*epi, cilium,* the eyelash). Cilia or eyelashes. See *Palpebra* (superior).

Epicœmasis, ep-e-se'mas-is (*epi, koimaomai,* to lie down to rest). Position or act of sleeping.

Epicolic, ep-e-kol'ik (*epi, colon*). On the colon. *Epicolic regions* are those parts of the abdomen corresponding to the colon.

Epicollesis, ep-e-kol-la'sis (*epi, kolla,* glue). Agglutination.

Epicoma or **Epicomus,** ep-e-ko'mus (*epi, kome,* hair). Double monstrosity in which the two individuals are united by the head. See *Cephalopagus parasiticus.* The monster is called an *Epicome.*

Epicondylar, ep-e-kon'dil-ar. Relating to the epicondyle. **E. mus'cles,** muscles connected by a single tendon with the epicondyle.

Epicondyle, ep-e-kon'dile (*epi, kondulos,* condyle). Eminence at the outer part of the inferior extremity of the os humeri, so called because it is seated above the condyle. It gives attachment to the outer lateral ligament of the elbow-joint, and to a very strong tendon to which several muscles of the posterior part of the forearm are attached.

Epicondylo-cubitalis, ep-e-kon'dil-o-ku-bit-al'is. Anconeus.

Epicondylo-cu'bito-metacar'pal mus'cle. Extensor carpi ulnaris.

Epicondylo-inter'na. Internal condyle of humerus.

Epicondylo-phalangettia'nus commu'nis. Extensor communis digitorum.

Epicondylo-præmetacar'peus. Extensor metacarpi magnus.

Epicondylo-radia'lis. Supinator radii brevis.

Epicondylo-suprametacarpia'nus. Extensor carpi radialis brevior.

Epicondylo-supraphalangettia'nus. Extensor communis digitorum. **E.-s. min'imi dig'iti.** Extensor minimi digiti.

Epicondylus, ep-e-kon'dil-us. Epicondyle. **E. extenso'rius** or **exter'nus,** external condyle of the humerus. **E. flexo'rius,** epitrochlea; internal condyle of the humerus. **E. inter'nus,** epitrochlea. **E. latera'lis,** external tuberosity of the humerus; see *Epicondyle.* Inner tuberosity of the thigh-bone. **E. media'lis,** epitrochlea.

Epicophosis, ep-e-kof-o'sis (*epi, kophosis,* deafness). Deafness supervening on another disease.

Epicoracoid, ep-e-kor'a-koid. Upon the coracoid process. **E. bone,** coracoid bone of fishes, so placed as to obtain the name *postclavicle.*

Epicostal, ep-e-kos'tal (*epi, costa,* rib). Upon a rib or ribs.

Epicranial, ep-e-kra'ne-al. Relating to the epicranium. Upon the skull. **E. aponeuro'sis,** membrane or aponeurosis covering almost the entire surface of the head. **E. mus'cle,** occipito-frontalis muscle.

Epicranium, ep-e-kran'e-um (*epi, kranion,* cranium). Name given to different parts seated on the cranium, as skin, aponeurosis between occipital and frontal muscles, and whole scalp. Some include under this name the occipito-frontalis muscle, pyramidalis nasi, and superior and anterior auricular muscles. Pericranium.

Epicra'nius. Occipito-frontalis alone, or with auricularis muscle. **E. fronta'lis,** frontalis, subcutaneous muscle of frontal region. **E. occipita'lis,** occipitalis muscle. **E. tempora'lis,** attrahens aurem.

Epicrasis, ep-ik'ras-is (*epi, kerannumi,* to mix). Correction of vitiated humors by alterative treatment.

Epicrisis, ep-ik'ris-is. Crisis occurring in disease subsequent to the main crisis.

Epicrusis, ep-ik-ru'sis (*epi, krouo,* to strike). Percussion; flagellation; massage by percussion.

Epictenium, ep-ik-ten-e'um (*epi, kteis,* pubes). Pubes.

Epicteti (ep-ik-ta'ti) **mor'bi** (*epiktetos,* acquired). Acquired diseases.

Epicye'ma (*epi, kuo,* to conceive). Superfœtation; mole.

Epicyesis, ep-e-se-a'sis. Superfœtation.

Epicylis (ep-is'il-is) or **Epicylium,** ep-e-sil'e-um. Upper eyelid.

Epicystic, ep-e-sis'tik (*epi, kustis,* bladder). Above or upon the bladder.

Epicystotomy, ep-e-sis-tot'o-me (*epi, kustis,* bladder, *tome,* incision). Opening the bladder above the pubes; suprapubic cystotomy See *Lithotomy.*

Epicyte, ep'e-site (*epi, kutos,* cell). Cell-wall.

Epidemesis (ep-e-dem-a'sis) or **Epidem'ia** (*epi, demos,* people). Epidemic disease or its general occurrence.

Epidemic, ep-e-dem'ik (same etymon). Prevailing simultaneously among a large number of persons in a locality; as E. disease, cause of which is imported from some other locality. See *Epidemy.* **E. constitu'tion, disease',** or **in'fluence,** epidemy.

Epdemicity, ep-e-dem-is'it-e. See *Epidemy.*

Epidemiography, ep-e-dem-e-og'raf-e (*epidemy, graphe,* description). History or description of epidemics.

Epidemiological, ep-e-dem-e-o-loj'ik-al. Relating to epidemiology.

Epidemiology, ep-e-dem-e-ol'o-je (*epidemy, logos,* description). Doctrine or description of epidemics.

Epidemius, ep-e-dem'e-us. Epidemic.

Epidemy (ep'e-dem-e) or **Epidemic,** ep-e-dem'ik. Epidemic disease. Disease attacking at the same time a number of individuals, usually spreading rapidly, and referred to some particular constitutio æris or condition of the atmosphere, epidemic influence or constitution. It differs from endemic, the latter being owing to locality; but should a particular epidemic constitution of the air (epidemicity) exist along with a favoring endemic condition, these combined influences may act in causing serious and fatal complaints, which at times visit a district and are not afterward met with for a considerable period.

Epiden'dron or **Epidendrum** (ep-e-den'drum) (*epi, dendron,* tree) **auricula'tum.** Species of orchid in Chili; anthelmintic and galactagogue. **E. bid'idum,** cathartic, diuretic, and anthelmintic. **E. cauda'tum,** of W. Indies, is antispasmodic, as is **E. cochlea'tum. E. lu'teum** grows in Chili; galactagogue. **E. obtusifo'lium,** anthelmintic. **E. spathula'tum,** E. Indian orchid; astringent and expectorant; leaves are emollient. **E. tenuifo'lium,** externally, anodyne; internally, astringent. **E. vanil'la,** see *Vanilla.*

Epideris (ep-id'er-is), **Epider'rhis,** or **Epider'rhion** (*epi, deras,* skin). Nymphæ; clitoris, or its prepuce.

Epiderm, ep'e-derm. Epidermis; epiblast.

Epiderma, ep-e-dur'mah. Epidermis.

Epidermal, ep-e-dur'mal. Relating to or composed of epidermis. See *Epidermatic.* **E. appen'dages,** parts originating from the epidermis, as hair, nails, horns, etc.

Epidermata (ep-e-dur'mat-ah) or **Epidermo'mata** (*epi, derma,* skin). Class of outgrowths from the external integument, including warts, corns, corneous tumors, bunions, etc.

Epider'matic, Epider'meous, Epider'mic, Epidermal (ep-e-dur'mal), or **Epider'midal.** Belonging or relating to the epidermis. *Epidermatic medication* is the administration of remedies through the skin without breaking its surface. **E. cells,** see *Cell, epidermic.* **E. spheres,** conical collections of epithelial cells seen in certain forms of cancer.

Epidermidal, ep-e-dur'mid-al. Epidermic.

Epidermidolysis, ep-e-dur-mid-ol'is-is (*epiderma, lusis,* separation). Detachment of the epidermis from the corion, as after application of a blister.

Epidermidomyco'sis (*epiderma, mukes,* fungus). Parasitic cutaneous disease in general.

Epidermidonosi (ep-e-dur-mid-on'o-se) or **Epidermidonusi,** ep-e-dur-mid-on-u'se (*epidermis, nosos,* disease). Disease of the epidermis.

Epidermidophyton, ep-e-dur-mid-of'it-on. Epidermophyton.

Epidermidoses, ep-e-dur-mid-o'sees. Morbid conditions of the epidermis and its appendages.

Epiderminosis, ep-e-dur-min-o'sis. Morbid condition of the epidermis induced by epidermophyta.

Epidermion, ep-e-dur'me-on. Epidermis.

Epidermis, ep-e-dur'mis (*epi, derma,* the skin). Scarf skin, cuticle. Transparent, dry, thin membrane, devoid of nerves and vessels, covering the surface of the body, except parts corresponding to the nails. It is a stratified cellular structure, with large number of cell-strata, and adherent to the dermis, which it protects, and prevents immediate contact of bodies with the nervous papillæ, and consequently deadens tactile impressions which without its intervention might be painful. **E. lin'guæ,** see *Tongue.*

Epider'mium. Epidermis.

Epidermization, ep-e-dur-mi-za'shun. Forming of epidermis.

Epidermoid, ep-e-dur'moid (*epidermis, eidos,* resemblance). Resembling the epidermis.

Epidermolysis, ep-e-dur-mol'is-is. Epidermidolysis.

Epidermomata, ep-e-dur-mo'mat-ah. Epidermata.

Epidermophyte, ep-e-dur'mo-fite (*epidermis*, *phuton*, vegetable). Vegetable parasite of the skin.

Epidermoph'yton (same etymon). Microsporon furfur. **E. gall'inæ**, fungus, like Achorion Schœnleinii, producing favus in fowls.

Epidermose, ep-e-dur'mose. Substance procured from fibrin by action of dilute muriatic acid.

Epidermo'ses. Morbid condition of the epidermis and its appendages.

Epider'rhion or **Epiderrhis**, ep-e-der'rhis (*epi*, *derrhis*, skin). Nymphæ; clitoris, or its prepuce.

Epiderrhitis, ep-e-der-rhe'tis. Inflammation of the clitoris or nymphæ.

Epid'esis (*epi*, *deo*, to bind). Deligation; bandaging. **E. hæmostas'ia**, ligature.

Epides'ma, **Epides'mis**, **Epides'mum**, or **Epidesmus**, ep-e-dez'mus. Fascia, bandage, or ligature.

Epididymis, ep-e-did'im-is (*epi*, *didumos*, testicle). Placed upon the testicle. Small, oblong, vermiform, grayish body lying along the superior margin of the testicle. The epididymis is a canal formed by the union of all the seminiferous vessels folded several times upon themselves, after having traversed the corpus Highmorianum. Its lower portion or tail, *cauda* or *globus* or *caput minor*, is curved upward, and is continuous with the vas deferens; the opposite extremity is called the head, *globus* or *caput major*.

Epididymitis, ep-e-did-im-e'tis. Inflammation of the epididymis, usually consequent on gonorrhœa or chronic inflammation of the urethra. **E., blennorrhag'ic**, hernia humoralis; gonorrhœal epididymitis. **E., ca'seous**, E., tuberculous. **E., gonorrhœ'al**, E. with gonorrhœa. **E., tuber'culous**, E. resulting from deposit of tuberculous matter in the epididymis.

Epidosis, ep-id'o-sis (*epi*, *didomi*, to give). Augmentation; increase; swelling; natural increase of the body; exacerbation of a disease.

Epidrome (ep-id'ro-ma), **Epidrom'ia**, or **Epid'romis** (*epi*, *dremo*, to run). Afflux or congestion of the humors. Congestion from obstruction or contraction of a part.

Epidural, ep-e-du'ral. Upon the dura mater. **E. space**, space between the dura mater of the spinal cord and periosteal layer of the vertebral canal.

Epiencephalon, ep-e-en-sef'al-on. Epencephalon.

Epifagus Americanus, ep-e-fag'us am-er-e-kan'us (*epi*, *fagus*, beech). Orobanche Virginiana. **E. Virginia'nus**, Orobanche Virginiana.

Epifolliculitis, ep-e-fol-lik-u-le'tis. Inflammation of the epidermis and hair-follicles, especially of the scalp.

Epigæ'a, **Epigea** (ep-e-je'ah), or **Epigia** (ep-e-je'ah) **re'pens** (*epi*, *ge*, earth). *Trailing arbutus*, *Ground laurel*, *Mayflower*, *Gravel plant*. Small trailing plant growing in N. America. The leaves and stems are used like uva ursi.

Epigastralgia, ep-e-gas-tral'je-ah (*epigastrium*, *algos*, pain). Pain at the epigastrium.

Epigastric, ep-e-gas'trik (*epi*, *gaster*, stomach). Relating to the epigastrium. **E. ar'tery** arises from the external iliac, on a level with the crural arch; sometimes by a trunk proper to it, at others by one common to it and the obturator artery. It ascends upward and inward behind the spermatic cord, follows the outer edge of the rectus abdominis muscle, and anastomoses toward the umbilicus with the internal mammary. It anastomoses, also, with the obturator, spermatic, lumbar, and intercostal vessels. **E. cen'tre**, solar plexus. **E. fold**, fold of peritoneum covering the epigastric vessels. **E. fos'sa**, see *Inguinal fossa*. **E. gland**, small lymphatic gland between the umbilicus and infrasternal fossa. **E. plex'us**, solar plexus. **E. re'flex**, contraction of muscular fibres produced by manipulating or rubbing over a part of the epigastric region. **E. re'gion**, superior region of the abdomen, comprised between the false ribs on each side, and extending from the lower surface of the diaphragm to two fingers' breadth above the umbilicus. It is divided into one middle region, the epigastrium, and two lateral regions, the hypochondria. **E. slip**, brachio-abdominalis muscle, arising from the aponeurosis of the external oblique, part of the pectoralis major in man. **E. vein** follows nearly the same course as the artery.

Epigastriocele, ep-e-gas-tre-o-se'le (Eng. ep-e-gas'tre-o-seel). See *Epigastrocele*.

Epigas'trion or **Epigastrium**, ep-e-gas'tre-um (same etymon). The belly. See *Epigastric region*.

Epigas'trius. Epigastric. Also monstrosity having an ill-developed fœtus attached to the epigastric region.

Epigastrocele (ep-e-gas-tro-se'le) (Eng. ep-e-gas'tro-seel) or **Epigastriocele**, ep-e-gas-tre-o-se'le (Eng. ep-e-gas'tre-o-seel) (*epi*, *gaster*, stomach, *kele*, tumor). Hernia formed by the stomach, *Gastrocele*; especially hernia occurring toward the upper part of the linea alba or the epigastric region, whether formed or not by the stomach.

Epigastrodidymus, ep-e-gas-tro-did'im-us (*epi*, *gaster*, stomach, *didymus*, twin). Double monster attached at the thorax.

Epigea, ep-e-je'ah. Epigæa.

Epigenema, ep-e-jen-a'mah. Symptom occurring late in a disease. Epigenesis.

Epigenesis, ep-e-jen'es-is (*epi*, *genesis*, generation). Theory of conception, according to which the new being is created entirely anew, and receives at once from each parent the materials necessary for its formation; the opposite of evolution. Those holding this view were called *Epigen'esists*. New formation; accessory symptom; epigenema.

Epigennema, ep-e-jen-na'mah. Epigenema.

Epigine'ma or **Epiginomenon**, ep-e-gin-om'en-on (*epi*, *ginomai*, to happen). Accessory or late symptom.

Epiglossis, ep-e-glos'sis. Epiglottis

Epiglotti-arytenoïdæus, ep-e-glot'te-ar-it-en-o-id-e'us. Aryteno-epiglottic muscle.

Epiglottic, ep-e-glot'tik. Relating to the epiglottis. **E. car'tilage**, epiglottis. **E. glands**, a collection of small glandular granules situate in the adipose areolar texture at the base of the anterior surface of the epiglottis. They pour out an unctuous or mucous fluid, lubricating the epiglottis, keeping it supple and movable, and preventing the larynx from being irritated by the coustant passage of air in respiration.

Epiglotticopalatinus, ep-e-glot-tik-o-pal-at-e'nus. Relating to the epiglottis and soft palate.

Epiglottidean, ep-e-glot-tid-e'an. Relating to the epiglottis; epiglottic.

Epiglottide'o-arytenoï'deus. Aryteno-epiglottic muscle.

Epiglottiditis, ep-e-glot-tid-e'tis. Inflammation of the epiglottis.

Epiglottis, ep-e-glot'tis. Epiglottic cartilage; oval elastic fibro-cartilage situate at the upper part of the larnyx, behind the base of the tongue. By its smaller or lower extremity it is attached to the thyroid cartilage; its two surfaces are covered by the mucous membrane of the pharynx and larnyx. The special use of the epiglottis is to cover the glottis accurately at the moment of deglutition, and thus oppose the passage of alimentary substances into the air-tubes. **E., mus'cle of**, thyro-aryepiglotticus.

Epiglottitis, ep-e-glot-te'tis. Inflammation of the epiglottis.

Epiglottum, ep-e-glot'tum. Instrument for raising the eyelids, resembling the epiglottis in shape.

Epigloutis (ep-e-glout'is) or **Epiglu'tis** (*epi*, *gloutos*, buttocks). Superior region of the nates.

Epignathus, ep-ig-nath'us (*epi*, *gnathos*, jaw). Double monster in which an incomplete fœtus is rooted, with its blood-vessels, in the palate of one more complete.

Epigonatis, ep-e-gon'at-is (*epi*, *gonu*, knee). Patella.

Epigone, ep-ig'on-e (*epi*, *gone*, seed). Progeny; superfœtation.

Epigonion (ep-ig-on'e-on) or **Epigo'nium**. Fœtus.

Epigo'nis or **Epigoun'is** (*epi, gonu*, knee). Patella.

Epigonon, ep-ig'on-on (*epi, gone*, progeny). Superfœtation.

Epigunis, ep-ig-u'nis (*epi, gonu*, knee). Fleshy mass just above the knee.

Epihyal, ep-e-hi'al. Above or upon the hyoid bone. **E. bone**, portion of stylo-hyoid ligament sometimes converted into bone, but naturally osseous in some of the lower animals.

Epihymata, ep-e-he'mat-ah (*epi, humen*, skin). Diseases attended with eruptions.

Epilaryngeus, ep-e-lar-in-ja'us. Upon or above the larynx. Term applied to falsetto voice.

Epilation, ep-il-a'shun (*e, pilus*, hair). Extraction or removal of hair.

Epilatorium, ep-il-at-o're-um. Depilatory.

Epilatory, ep'il-at-o-re. Depilatory.

Epilemp'sis or **Epilentia**, ep-il-en'she-ah. Epilepsy.

Epilepsia, ep-il-ep'se-ah. Epilepsy. **E. acu'ta infan'tum**, eclampsia. **E. alget'ica**, see *Algos*. **E. cortica'lis**, cortical epilepsy. **E. cursi've**, epilepsy attended with a desire to run. **E. drom'ica**, epilepsy choreiform in character. **E. febri'lis infan'tum**, eclampsia. **E. gra'vior**, grand mal; see *Epilepsy*. **E. Jacksonia'na**, cortical epilepsy; in this form of epilepsy the patient retains consciousness during the attack. **E. larva'ta**, masked epilepsy. **E. mit'ior**, petit mal; see *Epilepsy*. **E. noctur'na**, incubus. **E. nu'tans**, nodding spasm occurring in epilepsy in children, and accompanied by transient loss of consciousness. **E. pueri'lis**, eclampsia infantum. **E. ret'inæ**, epileptoid amaurosis. **E. saltato'ria**, choreic form of epilepsy in which patient's gait resembles dancing. **E. saturni'na**, epileptiform, hystero-epileptic, or cataleptic convulsions as a result of lead-poisoning. **E. spina'lis**, spinal epilepsy. **E. uteri'na**, convulsive affection of the uterus. **E. va'so-moto'ria**, E. attended with excessive arterial contraction. **E. vermino'sa**, E. due to presence of intestinal worms. **E. vertigino'sa**, epileptic vertigo.

Epilepsis, ep-e-lep'sis. Epilepsy.

Epilepsy, ep'il-ep-se (*epilepsis*, seizure). *Falling sickness*; *Falling down; Sacred disease of Hippocrates.* Cerebro-spinal disease, idiopathic or symptomatic, spontaneous or accidental, occurring in paroxysms; characterized by loss of consciousness and convulsive motions of the muscles, with uncertain intervals between them. At times, before loss of consciousness occurs, a sensation as of a cold vapor is felt, hence called aura epileptica. It appears to rise in some part of the body, proceeds toward the head, and as soon as it has reached the brain the patient falls down. The ordinary duration of a fit is from five to twenty minutes, but it may be protracted for hours. In all cases there is a loss of sensation, sudden falling down, distortion of the eyes and face; red, purple, or violet countenance; grinding of the teeth; foaming at the mouth; convulsions of the limbs; difficult respiration, at times stertorous; with sometimes involuntary discharge of fæces and urine. After the fit the patient may remain for some time affected with headache, stupor, and lassitude. The disease is generally organic, but may be functional and symptomatic of irritation in other parts, as the stomach, bowels, etc. Prognosis as to ultimate recovery is unfavorable; the disease rarely destroys life, but may lead to mental imbecility. To attacks of epilepsy unaccompanied by convulsions the French give the name *Petit mal;* they are preceded by vertigo, *cerebral epilepsy.* In the mildest cases the seizures are described as *blanks, faints, forgets, absences, darknesses*, etc., consciousness being, as it were, lost for a few seconds. Fully-formed epilepsy is the *Grand mal* of the French, *spinal epilepsy.* When furious mania succeeds a paroxysm, it is termed Mania epileptica and Epileptic delirium. **E., abdom'inal**, E. caused by abdominal disorders. **E., abor'tive**, petit mal; see *Epilepsy*. **E., acute**, eclampsia. **E., aud'itory**, E. due to pressure in the internal ear. **E., au'ral** or **auric'ular**, E., auditory. **E., car'diac**, E. having its origin in disease of the heart. **E., cen'tral**, E. caused by lesion of great nervous centres. **E., cer'ebral**, petit mal; see *Epilepsy*. **E., conges'tive**, E. caused by hyperæmia. **E., cor'tical**, epileptiform convulsions in certain regions of the body only, as the muscles of the upper extremity, dependent upon localized lesions of the cortex of the brain. **E. curs'ive**, E. preceded by a disposition to run. **E., diur'nal**, form of epilepsy occurring always in day-time. **E., eccen'tric**, E., reflex. **E., fo'cal**, E., cortical. **E., hemiple'gic**, E., cortical. **E., hyster'ical**, hystero-epilepsy. **E., idiopath'ic**, E. caused by morbid condition, such as anæmic condition of medulla oblongata and pons Varolii. **E., intes'tinal**, E. having its origin in disordered condition of the intestinal canal. **E., Jackso'nian**, E., cortical. **E., larynge'al**, laryngeal vertigo. **E., lead**, E. caused by lead-poisoning. **E., mani'acal**, E. with maniacal excitement or disturbed intellection. **E., masked**, abortive form of epilepsy, or one with other symptoms of the disease than convulsions. **E., matu'tinal**, form of diurnal epilepsy occurring in the early hours of the day. **E., moto'rial**, E., cortical. **E., noctur'nal**, form of epilepsy occurring always in the night-time; nightmare or incubus. **E., par'tial**, E., cortical. **E., periph'eral**, E. due to reflex irritation. **E., psy'chic**, E., maniacal, E., masked. **E., reflex**, E., peripheral. **E., re'nal**, convulsions accompanying albuminuria. **E., ret'inal**, epileptoid amaurosis. **E., sat'urnine**, E., lead. **E., se'nile**, E. due to changes and degenerations in arterial structures in old age. **E., sens'ory**, E. seated in the sensory portions of the brain and symptomatized by disordered sensations of various kinds, generally without convulsions. **E., spi'nal**, epileptiform movements of the lower extremities, dependent on lesions of the spinal cord. **E., sympathet'ic**, E., peripheral. **E., syphilit'ic**, E. due to syphilis. **E., thal'amic**, E. dependent on lesion of the thalamus opticus. **E., u'terine**, hystero-epilepsy; E. caused by disease of the uterus. **E., vasomo'tor**, E. attended with excessive arterial contraction.

Epileptic, ep-e-lep'tik. Relating to epilepsy; one affected with epilepsy. **E. au'ra**, see *Epilepsy*. **E. cry**, peculiar cry or sound in epilepsy, due to spasm of the larynx. **E. hemipleg'ia**, paralysis that occurs after convulsions in some cases of epilepsy. **E. ver'tigo**, vertigo that occurs during a slight attack of epilepsy, just before an attack of *grand mal*, or substituted for it. **E. zone**, part of skin of face and neck of guinea-pigs, which, when irritated after section of the spinal cord, produces epileptiform convulsions.

Epilepticism, ep-e-lep'tis-izm. The condition of epilepsy.

Epileptiform (ep-e-lep'te-form) or **Epileptoid**, ep-e-lep'toid (*epilepsy, eidos*, resemblance). Resembling epilepsy, as E. convulsions, E. hysteria, E. seizure, etc.

Epileptig'enous. Epileptogenous. **E. zone**, epileptic zone.

Epileptogen'ic or **Epileptogenous**, ep-e-lep-toj'en-us (*genesis*, generation). Producing epilepsy, as **E. re'gion**, a zone or region of the cutaneous surface which, when irritated, gives rise to convulsions.

Epilo'bium angustifo'lium or **Antonia'num** (*epi, lobos*, pod). Rose willow or bay; great willow herb. Indigenous plant, ord. Onagraceæ; root is emollient and slightly astringent and tonic. **E. colora'tum**, purple-veined willow herb, has similar properties. **E. spica'tum**, E. angustifolium. **E. villo'sum**, S. African plant, used at the Cape of Good Hope as a domestic remedy for cleansing foul ulcers.

Epilose, ep'il-oze (*e, pilus*, hair). Bald; without hair.

Epimanes, ep-im'an-ees (*epi, mainomai*, to be in a rage). Having an insane desire for anything. Maniac when in a paroxysm.

Epimeletai, ep-e-mel'et-i (*epi, melo*, to take care). Wound-curers of ancient armies.

Epime'lium (*epi, pimele*, fat). Fatty tumor.

Epimenia, ep-i-men'e-ah. Catamenia.

Epimenocnidosis, ep-e-men-oc-nid-o'sis (*epimenios*, monthly, *knidosis*, itching). Obstinate form of urticaria.

Epimenophacosis, ep-e-men-o-fak-o'sis (*epimenios,* monthly, *phakosis,* freckled condition). Chronic lentigo.

Epimorios, ep-e-mor'e-os (*epi, meiro,* to divide). Unequal, as the pulse.

Epimylis, ep-im'il-is (*epi,* upon, *mule,* knee-pan). Patella.

Epinarthecia, ep-in-arth-a'she-ah (*epi, narthex,* splint). Suspensive treatment of fracture by anterior splint.

Epinemesis, ep-in-em-a'sis (*epi, nemo,* to divide). Dispensation; distribution.

Epinephelos, ep-in-ef'el-os (*epi, nephele,* cloud). Presenting a cloud; urine, for example.

Epinephritis, ep-e-nef-re'tis (*epi, nephros,* kidney). Inflammation of suprarenal capsule.

Epineural, ep-e-nu'ral (*epi, neuron,* nerve). Upon or attached to the neural arch or spine of a vertebra.

Epineurion, ep-e-nu're-on (*epi,* upon, *neuron,* nerve). Connective-tissue sheaths of bundles of nerve-fibres.

Epineurium, ep-e-nu're-um (same etymon). Cellular sheath of a nerve.

Epino'sic (*epi, nosos,* disease). Susceptible to disease.

Epinotion, ep-in-o'te-on (*epi, notos,* back). Scapula.

Epinyctides, ep-in-ik'tid-ees (pl. of **Epinyctis**) (*epi, nux,* night). Eruptions which appear on the skin in the night and disappear in the day. **E. prurigino'sa,** urticaria.

Epiœ'cia, (*epi, oikos,* house). Circumscribed epidemic.

Epi'ola, Epi'oles, or **Epiolus,** ep-e'o-lus. Incubus or nightmare.

Epiomide, ep-e-o'mide (*epi, omos,* shoulder). Upper part of the shoulder.

Epiot'ic (*epi, ous,* ear). Over or above the ear. **E. cen'tre,** centre of ossification for the temporal bone.

Epipactis (ep-e-pak'tis) **latifo'lia.** European orchid, the root of which is antiarthritic. **E. unilatera'lis,** orchid of Chili, used in dysuria.

Epiparoxysmus, ep-e-par-ox-iz'mus. Paroxysm superadded to ordinary paroxysm.

Epipas'tic (*epipasso,* to sprinkle). Term applied to plasters on which some powder is sprinkled.

Epipastus, ep-e-pas'tus (*epi, passo,* to sprinkle). Powder for dusting.

Epipechu (ep-e-pa'ku) or **Epipech'y** (*epi, pechus,* elbow). Upper part of the elbow; part above the elbow.

Epipedometer, ep-e-ped-om'et-ur (*epipedos,* plane, *metron,* measure). Instrument for measurement of angles in deformed limbs made by planes of the body and limbs.

Epiphænomenon (ep-e-fe-nom'en-on) or **Epiphenom'enon** (*epi, phaino,* to appear). Adventitious symptom occurring during the progress of an affection, and not as intimately connected with it as the symptoms properly so called.

Epiphanei'a or **Epiphania,** ep-e-fa-ne'ah (*epi, phaino,* to appear). External surface or appearance of the body. Manifestation.

Epipharynge'al, ep-e-far-in-je'al (*epi, pharynx*). Above or upon the pharynx.

Epiphegus (ep-if-a'gus) **America'na** or **Virginia'na** (*epi, phegos,* the beech). Beech drops. Orobanche Virginiana.

Epiphenomenon, ep-e-fen-om'en-on. Epiphænomenon.

Epiphlebos, ep-if'le-bos (*epi, phleps,* vein). An epithet given to those whose veins are very apparent.

Epiphlegia, ep-e-flej'e-ah (*epi, phlego,* to inflame). Inflammation.

Epiphlogisma, ep-e-flo-giz'mah (same etymon). Erysipelatous inflammation.

Epiphlogismus, ep-e-flo-giz'mus. Pustule; herpes; dermatitis.

Epiphlogosis, ep-e-flo-go'sis. A high degree of inflammation.

Epiphora, ep-if'or-ah (*epi, phero,* to carry). Weeping, watery eye. Involuntary and constant flow of tears upon the cheek; usually symptomatic of disease of the lacrymal passages, and occurring when the tears cannot pass into the ductus ad nasum. Occasionally it is owing to the tears being secreted in too great quantity, as in ophthalmia. Morbid flux. **E. al'vi,** diarrhœa. **E. epid'rome,** ophthalmia. **E. lacryma'lis,** epiphora. **E. lac'tea,** galactorrhœa. **E. ptyalis'mus,** salivation.

Epiphorus, ep-if'or-us (*epi, phero,* to bring forth). Fruitful; near the time of delivery.

Epiphymata, ep-e-fe'mat-ah (pl. of **Epiphy'ma**) (*epi, phuo,* to grow). Cutaneous diseases.

Epiphysal, Epiphysary (ep-if'is-a-re), or **Epiphys'ial.** Relating or appertaining to an epiphysis.

Epiphyseal, ep-if-is-e'al. Relating to an epiphysis or the epiphysis cerebri. **E. disk,** flat epiphysis on the body of a vertebra. **E. line,** line of union of epiphysis and diaphysis. **E. nerves,** small nerves from anterior crural distributed to lower epiphysis of thigh-bone.

Epiphyses (ep-if'is-ees) (pl. of **Epiphysis**), **separa'tion of.** Epiphysary disjunctions; usually a traumatic separation of the epiphyses of bones before they are completely solidified.

Epiphysial, ep-e-fis'e-al. Epiphyseal.

Epiphysis, ep-if'is-is (*epi, phuo,* to grow). Portion of bone separated from the body of the bone by a cartilage, which becomes converted into bone by age. Epiphysis of the fœtus becomes the apophysis of the adult. Bony eminence. **E. acetab'uli,** cotyloid bone. **E. cer'ebri,** pineal gland. **E. cru'ris longio'ris in'cudis,** orbicular bones. **E. il'ii ante'rior,** acetabular or cotyloid bone. **E. in'cudis,** orbicular bone. **E. pi'æ ma'tris,** chorioid plexus.

Epiphysitis, ep-e-fis-e'tis. Inflammation of the epiphyses.

Epiphyte, ep'e-fite (*epi, phuton,* plant). Phytoparasite or parasite derived from the vegetable kingdom. Epiphytes are considered by some to include vegetations in the human fluids, as in vomited matter and fecal evacuations, vegetations on the external skin and its appendages and the mucous membranes. By others the term is restricted to vegetable parasites on the surface of the body.

Epiphytic, ep-e-fit'ik. Relating to epiphytes.

Epiphytism, ep-if'it-izm. Production of epiphytes. Condition of an epiphyte.

Epiphyty, ep-if'it-e. Very prevalent disease of plants, as epizooty has a similar signification in regard to animals.

Epiplasma, ep-e-plaz'mah (*epi, plasso,* to smear). Cataplasm; ectoplasm.

Epiplegia, ep-e-plej'e-ah (*epi, plege,* stroke). Paralysis, particularly of the upper extremities. Hemiplegia.

Epiplemphraxis, ep-ip-lem-fraks'is (*epiploon, emphraxis,* engorgement). Congestion of the omentum.

Epiplerosis, ep-e-pler-o'sis (*epi, plerosis,* repletion). Excessive repletion; distension.

Epipleural, ep-e-plu'ral. On the side of the chest; on or attached to the vertebral rib.

Epiplo (*epi, pleo,* to swim or float). In composition, epiploon.

Epiploce, ep-ip-lo'se (*epi, pleko,* to twine). Coition; entanglement; involution. **E. intestina'lis,** conglomeration or volvulus of the intestines.

Epiplocele, ep-ip-lo-se'le (Eng. ep-ip'lo-seel) (*epiplo, kele,* tumor). Epiploic or omental hernia. Omental hernia is recognized—at times with difficulty—by a soft, unequal, pasty tumor, in which no gurgling sound is heard on pressing or reducing it. It is less dangerous than hernia of the intestines.

Epiplocystoscheocele, ep-ip-lo-sist-os-ke-o-se'le (Eng. ep-ip-lo-sist-os'ke-o-seel) (*epiplo, kustis,* bladder, *oscheon,* scrotum, *kele,* tumor). Scrotal hernia containing omentum and bladder.

Epiploëmphraxis, ep-ip-lo-em-fraks'is. Congestion of the omentum.

Epiploënterocele, ep-ip-lo-ent-er-o-se'le (Eng. ep-ip-lo-ent'er-o-seel) (*epiplo, enteron,* intestine, *kele,* tumor). Hernia formed by the epiploon and a portion of the intestine; commonly called *Enteroëpiplocele.*

Epiploënteroscheocele, ep-ip-lo-ent-er-os-ke-o-se'le (Eng. ep-ip-lo-ent-er-os'ke-o-seel) (*epiplo, enteron,* intestine, *oscheon,* scrotum, *kele,* tumor). Hernia with omentum and intestine in the scrotum.

Epiploic, ep-ip'lo-ik. Relating to the epiploon. **E. appen'dages,** prolongations of peritoneum beyond the surface of the great intestine. **E. ar'teries,** arterial branches to the epiploon, given off by the gastro-epiploicæ. **E. cav'ity,** cavity of the peritoneum. **E. plex'us,** filaments from the gastro-epiploic plexus distributed to the great omentum.

Epiploïschiocele, ep-ip-lo-is-ke-o-se'le (Eng. ep-ip-lo-is'ke-o-seel) (*epiplo, ischion,* ischium, *kele,* tumor). Hernia formed by the epiploon through the ischiatic notch.

Epiploïtis, ep-ip-lo-e'tis. Inflammation of the omentum; a form of partial peritonitis.

Epiplomerocele, ep-ip-lo-mer-o-se'le (Eng. ep-ip-lo-mer'o-seel) (*epiplo, meros,* thigh, *kele,* tumor). Femoral hernia formed by the epiploon.

Epiplomphalocele, ep-ip-lom-fal-o-se'le (Eng. ep-ip-lom'fal-o-seel). Umbilical hernia formed by the epiploon.

Epiplom'phalon, Epiploömphalon (ep-ip-lo-om'fal-on), or **Epiplompha'lus** (*epiplo, omphalos,* navel). Umbilical hernia formed by the epiploon.

Epiploöcele, ep-ip-lo-o-se'le (Eng. ep-ip'lo-o-seel). Epiplocele.

Epiploöcomistes, ep-ip-lo-o-kom-is'tees (*epiplo, komizo,* to carry). One having morbidly large omentum; one laboring under epiplocele.

Epiploon, ep-ip'lo-on (pl. **Epiploa**) (*epi, pleo,* to swim or float). Omentum; caul. Prolongation of the peritoneum floating above a portion of the intestines, and formed of two membranous layers, with vessels and fatty bands distributed through it. The chief use seems to be to retain the viscera *in situ* and to give passage to the vessels. **E., col'ic,** colic omentum; third epiploon or omentum. Duplicature of the peritoneum, situate along the ascending portion of the colon, as far as its junction with the transverse portion. It is behind the great epiploon, and fills up the angle formed by the junction of the ascending with the transverse colon. **E., cystocol'ic,** occasional protuberant portion of omentum uniting the gall-bladder with the duodenum. **E., gastrocol'ic,** great omentum. Extensive duplicature, free and floating on the folds of the intestines. It is quadrilateral, and longer on the left side than the right, its base being fixed anteriorly to the great curvature of the stomach, and posteriorly to the arch of the colon. In this epiploon a number of vessels are distributed, and there is much fat. **E., gastrohepat'ic,** lesser omentum. Duplicature of the peritoneum extending transversely from the right side of the cardia to the corresponding extremity of the fissure of the liver, and downward from this fissure to the lesser curvature of the stomach, the pylorus, and duodenum. Below it is the foramen or hiatus of Winslow, and between its laminæ are lodged the biliary and hepatic vessels. It contains but little fat. If air be blown in at the foramen of Winslow, the cavity or sac of the omentum will be rendered perceptible. **E., gastrosple'nic,** reflection of the peritoneum, passing between the concave surface of the spleen and the stomach, from the cardiac orifice to near its great curvature, and lodging the vasa brevia and splenic vessels between its laminæ. **E. ma'jus,** E., gastrocolic. **E. mi'nus,** E., gastrohepatic.

Epiplosarcomphalocele, ep-ip-lo-sark-om-fal-o-se'le (Eng. ep-ip-lo-sark-om'fal-o-seel) (*epiploon, sarx,* flesh, *omphalos,* navel, *kele,* tumor). Umbilical hernia containing thickened or indurated omentum.

Epiplosarcomphalon or **Epiplosarcomphalus,** ep-ip-lo-sark-om'fal-us (*epiplo, sarx,* flesh, *omphalos,* navel, *kele,* tumor). Umbilical hernia formed of indurated omentum.

Epiploscheocele (ep-ip-los-ke-o-se'le) (Eng. ep-ip-los'ke-o-seel) or **Epiplos'chocele** (*epiplo, oscheon,* scrotum, *kele,* tumor). Scrotal hernia formed by displacement of the epiploon.

Epiploum, ep-ip'lo-um. Epiploon; omentum.

Epipnoia, ep-e-noi'ah (*epi, pneo,* to breathe). Air that strikes the body and produces disease.

Epipodialia, ep-e-po-de-al'e-ah (*epi, pous,* foot). Bones constituting the second division of a limb, as the radius and ulna in the arm, tibia and fibula in the leg.

Epipolasis (ep-e-po'las-is) or **Epipolasmus,** ep-e-po-laz'mus (*epipoles,* surface). Fluctuation; plethora; fluorescence; sublimation.

Epiporoma, ep-e-po-ro'mah (*epi, poroö,* to harden). Tophaceous concretion forming in the joint; callus of fracture.

Epiporo'sis (same etymon). Formation of callus.

Epiproso'pium (*epi, prosopon,* face). Local application to the face.

Epipsy'che (*epi, psuche,* soul). Epencephalon.

Epipter'ic (*epi, pteron,* wing). On the wing, as of the sphenoid bone. **E. bone,** Wormian bone, occasionally seen at the juncture of the parietal bone and greater wing of the sphenoid bone.

Epipterygoid, ep-e-ter'e-goid. On or above the pterygoid bone. **E. bone,** small bony rod articulating with the pterygoid in some of the lower animals.

Epiptyche, ep-ip'tik-e. Operculum; fold or cover.

Epiptyxis, ep-e-tiks'is. Occlusion of an aperture.

Epipu'bic. On or over the pubes. **E. bones,** marsupial bones, two curved bones found in marsupial animals, and probably a bony development from the external abdominal ring.

Epipygus, ep-ip'ig-us (*epi, puge,* buttocks). Fœtus having another fœtus connected with its sacral region.

Epirrhau'sis. Irrigation.

Epirrhoe (ep-ir'rho-e) or **Epirrhœ'a** (*epi, rheo,* to flow). Afflux or congestion of humors.

Episarcidium, ep-e-sar-sid'e-um (*epi, sarx,* flesh). Anasarca.

Epischesis, ep-is'kes-is (*epischo,* to restrain). Retention or suppression of excretions.

Epischeticus, ep-is-ket'ik-us. Restraining; agent that diminishes—secretion, for example.

Epischion, ep-is'ke-on (*ep, ischion,* ischium). Abdomen; pubes; pubic bone.

Epischomen'ia (*epischo,* to suppress, *meniaia,* menses). Suppression of menses; amenorrhœa.

Epischyon'ta (*epischuo,* to strengthen). Restorative or healing medicines.

Episcleral, ep-e-skle'ral (*epi, skleros,* sclerotic). On the sclerotic coat. **E. veins,** branches from capillary plexus of veins around the cornea.

Episcleritis, ep-e-skler-e'tis. Inflammation of conjunctival connective tissue and sclerotic; affection characterized by the appearance of a small dusky-red elevation of the sclerotic, most frequently at the temporal portion near the insertion of the external rectus. It is accompanied with photophobia, redness, etc.

Episclerotic, ep-e-skler-ot'ik, Episcleral.

Episclerotitis, ep-e-skler-ot-e'tis. Episcleritis.

Episcopales valvulæ, ep-is-ko-pal'ees valv'u-le (*episcopus,* bishop). Mitral valves.

Ep'iscope (*epi, skopeo,* to see). Instrument for optical examination of a surface, as the skin.

Episcotister, ep-is-ko-tis'tur (*episkoteo,* to obscure). Instrument for observing degree of sensitiveness to light, by means of blackened disks fenestrated to allow entrance of light.

Episeiæmato'ma (*episeion,* pubes, *haima,* blood). Hæmatoma of the external genital organs of woman.

Episeïi'tis (*episeion,* pubes). Inflammation of the pubic region or vulva.

Episeioce'le or **Episei'ocele.** Episiocele.

Episeiocle'sis. Episiocleisis.

Episeiœde'ma. Œdema of the labium pudendi.

Episei'o-elytror'rhaphy (*episeion,* pubes, *elutron,* vagina, *rhaphe,* suture). Episio-elytrorrhaphy.

Episeiohæmato'ma. Hæmatoma of the external genital organs of woman.

Episeioi'tis. Inflammation of the pubic region or vulva.

Episeion, ep-is-i'on. Pubic bone; pubes; vulva; labium pudendi; hair covering the mons veneris.

Episeion'cus (*episeion*, pubes, *onkos*, tumor). Swelling or tumor of the labia pudendi or pubic region.

Episeioperinæor'rhaphy (*episeion*, pubes, *perinæum*, *rhaphe*, suture). Episio-perinæorrhaphy.

Episeiophy'ma (*episeion*, pubes, *phuma*, growth). Tumor of the pubic region or labia pudendi.

Episeiorrha'gia. Episiorrhagia.

Episeior'rhaphy. Episiorrhaphy.

Episeiosteno'sis. Episiostenosis.

Episeiot'omy. Episiotomy.

Episemasia, ep-is-em-ah'ze-ah (*epi*, *sema*, sign). Invasion of an attack of fever.

Episio, ep-is-e'o. Pubes; labium pudendi. In composition, labium pudendi.

Episiocele, ep-is-e-o-se'le (Eng. ep-is'e-o-seel) (*episio*, *kele*, rupture). Vulvar hernia; vulvar swelling or tumor.

Episiocleisis (ep-is-e-o-kli'sis) or **Episioclisia,** ep-is-e-o-klis'e-ah (*episio*, *kleisis*, enclosure). Operation for vulvar swelling or tumor, or for closure of the vulva.

Episio-colpoclei'sis. Operation for closure of the labium and vagina.

Episicede'ma (*episio*, *oidema*, œdema). Œdema of the labium pudendi.

Episio-elytrorrhaphy, ep-is'e-o-el-it-ror'rhaf-e (*episio*, *elutron*, vagina, *rhaphe*, suture). Operation to narrow the vagina and vulva by suture in cases of prolapsus of the uterus.

Episiohæmato'ma. Hæmatoma of the external genital organs of woman.

Episioïtis, ep-is-e-o-e'tis. Inflammation of the labia pudendi.

Epision, ep-is-i'on. Episeion.

Episioncus, ep-is-e-on'kus (*episio*, *onkos*, tumor). Swelling or tumor of the labia pudendi or pubic region.

Episio-perineorrhaphy, ep-is'e-o-per-in-e-or'rhaf-e (*episeo*, *perineon*, perineum, *rhaphe*, suture). Operation in prolapsus to suture the vulva and perineum.

Episiophyma, ep-is-e-o-fe'mah (*episio*, *phuma*, swelling). Swelling or tumor of the labia pudendi or pubic region.

Episiorrhagia (*episio*, *rhage*, rupture). Hemorrhage from the labia pudendi.

Episiorrhaphy, ep-is-e-or'rhaf-e (*episeion*, *rhaphe*, suture). Operation in cases of prolapsus uteri, consisting in paring the opposing surfaces of the labia pudendi, bringing them together, and uniting them by suture, so as to diminish the outlet of the vulva.

Episiostenosis, ep-is-e-o-sten-o'sis (*episio*, *stenos*, narrow). Narrowness of the vulvar opening. Operation for narrowing or closing the vulva.

Episiotomy, ep-is-e-ot'o-me (*episio*, *tome*, incision). Incision of the labia to relieve injurious pressure of the child on the perineum.

Episio-urethroclei'sis. Operation for closure of the labium and urethra.

Episio-vulvoclei'sis. Operation for closure of the labium and vagina.

Episkeletal, ep-e-skel'et-al. Upon the skeleton; as **E. mus'cles,** muscles developed from rudimentary vertebræ above the inner skeleton or endoskeleton.

Epispadia, ep-e-spad'e-ah (*epi*, *spao*, to draw). Condition of an epispadiæus.

Epispadiæ'us. One who has a preternatural opening of the urethra at the upper part of the penis.

Epispad'ian. Epispadiæus.

Epispad'ias, Epispadi'asis (*epi*, above, *spao*, to get out of place). Malformation in which the male urethra ends at a point above the natural location of the meatus. **E. glan'dis.** In this form of epispadias the urethra ends on the dorsum of the glans penis. **E. pe'nis.** In this variety the urethra terminates back of the glans penis.

Epispasis, ep-is'pas-is (*epi*, *spao*, to draw). Eruption produced by drugs employed for relief of another affection.

Epispasmos or **Epispasmus,** ep-e-spaz'mus (same etymon). Hasty breathing.

Epispastics, ep-e-spas'tiks (same etymon). Medicinal substances which, when applied to the skin, excite pain, heat, and more or less redness, followed by separation of the epidermis, which is raised up by effused serum or by suppuration. Blisters.

Epispasticum, ep-e-spas'tik-um. Blister.

Episphæria, ep-e-sphe're-ah (*epi*, *sphaira*, sphere). Convolutions and sinuosities of external surface of the brain.

Epispinous, ep-e-spi'nus. Upon the spine or spinous process. **E. bones,** prominences or spinous processes of vertebræ for muscular attachment.

Episplenitis, ep-e-splen-e'tis. Inflammation of the capsule of the spleen.

Epistactischesis, ep-is-tak-tis'kes-is (*epistaxis*, bleeding at nose, *ischo*, to restrain). Arrest of bleeding from the nose.

Epistagmos, ep-e-stag'mos (*epistazo*, to instil). Catarrh; installation.

Epistaphylinus, ep-e-staf-il-e'nus (*epi*, *staphule*, the uvula). Azygos muscle.

Epistasis, ep-is'tas-is (*epi*, *stasis*, rest). Opposed to hypostasis or sediment. Suppression or retention, as of urine. Pellicle on the surface of urine.

Epistation, ep-is-ta'shun (*e*, *pinso*, to pound). *Pistation.* Bruising in a mortar soft and parenchymatous substances.

Epistaxis, ep-is-taks'is (*epi*, *stazo*, to flow drop by drop). Hemorrhage from the pituitary membrane; bleeding at the nose. A common variety of hemorrhage, the organization of the Schneiderian membrane being favorable to it, the blood-vessels being but slightly supported. It generally flows from one nostril, and is very apt to recur. It is most common at puberty, and is caused by anything inducing local congestion, as running, coughing, blowing the nose, etc.

Episternal, ep-e-stur'nal. Epithet applied to two bones forming part of the sternum, and situate upon its superior and lateral part, *suprasternal bones.* They resemble the pisiform bones, but are larger. The interclavicle of lower animals, a bone between the præsternum and clavicle, is an episternal bone.

Episthotonus, ep-is-thot'on-us (*episthen*, forward, *teino*, to extend). Spasm of the muscles, drawing the body forward; emprosthotonos.

Epistrophe, ep-is'trof-e (*epi*, *strepho*, to turn). Relapse.

Epistropheo-basilaris, ep-is-trof'e-o-baz-il-ar'is. Small occasional muscle between the axis vertebra and basilar process.

Epistroph'eus, Epis'trophis, or **Epistrophus,** ep-is'trof-us. Axis.

Epistroph'ico-atlan'ticus. Atlanto-axial.

Epistrophico-occipital, ep-is-trof'ik-o-ok-sip'it-al. Relating to the axis and occiput.

Episylvian, ep-e-sil've-an. On or above the fissure of Sylvius.

Episynanche, ep-e-sin-an'ke (*epi*, *synanche* or *cynanche*). Spasm of the pharnyx, perhaps from paralysis of the velum palati, by which deglutition is prevented, and food driven back toward the mouth or nasal fossæ.

Episynangina, ep-e-sin-an-je'nah. Episynanche.

Episynthetics, ep-e-sin-thet'iks (*epi*, *suntithemi*, to collect). Medical sect whose object it was to reconcile the principles of the Methodists with those of the Empirics and Dogmatists.

Epitasis, ep-it'as-is (*epi*, *teino*, to extend). Period of violence of fever, attack, or paroxysm; used also in the same sense as epistasis, for suppression.

Epitecnos, ep-e-tek'nos (*epitikto*, to bring forth). Prolific, or a woman who is so.

Epite'lium. Epithelium.

Epithal'amic. On or above the thalamus opticus.

Epithelial (ep-e-the'le-al) or **Epithe'liac** (*epi*, *thele*, nipple). Appertaining or relating to the epithelium. **E. can'cer,** cancroid of the skin; epithelioma. A morbid growth of epithelial cells forming an epithelial tumor, a variety of carcinoma. Epithelial cancer may be squamous or columnar-celled. The former always grows from a surface covered by squamous

epithelium, either cutaneous or mucous. Columnar-celled epithelioma is sometimes called *adenoid cancer*, and grows from mucous membranes with columnar or cylindrical epithelium, that is of the stomach and intestines, the rectum and uterus especially. See *Cancroid* and *Epithelioma*. **E. cast**, urinary cast having an epithelial surface. **E. cell**, cell of epidermis. **E. globes** or **nests**, concentrically-arranged masses of cells seen in epithelioma. **E. tu'mor**, epithelioma.

Epithe'lioid. Resembling epithelium; term applied to several membranes or coverings in embryonic life and in subsequent existence.

Epithelioma, ep-e-the-le-o'mah. See *Epithelial Cancer*. **E., can'croid**, epithelial cancer. **E., col'loid**, colloid cancer. **E., colum'nar**, cylindrical epithelioma. **E. contagio'sum**, fowl-pox; form of molluscum contagiosum. **E., cylin'drical** or **cylin'dro-cel'lular**, form of epithelial cancer in which the cells are like columnar epithelia. **E., gland'ular**, E. made up of gland-cells, and usually attacking the throat and nose. **E. mollus'cum**, molluscum contagiosum. **E. myxomato'des psammo'mum**, rare tumor having its seat in the third ventricle of the brain. **E., pap'illary** or **papillo'matous**, E. with accompanying papillary tumors. **E. pearls**, bodies of a round shape found sometimes in ovarian dermoids, and having a resemblance to a boiled fish lens, and consisting wholly of epithelial cells. **E., tu'bular**, cylindroma. **E., vil'lous**, E. having appearance of villi, growing on the interior of the bladder.

Epithelium, ep-e-the'le-um. Thin layer of epidermis, covering parts deprived of derma properly so called, as the nipple, mucous membranes, lips, etc. It exists in different forms — pavement, cylinder, and vibratile or ciliated epithelium. *Pavement*, tessellated, scaly, lamellar, tubular, or flattened epithelium, E. polyedricum or lamellosum, covers the serous and synovial membranes, the lining of blood-vessels, and the mucous membranes, except where cylinder epithelium exists. It is spread over the mouth, pharynx, and œsophagus, conjunctiva, vagina, and entrance of the female urethra. *Cylinder*, columnar, or prismatic epithelium, E. cylindricum, is found in the intestinal canal, beyond the cardiac orifice of the stomach; in the larger ducts of the salivary glands, ductus communis choledochus, prostate, Cowper's glands, vesiculæ seminales, vas deferens, tubuli uriniferi, and urethra of the male; and lines the urinary passages of the female, from the orifice of the urethra to the beginning of the tubuli uriniferi of the kidneys. In all these situations it is continuous with tessellated epithelium, which lines the more delicate ducts of the various glands. For the uses of the *ciliated* epithelium, E. vibrans, see *E., ciliated*, and *Cilia*. The term *spheroidal* has been applied to a variety of epithelium, the cells of which, for the most part, retain their primitive roundness; or, being flattened where they touch, acquire a polyhedral figure. At times, these show a disposition to pass into the columnar, or the tessellated variety; and hence this form has been called the transitional. Spheroidal epithelium is found in the urinary passages, where it succeeds the columnar epithelium of the urethra at the internal orifice of that canal, and lines the whole of the bladder, ureters, and pelvis of the kidneys. It is found also in the excretory ducts of the mammary, perspiratory, and of many mucous glands, and a modification of it lines the inmost secreting cavities or commencing ducts of glands generally.

Epithe'lium, alve'olar, E. of glandular or pulmonary alveoli. **E., are'olar**, E. of areola of mammary gland. **E., cil'iated**, E. in which the free extremities of the cells have a ciliary or ciliated appearance. This form of epithelium is observed in the respiratory passages, vasa efferentia, uterus, Fallopian tubes, part of the epididymis, convoluted tubes of the kidney, etc., and in portions of the digestive apparatus and larynx of the fœtus. **E., colum'nar**, see *Epithelium*. **E., cyl'inder** or **cylin'drical**, see *Epithelium*. **E. decid'uum**, decidua. **E., ectoder'mic**, E. derived from the ectoderm. **E., enam'el**, cuticula dentis. **E., entoder'mic**, E. derived from the entoderm. **E., false**, endothelium. **E., fib'rillated**, E. with cells, like small fibres, seen in the small uriniferous tubes and salivary ducts. **E., flat'tened**, pavement e.; see *Epithelium*. **E. follic'ular**, E. lining the Graafian follicle. **E., fu'siform**, vascular endothelium. **E., germ'inal** or **germ'inative**, E. covering the pleuro-peritoneal space in the embryo; E. covering a large portion of the ovary. **E., gland'ular**, E. making up secreting surface of a gland. **E. of Graaf'ian fol'licle**, membrana granulosa; E., follicular. **E., intest'inal**, E., columnar. **E. lamello'sum** or **lamel'lar**, pavement epithelium; see *Epithelium*. **E., lam'inar** or **lam'inated**, layers of cells arranged one above another. **E., Malpigh'ian**, rete mucosum; greater portion of epidermis of embryo. **E., mater'nal**, E. of maternal organs, not of embryo. **E., mesoderm'ic**, E. of mesoderm, as of peritoneum, blood-vessels, etc.. **E. mi'cans**, E., ciliated. **E., mu'cous**, E., Malpighian. **E., mus'cle**, combination of myoblast and processes which branch out in various directions and act as muscular fibres. **E., nerve**, mingling of sensory and epithelial cells in ends of sensory nerves, **E., olfac'tory**, E. of olfactory portion of nose. **E., ova'rian**, E., germinal. **E., palisade**, E., columnar. **E., pave'ment**, see *Epithelium*. **E., pig'mentary**, E., as in the retina, containing coloring matter. **E. polyed'ricum, polyed'ral**, or **polyg'onal**, pavement epithelium; see *Epithelium*. **E., pyram'idal**, E., columnar. **E., rod**, E., fibrillated. **E., secre'ting**, E., glandular. **E., spheroid'al**, E., glandular. **E. spu'rium**, endothelium. **E., squam'ous**, E., pavement. **E., strat'ified**, E., laminar. **E., tab'ular**, pavement epithelium; see *Epithelium*. **E., tegument'ary**, epidermis. **E., tes'sellated**, E., pavement. **E., vas'cular**, vascular endothelium; vascular perithelium. **E. vi'brans** or **vibrato'rium, vi'bratile** or **vibrat'ing**, E., ciliated.

Epithem, ep'e-them (*epi*, *tithemi*, to place upon). Topical application not classed under ointments or plasters. Three sorts have been usually distinguished: liquid, dry and soft, comprising fomentations, bags filled with dry substances, and cataplasms.

Epithesis, ep-ith'es-is (same etymon). Rectification of crooked limbs by instruments, splints, etc.

Epithymiæ, ep-e-thim'e-e (*epi*, *thumos*, desire). Morbid desires or longings.

Epithymiama, ep-e-thim-e-am'ah (*epi*, *thumiama*, fumigation). Fumigation.

Epith'ymon or **Epithymum**, ep-ith'im-um (*epi*, *thumos*, thyme). Cuscuta epithymum. **E. officina'rum**, Cuscuta Europæa.

Epitocos, ep-it'o-kos (*epitikto*, to bring forth). Pregnant.

Epit'onos or **Epit'onus** (*epiteino*, to stretch). Stretched; hence spasm of any form.

Epitrochante'rian. On the trochanter or trochanters.

Epitrochlea, ep-e-trok'le-ah (*epi*, *trochalia*, pulley). That which is situate above a pulley. Inner or lesser condyle of the humerus from which originate several muscles of the forearm.

Epitrochlea, ep-e-trok'le-ah. External condyle of the humerus.

Epitrochlear, ep-e-trok'le-ar. Relating to or connected with the epitrochlea.

Epitroch'leo. In composition, belonging or attached to the epitrochlea.

Epitroch'leo-ancone'us. Occasional muscle passing from internal condyle to olecranon.

Epitroch'leo-cubita'lis. Flexor carpi ulnaris.

Epitroch'leo-metacar'pal mus'cle. Flexor carpi radialis.

Epitroch'leo-palma'ris. Palmaris longus.

Epitroch'leo-phalange'us, com'mon. Flexor sublimis digitorum.

Epitroch'leo-radia'lis. Pronator radii teres.

Epitroch'leo-supercar'peus. Muscle in lower animals corresponding with flexor carpi radialis.

Epitympanic, ep-e-tim-pan'ik. On or above the tympanum. **E. bone,** the hyo-mandibular bone, tympanic bone of some animals, representing the incus of the higher animals.

Epivertebral, ep-e-vur'te-bral. On or above a vertebra. Spinous process.

Epizoa, ep-e-zo'ah (pl. of **Epizoon**) (*epi, zoon,* animal). Ectoparasites. Parasitic animals infesting the surface of the body.

Epizoa'ria (same etymon). Animal parasites on external surfaces or parts.

Epizoic, ep-e-zo'ik. Relating to epizoa.

Epizoicide, ep-e-zo'e-side (*epizoon, cædo,* to kill). Any agent destructive of epizoa or external animal parasites.

Epizoönosi, ep-e-zo-on'o-se (*epizoon, nosos,* disease). Diseases (of the skin) caused by epizoa.

Epizoö'tia or **Epizoöty,** ep-e-zo'ot-e (same etymon). Disease prevalent among animals; corresponding in the veterinary art to epidemy in medicine. Influenza of animals.

Epizoötic, ep-e-zo-o'tik. Relating to epizoöty. General among the lower animals; corresponding to the word epidemic for man. **E. aph'thæ,** foot-and-mouth disease, of animals especially; eczema epizoötica. **E. celluli'tis,** condition popularly known as pink-eye.

Epizoötiology, ep-e-zo-o-te-ol'o-je. Description or science of epizoötic diseases.

Epizo'öty. Epizoötia.

Ep'och (*epi, echo,* to have or hold). Doubt; suspension of judgment. Period of change or occurrence. Suppression.

Epocheteusis, ep-ok-e-tu'sis (*epocheteuo,* to turn water from its course). Derivation.

Epode, ep-o'de (*epi, ode,* song). Incantation.

Epod'ynous (*epi, odune,* pain). Excessively painful.

Epomis, ep-o'mis (*ep, omos,* shoulder). Acromion; upper part of shoulder.

Epomphalicum, ep-om-fal'ik-um (*epi, omphalos,* navel). External application to the navel to act upon the abdomen.

Epomphalion (ep-om-fal'e-on), **Epomphal'ium,** or **Epom'phalum.** Part of the abdomen above the navel. Epomphalicum.

Eponychium, ep-o-nik'e-um (*epi, onux,* nail). Delicate epidermic layer on base and sides of the nail. Corneous condition of the epidermis from the second to the eighth month of fœtal life, locating the position of the future nail.

Epoöphoron, ep-o-of'or-on (*epi, oön,* egg, *phero,* to bear). Traces of genital part of the corpus Wolffianum.

Epostoma (ep-os-to'mah) or **Epostosis,** ep-os-to'sis (*ep, osteon,* bone). Exostosis.

Epsema, ep-sa'mah (*epseo,* to boil). Decoction.

Epsesis, ep-sa'sis. Decoction; elixation.

Epsilon bacillus, ep'sil-on bas-il'lus. Bacillus occurring in carious teeth.

Ep'som salts. Magnesium sulphate.

Epulis, ep-u'lis (*ep, oulon,* the gum). Excrescence not really connected with the gum, either fibroma or sarcoma of the alveolar processes, being a growth from the periosteum of the jaw. Two forms are described, simple or fibrous and malignant or myeloid, the latter being a vascular and fungating mass. **E., sarco'matous,** see *Sarcoma, alveolar.*

Epulosis, ep-u-lo'sis (*ep, oulo,* to cicatrize). Cicatrization.

Epulotica, ep-u-lot'ik-ah. Cicatrizing; aiding cicatrization.

E'qual. Epithet applied particularly to the pulse and respiration, which are equal when the pulsations and inspirations succeeding each other are alike in every respect.

Equa'tor. See *Æquator.*

Equiformal, e-kwi-for'mal. Having the same shape.

Equilibration, e-kwil-i-bra'shun (*æquus,* equal, *libro,* to balance). Condition in which an even balance of the body exists while in the act of walking or standing; believed to be influenced by impressions from the semicircular canals of the ear.

Equilibrium, e-kwil-ib're-um (*æquus,* equal, *libro,* to weigh). State of organs, fluids, and forces constituting health.

Equina cauda, ek-we'nah kawd'ah. See *Cauda.*

Equinated, ek'win-at-ed. Inoculated with equinia.

Equination, ek-win-a'shun. The condition of being inoculated with equinia. Inoculation of smallpox in the horse.

Equinia, ek-win'e-ah (*equinus,* belonging to a horse). *Glanders.* Dangerous contagious disorder accompanied by a pustular eruption, arising from inoculation with certain diseased fluids generated in the horse, the ass, and the mule. The disease is caused by a bacillus described by Schütz and Löffler, and called bacillus mallei. See *B. mallei.* Two forms of equinia are met with: *E. mitis,* contracted from horses affected with grease; and *E. glandulosa,* a dangerous and commonly fatal disease communicated to man, in the acute or chronic form, from the glandered horse. Veterinary surgeons make two varieties of the disease in the horse—glanders and farcy—the former affecting the pituitary membrane, with a profuse discharge from the nostrils, and pustular eruptions or small tumors, which soon suppurate and ulcerate, being attended by symptoms of malignant fever and by gangrene of various parts; the latter being the same disease, but appearing in the shape of small tumors, *farcy buds,* about the legs, lips, face, neck, etc. of the horse; sometimes very painful, suppurating, and degenerating into foul ulcers. They are often seen together.

Equinine, ek'win-een. The zymotic principle of glanders.

Equino-carus, ek-we'no-kah'rus. That condition of pes equinus in which there exists a marked hollowness of the sole of the foot.

Equino-varus, ek-we'no-vah'rus. Variety of club-foot in which pes equinus and pes varus coexist.

Equinus, ek-we'nus. Relating to the horse.

Equipedal, e-kwip'ed-al. Equal-footed.

Equisetum arvense, ek-we-se'tum ar-ven'se (*equus,* horse, *seta,* bristle). See *Hippuris vulgaris.* **E. hyema'le,** see *Hippuris vulgaris.* **E. mi'nus,** Hippuris vulgaris. **E. palus'tre,** grows in Europe and United States; diuretic, astringent, enmenagogue.

Equitation, ek-we-ta'shun (*equito,* to ride on horseback). Horseback exercise; advisable in many diseases, although improper in others, as in uterine affections; recommended in phthisis pulmonalis. Where much exercise is required walking is preferable.

Equivalence (e-kwiv'a-lence) or **Equivalency,** e-kwiv'a-len-se. Condition of being equivalent. Saturating power of other elements compared with hydrogen as a standard.

Equivalent, e-kwiv'a-lent. The atomic weight of a substance, or a number expressing the proportion by weight in which it combines with other substances. See *Elements* for table of combining weights.

Equivocal, e-kwiv'o-kal (*æquus,* equal, *vox,* voice). Term applied to symptoms which belong to several diseases. Generation is said to be equivocal when it is, or seems to be, spontaneous. See *Generation.*

Equivorous, e-kwiv'o-rus (*equus,* horse, *voro,* to devour). Feeding or subsisting on horseflesh, *Hippophagy.*

Er. In composition. See *Em.*

Era. Hedera helix.

Eradicate, e-rad'i-kate. To get rid of completely; a term applied to diseases.

Eradication, e-rad-i-ka'shun (*e, radix,* root). Act of rooting out or completely removing a disease.

Eradicative, e-rad'i-ka-tiv. Anything possessed of the power of completely rooting out a disease.

Erasion, e-ra'zhun (*e, rado,* to scrape). The act of scraping. Opening a joint and scraping out morbid structures.

Eras'mus Wil'son's disease. See *Wilson.*

Erb-Char'cot's disease. Spasmodic tabes dorsalis.

Erb's pal'sy or **paral'ysis.** Paralysis of the upper

portion of the superior extremity of the roots of the brachial plexus.

Erebinthus, er-e-bin'thus. Acer arietinum.

Erechthites hieracifolia, er-ek-the'tez he-er-as-e-fo'le-ah. *Fireweed.* Indigenous plant, ord. Compositæ; acrid tonic and astringent, and in large doses emetic.

Erectile, e-rek'til (*erigo*, to erect). Capable of erection. **E. tis'sue**, tissue susceptible of turgescence and increase of size, and formed of a collection of arteries and veins intermixed with nervous filaments; the veins varicose, and contained in spaces formed by trabeculæ of fibrous tissue, being prolongations from the fibrous envelope. This tissue exists in the corpora cavernosa of the penis and clitoris, at the lower and inner surface of the vagina, in the spongy part of the urethra, the lips, nipples, iris, etc. Sometimes it is developed accidentally, constituting a kind of organic transformation.

Erection, e-rek'shun. State of a part, as the penis, in which, from having been soft, it becomes stiff, hard, and swollen by the accumulation of blood in the areolæ of its tissue. **E. cen'tre**, reflex centre controlling erection; see *Centre*. **E., persist'ent**, priapism.

Erector, e-rek'tor. Producing erection; term applied to the muscles so concerned. **E. clitor'idis**, ischiocavernosus. **E. penis**, ischiocavernosus. **E. pi'li** (*pilus*, hair), cutaneous muscular fibres arising in the outer part of the corium, and inserted in the inner sheath of the hair-follicle. **E. spi'næ**, sacrospinalis. **E. trun'ci**, sacrospinalis.

Eremecausis, er-em-ah-kaws'is (*erema*, slowly, *kausis*, combustion). Combustion, oxidation, or decay of organic matters in the air.

Eremia, er-em'e-ah (*eremia*, rest). Inertia; want of power or inclination to move.

Eremocarpus, er-em-o-kar'pus. Gingerleaf, herb native of California; used in decoction for applying externally in rhus-poisoning, and the root is given internally in pulmonary diseases.

Eremopompholyx, er-em-o-pom'fo-liks (*eremos*, lonely). A single pompholyx.

Erethilyticum, er-e-thil-it'ik-um (*erethos*, redness, *lusis*, solution). Having a poor quality of blood, as from diminution of red corpuscles.

Erethism, er'-e-thizm (*erethizo*, to irritate). Irritation. Augmentation of the vital phenomena in any organ or tissue. Orgasm. Also greatly depressed state of the constitution produced by mercury as a poison, *mercurial erethism.*

Erethisma, er-e-thiz'mah (irritation). Excitement, irritation, rubefaction.

Erethismus, er-e-thiz'mus. Erethism; irritation. **E. ebrioso'rum**, delirium tremens. **E. hydropho'bia**, hydrophobia. **E. oneirodyn'ia**, incubus; depraved, disturbed, or morbid dreaming. **E. sim'plex**, fidgets. **E. trop'icus**, sunstroke.

Erethistic, er-e-this'tik. Relating to erethism. Rubefacient.

Erethitic, er-e-thit'ik. Relating to erethism.

Ereugmos, er-oog'mos (*ereugomai*, to belch). Eructation.

Ereumenus, er-u'men-us. Cloudy; applied to cloudy appearance of urine.

Ereuxis, er-ooks'is. Eructation, flatulence.

Erg (*ergon*, work). Unit of work effected in raising 1.981 gramme, or one dyne, to the height of one centimetre.

Ergasia, ur-gaz'e-ah. Action of the functions.

Ergasiomania, ur-gas-e-o-man'e-ah (*ergazomai*, to operate). Morbid desire or mania to operate.

Ergasiophobia, ur-gas-e-o-fo'be-ah (*ergazomai*, to operate, *phobos*, fear). Nervous dread of performing a surgical operation.

Ergasm, ur'gazm. Action of the functions.

Ergasterion, ur-gas-te're-on (*ergon*, work). Laboratory. **E. spir'itûs**, lung.

Ergastic, ur-gas'tik. Relating to operation.

Ergostat, ur'go-stat (*ergon*, work). Instrument for measuring and registering the amount of muscular exercise.

Ergot, ur'got. *Spurred* or *Horned rye, Spur, Hornseed, Cockspur rye, Cockspur, Ergot of rye.* Ergot is the compact mycetum or spawn of a fungus, Claviceps purpurea, which replaces grain of common rye, *Secale cereale.* This parasitic fungus has been called *Spacelia segetum.* More recently it has been maintained that it is a diseased state of the grain occasioned by the growth of a fungus not previously detected, to which the names *Ergotætia abortans* or *abortifaciens, Oïdium abortifaciens, Ergot-mould*, have been given. It is found projecting from among the leaves of the spike or ear, and is a long, crooked excrescence, resembling the spur of a cock, pointed at its extremities, of a dark-brown color externally, and white within. To the whole fungus giving rise to ergot has been given the name *Claviceps purpurea;* and the Pharmacopœias (U. S. and Br.), adopting this view, describe ergot as the sclerotium of Claviceps purpurea, replacing the grain of Secale cereale. Ergot is usually prescribed in the form of extract, fluid extract, or wine. See *Ergotin.*

Ergot has been long used, on account of its powerful contractile effects on the uterus, to accelerate parturition, and in post-partum hemorrhages. Some recommend the clear watery infusion; others advise the powder or the oil, the wine or the fluid extract. Ergot is also a valuable hemostatic in hæmoptysis, epistaxis, etc. It has been prescribed in diabetes, uterine fibroids, purpura, and various other conditions; it also possesses, it is affirmed, narcotic virtues, which have rendered it useful in hemorrhagic and other affections of excitement. Bread made of spurred rye has been attended with the effects described under *Ergotism.* **E. of maize**, corn maize. **E. of rye**, ergot.

Ergota, ur'go-tah. Ergot.

Ergotætia abortans, ur-go-te'she-ah ab-or'tans (*ergot, aitia*, cause). See *Ergot.* **E. abortifa'ciens**, see *Ergot.*

Ergotate, ur'go-tate. Salt of ergotic acid.

Ergotic acid, ur-got'ik as'id. Acid derived from ergot.

Ergotin, ur'go-tin. *Extract of ergot.* It has been used as a hemostatic in the dose of two grains several times a day, and has also been employed in mucilaginous emulsion in diarrhœa and dysentery. Name of various extracts of the active principle of ergot, which vary very much in action. *Bonjean's Ergotine*, aqueous extract used hypodermically.

Ergotinic acid, ur-go-tin'ik as'id. A narcotic constituent of ergot.

Ergotinine, ur-got'in-een. $C_{35}H_{40}N_4O_6$. Alkaloid from ergot.

Ergotinum, ur-go-te'num. Ergotin.

Ergotism, ur'go-tizm. Poisoning by ergot; affection produced by the use of spurred rye. Symptoms are vertigo, spasms, and convulsions, or torpor with numbness and loss of sensation and motion, and dry gangrene of the hands and feet.

Ergotismus, er-go-tiz'mus. Ergotism. **E. spasmod'icus**, convulsive disorder said to be endemic in some parts of Germany, from use of spoiled corn. **E. sphacelo'sus**, ergotism.

Ergot-mould, ur'got-mold. See *Ergot.*

Ergotole, ur'go-tole. Liquid preparation of Secale cornutum, which, it is claimed, will not produce irritation when used hypodermically.

Erica vulgaris, er-e'kah vul-gah'ris. Common heath. Diuretic and diaphoretic.

Er'ichsen's disease. Morbid condition due to traumatism or to mental strain, known as railway brain and railway spine.

Ericolin, er-ik'o-lin. $C_{34}H_{56}O_{21}$. Glucoside from plants of order Ericaceæ.

Erigentes nervi, er-e-jen'tees nur've (*erigo*, to be stiff). Nerves concerned in erection, proceeding from the sacral nerves.

Erigeron, er-ij'er-on (*er*, spring, *geron*, old man). E. Canadense. **E. ambig'uum**, see *Erigeron Philadelphicum.* **E. an'nuum**, see *E. Canadense.* **E. bellidifo'lium**, *Robin's plantain, Rosy's Betty.* Indigenous plant of the Compositæ; properties like those of E.

Philadelphicum. **E. Canaden'se,** *Canada fleabane, Prideweed, Horseweed, Butterweed,* allied in properties to E. Philadelphicum. Same may be said of *E. heterophyllum, E. annuum, Sweet scabious* or *Various-leaved fleabane.* **E. heterophyl'lum,** see *E. Canadense.* **E. integrifo'lium,** E. Philadelphicum. **E. Philadel'phicum,** *Scabious, Skevisch, Philadelphia* or *Skevisch* or *Narrow-leaved fleabane, Daisy, Cocash, Frostweed, Fieldweed, Squawweed,* is a plant used in decoction or infusion for gouty and gravelly complaints; diuretic and sudorific. The essential oil has been given in uterine hemorrhage; that of E. Canadense, *Oil of Canada fleabane,* has been given in gonorrhœa. **E. strigo'sum,** E. Philadelphicum.

Erigerum, er-ij'er-um. Senecio.

Eriocephalus umbellulatus, er-e-o-sef'al-us umbel-lu-lat'us (*erion,* wool, *kephale,* head). *Wild rosemary.* African shrub, ord. Compositæ; diuretic.

Eriodendron anfractuosum, er-e-o-den'dron anfrak-tu-o'sum. Tropical plant, ord. Sterculiaceæ, exuding emollient gum. **E. occidenta'le** has the same virtues as Eriodendron anfractuosum.

Eriodictyon Californicum, er-e-o-dik'te-on kal-e-for'ne-kum. *Consumptive's weed, Bear's weed, Yerba santa, Mountain weed* of California and Mexico. Leaves are used as stimulant expectorant in bronchitis, phthisis, and catarrhal apnœa. **E. glutino'sum,** E. Californicum.

Eriophorum, er-e-of'or-um. Cotton grass. **E. polystach'ium,** species of Europe, possesses laxative properties.

Eriosper'mum latifo'lium (*erion,* wool, *sperma,* seed). S. African plant, the tuber of which is muculent, and used externally in abrasions and superficial ulcers.

Eristalis, er-is-tal'is. Insect, genus Syrphidæ. Larvæ of this insect have been discovered in the urine of human beings.

Erithace, er-ith'as-e. See *Propolis.*

Erithricium (er-ith-ris'e-um) **gnaphalioï'des.** Native of Chili; infusion is employed as a stomachic.

Erodens, e-ro'dens (*e, rodo,* to gnaw). Caustic.

Erodium cicutarium, er-o'de-um sik-u-tah're-um (*erodios,* heron). Variety of storksbill of the Geranium family, prescribed in dropsy, in decoction of the dried plant. **E. moscha'tum,** Geranium moschatum.

Eromania, er-o-man'e-ah (*eros, mania,* love). Erotomania.

Eronosus (er-on'os-us) or **Eronu'sos** (*er,* spring, *nosos* or *nousos,* disease). Disease appearing chiefly in the spring.

Eros, er'os. Love.

Erosio, er-o'ze-o. Corrosion, erosion. **E. et perfora'tio sponta'nea ventric'uli,** gastromalacia.

Erosion, e-ro'zhun (*e, rodo,* to eat away). Action of a corrosive substance, or the gradual destruction of a part by such substance or by friction. Ulceration is a form of *spontaneous erosion.* **E., catar'rhal,** catarrh attacking the epithelium, and followed by loss of epithelium. **E., chan'crous,** destruction of the normal tissues occurring in the neighborhood of a chancre. **E., cys'tic, of the cervix uteri,** inflamed condition of the mucous follicles of the vaginal part of the cervix and in the uterine cavity. **E., gan'grenous, of the cheek,** cancer aquaticus. **E., herpet'ic,** appearance of the vaginal portion of the cervix of the uterus, herpetiform in character, observed in catarrhal attacks of that organ. **E. of the stom'ach, hemorrhag'ic,** form of chronic ulcerative gastritis of habitual drinkers. **E. of the teeth,** condition of the teeth in children, in which they present a honeycombed appearance, due to stomatitis, especially the mercurial form.

Erosive, e-ro'siv. Relating to, or giving rise to, erosion.

Erotic, e-rot'ik (*eros,* love). Produced by love or sexual desire; causing such desire.

Eroticomania, er-ot-e-ko-man'e-ah. Erotomania.

Erotomanes, er-ot-om'an-ees. Suffering with erotomania.

Erotomania, er-ot-o-man'e-ah. Mental alienation caused by love or sexual desire. Nymphomania.

Erpes, er'pees. Herpes.

Erpetol'ogy. Herpetology.

Errabundus, er-rah-bund'us (*erro,* to wander). Wandering or irregular.

Erratic, er-rat'ik. *Wandering, Irregular.* Disappearing and recurring at regular intervals, as intermittents which observe no type. Applied also to pains or to diseased manifestations which move from one part to another, as in gout, rheumatism, erysipelas, etc.; also to worms which wander from one part—as the intestinal canal—to other parts, as the urinary passages.

Errhine, er'rhin (*er, rhis,* nose). Sternutatory. Remedy acting on the Schneiderian membrane, exciting sneezing and increased discharge.

Errhinum, er-rhe'num. Errhine, sternutatory.

Errhipsis, er-rhip'sis. Prostration.

Errhysis, er'ris-is (*er, rheo,* to flow). Draining of blood, or trifling hemorrhage.

Er'ror. Deviation or aberration. **E. of disper'sion,** aberration of refrangibility. **E. lo'ci,** error of place. Deviation of fluids when they enter vessels not destined for them.

Ers'mert. Polygonum hydropiper.

Erubes'cence (*e, rubeo,* to be red). Blushing; redness.

Eru'ca. Brassica eruca; sinapis. **E. arven'sis,** Sinapis arvensis. **E. barba'rea,** Erysimum barbarea. **E. fœ'tida,** Brassica eruca. **E. ni'gra,** Sinapis nigra. **E. sati'va,** Brassica eruca.

Eru'cic acid. $C_{22}H_{42}O_2$. Acid derived from oil of mustard.

Erucin, e-ru'sin. Powder, yellow in color, obtained from sinapis alba.

Eructation, e-ruk-ta'shun (*eructo,* to belch). Belching. Sonorous emission by the mouth of flatus proceeding from the stomach.

Erugatoria, er-u-gat-o're-ah (*e, ruga,* wrinkle). Medicines which remove wrinkles.

Erumpent, e-rum'pent (*e, rumpo,* to break out). Breaking out; eruptive.

Eruptio, e-rup'she-o (*e, rumpo,* to break out). Eruption. **E. exanthe'matis,** breaking out of an eruption. **E. san'guinis,** hemorrhage.

Eruption, e-rup'shun. Sudden and copious evacuation of fluid, as serum, blood, pus, etc., from a canal or cavity. Breaking out of an exanthem; exanthem itself, as rash, pustules, vesicles, etc. **E., medic'inal,** cutaneous eruption due to internal administration of certain drugs.

Eruptive, e-rup'tiv. Accompanied by eruption. **E. fe'vers.** The following tabulated arrangement presents some interesting facts in regard to the diagnostic symptoms of this class of fevers, including typhus and enteric fevers, from their exanthematous nature (Finlayson):

DATE OF APPEARANCE OF THE FEBRILE RASHES AFTER THE FIRST SIGNS OF ILLNESS.

Scarlatina rash appears on the first or second day.
Small-pox appears on the third day.
Measles appears on the fourth day.
Typhus appears on the fifth day.
Typhoid or *enteric fever* appears on the seventh day or later.
Chicken-pox usually shows itself within the first day after the constitutional disturbance, but this is often so slight as not to be clearly marked.
German measles (red measles, rötheln, roseola, rosalia, etc.) may appear on the second, third, or fourth day, or the rash may be among the very first symptoms recognized.
Erysipelas varies considerably as to the date of its appearance on the skin, but may usually be detected on the day after shiverings or other febrile disturbances have appeared. Occasionally, however, the rash is delayed or suppressed, or appears only as fugitive patches which readily escape notice, just as happens in certain cases of scarlatina.

PERIOD OF INCUBATION.

This is not always uniform, and in many cases cannot be determined with accuracy, as the infection may linger in the clothing or other materials (fomites) for some time after the more obvious exposure of the person to the disease.

Scarlatina: incubation period varies from a few hours to eight or ten days; apparent prolongation for a longer period (which is not unusual) can often be explained more naturally on the supposition of infection through clothing and the like.
Small-pox: thirteen or fourteen days.
Varicella or *chicken-pox:* ten to fourteen days.
Measles: usually about a fortnight; said to be seven days when inoculated from nasal mucus; variation in extreme from seven to twenty-one days.
German measles (rötheln): varies from seven to fourteen days.
Typhus fever: varies from a single day to nearly three weeks; usually about seven to fourteen days.
Typhoid or *enteric fever:* about two or three weeks.
Erysipelas: period very uncertain; probably short as a rule.

LIABILITY TO SECOND ATTACKS.

Scarlatina: an indubitable second attack very rare, but not unknown; dubious illnesses erroneously called scarlet fever may account for most of the so-called second attacks.
Varicella or *chicken-pox:* a second attack extremely rare.
Typhus fever: a second attack extremely rare, but not unknown; the common confusion between typhus and typhoid (enteric) fever must be remembered in judging of the history of patients.
Small-pox: a second attack by no means rare; errors in the diagnosis from other forms of pustular eruptions are quite possible. Traces of former attacks are usually visible.
Measles: a second attack, as alleged, is very common; possibly this may arise from there being two forms of measles with distinct powers of infection.
Typhoid or *enteric fever:* one attack does not seem to afford much if any protection from a second (relapses are also very common).
Erysipelas: one attack seems rather to predispose to a second than to afford exemption.

Erva de Sancta Maria, er'vah de sank'tah mah-re'-ah. Arum dracunculus.

Ervum (er'vum) or **Ervil'ia.** A kind of lentil. Meal of the seeds has been used in poultices. **E. ervil'-ia,** ervum. **E. lens,** lentil; the seed is eaten like peas; it is flatulent and difficult of digestion. **E. plica'tum,** ervum.

Eryge, er'e-je. Eructation.

Erygmatodes, er-ig-mat-o'dees. Producing eructations.

Eryngium aquaticum, er-in'je-um ah-kwat'ik-um. *Water eryngo, Button snakeroot.* Ord. Umbelliferæ. The root eryngium is nearly allied to the contrayerva, and is a sudorific and expectorant. **E. campes'tre,** of Europe, is diuretic and emmenagogue; is sometimes used for *E. maritimum.* **E. fœt'idum,** *Feverweed,* indigenous; is alterative, sedative, and antipyretic. **E. marit'imum** or **mari'num** (*ereugomai,* to belch), *Sea holly* or *eryngo.* The root has a slightly aromatic odor and sweetish and warm taste; is diuretic and expectorant. **E. vulga're,** E. campestre. **E. yuccæfo'lium,** E. aquaticum.

Eryngo (er-in'go) **root.** Eryngium maritimum. **E., sea,** Eryngium maritimum. **E., wa'ter,** E. aquaticum.

Erysimum, er-is'im-um (*eruo,* to draw). *Hedge-mustard;* expectorant and diuretic. Seeds resemble mustard. **E. allia'ria,** alliaria. **E. barbare'a,** antiscorbutic; see *Alliaria.* **E. cordifo'lium,** alliaria. **E. lyra'tum,** E. barbarea. **E. officina'le,** erysimum.

Erysipelacea, er-e-sip-el-ah'se-ah (same etymon as **Erysipelas**). Family of eruptive diseases comprising erysipelas, variola, rubeola, and scarlatina.

Erysipelas, e-re-sip'el-as (*erusos,* red, *pella,* skin). *St. Anthony's fire, Wildfire.* A disease characterized by superficial inflammation of the skin, with general fever, tension, and swelling of the part; the surface smooth and shining as if oiled, *Erysipelas glabrum;* pain and heat, redness diffused, but more or less circumscribed, and disappearing when pressed upon by the finger, but returning as soon as the pressure is removed. Frequently small vesicles appear upon the inflamed part, which dry up and fall off as branny scales. This disease is contagious and inoculable, and is thought to be the result of the introduction of a specific coccus, the streptococcus pyogenes. Erysipelas is generally acute, its medium duration being from ten to fourteen days. When it reaches its acme and ceases to spread, it receives the name *Erysipelas fixum.* It yields, commonly, to general refrigerant remedies. Topical applications of bichloride of mercury and ichthyol in the form of an ointment are very serviceable. At times, when it approaches the phlegmonous character, copious bleeding and other evacuants may be required, as in many cases of erysipelas of the face. In most cases the general action seems deficient, and it becomes necessary to give tonics. When erysipelas is highly inflammatory and invades the parts beneath, it is termed *Erysipelas phlegmonodes;* when accompanied with phlyctenæ and the inflammation terminates in gangrene, *Erysipelas gangrænosum;* and when associated with infiltration of serum, *Erysipelas œdematosum;* when superficial and tending to spread indefinitely, *Erysipelas erraticum.* At times the surface in erysipelas has a bronzed rather than a red hue, *Bronzed erysipelas.* **E., bronzed,** see *Erysipelas.* **E. coc'cus,** Micrococcus erysipelatosus; see *Erysipelas.* **E. errat'icum,** see *Erysipelas.* **E. fix'um,** see *Erysipelas.* **E. gangræno'sum,** see *Erysipelas.* **E. glab'rum,** see *Erysipelas.* **E. mi'grans,** erysipelas erraticum. **E. œdemato'sum,** see *Erysipelas.* **E. period'ica nervo'sa chron'ica,** pellagra. **E. phlegmono'des,** see *Erysipelas.* **E. phlyctenoï'des,** herpes zoster. **E., puer'peral,** erysipelas occurring in women who have been recently delivered. **E. pustulo'sa,** herpes zoster. **E. zoster,** herpes zoster.

Erysipelatodes, er-e-sip-el-at-o'dees. Erysipelatous.

Erysipelatoid, er-e-sip-el'at-oid. Resembling erysipelas.

Erysipelato-parotitis, er-e-sip-el'at-o-par-o-te'tis. Parotitis accompanied with erysipelas.

Erysipel'atous. Relating to erysipelas. **E. inflamma'tion,** character of inflammation which distinguishes erysipelas.

Erysipeline, er-e-sip'el-een. The zymotic poison of erysipelas.

Erysipelo-gonorrhœa, er-i-sip'el-o-gon-or-rhe'ah. Urethritis erysipelatous in character.

Erysipeloid, er-e-sip'el-oid. Resembling erysipelas; also cutaneous affection from infection with microorganisms of septic animal matter.

Erysipelorchitis, er-e-sip-el-or-ke'tis. Orchitis accompanied with erysipelas.

Erysipelous, er-e-sip'el-us. Erysipelatous.

Erysipelurethritis, er-e-sip-el-u-re-thre'tis. Urethritis erysipelatous in character.

Erysos, er'e-sos (red). Erythema.

Erythanthema, er-e-than'the-mah (*eruthros,* red, *anthos,* flower). Efflorescence of the skin. The erythanthemata constitute a class of diseases resembling erythema in origin, but differing in their development.

Erythema, er-e-tha'mah (vulg. er-e-the'mah) (*eruthros,* red, rose-colored). *Inflammatory blush.* Name sometimes given to erysipelas, especially when of a local character. It is also applied to the morbid redness on the cheeks of the hectic and on the skin covering bubo, phlegmon, etc. It is a nearly continuous redness of some portion of the skin, attended with disorder of the constitution, but not contagious. Many varieties are described by dermatologists. Local erythema, which is merely hyperæmia, without much, if any, appreciable effusion into the cutis and cellular tissue, is sometimes called *Erythema hyperæmicum.* If there is more or less escape of serosity from the vessels, with prominence of the eruption, it is called *Erythema exudativum.* Sometimes erythema is used synonymously with erysipelas. **E. ab a'cribus,** hyperæmia produced by acrid or poisonous agents. **E. acrodyn'ia,** acrodynia. **E. ambus'tio,** burn. **E. annula're,** form generally called E. marginatum. **E. an'thrax,** anthrax. **E. calor'icum,** rash resulting from the action of heat on the skin. **E. centrif'ugum,** variety of erythema attacking the face, commencing as a small red spot, and spreading to affect the whole face. **E. circina'tum,** see *E. marginatum.* **E. endem'icum,** pellagra. **E., epidem'ic,** acrodynia. **E. exudati'vum,** see *Erythema.* **E. figura'tum,** erythema with patches running together to form a novel appearance of the surface. **E. à frig'ore,** chilblain. **E. fu'gax,** erythema appearing on the body in febrile

diseases, teething children, etc., and of brief duration. **E. gangræno'sum**, anthrax. **E. hyperæ'micum**, see *Erythema*. **E. ichoro'sum**, eczema mercuriale. **E. intertri'go**, chafing. **E. læ've**, slight erythema affecting the skin, as in œdema. **E. margina'tum**, form in which the prominent patches of erythema are distinctly separated from the skin at their margins. When they can be distinctly measured or composed, we have *E. circinatum*. **E. mercuria'le**, eczema mercuriale. **E. multifor'me**, under this head are included various forms of symptomatic erythemata. **E. nodo'sum**, severe form of E. tuberculatum. **E. papula'tum**, E., papulated, at first appearing on face, neck, breast, etc. of females, young persons especially. Rash which breaks out in epidemic cholera, generally described as a roseola, *Roseola cholerica*, is erythema papulatum. **E. paratrim'ma**, chafing. **E. pellagro'sum**, pellagra. **E. per'nio**, chilblain. **E. purif'luens**, E. intertrigo, producing by irritation a raw surface giving out a puriform fluid. **E. rose'ola**, E. of dull-red color; may precede eruptive fevers. **E. scarlatinifor'me**, rubella. **E. sim'plex**, congestion produced by irritation from without. **E. sola're**, pellagra, attended with eruption of small red spots or patches on the parts exposed to the sun. **E. tubercula'tum** or **tuberculo'sum**, erythema in which the patches are in small lumps. **E. urtica'ria**, preliminary appearance of urticaria. **E. vaccin'ium**, form of erythema occurring the first or second day after vaccination, or about the eighth or ninth day, when the vaccine vesicle commences to mature. **E. variolo'sum**, see *Roseolæ*. **E. venena'tum**, E. ab acribus. **E. vesiculo'sum**, local erythema from the application of an irritant, characterized by vesicles on a red base. **E. volat'icum**, E. fugax.

Erythematous (er-e-them'at-us) or **Erythemat'ic.** Appertaining or relating to erythema.

Erythemoid, er-e-them'oid (*erythema, eidos*, resemblance). Resembling erythema.

Er'ythism of the stom'ach. Neurosis of the stomach, usually due to neuralgic diathesis.

Erythræa centaurium, er-e-thre'ah sen-taw-re'um (*eruthros*, red). Chironia centaurium. **E. Chilen'sis**, Canchalagua, Chironia Chilensis; febrifuge and cholagogue.

Erythræmia, er-e-thre'me-ah (*erythro, haima*, blood). Plethora.

Erythranche, er-e-thran'ke (*erythro, ancho*, to suffocate). Erysipelatous or erythematous sore throat.

Erythrasma, er-e-thraz'mah. Eczema marginatum; cutaneous affection, like erythema intertrigo, due to micro-organism in the epithelial layer called *Microsporon minutissimum*.

Erythrema, er-e-thre'mah. Erythema.

Erythrenteria, er-e-thren-ter'e-ah (*erythro*, red, *enteron*, intestine). Hyperæmia of the intestines.

Erythrina (er-e-thre'nah) **coralloden'dron.** E. Indica. **E. cristagal'li**, Brazilian tree, inner bark of which, *mulangee bark*, is narcotic and hypnotic. **E. In'dica**, coral tree; bark is sedative to the nervous system. **E. monosper'ma**, Butea frondosa.

Erythrine, er'ith-reen. Alkaloid, $C_{20}H_{22}O_{10}$, obtained from Erythrina corallodendron.

Erythro, er'e-thro (*eruthros*, red). In composition, red.

Erythroblasts, er'e-thro-blasts (*eruthros*, red, *blastos*, germ). Protoplasmic condition of red blood-globules.

Erythrocentaurin, er-e-thro-sen-taw'rin. Crystallizable derivative, $C_{27}H_{24}OH$, from Erythræa centaurium.

Erythrochloropy, er-e-thro-klo'ro-pe (*eruthros*, red, *chloros*, green, *ope*, vision). Color-blindness as to all colors except red and green.

Erythrochœras, er-e-thro-ke'ras (*erythro, choiras*, glandular swelling). Cynanche parotidæa.

Erythrocruorin, er-e-thro-kru'or-in (*eruthros*, red, *cruor*, blood). Hæmoglobin.

Erythrocyte, er'e-thro-site (*eruthros*, red, *kutos*, cell). Red blood-corpuscle.

Erythrodanum, e-e-throd'an-um. Rubia.

Erythrodermia, er-e-thro-dur'me-ah (*eruthros*, red, *derma*, skin). Pathological reddening of the skin.

Erythrodextrin, er-e-thro-deks'trin (*eruthros*, red, *dextrin*). Amylo-dextrin, $C_6H_{10}O_5$, a substance isomeric with dextrin. When saliva acts upon starch erythrodextrin is a product. The test for its presence in the stomach consists in adding iodine to the filtered gastric juice, when a purple color appears if erythrodextrin is present.

Erythrogaster, er-e-thro-gas'ter (*eruthros*, red, *gaster*, belly). Having a red belly.

Erythrogran'ulose. Granular substance in the grains of starch colored red by iodine.

Erythroid, er'e-throid (*erythro, eidos*, resemblance). Reddish. **E. coat**, vaginal coat of the testes. **E. ves'icle**, vesicle of the fœtus, pyriform and much longer than, although of the same breadth as, the umbilical vesicle.

Erythromelalgia, er-e-thro-mel-al'je-ah *eruthros*, red, *melos*, limb, *algos*, pain). Vaso-motor neurosis of the lower extremities, attended with local redness and intense pain—*Reynaud's disease*.

Erythronium, er-e-thro'ne-um. E. Americanum. **E. America'num**, *Common erythronium, Yellow snakeleaf, Yellow adder's tongue, Adderleaf, Dog violet, Dog's tooth violet, Rattlesnake violet, Lamb's tongue, Scrofula root, Yellow snowdrop*. Ord. Liliaceæ. **E. dens ca'nis**, E. Americanum. **E. lanceola'tum**, E. Americanum. **E. longifo'lium**, E. Americanum.

Erythrophlæine, er-e-thro-fle'een. Poisonous alkaloid from erythrophlæum or sassy-bark, resembling digitalin or picrotoxin. The hydrochloride is used; said to be a more potent cardiac agent than digitalin.

Erythrophleum judiciale, er-e-thro-fle'um ju-dis-e-ah'le (*erythro, phleo*, to flow). Casca or sassy-bark tree. Doom-bark, from E. Guineense or E. judiciale of Africa; used as an errhine, and also as a substitute for digitalis and as an ordeal-poison.

Erythrophlogosis, er-e-thro-flo-go'sis (*eruthros*, red, *phlogosis*, burning). Inflammation accompanied with marked redness.

Erythrophobia, er-e-thro-pho'be-ah (*eruthros*, red, *phobos*, fear). Morbid dread of red color.

Erythropia, er-e-thro'pe-ah (*erythro, ops*, vision). Defective vision in which everything seen has a red shading.

Erythropityriasis, er-e-thro-pit-e-re'as-is. Pityriasis rubra.

Erythroplast, er'e-thro-plast. Erythroblast.

Erythropsia, er-e-throp'se-ah (*erythro, ops*, vision). Erythropia.

Erythropsin, er-e-throp'sin. Red or purple seen on the retina.

Erythrophthalmia, er-e-throf-thal'me-ah (*eruthros*, red, *ophthalmia*). Ophthalmia accompanied with marked redness.

Erythropyra, er-e-throp'ir-ah (*erythro, pur*, fire, fever). Erysipelas.

Erythroretin, er-e-thro-re'tin (*erythro, resina*, resin). Resinous matter of rhubarb.

Erythrorrhiza rotundifolia, er-e-thror-re'zah rotun-de-fo'le-ah (*erythro, rhiza*, root). Galax aphylla.

Erythrose, er'e-throse. Red coloring matter obtained from rhubarb by treating the latter with nitric acid.

Erythrosis, er-e-thro'sis. Rubefaction; plethora.

Erythroxyline, er-e-throx'il-een. Cocaïne.

Erythroxylon coca (er-e-throks'e-lon ko-kah) or **Erythrox'ylum** (*erythro, xulon*, wood). Coca; a plant growing on the eastern slopes of the Andes; prized in Peru, Chili, and Bolivia as a nervous stimulant and an article of diet; serves as a substitute for the tea, coffee, betel, tobacco, hashish, and opium of other peoples. The leaves are the part used medicinally. Erythroxylon (Ph. U. S.) is the leaves of E. coca. The active alkaloid, cocaïne, has been separated from it. See *Cocaïne*. **E. lu'cidum**, Lithia acuminata.

Erythruria, er-e-thru're-ah (*eruthros*, red, *ouron*, urine). Hæmaturia; emission of red urine.

Esaphe, es'af-e (*eis, haphao*, to feel, to feel inside). Introduction of a finger or fingers into the vagina, to examine the condition of the uterus. Employed to verify the existence or non-existence of pregnancy

and its different stages; to detect certain affections or faults of conformation in the genital organs and pelvis; and to examine into the progress of labor, etc.

Esca, es'kah. Aliment.

Escallonia (es-kal-lo'ne-ah) **myrtilloï'des.** Species of Escalloniæ growing in Peru; the leaves are used for poultices on wounds and as a tonic. *E. resinosa* and *E. rubra* have both tonic properties.

Escara, es'kar-ah. Eschar.

Eschalot, es'shal-ot. Species of Allium.

Eschar, es'kar. Slough, crust, or scab; disorganized portion arising from the mortification of a part, and distinguishable from the living parts by its color, consistence, and other physical properties. Inflammation excited in the contiguous parts gives occasion to a secretion of pus between the living and dead parts, ultimately completely separating the latter. The process is called *sloughing.*

Eschara, es'kar-ah. Eschar. Vulva.

Escharification, es-kar-i-fi-ka'shun. Formation of an eschar.

Escharodermitis, es-kar-o-dur-me'tis (*eschara,* eschar, *derma,* skin). Dermatitis in which an eschar occurs.

Escharopædophlysis, es-kar-o-pe-dof'lis-is (*eschara,* eschar, *pais,* child, *phlusis,* eruption). Escharodermitis occurring in children.

Escharosis, es-kar-o'sis. Formation of an eschar.

Escharotic, es-kar-ot'ik. Destroying living tissues, producing an eschar; substance which, when applied upon a living part, produces such an effect.

Eschomelia, es-ko-me'le-ah. Variety of monstrosity in which defect of a limb exists.

Eschscholt'zia Califor'nica. California plant, the alcoholic extract of which is sedative, resembling morphia in its effect and action; analgesic and soporific.

Escoba (es-ko'ba) **amaya.** Parthenium hysteropharum.

Escorzonera, es-kor-zon-a'rah. Scorzonera.

Esculapian (from *Æsculapius*). Medical.

Esculent, es'ku-lent (*esca,* food). Edible; eatable; cibarious; such plants, or such parts of plants or animals, as may be eaten for food.

Esculin, es'ku-lin. Æsculin.

Esenbeckia febrifuga, es-en-bek'e-ah feb-rif'u-gah. Brazilian tree, ord. Rutaceæ, from which a variety of angostura is procured; febrifuge. An alkaloid called *Esenbeckine* has been obtained from it.

Eseria (es-e're-ah) or **Eserine,** es'er-een. Alkaloid from Physostigma venenosum, Calabar bean; called also *physostigmine* and *calabarine.* Used by ophthalmologists for various affections of the eye and as a mydriatic, usually in doses of gr. ij to f℥ij of distilled water. **E. hydrobro'mate,** prepared by neutralizing eserine with solution of hydrobromic acid. **E. sal'icylate,** result of combining eserine with salicylic acid. **E. sul'phate,** produced by neutralizing ethereal solution of eserine with sulphuric acid.

Eseridine e-ser'id-een. $C_{15}H_{23}N_3O_3$. Alkaloid from seeds or leaves of Physostigma venenosum or Calabar bean, in which is also found eserine or physostigmine. It is toxic to the heart, but only one-sixth as strong as eserine. Its hypodermic use has produced gangrene.

Esmarch's apparatus, es'mark's ap-par-at'us. Arrangement for removing blood from a limb before amputation or other important operation, by application of a broad rubber bandage wrapped tightly from below. **E.'s band'age,** E.'s apparatus. **E.'s tourniquet,** E.'s apparatus. **E.'s tubes,** tubes containing thin layer of gelatin, for culture of bacteria.

Eso, es'o (within). In composition, within.

Esochas (es'o-kas) or **Esoche,** es'o-ke (*eso, echo,* to have). Tumor, as a hemorrhoid, within the anus.

Esocolitis, es-o-ko-le'tis (*eso, colitis*). Dysentery.

Esodic, es-od'ik (*eso, hodos,* way). Afferent.

Esoenteritis, es-o-en-ter-e'tis. Inflammation of mucous coat of intestines.

Esoethmoïditis, es-o-eth-mo-id-e'tis. Inflammation of ethmoid cells.

Esogastritis, es-o-gas-tre'tis. Inflammation of lining membrane of stomach.

Esophoria, es-o-for'e-ah (*eso, phero,* to bear). Bending of visual lines inward.

Esoptrocnaphallon, es-op-tro-na-fal'lon (*eisoptron,* mirror, *knaphalon,* wool). Plug of speculum for the vagina.

Esorhinus, es-o-rhi'nus. Term applied to crania in which a line projected from the nasion to the alveolar point comes in front of a line drawn from nasion to rhinion.

Esosmometrum, es-os-mo-met'rum (*eis,* into, *osmos,* impulse, *metron*). Apparatus for estimating endosmosis.

Esosmosis (es-os-mo'sis) or **Esosmus,** es-os'mus (*eisotheo,* to thrust into). Endosmosis.

Esosphenoiditis, es-o-sfen-oid-e'tis. Inflammation of lining membrane of sphenoidal cells; osteomyelitis of the sphenoid bone.

Esoteric, es-o-ter'ik (*esoteros,* interior). Private, interior; as esoteric causes of disease, in contradistinction to exoteric, public or exterior.

Esoterism (es'ot-er-izm), **med'ical.** Esotery, or mystery and secrecy, with which a practitioner performs his daily duties.

Esotropia, es-o-tro'pe-ah (*eso,* inward, *trepo,* to turn). Convergent strabismus.

Esphlasis, es'flas-is (*es,* inward, *phlao,* to break). Fracture of skull by comminution, the fragments being depressed. Depression.

Espnoic, esp'no-ik. Inspiratory.

Essence. By some used synonymously with volatile oil; by others with simple tincture or with alcoholic solution of volatile oil, as essence of peppermint. **E. of an'ise,** essentia anisi. **E. of Barda'na,** tinctura guaiaci ammoniata. **E. of car'away,** essentia carui. **E. of cin'namon,** essentia cinnamomi. **E. of colts'-foot,** see *Tinctura benzoini composita.* **E. of fen'nel,** essentia fœniculi. **E. of gin'ger,** tinctura zingiberis fortior. **E. of lem'on,** spiritus limonis. **E. of mint,** spiritus menthæ piperitæ. **E. of musk,** tinctura moschi. **E. of nut'meg,** essentia myristicæ moschatæ. **E. of pennyroy'al,** essentia menthæ pulegii. **E. of pep'permint,** spiritus menthæ piperitæ. **E. of pimen'to,** essentia pimentæ. **E. of rose'mary,** essentia rosmarini. **E. of roses,** see *Rosa centifolia.* **E. of spear'mint,** spiritus menthæ viridis. **E. of spruce,** see *Pinus abies.*

Essentia, es-sen'she-ah. Essence; tincture. **E. abie'tes,** see *Pinus abies.* **E. absin'thia ama'ra,** tinctura absinthii composita. **E. absin'thii compos'ita,** tinctura a. composita. **E. al'oës,** tinctura aloes. **E. ani'si,** *Essence of anise* (ol. anisi and spirit. rectif.); dose, ♏x–xx as a carminative. **E. antimo'nii** or **stib'ii,** vinum antimonii tartarizati. **E. antisep'tica Huxha'mi,** tinctura cinchonæ compositum. **E. aromat'ica,** tinctura cinnamomi composita. **E. car'ui,** *Essence of caraway* (ol. carui and alcohol); dose, gtt. xx–f℥j as a carminative. **E. casto'rei,** tinctura castorei. **E. de ce'dro,** oleum cedrinum. **E. Chi'næ,** tinctura cinchonæ composita. **E. cinnamo'mi,** *Essence of cinnamon* (ol. cinnam. and alcohol); dose, gtt. x–xx. **E. cor'ticis Peruvia'na antisep'tica Huxha'mi,** tinctura cinchonæ composita. **E. c. P. compos'ita,** tinctura cinchonæ amara. **E. fœnic'uli,** *Essence of fennel* (ol. fœnic. and alcohol); dose, gtt. x–f℥j. **E. men'thæ piperi'tæ,** spiritus menthæ piperitæ. **E. m. pule'gii,** *Essence of pennyroyal* (ol. puleg. and alcohol); dose, gtt. xv–xxx. **E. m. vir'idis,** tinctura olei menthæ viridis. **E. myrist'icæ moscha'tæ,** *Essence of nutmeg* (ol. myrist. and alcohol); dose, gtt. xx–xxx. **E. nero'li,** see *Citrus aurantium.* **E. pepsi'ni,** wine of pepsin. **E. pimen'tæ,** *Essence of pimento* (ol. piment. and alcohol); dose, gtt. xxx–lx. **E. rosmari'ni,** *Essence of rosemary* (ol. rosmarini and alcohol); dose, gtt. xxx–lx. **E. terebin'thinæ,** oleum terebinthinæ.

Essential, es-sen'shal. Term applied to the active principles of vegetables believed to be endowed with the properties of the plants from which they are extracted. *Essential oil* was so called because regarded as the only immediate principle which was

essential. *Essential salts* are true salts or extracts, existing ready formed in vegetables, obtained by distillation, incineration, or some other process. *Essential disease* is synonymous with a general disease; that is, one not depending on any local affection, not symptomatic. **E. paral'ysis,** paralysis without perceptible lesion. **E. ver'tigo,** vertigo without perceptible lesion.

Essen'tialism. Theory that every disease has its own individual features, requiring its own individual treatment.

Essentiality, es-sen-she-al'it-e. See *Essential disease.*

Essera, es'se-rah. Species of cutaneous eruption, consisting of small, reddish tubercles over the whole body, with troublesome itching; variety of lichen or urticaria.

Esthema (es-tha'mah) or **Esthesis,** es-tha'sis (garment). Clothing. See *Vestitus.*

Esthiomenus (es-the-om'en-us) or **Esthiom'enos** (*esthio,* to eat). That which devours or eats away. Certain ulcers and eruptions are so called, especially rodent ulcer of the vulvo-anal region.

Estival, es'te-val (*æstas,* summer). Happening in summer; belonging to summer. Epithet given to summer diseases, because they reign at that season and appear to depend on the influence exerted by it on the animal economy. In the United States the summer disease or complaint means disorder of the bowels, as diarrhœa, cholera morbus, etc.

Est'lander's opera'tion. Operation of excision of a rib or ribs for discharging thoracic abscess.

Esula (es'u-lah) **cyparis'sias.** Euphorbia cyparissias. **E. ma'jor,** Euphorbia palustris. **E. mi'nor,** Euphorbia cyparissias.

Esuries (es-u're-ees), **Esurigo** (es-u-re'go), or **Esuritio,** e-su-rish'e-o. Hunger.

Esurinus, es-u-re'nus. Causing hunger.

Esuritis, es-u-re'tis. Ulcerated condition of the stomach caused by inanition.

Etæristria, et-e-ris'tre-ah (*etaireo,* to indulge unnatural desires). A female whose clitoris is so large as to cause her to be regarded as a hermaphrodite.

Eternal (e-tur'nal) **flower.** Helichrysum orientale.

Etesticulatio, e-tes-tik-u-lah'she-o (*e, testiculus,* testicle). Castration.

E'thal. Cetyl hydrate. See *Cetyl alcohol.*

Eth'alyl. Cetyl.

Ethemosyne, eth-em-os'in-e. Habit.

Eth'ene. Ethylene.

Ether, e'thur. Æther; æther sulphuricus. **E., ace'tic,** see *Æther sulphuricus.* **E., chlor'ic,** æther chloricus; see also *Chloroform.* Under the names *concentrated chloric ether* and *strong chloric ether* a compound of pure chloroform and nearly absolute alcohol, in the proportion of one-third of the former to two-thirds of the latter, has been used as an anæsthetic by inhalation in the same cases as sulphuric ether and chloroform. It is properly an alcoholic solution or tincture of chloroform. See *Spiritus chloroformi* and *Chloroform.* **E., chlo'rinated,** see *Æther muriaticus.* **E., chlorohy'dric,** æther muriaticus; see *Æther sulphuricus.* **E., com'pound,** preparation consisting of a solution of chloroform in sulphuric ether, used as an anæsthetic in the same cases as chloroform. **E., gel'atinized,** see *Æther sulphuricus.* **E., hydrobro'mic,** C_2H_5Br, volatile liquid made by distilling powdered bromide of potassium with a mixture of strong sulphuric acid and alcohol; colorless liquid with odor of chloroform, without its disagreeable after effects; rapid anæsthetic. **E., hydrochlor'ic,** see *Ether.* **E., hydrocyan'ic,** æther hydrocyanicus. **E., iohy'dric,** æther hydriodicus. **E., marine',** æther muriaticus. **E., meth'yl-ethyl'ic,** methylic ether, made by adding pure methylic alcohol and strong sulphuric acid, is an anæsthetic devoid of unpleasant symptoms. Dissolved in ether, it is called methyl-ethylic ether, and may be employed as a rapid anæsthetic in short operations. **E., methyl'ic,** ether, methyl-ethylic. **E., muriat'ic,** æther muriaticus. **E., m., spir'it of,** spiritus ætheris muriatici. **E., ni'tric,** see *Æther.* **E., ni'trous,** *Nitrite of ethyl, N. of oxide of ethyl.* This liquid, the characteristic ingredient of *Spiritus ætheris nitrosi,* is closely analogous in its action to nitrite of amyl. It is too powerful for anæsthetic purposes. **E., ozo'nic,** *Ozonized ether* (peroxide of hydrogen in ether); used in the form of spray in the sick-room as a purifying agent. It does not irritate the respiratory organs, but cannot be safely employed near a light or fire. See *Hydrogen, binoxide of.* **E., pearls of,** see *Æther sulphuricus.* **E., phospho'ric,** see *Æther.* **E., prus'sic,** æther hydrocyanicus. **E. pu'rus,** see *Æther sulphuricus.* **E., pyroace'tic,** acetone. **E., rec'tified,** æther sulphuricus. **E. spray,** see *Æther sulphuricus.* **E., strong'er,** see *Æther sulphuricus.* **E., sulphu'ric,** æther sulphuricus. **E., terebin'thinated,** æther terebinthinatus. **E., xylostyp'tic,** colloid styptic.

Ethereal (e-the're-al) or **Ethereous,** e-the're-us. Æthereal.

Etherification, e-ther-i-fi-ka'shun (*æther,* ether, *facio,* to make). Generation of an ether from an alcohol.

E'therin. Crystalline substance in oleum æthereum, and of same composition as ethylene.

Etherine, hydrocyanate (e'ther-in, hy-dro-si'an-ate) **of.** Æther hydrocyanicus. **E., mu'riate of,** æther muriaticus.

Etherioscope, e-the're-o-skop (*æther, skopeo,* to examine). Apparatus for estimating the ratio of ether or of acetic acid to water in a solution.

Etherism, e'thur-izm. Aggregate of phenomena induced by the inhalation of ether.

Etherization, e-thur-iz-a'shun. Administration of ether by inhalation as an anæsthetic. Anæsthetic effect of ether.

E'therize. To place under the anæsthetic influence of ether.

Etherized, e'thur-ized. Presenting the phenomena induced by the inhalation of ether.

Etherol, e'thur-ol (*ether, oleum,* oil). Oleum æthereum; also liquid resulting from acting upon oleum æthereum with water.

Etheromania, e-ther-o-man'e-a. Mania for, or excessive indulgence in, ether as an intoxicant.

Eth'ics, med'ical (*ethos,* moral conduct). The duties and rights of medical practitioners.

Eth'idene dichlor'ide. Employed sometimes as an anæsthetic; its properties are not well understood as yet.

Ethiopian, e-thi-o'pe-an. See *Homo.*

Ethiops, e'the-ops. See *Æthiops.* **E. mar'tial,** black deutoxide of iron.

Ethisis (eth'is-is) or **Ethismus,** eth-iz'mus (*etheo,* to sift). Filtration.

Ethmo, eth'mo (*ethmos,* sieve). In composition, a sieve; also the ethmoid bone.

Ethmoceph'alus (*ethmo,* ethmoidal portion of nose, *kephale,* head). Monstrosity in form of cyclocephalus, in which the eyes are close together, but distinct; the nasal apparatus atrophied and rudimental. Cyclops. Such a condition is called *Ethmocephalia.*

Ethmocranial (eth-mo-kra'ne-al) **an'gle.** Angle formed between cribriform plate of ethmoid and basicranial axis.

Eth'moid (*ethmos,* sieve, *eidos,* form). Shaped like a sieve. **E. bone,** one of the eight bones comprising the cranium; so called because its upper plate is pierced by a considerable number of holes. The ethmoid bone is situate at the anterior, inferior, and middle part of the base of the cranium. It seems to be composed of a multitude of thin, fragile, semi-transparent laminæ, forming more or less spacious cells, called the *ethmoidal labyrinth* or *cells,* distinguished into anterior and posterior. These communicate with the nose, and are lined by a prolongation of the pituitary membrane. The ethmoid bone is constituted of compact tissue, and is surrounded by the ethmoid suture. It is articulated with the frontal and sphenoidal bones, the cornua sphenoidalia, the superior maxillary bones, the palate bones, the ossa turbinata inferiora, the vomer, the proper bones of the nose, and the lacrymal bones.

Ethmoidal, eth-moid'al. Belonging or relating to the ethmoid bone. **E. an'trum**, ethmoidal cells. **E. apoph'ysis**, advanced part of the sphenoid bone, articulating with the ethmoid. **E. ar'teries** are two in number, branches of the ophthalmic artery. **E. cells**, cells in lateral masses of ethmoid bones. **E. crest**, ridge on superior surface of ethmoid. **E. fis'sures**, fissures in cribriform plate of ethmoid. **E. foram'ina**, foramina on inner part of orbit between ethmoid and frontal bones. **E. grooves**, deep depressions between lateral masses of ethmoid and vertical plate. **E. lab'yrinth**, E. cells. **E. nerve**, branch from nasal nerve, supplying the nose. **E. notch**, notch for reception of cribriform plate of ethmoid. **E. sinuses**, E. cells. **E. spine**, spine of sphenoid bone articulating with cribriform plate of ethmoid. **E. su'ture**, suture between ethmoid and frontal bones. **E. veins**, these vessels correspond in distribution with the ethmoidal arteries.

Ethmoiditis, eth-mo-id-e'tis. Inflammation of ethmoid bone or cells.

Ethmoido-frontal (eth-moi'do-fron'tal) **suture.** Suture between ethmoid and frontal bones.

Ethmo-lacrymal angle, eth'mo-lak'rim-al an'g'l. Part of upper jawbone, orbital portion of which fits in space between lacrymal bone and orbital plate of ethmoid.

Ethmo-sphenoidal, eth-mo-sfen-oid'al. Relating to the connection of ethmoid and sphenoid bones.

Ethmo-turbinals, eth-mo-tur'bin-alz (*ethmos*, sieve, *turbo*, top). Lateral masses of ethmoid bone.

Ethmo-vomarine, eth-mo-vo'mar-een. Relating to ethmoid bone and vomer.

Ethmyphe, eth'mif-e (*ethmos*, sieve, *huphe*, tissue). Cellular tissue.

Ethmyphitis, eth-mif-e'tis. Inflammation of the cellular membrane. When it extends in depth through the whole thickness of the subcutaneous cellular tissue, it is called *Dermatocellulitis*.

Ethmyphotylosis, eth-me-fo-til-o'sis (*ethmyphe*, *tulosis*, hardness). Induration of the cellular tissue.

Ethmyphyperphlogosis, eth-mif-e-per-flo-go'sis (*ethmos*, sieve, *huphe*, web, *hyper*, *phlogosis*, inflammation). Violent inflammation of connective tissue.

Ethnic, eth'nik (*ethnos*, nation or race). Relating to race.

Ethnography, eth-nog'raf-e (*ethnos*, nation, *graphe*, description). History of the races and families of man.

Ethnolog'ical. Relating to ethnology.

Ethnol'ogy (*ethnos*, nation, *logos*, discourse). Science of the races and families of man.

Eth'os. Habit.

Ethoxycaf'feine. Substance prepared by boiling bromcaffeine with potassium hydrate and alcohol; narcotic and diuretic.

Ethydene chloride, eth'e-deen klo'ride. Ethylidene chloride.

Eth'yl. C_2H_5. Hypothetical radical of ethyl alcohol. **E. ac'etate**, acetic ether. **E. al'cohol**, hydrate of ethyl; alcohol. **E. bichlo'ride**, olefiant gas. **E. bro'mide**, ether, hydrobromic. **E. carb'amate** or **carbam'inate**, urethane. **E. chlo'ride**, æther muriaticus. **E. cy'anide**, æther hydrocyanicus. **E. e'ther**, spiritus vini æthereus. **E. hy'dride**, gas prepared by exposing, at a temperature of 300°, the iodide of ethyl to zinc in the presence of water in a closed tube; narcotic. **E. i'odide**, æther hydriodicus. **E. kai'rine**, kairine. **E., ni'trate of**, liquid formed by distilling alcohol and pure nitric acid; not much employed as anæsthetic, severe headache following its administration. **E., ni'trite of**, ether, nitrous. **E. ure'thane**, urethane.

Ethylamine, eth-il'am-een. $C_2H_5NH_2$. An ammoniacal constituent of coal-tar. Ptomaïne formed from putrefying yeast, wheat flour, etc.; a strong ammoniacal liquid. See *Ptomaïnes* (table).

Eth'ylene. C_2H_4. Olefiant gas. **E. bichlo'ride**, dutch liquid, ethene chloride. Oily liquid used as anæsthetic. **E. bro'mide**, $C_2H_4Br_2$, brown fluid, with odor of chloroform; narcotic, used in epilepsy; violent cardiac sedative. **E. lactic acid**, acid isomeric with lactic acid, derived from muscle.

Ethylen'imine. Piperazine.

Ethyl'ic al'cohol. Alcohol.

Ethylidene chloride, eth-il-id'een chlo'ride. $C_2H_4Cl_2$. Chlorinated, hydrochloric, or muriatic ether. Colorless fluid employed as anæsthetic.

Ethylidenediamine, eth-il-id-een-di'am-een. $C_2H_8N_2$. Ptomaïne produced in decomposition of fish. Experiments on frogs produced dilatation of the pupils, projection of the eyeball, dyspnœa, and death.

Ethylization, eth-il-iz-a'shun. Anæsthetization with ethyl bromide.

Ethylize, eth'il-ize. To use ethyl bromide as an anæsthetic.

Etiolation, e-te-o-la'shun (*blanching*). Paleness produced in persons who have been kept long without light, or similar paleness the result of chronic disease.

Etiology, e-ti-ol'o-je. Doctrine of causes, as of disease.

Etiquette', med'ical. The duties and rights of medical men toward themselves, their patients, and the public.

Eti'ta. Cutaneous affection in Africa, with rapidly formed blotches over the body, the parts looking as if they had been badly scalded, with intolerable itching.

Etnaghber'ries. See *Juniperus communis*.

E'tor. The heart.

Et'ron. Abdomen, hypogastrium.

Etroncus, et-ron'kus (*etron*, *onkos*, tumor). Tumor of the lower belly.

Eu. Good, proper, when prefixed to words.

Euæmia, u-e'me-ah (*eu*, *haima*, blood). Good condition of the blood.

Euæsthesia, u-ees-tha'se-ah (*eu*, *aisthesis*, perception). Vigorous perception. Good condition of the perceptive faculties.

Euæsthetus, u-ees-tha'tus. One whose senses are in full vigor.

Euanalepsis, u-an-ah-lep'sis (*eu*, *analepsis*, recovery). Rapid restoration to health or strength.

Euanthemon, u-an'them-on. Anthemis nobilis.

Euanthes, u-an'thees. Blooming; applied to blood, as red blood.

Eucalyptol, u-kal-ip'tol. $C_{12}H_{20}O$. Essential oil of Eucalyptus globulus, with odor of camphor. Externally, antiseptic to ulcers, gangrene, etc.; local stimulant application in neuralgia and rheumatism. Internally, used in treatment of respiratory diseases, or phthisis pulmonalis, pneumonia, bronchitis, influenza, malaria, etc.

Eucalyptus (u-kal-ip'tus) (*eu*, *kaluptos*, covered) **amygdali'na.** Peppermint tree. **E. corymbo'sa**, tree of Australia yielding Australian kino. **E. dumo'sa**, species of eucalyptus on whose leaves is obtained a kind of manna. **E. glob'ulus** or **globo'sus**, *Blue gum tree*, *fever tree*, growing in Australia. Supposed to exert a beneficial effect in malarial regions. Australian tree, ord. Myrtaceæ, infusion of whose leaves has been given with success as antiperiodic; also prescribed in the form of powdered leaves, decoction, aqueous and alcoholic extracts, etc., and in its essential oil, *eucalyptol*. Eucalyptus (Ph. U. S.) is the leaves of E. globulus. Some of the preparations have been used for disinfecting surgical dressings. **E. gum**, red astringent gum exuding from some species of Eucalyptus. **E. kino**, Australian kino. **E. man'na**, Australian manna. **E. mannif'era**, from this Australian species, ord. Myrtaceæ, a manna-like substance exudes, having similar properties to manna. **E. resinif'era**, see *Kino*. **D. rostra'ta**, said to be of value in sea-sickness; **E. vimina'lis**, a source of Australian manna.

Eucardios, u-kar'de-os. Agreeable to the stomach.

Eucharistos, u-kar-is'tos. Antidote.

Eucheuma (u-ku'mah) **gelat'inæ.** Form of E. Indian algæ, used to make isinglass. **E. specio'sa**, *July plant*. Plant of W. Australia, making excellent stock for jelly for invalids.

Euchlorine, u-klo'reen. Gas obtained by subjecting potassium chlorate to the action of hydrochloric acid; good disinfectant.

Euchresta (u-kres'tah) **Horsfeldii.** Native of India; seeds are employed by the natives in bites of venomous animals.

Euchrœa, u-kre'ah (*eu, chroia,* color). Good or healthy color of the skin.

Euchromatopsia, u-kro-mah-top'se-ah (*eu,* well, *chroma,* color, *opsis,* sight). Ability to recognize colors distinctly.

Euchylia, u-kil'e-ah (*eu,* well, *chulos,* chyle). Healthy state of the chyle.

Euchylos or **Euchylus,** u-ke'lus. Possessing healthy juices.

Euchymia, u-kim'e-ah (*eu, chumos,* juice). Good state of the humors.

Euchy'mus. Euchylos.

Eucinesia, u-sin-a'ze-ah (*eu, kinesis,* motion). Healthy or normal movement.

Eucrasia, u-kraz'e-ah (*eu, krasis,* temperament). Good temperament.

Eucrines, u'krin-ees. Easy to diagnose.

Eucyesia (u-se-a'ze-ah) or **Eucyesis,** u-se-a'sis (*eu,* good, *kuesis,* pregnancy). Normal pregnancy.

Eudiapneustia, u-de-ap-nuse'te-ah (*eu, dia, pnoe,* breath). Easy transpiration.

Eudiometer, u-de-om'et-ur (*eudia,* fair weather, *metron,* measure). Apparatus for estimating the amount of oxygen contained in the air. Also an instrument used to explode gases with the aid of an electric spark.

Eudipleural, u-de-plu'ral (*eu, dis,* twice, *pleura,* side). Possessing well-marked symmetry of both sides.

Euëctica, u-ek'tik-ah (*eu, echo,* to hold; conducive to health). Gymnastics.

Euëlces, u-el'sees (*eu, helkos,* ulcer). One in whom wounds and ulcers are readily healed.

Euembolos, u-em'bol-os (*en, emballo,* to insert). A surgeon experienced in bone-setting.

Euemes, u'em-ees (*eu, emeo,* to vomit). That which readily excites vomiting; one who vomits with facility.

Euethes, u'eth-ees (*eu, ethos,* habit). Benign.

Euexia, u-eks'e-ah (*eu, hexis,* constitution). Good constitution.

Eugenia acris, u-jen'e-ah ak'ris. Myrcia acris; see *Spiritus myrciæ.* **E. aromat'ica,** E. caryophyllata. **E. caryophylla'ta** (after Prince Eugene of Savoy), Indian tree, ord. Myrtaceæ, source of the *Clove, Caryophyllus, C. aromaticus, Caryophyllum,* unexpanded bud. Its odor is strong, aromatic, and peculiar; taste pungent and acrid; it is stimulant and carminative; generally used as a corrigent to other remedies and in cases where substances containing the essential oils are demanded. Caryophyllus (Ph. U. S.) is the unexpanded flowers of Eugenia caryophyllata; in the Ph. Br., the dried flower-bud of the same plant. The oil—*Oleum caryophylli, Oil of cloves*—has the properties of the cloves. **E. cauliflo'ra,** Myrtus cauliflora. **E. che'ken,** cheken, Myrtus chekan, plant of Chili; used in mucous affections, especially bronchitis. **E. jambola'na,** Syzygium jambolanum. **E. pimen'ta,** Myrtus pimenta.

Euge'nic acid or **Eu'genol.** $C_{10}H_{12}O_2$. Chief constituent of oil of cloves, cinnamon, etc.; oily liquid; antiseptic; febrifuge.

Eugion (u-je'on) or **Eugium,** u-je'um (*eu, ge,* earth, *eugeios,* fertile). Hymen, uterus, vulva.

Eukinesia, u-kin-a'ze-ah (*eu, kinesis,* motion). Healthy exercise or power of movement.

Eulachon (u'lak-on) **oil.** *Oolachon oil.* Oil from the eulachen or candle-fish, Thaleichthys Pacificus, of British Columbia, used as substitute for cod-liver oil.

Eule, u'le (a worm). Worms, especially those bred in a wound or ulcer.

Eulophia (u-lof'e-ah) **campes'tris.** Ord. Orchidaceæ, growing in E. Indies, source of salep. **E. herba'cea** grows in same region; also source of salep.

Eunuch, u'nuhk (*eune,* bed, *echo,* to keep). One whose organs of generation have been removed, or so altered that he is rendered incapable of reproducing his species or of exercising the act of venery. Eunuchs were common with the ancient Romans; *Castratus* meant one from whom the external organs had been removed; *Spado* meant deprived of the testicles only; while the *Thlibias* and *Thlasias* preserved the organs, but the testicles were crushed so as to render them unfit for procreation.

Eunuchism, u'nuk-izm. Castration.

Eunuchium meconis, u-nu'ke-um me-ko'nis. Lactuca.

Eunuchus, u-nu'kus. Castratus, eunuch.

Euodes, u-o'dees (*eu, ozo,* to smell). Sweet-scented; medicines prepared for this quality.

Euonymin, u-on'im-in. Bitter, resinous principle derived from euonymus; brown powder; cholagogue cathartic. Dose, 1 to 3 grains.

Euonymite, u-on'im-ite. Sweet substance like mannite, derived from euonymus.

Euonymus, u-on'im-us (*eu, onuma,* name). Quassia simarouba. **E. America'nus,** *Strawberry bush, Strawberry tree, Burning bush, Indian arrowwood.* Shrub of ord. Celastraceæ, found throughout the United States and Canada. **E. atropurpu'reus,** *Burning bush, Spindle tree, Indian arrowwood,* growing in United States and Canada. The bark is officinal in U. S. Ph.; stimulant to liver; hydragogue cathartic, diuretic, antiperiodic; used in dropsy, in infusion, in the proportion of an ounce to a pint of water. **E. Europæ'us,** spindle tree; emeto-cathartic. **E. tin'gens,** inner bark of this shrub of India is used in affections of the eye.

Eupathia, u-path-e'ah (*eu, pathos,* affection). Disposition for being easily affected by pain; good state of health.

Eupatorium, u-pat-o're-um (after Mithridates Eupator). Eupatorium perfoliatum. **E. ageratoï'des,** *White snake-root,* ord. Compositæ; indigenous; antispasmodic, diaphoretic, diuretic. **E. aromat'icum,** *Aromatic eupatorium* or *Hempweed,* white snake-root; indigenous; has similar properties. **E. aya-pa'na** grows in Brazil; aromatic tonic. **E. cannab'inum,** *E. of Avicenna, Hemp agrimony, Water hemp, Herb of Saint Cunegonde,* ord. Compositæ; juice is emetic, purgative, and diuretic. **E. Colli'num** grows in Mexico; decoction of leaves is used in diarrhœa and as a tonic and antiperiodic. **E. con'natum,** E. perfoliatum. **E. fœnicula'ceum,** *Dog fennel;* indigenous. **E. gua'co,** guaco. **E. hyssopifo'lium,** employed in cases of snake-bite. **E. incarna'tum,** *Mata;* indigenous in Southern States. **E. Japon'icum,** E. cannabinum. **E. leucolep'sis,** *Justice's weed;* used in cases of snake-bite. **E. mes'ues,** Achillea ageratum. **E. nervo'sum, of Jamaica,** cholagogue. **E. perfolia'tum,** *Boneset, Thoroughwort, Thoroughstem, Thoroughwax, Vegetable antimony, Crosswort, Ague-weed, Feverwort, Indian sage, Joe-pye, Teazel, Sweating plant;* a plant growing in the United States; tops and leaves, gathered after flowering has commenced—*Eupatorium* (Ph. U. S.)—are stimulating, tonic, emetic, purgative, diuretic, and sudorific. **E. pubes'cens,** E. teucrifolium. **E., pur'ple-stalked,** E. purpureum. **E. purpu'reum,** *Mohawk tassel, Purple-stalked eupatorium, Trumpetweed, Joe-pye-weed, Gravel-root,* is used in similar cases, as well as **E. rotundifo'lium,** *Round-leaved hempweed, Wild horehound,* **E. sessilifo'lium,** *Upland boneset,* and **E. teucrifo'lium,** *Wild horehound, Germander-leaved horehound, Rough boneset.* **E. trifolia'tum,** E. cannabinum. **E., triple ner've,** aya-pana. **E. urticifo'lium,** E. ageratoïdes. **E. verbenæfo'lium,** E. teucrifolium.

Eupepsia, u-pep'se-ah (*eu, pepto,* to digest). Good digestion; antithesis to dyspepsia.

Eupeptic, u-pep'tik. Relating to a good digestion; one endowed with a good digestion.

Eupeptus, u-pep'tus. Eupeptic.

Euperistal'sis. Normal peristaltic action of the intestines.

Euphlogia, u-floj'e-ah (*eu, phlego,* to burn). Mild inflammation.

Euphony, u'fon-e (*eu, phone,* voice). Agreeable or regular voice.

Euphorbia antiquorum, u-for'be-ah an-te-kwo'rum,

Grows in India; said to possess the same properties as Euphorbia tirucalli. **E. Canarien'sis** grows in Canary Islands and Western Africa, yielding gum-resin euphorbium. **E. capita'ta**, *Caacica*, ord. Euphorbiaceæ (after Euphorbus, physician to Juba). Brazilian plant, strongly astringent, and not poisonous; considered to be one of the best remedies for the bites of serpents. **E. ca'put Medu'sæ**, South African plant, used to poison arrows; Ethiopians use, for the same purpose, *Euphorbia heptagona*, *E. virosa*, and *E. cereiformis;* the savages in the most southern part of America, the sap of *E. cotinifolia*. **E. cereiform'is**, see *Euphorbia caput Medusæ*. **E. Chilen'sis**, juice of this South American plant is a drastic purgative. **E. corolla'ta**, *Large flowering spurge, Milkweed, Snake's milk, Ipecacuanha, Hippo, Picac, Ipecac, Milk purslain, Purge-root, Emetic-root, Bowman's root, Apple root, Indian physic;* indigenous; emeto-cathartic. **E. cotinifo'lia**, see *Euphorbia caput Medusæ*. **E. cyparis'sias** or **cypres'sina**, *Cypress spurge, Welcome to our house.* Like most of the spurges, it is very acrimonious. It was formerly called *Poor man's rhubarb*, being a laxative. **E. Drummon'dii**, of Australia; alkaloid *drumine* resembles cocaine. **E. helioscop'ia**, *Sun-spurge, Wartwort spurge;* indigenous. Juice has been given in syphilis; is cathartic. **E. heptago'na**, see *Euphorbia caput Medusæ*. **E. heterodox'a**, of Brazil; milky juice, *Alveloz, Arveloz*, or *Aveloz*, has been used externally in cancer. **E. hypericifo'lia**, *Large-spotted spurge, Eyebright.* Native of the United States; astringent and tonic; used in infusion. **E. ipecacuan'ha**, *Ipecacuanha spurge, Wild ipecac.* Common in the southern and middle parts of the United States. Root is a powerful emetic in the dose of five to fifteen grains; twenty grains act as a cathartic. In large doses is narcotico-acrid. **E. lath'yris**, systematic name of the plant which affords the *Lesser cataputia seeds, Caper spurge, Lathyris, Garden spurge, Caper plant, Moleplant.* Seeds possess cathartic properties; and expressed oil of the seeds, *Oleum euphorbiæ lathyridis, Oil of euphorbia*, is cathartic in the dose of six to twelve drops. **E. macula'ta**, *Spotted spurge.* Indigenous in United States and Mexico. Juice is used in corneal opacity; a decoction in skin diseases. **E. myrtifo'lia**, Pedilanthus tithymaloides. **E. obtura'ta**, E. helioscopia. **E. officina'rum**, systematic name of the plant affording euphorbium in greatest abundance; inodorous gum-resin which enters into the composition of some plasters, and has been used as an errhine. **E. palus'tris**, *Greater spurge, Marsh spurge, Wretweed.* Juice is given in Russia as a common purge, and as an irritant in tinea, warts, etc.; locally, as a preventive of hydrophobia after bite of rabid dogs, bitten part being washed with a decoction, which is also taken internally. **E. panicula'ta**, E. palustris. **E. paral'ias**, *Sea spurge.* Violently cathartic and irritating, and seldom used. **E. pep'lus**, *Petty spurge;* indigenous; powdered root is actively cathartic; given in dropsy. **E. pilo'sa**, properties and uses same as E. palustris. **E. pilulif'era**, herb growing in India and other tropical countries; used in bronchitis and asthma; first accelerates and then retards action of the heart. **E. prostra'ta**, used in Mexico as an antidote to the poison of serpents; in large doses emeto-cathartic. **E. resinif'era**, indigenous in Morocco, a source of gum-resin euphorbium. **E. tirucalli**, of India, *Milk hedge;* juice, applied locally, is said to induce powerful uterine contractions. **E. tithymaloï'des**, Pedilanthus tithymaloïdes. **E. tort'ilis**, of India, is said to possess the same properties as E. tirucalli. **E. villo'sa**, properties and uses same as E. palustris. **E. viro'sa**, see *Euphorbia caput Medusæ*. All the spurges are vesicant and rubefacient when applied externally.

Euphorbium, u-for'be-um. Euphorbia officinarum.

Euphorbon, u-for'bon. $C_{13}H_{22}O$. Neutral principle in root of Euphorbia ipecacuanha.

Euphoria, u-phor'e-ah (*eu, phero*, to carry). Good state of health. Sense of ease or of good health.

Euphorin, u'for-in. Phenylurethane.

Euphragia, u-frah'je-ah. Euphrasia officinalis.

Euphrasia, u-frah'se-ah (cheerfulness). *Eyebright.* Genus Scrophularineæ; used in diseases of the eye, catarrh, toothache, etc. **E. officina'lis**, euphrasia.

Eupion, u'pe-on. Oily liquid obtained by dry distillation of wood, resin, etc.

Euplasia, u-plah'ze-ah (*eu, plasso*, to form). Healthy healing, resulting in a living structure conforming to the nature and habits of the tissue of the part.

Euplastic, u-plas'tik (*eu, plasso*, to form). Having the capacity of becoming organizable in a high degree.

Eupleurum serrulatum, u-plu'rum ser-ru-lat'um. Diosma crenata.

Eupnœa, u-ne'ah (*eu, pneo*, to respire). Freedom or facility of respiration; normal respiration.

Eupnoic, u-no'ik (*eu, pneo*, to respire). Breathing naturally or gently.

Eupurpurin, u-pur'pur-in. Diuretic oleo-resin from Eupatorium purpureum.

Eurhythmia (u-rhith'me-ah) or **Eurrhith'mia** (*eu, rhuthmos*, rhythm). Regularity of the pulse.

Eurhythmic, u-rhith'mik. Regular in rhythm or beat, as the pulse.

Euriba'li. Juribali.

Eurodes, u-ro'dees (*euros*, corrupt). Carious.

Eurodontic, u-ro-don'tik (*euros*, putrefaction, *odous*, tooth). Suffering from carious teeth.

Euromesocephalus, u-ro-mes-o-sef'al-us (*eurus*, broad, *mesos*, the middle, *kephale*, head). Having a head with a long bitemporal diameter.

Europhen, u-ro'fen. Yellow amorphous powder, allied to aristol, produced by the action of iodine on isobutylorthocresol in the presence of an alkali; used as substitute for iodoform in syphilitic and other ulcers, lupus, burns, etc., in powder, ointment, or subcutaneously in solution. It is also used internally in syphilis.

Europrocephalus, u-ro-pro-sef'al-us (*eurus*, broad, *pro*, in front, *kephale*, head). Possessing a skull which is broad in the frontal region.

Eurrhythmia, ur-rhith'me-ah. Regularity of the pulse.

Eu'rus (*euros*, mould, putrefaction). Corruption of the humors.

Euryale (u-re'al-e) **fe'rox**. Species of euryale of India, where it is used as a tonic and for food.

Euryangium (u-re-an'je-um) **sum'bul**. Ferula sumbul.

Eurycephalous, (*eurus*, broad, *kephale*, head). Having a broad head.

Eurychasmus, u-re-kaz'mus (*eurus*, broad, *chasma*, cavity). Epithet applied to skulls having sector for pharyngo-nasal cavity of 153° to 154°.

Eurychoria, u-re-ko're-ah (*eurus*, extensive, *choros*, space). Sinus.

Eurycles, u're-klees (Eurukles, celebrated soothsayer and ventriloquist). Engastrimyth.

Euryclitus, u-re-kle'tus. Engastrimyth.

Eurygnathismus, u-rig-nath-iz'mus. The condition of being eurygnathous or broad-jawed.

Eurygnathous, u-rig-na'thus (*eurus*, broad, *gnathos*, jaw). Having a broad jaw.

Eurynter, u-rin'tur (*euruno*, to dilate). Dilator.

Euryproctus, u-re-prok'tus (*eurus*, broad, *proktos*, anus or rump). Having broad buttocks or a wide anus.

Eurysmaticus, u-riz-mat'ik-us. Relating to dilatation.

Eurysmus, u-riz'mus (*euruno*, to dilate). Dilatation.

Eusarcus, u-sar'kus (*eu, sarx*, flesh). One who is fleshy, robust, muscular.

Eusemia, u-sem-e'ah (*eu, semeion*, sign). Good signs or symptoms.

Eusitia, u-sish'e-ah (*eu, sitos*, food). Good appetite.

Eusom'phalus (*eu, omphalos*, navel). Double monster in which each being has a separate navel, and is able to execute, independently, almost all the vital functions.

Eusplanchnia, u-splank'ne-ah (*eu, splanchnon*, viscus). Healthy state of the viscera.

Eusplanchnos, u-splank'nos. Possessing healthy viscera.

Euspongia equina, u-spon'je-ah ek-we'nah (*eu, spongos*, sponge). Genus Spongiadæ. Bald sponge is obtained from it. **E. officina'lis** furnishes the Levant sponge; this variety is regarded as the best.

Eustachian (u-sta'ke-an) **canal'** (called after Eustachius). Canal for Eustachian tube in temporal bone. **E. cath'eter**, catheter to be applied through the nose into the Eustachian tube. **E. tube**, canal partly bony and partly cartilaginous, extending from the cavity of the tympanum to the upper part of the pharynx. Its length is about two inches; the bony portion, which belongs to the temporal bone, is about three-fourths of an inch long. It is lined internally by a prolongation of the lining membrane of the pharynx. It permits the renewal of air into the cavity of the tympanum. **E. valve**, valve of Eustachius; membranous semilunar fold, corresponding to the opening of the vena cava inferior into the right auricle of the heart.

Eusthenia, eus-then-e'ah (*eu, sthenos*, strength). Flourishing, exuberant health.

Eustochia, u-stok'e-ah (*eu, stochos*, mark). Happy conjecture, in contradistinction to accurate inductive diagnosis.

Eusto'cia (*eu, tokos*, childbirth). Natural delivery.

Eustomachus, u-stom'ak-us (*eu, stomachos*, stomach). Digesting rapidly; having a good stomach.

Eustrongylus gigas, u-stron'gil-us je'gas. Strongylus gigas. **E. longevagina'tus**, see *Parasites* and *Worms*.

Eusystolic, u-sis-tol'ik (*eu, sustole*, contraction). Relating to healthy contraction of the heart.

Eutaxia, u-taks'e-ah (*eu, tasso*, to arrange). Well-ordered constitution, every part having its proper relation; ready reduction of a rupture or luxated bone.

Euthanasia, u-than-ah'ze-ah (*eu, thanatos*, death). Easy death.

Eutheria, u-ther'e-ah (*eu, ther*, animal). Placental mammals (Huxley).

Euthesia, u-tha'ze-ah (*eu, thesis*, position). Well-ordered constitution.

Euthycoryphus, u-the-kor'e-fus (*euthus*, straight, *koruphe*, vertex). Epithet applied to skulls which have the parietal angle of Lissauer (angle between lines projected in middle line of skull, between the most prominent part of parietal bone, to bregma and lambda) from 142° to 151°.

Euthyenteron, u-the-en'ter-on (*euthus*, straight, *enteron*, intestine). Rectum.

Euthyenterostenoma, u-the-en-ter-o-sten-o'mah (*euthyenteron*, rectum, *stenos*, narrow). Stricture of the rectum.

Euthymetopus, u-the-met'o-pus (*euthus*, straight, *metopon*, forehead). Term used to designate skulls having angle formed by lines drawn from metopion to bregma and to nasion from 151.5° to 141°.

Euthymia, u-thim'e-ah (*eu, thumos*, mind). Tranquillity of mind; good state of the mental faculties.

Euthyopisthocranius, u-the-op-is-tho-kran'e-us (*euthus*, straight, *opisthe*, backward, *cranium*). Term to designate skulls in which angle between lines drawn in middle plane, from most prominent point of squama occipitis to lambda and inion, is from 154° to 172°.

Euthypnoe (u-thip'no-e) or **Euthypnœa**, u-thip'ne-ah (*euthus*, straight, *pnoë*, breath). Orthopnœa.

Euthypnous, u-thip'nus. Breathing without difficulty.

Euthyuranus, u-the-u'ran-us (*euthus*, straight, *ouranos*, roof). Term to designate skulls in which angulus summi palati is from 180° to 163.5°.

Eutocia, u-tos'e-ah (*eu, tokos*, delivery). Easy or normal labor; fecundity.

Eutocous, u'tok-us (same etymon). Having easy or normal labor.

Eutolmia, u-tol'me-ah (*eu*, well, *tolma*, confidence). Favorable condition of mind in disease.

Eutrophia, u-trof'e-ah (*eu, trophe*, nourishment). Good state of nutrition.

Eutrophic, u-trof'ik. Term introduced into medical terminology by the author for an agent whose action is exerted on the system of nutrition, without necessarily occasioning manifest increase of the secretions; as mercurials, preparations of iodine, bromine, cod-liver oil, preparations of gold and silver, sulphur, sugar, sarsaparilla, etc.

Eutropion, u-tro'pe-on. Inversion. **E. partia'le**, inversion of the eyelid, in which the margin of the lid and the cilia are in contact with the ball of the eye.

Euzoödynamia, u-zo-o-din-am'e-ah (*eu, zoön*, animal, *dunamis*, power). Good health; healthy exercise of the mental and physical powers.

Evacuants, e-vak'u-ants (*e, vacuo*, to empty). Medicines which occasion a discharge by some emunctory, such as purgatives, emetics, etc.

Evacuatio, e-vak-u-ah'she-o. Evacuation; excretion.

Evacuation, e-vak-u-a'shun. Discharge by natural passages or artificial opening; dejection.

Ev'anroot. Geum Virginianum.

Evaporate, e-vap'o-rate. To transform a liquor into vapor by means of heat.

Evaporation, e-vap-o-ra'shun (*e, vaporo*, to emit). Transformation of a liquid into vapor to obtain the fixed matters contained in it dry and separate from the liquid. When the vapor is received into a proper vessel and condensed, the process is called distillation. Evaporation produces cold, and this is one of the processes by which the body is cooled, through the evaporation of the perspiratory fluid.

Eve'ning prim'rose. Œnothera biennis.

Eventration, e-ven-tra'shun (*e, venter*, belly). Tumor formed by a general relaxation of the parietes of the abdomen, and containing a great part of the abdominal viscera. *Ventral hernia*, or that which occurs in any other way than through the natural openings of the abdominal parietes. Extensive wound of the abdominal parietes, with issue of the greater part of the intestines. Pendulous abdomen.

Eventus, e-ven'tus (*e, venio*, to come). Event or issue of a disease.

Everlasting, dicœcious, ev-ur-last'ing, di-e'se-us. Antennaria dioica.

Everriculum, ev-ur-rik'ul-um (*e, verro*, to clean out). Sound or scoop used for extracting sand or fragments of stone or clots of blood from the bladder, after or during lithotomy.

Eversio, e-vur'se-o (*e, verto*, to turn). Eversion or turning outward. **E. pal'pebræ**, ectropion.

E'vil, the. Scrofula. **E., Alep'po**, see *Aleppo*. **E., king's**, scrofula. **E. leg**, purpura. **E., so'cial**, prostitution.

Eviratio, ev-ir-ah'she-o (*e, vir*, man). Castration; loss of sexual power in man. Perversion of sexual instinct, in which the feelings and inclinations of the male resemble those of the female.

Eviratus, e-vir-a'tus. Castrated; eunuch.

Evisceration, e-vis-ur-a'shun (*e, viscus*). Removal of viscera, particularly of the abdomen; see *Exenterismus*. **E. oculi**, removal by operation of the eyeball and its contents; see *Exenteratio bulbi*.

Evodia (e-vo'de-ah) **febrif'uga.** Esenbeckia febrifuga. **E. fraxinofo'lia**, tree of E. Indies; volatile oil of seeds neutralizes odor of iodoform. **E. glau'ca**, bark is employed by Japanese physicians. **E. rutæcar'pa**, shrub of Japan, *Go-sin-ju*, parts of which are used as purgative, emmenagogue, and sudorific.

Ev'odine. *Esenbeckine.* Alkaloid from bark of Esenbeckia febrifuga.

Evolutio, ev-o-lu'she-o (*e, volvo*, to roll). Development. **E. sponta'nea**, evolution, spontaneous.

Evolution, ev-o-lu'shun. Development, as of an organ or of the parts composing it; of the uterus during pregnancy; see *Darwinism*. **E. of germs**, see *Generation*. **E., sponta'neous**, *Spontaneous version, Spontaneous expulsion, Duplication of the fœtus.* Spontaneous turning of the fœtus in utero, in arm presentation, in consequence of powerful uterine contractions forcing out the breech and feet, while the arm

recedes. Now employed to denote the doubling of the fœtus, so that the arm changes its position but little, while the breech is forcibly expelled before the upper extremity; the case thus becoming similar to a breech presentation. **E., ves'icle of,** vesicle of development.

Evolvulus (e-vol'vu-lus) **alsinoï'des.** Native of India; used as febrifuge and in disorders of the intestines.

Evomitio, e-vom-ish'e-o. Vomiting.

Evonymus. Euonymus.

Evulsion, e-vul'shun (*evello,* to pluck out). *Avulsion.* Action of plucking out; forcible extraction; act of extracting certain parts, the presence of which is injurious, as the teeth, polypi, etc.

Ex. As a prefix, out of. See *Ec.*

Ex maribus, mar'ib-us (*ex, mas,* male). Castrated.

Exacerbatio, eks-as-ur-bash'e-o (*ex, acerbo,* to embitter). Exacerbation, paroxysm.

Exacerbation, eks-as-ur-ba'shun. Increase in the symptoms of a disorder. Paroxysm.

Exacum spicatum eks'ak-um spik-at'um (*ex, ago,* to drive, from supposed virtue as expeller of poison). Coutoubea alba.

Exæmatosis, eks-e-mah-to'sis (*ex, haima,* blood). Hæmatosis.

Exæmia, eks-e'me-ah (*ex, haima,* blood). Anæmia.

Exæmous, eks-e'mus. Exanguious.

Exæresis, eks-er'es-is (*ex, aireo,* to take away). Operation of drawing, extracting, or removing from the human body anything useless, noxious, or extraneous; generic term, including extraction, evulsion, evacuation, excision, ablation, amputation, etc.; also act of extraction.

Exaggerated, eks-aj'ûr-a-ted (*ex, aggero,* to heap up, to magnify). Heightened; increased by expression; epithet for sounds heard on auscultation and percussion when much increased.

Exagion, eks-ag'e-on. Sixth part of an ounce; four scruples.

Exagoge, eks-ag-o'ge. Death.

Exalbuminous, eks-al-bu'min-us. Free from albumin.

Exalgine, eks-al'jen (*ex,* priv., *algos,* pain). Obtained by treating sodium acetanilide with methyl iodide. Its physiological action resembles that of antipyrine. When given in large doses it is followed by cyanosis and convulsions. Used in neuralgia as an analgesic, and in chorea.

Exallage (eks-al'lah-je) or **Exallaxis,** eks-al-laks'is. Alteration, as of tissues.

Exalma (eks-al'mah) or **Exalsis,** eks-al'sis (*ex, allomai,* to leap). Displacement of the vertebræ.

Exaltation, eks-al-ta'shun (*ex, alto,* to raise). Increased action. **E. of vi'tal forces,** morbid increase in action of any organ or in an inflamed organ.

Exambloma (eks-am-blo'mah) or **Examblosis,** eks-am-blo'sis (*ex, ambloo,* to abort). Abortion.

Examination, eks-am-i-na'shun. The act of making a careful search of an organ by investigation or by inquiry. **E., biman'ual** or **combined,** examination of an organ with both hands, in which each hand pursues a different course. **E., dig'ital,** examination by a finger or fingers. **E., post-mor'tem,** post-mortem examination for the purpose of establishing the cause of death.

Exanastomosis, eks-an-as-to-mo'sis. Anastomosis.

Exanastrophe, eks-an-as'tro-fe (*ex, ana, strepho,* to turn). Convalescence.

Exangia (eks-an-je'ah) or **Exangei'a** (*ex, angeion,* vessel). Enlargement or rupture of a blood-vessel, without external opening; aneurism; varix. **E. aneuris'ma,** aneurism.

Exanguious (eks-an'gwe-us) or **Exsan'guine** (*ex, sanguis,* blood). Bloodless, as after uterine hemorrhage; anæmic.

Exania, eks-an'e-ah (*ex, anus*). Prolapse of the rectum.

Exanimation, eks-an-im-a'shun (*ex, anima,* life). Death; apparent death; fainting.

Exanthem, eks-an'them (*ex, antheo,* to bloom). A rash; every kind of eruption of which the skin is the seat. Usually restricted to eruptions accompanied by fever, including under *major exanthemata* those which usually attack a person but once in his life, and are communicated by specific contagion; and under *minor exanthemata* those not marked by these characteristics. Small-pox, measles, cow-pox, etc. belong to the major exanthemata; chicken-pox, herpes, lichen, etc. to the minor. The general acceptation of exanthem is, however, a more or less vivid, circumscribed, or diffuse redness of the skin, which diminishes, or disappears, transiently under the pressure of the finger. **E., anom'alous,** German measles. **E., carbun'cular,** see *Anthracia.* **E., ich'orous,** see *Emphlysis.* **E., pus'tulous,** see *Empyesis.* **E., rash,** see *Enanthesis.* **E., syphilit'ic,** see *Syphilis.*

Exanthema, eks-an-tha'mah. Eminence, exanthem. **E. antivariolo'sum,** cowpox. **E. hæmorrhag'icum,** affection similar to purpura, with febrile symptoms, bleeding from the bowels and urinary organs and the mucous system generally, and a peculiar exanthematous eruption on the skin. **E. inter'num,** eruption on a mucous membrane. **E. io'dicum,** eruption of dark-red definite spots, spreading over the body without the formation of scales, disappearing after a long time, and seeming to be produced occasionally by the use of iodine. **E. milia'ria,** miliary fever. **E. pes'tis,** plague. **E. sero'sum,** pemphigus. **E. stroph'ulus,** strophulus. **E. urtica'tum,** urticaria. **E. vacci'na,** vaccina. **E. varicel'la,** varicella.

Exanthemata, eks-an-them'at-ah. *Eruptive fevers.* Cutaneous eruptions, essentially accompanied with fever.

Exanthemat'ic. Eruptive; relating to exanthems or exanthemata. **E. fe'ver,** typhus fever.

Exanthematischesis (eks-an-them-at-is'kes-is) or **Exanthematoschesis** (*exanthem, ischo,* to withhold). Suppression of a cutaneous eruption.

Exanthematology, eks-an-them-at-ol'o-je (*exanthem, logos,* discourse). Doctrine or description of cutaneous eruptions.

Exanthematophthalmia, eks-an-them-at-of-thal'me-ah (*exanthem, ophthalmos,* eye). Ophthalmia in the course of, or succeeding to, a cutaneous eruption.

Exanthematous, eks-an-them'at-us. Exanthematic or eruptive.

Exanthesis, eks-an-tha'sis. Efflorescence. **E. arthro'sia,** dengue. **E. rose'ola,** roseola. **E. rube'ola,** rubeola.

Exanthisma, eks-an-thiz'mah. Exanthem.

Exanthropia, eks-an-thro'pe-ah (*ex, anthropos,* man). Misanthropy; a symptom of melancholy and hypochondriasis.

Exapsis, eks-ap'sis (*ex, hapto,* to inflame). Inflammation.

Exaragma, eks-ar-ag'mah (*exarasso,* to tear away). Collision; violent fracture; fragment.

Exarchiater, eks-ar-ke-at'er. Chief of the *archiatri,* or chief of physicians—a title, like that of *Comes archiatorum,* of the chief physician of the emperor or king.

Exarma, eks-ar'mah (*ex, aireo*). Swelling.

Exarsio, eks-ar'se-o (*ex, ardeo,* to burn). Burning heat.

Exartema, eks-ar-ta'mah (*ex, artao,* to suspend). Amulet.

Exarteritis (eks-ar-ter-e'tis) or **Exarterii'tis.** Inflammation of the outer coat of an artery.

Exarthrema, eks-ar-thra'mah (*ex, arthron,* joint). Luxation.

Exarthroma, eks-ar-thro'mah (same etymon). Luxation.

Exarthrosis, eks-ar-thro'sis. Luxation. **E. pare'tica,** see *Pareticus.*

Exarticulate, eks-ar-tik'u-late (*ex, articulus,* joint). To separate at a joint.

Exarticulation, eks-ar-tik-u-la'shun (*ex, articulus,* joint). Amputation at a joint. Luxation.

Exarysis, eks-ar'is-is. Exhaustion.

Exasperatio, eks-as-per-ah'she-o (*ex, aspero,* to sharpen). Exacerbation.

Exbibition, eks-bib-ish'un. See *Imbibition.*

Excæcaria (ek-se-kah're-ah) (*excæco,* to make blind) **agal'locha.** Agallochum. **E. hiber'nica** possesses properties similar to those of E. agallocha. **E. lamet'tia,** tree, native of East Indies, which contains caoutchouc; leaves are used externally in infusion in syphilis and in ulcers. **E. sebif'era,** Stillingia sebifera. **E. sylvat'ica,** found in some of the southern United States; the juice has sudorific properties; the root is used in syphilis.

Excandescentia, eks-kan-des-sen'she-ah (*excandesco,* to glow). Irascibility of a morbid character.

Excarnation, eks-karn-a'shun (*ex, karo,* flesh). Mode of making anatomical preparations, consisting in separating injected vessels from parts in which they are situate, by corrosion, by acid, or by putrefaction.

Excastratio, eks-kas-trah'she-o. Castration, eunuch.

Excastratus, eks-kas-trat'us. Castrated.

Excathisma, eks-kath-iz'mah (*ex, kathisma,* seat). Bath, half. Semicupium.

Excavatio, eks-kav-ah'she-o. Pouch, cavity, or hollow space. **E. Douglas'ii,** recto-vaginal pouch. **E. is'chio-recta'lis,** ischio-rectal fossa. **E. rec'to-ischiad'ica,** ischio-rectal fossa. **E. rec'to-uteri'na,** recto-vaginal pouch. **E. rec'to-vesica'lis,** recto-vesical pouch. **E. u'tero-recta'lis,** recto-vaginal pouch. **E. ves'ico-recta'lis,** recto-vesical pouch. **E. ves'ico-uteri'na,** vesico-uterine pouch.

Excava'tion, glaucom'atous. See *Optic papilla.* **E. of the op'tic nerve,** cupping of the optic disk.

Excavator, dental, eks'ka-va-tor, den'tal (*ex, cavus,* hollow). Instrument for removing carious part of a tooth.

Excentric, eks-sen'trik. Literally, from the centre. Term applied especially to pains experienced externally, but produced by spinal disease caused by lesion of the posterior roots.

Excerebration, eks-ser-e-bra'shun (*ex, cerebrum,* brain). Removal of brain of the child, to facilitate delivery. Delirium. Disturbance of action of the brain.

Excerebratus, eks-ser-e-brat'us. Delirious.

Excernent, eks-sur'nent (*ex, cerno,* to sift). Secreting.

Excidentia, eks-sid-en'she-ah (*ex, cado,* to fall). See *Ecptoma.*

Excipient, eks-sip'e-ent (*ex, capio,* to receive). Substance which, in a medicinal prescription, gives form and consistence to it, and serves as a vehicle or medium for the exhibition of the other ingredients.

Excipulum, eks-sip'u-lum. Cup.

Excisio, eks-siz'e-o. Deep cut; incised wound. Excision. **E. ova'rii,** ovariotomy.

Excision, eks-sizh'un (*ex, cædo,* to cut off). Operation by which parts are removed with a cutting instrument. See *Amputation.*

Excisor prostatæ, eks-se'zor pros'tat-e. Instrument for removing the prostate gland.

Excitability, eks-site-a-bil'it-e (*ex, cito,* to excite). Irritability. Faculty possessed by living beings of being sensible to the action of excitants. Excitation.

Excitant, eks-si'tant. Stimulant. (For action of this class of remedies, see *Stimulants.*)

Excitation, eks-si-ta'tion. *Excitement.* Act of exciting; state of organ or organs excited. Augmented arterial action. Excessive action.

Excito-motion, eks-si'to-mo'shun. See *Excito-motory.*

Excito-motor (eks-si'to-mo'tor) or **-mo'tory.** Exciting motor or muscular action. Epithet applied by Dr. Marshall Hall to a division of the nervous system comprising the gray matter of the spinal marrow, with the afferent and efferent nerves connected with it—all of which are concerned in *reflex* actions, or those by which impressions are transmitted to a centre, and reflected so as to produce muscular contraction without sensation or volition. They constitute the *reflex system of nerves.* See *Nerves.* The term *excito-motion* has also been employed to signify motion, no matter how excited, by the reflex nerves or by volition.

Excito-nutrient (eks-si'to-nu'tre-ent) and **Excito-secretory,** eks-si'to-se-kre'to-re. Terms applied to reflex actions in which nutrition and secretion are modified by impressions made elsewhere and reflected to them, as where tumors disappear or secretions, as of tears, milk, or saliva, are increased by impressions made on the cerebro-spinal nervous centres.

Excito-vasomotor, eks-si'to-vas-o-mo'tor. Stimulating vasomotor activity.

Exclusion, eks-klu'zhun (*ex, claudo,* to shut). Act of excluding or shutting out; applied to diagnosis by exclusion of symptoms. **E. of pu'pil,** condition in which the iris is attached to the lens.

Exclusive, eks-klu'siv. That which excludes or shuts out.

Excochleation, eks-kok-le-a'shun (*ex, cochleare,* spoon). Act of curetting or scraping with a spoon.

Excoriatio, eks-ko-re-ah'she-o (*ex, corium,* skin). Excoriation.

Excoriation, eks-ko-re-a'shun. Slight wound, removing only the skin; act of abrading.

Excoriatura, eks-ko-re-at-u'rah. Excoriation.

Excreation, eks-kre-a'shun (*ex, screo,* to spit). Act of spitting; exspuition.

Excrement, eks'kre-ment (*excerno,* to separate, to cleanse). Everything evacuated from the body of an animal by the natural emunctories as being superfluous, such as fecal matters, urine, perspiration, nasal mucus, etc. The term is usually restricted to fecal evacuations. The average amount of fæces discharged in twenty-four hours has been estimated at from four ounces to six in cases where the amount of solid food taken may have been forty-five ounces. According to Simon, the fæces contain, approximately, water, 77.3; mucin, 2.3; proteids, 5.4; extractives, 1.8; fats, 1.5; salts, 1.8; resinous, biliary, and coloring matters, 5.2; insoluble residue of food, 4.7. A non-nitrogenous, crystallizable matter, *excretin,* has been separated from the fæces, and also a crystallizable substance, *stercorine,* which is thought to be produced by transformation from cholesterin of the bile.

Excrementitial (eks-kre-men-tish'al) or **Excrementi'tious.** Relating to, or resembling, excrement. Excrementitial matters are those destined to be evacuated as incapable of administering to the nutrition of the body.

Excremento-recrementitial (eks-kre-men'to-rekre-men-tish'al) or **Excremento-recrementitious,** eks-kre-men'to-rek-re-men-tish'us. Animal fluids intended to be partly absorbed and partly rejected.

Excrescence, eks-kres'sence (*excresco,* to grow outward). Tumor which forms at the surface of organs, and especially on the skin, mucous membranes, or ulcerated surfaces. Warts, condylomata, polypi, and hemorrhoids belong to this head. **E., caul'iflower,** see *Cauliflower.*

Excrescentia, eks-kres-sen'she-ah. Exacerbation; protuberance; tumor. **E. carno'sa,** sarcoma. **E. fungo'sa,** fungosity. **E. gingi'væ,** epulis. **E. vesi'cæ urina'riæ carno'sa,** fleshy thickening of the coats of the bladder.

Excreta, eks-kre'tah. Fæces; urine; perspiration. See *Excretion.*

Excretin, eks'kre-tin. See *Excrement.*

Excretio, eks-kre'she-o. Excretion, excrement. **E. alvi'na,** defecation. **E. fæ'cum alvina'rum,** defecation. **E. uri'næ involunta'ria,** enuresis.

Excretion, eks-kre'shun (*excerno, excretum,* to separate). Separation or throwing off of those matters, *excreta,* from the body of an animal which are supposed to be useless, as the urine, perspiration, and fæces.

Excretory, eks'kre-to-re. Relating to or causing excretion. An excretory vessel or duct is one which transmits the fluid secreted by a gland, either externally or into the reservoirs in which it has to be deposited. The existence of an excretory duct was regarded as a distinctive character of the glands properly so called. **E. duct,** canal conveying secretion from a gland. **E. or'gan,** one charged with the office of excreting—the skin, for example. **E. tu'bule,** uriniferous tubule emptying into pelvis of kidney.

Excretum, eks-kre'tum. Excrement.

Excurvation, eks-kur-va'shun. Outward curvature.

Excutia ventriculi, eks-ku'she-ah ven-trik'u-le (*ex, quatio,* to shake). *Stomach brush.* Instrument of iron or brass wire, at one extremity of which is a pencil of bristle to extract foreign bodies from the œsophagus, as well as to cleanse the stomach of viscid and tenacious matters adhering to it.

Exdermoptosis, eks-dur-mop-to'sis (*ex, derma,* skin, *ptosis,* falling). Hypertrophy of the sebaceous glands of the skin, especially of the genital organs.

Exechebronchus, eks-ek-e-bron'kus (*execho,* to project, *bronchos,* throat). Bronchocele.

Exechegluti, eks-ek-e-glu'te (*execho,* to project, *gloutoi,* nates). Those having large nates.

Exedens, eks'e-dens (*ex, edo,* to eat). Eroding; eating away. See *Herpes exedens* and *Lupus exedens.*

Exelcosis, eks-el-ko'sis (*ex, helcos,* ulcer). Formation of an ulcer.

Exelcysmus, eks-el-siz'mus (*ex, helkuo,* to draw). Extraction. Breaking out into ulcers.

Exencephalus, eks-en-sef'al-us (*ex, enkephalos,* encephalon). Malformation and faulty development of the bones of the head, with defective development of the brain, etc., and displacement of greater part of the brain to the outside of the skull, sometimes the entire brain lying on the back.

Exenteration (eks-en-ter-a'shun) or **Exenterismus,** eks-en-ter-iz'mus. *Evisceration, Devisceration, Unbowelling, Embowelling* or *Imbowelling, Visceration.* Operation of taking out the bowel or of removing the contents of any cavity. **E. bul'bi,** removal, by operation, of the eyeball and its contents. Operation to supersede enucleation, the injured organ being removed without opening the capsule of Tenon and without involving orbital cellular tissue, retaining the sclerotic coat with its muscles as a movable stump for support of an artificial eye. **E. or'bitæ,** operation for removal of contents of orbit.

Exenteritis, eks-en-ter-e'tis (*ex, enteron,* intestine). Peritonitis.

Exerama, eks-er-am'ah (*ex, erao,* to pour out). Anything cast out; vomiting or the matter vomited.

Exerasis, eks-er-a'sis (same etymon). Evacuating; vomiting.

Exercise, eks'ur-size (*exerceo,* to work). Motion of the body from the contraction of voluntary muscles; action of any organ whatever. *Active exercise,* such as walking, running, dancing, hunting, fencing, playing at ball, cricket, quoits, swimming, etc., is an important prophylactic, particularly for those disposed to be plethoric. It improves digestion, augments the secretions, and, in moderation, gives strength to the body, but in excess produces debility and disease. *Passive exercise* is when a part or a limb is moved gently by another person—by massage, for example. **E. bone,** drill bone.

Exerrhosis, eks-er-rho'sis (*ex, rheo,* to flow). Discharge by insensible perspiration.

Exfœtation, eks-fe-ta'shun. Pregnancy, preternatural or extra-uterine. See *Pregnancy.*

Exfoliation, eks-fo-le-a'shun (*ex, folium,* leaf). Separation of the dead portions of a bone, tendon, aponeurosis, or cartilage, under the form of laminæ or small scales. The object is to detach the dead portion from parts subjacent, which are still alive. For this purpose the latter throw out fleshy granulations, and a more or less abundant suppuration occurs, which tends to separate the exfoliated part, now an extraneous body. When the dead part embraces all or almost all the substance of a bone, it takes the name *Sequestrum.*

Exfoliative, eks-fo'le-a-tiv. *Desquamatory.* Causing or relating to exfoliation. Taking away by leaves or scales. The term is also applied to certain medicines regarded as proper to hasten exfoliation, as alcohol, oil of turpentine, tincture of myrrh, etc. **E. dermati'tis,** see *Dermatitis exfoliativa.* **E. trepan',** raspatory, or instrument for scraping exfoliating portions of bone.

Exhalant (eks-ha'lant) or **Exhalent** (*exhalo,* to breathe out or exhale). Having the quality of exhaling or evaporating.

Exhalatio, eks-hal-ah'she-o. Evaporation, exhalation.

Exhalation, eks-hal-a'shun (*exhalo,* to exhale). Function by virtue of which certain fluids obtained from the blood are spread, in the form of dew, in the areolæ of the different textures or at the surface of membranes, to be thrown out of the body or to serve ulterior purposes. Sweat is a liquid excrementitious exhalation; the serous fluid of the pleura a liquid recrementitious exhalation. Also that which exhales from any body whatever, organic or inorganic, dead or living. **E., pul'monary,** transpiration which takes place into the bronchia and is sent out with the expired air.

Exhaustion, eks-awst'shun (*exhaurio,* to draw out). Loss of strength occasioned by excessive evacuations, great fatigue, privation of food, or by disease. In pharmacy, separation of potent ingredients of a drug. **E., ner'vous,** see *Neurasthenia.* **E., so'lar,** see *Insolation.*

Exhib'it. To administer medicine.

Exhibition, eks-ib-ish'un. The administration of a certain medicine.

Exhibitionism, eks-ib-ish'un-izm. Tendency to exhibit the genitalia in the presence of others; the one so offending being called an *Exhibitionist.*

Exhilarant, eks-hil'ar-ant (*ex, hilaro,* to make merry). Agent that exhilarates or enlivens.

Exhumation, eks-hu-ma'shun (*ex, humus,* the ground). Disinterment of a corpse, as for medico-legal purposes.

Exidia auricula Judæ, eks-id'e-ah aw-rik'u-lah ju'de. Peziza auricula.

Exiguous, eks-ig'u-us (*exiguus,* small). Small in size or measure.

Exinanition, eks-in-an-ish'un (*ex, inanis,* empty). Extreme exhaustion; complete evacuation.

Exipotic, eks-e-pot'ik (*exipoo,* to purge). Purgative; detergent.

Exischium, eks-is'ke-um (*ex, ischion,* ischium). Prominence of the hips.

Exischius (eks-is'ke-us) or **Exischus,** eks-is'kus. Luxation of the os femoris. Those with large nates and prominent hips were formerly called *Exischioi* and *Exechegluti.*

Exitialis, eks-ish-e-al'is. Deadly.

Exitura, eks-it-u'rah (*exeo,* to go out). Abscess which discharges; putrid excrement.

Exitus, eks'it-us. Outer termination or exit of a canal; termination of a disease. **E. pel'vis,** outlet of the pelvis.

Exo, eks'o. In composition, without, outward; out of median line.

Exoärteritis, eks-o-ar-ter-e'tis. Inflammation of outer coat of artery.

Exocardia, eks-o-kar'de-ah (*exo, cardia,* heart). Exterior of the heart; displacement of the heart.

Exocardiac (eks-o-kar'de-ak) or **Exocardial,** eks-o-kar'de-al. Relating to the exterior of the heart. *Exocardiac sounds* are those induced by conditions of the external surface of the heart.

Exocardi'tis. Pericarditis.

Exochas (eks'o-kas) or **Exoche,** eks'o-ke (*execho,* to project). Soft tumor, as a hemorrhoid outside of the anus; external pile.

Exochorion, eks-o-ko're-on. Outer layer of the chorion.

Exochorrhypia, eks-o-kor-rhip'e-ah (*exochos,* elevated, *rhupos,* filth). Rupia prominens.

Exocolitis, eks-o-ko-le'tis. Inflammation of peritoneal coat of colon.

Exoculation, eks-ok-u-la'shun (*ex, oculus,* eye). Absence of eyes; deprivation of vision; removal of an eye.

Exocyste (eks-o-sis'te) or **Exocus'tis** (*exo, kustis,* bladder). Prolapsus of the bladder into the urethra; protrusion of the inner membrane of the bladder; protrusion of the neck of the bladder.

Exoderm, eks'o-durm (*exo, derma,* skin). Epidermis.

Exodic, eks-od'ik (*ex, hodos,* way). Efferent; reflex motor.

Exodontosis, eks-o-don-to'sis (*odous,* tooth). Exostosis on a tooth.

Exœdesis, eks-e-da'sis (*oidao,* to swell). Swelling.

Exoënteritis, eks-o-en-ter-e'tis. Inflammation of external coat of intestines.

Exogastritis, eks-o-gas-tre'tis (*exo, gaster,* stomach). Inflammation of external coat of stomach.

Exogenetic, eks-o-jen-et'ik (*exo, genesis,* generation). Having origin from external causes, as E. diseases.

Exogenous, eks-oj'en-us (*gennao,* to engender). Increase by addition from without.

Exognathion, eks-o-na'the-on. Alveolar process of the upper maxillary bone.

Exogonium purga, eks-o-go'ne-um pur'gah. Convolvulus jalapa.

Exogonyancon, eks-o-gon-e-an'kon (*exo, gonu,* knee, *ankon,* elbow). Bowing of the knees outward.

Exolce, eks-ol'se (*ex, helko,* to draw). Extraction.

Exolceus, eks-ol'se-us. Bone-elevator.

Exolcys'mus. Extraction. Breaking out into ulcers.

Exolution, eks-o-lu'shun. Syncope.

Exometra, eks-o-ma'trah (*exo, metra,* uterus). Prolapse or inversion of the uterus.

Exometritis, eks-o-met-re'tis (same etymon). Inflammation of the peritoneal surface of the uterus or of parts in immediate relation with it.

Exomoiosis, eks-o-moi-o'sis (*ex, homoios,* like). Assimilation.

Exomphalia, eks-om-fal'e-ah (*ex, omphalos,* navel). Protrusion of the navel.

Exomphalocele (eks-om-fal-o-se'le) (Eng. eks-om'fal-o-seel) or **Exomphalus,** eks-om'fal-us (*ex, omphalos,* navel, *kele,* rupture). *Omphalocele, Exomphalocele, Umbilical hernia, Ruptured navel.* Hernia at the navel; more frequent in infants, and taking place by the umbilical ring. In adults it is more common in females than in males, and the sac passes in the vicinity of the umbilicus. The organs found in this kind of hernia are particularly the epiploon, jejunum, arch of the colon, and sometimes the stomach. It is commonly readily reducible, and not subject to strangulation. It must be reduced, and retained by an elastic bandage like a girdle, and furnished with a pad at its middle part. When strangulated, the stricture may be divided upward and toward the left side.

Exoncoma, eks-on-ko'mah (*ex, onkos,* tumor). Large, prominent tumor; protuberance of the vertebræ after luxation.

Exoncosis, eks-on-ko'sis (same etymon). Formation of a large, prominent tumor; tumefaction. **E. lin'guæ,** swelling of the tongue.

Exoneirogmus (eks-on-i-rog'mus) or **Exoneirosis,** eks-on-i-ro'sis (*ex, oneiros,* dream). Pollution, nocturnal.

Exoneurism, eks-on'u-rizm (*exo, neuron,* nerve). Animal magnetism.

Exopathic, eks-o-path'ik (*exo, pathos,* disease). Relating to disease originating from causes outside the body.

Exophor'ia (*exo, phero,* to carry). Tending of visual lines outward.

Exophthalmia (eks-of-thal'me-ah) or **Exophthalmos,** eks-of-thal'mos (*ex, ophthalmos,* eye). Protrusion of the eye from its orbit, occasioned by abscess or tumor in the areolar texture of the orbit, by exostosis of the parietes of the orbit, etc. The eye is pressed forward; the eyelids are raised and separated, and no longer cover the eye and defend it from the action of extraneous bodies; it becomes inflamed, and the sight is disturbed or destroyed. Treatment of course depends upon the cause. **E., anæ'mic,** exophthalmic goitre. **E., car'dio-thy'roid,** exophthalmic goitre. **E. fungo'sa,** fleshy growth from the globe of the eye. **E., pul'sating,** E. associated with or dependent upon an aneurism pushing the eyeball forward. **E. sarcomat'ica,** E. fungosa.

Exophthalmic, eks-of-thal'mik. Appertaining or relating to exophthalmia. Having the eyes bulging or abnormally protrusive. **E. goi'tre,** *Basedow's disease, Disease of Graves, Graves' disease, Bigbie's disease, Stokes' disease, Parkinson's disease, Marsh's disease, Parry's disease, Anæmic protrusion of the eyeballs, Cardio-thyroid* or *Anæmic exophthalmia.* An anæmic condition, accompanied by protrusion of the eyeballs, palpitation of the heart and arteries, and tumefaction of the thyroid gland; is more frequent among women than men; prognosis is less favorable with the latter. It was named by Professor Trousseau of Paris after Dr. Graves, who first recognized it in 1835. Its etiology is still obscure; the disease is regarded as a general neurosis, possibly due to irritation of the accelerator nerves of the heart and of the vasodilator nerves connected with the vessels of the head and neck.

Exophthalmometer, eks-of-thal-mom'et-ur (*exophthalmia, metron,* measure). Instrument for measuring amount of exophthalmia.

Exophthalmos (eks-of-thal'mos) or **Exophthalmus,** eks-of-thal'mus. *Goggle-eyed.* One whose eyes are very prominent; opposed to cœlophthalmus. See *Exophthalmia.*

Exoprosopus, eks-o-pros-o'pus (*exo, prosopon,* face). Epignathus.

Exorbitism, eks-or'bit-izm (*ex, orbita,* orbit). Exophthalmia.

Exorhinus, eks-o-rhe'nus (*exo, rhis,* nose). Term to designate skulls in which line projected from nasion to alveolar point falls back of that from nasion to rhinion, the angle being from 1° to 20.5°.

Exormia, eks-or'me-ah (*ex, ormao,* to break forth). Papule. **E. li'chen,** lichen. **E. pruri'go,** prurigo. **E. stroph'ulus,** strophulus.

Exortus unguium, eks-or'tus un'gwe-um (rising of the nails). Lunula of the nail.

Exosepsis, eks-o-sep'sis (*exo, sepsis,* putrefaction). Septic poisoning from external causes.

Exosis, eks-o'sis (*ex, otheo,* to impel). Luxation.

Exoskeletal, eks-o-skel'et-al. Pertaining to the exoskeleton.

Exoskeleton, eks-o-skel'e-ton. Skeleton that is wholly external, as in crustacea and testacea. Part of skeleton nearest to the surface.

Exosma, eks-oz'mah. A part that has protruded.

Exosmic, eks-oz'mik. Exosmotic.

Exosmose' or **Exosmo'sis** (*ex, osmos,* impulse). *Transudation.* Act by which substances transude from within to without an animal or other membrane. Opposite to endosmose.

Exosmotic (eks-oz-mot'ik) or **Exos'mic.** Belonging or relating to exosmose.

Exossatio, eks-os-sah'she-o (*ex, os,* bone). Exostosis.

Exostemma (eks-o-stem'mah) or **Exostema Caribæum,** eks-o-sta'mah kar-ib-e'um (*exo,* without, *stemma,* crown). Cinchonæ caribææ cortex. **E. floribun'dum,** species yielding false cinchona bark.

Exostoma, eks-os-to'mah. Exostosis.

Exostosis, eks-os-to'sis (*ex, osteon,* bone). *Osteophyte.* Osseous tumor forming at the surface of bones or in their cavities. Various kinds have been enumerated: *Ivory exostosis, Exostosis eburnea,* having the appearance and consistence of ivory; *Laminar exostosis,* formed of laminæ in superposition, or of distinct filaments; *Spongy exostosis,* whose structure is analogous to the spongy tissue of bones. Exostoses are sometimes distinguished into the *true,* which seem to be a projection of the osseous substance, having the same organization and hardness as that substance, and the *false* or osteo-sarcoma. Exostosis may depend on syphilis, scrofula, rickets, gout, etc. In such cases it is important to get rid of the primary disease. Exostoses within the bones have by some been called *Enostoses.* See *Spina ventosa.* **E. den'tium,** exostosis of the teeth. **E. ebur'nea,** see *Exostosis.* **E., i'vory,** see *Exostosis.* **E., lam'inar,** see *Exostosis.* **E., spon'gy,** see *Exostosis.* **E. steatomato'des,** bony tumor or degeneration belonging to exostosis. **E., subun'guial,** see *Subunguial.*

Exostotic, eks-os-tot'ik. Relating to, or affected

with, exostosis. **E. pel'vis**, pelvis whose cavity is diminished in size by exostoses, so as to render labor difficult.

Exoteric, eks-o-ter'ik (*exoteros*, outer). Public; exterior; opposite of esoteric.

Exoterorhi'nus (*exoteros*, external, *rhis*, nose). Term to designate skulls in which line projected from nasion to alveolar point falls behind line from nasion to rhinion, the angle formed being from 22.5° to 45°.

Exothesis, eks-o-tha'sis (*exotheo*, to put out). Luxation.

Exothyropexy, eks-o-thi'ro-peks-e (*exo*, without; *thyroid*, *pexis*, suture). Operation for goitre, in which the thyroid gland is loosened as much as possible from its attachments and brought outside of the external incision, where it gradually undergoes a process of atrophy.

Exotic, eks-ot'ik (*exo*, without). That which comes from abroad, as plants or drugs; opposed to indigenous.

Exoticadenia, eks-ot-ik-ad-en'e-ah (*exotic*, *adeo*, to dislike). Aversion for exotic drugs, for their use or importation.

Exotichæmatic, eks-ot-e-ke-mat'ik (*exotic*, *haima*, blood). Relating to transfusion of blood.

Exotichæmatosis, eks-ot-ik-he-mat-o'sis (*exotic*, *haimatosis*). Transfusion.

Exoticomania, eks-ot-ik-o-man'e-ah (*exotic*, *mania*). Fondness for exotic remedies; opposite to exoticadenia.

Exoticosymphysis, eks-ot-ik-o-sim'fis-is (*exotic*, *sumphusis*, growing together). Union or growing together of foreign bodies, as of a foreign body with the human body.

Exoticudenia, eks-ot-ik-u-den-e'ah (*exotic*, foreign, *oudeneia*, worthlessness). Dislike for foreign remedies, under the belief that they are worthless as remedies.

Exotrachelus, eks-o-trak-e'lus (*exo*, *trachelos*, neck). Epignathus.

Exotro'pia (*exo*, *trepo*, to turn). Deviation of the eye outward, as in strabismus, from muscular contraction.

Expansibility, eks-pan-si-bil'i-te. The capacity of being expanded.

Expansio, eks-pan'se-o (*expando*, to spread out). Expansion. **E. meat'uum**, expansion of vessels. **E. musculo'sa**, platysma myoides.

Expansion, eks-pan'shun. Prolongation or spreading out of certain organs, as *aponeurotic expansion*, spreading out of aponeuroses, etc.

Expatratio, eks-pat-rah'she-o (*ex*, *patratio*, copulation). Ejaculation (of sperm).

Expectant, eks-pek'tant (*exspecto*, to wait). That which waits, as expectant medicine or treatment. See *Expectation*.

Expectation, eks-pek-ta'shun. Method of observing the progress of diseases and removing deranging influences, without prescribing active medicines unless imperatively required, thus leaving a disease almost wholly to the efforts of nature. It has been termed the "art of curing diseases by expectation or waiting." **E. of life**, age to which it is probable that any one may live, based on a given age. Such expectation is calculated from life-insurance tables of the duration of life, which are particularly valuable and important as forming a basis of calculation for insurance offices and for medical examiners for life insurance.

Expectorant, eks-pek'tor-ant (*ex*, *pectus*, breast). *Expectorative; ptysmagogue.* A medicine capable of facilitating or provoking expectoration and of aiding the removal of the expectorated matter from the air-passages. It may produce the latter effect by increasing the rapidity of the ciliary motion in the mucous membrane of the trachea, or the activity of the respiratory centre. Expectorants may also act through the system or by impressions made on parts at a distance, which, through the medium of general, continuous, or contiguous sympathy, excite the secretory vessels of the air-passages to action.

The chief agents of this class have been divided into depressant and stimulating expectorants, as follows (Brunton):

Depressant Expectorants.	*Stimulating Expectorants.*
Generally tending to depress the heart, lessen blood-pressure, and increase secretion.	Generally stimulating the heart, increasing blood-pressure, and diminishing secretion.
Alkalies.	Acids.
Antimonial preparations.	Ammonium salts: chloride, carbonate, hydrate (Ammonia).
Tartar emetic.	
Apomorphine.	
Ipecacuanha.	
Emetine.	
Jaborandi.	
Pilocarpine.	
Lobelia.	
Lobeline.	
Potassium iodide.	
Quebracho.	
Quebrachine.	Balsams: Benzoin, Benzoic acid, Balsam of Tolu, Balsam of Peru.
	Nux vomica.
	Strychnine.
	Senega.
	Saponine.
	Squill.
	Saccharine substances: Syrups, Licorice.
	Sulphur.
	Sulphur oils: Onion, Garlic.
	Terebinthinates: Wood tar, Terebene, Turpentine, Oleum Pini sylvestris, Oleum Pini pumilionis.

Expectoratio, eks-pek-tor-ah'she-o. Expectoration. **E. san'guinis**, hæmoptysis. **E. sol'ida**, cynanche trachealis.

Expectoration, eks-pek-tor-a'shun. Raising; act of expelling from the chest matters or secretions collected or existing there; expectorated matter. **E., prune'-juice**, matter expectorated during purulent stage of pneumonia.

Expectorative, eks-pek'tor-a-tiv. Expectorant.

Expellens, eks-pel'lens (*expello*, to drive away). Expulsive; abortive.

Experience, eks-pe're-ence (*ex*, *peira*, trial). Knowledge of things acquired by observation, either personal or that obtained from tradition and from books. Union of accurate observation by the physician with that handed down by medical writers constitutes perfect experience, so far as it is attainable.

Experientia, eks-pe-re-en'she-ah. Experience.

Experiment, eks-per'i-ment. Trial instituted with the intent of becoming better acquainted with anything. It may be made on the bodies of men or animals for the purpose of detecting the effect of a remedy or of becoming better acquainted with their structure, functions, or peculiarities. Experiments on living animals have given valuable information, particularly in physiology and toxicology. **E. of Mariotte'**, see *Mariotte*. **E., Valsal'vian**, see *Valsalvian*. **E. of Wep'fer**, experiment attributed to Wepfer, consisting in injecting air into the blood-vessels of animals, with the view of observing the effect on the economy.

Experimental, eks-per-i-men'tal. Obtained from experiment or experience.

Experimentation, eks-per-i-men-ta'shun. The carrying out of experiments.

Experimentum mirabile, eks-per-im-en'tum mir-ab'il-a. Experiment illustrating the effect of hypnotism on animals; as, for instance, when the head of a hen is pressed on the ground, the animal remains in the same position.

Expers nuptiarum, eks'purs nup-she-ah'rum (ignorant of marriage rites). Virgin.

Expert, eks'purt (*ex*, *peritus*, skilled). Skilful or of good experience. The term as applied to witnesses —*expert witnesses*—should be restricted to those only whose opinion in medico-legal cases is valuable from their accurate knowledge of the subject under consideration.

Expiration, eks-pi-ra'shun (*exspiro*, to breathe out). Act of expelling from the chest the air received dur-

ing inspiration. See *Vital capacity*. **E., prolonged,** a sound heard during expiration or auscultation, indicating a diseased condition of the lungs; the expiration may be prolonged, as in emphysema due to diminished elasticity of the alveolar walls, or the expiratory sound may be prolonged or jerking, as observed in incipient tuberculosis due to an obstruction to the exit of air.

Expiratory, eks'pir-at-o-re. Relating or appertaining to expiration. Expiratory muscles are all those which contribute to diminish the cavity of the chest for the purpose of expelling the air contained in the lungs or of producing expiration.

Expire' (*exspiro*, to breathe out). To breathe out; to emit the last breath, or die.

Ex'pletive fibres. *Association fibres.* Fasciculi in the brain passing beneath the cortical layer, associating cortical areas of the same hemisphere.

Exploratio, eks-plor-ah'she-o (*exploro*, to search into). Exploration. **E. abdom'inis,** abdominoscopy.

Exploration, eks-plor-a'shun. Examination of parts or organs that are not superficial, and therefore not within direct reach. Act of observing and attentively investigating everything connected with a case of disease or injury, by every practicable method of diagnosis. **E., Noeggerath's method of,** method of examining the uterine walls by gradually dilating the urethra with instruments, and introducing the index finger of one hand into the bladder, and that of the other into the rectum and vagina.

Exploratorium, eks-plor-at-or'e-um. Sound; probe.

Exploratory, eks-plor'a-to-re. Serving to explore, as an exploratory incision.

Explorer, eks-plor'ur. Instrument used for the purpose of exploring.

Explosion, eks-plo'zhun. Term used in pathology to denote the sudden onset of convulsions or of a violent attack of disease.

Explo'sives. Some consonants are so called, as *b*, *p*, *t*, *d*, *c*, and *g*, which seem to issue explosively when uttered.

Expressed, eks-prest' (*ex, premo*, to press). Pressed out, as expressed oils.

Expression, eks-presh'un (*ex, premo*, to press). Act of compressing a substance to separate from it the fluids which it contains. Manner in which impressions made upon us are depicted, especially in the traits of the countenance. **E., Credé's method of,** Credé's method of delivering the placenta is performed by grasping the uterus with the fundus in the hollow of the hand, and compressing the uterus so as to assist the expulsion of the placenta. **E. of the fœ'tus,** method of accelerating the birth of the child, which consists in rubbing and pressing upon the uterus. It is called Kristeller's method of expression. **E. of sweat,** passive perspiration observable in very debilitated individuals.

Expuition, eks-pu-ish'un. Rejection of matters accumulated in the pharynx and larynx; spitting.

Expulsio, eks-pul'se-o (*expello*, to drive away). Excretion. **E. fæ'cum,** defecation. **E. fœ'tûs,** parturition.

Expulsion, eks-pul'shun. Driving out. **E. of the placen'ta,** expulsion of the placenta from the uterus, caused by the contractions of the uterus and of the abdominal muscles. **E., sponta'neous,** spontaneous evolution; extrusion of the fœtus or placenta by the mother without external assistance.

Expulsive, eks-pul'siv. Driving out. **E. band'age,** one constructed with the view of compressing a part from which we are desirous of expelling pus, serum, etc. **E. med'icines,** those believed to have the power of driving the humors toward the skin, as diaphoretics and sudorifics. **E. pains,** pains attending expulsion of the fœtus in labor.

Expultrix, eks-pul'triks. Driving out. See *Vis expultrix*.

Exsanguination, eks-san-guin-a'shun. The condition of being deprived of blood, such as occurs in tight bandaging.

Exsanguine, eks-san'gwin (*ex, sanguis*, blood). Bloodless.

Exsanguinity, eks-san-gwin'it-e. Anæmia.

Exsanguinous, eks-san'gwin-us (*sanguis*, blood; also an old term for sperm). Bloodless; exhausted by venery. See *Sperm*.

Exsarcoma, eks-sar-ko'mah. Sarcoma.

Exscreatio, eks-skre-ah'she-o (*ex, screo*, to spit). Act of spitting.

Exsectio, eks-sek'she-o. Exsection. **E. viril'ium,** castration.

Exsection, eks-sek'shun (*ex, seco*, to cut). Act of cutting out, as a nerve.

Exsectus, eks-sek'tus. Castrated; eunuch.

Exsertor, eks-sur'tor. Muscle whose function it is to carry a part forward.

Exsiccation, eks-sik-ka'shun (*ex, sicco*, to dry). Desiccation or drying.

Exsiccative, eks-sik'ka-tiv. Desiccative or drying.

Exsolutio, eks-so-lu'she-o (*ex, solvo*, to loosen). Resolution; prostration of strength; faintness.

Exspiration, eks-spir-a'shun. Expiration.

Exspirator, eks-pi-ra'tor. An apparatus for collecting expired air for analytical purposes.

Exspuition, eks-spu-ish'un (*ex, spuo*, to spit). Rejection of the matters accumulated in the pharynx and larynx; spitting.

Exstasis, eks'sta-sis. Ecstasy.

Exstinctio, eks-stink'she-o. Extinction.

Exstirpatio, eks-stur-pah'she-o. Extirpation. **E. lin'guæ,** extirpation of the tongue. **E. testiculo'rum,** castration.

Exstrophia, eks-strof'e-ah (*ex, strophe*, turning). *Exstrophy, Extroversion.* Eversion or turning out of a part, as the eyelids; displacement of organs, especially the urinary bladder.

Exstrophy, eks'stro-fe. Exstrophia. **E. of the bladder,** *Extroversion of the bladder, Congenital hernia* or *hiatus of the bladder.* Faulty conformation in which the bladder opens above the pubes, so that in the hypogastric region there is a red, mucous surface, formed by the inner coat of the bladder, on which two prominences are distinguishable, corresponding to the opening of the ureters.

Exsuccatio, eks-suk-kah'she-o (*ex, succus*, juice). Ecchymoma.

Exsuctio, eks-suk'she-o (*ex, sugo*, to suck). Action of sucking.

Exsudatio, eks-su-dah'she-o (*ex, sudo*, to sweat). Ephidrosis; exudation.

Exsufflatio, eks-suf-flah'she-o (*ex, sufflo*, to blow). Quick and forced expulsion of air from the lungs.

Exta, eks'tah. Viscera of the abdomen or thorax.

Extemporaneous, eks-tem-po-ra'ne-us (*ex, tempus*, time). Term applied to prescriptions which are made on the spot, and compounded according to the prescription of the physician.

Extensibility, eks-ten-si-bil'it-e (*extensio, habilis*, able). Property possessed by certain bodies of being capable of extension or elongation.

Extensible, eks-ten'si-b'l. Possessing the power of extension.

Extensio, eks-ten'she-o. Extension; tetanus.

Extension, eks-ten'shun (*ex, tendo*, to stretch). Operation in surgery, in which, either by the hands alone or by straps or weights, a fractured or luxated limb is pulled strongly to restore it to its natural position. In obstetrics, bending of the occiput of the fœtal head toward the back.

Extensor, eks-ten'sor. Muscle whose office is to extend certain parts. **E. accesso'rius in'dicis,** accessory fasciculi of E. brevis digitorum manûs to index finger. **E. annula'ris,** occasional supernumerary muscle connecting with tendon of extensor communis to ring finger. **E. antibrach'ii,** triceps brachii. **E. bre'vi radia'lis,** E. carpi radialis brevior. **E. bre'vis digito'rum ma'nûs,** rare muscle passing from lower part of radius or ulna, from carpus or metacarpus, to one digit or more. **E. b. d. pe'dis,** *Short extensor of the toes.* Muscle on the dorsal region of the foot, arising from the external surface of the

calcaneum and at the anterior edge of a ligament uniting that bone to the astragalus. Anteriorly, each of its divisions terminates by a small tendon fixed successively at the superior part of the posterior extremity of the first phalanx of the great toe, and to the second and last phalanges of the next three toes. It extends the first four toes, and directs them a little outward. **E. b. hallu'cis**, portion of E. brevis digitorum pedis, sending tendon to great toe. **E. b. in'dicis**, E. accessorius indicis. **E. b. pol'licis**, E. primi internodii pollicis. **E. b. pro'prius me'dii**, separate fasciculi from E. brevis digitorum manûs to middle finger. **E. car'pi interme'dius**, E. carpi radialis intermedius. **E. c. radia'lis accesso'rius**, occasional supernumerary muscle arising with extensor carpi radialis muscles and inserted with other muscles and tendons. **E. c. r. bre'vior**, radialis externus brevior. **E. c. r. interme'dius**, muscle formed by fusion of two extensor carpi radialis muscles. **E. c. r. lon'gior** or **lon'gus**, radialis externus longior. **E. c. ulna'ris**, see *Cubital muscles*. **E. coccy'gis**, muscular fasciculi from sacrum to coccyx, vestige of lower creation of animals. **E. commu'nis digito'rum**, E. digitorum communis. **E. c. d. pe'dis**, muscle situated at the anterior part of the leg; long, thin, flattened, simple, and fleshy above, and divided into four tendons below. It arises from the outer tuberosity of the tibia and the anterior surface of the fibula, and is inserted into the superior part of the posterior extremity of the second and third phalanges of the last four toes. It extends the phalanges of these toes. **E. c. in'dicis**, supernumerary fasciculi of E. indicis to middle and ring fingers. **E. c. pol'licis et in'dicis**, supernumerary fasciculus of E. indicis to thumb-muscle, produced by combination of E. indicis and E. secundi internodii pollicis. **E. cru'ris**, quadriceps extensor cruris. **E. c. exter'nus**, see *Triceps cruris*. **E. c. me'dius superficia'lis**, rectus femoris. **E. c. vas'tus**, see *Triceps cruris*. **E. cu'biti**, triceps extensor cubiti. **E. dig'iti min'imi pro'prius**, see *E. proprius minimi digiti*. **E. d. secun'di pe'dis lon'gus**, supernumerary muscle from separation of portion of E. longus digitorum pedis inserted on second toe. **E. digito'rum commu'nis**, *Common extensor of the fingers*. Long, flattened muscle, simple above, and divided into four portions inferiorly, situated at the posterior part of the forearm; arising from the external tuberosity of the humerus, from the aponeurotic septa situated between it and the neighboring muscles, and inserted at the posterior surface of the second and third phalanges of the last four fingers. This muscle extends the phalanges of the last four fingers upon each other and upon the metacarpal bone; it can also extend the hand on the forearm. **E. d. c. bre'vis**, E. brevis digitorum pedis. **E. d. c. lon'gus**, E. communis digitorum pedis. **E. d. lon'gus**, E. communis digitorum pedis. **E. d. ma'nûs**, E. digitorum communis. **E. d. m. commu'nis**, E. digitorum communis. **E. d. pe'dis**, E. communis digitorum pedis. **E. d. p. bre'vis**, E. brevis digitorum pedis. **E. d. p. commu'nis**, E. communis digitorum pedis. **E. dor'si commu'nis**, sacro-spinalis. **E. hallu'cis bre'vis**, E. primi internodii hallucis. **E. h. pro'prius**, E. longus hallucis. **E. humera'lis pol'licis**, anomalous muscle from E. digitorum communis, passing from epicondyle to ungual phalanx of the thumb. **E. in'dicis**, E. proprius indicis. **E. i. pro'prius**, E. proprius indicis. **E. interno'dii os'sis pol'licis**, E. pollicis longus. **E. latera'lis me'dii**, occasional fasciculi of E. brevis digitorum manûs to middle finger. **E. lon'gi radia'lis**, radialis externus longior. **E. lon'gus digito'rum pe'dis**, E. communis digitorum pedis. **E. l. hallu'cis**, E. proprius pollicis pedis. **E. l. h. tricauda'tus**, long extensor with three tendons inserted on great toe. **E. l. pol'licis**, E. pollicis longus. **E. ma'nûs radia'lis bre'vis**, radialis externus brevior. **E. m. r. lon'gus**, radialis externus longior. **E. m. ulna'ris**, E. carpi ulnaris. **E. me'dii dig'iti**, portion of E. indicis inserted with E. digitorum communis on middle finger. **E. metapol'licis**, abductor pollicis longus. **E. min'imi dig'iti**, E. proprius minimi digiti. **E. mi'nor pol'licis ma'nûs**, E. pollicis brevis. **E. os'sis metacar'pi, E. o. m. pol'licis ma'nûs**, abductor pollicis longus. **E. o. metatar'si hallu'cis**, supernumerary muscle on anterior part of leg, arising in connection with other muscles, and inserted on first metatarsal bone. **E. pe'dis**, see *Gastrocnemii*. **E. pol'licis bre'vis**, seated at the posterior and inferior part of the forearm; thin, long, and broader at its middle than at the extremities; arises from the posterior surface of the ulna and the interosseous ligament, and is inserted behind the superior extremity of the first phalanx of the thumb. It extends the thumb and aids in supination. **E. p. lon'gus**, long, flat, and fusiform muscle seated at the posterior part of the forearm. It arises from the posterior surface of the ulna and the interosseous ligament, and is inserted at the posterior part of the superior extremity of the first phalanx of the thumb. It extends the last phalanx of the thumb upon the first. See *Extensor proprius pollicis pedis*. **E. pol'licis ma'jor**, E. secundi internodii pollicis. **E. p. mi'nor**, E. primi internodii pollicis. **E. p. secun'dus**, E. pollicis longus. **E. pri'mi interno'dii**, abductor pollicis longus, E. pollicis brevis. **E. p. l. hallu'cis**, supernumerary muscle, associated in origin with E. longus hallucis and inserted on phalanx of great toe. **E. pri'mus pol'licis**, abductor pollicis longus. **E. pro'prius hallu'cis**, E. proprius pollicis pedis. **E. p. in'dicis**, long and thin muscle, broader in the middle than at the extremities, situate at the posterior part of the forearm. It arises from the posterior surface of the ulna, and is inserted at the posterior part of the upper extremity of the second and third phalanges of the index finger; it extends the phalanges of the index finger, and has, besides, the same uses as the other extensors of the fingers. **E. p. i. superficia'lis**, supernumerary muscle formed by separation of fasciculi of E. digitorum communis. **E. p. min'imi dig'iti**, situate on the inside of the E. communis digitorum; arises from the external condyle of the os humeri and the aponeurotic septa between it, the extensor communis digitorum, and the extensor carpi ulnaris, and is inserted into the last two phalanges of the little finger. It extends the little finger, and even the hand, on the forearm. **E. p. pol'licis pe'dis**, this muscle, situate at the anterior part of the leg, is fleshy, broad, flat above, small and tendinous below; arises from the anterior part of the middle third of the fibula, and is inserted into the posterior part of the superior extremity of the last phalanx of the great toe. It extends the last phalanx of the great toe upon the first, and the first upon the first metatarsal bone. **E. p. quin'ti dig'iti**, peroneus quinti digiti. **E. quad'riceps cru'ris**, quadriceps extensor cruris. **E. secun'di interno'dii**, E. pollicis brevis, E. pollicis longus. **E. s. i. in'dicis pro'prius**, E. proprius indicis. **E. s. i. pol'licis**, E. pollicis brevis, E. pollicis longus. **E. s. pol'licis**, E. pollicis brevis, E. pollicis longus. **E. spi'næ**, erector spinæ. **E. tar'si**, tibialis posticus. **E. t. mag'nus**, name given to the gastrocnemius and soleus combined. **E. t. mi'nor**, plantar muscle. **E. t. sura'lis**, E. tarsi magnus. **E. ter'tii interno'dii**, E. pollicis longus. **E. t. i. in'dicis**, prior annularis. **E. t. i. min'imi dig'iti**, abductor minimi digiti. **E. tet'anus**, spasm of the extensor muscles. **E. tri'ceps**, triceps extensor cubiti. **E. ulna'ris**, E. carpi ulnaris.

Extenuatio, eks-ten-u-ah'she-o (*extenuo*, to make thin). Emaciation; making thin.

Extergentia, eks-tur-gen'she-ah (*extergeo*, to wipe clean). Detergents.

Exterior, eks-te'ri-or. External.

Exteriora'tion. Act of the brain by which impression is referred to the remote extremity of the nerves through which it was conveyed.

External, eks-tur'nal. Situated on the outside; opposed to internal. Remote from middle line or axis; on outer or superficial surface. (For numerous arteries, veins, nerves, etc. under this head, as external carotid artery, external jugular vein, etc., see *Carotid, Jugular*, etc., and *Arteries, Veins*, etc.) **E. dis-**

eases, *Extrinsic diseases, Surgical diseases;* those which occupy the surface of the body, and form the object of surgical pathology, requiring generally external means or surgical operations. **E. pachymeningi'tis,** see *Pachymeningitis externa.* **E. urethrot'omy,** see *Urethrotomy.* **E. ver'sion,** see *Version.*

Externe, eks'tern. See *House-surgeon.*

Externus, eks-tur'nus. External. **E. au'ris,** laxator tympani. **E. mal'lei,** laxator tympani.

Extesticulated, eks-tes-tik'u-la-ted (*ex, testiculus,* testicle). Castrated; eunuch.

Extinctio, eks-tink'she-o. Extinction. **E. hydrar'gyri** or **mercu'rii,** *Extinction of mercury;* trituration of mercury with lard or other substance until the metallic globules disappear. The mercury is then so divided that it forms a black powder, generally considered to be a protoxide of mercury. **E. vo'cis,** feeble sound, not complete suppression of voice; incomplete aphonia.

Extinction, eks-tink'shun. Putting out of the way; annihilation; death. **E. of mer'cury,** see *Extinctio hydrargyri.* **E. of voice,** see *Extinctio vocis.*

Extirpa'tion (*extirpo,* to root out). Ablation. Complete removal or destruction of any part, either by cutting instruments or the action of caustics. Enucleation.

Extom'ius (*ex, tome,* incision). Eunuch.

Extozo'a (pl. of **Extozoon**). Ectozoa.

Extozoa'ria. Ectozoa.

Ex'tra (L.). In composition, on the outside, without; as extrascapular, extracardial, outside the scapula, outside the heart. **E. cur'rent,** action of self-induction in electricity, or of an increasing or decreasing current on its own circuit.

Ex'tra-amniot'ic. Outside the amnion; that is, between the amnion and chorion.

Extra-artic'ular. Outside of a joint, as *E.-a. anchylosis,* from causes not involving the joint, as muscular spasm, etc.

Extracap'sular. Outside the capsule of a joint.

Extracar'dial. Exocardial, or outside the heart. **E. sounds,** sounds induced by conditions or changes on the outside of the heart.

Extracil'iary. Outside the ciliary body. *Extraciliary fibres* are those passing from the ciliary body to the semicircular tract of the cerebellum.

Extracra'nial. Outside the skull.

Ex'tract (*ex, traho, tractum,* to draw). See *Extractum.* **E. of ac'onite,** extractum aconiti, E. aconiti alcoholicum. **E. of ac'onite, alcohol'ic,** extractum aconiti alcoholicum. **E. of ac'onite, flu'id,** extractum aconiti fluidum. **E., alcohol'ic,** see *Extractum.* **E. of al'oes,** extractum aloës. **E. of al'oes, pu'rified,** see *Extractum aloës.* **E. of ar'nica,** extractum arnicæ. **E. of ar'nica root,** extractum arnicæ radicis. **E. of ar'nica root, flu'id,** extractum arnicæ radicis fluidum. **E., aromat'ic, flu'id,** extractum aromaticum fluidum. **E. of ba'el, liq'uid,** extractum belæ liquidum. **E. of bark,** extractum cinchonæ. **E. of bark, precip'itated,** chinoidine. **E. of bark, res'inous,** extractum cinchonæ resinosum. **E. of beef,** see *Biscuit, meat,* and *Beef.* **E. of beef, Lie'big's,** *Condensed beef,* is prepared by removing the fat, sinews, and albumen from the fresh meat, and forming an extract, of the consistence of an extremely thick jelly, of the soluble matter of the remainder; used for the instantaneous preparation of beef tea. **E. of belladon'na,** extractum belladonnæ. **E. of belladon'na, alcohol'ic,** extractum belladonnæ alcoholicum. **E. of belladon'na, flu'id,** extractum belladonnæ fluidum. **E. of belladon'na root, flu'id,** extractum belladonnæ radicis fluidum. **E. of bit'ter or'ange, flu'id,** extractum aurantii amari fluidum. **E. of bit'tersweet,** extractum dulcamaræ. **E. of bit'tersweet, flu'id,** see *Extractum dulcamaræ.* **E. of black'berry, flu'id,** extractum rubi fluidum. **E. of braye'ra, flu'id,** extractum brayeræ fluidum. **E. of broom'tops,** extractum genistæ cacuminum. **E., bu'chu, flu'id,** extractum buchu fluidum. **E. of but'ternut,** extractum juglandis. **E. of Cal'abar bean,** extractum physostigmatis. **E. of cal'amus, flu'id,** extractum calami fluidum. **E. of calum'ba,** extractum calumbæ. **E. of calum'ba, flu'id,** extractum calumbæ fluidum. **E. of Can'ada erig'eron, flu'id,** extractum erigerontis Canadensis fluidum. **E. of can'nabis In'dica, flu'id,** extractum cannabis indicæ fluidum. **E. of cap'sicum, flu'id,** extractum capsici fluidum. **E. of casca'ra sagra'da,** extractum cascaræ sagradæ. **E. of casca'ra sagra'da, liq'uid,** extractum cascaræ sagradæ liquidum. **E. of cascarii'la, res'inous,** extractum cascarillæ resinosum. **E. of casta'nea, flu'id,** extractum castaneæ fluidum. **E. of cham'omile,** E. anthemidis. **E. of che'ken, flu'id,** extractum cheken fluidum. **E. of chira'ta, flu'id,** extractum chiratæ fluidum. **E. of cimicif'uga, flu'id,** extractum cimicifugæ fluidum. **E. of cincho'na,** extractum cinchonæ. **E. of cincho'na, flu'id,** see *Extractum cinchonæ.* **E. of co'ca, liq'uid,** extractum cocæ liquidum. **E. of col'chicum,** extractum colchici. **E. of col'chicum, ace'tic** or **ace'tous,** extractum colchici aceticum. **E. of col'chicum, flu'id,** extractum colchici fluidum. **E. of col'chicum root,** extractum colchici radicis. **E. of col'chicum root, flu'id,** extractum colchici radicis fluidum. **E. of col'chicum seed, flu'id,** extractum colchici seminis fluidum. **E. of col'ocynth,** extractum colocynthidis, E. c. alcoholicum. **E. of col'ocynth, com'pound,** extractum colocynthidis compositum. **E. of colom'bo,** extractum calumbæ. **E. of colom'bo, flu'id,** extractum calumbæ fluidum. **E. of coni'um,** extractum conii. **E. of coni'um, alcohol'ic,** extractum conii alcoholicum. **E. of coni'um seed, flu'id,** extractum conii fructûs fluidum. **E. of cot'ton root, flu'id,** extractum gossypii fluidum. **E. of cu'beb** or **cu'bebs, flu'id,** extractum cubebæ fluidum. **E. of cypripe'dium, flu'id,** extractum cypripedii fluidum. **E. of dan'delion,** extractum taraxaci. **E. of dan'delion, flu'id,** extractum taraxaci fluidum. **E. of digita'lis,** extractum digitalis, E. digitalis alcoholicum. **E. of digitalis, alcohol'ic,** extractum digitalis alcoholicum. **E. of digitalis, flu'id,** extractum digitalis fluidum. **E. of dogwood, fluid,** extractum cornûs floridæ fluidum. **E. of dulcamar'æ,** extractum dulcamaræ. **E. of elaterium,** extractum elaterii. **E. of er'got,** extractum ergotæ. **E. of ergot, fluid,** extractum ergotæ fluidum. **E. of ergot, liquid,** see *Extractum ergotæ.* **E. of erig'eron, fluid,** extractum erigerontis Canadensis fluidum. **E. of erythrox'ylon, fluid,** extractum erythroxyli fluidum. **E., ethe'real,** see *Extractum.* **E. of eucalyp'tus, fluid,** extractum eucalypti fluidum. **E. of flesh,** extract of beef, extractum carnis. **E. of foxglove,** extractum digitalis. **E. of fran'gula, fluid,** extractum frangulæ fluidum. **E. of gelsem'ium, fluid,** extractum gelsemii fluidum. **E. of gen'tian,** extractum gentianæ. **E. of gentian, fluid,** extractum gentianæ fluidum. **E. of gera'nium, fluid,** extractum geranii fluidum. **E. of ginger, fluid,** extractum zingiberis fluidum. **E. of grass,** extractum graminis. **E. of grinde'lia, fluid,** extractum grindeliæ fluidum. **E. of guarana, fluid,** extractum guaranæ fluidum. **E. of hamame'lis, fluid,** extractum hamamelidis fluidum. **E. of hel'lebore, alcohol'ic,** see *Extractum hellebori.* **E. of hellebore, American, fluid,** extractum veratri viridis fluidum. **E. of hellebore, black,** extractum hellebori. **E. of hemlock,** extractum conii. **E. of hemlock, alcoholic,** extractum conii alcoholicum. **E. of hemlock, fluid,** extractum conii fluidum. **E. of hemp, American,** extractum cannabis Americanæ. **E. of hemp, Indian,** extractum cannabis Indicæ. **E. of hemp, purified,** extractum cannabis purificatum. **E. of henbane,** extractum hyoscyami. **E. of henbane, alcoholic,** extractum hyoscyami alcoholicum. **E. of henbane, fluid,** extractum hyoscyami fluidum. **E. of hops,** extractum humuli, E. lupuli. **E. of hydras'tis, fluid,** extractum hydrastis fluidum. **E. of hyoscy'amus,** extractum hyoscyami. **E. of hyoscy'amus, alcoholic,** extractum hyoscyami alcoholicum. **E. of hyoscyamus, fluid,** extractum hyoscyami fluidum. **E. of igna'tia,** extractum ignatiæ alcoholicum. **E. of igna'tia, alcoholic,** extractum ignatiæ alcoholicum. **E. of In'dian can'nabis,** extractum cannabis Indicæ. **E. of ipecacuan'ha, fluid,** extractum ipecacuanhæ fluidum. **E. of iris,** extractum iridis. **E. of**

iris, fluid, extractum iridis fluidum. **E. of jaboran'di,** extractum jaborandi. **E. of jal'ap,** extractum jalapæ. **E. of jalap, res'inous,** extractum jalapæ resinosum. **E. of jas'mine, yellow, fluid,** extractum gelsemii fluidum. **E. of ju'niper,** extractum juniperi. **E. of lactuca'rium, fluid,** extractum lactucarii fluidum. **E. of lead, Goulard's,** liquor plumbi subacetatis. **E. of leptan'dra,** extractum leptandræ. **E. of leptan'dra, fluid,** extractum leptandræ fluidum. **E. of let'tuce,** extractum lactucæ. **E. of licorice,** extractum glycyrrhizæ. **E. of licorice, fluid,** extractum glycyrrhizæ fluidum. **E. of licorice, pure,** extractum glycyrrhizæ purum. **E. of lobe'lia, fluid,** extractum lobeliæ fluidum. **E. of log'wood,** extractum hæmatoxyli. **E. of lu'pulin, fluid,** extractum lupulinæ fluidum. **E. of male fern,** see *Polypodium filix mas.* **E. of malt,** extractum malti. **E. of mati'co, fluid,** extractum matico fluidum. **E. of may-apple,** extractum podophylli. **E. of meat, sapona'ceous,** osmazome. **E. of meze'reon,** extractum mezerei. **E. of meze'reon, alcoholic,** extractum mezerei alcoholicum. **E. of meze'reon, fluid,** extractum mezerei fluidum. **E. of nux vom'ica,** extractum nucis vomicæ alcoholicum. **E. of nux vom'ica, alcoholic,** extractum nucis vomicæ alcoholicum. **E. of oak bark,** extractum quercûs corticis. **E. of o'pium,** extractum opii. **E. of opium, fluid,** see *Extractum opii.* **E. of parei'ra bra'va,** extractum pareiræ. **E. of parei'ra bra'va, fluid,** extractum pareiræ fluidum. **E. of pep'per, black, fluid,** extractum piperis fluidum. **E. of pilocar'pus, fluid,** extractum pilocarpi fluidum. **E. of pipsis'sewa, fluid,** extractum chimaphilæ fluidum. **E. of podophyl'lum, fluid,** extractum podophylli fluidum. **E. of pop'py,** extractum papaveris. **E. of quas'sia,** extractum quassiæ. **E. of quas'sia, fluid,** extractum quassiæ fluidum. **E. of qui'nia,** extractum quiniæ. **E. of rham'nus fran'gula,** extractum rhamni frangulæ. **E. of rham'nus fran'gula, liquid,** extractum rhamni frangulæ liquidum. **E. of rhat'any,** extractum krameriæ. **E. of rhat'any, fluid,** extractum krameriæ fluidum. **E. of rhu'barb,** extractum rhei. **E. of rhu'barb, alcohol'ic,** extractum rhei. **E. of rhubarb, fluid,** extractum rhei fluidum. **E. of rhus glab'ra, fluid,** extractum rhois glabræ fluidum. **E. of roses, fluid,** extractum rosæ fluidum. **E. of Ru'dius,** extractum Rudii. **E. of rue,** extractum rutæ graveolentis. **E. of sanguina'ria, fluid,** extractum sanguinariæ fluidum. **E. of sarsaparil'la,** extractum sarsaparillæ. **E. of sarsaparil'la, fluid** or **liquid,** extractum sarsaparillæ fluidum. **E. of sarsaparil'la, fluid, compound,** extractum sarsaparillæ fluidum compositum. **E. of sav'ine,** extractum sabinæ foliorum. **E. of sav'ine, fluid,** extractum sabinæ fluidum. **E. of scam'mony,** extractum scammonii. **E. of scutella'ria, fluid,** extractum scutellariæ fluidum. **E. of senega, fluid,** extractum senegæ fluidum. **E. of sen'eka,** extractum senegæ alcoholicum. **E. of sen'eka, alcoholic,** extractum senegæ alcoholicum. **E. of senna, fluid,** extractum sennæ fluidum. **E. of serpenta'ria, fluid,** extractum serpentariæ fluidum. **E. of spige'lia, fluid,** extractum spigeliæ fluidum. **E. of spigelia and senna, fluid,** extractum spigeliæ et sennæ fluidum. **E. of squill,** extractum scillæ. **E. of squill, fluid,** extractum scillæ fluidum. **E. of still'in'gia, fluid,** extractum stillingiæ fluidum. **E. of stramo'nium,** extractum stramonii, E. stramonii alcoholicum. **E. of stramonium, alcoholic,** extractum stramonii alcoholicum. **E. of stramo'nium, fluid,** extractum stramonii fluidum. **E. of trit'icum, fluid,** extractum tritici fluidum. **E. of u'va ur'si,** extractum uvæ ursi. **E. of uva ursi, fluid,** see *Extractum uvæ ursi.* **E. of vale'rian,** extractum valerianæ; E. v. alcoholicum. **E. of valerian, alcoholic,** extractum valerianæ alcoholicum. **E. of vibur'num, fluid,** extractum viburni fluidum. **E. of wild-cherry bark, fluid,** extractum pruni Virginianæ fluidum. **E. of wild cherry, fluid,** extractum prun Virginianæ fluidum. **E. of wormwood,** extractum absinthii cacuminum. **E. of xanthox'ylum, fluid,** extractum xanthoxyli fluidum.

Extracta (pl. of **Extractum**). Extracts. **E. flu'ida,** see *Extractum.*

Extrac'tion. Act of removing an extraneous substance from any part of the body—a splinter, for example; also removal of certain parts. A cataract is said to be *extracted;* a tooth is *extracted,* etc. See *Cataract.*

Extrac'tive. Peculiar presumed principle, or combination of principles, extracted by alcohol or other solvents. Thus, *bitter extractive* is the immediate principle of bitter vegetables, etc. Ill-defined matters met with on analysis are called *extractive matters.*

Extrac'tor. Instrument employed for extraction.

Ex'tracts. See *Extractum.* **E., flu'id,** see *Extractum.*

Extrac'tum. Extract. An extract is prepared by evaporating vegetable solutions till a tenacious mass is obtained. When prepared from an infusion or decoction, it is called a watery extract; from ether, an ethereal extract; from alcohol, alcoholic or spirituous extract. Extracts contain all the principles of the vegetable that are soluble in the menstrua with which they are prepared; but the volatile parts are dissipated, and some of the fixed parts are decomposed. Extracts are solid and liquid; those which are officinal in the Pharmacopœia are prepared by displacement or percolation, especially the latter. Gummy or mucous or mucilaginous extracts are those which are mainly composed of gum or mucilage. Gum tragacanth may be considered a pure gummy extract. Gelatinous extracts are those composed especially of gelatin; resinous extracts, those of a resinous character; extracto-resinous, those composed of extractive or coloring matter and resin; gum-resinous, those containing gum and resin; and saponaceous or saponaceous saline, those containing a notable quantity of saline substances and a resinous matter so combined with other substances that they cannot be separated.

Under the name *Fluid extracts—Extracta fluida* or *Liquida*—a class of preparations is officinal in the Pharmacopœias, the distinctive character of which is the concentration of the active ingredients of medicinal substances into a small bulk in the liquid form, a cubic centimetre or fluigramme of any one of them representing a gramme of the crude drug. The extraction is effected by percolation, the percolator being covered to prevent evaporation, and the liquid set aside for the requisite time, say from twenty-four to forty-eight hours, when percolation is again commenced, and continued until the amount that percolates equals the amount of the drug taken in grammes. **E. absin'thii cacu'minum,** *Extract of wormwood;* decoction defecated and evaporated; bitter tonic. **E. aconi'ti,** *Extract of aconite;* narcotic and diuretic, and given in cases referred to under *Aconitum.* The officinal *Extractum aconiti* (Ph. U. S.) is extractum aconiti alcoholicum. The Ph. Br. also has an extractum aconiti. **E. aconi'ti alcohol'icum,** *Alcoholic extract of aconite, Extractum aconiti* (Ph. U. S.), *Extract of aconite* (aconite powder, ℥xvj; tartaric acid, gr. lxx; glycerin, alcohol, āā q. s.); dose, half a grain or a grain. **E. aconi'ti flu'idum,** *Fluid extract of aconite* (aconite, ℥l; tartaric acid, ℥ss; alcohol, q. s.); used as basis for making other preparations of aconite. Given internally in doses of one-half to one minim. **E. al'oës,** *Extract of aloes, Purified extract of aloes* (the gummy part extracted by boiling water, defecated, and inspissated); dose, gr. v to gr. xv. The Ph. B. has an *Extract of Barbadoes aloes* and an *Extract of Socotrine aloes.* **E. al'oës aquo'sum** (Ph. U. S.), E. aloes. **E. aloës purifica'tum,** E. aloes. **E. anthem'idis** (Ph. Br.), *E. anthemidis nobilis chamæmeli* or *E. florum chamæmeli, Extract of chamomile;* pure, grateful bitter, tonic and stomachic; dose, gr. x to gr. xx, in pill. **E. ar'nicæ radi'cis** (Ph. U. S.), extract of arnica root (arnica root, ℥xvj; glycerin and diluted alcohol, āā q. s.); dose, gr. ij–iv. **E. ar'nicæ radi'cis flu'idum** (Ph. U. S.), fluid extract of arnica root (arnica root, ℥l; diluted alcohol, q. s. ad Oiij); dose, ♏v. **E. aromat'icum flu'idum,** aromatic fluid extract (aromatic powder, ℥l; alcohol, q. s. ad ℥iij);

aromatic; dose, ♏x to xx. **E. aspar'agi,** see *Asparagus.* **E. auran'tii ama'ri flu'idum** (Ph. U. S.), fluid extract of bitter orange-peel (bitter orange-peel, ℥l; alcohol, water, āā q. s. ad Oiij); tonic. **E. be'læ liq'uidum,** *Liquid extract of bael.* Preparation of Br. Pharm.; astringent, in diarrhœa and dysentery; dose, f℥ j–ij. **E. belladon'næ,** *Extract of belladonna;* made from fresh belladonna leaves; properties same as those of the plant; dose, gr. j, gradually increased. It dilates the pupil when applied to the eye. **E. belladon'næ alcohol'icum** (Ph. U. S.), *Alcoholic extract of belladonna* (belladonna leaves, in fine powder, ℥xvj; alcohol, Oij, f℥iv; water, Oj; glycerin and diluted alcohol, q. s.); dose, gr. ¼–½. The Ph. Br. also has an officinal preparation of the same name. **E. belladon'næ flu'idum** (Ph. U. S.), *Fluid extract of belladonna* (belladonna root, ℥l; alcohol, q. s. to make Oiij); dose, ♏i–ij. **E. belladon'næ radi'cis flu'idum,** old officinal name of E. belladonnæ fluidum. **E. braye'ræ flu'idum** (Ph. U. S.), fluid extract of brayera (brayera, ℥l; alcohol, q. s. to make Oiij); dose, as anthelmintic, f℥ss–j. **E. buch'u flu'idum** (Ph. U. S.), *Fluid extract of buchu* (buchu, ℥l; alcohol and water, q. s. to make Oiij); dose, ♏xxx–f℥j. **E. cal'ami flu'idum** (Ph. U. S.), fluid extract of calamus (calamus, ℥l; alcohol, q. s. to make Oiij); aromatic stimulant; dose, ♏v–x. **E. calum'bæ** (Ph. Br.), *Extract of calumba* (calumb. rad., aqua destillat.); dose, gr. ij–x. **E. calum'bæ flu'idum** (Ph. U. S.), *Fluid extract of calumba* (calumba, ℥l; diluted alcohol, q. s. to make Oiij); tonic and stomachic; dose, ♏xv–xxv. **E. can'nabis,** see *Cannabis.* **E. can'nabis American'æ,** see *Cannabis Americana.* **E. can'nabis In'dicæ** (Ph. U. S. and Br.), see *Cannabis.* **E. can'nabis In'dicæ flu'idum** (Ph. U. S.), fluid extract of Indian cannabis (cannabis Ind., ℥l; alcohol, q. s. to make Oiij); dose, ♏ss–j. **E. can'nabis purifica'tum,** *Purified extract of hemp* (extract of hemp, alcohol); dose, half a grain. **E. cap'sici flu'idum** (Ph. U. S.), fluid extract of capsicum (capsicum, ℥l; alcohol, q. s. to make Oiij); dose, ♏ss–j. **E. car'nis,** *Extract of flesh;* extract formed by evaporating beef tea in a water-bath. **E. casca'ræ sagra'dæ** (Ph. Br.), *Extract of Cascara sagrada* (cascara sagrada, proof spirit, and distilled water); dose, gr. ij–vj in pill. **E. casca'ræ sagra'dæ liq'uidum** (Ph. Br.) (cascara sagrada, rectified spirit, distilled water); dose, ♏xxx–f℥ij. **E. cascaril'læ resino'sum,** *Resinous extract of cascarilla* (cort. cascarillæ, sp. vini rect.); dose, gr. x to gr. xx in pills. **E. casta'neæ flu'idum** (Ph. U. S.), fluid extract of castanea (castanea, ℥l; alcohol and water, q. s. to make Oiij); employed in whooping cough; dose, f℥j–ij. **E. cat'echu,** catechu. **E. cathar'ticum,** E. colocynthidis compositum. **E. cathol'icum,** name given to pills composed of aloes, black hellebore, colocynth, resin of jalap, and scammony; see also *Extractum colocynthidis compositum.* **E. chamæme'li,** E. anthemidis. **E. chekan flu'idum,** not officinal; prepared like ext. cinchonæ fluid.; dose, f℥j–iij. It possesses antiseptic, tonic, expectorant, and diuretic properties. **E. chimaph'ilæ flu'idum** (Ph. U. S.), *Fluid extract of chimaphila* or *pipsissewa* (chimaphila, ℥l; glycerin, ℥x; diluted alcohol, q. s. to make Oiij); dose, f℥j. **E. chira'tæ flu'idum,** fluid extract of chirata (chirata, ℥l; glycerin, f℥iij–f℥vj; diluted alcohol, q. s. to make Oiij); dose, ♏xx–xxx. **E. cicu'tæ,** E. conii. **E. cimicif'ugæ flu'idum,** *Fluid extract of cimicifuga* (cimicifuga, ℥l; alcohol, q. s. to make Oiij); dose, ♏xx–xxx. The Ph. Br. also has a preparation of the same name. **E. cincho'næ,** *Extract of cinchona* or *of bark,* was formerly a decoction evaporated. When reduced by drying to a state fit for being powdered, it is called *Hard extract of bark, Extractum corticis Peruviani durum, E. cinchonæ durum;* dose, gr. x to ℥ss. *E. cincho'næ* (Ph. U. S.) (yellow bark, ℥xvj; alcohol, Oiiiss; water, Oj; glycerin and diluted alcohol, q. s. to make Oivss, which are evaporated); dose, gr. x–xx. **E. cincho'næ flu'idum** (Ph. U. S.), *Fluid extract of cinchona* (yellow cinchona, ℥l; glycerin, f℥ixss; alcohol and water, q. s. to make Oiij); dose is ♏xxx–f℥j. It is also officinal in the Ph. Br. **E. cincho'næ pal'lidæ** may be prepared in the same manner as E. cinchonæ. **E. cincho'næ resino'sum, E. cincho'næ lancifo'liæ, E. cincho'næ ru'bræ resino'sum,** or **E. cincho'næ resi'næ,** *Resinous extract of bark.* The aqueo-spirituous extract contains both the extractive and resin of the bark; dose, gr. x–xxx. E. cinchonæ rubræ may be prepared like Extractum cinchonæ. **E. co'cæ liq'uidum,** liquid extract of coca; see *E. erythroxyli fluidum.* **E. col'chici,** *Extract of colchicum,* officinal in the Ph. B.; dose, half a grain to two grains. **E. col'chici ace'ticum,** *Acetous* or *Acetic extract of colchicum* (colchic. rad., acid. acet., aqua); dose, gr. j to gr. iij. **E. col'chici radi'cis** (Ph. U. S.), *Extract of colchicum root* (colchicum root, ℥xvj; acetic acid, f℥vss; water, f℥xxiij; evaporate); dose, gr. i–ij. **E. col'chici radi'cis flu'idum** (Ph. U. S.), *Fluid extract of colchicum root* (colchicum root, ℥l; alcohol, water, āā q. s. to make Oiij); dose, ♏ij–v. **E. col'chici sem'inis flu'idum** (Ph. U. S.), *Fluid extract of colchicum seed* (colchicum seed, ℥l; alcohol and water, āā q. s. to make Oiij); dose, ♏ij–v. **E. colocyn'thidis** (Ph. U. S), *Extract of colocynth* (colocynth, ℥xvj; diluted alcohol, q. s.); cathartic in the dose of from gr. v to ℥ss. **E. colocyn'thidis alcohol'icum,** alcoholic extract of colocynth, E. colocynthidis. **E. colocyn'thidis compos'itum** (Ph. U. S), *Compound extract of colocynth* (extract of colocynth, ℥viij; Socotrine aloes, ℥xxv; resin of scammony, ℥vij; cardamom, ℥iij; soap, ℥vij; alcohol, f℥vj); active cathartic, and used in obstinate visceral obstructions, etc.; dose, gr. vj to xxx. It is also officinal under the same name in the Ph. Br. **E. coni'i** (Ph. Br.), *Extract of hemlock, E. of conium.* Prepared like extract of aconite; employed in the same cases as conium; dose, gr. iij to x; see *Succus conii.* **E. coni'i alcohol'icum** (Ph. U. S.), *Alcoholic extract of hemlock, A. e. of conium* (conium, ℥xvj; diluted hydrochloric acid, f℥iij; glycerin, diluted alcohol, āā q. s. to make Oiij); dose, gr. ss–j. A *Fluid extract of hemlock, Extractum conii fluidum,* is officinal (Ph. U. S.) (conium fruit, ℥l; diluted hydrochloric acid, f℥iss; diluted alcohol, q. s. to make Oiij); dose, ♏v. *Fluid extract of conium, Extractum conii fructûs fluidum,* was in the U. S. Ph. (1873). **E. convol'vuli jala'pæ,** E. jalapæ. **E. cor'nûs flu'idum** (Ph. U. S.), *Fluid extract of cornus* or *dogwood* (cornus ℥l; glycerin, f℥viiss; diluted alcohol, q. s. to make Oiij); dose, ♏xxx. **E. cor'ticis Peruvia'ni,** E. cinchonæ. **E. cube'bæ flu'idum** (Ph. U. S.), *Fluid extract of cubebs* (cubeb, ℥l; alcohol, q. s. to make Oiij); dose, ♏x–xxx. **E. cypripe'dii flu'idum** (Ph. U. S.) (cypripedium, ℥l; alcohol, q. s. to make Oiij); dose, ♏x–xv. **E. digita'lis** (Ph. U. S.), *Extract of digitalis, E. of foxglove* (digitalis, ℥xvj; alcohol, Oij, f℥iv; water, Oj; glycerin, diluted alcohol, q. s. to make Oiij, and evaporate); dose, gr. ¼. **E. digita'lis alcohol'icum,** *Alcoholic extract of digitalis;* E. digitalis. **E. digita'lis flu'idum** (Ph. U. S.), *Fluid extract of digitalis* (digitalis, ℥l; alcohol and water, āā q. s. to make Oiij); dose, ♏i–ij. **E. dulcama'ræ,** *Extract of bittersweet, E. of dulcamara* (prepared by percolation, by means of diluted alcohol, from bittersweet in moderately fine powder); dose, f℥j. **E. dulcama'ræ flu'idum** (Ph. U. S.), *Fluid extract of bittersweet* or *dulcamara* (dulcamara, ℥l; diluted alcohol, q. s. to make Oiij); dose, ♏xx–xxx. **E. elate'rii,** *Elaterium, Extract of elaterium* (fecula of expressed juice of the fruit of Momordica elaterium); violently cathartic, hydragogue, and sometimes emetic; dose, gr. ss. **E. er'gotæ** (Ph. U. S.), ergotinum (fluid extract of ergot, ℥xvj, to make ℥iij, gr. 88, by evaporation); used hypodermically and for suppositories; dose, internally, in capsules, gr. v–x. **E. er'gotæ flu'idum** (Ph. U. S.), fluid extract of ergot (ergot ℥l; diluted hydrochloric acid, f℥iij; alcohol, water, āā q. s. to make Oiij); dose, ♏xxx–f℥iij. *Liquid extract, Extractum ergotæ liquidum,* is in the Ph. Br. **E. erigeron'tis Canaden'sis flu'idum,** *Fluid extract of Canada erigeron,* was in the U. S. Ph. (1873). **E. erythrox'yli flu'idum** (Ph. U. S.), fluid extract of

erythroxylon or coca (erythroxylon, ℥l; diluted alcohol, q. s. to make Oiij); dose, ♏xx–f℥j. Preparation of the same name is officinal in the Ph. Br. **E. eucalyp'ti flu'idum** (Ph. U. S.), fluid extract of eucalyptus (eucalyptus, ℥l; alcohol, q. s. to make Oiij); dose, ♏v–x. **E. euon'ymi** (Ph. U. S.), extract of euonymus (euonymus, ℥xvj; glycerin, diluted alcohol, āā q. s. to make Oiij; evaporate); dose, gr. i–iij. **E. eupato'rii flu'idum** (Ph. U. S.), fluid extract of eupatorium (eupatorium, ℥l; diluted alcohol, q. s. to make Oiij); dose, ♏xx–f℥j. **E. fil'icis æthe'reum**, see *Polypodium filix mas.* **E. fil'icis liqui'dum** (Ph. Br.), see *Polypodium filix mas.* **E. fran'gulæ flu'idum** (Ph. U. S.), fluid extract of frangula (frangula, ℥l; alcohol, water, āā q. s. to make Oiij); dose, ♏x–xx. **E. gelsem'ii alcohol'icum** (Ph. Br.), alcoholic extract of gelsemium (gelsemium, lb. j; rectified spirit, distilled water, q. s. to make Oij; evaporate); dose, gr. ss. **E. gelsem'ii flu'idum** (Ph. U. S.), *Fluid extract of gelsemium* or *yellow jasmine* (gelsemium, ℥l; alcohol, q. s. to make Oiij); dose, ♏i–ij. **E. genis'tæ cacu'minum**, *Extract of broom tops;* diuretic and stomachic; dose, ℥ss to ℥j. **E. gentia'næ, E. gentia'næ lu'teæ**, or **E. radi'cis gentia'næ**, *Extract of gentian.* Evaporated decoction (Ph. U. S.) (gentian, ℥xvj; water, f℥vjss; macerate with additional water, boil, and strain); dose, gr. v. It is also officinal in the Br. Ph. **E. gentia'næ flu'idum** (Ph. U. S.), fluid extract of gentian (gentian, ℥l; diluted alcohol, q. s. to make Oiij); dose, ♏xv–xxx; properties like those of gentian. **E. gera'nii flu'idum** (Ph. U. S.), *Fluid extract of geranium* (geranium, ℥l; glycerin, f℥iij, f℥vj; diluted alcohol, q. s. to make Oiij); dose, ♏xxx–f℥j. **E. glycyrrhi'zæ** (Ph. U. S. and Br.), *Spanish juice, Italian juice, Black sugar, Extract of glycyrrhiza* or *licorice* (evaporated decoction). Extract of root of Glycyrrhiza glabra; demulcent, taken *ad libitum;* used in pharmacy to give consistence to pills and troches, and to correct taste of medicine. Refined licorice, sold in form of cylinders, is made by gently evaporating a solution of pure extract of licorice with half its weight of gum arabic, rolling the mass and cutting it into lengths, and then polishing by rolling them together in a box. **E. glycyrrhi'zæ fluidum** (Ph. U. S.), *Fluid extract of glycyrrhiza* or *licorice* (glycyrrhiza, ℥v; water of ammonia, diluted alcohol, āā q. s. to make Oiij); adjuvant in prescriptions, and convenient form of giving licorice. It is also an officinal preparation of the Ph. Br. **E. glycyrrhi'zæ pu'rum** (Ph. U. S.), pure extract of glycyrrhiza or licorice (glycyrrhiza, ℥xvj; water of ammonia, f℥iiss; distilled water, Oiij; evaporate). **E. gossyp'ii flu'idum** (Ph. U. S.), *Fluid extract of cotton root* (cotton root, ℥l; glycerin, f℥xiiiss; alcohol, q. s. to make Oiij); dose, ♏xxx–f℥j. **E. gram'inis**, extact of grass; prepared from Triticum repens; considered by Germans a mild tonic, and used especially in convalescence from fever. **E. grinde'liæ flu'idum** (Ph. U. S.), fluid extract of grindelia (grindelia, ℥l; alcohol, water, āā q. s. to make Oiij); dose, ♏xxx–f℥j. **E. guaranæ' flu'idum** (Ph. U. S.), fluid extract of guarana (guarana, ℥l; alcohol, water, āā q. s. to make Oiij); dose, f℥j–ij. **E. hæmatox'yli** (Ph. U. S.), *E. hæmatoxyli Campechiani* or *Scobis hæmatoxyli, Extract of logwood* (hæmatoxylon, ℥xvj; water, Ox; macerate, boil, evaporate); astringent; dose, gr. x–xxx. It is also an officinal preparation of the Ph. Br. **E. hamamel'idis flu'idum** (Ph. U. S.), fluid extract of hamamelis (hamamelis, ℥l; alcohol, water, āā q. s. to make Oiij); dose, ♏xxx. **E. helleb'ori** or **helleb'ori ni'gri**, *Extract of black hellebore;* evaporated decoction. In large doses, cathartic; in smaller, diuretic and emmenagogue; dose, as cathartic, gr. x to xx; as emmenagogue, gr. iij to x. **E. helleb'ori alcohol'icum**, *Alcoholic extract of black hellebore:* prepared from black hellebore, in coarse powder, like the extractum aconiti of the Ph. U. S.; dose like the last. **E. hu'muli**, *Extract of hops.* It is tonic and anodyne. Dose, gr. v to ℥j. **E. hydras'tis flu'idum** (Ph. U. S.), *Fluid extract of hydrastis* (hydrastis, ℥l; alcohol, water, āā q. s. to make Oiij); dose, f℥j–ij. **E. hyoscy'ami** (Ph. Br.), *Extract of hyoscyamus* or *henbane;* prepared from fresh leaves, flowering tops, and young branches of henbane in same manner as extract of aconite; dose, gr. i–ij. Narcotic. **E. hyoscy'ami alcohol'icum**, *Alcoholic extract of hyoscyamus* or *henbane* (hyoscyamus, ℥xvj; alcohol, Oij, f℥iv; water, Oj; diluted alcohol, q. s. to make Oiij, by percolation and evaporation); dose, gr. j. **E. hyoscy'ami flu'idum** (Ph. U. S.), *Fluid extract of hyoscyamus* or *henbane* (hyoscyamus, ℥l; alcohol, water, āā q. s. to make Oiij); dose, ♏v. **E. igna'tiæ alcohol'icum**, *Alcoholic extract of ignatia, E. ignatiæ, Extract of ignatia* (ignatia exhausted by alcohol in a percolator, and the solution evaporated to a proper consistence); dose, half a grain to a grain. **E. ipecacuan'hæ flu'idum** (Ph. U. S.), *Extract of ipecacuanha* (ipecac, ℥l; alcohol, water, āā q. s. to make Oiij); dose as expectorant, ♏v–x; emetic, ♏xv–xxx. **E. i'ridis** (Ph. U. S.), extract of iris (iris, ℥xvj; alcohol, Oiiss; water, f℥xij; diluted alcohol, q. s., by percolation and evaporation); dose, gr. i–ij. **E. i'ridis flu'idum** (Ph. U. S.), fluid extract of iris (iris, ℥l; alcohol, water, q. s. to make Oiij); dose, ♏v–x. **E. jaboran'di** (Ph. Br.), from jaborandi by maceration with proof spirit and distilled water, percolation, and evaporation; dose, gr. ij. **E. jala'pæ** (Ph. Br.), *Extract of jalap.* A spirituous tincture distilled, and an aqueous decoction evaporated; the residua being mixed together. Cathartic and hydragogue. Replaced by Abstractum jalapæ (Ph. U. S.). Dose, gr. x to xx. **E. jala'pæ resino'sum**, *Resin* or *Resinous extract of jalap* (made by exhausting jalap powder by percolation by alcohol, throwing down the resin from the fluid by means of water, and drying the precipitate). Properties like the last. **E. juglan'dis** (Ph. U. S.), *Extract of juglans* or *butternut* (juglans, ℥xvj; glycerin, alcohol, āā q. s. to make Oiij, by maceration, percolation, and evaporation); dose, gr. v to x. **E. junip'eri**, *Extract of juniper;* preparation made by bruising juniper berries, macerating, filtering, and evaporating. **E. krame'riæ** (Ph. U. S.), *Extract of krameria* or *rhatany* (krameria, ℥vxj; water, f℥ivss, by percolation and evaporation); dose, gr. x–xx. It is also an officinal preparation of the Ph. Br. **E. krame'riæ flu'idum** (Ph. U. S.) *Fluid extract of krameria* or *rhatany* (krameria, ℥l; glycerin, f℥viiss; diluted alcohol, q. s. to make Oiij); dose, ♏x–xxx. **E. lactu'cæ** (Ph. Br.), *Extract of lettuce;* prepared from flowering herb of lettuce exactly as extract of aconite is prepared; narcotic and diaphoretic; dose, gr. iij to gr. x. An extract is sometimes made from the juice of the wild lettuce, Lactuca virosa, which is regarded as diuretic. **E. lactuca'rii flu'idum** (Ph. U. S.), *Fluid extract of lactucarium* (lactucarium, ℥xiiss; ether, Oj; alcohol, water, āā q. s. to make f℥xij); dose, ♏v–xx. **E. leptan'dræ** (Ph. U. S.), *Extract of leptandra* (leptandra, ℥xvj; alcohol, Oij, f℥iv; water, Oj; glycerin, diluted alcohol, āā q. s. to make Oiij, by maceration, percolation, and evaporation); dose, gr. v–x. **E. leptan'dræ flu'idum** (Ph. U. S.), *Fluid extract of leptandra* (leptandra, ℥l; glycerin, f℥vss; diluted alcohol, q. s. to make Oiij); dose, ♏xx–f℥j. **E. lobe'liæ flu'idum** (Ph. U. S.), *Fluid extract of lobelia* (lobelia, ℥l; diluted alcohol, q. s. to make Oiij); dose, as expectorant, ♏j–v; as emetic, ♏x–xx. **E. lu'puli** (Ph. Br.), E. humuli. **E. lupuli'næ flu'idum** (Ph. U. S.), *Fluid extract of lupulin* (lupulin, ℥l; alcohol, q. s. to make Oiij); dose, ♏x. **E. mal'ti** (Ph. U. S.), *Extract of malt* (malt, ℥lxxx; water, Oxxv, by maceration, digestion, and evaporation); dose, ℥j–iij. **E. mar'tis ace'ticum**, ferri acetas. **E. mati'co flu'idum** (Ph.U. S.), *Fluid extract of matico* (matico, ℥l; glycerin, f℥iij, f℥vj; alcohol, water, āā q. s. to make Oiij); dose, ♏xxx–f℥j. **E. meze'rei** (Ph. U. S.), *Extract of mezereum* (mezereum, ℥xvj; alcohol, q. s. to make Oiij, by maceration and percolation, and afterward evaporate. The Br. Ph. has an ethereal extract of mezereon, *Extractum mezerei æthereum,* made from mezereon bark by maceration and distillation with recti-

fied spirit and ether, then evaporating. These extracts are used as irritant dressings to issues and blistered surfaces. **E. meze'rei flu'idum** (Ph. U. S.), *Fluid extract of mezereon* (mezereum, ℥l; alcohol, q. s. to make Oiij). **E. nu'cis vom'icæ**, *Extract of nux vomica;* made by maceration of nux vomica with alcohol and water, percolation, and evaporation. The abstract (Abstractum nucis vomicæ, Ph. U. S.) is to be preferred. Dose of the extract is half a grain to a grain or grain and a half. It is also an officinal preparation of the Ph. Br. **E. nu'cis vom'icæ flu'idum** (Ph. U. S.), *Fluid extract of nux vomica* (nux vomica, ℥l; alcohol, water, āā q. s. to make three pints); dose, ♏iij–v. See *Strychnos nux vomica.* **E. o'pii** (Ph. U. S.), *Extract of opium* (opium, ℥xvj; water, Oviiss; glycerin, q. s., by maceration and filtration, and subsequent evaporation); dose, gr. ss–j. It is also an officinal preparation of the Ph. Br. **E. o'pii aquo'sum** or **gummo'sum**, *Extract* or *Watery extract of opium.* A watery solution defecated and evaporated; dose, gr. ss to gr. j. A *Fluid extract of opium, Extractum opii liquidum,* is officinal in the Ph. Br. **E. panchymago'gum,** drastic medicine composed of colocynth, senna, black hellebore root, agaric, scammony, extract of aloes, and powder of diarrhodon. **E. papav'eris** (Ph. Br.) or **papav'eris al'bi** or **papav'eris somnif'eri**, *Extract of white poppy.* It possesses nearly the same virtues as opium, but is much weaker. Dose, gr. ij to v. **E. parei'ræ** (Ph. Br.), *Extract of pareira brava.* Prepared like extractum hæmatoxyli; dose, ten to thirty grains. **E. parei'ræ flu'idum** (Ph. U. S.), *Fluid extract of pareira brava* (pareira, ℥l; glycerin, fʒviiss; diluted alcohol, q. s. to make Oiij); dose, fʒj–ij. The Ph. Br. contains an *Extractum pareiræ liquidum.* Dose, fʒj. **E. physostig'matis** (Ph. U. S.), *Extract of Calabar bean* (physostigma, ℥xvj; alcohol, q. s. to make Oiij; evaporated); dose, gr. $\frac{1}{8}$–$\frac{1}{4}$. It is also officinal in the Ph. U. S. **E. pilocar'pi flu'idum** (Ph. U. S.), *Fluid extract of pilocarpus* (pilocarpus, ℥l; diluted alcohol, q. s. to make Oiij); dose, ♏xv–xxx. **E. pi'peris flu'idum,** *Oleoresina piperis, Fluid extract of black pepper, Oleoresin of black pepper* (black pepper exhausted by ether through percolation, the solution evaporated, and the piperin in crystals separated by expression); dose, ♏j–v. **E. podophyl'li** (Ph. U. S.), *Extract of podophyllum* or *may apple* (podophyllum, ℥xvj; alcohol, water, q. s. to make Ov; evaporate); dose, gr. j–iij, as a cathartic. **E. podophyl'li flu'idum** (Ph. U. S.), *Fluid extract of podophyllum* (podophyllum, ℥l; alcohol, water, q. s. to make Oiij); dose, ♏v–x. **E. pru'ni Virginian'æ flu'idum** (Ph. U. S.), *Fluid extract of wild-cherry bark* (wild cherry, ℥l; diluted alcohol, glycerin, water, each q. s. to make Oiij); dose, ♏xxx–fʒj. **E. pur'gans,** see *Hedera helix.* **E. quas'siæ** (Ph. U. S. and Br.), *Extract of quassia* (quassia, ℥xvj; glycerin, water, āā q. s., by percolation and evaporation); dose, as a tonic, five grains and more. **E. quas'siæ flu'idum** (quassia, ℥l; diluted alcohol, q. s. to make Oiij); dose, ♏v–x. **E. querceta'ni,** E. colocynthidis compositum. **E. quer'cûs cor'ticis,** *Extract of oak bark* (the decoction evaporated); astringent and tonic. **E. qui'niæ,** *Extract of quinia* (made by evaporating the liquor poured off the crystals of sulphate of quinia to the consistence of a pilular mass). Twenty-four grains will generally arrest an intermittent. **E. rham'ni fran'gulæ** (Ph. Br.), from Rhamnus frangula bark, by maceration, percolation, and evaporation. **E. rham'ni fran'gulæ liq'uidum,** preparation of Ph. Br.; dose, fʒj–iij. **E. rhe'i** (Ph. U. S.), *Extract of rhubarb, Alcoholic extract of rhubarb;* made by moistening powdered rhubarb in water and alcohol by percolation and evaporation; uses like those of the powdered root; dose, gr. x–xxx. It is also officinal in Ph. Br. **E. rhe'i flu'idum** (Ph. U. S.), *Fluid extract of rhubarb* (rhubarb, ℥l; alcohol, water, each q. s. to make Oiij); dose, ♏xx–xxx, as a purgative. **E. rho'is glab'ræ flu'idum** (Ph. U. S.), *Fluid extract of rhus glabra* (rhus glabra ℥l; glycerin, fʒiij, fʒvj; diluted alcohol, q. s. to make Oiij); used as addition to mouth-washes, gargles, etc. **E. ro'sæ flu'idum** (Ph. U. S.), *Fluid extract of rose* (red rose, ℥l; glycerin, fʒiij, fʒvj; diluted alcohol, q. s. to make Oiij); dose, fʒi–ij. **E. ru'bi flu'idum** (*Fluid extract of rubus* or *blackberry* (rubus, ℥l; glycerin, fʒviiss; alcohol, water, q. s. to make Oiij); dose ♏xxx–fʒj). **E. Ru'dii,** *Extract of Rudius* (colocynth, agaric, scammony, roots of black hellebore and jalap, Socotrine aloes, cinnamon, mace, cloves, and alcohol); see *Pilulæ aloës et colocynthidis.* **E. ru'tæ, E. ru'tæ graveolen'tis,** or **E. folio'rum ru'tæ,** *Extract of rue* (decoction evaporated); tonic, stomachic; dose, gr. x–xx. **E. sabi'næ flu'idum** (Ph. U. S.), *Fluid extract of savine* (savine, ℥l; alcohol, q. s. to make Oiij); dose, ♏iij–vj. **E. sabi'næ folio'rum,** *Extract of savine* (decoction evaporated); tonic; dose, gr. x–xxx. **E. sanguina'riæ flu'idum** (Ph. U. S.), *Fluid extract of sanguinaria* (sanguinaria, ℥l; alcohol, q. s. to make Oiij); dose, ♏iij–v. **E. san'guinis bovi'ni,** see *Blood.* **E. sar'sæ liq'uidum** (Ph. Br.), see *E. sarsaparillæ fluidum.* **E. sarsapari'læ,** *Extract of sarsaparilla.* A strained decoction evaporated; virtues the same as those of the powdered root; dose, gr. x to ʒj. **E. sarsapari'læ compos'itum flu'idum** (Ph. U. S.), *Extractum sarsaparillæ fluidum compositum, E. sarsæ liquidum, E. sarsæ fluidum, Compound fluid extract of sarsaparilla, Extractum sarsaparillæ fluidum, Fluid extract of sarsaparilla* (sarsaparilla, ℥xxxviiss; glycyrrhiza, ℥vj; sassafras bark, ℥v; mezereum, ℥iss; glycerin, fʒiij, fʒvj; alcohol, water, each q. s. to make Oiij); dose, ♏xxx–fʒj. **E. sarsapari'læ flu'idum** (Ph. U. S.), *Fluid extract of sarsaparilla* (sarsaparilla, ℥l; glycerin, fʒiij, fʒvj; alcohol, water, each q. s. to make Oiij). The Ph. B. has an *Extractum sarsæ liquidum, Liquid extract of sarsaparilla.* **E. satur'ni, Gou'lard's,** liquor plumbi subacetatis. **E. scammo'nii,** *Extract of scammony, Resina scammonii* (Ph. U. S.), *Scammoniæ resina* (Ph. B). Resinous cathartic principle of scammony obtained from scammony root by means of alcohol. **E. scil'læ,** *Extract of squill.* An alcoholic extract of squills. **E. scil'læ flu'idum,** *Fluid extract of squill* (squill, ℥l; alcohol, q. s. to make Oiij); dose, ♏ij–iij. **E. sco'bis hæmatox'yli,** E. hæmatoxyli. **E. scutella'riæ flu'idum** (Ph. U. S.), *Fluid extract of scutellaria* (scutellaria, ℥l; alcohol, water, each q. s. to make Oiij); dose, ♏xxx fʒj. **E. sen'egæ alcohol'icum,** *Alcoholic extract of senega, E. senegæ, Extract of seneka* (prepared by displacement from senega and diluted alcohol, the tincture being evaporated to the proper consistence); dose, gr. v to x. **E. sen'egæ flu'idum** (Ph. U. S.), *Fluid extract of seneka* (senega, ℥l; water of ammonia, fʒj; alcohol, water, each q. s. to make Oiij). **E. sen'næ flu'idum** (Ph. U. S.), *Fluid extract of senna* (senna, ℥l; alcohol, water, each q. s. to make Oiij); dose, fʒj–iv. **E. serpenta'riæ flu'idum** (Ph. U. S.), *Fluid extract of serpentaria* (serpentaria, ℥l; alcohol, water, each q. s. to make Oiij); dose, ♏xx–xxx. **E. spige'liæ flu'idum,** *Fluid extract of spigelia* (spigelia, ℥l; diluted alcohol, q. s. to make Oiij); adult dose, fʒj–ij. **E. spige'liæ et sen'næ flu'idum,** *Fluid extract of spigelia and senna;* mixture of the fluid extracts of spigelia and senna, carbonate of potassium, and oils of anise and caraway; dose, fʒj. **E. stillin'giæ flu'idum** (Ph. U. S.), *Fluid extract of stillingia* (stillingia, ℥l; diluted alcohol, q. s. to make Oiij); dose, ♏xx–xl. **E. stramo'nii alcohol'icum,** *Alcoholic extract of stramonium,* was officinal in Ph. U. S., 1863. These extracts are used as narcotics in asthma and other spasmodic affections. **E. stramo'nii flu'idum** (Ph. U. S.), fluid extract of stramonium (stramonium seed, ℥l; alcohol, water, each q. s. to make Oiij); dose, ♏j–ij. **E. stramo'nii folio'rum,** *Extract* or *Alcoholic extract of stramonium* or *of stramonium leaves.* The expressed juice inspissated. *Extractum stramonii seminis* (Ph. U. S., 1873), *Extract of stramonium seed,* was made from the powdered seed by means of diluted alcohol, with the aid of the percolator, the solution being evaporated. The officinal *Extractum stramonii* (Ph. U. S.) is made by moistening powdered stramonium seed with diluted alcohol,

percolation, and evaporation; dose, gr. ½–1. It is officinal in the Ph. Br. **E. styra'cis**, see *Styrax*. **E. tarax'aci**, *E. herbæ et radicis taraxaci*, *Extract of dandelion*. The strained juice evaporated; deobstruent, laxative, and diuretic; dose, gr. xx–xxx. It is also officinal in the Ph. Br. **E. tarax'aci flu'idum** (Ph. U. S.), *Fluid extract of taraxacum* (taraxacum, ℥l; alcohol, water, each q. s. to make Oiij); dose, f℥j–ij. **E. theba'icum**, E. opii. **E. trit'ici flu'idum** (Ph. U. S.), *Fluid extract of triticum* (triticum, ℥l; alcohol, water, each q. s. to make Oiij); dose, f℥ij–v. **E. u'væ ur'si**, *Extract of uva ursi*. The decoction evaporated; dose, gr. v to xxx. **E. u'væ ur'si flu'idum**, *Fluid extract of uva ursi* (uva ursi, ℥l; glycerin, f℥iij, f℥vj; diluted alcohol, q. s. to make Oiij); dose, ♏xxx–f℥j. **E. valerian'æ**, *Extractum valerianæ*, *Alcoholic extract of valerian*, *Extract of valerian* (made from valerian, in fine powder, by percolation with diluted alcohol, and evaporation); dose, gr. iij to v. **E. valerian'æ flu'idum**, fluid extract of valerian (valerian, ℥l; alcohol, water, q. s. to make Oiij); dose, ♏xxx–f℥j. **E. vera'tri vir'idis flu'idum** (Ph. U. S.), *Fluid extract of American veratrum viride* or *hellebore* (veratrum viride, ℥l; alcohol, q. s. to make Oiij); dose, ♏i–ij. **E. vibur'ni flu'idum** (Ph. U. S.), fluid extract of viburnum (viburnum, ℥l; alcohol, water, each q. s. to make Oiij); dose, ♏xxx–f℥j. **E. xanthox'yli flu'idum**, fluid extract of xanthoxylum (xanthoxylum, ℥l; alcohol, q. s. to make Oiij); dose, ♏xxx–f℥j. **E. zingib'eris flu'idum**, *Fluid extract of ginger* (ginger, ℥l; alcohol, q. s. to make Oiij); dose, ♏v–xv.

Extradural, eks-trah-du'ral. Outside the dura mater.

Extra-embryonic, eks-trah-em-bre-on'ik. Outside the embryo; term used to designate portions of the ovum not embraced in the embryo itself.

Extralobular, eks-trah-lob'u-lar. Outside a lobule, as of the lung.

Extramed'ullary. Outside the spinal cord, as lesions or hemorrhage occurring in such location.

Extramural, eks-trah-mu'ral (*murus*, wall). Outside the wall, as of a vessel. **E. inter'ment** is burial outside the city walls or limits.

Extraneous, eks-tra'ne-us. Foreign or outside. **E. bod'y**, foreign body; any solid, liquid, or gaseous substance, inanimate or animate, proceeding from without or formed in the body, not constituting a part of it, but occupying in the substance of the textures, or in some of the cavities, a place foreign to it.

Extra-ocular, eks-trah-ok'u-lar. Outside of the eye.

Extra-orbital, eks-trah-or'bit-al. Outside of the orbit.

Extra-organismal, eks-trah-or-gan-iz'mal. Outside of the organism.

Extrapelvic, eks-trah-pel'vik. Outside the pelvis.

Extraperitoneal, eks-trah-per-e-to-ne'al. Outside the peritoneum.

Extrapolar, eks-trah-po'lar. Outside of the poles, as the electrodes of a battery.

Extrarectus, eks-trah-rek'tus. External rectus muscle of the eye; also the pyramidalis abdominis.

Extrarenal, eks-trah-re'nal. Situated to the outside of the kidney.

Extrascapular, eks-trah-skap'u-lar. Situated outside of the scapula.

Extrastapedial, eks-trah-stap-e'de-al. Situated externally to the stapes.

Extrastomachal, eks-trah-stum'ak-al. Occurring outside of the stomach; a term applied to digestion.

Extrathoracic, eks-trah-tho-ras'ik. Outside the thorax.

Extratriceps, eks-trah-tri'seps. External head of triceps muscle.

Extra-uterine, eks-trah-u'ter-een. Outside the uterus, as E. pregnancy, pregnancy in which the fœtus is developed outside the uterus.

Extravasation (eks-trav-a-sa'shun) or **Extrava'sion** (*extra*, *vasa*, vessels). Escape of a fluid from the vessels containing it, and infiltration or effusion of the fluid into the surrounding textures. Such fluid is said to be *extravasated*—urine, for example. Exudation. Hemorrhage. **E. cysts**, exudation cysts.

Extravasatum, eks-trav-as-at'um. Extravasated fluid.

Extravascular, eks-trah-vas'ku-lar (*vasculum*, vessel). Outside the vessels.

Extravasion, eks-trav-a'shun. Extravasation.

Extraventricular, eks-trah-ven-trik'u-lar. Outside the ventricle, as of the brain or heart. **E. gan'glion**, portion of corpus striatum outside the ventricle.

Extravillous, eks-trah-vil'lus. Situated outside of a villus.

Extravisceral, eks-trah-vis'er-al. Outside of the visceral arch.

Extremitas, eks-trem'it-as. Extremity. **E. acu'ta pancre'atis**, extremity or tail of pancreas. **E. duodena'lis pancre'atis**, head of pancreas. **E. liena'lis pancre'atis**, E. acuta. **E. obtu'sa pancre'atis**, E. duodenalis. **E. pelvi'na**, lower extremity of man; posterior limbs of animals. **E. thora'cica**, upper extremity of man; anterior limbs of animals.

Extremity, eks-trem'it-e (*extremus*, outermost). End or termination. The limbs, as the upper and lower extremities. See *Membrum* and *Extremitas*. Last moments of life, as when we say a patient is "in extremity."

Extremum occiput, eks-tra'mum ok'sip-ut. See *Occipital point*.

Extrinsic, eks-trin'sik (from without). That which comes from without. Muscles which surround certain organs and attach them to the neighboring parts, to distinguish them from the *intrinsic* muscles, which enter into the intimate composition of those organs. Thus, there are extrinsic and intrinsic muscles of the tongue, ear, etc.

Extrobliquus, eks-trob-le'kwus. External oblique muscle of the abdomen.

Extroduction, eks-tro-duk'shun. Extraction carried out gently.

Extrophy, eks'tro-fe. Exstrophy; extroversion.

Extrorsal, eks-tror'sal. To the outside.

Extrorsion, eks-tror'shun. Projection or protrusion; growth or development of projections.

Extroversio, eks-tro-vur'she-o (*extra*, *verto*, to turn). Eversion; exstrophy.

Extrusion, eks-tru'zhun (*ex*, *trudo*, to thrust). Action of pushing or forcing out; expulsion.

Extuberantia (eks-tu-ber-an'she-ah) or **Extuberatio**, eks-tu-ber-ah'she-o (*ex*, *tuber*, prominence). Protuberance.

Extumefaction (eks-tu-me-fak'shun) or **Extumescence**, eks-tu-mes'sence (*ex*, *tumeo*, to swell, *facio*, to make). Swelling.

Extusio, eks-tu'zhe-o (*ex*, *tussis*, cough). Cough with expectoration.

Exuber, eks-u'bur (*ex*, *ubera*, breasts). Child which has been weaned.

Exuberant, eks-u'ber-ant. Growing to excess, or having tendency to excessive growth.

Exudate, eks'u-date. Material which has oozed out through the skin. Product of exudation. See *Exudation*.

Exudation (eks-u-da'shun) or **Exsuda'tion** (*ex*, *sudo*, to sweat). Oozing of a material through the pores of a membrane. Also the material issuing in this manner. See *Diapedesis*, *Exhalation*, and *Endosmose*. Cutaneous exudations are characterized by the presence, beneath the epidermis, of a fluid, as in vesicles, pustules, etc.; or by swelling of the skin, as in tubercles, papules, wheals, etc.; or by pigment-staining or desquamation of the cuticle—which are not the sequelæ of simple hyperæmia. **E. cells**, see *Corpuscles*, *exudation*. **E. cor'puscles**, see *Corpuscles*, *exudation*. **E. cysts**, cysts containing extravasated blood, or fluids which have exuded from the blood.

Exudative, eks-u-da'tiv. Relating or appertaining to exudations.

Exulceratio, eks-ul-sur-ah'she-o (*ex, ulcus,* ulcer). Ecthlimma, ulceration. **E. a'ni,** ulceration of the lower bowel, in the vicinity of the anus. **E. intestino'rum,** ulceration of the intestines. **E. rec'ti,** ulceration of the rectum. **E. u'teri,** ulceration of the uterus. **E. ventric'uli,** ulceration of the stomach.

Exulcera'tion. Ulceration.

Exumbilicatio, eks-um-bil-ik-ah'she-o (*ex, umbilicus,* navel). Exomphalus.

Exustio, eks-us'te-o (*ex, uro,* to burn). Cauterization.

Exutorium, eks-u-to're-um (*exuo,* to draw or put out). Issue. See *Fonticulus.*

Exutory, eks'u-to-re. Fonticulus.

Exuviæ, eks-u've-e. Parts shed or cast off. See *Exuviation.*

Exuviation, eks-u-ve-a'shun (*exuo,* to put off). Shedding or casting off of parts, as epidermis, deciduous teeth, the skins of serpents, etc., which are hence called *Exuviæ.*

Eye. Immediate organ of vision, seated in the orbit, while its dependencies, *tutamina oculi,* occupying the circumference of the cavity, include the eyebrows, the eyelids, cilia, glands of Meibomius, etc. The *ball, globe,* or *bulb* of the *eye, bulbus oculi,* is covered anteriorly by the tunica conjunctiva; is moved by six muscles, four straight, two oblique; and is constituted of membranes, as the sclerotic, cornea, choroid, tunica Jacobi, retina, iris, hyaloid, and in the fœtus the membrana pupillaris; and of fluids, called humors or media, the aqueous, crystalline, and vitreous. The eyeball is invested with a membranous tunic separating it from the other structures of the orbit, and forming a smooth, hollow surface, by which its motions are facilitated. This investment has been called cellular capsule of the eye, ocular capsule, tunica vaginalis oculi, vaginal coat, and submuscular fascia of the eye. The vessels of the eye proceed from the ophthalmic artery. The nerves, except the optic, are chiefly furnished from the ophthalmic ganglion. The *fundus of the eye*—fundus oculi—is the part lying behind the lens and vitreous humor, and embracing the entrance for the optic nerve, the retina, choroid, sclerotic, and blood-vessels. The following are the dimensions, etc. of the organ, derived from the investigations of different authorities:

Length of the antero-posterior diameter of the eye	0.91 in., or 2.31 cm.
Vertical chord of the cornea	0.45 in., or 1.14 cm.
Versed sine of the cornea	0.11 in., or 2.82 mm.
Horizontal chord of the cornea	0.47 in., or 1.19 cm.
Size of pupil seen through the cornea	0.27 to 0.13 in., or 6.92 to 3.33 mm.
Size of pupil diminished by magnifying power of cornea, from	0.25 to 0.12 in., or 6.41 to 3.07 mm.
Radius of anterior surface of crystalline	0.30 in., or 7.69 mm.
Radius of posterior surface	0.22 in., or 5.64 mm.
Principal focal distance of lens	1.73 in., or 4.4 cm.
Distance of the centre of the optic nerve from the foramen centrale of Sömmering	0.11 in., or 2.82 mm.
Distance of the iris from the cornea	0.10 in., or 2.56 mm.
Distance of the iris from the anterior surface of the crystalline	0.02 in., or 0.05 mm.
Field of vision above a horizontal line, 50°	120°
Field of vision below a horizontal line, 70°	
Field of vision in a horizontal plane	150°
Diameter of the crystalline in a man above fifty years of age	0.378 in., or 9.7 mm.
Diameter of the cornea	0.400 in., or 1.02 cm.
Thickness of the crystalline	0.172 in., or 4.41 mm.
Thickness of the cornea	0.042 in., or 1.06 mm.

E., accommoda'tion of, power possessed by the eye of adjusting itself for different distances, according as the object is remote or near, probably due to the alteration in the form of the crystalline lines from some action of the ciliary muscle; see *Accommodation.* **E., ap'ple,** see *Melum.* **E., ap'ple of,** the pupil. **E., artifi'cial,** eye manufactured to replace the natural eye when extracted; generally made of glass. **E. ball,** see *Eye.* **E. b., anæ'mic protru'sion of,** see *Exophthalmia.* **E. balm,** Hydrastis Canadensis. **E., black,** see *Ecchymoma.* **E. bright,** Euphrasia officinalis, Lobelia veronica. **E. brow,** supercilium. **E., cat's,** amaurotic; see *Amaurotic.* **E., cel'lular cap'sule of,** see *Eye.* **E., cylind'rical,** eye in which the rays of light entering the organ are refracted to a nearer focus in a vertical than in a horizontal plane. **E. drop,** tear. **E. glass,** glass, porcelain, or metallic vessel used for applying lotions to the eye. See *Spectacles.* **E., gum of,** sebaceous humor secreted mainly by the follicles of Meibomius, sometimes gluing the eyelids together. **E. lashes,** cilia. **E. lid,** see *Palpebra.* **E. lid, gran'ular,** trachoma. **E., mel'on,** see *Melum.* **E. piece,** part of microscope next the eye. **E., pin'eal** or **epiphys'ial,** rudimentary eye, situated in median line of the head, existing in some lizards. **E., pu'rulent,** ophthalmia, purulent, of infants. **E. root,** Bignonia ophthalmica. **E., sight of,** pupil. **E. spec'ulum,** instrument for separating the eyelids during operation. **E. stone,** shelly operculum of small Turbinideæ, used to get foreign body out of the eye, being put into the inner corner under the eyelid, and working its way out at the outer corner, bringing foreign substances with it. **E. teeth,** canine teeth. **E. of ty'phon,** squills. **E. vine,** Bignonia ophthalmica. **E. wash,** collyrium. **E. wa'ter,** collyrium. **E. wa'ter, blue,** liquor cupri ammoniati. **E. wa'ter, com'mon,** liquor zinci sulphatis cum camphorâ. **E., wa'tery,** epiphora. **E., white of,** see *Sclerotic.*

F.

F. Abbreviation of *Fahrenheit;* also of *Fac*, make, or *Fiat*, let there be made.

Faba, fab'ah (bean). Phaseolus, Vicia faba. **F. Ægypti'aca**, Nymphæa nelumbo. **F. ca'cao**, cacao. **F. Calabar'ica**, physostigma. **F. cathar'tica**, Jatropha curcas. **F. cras'sa**, Sedum telephium. **F. febrif'uga**, Ignatia amara. **F. græ'ca**, Diospyros lotus. **F. Ignatia'na**, Ignatia amara. **F. Igna'tii**, Ignatia amara. **F. In'dica**, Ignatia amara. **F. ma'jor**, Vicia faba. **F. pechu'rei**, pichurim beans. **F. physostig'matis**, physostigma. **F. pichu'rim**, pichurim beans. **F. purga'trix**, Ricinus communis. **F. Sanc'ti Igna'tii**, Ignatia amara. **F. suil'la**, hyoscyamus. **F. vulga'ris**, Vicia faba.

Fabæ, fa'be. Beans; hog-lice, once used medicinally. **F. puchu'ry**, pichurim beans.

Fabaria crassula, fab-ah're-ah kras'su-lah. Sedum telephium.

Fabellæ, fab-el'le (dim. of **Faba**, bean). Sesamoid bones in gastrocnemii tendons.

Fabiana imbricata, fab-e-an'ah im-bre-kah'tah. Pichi; Chilian shrub, genus Solanaceæ; branches are used in vesical and urinary diseases.

Fabianine, fab-e-an'een. Crystallizable alkaloid contained in Fabiana imbricata.

Fabrica androgyna, fab-re'kah an-droj'in-ah (androgynous make). Hermaphrodeity.

Facaldina, fak-al-de'nah. Disease allied to syphilis and resembling tabes, which prevailed in an epidemic form in Facalde, Austria, in the early part of the year 1800.

Face (*facies*, face or visage). Anterior part of the head, formed of fourteen bones—the two superior maxillary, the two malar, the two ossa nasi, the two ossa inguis, the vomer, the two ossa spongiosa inferiora, the two palate bones, and the inferior maxillary, without including the frontal portion of the os frontis and the thirty-two teeth, which may be considered to form part of the face. Its numerous muscles are chiefly destined for the organs of sight, hearing, taste, and smell. Its arteries proceed from the external carotid; its veins end in the jugular; its nerves originate immediately from the brain.

The face experiences alterations in disease, being yellow in jaundice and pale and puffy in dropsy. Its expression varies according to the seat of irritation, so that in infants, by attention to medical physiognomy, we can often detect the seat of disease. Hippocrates depicted so well the changes which the face experiences in long sickness, great evacuations, excessive hunger, watchfulness, etc., threatening dissolution, that the state has been called *Facies Hippocratica*, *F. cadaverica*, or *F. tortualis*. The nose is pinched; the eyes are sunken; the temples hollow; the ears cold and retracted; the skin of the forehead tense and dry; the complexion livid; the lips pendent, relaxed, and cold, etc. The face assumes a peculiar characteristic appearance in cholera, *facies cholerica;* in cancer, *cancerous facies;* in tuberculosis, *tubercular facies*. The term *face* is likewise given to an aspect of an organ, as *superior face of the stomach*.

Face ache, facial neuralgia. **F. a'gue**, facial neuralgia. **F. presenta'tion**, presentation of face of fœtus at os uteri in parturition. **F. worms**, comedones.

Facet, fas'et (dim. of **Face**). Small face. Small, circumscribed portion of the surface of a bone, as articular facet of a bone.

Faceted, fas'et-ed. Having facets.

Facial, fa'shal (*facies*, face). Belonging to, or connected with, the face. **F. an'gle**, see *Angle, facial*. **F. ar'tery**, *Labial, Angular*, or *External maxillary artery;* branch of the external carotid, rising beneath the digastricus and distributed to almost every part of the face. It furnishes the inferior palatal, submental, superior labial, inferior labial, and dorsalis nasi. The external carotid artery has also been called facial artery. **F. ar'tery, deep**, internal maxillary artery. **F. ar'tery, exter'nal**, facial artery. **F. ar'tery, poste'rior**, transverse facial artery. **F. ax'is**, median line projected from internal part of sphenoethmoidal suture to alveolar point. **F. canal'**, aqueduct of Fallopius. **F. diam'eter**, distance in fœtus between frontal protuberance and point of chin; diameter of face of child or adult, taken from fixed points as standards. **F. diple'gia**, see *Diplegia facialis*. **F. hemiat'rophy**, rare nervous affection characterized by progressive atrophy of one side of the face. **F. in'dex**, craniometrical ratio of breadth of the face to its length. **F. line**, line to determine general direction of the face, taken from different fixed points. **F. loop**, bend made by the facial nerve within the medulla oblongata. **F. nerve**, *Portio dura of the seventh pair, Respiratory* or *motor nerve of the face;* arises from the inferior and lateral part of the tuber annulare, in the groove separating it from the medulla oblongata, external to the corpora olivaria, and by the side of the auditory nerve. It issues from the cranium by the meatus auditorius internus; enters the aqueduct of Fallopius; receives a branch of the Vidian nerve; forms a gangliform swelling—*Intumescentia gangliformis;* sends off filaments to the internal muscles of the malleus and stapes; makes its exit at the foramen stylo-mastoideum, and divides into two branches, the temporo-facial and cervico-facial. On the face it is termed *Pes anserinus, Plexus nervorum anserinus*. **F. nu'cleus**, nucleus in medulla oblongata from which facial nerve originates. **F. nu'cleus, acces'sory**, nucleus in funiculus teres, floor of fourth ventricle. **F. nu'cleus, supe'rior**, portion of nucleus of abducent nerve transmitting fibres to the facial. **F. paral'ysis**, paralysis of parts to which the facial nerve is distributed. **F. sur'face**, part of the outer surface of the upper jaw-bone in front of the zygomatic process. **F. trophoneuro'sis**, F. hemiatrophy. **F. vein** arises between the skin and frontalis muscle, descends vertically toward the greater angle of the eye, afterward descends obliquely on the face, uniting with the temporo-maxillary vein to form the *common facial vein*. The latter discharges into the internal jugular vein. A *deep facial vein* comes from the pterygoid plexus to join the facial vein.

Facia'lis. Facial.

Faciecula, fas-e-ek'-u-lah (dim. of **Facies**). Facet. **F. rena'lis**, depression on the inferior surface of the liver made by the right kidney.

Fa'cient (*facio*, to make). Making; suffix, as in *Calefacient, Rubefacient*, etc., making warm, making red.

Facies, fas'-e-ees. Face, appearance. **F. angula'ris u'vulæ**, angular crest of uvula of cerebellum. **F. auricula'ris**, auricular face or surface. **F. cadaver'ica**, see *Face*. **F. of can'cer**, see *Face*. **F. choler'ica**, choleric face. **F. conca'va pedis**, sole. **F. extenso'ria**, face or surface for attachment of extensor muscles. **F. flexo'ria**, face or surface for attachment of flexor muscles. **F. Hippocrat'ica**, see *Face* and *Agony*. **F., hyster'ical**, facial expression, marked by depth and prominent fulness, with more or less thickness of upper lip and peculiar drooping of the upper eyelids, supposed to be characteristic of hysteria. **F. infe'rior pe'dis**, sole. **F. leonti'na**, leprosy of the face. **F. in mouth-breathers**, dull, heavy expression of face observed in patients affected with nasopharyngeal obstruction. **F., Parkinso'nian**, mask-like expression of face observed in Parkinson's disease or paralysis agitans. **F., syphilit'ic**, appearance of face of children suffering from congenital syphilis, which has a prematurely aged expression. **F. tortua'lis**, see *Face*. **F.**

tuber'cular, see *Face.* **F. uteri'na**, altered appearance of face from continued uterine suffering.

Factitious, fak-tish'us (*facio*, to make). Artificial; made by art, in opposition to what is natural or already existing in nature. Factitious mineral waters are artificial mineral waters.

Facultas, fak'ul-tas. Faculty. **F. auc'trix**, plastic force. **F. forma'trix**, plastic force. **F. nu'trix**, plastic force. **F. vegetati'va**, plastic force. **F. zoö'tica**, vital force.

Facultates naturales, fak-ul-tat'ees nat-u-ral'ees (natural faculties). See *Function* (natural).

Facultative, fak'ul-ta-tiv. Possessing the power of developing without the absence or presence of oxygen; said of micro-organisms, as facultative bacteria.

Faculties, affective, fak'ul-tees, af-fek'tiv. See *Affective.*

Faculty, fak'ul-te. Potency, power, virtue (*facio*, to make); what can be made or done. Power of executing a function or act. The collection of intellectual faculties constitutes the understanding. Vital faculties are vital properties. Faculty also denotes the medical profession or a body of medical or other professors.

Fæcal, fe'kal. Stercoraceous. **F. fis'tula**, fistula of the intestines. **F. reten'tion**, constipation. **F. toxæ'mia**, condition occurring in puerperal women, accompanied with fever, rapid pulse, sweating, and general malaise, due to fecal accumulation in the intestines.

Fæces (fe'sees) (pl. of **Fæx**) or **Fe'ces**. Dregs; excremental matter to be discharged from the bowels. The fæces consist of that portion of the food which has not been taken into the system by absorption, and is discharged from the body mixed with some of the products of the biliary and intestinal secretions. The quantity passed depends on the nature of the food taken and on the energy of the digestive powers. A grown person in normal condition discharges from seven to nine ounces daily. An approximate analysis of the fæces of a healthy adult, by Simon, shows:

Water	77.3 per cent.
Mucin	2.3 "
Proteids	5.4 "
Extractives	1.8 "
Fats	1.5 "
Salts	1.8 "
Resinous, biliary, and coloring matters	5.2 "
Insoluble residue of food	4.7 "

F. indura'tæ, hard fecal matter, discharged in lumps.

Fæcos'itas. Feculence.

Fæcula, fe'ku-lah. Fecula. **F. amyla'cea**, starch. **F. maran'tæ**, arrow root. **F. tapio'ca**, see *Jatropha manihot.*

Fæculentia, fe-ku-len'she-ah. Feculence.

Fænugræcum, fe-nu-gre'kum. Fenugreek.

Fæx, feeks. Feculence; see *Fæces.* **F. sac'chari**, treacle.

Fagara octandra, fag-ah'rah ok-tan'drah (*fagus*, beech). Ord. Rutaceæ. Systematic name of plant which affords *tacamahaca*; resinous substance exuding from the tree *tacamahaca*, having a fragrant, delightful smell. It was formerly an ingredient in warm, stimulating plasters, and given internally like balsams generally. *East India Tacamahac* is yielded by Calophyllum inophyllum, Balsamaria inophyllum. The name *Tacamahac* is also given to resin from Populus balsamifera or tacamahaca, growing in northern parts of America and Siberia. **F. piperi'ta**, *Japanese pepper*, a native of Japan, possesses the qualities of pepper, and is used as such by the Japanese; also employed as a rubefacient cataplasm.

Fagarastrum Capense, fag-ar-as'trum kap-en'se. Nat. Ord. Xanthoxyleæ. S. African plant, fruit of which is known to the colonists as wild cardamom, prescribed in flatulency and paralysis.

Fagonia (fag-o'ne-ah) **mysorien'sis.** Native of India; possesses tonic, astringent, and diuretic properties.

Fagopyrum, fag-op'ir-um (*fagus*, beech, *puros*, wheat). Polygonum fagopyrum.

Fagræa fragrans, fag-re'ah frah'grans. The bark of this Chinese tree, nat. ord. Loganiaceæ, is antipyretic.

Fagus, fag'us. F. sylvatica. **F. casta'nea**, systematic name of *Chestnut tree, Jupiter's* or *Sardinian acorn, Common chestnut*, ord. Cupuliferæ. The *Chestnut, Castanea nut*, is farinaceous and nutritious, but not easy of digestion; see *Castanea vesca.* **F. c. pu'mila**, *Chincapin* or *Chinquapin, Castanea pumila;* the nut of this American tree is eaten like the chestnut; bark, *Castanea* (Ph. U. S.), has been used in intermittents; the leaves of our indigenous chestnut tree are used in whooping cough in infusion. **F. pu'mila**, F. castanea pumila. **F. purpu'rea**, F. sylvatica. **F. sylvat'ica**, systematic name of the *Beech. Beech-nut* or *Beech-mast;* it affords, by expression, a palatable oil, which is eaten in some places instead of butter; it has been used as a vermifuge. **F. sylves'tris**, F. sylvatica.

Fahr. Abbreviation for Fahrenheit. See *Thermometer.*

Faint. Weak; weakness; swooning; syncope.

Faint'ing. Syncope. **F. fe'ver**, epidemic choleriform fever which prevailed about fifty years ago in Asia. **F. fit**, syncope.

Faint'ishness. See *Syncope.*

Faint'ness. Languor; syncope.

Faints. See *Epilepsy.*

Fair-days or **Fair-grass.** Potentilla anserina.

Fai'ries' bath. Peziza coccinea. **F. but'ter**, Tremella albida. **F. hair**, Cuscuta epithymum. **F. horse**, Senecio Jacobæa. **F. pet'ticoats**, Digitalis purpurea. **F. ta'ble**, Agaricus campestris.

Fair-maids-of-France. Saxifraga, Achillea ptarmica.

Falcadina, falk-ad-e'nah. See *Scherlievo.*

Falcate, fal'kate (*falx*, sickle). Shaped like a sickle; falciform. **F. car'tilages**, falciform cartilages.

Falces (fal'sees) (pl. of **Falx**) **of the peritone'um, less'er.** Triangular ligament of the liver; lateral ligaments of the liver and the reflections which the peritoneum forms, raised up by the umbilical arteries.

Falcicula, fal-sik'u-lah. Falx cerebelli.

Falciform, fal'si-form (*falx*, scythe, *forma*, shape). Having the shape of a scythe. See *Falx* and *Sinus.* **F. bor'der**, F. process. **F. car'tilages**, semilunar cartilages of the knee. **F. constric'tion**, sickle-shaped appearance of the uterus from irregular contraction. **F. expan'sion, lig'ament**, or **pro'cess of the fas'cia lata**, scythe-shaped reflection of the fascia lata, forming, outward and upward, the opening for the vena saphæna, and attached to the crural arch by its superior extremity, forming the anterior paries of the canal of the same name. **F. lig'ament**, suspensory or broad ligament of the liver; falciform expansion of the fascia lata. **F. lobe**, central part of the cerebral hemispheres. **F. pro'cess**, part of great sacro-sciatic ligament prolonged on ramus of ischium; falciform expansion of fascia lata; falx cerebri.

Fall fe'ver. Fever, autumnal. **F. poi'son**, Amianthium muscætoxicum.

Fallacia, fal-lah'se-ah (*fallax*, deceitful). Hallucination. **F. op'tica**, optic illusion.

Falling of the bow'el. Prolapsus recti. **F. sick'ness**, epilepsy. **F. of the womb**, prolapsus uteri.

Fallopian (fal-lo'pe-an) **arch.** Poupart's ligament. **F. canal'**, aqueduct of Fallopius. **F. lig'ament**, round ligament of uterus; Poupart's ligament. **F. preg'nancy**, tubal pregnancy or pregnancy occurring in the Fallopian tube. **F. tube**, see *Tube, Fallopian.*

Fall'tranck. Literally, *drink against falls.* A vulnerary mixture of aromatic and astringent plants growing chiefly in the Swiss Alps. A vulnerary beer was formerly prescribed in English country practice in inward bruises, called *Cerevisia nigra* or *Black beer*, formed by infusing certain herbs in beer or ale.

Fal'sa vi'a. False passage.

False (*fallo*, to deceive). *Pseudo* (in composition), *Spurious, Bastard.* Epithet added to peripneumony, pleurisy, etc., to designate a disease similar to it, but less severe, which is commonly a severe catarrh or pleurodynia. See *Peripneumonia notha.* **F. aca'cia,**

Robinia pseudacacia, indigenous to the U. S. Bark is tonic and emeto-cathartic; flowers are narcotic. **F. al'oe,** Agave Virginica; root is laxative. **F. an'eurism,** see *Aneurism.* **F. angustu'ra,** bark of Strychnos nux vomica. **F. ankylo'sis,** ankylosis without osseous union. **F. a'nus,** unnatural external outlet for the bowel. **F. bit'tersweet,** Celastrus scandens. **F. concep'tion,** mole. **F. deliv'ery,** false waters. **F. germ,** mole. **F. glot'tis,** cavity between the superior vocal cords. **F. ipecacuan'ha,** Ionidium ipecacuanha. **F. joint,** pseudarthrosis. **F. lig'aments,** peritoneal folds connecting the bladder and contiguous organs. **F. mea'sles,** roseola, rötheln. **F. mem'brane,** exudation of fibrin on the surface of an organ, as the lung, the pharynx, etc. **F. pains,** pains resembling labor-pains, but not caused by contractions of the uterus. **F. pas'sage,** accidental passage made in surgical operations, and particularly in introducing the catheter, the latter being sometimes passed through into the rectum. **F. pel'vis,** see *Pelvis.* **F. quar'ter,** fissure in hoof of the horse. **F. ribs,** ribs that are not attached to the breast-bone. **F. saf'fron,** safflower. **F. sarsaparil'la,** Aralia nudicaulis. **F. spike'nard,** Smilacina racemosa. **F. su'ture,** joint formed by rough surfaces. **F. u'nicorn root,** Chamælirium luteum. **F. vale'rian,** Senecio aurelius. **F. ver'tebræ,** lower vertebræ, forming sacrum and coccyx. **F. vo'cal cords,** inferior vocal cords of the larynx. **F. wa'ters,** water which sometimes collects between the amnion and chorion or between the uterus and ovum, and is commonly discharged before the birth of the child. **F. win'tergreen,** Pyrola rotundifolia.

Falset'to voice (I., dim. of **Falso,** false). See *Voice.*

Falsifica'tion (*falsus,* false, *facio,* to make). Fraudulent imitation or alteration of an aliment or medicine. Adulteration; sophistication. Intentional addition to an article, for purposes of gain or deception, of a substance or substances the presence of which is not acknowledged in the name under which the article is sold.

Fal'tranck. Falltranck.

Falx (scythe). Anatomical name for several membranous reflections having the shape of a falx or scythe. **F. cerebel'li,** triangular process of the dura mater opposite the internal occipital protuberance. Its base is attached to the middle of the tentorium, and its top or apex bifurcates, to proceed to the sides of the foramen magnum. Its convex surface is toward the cranium; its concave surface, in the fissure or groove separating the two lobes of the cerebellum. **F. cer'ebri,** *Vertical superior longitudinal process.* Greatest process of the dura mater, extending from the fore to the hind part of the skull, on the median line; broad behind and narrow before, and lodged in the groove separating the hemispheres from each other—*interlobular fissure.* At its superior part is situated the superior longitudinal sinus; at its lower, corresponding to the edge of the scythe, the inferior longitudinal sinus. Its anterior extremity is attached to the crista galli; its posterior is continuous with the tentorium cerebelli, and contains the straight sinus. **F. ligamento'sa,** falciform process. **F. ma'jor,** falx cerebri. **F. mi'nor,** falx cerebelli. **F. of the peritone'um, great,** *Falx of the umbilical vein.* Suspensory ligament of the liver; reflection of the peritoneum, ascending from the umbilicus to the anterior and inferior surface of the liver. **F. of the umbil'ical vein,** falx of the peritoneum, great.

Famelica febris, fam-el'ik-ah feb'ris. Fever accompanied with insatiable hunger.

Famelicus, fam-el'ik-us (*fames,* hunger). Hungry.

Fames, fam'ees. Hunger. **F. bovi'na,** boulimia. **F. cani'na,** boulimia. **F. lupi'na** (wolf hunger), boulimia, or depravation of the digestive functions, in which the patient eats voraciously, and passes his food afterward, *per anum,* imperfectly digested.

Familiarica sella, fam-il-e-ar'ik-ah sel-lah (*familia,* household, *sella,* seat or stool). Close-stool.

Fam'ily atax'ia. Paramyoclonus multiplex. **F. diseases,** hereditary diseases.

Fam'ine fe'ver. Relapsing fever. **F. ty'phus,** relapsing fever.

Fanculum, fan'ku-lum. Anethum.

Fan'cy mark. Nævus.

Fang of tooth. Part of tooth contained in an alveolus; the larger teeth have several fangs. Tooth of venomous serpent for transmission of poison.

Fan'tasm. Imaginary apparition or illusion of the senses.

Fantas'ma. Phantasm.

Fan'tom (*phantasma,* spectre). *Phantom.* Spectres and images which the imagination presents to the sick when asleep or awake. The figure called *Mannikin, Manikin,* and *Manakin,* on which surgeons practise the application of bandages, or the accoucheur the manual part of midwifery—*Phantoma obstetricium.* A *Fantom* or *Phantom tumor* is one that forms—in the abdomen, for example—simulating organic disease, and occasionally exceedingly deceptive.

Fa'rad (after Faraday). Unit of electrical capacity.

Far'adic. Relating or appertaining to faradization or electricity by induction; as F. battery, F. bath, F. current.

Faradism, far'ad-izm. Faradization.

Faradization, far-ad-i-za'shun (after Faraday, the celebrated physicist). Term proposed by Duchenne of Boulogne for electricity by induction, or the localized application, therapeutically, of induction currents, such as are instantaneously developed in metallic conductors under the influence of voltaic or magnetic currents, or even of the earth.

Fara'do-punc'ture. Acupuncturation by a faradized needle.

Farcimen (far-se'men), **Farciminum** (far-sim'in-um), or **Farcinoma,** far-sin-o'mah (*farcio,* to stuff). Equinia.

Farciminalis (far-sim-in-al'is) **membra'na** or **tu'nica** (*farcimen,* sausage). Allantois.

Farcinous, far'sin-us. Relating to, or affected with, farcy. **F. poi'soning,** equinia.

Farctura, fark-tu'rah (*farcio,* to stuff). Operation of introducing medicinal substances into the cavities of animals or of fruits, which have been previously emptied.

Farc'tus (stuffed). Obstructed.

Farcy, far'se. See *Equinia.* **F. buds,** see *Equinia.* **F. glan'ders,** see *Equinia.*

Far'del-bound. Disorder of the locomotor apparatus in cattle—"staggers"—from overloading of third stomach.

Far'fara or **F. be'chium.** Coltsfoot. See *Tussilago.*

Farina, far-e'nah (*far,* corn or grain). Meal or flour; powder obtained by grinding the seeds of the gramineous, leguminous, and cucurbitaceous plants in particular. It is highly nutritious and much used, dietetically as well as medicinally. **F. amygdala'rum,** see *Amygdala.* **F. arena'cea,** oatmeal; see *Amylum.* **F. hor'dei,** barley flour; see *Amylum.* **F. li'ni,** linseed or flaxseed meal. **F. ory'zæ,** rice flour. **F. seca'lis,** rye flour or meal; see *Amylum.* **F. trit'ici,** wheaten flour; see *Amylum.*

Farinaceous, far-in-a'shus. Mealy; having the appearance or nature of farina or containing farina. The term *Farinacea* includes all substances called *Cerealia, Legumina,* etc., containing farina and employed as nutriment. In pathology the epithet *Farinaceous* is applied to eruptions in which the epidermis exfoliates in small particles similar to farina.

Fari'næ (pl. of **Farina**) **resolven'tes.** Mixture of the farina of four different plants, *Lupinus albus, Ervum ervilia, Vicia faba,* and *Hordeum distichum;* recommended to form cataplasms.

Farinosus. Farinaceous.

Far'kleberry. Vaccinium arboreum.

Farm'ery. Hospital.

Far-point. *Punctum remotum.* Farthest point of accommodation to which the eye can adjust itself, denoted by symbol R; this varies in different conditions of the eye from infinity to a negative distance.

Farre's tu'bercles. Cancerous nodules occurring

on the surface of the liver in secondary cancer of that organ.

Far'rier (*ferrum*, iron). One who shoes horses, but sometimes applied to one who cares for the ailments of horses.

Farsight'edness. See *Presbytia* and *Hypermetropia.*

Fartu'ra. Farctura.

Far'tus (*farcio*, to stuff). Obstructed.

Fascia, fash'e-ah (band). A bandage, fillet, roller, or ligature; aponeurotic expansion of muscles binding parts together. Sheaths of muscles, vessels, and nerves are made up of fascia. See *F., superficial, F., deep,* etc. **F. adipo'sa,** adipose capsule (of kidney). **F., a'nal,** F., ischio-rectal. **F. anoperinea'lis,** perineal fascia. **F., antibrach'ial,** antibrachial aponeurosis. **F. aponeurot'ica,** F., deep. **F. a. fem'oris,** F. lata aponeurosis. **F., ax'illary,** axillary fascia. **F., bicip'ital,** aponeurosis of biceps muscle. **F., brach'ial,** brachial aponeurosis. **F., broad,** F. lata. **F., buc'cal, buc'cinator,** or **buc'co-pharynge'al,** thin fascia covering buccinator muscle and pharynx. **F. bul'bi,** see *Capsule of Bonnet.* **F. capita'lis,** double-headed roller passing over the head and enveloping it like a cap; capelina. **F. cap'itis,** bandage for the head in case of headache. **F., ceph'alo-pharynge'al,** upper part of pharyngeal aponeurosis attached to bones of the head. **F., cer'vical,** cervical fascia. **F., clavipec'toral,** costo-coracoid membrane. **F. of Col'les,** see *Perineal fascia.* **F. col'li pro'pria,** deep cervical fascia. **F. Coop'eri,** F. transversalis. **F., cor'aco-clavic'ular** or **cor'aco-pec'toral,** costo-coracoid membrane. **F. corona'lis ante'rior,** muscular fibres of anterior wall of the heart from the left to the right auricular appendage. **F. cos'to-coracoï'dea,** costo-coracoid membrane. **F., cremas'teric,** see *Cremaster.* **F., crib'riform** or **cribro'sa,** sieve-like portion of the fascia lata, so called from its being pierced by numerous openings for the passage of lymphatic vessels. **F. cru'ris** or **cru'ral,** fascia of leg, superficial and deep. **F., deep,** fibrous tissue, not superficial, in membranous expansions. **F. denta'ta** or **denticula'ta,** band of gray matter seen beneath the tænia hippocampi on raising it up, which runs along the inner border of the cornu ammonis; crenated by transverse furrows. **F. digita'lis,** gantelet; finger bandage. **F., diophthal'mic,** bandage applied over both eyes. **F. div'idens,** dividing bandage. **F., dor'sal,** vertebral fascia; also fascia covering dorsum of fingers and toes. **F. en'do-abdomina'lis** or **endogas'trica,** transversalis fascia. **F. endopelvi'na,** subperitoneal fascia of pelvis. **F. endothora'cica,** internal fascia of thoracic cavity. **F. epicra'nia,** epicranial aponeurosis. **F., fi'bro-are'olar,** F., superficial. **F. gyp'sea,** plaster-of-Paris bandage. **F. heliodo'ri,** T-bandage. **F. hu'meri,** brachial aponeurosis. **F. hypogas'trica,** pelvic fascia. **F. ili'aca,** *Iliac aponeurosis* or *fascia;* aponeurosis proceeding from the tendon of the psoas minor, or arising from the anterior surface of the psoas magnus when the former muscle does not exist. Attached externally to the inner edge of the crest of the ilium, below and anteriorly, on one side to the crural arch, sending expansion to the fascia transversalis, and on the other side continuous with the deep-seated lamina of the fascia lata, forming the posterior paries of the crural canal. Within and behind, the iliac fascia is attached to the brim of the pelvis, and is continuous with the *pelvian aponeurosis.* The iliac aponeurosis covers the iliac and psoas muscles, which it separates from the peritoneum. **F. infraspina'ta,** fascia investing infraspinatus muscle. **F. infundibulifor'mis,** internal spermatic fascia. Funnel-shaped offset from the fascia transversalis, which is prolonged as a sheath upon the vas deferens and spermatic vessels as they pass out of the abdomen. **F. inguina'lis,** spica. **F., intercolum'nar,** *External spermatic fascia.* Thin membrane derived from the margin of the pillars of the external abdominal ring during the descent of the testis in the fœtus, being prolonged downward around the surface of the cord and testis. **F. is'chio-prostat'ica,** transverse ligament of the pelvis; deep perineal fascia. **F., is'chio-rec'tal,** *Anal fascia;* thin membrane covering the perineal aspect of the levator ani muscle, with which the obturator fascia is continuous. **F. la'ta,** name given by anatomists to an aponeurosis and a muscle. **F. la'ta aponeuro'sis,** crural or femoral aponeurosis; the most extensive fascia in the body, enveloping all the muscles of the thigh, attached above to the outer edge of the ilia; it arises, before, from the crural arch by two distinct laminæ, separated by the femoral vessels, and becoming confounded a little below the part where the great vena saphæna opens into the crural vein. Of these laminæ, the one is more anterior and thicker than the other, and may be considered as a prolongation of the aponeurosis of the external oblique; it is intimately united to Poupart's ligament; the other, which is thinner, is behind and deeper seated, and, after its union with the former, proceeds to be inserted into the pubis. In attaching itself to the pectineal line under the name of *Hey's ligament,* or Hey's femoral ligament, it helps to form *Gimbernat's ligament.* Inferiorly, the fascia lata becomes confounded with the tendon of the triceps, and is attached to the external tuberosity of the tibia. The use of the fascia lata, like that of other aponeuroses, is to strengthen the action of muscles, etc. **F. la'ta mus'cle,** muscle situate at the upper and outer part of the thigh, arising, above, from the outer part of the anterior and superior spine of the ilium, and inserted, below, between the two laminæ of the fascia lata, which it stretches and raises when it contracts. **F. levato'ris a'ni,** anal fascia. **F. lin'guæ,** fascia covering the tongue. **F. lon'ga** or **longitudina'lis,** vertebral ligament (anterior and posterior). **F. lumba'lis, lumba'ris,** or **lumbo'rum,** *Lumbar fascia.* Fascia formed by the blending of the posterior layer of the vertebral aponeurosis of the transversalis with the aponeurosis of the serratus posticus inferior and latissimus dorsi muscles. **F. lum'bo-dorsa'lis,** the whole fascia usually included under the two divisions—vertebral and lumbar fasciæ. **F. medulla'ris,** pyramid of medulla oblongata. **F. mus'culi transver'si,** fascia transversalis. **F. nodo'sa,** knotted bandage. **F. nu'chæ,** portion of cervical fascia in relation with trapezius and rhomboidei muscles. **F., ob'turator,** see *Pelvic aponeurosis.* **F. oc'uli** or **ocula'ris,** eye bandage; capsule of Tenon. **F. or'bitæ,** orbital fascia. **F., pal'mar,** palmar aponeurosis. **F. parotide'o-masseter'ica,** process of cervical fascia covering the parotid gland and masseter muscle. **F., pel'vic, inter'nal,** see *Pelvic aponeurosis.* **F., pel'vic, lat'eral,** see *Pelvic aponeurosis.* **F., pel'vic, supe'rior,** see *Pelvic aponeurosis.* **F. pelvi'na,** see *Pelvic aponeurosis.* **F. pel'vi-prostat'ica,** process of recto-vesical fascia investing the prostate gland. **F. pel'vis exter'na,** perineal fascia. **F. pel'vis inter'na,** pelvic fascia. **F. pe'nis,** see *Perineal fascia.* **F., perine'al,** see *Perineal fascia.* **F. perine'i,** perineal fascia. **F. p. profun'da** or **transver'sa,** triangular ligament of urethra. **F. pharyn'gis,** pharyngeal aponeurosis. **F. pharyn'go-basila'ris,** F. cephalo-pharyngea. **F. prævertebra'lis,** prevertebral fascia; portion of cervical fascia. **F. profun'da abdom'inis,** fascia transversalis. **F. p. col'li,** deep fascia of neck. **F. p. cru'ris,** fascia lata. **F. p. fem'oris,** fascia lata. **F. pro'pria,** layer of areolar tissue derived from sheath of femoral vessels, or, according to some, from the cribriform fascia. One of the coverings of femoral hernia, and generally pretty dense about the neck of the hernia, but thin or even wanting on its fundus. *F. propria of the cord* is the prolongation of the fascia propria on the spermatic cord. **F. pu'bo-recta'lis,** process of recto-vesical fascia from pubis to rectum. **F. rec'ta,** fascia or sheath of rectus muscle. **F. r. abdom'inis,** fascia or sheath of rectus abdominis muscle. **F., recto-ves'ical,** visceral layer of the pelvic fascia, investing the prostate, bladder, and rectum. **F. re'num,** adipose capsule of kidney. **F. re'pens,** spica. **F. salpin'go-pharynge'a,** part of pharyngeal aponeurosis having origin at Eustachian tube. **F. scapula'ris,** scapulary. **F. of Scar'pa,** deep layer of superficial fascia about the groin. **F. Sculte'ti,** bandage of separate strips. **F. semicircula'ris,** tænia semicircularis. **F. semiluna'-**

ris, aponeurosis of biceps. **F. serra'ta**, dentate convolution. **F., spermat'ic**, see *Fascia infundibuliformis* and *F., intercolumnar*. **F. spira'lis**, bandage in the shape of an axe or hatchet. **F. stella'ta**, X-shaped bandage for one or both shoulders. **F. subcuta'nea**, superficial fascia. **F., submus'cular**, see *Vaginal (of the eye)*. **F., subperitone'al**, *Subperitoneal aponeurosis;* thin tendinous layer on the outer surface of the peritoneum. **F. subpu'bica**, triangular ligament of urethra. **F. subscapula'ris**, fascia investing subscapularis muscle. **F., superfic'ial**, *Fibro-areolar fascia;* fascia immediately beneath the integument over almost the entire surface of the body, facilitating the movement of the skin, connecting with the parts beneath, etc. **F. superficia'lis abdom'inis**, *Superficial aponeurosis of the abdomen and thigh;* very thin aponeurosis covering the muscles and aponeuroses of the abdomen; passing before the crural arch, to which it adheres with some degree of force; sending a membranous sheath, which surrounds the spermatic cord; and continuous with the dartos, which it assists in forming. The fascia superficialis presents, beneath the crural arch, very distinct fibres, whose direction is parallel to the fold of the thigh. It is applied over the fascia lata aponeurosis, and is attached, internally, to the ascending ramus of the ischium, near the root of the corpus cavernosum. Before the descent of the testicle from the abdomen, the fascia superficialis is very manifestly continuous with the *gubernaculum testis*. **F. supraspina'ta**, fascia investing supraspinatus muscle. **F. Tari'ni**, dentate convolution. **F., tem'poral**, temporal aponeurosis. **F. of Tenon**, the tunica vaginalis bulbi or capsule of Bonnet, is blended with the sheaths and expansion of the straight muscles of the eye, and closely adherent to the sclerotica as far forward as the corneal edge. The latter portion of this membrane has been called the *Fascia* or *Membrane of Tenon*. Between this fascia and the sclerotica is the *Space of Tenon*. See *Capsule of Bonnet*. **F. t-formis**, T-bandage. **F. thora'cico-inter'na**, F. endothoracica. **F. tor'tilis**, tourniquet. **F. transver'sa** or **transversa'lis**, aponeurosis separating the transversalis muscle from the peritoneum in the inguinal region. It arises above the posterior edge of the crural arch, where it seems to be continuous with the aponeurosis of the greater oblique muscle. Above, it is lost in the areolar tissue at the internal surface of the transversalis abdominis; within, it is continuous with the outer edge of the tendon of the rectus muscle and Gimbernat's ligament; below, with the aponeurosis of the greater oblique, receiving an expansion from the fascia iliaca. Toward its middle, and a little above the crural arch, the fascia transversalis has the wide orifice of a canal, which is occupied, in the female, by the round ligament of the uterus, and in man furnishes an expansion, serving as a sheath to the spermatic vessels. Where the fascia is thickened across the inner surface of the umbilicus, it is called *Fascia transversalis umbilicalis* or *F. umbilicalis*. **F. triangula'ris**, triangular ligament. **F. umbilica'lis**, see *F. transversalis*. **F. vagina'lis bul'bi**, capsule of Tenon. **F. vertebra'lis**, vertebral fascia. **F. vola'ris**, palmar fascia.

Fasciæ, fash'e-e (pl. of **Fascia**). See *Fascia*. Also, swathing-clothes. **F. co'li**, see *Colon*. **F. ligamento'sæ co'li**, see *Colon*. **F. muscula'res oc'uli**, fibres of the capsule of Tenon connected with the tendons of ocular muscles.

Fascial, fash'yul. Relating to fascia or fasciæ. *Fascial reflexes* are those associated with direct stimulation of fascial nerves.

Fascialis, fas-se-al'is. Fascia lata muscle; sartorius. **F. lon'gus**, sartorius. **F. sarto'rius**, sartorius.

Fas'cians (*fascia*, a swathe). Dividing into layers, as in neuritis fascians.

Fasciarum applicatio, fas-se-ar'um ap-ple-kash'e-o. Deligation; bandaging.

Fas'ciated. Having a fibrous or rod-like arrangement.

Fasciatio, fas-se-ah'she-o. Deligation; binding up a wounded part; see *Bandage*. **F. cuculla'ta**, bandage applied to the head for retaining dressings, etc., *in situ*.

Fascia'tion. Fasciatio.

Fascicle, fas'sik'l. Fasciculus. **F., cu'neiform**, fasciculus cuneatus.

Fascicular, fas-sik'u-lar. Arranged in bundles or fasciculi. **F. kerati'tis**, inflammation of the cornea, attended with peculiar arrangement of bands of vessels. **F. neuro'ma**, neuroma in which nerve-fibres are fascicular or in bands.

Fascic'ulate or **Fasciculated**, fas-sik'u-la-ted. Fascicular, or arranged in bands or bundles. **F. blad'der**, sacculated condition of bladder. **F. por'tion of pe'duncle**, basal portion of crura cerebri. See *Peduncles*.

Fasciculation, fas-sik-u-la'shun. Arrangement or distribution in fasciculi or bundles. Sacculation or hypertrophy of muscular coat, as of bladder.

Fas'cicule. Fascicle; fasciculus.

Fasciculi, fas-sik'u-le (pl. of **Fasciculus**). Bundles. **F. acous'tici**, transverse white lines on floor of fourth ventricle. **F. cortica'les**, Ferrein, pyramids of. **F. gra'ciles**, see *Corpora restiformia*. **F. innomina'ti**, two large bundles of fibres in the interior of the medulla oblongata, behind the corpora olivaria, and more or less apparent between those bodies and the corpora restiformia. They ascend, and become apparent in the fourth ventricle, under the name *Fasciculi* or *Processus teretes*. **F. longitudina'les co'li**, ligaments of the colon. **F. margina'les aquæduc'ti**, collections of nerve-fibres arising from the nucleus of the fifth nerve interlacing along the aqueduct of Sylvius. **F., me'dian poste'rior of medul'la oblonga'ta**, funiculi graciles. **F. medul'læ spina'lis**, columns of spinal cord. **F. muscula'res co'li**, ligaments of the colon. **F. musculo'rum**, see *Muscular fibre*. **F. pyramida'les**, Ferrein, pyramids of; see *Papillæ of kidney*. **F. ter'etes**, processus teretes; see *Fasciculi innominati*. **F. ter'etes cor'dis**, columnæ carneæ.

Fasciculus (fas-sik'u-lus) or **Fas'cicle** (dim. of **Fascia**, band). A small bundle. In anatomy, a fasciculus of fibres; in pharmacy, a handful. **F. arcifor'mis**, collection of white fibres on surface of medulla oblongata. **F. arcifor'mis pe'dis**, fibres of pes pedunculi passing under pons Varolii. **F. arcua'tus**, bundle of fibres passing from frontal to occipital lobe. **F. bas'ilis inter'nus**, bundle of fibres situate in axis of superior or medial occipito-temporal convolution. **F. bigem'ino-genicula'ris**, fibres connecting corpora geniculata externa and superior corpora quadrigemina. **F., cerebel'lar**, cerebellar lateral tract. **F. cerebello'sus**, posterior column of spinal cord. **F. cerebra'lis**, anterior column of spinal cord. **F. cor'tico-bulba'ris**, bundle of nerve-fibres along middle border of pes pedunculi. **F. cunea'tus**, fasciculus of reinforcement. **F., cu'neiform**, fasciculus of reinforcement. **F. decus'sans pyram'idum**, bundle or tract of motor fibres associating central convolutions of the brain and spinal cord. **F. ex'ilis**, slip of insertion of flexor longus pollicis on coronoid process of ulna. **F. genicula'tus**, fibres of pes pedunculi passing to genu of internal capsule, or collection of fibres passing from crusta to cortex. **F. of Goll**, fibres passing along posterior median fissure of spinal cord and medulla oblongata from middle of the back to the cerebellum. **F. gra'cilis**, F. of Goll. **F., Gratiolet's**, bundle of nerve-fibres between cerebellum and occipital lobe. **F., habe'nal**, bundle of nerve-fibres between ganglion of habenula and interpeduncular ganglia. **F., infe'rior longitu'dinal**, bundle of fibres connecting occipital and temporal lobe. **F. latera'lis**, fibres of tractus opticus distributed along the side of the crossing of the optic nerve to nerve of same side. **F. longitudina'lis**, F., inferior longitudinal; also bundle of white fibres in middle raphe of medulla oblongata, pons Varolii, and crura cerebri. Bundle of fibres from frontal to occipital lobe. **F. nu'clei oli'væ**, prolongation of lateral column of spinal cord in medulla. **F. obli'quus pon'tis**, bundle of fibres directed obliquely on surface of pons. **F. occipita'lis perpendicula'ris**, bundle of fibres directed perpendicularly from parietal lobe to occipito-

temporal convolution. **F., ol'ivary,** F. nuclei olivæ; olivary peduncle. **F., prim'itive,** muscular fibre. **F. pyramida'lis,** part of pes pedunculi having fibres from pyramidal tracts of the cord. **F. pyram'idis,** column of medulla oblongata, continuation of anterior column of the cord. **F. of reinforce'ment,** lateral column of spinal cord. **F., res'piratory,** F., solitary. **F. restifor'mis,** lateral column of spinal cord. **F. retroflex'us,** bundle of white fibres passing through thalamus opticus from ganglion habenulæ to ganglion interpedunculare. **F. rotun'dus,** solitary bundle of fibres in upper part of spinal cord and medulla oblongata from nucleus of vagus. **F., sol'itary,** bundle of nerve-fibres in posterior part of internal capsule of lens, extending to occipital lobe. **F., sphenoid'al,** bundle of nerve-fibres corresponding to part of corona radiata entering temporo-sphenoidal lobe. **F., supe'rior longitu'dinal,** bundle of fibres passing from frontal to occipital lobe. **F. tegmen'ti,** bundle of longitudinal nerve-fibres in tegmentum of brain of dog. **F. te'res,** eminence on floor of fourth ventricle. **F. te'res pon'tis,** band of white fibres in floor of fourth ventricle. **F., trineu'ral,** F., solitary. **F. of Türck,** continuation downward in anterior column of spinal cord of motor-fibres connecting central convolutions of brain and spinal cord. **F. uncina'tus** or **uncifor'mis,** white bundle, seen on the lateral aspect of the cerebral hemispheres, passing across the bottom of the fissure of Sylvius, and connecting the anterior with the middle and posterior lobes. Fibres of this fasciculus expand at each extremity, and the superficial portions curve or *hook* sharply between the contiguous parts of the anterior and middle lobes, whence the epithet *uncinatus,* "hooked."

Fascination, fas-sin-a'shun. Exercise of will-power by one person over the actions of another, as in first stage of hypnotism.

Fascinosus, fas-sin-o'sus. Membranous.

Fascinum, fas'sin-um. Penis; dildoo; having a large penis.

Fasciola, fas-se'o-lah (dim. of **Fascia,** band). Small bandage; fascia dentata; diatoma. **F. cine'rea,** tuberculum cinereum. **F. denta'ta,** dentate convolution. **F. hepat'ica,** distoma hepaticum. **F. huma'na,** distoma hepaticum. **F. lanceola'ta,** distoma hepaticum.

Fasciolæ, fas-se'o-le (pl. of **Fasciola**). Small bands. **F. cine'reæ,** part of floor of fourth ventricle.

Fas'cis. Fasciculus.

Fascitis, fas-se'tis. Inflammation of fascia.

Faselus, fas'el-us. Phaseolus vulgaris.

Fast. To abstain from food. Abstinence from food.

Fastidium, fas-tid'e-um. Fastidiousness, squeamishness; condition of a stomach affected with nausea. **F. ci'bi** or **cibo'rum,** disgust for food; want of appetite. **F. po'tûs,** loathing of drink.

Fastigium, fas-tij'e-um (*fastus,* elevation). Acme; point of projection of roof of fourth ventricle in medullary centre of cerebellum.

Fast'ing. Loss or want of appetite without apparent affection of the stomach. See *Abstinence.*

Fat. Soft, white, animal substance; inodorous, insipid, oily, inflammable, easy to melt, spoiling in air, and becoming rancid by union with oxygen; almost insoluble in alcohol, insoluble in water, soluble in fixed oils. Fat is formed of immediate principles, stearin, margarin, and olein or olain, all of which are regarded as salts composed of stearic, margaric, and oleic acids, and a common base, called, from its sweetish taste, glycerin (glycerine, glycerina, or glycerinum). To these are almost always joined an odorous and a coloring principle. Fat is found in a number of animal tissues, and is very abundant in the neighborhood of the kidneys and in the epiploon. It is generally fluid in the cetacea; soft and of strong smell in the carnivora; solid and inodorous in the ruminating animal; white and abundant in young animals; and yellowish in old. It forms about a twentieth part of the weight of the human body. Fat, considered physiologically, has, for its function, to protect the organs, maintain their temperature, and to serve for nutrition in case of need, as in torpid animals. Also, corpulent. **F. canals** or **col'umns,** vertical columnar-shaped spaces or clefts extending obliquely from the bases of the hair-follicles to the cellular membrane. **F. cells,** fatty vesicles. **F. em'bolism,** embolism caused by choking of capillary vessels with globules of oil or fat. **F., mackaw',** see *Cocos butyracea.*

Fatigatio, fat-e-gash'e-o (*fatigo,* to fatigue). Lassitude or fatigue.

Fatigue'. State of the body in which the animal functions are executed with less promptitude and vigor than usual, from over-exertion.

Fat'ty. *Adipose, Adipous, Pinguid, Pinguedinous.* Relating to, resembling, or containing fat. Cellular membrane has been called fatty or adipous from an opinion that in its areola the fat is deposited. The areolar membrane, however, merely lodges between its lamellæ and filaments the vesicles in which the fat is contained. **F. ac'ids,** acids occurring in the body partly free and partly in combination. **F. casts,** tube-casts. **F. degenera'tion,** degenerative and disintegrating change in a tissue by conversion into fat, as in muscular fibres of the heart. It is caused by chemical alteration in the protoplasm of a cell acting at the expense of the histological elements of the cell. See *Degeneration* and *Lardaceous.* **F. degenera'tion of ar'teries** occurs rarely, principally in the aorta. **F. d. of the liv'er,** form of disease of the liver dependent on the accumulation of fat in its secreting cells. **F. heart,** unusual deposition of fat on the heart; adipose degeneration of the heart. **F. infiltra'tion,** infiltration of the tissues with fat deposited in them from the blood. It is only a deposit, not a degeneration, but if it persists it becomes a morbid process. The fat is not formed out of the cells of an organ, but is brought there in the circulation. **F. kid'ney,** kidney, Bright's disease of. **F. lig'ament,** adipous ligament. Reflection of the synovial membrane of the knee-joint, passing from the ligamentum patellæ toward the cavity separating the condyles of the femur. **F. liv'er,** F. degeneration of the liver. **F. mem'brane,** adipous membrane, adipous tissue; subcutaneous areolar tissue, or that containing the fatty or adipose vesicles. **F. metamor'phosis,** F. degeneration; see *Degeneration.* **F. tu'mors,** several forms of adipose or fatty tumors are described, as lipoma, steatoma, etc.; see *Tumors.* **F. ves'icles,** adipous vesicles, fat-cells; small bursæ or membranous vesicles enclosing the fat situate in the areolæ of the areolar tissue. Generally they are round and globular, and in certain subjects receive vessels which are very apparent. They form so many small sacs without apertures, in the interior of which are filaments arranged like septa. In fatty subjects the adipous vesicles are very perceptible, being attached to the areolar tissue and neighboring parts by a vascular pedicle. **F. ves'sels,** adipous vessels; vessels connected with the fat. Some anatomists have called the vessels to which they attribute the secretion of fat *adipous canals.*

Fatuism, fat'u-izm. Fatuitas.

Fatuitas, fat-u'it-as (*fatuus,* foolish). Mental imbecility; idiotism; dementia. One so affected is said to be *Fatuous.* **F. alpicola'rum,** cretinism. **F. convalli'nus,** cretinism.

Fatuity, fat-u'it-e. Fatuitas.

Fat'uous. See *Fatuitas.*

Fau'ces. Isthmus; pharynx; throat.

Faucette' voice (dim. of **Faux,** false). See *Voice.*

Fau'cial. Relating to the fauces; pharyngeal.

Faucitis, faw-se'tis. Inflammation of the fauces; isthmitis.

Fau'na. Collection of animals peculiar to any one country or locality.

Fauno'rum ludib'ria. *Sports of the Fauni.* Incubus of some authors, epilepsy of others.

Favaginous, fav-aj'in-us. Favous.

Fave'olate (*faveolus,* small cavity). Having small cavities like a honeycomb; alveolar.

Faviformis, fav-e-for'mis (*favus,* honeycomb, *forma,* shape). Honeycombed. See *Favosus.*

Fa'vose. Faveolate; favous; honeycombed.

Favo'sus (*favus,* honeycomb). Favous; epithet

given to a species of porrigo; ulceration resembling a honeycomb.

Fa'vous. Relating to favus.

Fav'uli (dim. of **Favus**, honeycomb). Honeycomb-like depressions in the lining membrane of the stomach; alveoli.

Fa'vus (honeycomb). Porrigo; porrigo lupinosa or favosa; see *Favosus* and *Phytosis*. **F. achati'nus** (*achates*, agate), favus with agate-like crusts. **F. confer'tus**, porrigo scutulata. **F. crusto'sus**, favus attended with crusts. **F. disper'sus**, porrigo lupinosa. **F. eczemato'des**, vesicular form of favus. **F. fun'gus**, achorion Schœnleinii. **F. lupino'sus**, porrigo lupinosa. **F. scutifor'mis**, ringworm of the scalp. **F. sparro'sus**, F. crustosus. **F. spar'sus**, porrigo lupinosa. **F. suberi'nus** (corklike), F. with corklike crusts. **F., un'gual** or **un'guium**; see *Onychomycosis favosa*.

Fax'wax. Ligamentum nuchæ.

Fea'berry. Gooseberry.

Feath'er gera'nium. Chenopodium botrya.

Feath'erfew. Matricaria.

Febricitans, feb-ris'it-ans (*febricito*, to have fever). Feverish; one attacked with fever.

Febricitatio, feb-ris-it-ah'she-o. Feverishness.

Febricity, feb-ris'it-e. Condition of fever; feverishness.

Febricosus, feb-rik-o'sus. Feverish.

Febricula, feb-rik'u-lah (dim. of **Febris**). Slight degree of fever; ephemera. **F., sep'tic**, mild variety of septic poisoning. **F., ty'phoid**, see *Typhus*.

Febriculose, feb-rik'u-lose. Slightly feverish.

Febriculosity, feb-rik-u-los'it-e. Feverishness.

Febri'cus or **Febriens**, feb're-ens (*febrio*, to have fever). Feverish.

Febrifacient (feb-re-fa'she-ent) or **Febrif'ic** (*febris*, fever, *facio*, to make). Causing fever, as certain drinks or remedial agents.

Febriferous, feb-rif'er-us (*febris*, *fero*, to carry). Fever-bearing or fever-producing.

Febrif'ic. Febrifuge.

Febrifuga, feb-rif'u-gah (*febris*, *fugo*, to drive away). Febrifuge. Erythraca centaurium; Icica altissima.

Febrifugal, feb-rif'u-gal (same etymon). Febrifuge.

Feb'rifuge (same etymon). Medicine possessing the property of abating or driving away fever; antipyretic. Some febrifuges have a general applicability in various fevers, while others—as quinine—have a specific action in such forms as intermittents, etc.

Febrif'ugum. Febrifuge. **F. lig'num**, quassia.

Febrile, feb'ril. Pyretic, pyrectic; relating to fever; feverish. **F. an'guish**, pain of head sometimes preceding fever.

Febril'ity. Condition of fever.

Febris, feb'ris. Fever. **F. acmas'tica**, continued fever. **F. acu'ta**, continued fever. **F. a. contin'ua**, continued fever. **F. adenomeninge'a**, fever, adenomeningeal; fever with irritation of lining membrane of intestinal canal. **F. adenonervo'sa**, plague. **F. adynam'ica**, typhus. **F. æsta'tis**, thermic fever. **F. æsti'va**, summer intermittent fever. **F. Africa'na**, fever, African. **F. agrypno'des**, see *Agrypnodes* and *Agrypnos*. **F. al'ba**, chlorosis. **F. a. milia'ris**, miliary fever. **F. al'gida**, see *Algidus*. **F. amato'ria**, chlorosis; hectic fever. **F. America'na**, yellow fever. **F. amphim'era** or **amphemer'ina**, quotidian. **F. amphimer'ina hec'tica**, hectic fever. **F. a. la'tica**, latent form of quotidian remittent fever. **F. ampullo'sa**, pemphigus. **F. anabat'ica**, continued fever. **F. angino'sa**, angina. **F. angioton'ica**, continued fever. **F. an'nua**, see *Annual diseases*. **F. anom'ala**, fever, anomalous. **F. apho'nica**, fever, aphonic. **F. aphtho'sa**, aphtha. **F. apoplec'tica**, fever, apoplectic. **F. ar'dens**, synocha. **F. ar'te promo'ta**, fever, artificial. **F. arthrit'ica**, gout. **F. aso'des**, fever, bilious; see *Asodes*. **F. assid'ua**, continued fever. **F. asthen'ica**, fever, asthenic; typhus. **F. asthmat'ica**, fever, asthmatic. **F. atac'ta**, ataxic fever. **F. atax'o-adynam'ica**, fever, ataxo-adynamic. **F. aurigino'sa**, jaundice. **F. azo'des**, see *Asodes*. **F. bilio'sa**, fever, bilious. **F. bullo'sa**, pemphigus. **F. cacato'ria**, fever with diarrhœa. **F. cacoe'thes**, typhus fever. **F. cal'ida**, ardent fever; meningitis. **F. à calo're**, thermic fever. **F. campes'tris**, paludal or miasmatic fever. **F. carbuncula'ris** or **carbunculo'sa**, splenic fever; contagious anthrax. **F. carcera'ria** or **car'ceris**, jail fever. **F. cardial'gia**, fever, cardialgic. **F. car'nis**, slight attack of fever following the ingestion of meat, occurring in convalescence from typhoid fever. **F. castren'sis**, typhus fever; remittent fever. **F. catarc'tica**, F. cacatoria. **F. catarrha'lis**, catarrh. **F. c. epidem'ica**, influenza. **F. cathemer'inus**, quotidian fever. **F. caumato'des** or **causo'des**, synocha. **F. cephalal'gica**, fever, cephalalgic. **F. cephal'ica**, fever, cephalic; meningitis; brow ague. **F. cer'ebrospina'lis**, meningitis, cerebro-spinal. **F. cholepyret'ica**, fever, bilious. **F. choler'ica**, fever, bilious; fever, choleric. **F. chron'ica**, fever, chronic; hectic fever. **F. coalter'na**, double intermittent fever; see *Coalternæ febres*. **F. coccin'ea**, scarlatina. **F. colliquati'va**, fever, colliquative. **F. comato'des**, fever, apoplectic. **F. comita'ta**, pernicious intermittent fever; relapsing fever. **F. commu'nicans**, fever, subintrant. **F. complica'ta**, see *Fever, Malta*. **F. compos'ita**, intermittent fever. **F. confu'sa**, see *Confusæ febres*. **F. contagio'sa**, typhus fever. **F. con'tinens**, typhus. **F. c. non-pu'trida**, continued fever. **F. c. putri'da**, typhus. **F. contin'ua inflammato'ria**, internal inflammation. **F. c. non-pu'tris**, synocha. **F. c. pu'trida**, synochus. **F. c. p. ictero'des Carolinien'sis**, yellow fever. **F. c. sanguin'ea**, synocha. **F. c. sim'plex**, synocha. **F. convulsi'va**, fever, convulsive. **F. crit'ica**, remittent fever, ephemeral fever, intermittent fever, typhus fever. **F. crymo'des**, see *Crymodes* and *Algida febris*. **F. culicula'ris**, miliary fever. **F. cum deli'rio**, fever, delirious. **F. depurato'ria**, fever, depuratory. **F. deu'rens**, synocha. **F. diaphoret'ica**, fever, diaphoretic. **F. dia'ria**, ephemera; febricula. **F. diphthero'des**, fever, diphtheroid. **F. duodecim'ana**, fever, duodecimane. **F. dysenter'ica**, dysentery. **F. ectymat'ica**, scarlatina. **F. elo'des**, see *Elodes*. **F. e. ictero'des**, yellow fever. **F. enter'ica**, enteric fever. **F. en'tero-mesenter'ica**, typhoid fever; see *Entero-mesenteric*. **F. epacmas'tica**, fever increasing steadily to a crisis; see *Epacmasticus*. **F. ephem'era**, ephemera; febricula; quotidian fever. **F. epidem'ica cum angi'na**, cynanche maligna. **F. epidem'ica contagio'sa**, pemphigus acutus. **F. epilep'tica**, fever, epileptic. **F. erot'ica**, fever, erotic. **F. errat'ica**, fever, anomalous; fever, erratic; see *Erratic* and *Planetes*. **F. erro'nea**, see *Planetes*. **F. erysipela'cea** or **erysipelato'sa**, erysipelas. **F. erythemato'sa**, roseola febrilis. **F. essero'sa**, miliary fever. **F. exanthemat'ica articula'ris**, dengue. **F. exquis'ita**, fever, regular; F., quotidian. **F. famel'ica**, see *Famelica febris*. **F. fix'a**, continued fever. **F. fla'va** or **fla'va Americano'rum**, fever, yellow. **F. gangræno'des**, fever, gangrenous. **F. gas'trica**, fever, bilious; fever, gastric. **F. gas'trico-inflammato'ria**, gastritis. **F. gas'trico-nervo'sa**, typhoid fever. **F. gastro-adynam'ica**, fever, gastro-adynamic. **F. glutino'sa gas'trica**, typhoid fever. **F. hæmopto'ica**, fever, hæmoptoic. **F. hebdomada'na**, fever with paroxysms recurring every week. **F. hec'tica**, hectic fever. **F. hec'tica infan'tum**, tabes mesenterica. **F. hec'tica malig'na nervo'sa**, typhus mitior. **F. helo'des ictero'des**, yellow fever. **F. hemere'sia**, quotidian. **F. hemitritæ'a**, hemitritæa. **F. hepat'ica**, fever, bilious. **F. hepat'ica inflammato'ria**, hepatitis. **F. herpet'ica**, fever preceding or attending eruption of herpes. **F. hor'rida**, see *Algidus*. **F. horrif'ica**, see *Algidus*. **F. humora'lis**, fever, humoral. **F. Hungar'ica**, fever, Hungaric; typhoid fever. **F. hydrocephal'ica**, hydrocephalus internus. **F. hydrophob'ica**, fever, hydrophobic. **F. hysteret'ica**, a postponing intermittent. **F. hyster'ica**, hysteria accompanied with fever; intermittent fever in which the paroxysms are accompanied with hysteria. **F. icter'ica**, fever, icteric. **F. ictero'des**, yellow fever. **F. ili'aca inflammato'ria**, enteritis;

typhoid fever. **F. infan'tum remit'tens,** fever, infantile remittent. **F. inflammato'ria,** synocha. **F. inten'sio,** period of violence of a fever or paroxysm. **F. intermit'tens,** intermittent fever. **F. intermit'tens cephal'ica larva'ta,** periodical headache, probably neuralgic. **F. intestina'lis,** see *Typhus*. **F. intestina'lis ulcero'sa,** typhoid fever. **F. intestino'rum,** enteritis. **F. irregula'ris,** fever, anomalous. **F. Ital'ica,** plague. **F. lac'tea** or **lactan'tium,** fever, milk. **F. larva'ta,** fever, masked; masked intermittent. **F. len'ta,** fever, infantile remittent; hectic fever; synochus. **F. len'ta nervo'sa,** typhus mitior; fever, nervous. **F. lenticula'ris,** miliary fever. **F. lethar'gica,** fever, apoplectic. **F. le'vis,** febricula. **F. lochia'lis,** fever, lochial. **F. lygmo'des,** fever, singultous. **F. lyngo'des,** fever, singultous. **F. maculo'sa,** typhus. **F. malig'na,** fever, malignant. **F. malig'na bilio'sa Amer'icæ,** fever, yellow. **F. malig'na fla'va In'diæ occidenta'lis,** fever, yellow. **F. malig'na cum so'pore,** typhus. **F. marasmo'des,** hectic fever; fever of emaciation. **F. Mediterra'nica,** yellow fever; pernicious malarial fever of vicinity of Mediterranean Sea. **F. meningogas'tricus,** fever, gastric. **F. mesara'ica** or **mesenter'ica,** fever, adenomeningeal; F., mesenteric; F., typhoid; tubercular disease of mesenteric glands. **F. methemer'ina,** quotidian. **F. milia'ris,** miliary fever. **F. milita'ris,** typhus fever. **F. minu'ta,** fever, syncopal. **F. morbillo'sa,** rubeola. **F. muco'sa,** fever, adenomeningeal. **F. mucosa vermino'sa,** fever, infantile remittent. **F. naut'ica,** typhus fever. **F. naut'ica pestilentia'lis,** typhus gravior. **F. nephrit'ica,** fever, nephritic. **F. nervo'sa,** fever, nervous. **F. nervo'sa enter'ica,** see *Typhus*. **F. nervo'sa epidem'ica,** typhus. **F. nervo'sa exanthemat'ica,** typhus. **F. nervo'sa gas'trica,** see *Typhus*. **F. nervo'sa mesenter'ica,** see *Typhus*. **F. nervo'sa petechia'lis,** typhus. **F. neuro'des,** fever, nervous. **F. ni'gra,** fever, purpuric malignant; cerebro-spinal meningitis. **F. noctur'nus,** see *Nocturnal*. **F. nona'na,** fever, nonane. **F. nosocomia'lis** or **nosocomio'rum,** typhus gravior. **F. nycteri'nus,** see *Nocturnal*. **F. octa'na,** fever, octane. **F. os'citans,** oscitant fever. **F. paludo'sa** or **palu'dum,** see *Elodes*. **F. Panno'nica,** fever, Hungarian. **F. pemphigo'des** or **pemphingo'des,** pemphigus. **F. pemp'ta,** quintan. **F. period'ica,** fever, periodic. **F. pernicio'sa,** fever, pernicious. **F. pes'tilens,** plague. **F. pes'tilens malig'na,** typhus gravior. **F. pestilentia'lis,** fever, pestilential. **F. pestilentia'lis Euro'pæ,** typhus gravior. **F. phlegmat'ica,** quotidian fever. **F. phthis'ica,** hectic fever. **F. plane'tes,** see *Planetes*. **F. pleurit'ica,** pleuritis. **F. pneumon'ica,** fever, pneumonic; pneumonia. **F. podag'rica,** gout. **F. polychol'ica,** fever, bilious. **F. puerpera'lis,** fever, puerperal. **F. puerpera'lis bilio'sa,** puerperal bilious fever. **F. puncticula'ris,** miliary fever; typhus gravior. **F. purpura'ta,** typhus fever; cerebrospinal fever. **F. purpura'te ru'bra et al'ba milia'ris,** miliary fever. **F. purpu'rea pestif'era,** meningitis, cerebrospinal. **F. purulen'ta,** fever, purulent; septicæmia. **F. pu'trida,** typhus gravior. **F. pu'trida nervo'sa,** typhus mitior. **F. quarta'na,** quartan fever. **F. querquera,** see *Algidus*. **F. quin'ta,** quintan. **F. quinta'na,** fever, quintan; quintan. **F. quotidia'na,** fever, quotidian; quotidian. **F. recidi'va,** relapsing fever. **F. recur'rens,** relapsing fever. **F. regula'ris,** fever, regular. **F. remit'tens,** remittent fever. **F. remit'tens infan'tum,** fever, infantile remittent. **F. rheumat'ica inflammato'ria,** rheumatism, acute. **F. ru'bra,** scarlatina. **F. ru'bra prurigino'sa,** urticaria. **F. sanguin'ea,** synocha. **F. sapop'yra,** typhus gravior. **F. scarlatino'sa,** scarlatina. **F. scorbu'tica,** fever, scorbutic. **F. semitertia'na,** fever, semitertian. **F. septa'na,** fever, septan. **F. sesquial'tera,** fever, semitertian. **F. sexta'na,** fever, sextan. **F. Siamen'sis,** yellow fever. **F. sim'plex,** ephemera; fever, simple. **F. singulto'sa,** fever, singultous. **F. soporo'sa,** fever, apoplectic. **F. stercora'lis,** fever, stercoral; gastric fever, enteric fever. **F. sthen'ica,** synocha. **F. stigmat'ica,** typhus fever. **F. stomach'ica inflammato'ria,** gastritis. **F. subin'trans,** fever, subintrant. **F. sudato'ria,** fever, diaphoretic; sudor anglicus or sweating sickness. **F. syncopa'lis,** fever, syncopal. **F. synocha'lis,** synocha. **F. syphilit'ica,** fever, syphilitic. **F. tab'ida,** fever, colliquative; hectic fever. **F. tertia'na,** fever, tertian. **F. ton'ica,** synocha. **F. top'ica,** neuralgia, facial. **F. tor'pida,** enteric fever. **F. tox'ica,** fever, yellow. **F. trag'ica,** fever, tragic. **F. traumat'ica,** fever, traumatic. **F. tritæ'us,** intermittent fever. **F. trop'ica** or **tropica'lis,** fever, yellow. **F. tympan'ica,** enteric fever. **F. typho'des,** typhus; typhoid fever. **F. urethra'lis,** fever, urethral. **F. urino'sa,** uræmia. **F. urtica'ta,** urticaria. **F. uteri'na,** inflammation of the uterus. **F. va'ga,** fever, anomalous; see *Planetes*. **F. variolo'sa,** variola. **F. vermino'sa,** fever, infantile remittent; fever, verminous; helminthopyra. **F. verna'lis,** fever, vernal. **F. vesicato'ria,** pemphigus. **F. vesicula'ris,** miliary fever; pemphigus acutus. **F. vesiculo'sa,** erysipelas. **F. virgin'ea** or **vir'ginum,** chlorosis. **F. vulnera'ria,** traumatic fever.

Februa, feb'ru-ah (*februo*, to purge). In ancient mythology, a goddess presiding over menstruation.

Fe'cal, stercoraceous. **F. mat'ter,** fæces.

Fecula (fek'u-lah) or **Fæcula,** fe'ku-lah (dim. of **Feces**). Immediate principle of vegetables, composed of hydrogen, oxygen, and carbon, existing in several plants under different names, according to that which furnishes it. When extracted from wheat or barley it is called starch or amylum; when from Cycas circinalis, sago; from Orchis morio, salep. We say also fecula of the potato, bryony, arum, manioc, etc. The term is now generally restricted to starch.

Fec'ulence. Deposit; dregs; fæces. In pharmacy, feculent, albuminous, or other substances deposited from turbid fluids.

Fec'ulent, fek'u-lent. Foul, dreggy, excrementitious; as feculent fluid, feculent evacuations, etc.

Fecund, fek'und. Fruitful; prolific.

Fecundation, fe-kun-da'shun. Impregnation; procreation; act by which, in organized beings, the material furnished by the generative organs of the female unites with that prepared by those of the male, so that a new being results. **F., artific'ial,** impregnation by introduction of semen by artificial method.

Fecundity, fe-kund'it-e. Faculty of reproduction possessed by organized bodies; capability of bearing children.

Fee'ble. Infirm.

Feeblemind'edness. Weak mental conditions, in which are included dementia, idiocy, and imbecility.

Feed'ing. Alimentation. **F., rec'tal,** feeding by enema or by suppository.

Feel'ing. Exercise of sensations, general or special, and emotions.

Feet, burning of. Singular cachectic disease in India, the prominent symptom of which is a sense of burning in the feet, due either to rheumatism or neuritis. See *Causalgia*.

Fehling's (fa'ling's) **solu'tion** or **test.** Two solutions are employed for estimation of glucose in urine (to be freshly prepared), one being a solution of 34.639 grammes of crystallized cupric sulphate in 200 c. c. of water, the other a solution of 173 grammes of Rochelle salt in 350 centigrammes of distilled water, heated to the boiling point; on cooling, add 600 centigrammes of a previously boiled solution of caustic soda (sp. gr. 1.12), and make up to a litre with distilled water. To ten minims of each of these solutions in a test-tube add a fluidrachm of distilled water, and boil for a few seconds. If the solution remains clear, drop the urine gradually into it, and heat the tube. If there should be a large quantity of sugar, a reddish deposit results. In the absence of a precipitate, add urine to an equal volume, cool the mixture, and, if there is no precipitate, there is no sugar present.

Feigned (faned) **diseases.** Simulated or pretended diseases. These are generally assumed by beggars to obtain alms, by criminals to escape punishment, and by soldiers to be exempt from duty or to be dis-

charged from the service. The methods adopted for this purpose, and the means by which they may be detected, are set forth in the following paragraphs:

ABORTION.—By staining the clothes and body with borrowed blood.

ABSTINENCE.—Detected by constant and minute attention.

AMAUROTIC BLINDNESS.—By applying the extract of belladonna or Datura stramonium to the eye. Amaurosis is characterized by dilated pupil. Where these substances have been applied, the effects will go off in ten days or a fortnight.

ANÆMIA. See *Cachexia.*

APHONIA.—Detected by anæsthetics, and, under their use or otherwise, taking the person off his guard.

APOPLEXY.—By falling down as if deprived of sensation and consciousness. Detected by powerful stimulants, an electric shock, application of hot water, sternutatories, actual cautery, etc.

CACHEXIA, ANÆMIA, AND DEBILITY.—Using substances to make the face appear pale and livid. Indulging freely in wine, and privation of sleep prior to examination. Detected by examining if the pulse be strong and the skin hot, and whether there be loss of appetite or of strength, or swelling of the limbs, or unmistakable feebleness of the vital actions.

CALCULI, EXCRETION OF.—Putting sand, pebbles, etc. into the urine. Detected by the aid of chemistry; we are acquainted with the chemical composition of urinary calculi.

CANCEROUS ULCER.—By gluing on a portion of a spleen with the smooth side to the skin, leaving on the outside the appearance of an ulcerated surface. Detected by noticing whether there be signs of cachexia, and by attentive examination of the part.

CATALEPSY.—By seeming to be suddenly motionless, the joints remaining flexible, and external objects making no impression. Detected by powerful stimulants, as recommended under Apoplexy; by letting fall a drop of boiling water on the back; by proposing to use the actual cautery, and seeing whether the pulse rises.

CHOREA.—By assuming the convulsive motions of a part which characterize chorea. Detected by examining the patient while he may imagine himself unobserved, and seeing whether the convulsive motions go on; and by anæsthetics, as under Aphonia.

CONTRACTION OF JOINTS IN GENERAL.—The mode of discrimination is sometimes so obscure as to deceive the most practised and attentive. It may be detected by anæsthetics, as under Aphonia.

CONTRACTION OF THE FINGERS.—To detect it, introduce a cord between the fingers and the palm of the hand, and gradually apply weights so as to expand the fingers. Confine him so that he cannot obtain his food without using his clenched hand. It may also be detected by anæsthetics, as under Aphonia.

CONVULSIONS.—When feigned, they do not present the rigidity of muscles or the rapidity of action which characterize real convulsions. The mode of detection must be the same as in Epilepsy.

CORNEA, OPAQUE.—Produced by the application of strong acid, by acrid powders, as quicklime, etc. The existence of the opacity can be detected by attentive observation.

CUTANEOUS DISEASES.—Some articles of diet will bring on urticaria or nettlerash in particular individuals, as shellfish, bitter almonds, etc. They may be produced by acrids, acids, or any irritants applied to the surface. An ointment of tartarized antimony causes a painful pustular eruption. See *Porrigo*, in this list. They may be detected by careful watching and examination on the part of practitioner and nurse.

DEAF-DUMBNESS—The really deaf and dumb acquire an expression of countenance and gestures which it is difficult to assume. It may be detected by anæsthetics, as under Aphonia.

DEAFNESS.—It may be assumed or excited by putting a pea in the ear, or by inserting irritants, so as to induce inflammation and temporary loss of function. To detect it, make a noise when not expected, and see if the countenance varies or pulse rises. Put him to sleep by opium, and then fire a pistol close to the ear when off his guard. Examine the ear to see if any trick has been played there. Try anæsthetics, as under Aphonia.

DEATH.—Some persons possess the power of suspending or moderating the action of the heart. If suspected, the plan recommended under Apoplexy will be found most efficacious.

DEBILITY.—See *Cachexia.*

DEFORMITY.—Examine the part and its articulation naked, and compare it with the opposite side.

DELIRIUM.—Real delirium is accompanied by bodily disease; with general wandering and incoherency. The feigned is more confined to special subjects.

DELIVERY.—After enlargement produced artificially a subsidence of the tumefaction; the parts being moistened by borrowed blood, and the child of another substituted for the female's own. It can only be positively detected by examination *per vaginam.* Soon after delivery the vagina will be relaxed and the lochial discharge be flowing in greater abundance the shorter the time that may have elapsed since delivery.

DIARRHŒA.—Said to have been caused by a mixture of vinegar and burnt cork. May be occasioned by the use of any of the purgative roots, etc. When diarrhœa is feigned by the lower classes, inspect the linen: if clean, the bowels are probably not much out of order. Let every individual have a close-stool of his own, and inspect the evacuations, taking care that one suffering under the disease does not lend his evacuations to another.

DROPSY.—May be feigned, like pregnancy, by wearing pads. The anasarcous condition of the lower limbs has been caused by applying a ligature round them. Also produced by inflating the cellular membrane of the abdomen. It can be detected by attentive examination. There will be a want of that leucophlegmatic habit which accompanies and characterizes dropsy.

DYSENTERY.—May be feigned, like diarrhœa, by adding a little blood to the evacuations, or by introducing a soap or some more irritating suppository. Same rules for detection may be employed as mentioned under Diarrhœa.

EPILEPSY.—The foaming of the mouth has been produced by keeping a piece of soap in it. Sensation in epilepsy is totally abolished. If any remain, disease is probably feigned. Incontractility of pupil, which occurs in epilepsy, cannot be feigned. Same means to be used as in feigned apoplexy.

FEVER.—Produced by various stimulants, as wine, brandy, pepper; swallowing a small quantity of tobacco or introducing it into the anus. Flour or chalk used to whiten the tongue. Redness of skin, caused by friction with a hard brush. This deceit is generally developed by an examination of a day or two. When flour or chalk has been used to whiten the tongue, the line of demarcation between the whitened part and the clean, healthy margin of the tongue is too well marked to escape observation.

FISTULA IN ANO.—Produced by making an incision near the verge of the anus, and introducing into it an acrid tent, such as the root of white hellebore. It may be detected by careful examination.

FRACTURES.—There is generally nothing but the man's own testimony. He complains of pain in the part; if fracture of the skull be feigned, he states, perhaps, that he becomes deranged on tasting liquor. Detected by attentive examination.

HÆMATEMESIS.—By drinking the blood of some animal or using some colored liquid, and then throwing it up. Detected by cutting off the supply of the fluid and careful examination.

HÆMOPTYSIS.—By secreting bullock's blood for the purpose of coloring the saliva; making small incisions in the mouth; using bole armeniac or paint of vermilion. Blood from the lungs is frothy and light-

colored. The mouth and fauces must be carefully inspected, and the individual be observed.

HEART, DISEASES OF. See *Palpitation.*

HEMORRHOIDS.—By introducing bladders of rats or of small fish partly into the rectum. The linen has also been stained with borrowed blood. The means of detection are obvious.

HEPATITIS.—Unless the person be a well-educated impostor, acute inflammation of the liver will be detected by the absence of marks of strong inflammatory action. Chronic liver disease is frequently not characterized by well-marked symptoms, and hence, when assumed, is difficult of detection.

HERNIA.—Produced in the same manner as hydrocele—by inflation. The detection is easy.

HYDROCELE.—Produced by puncturing the skin of the scrotum, and inflating the cellular membrane. The detection is easy.

HYDROCEPHALUS.—Produced by opening the integuments of the head—near the vertex, *e. g.*—and blowing in air. The detection is easy.

HYSTERIA.—Does not easily resist the application of strong sternutatories to the nostrils. Attentive examination necessary.

INSANITY.—The expression of countenance cannot easily be feigned, nor can the affection be kept up so long as in real mental alienation. The individual cannot do so long without food, sleep, etc., and is very apt to overdo his imitative actions.

JAUNDICE.—Produced by coloring the skin with an infusion of turmeric or tincture of rhubarb. Clay-colored stools may be produced by taking daily a small quantity of muriatic acid. High-colored urine may be caused by rhubarb taken internally. The eyes cannot be colored, although smoke has been used for this purpose. The skin must be washed to remove the coloring matter, if any exist, and the supply of acid and rhubarb be prevented.

LAMENESS.—Produced by keeping the limb in a contracted state, and resisting any efforts to move it. May be detected by two persons taking hold of the individual and moving rapidly along with him, and when they are tired having relays. The impostor will generally give in. May also be detected by anæsthetics, as under Aphonia.

MENSTRUATION.—Produced by staining the clothes and body with borrowed blood. May be detected by cutting off the supply.

MYOPIA.—Present an open book, and apply the leaves close to the nose. If it cannot be read distinctly when thus placed, or when glasses proper for short-sightedness are used, the disease is feigned.

OPHTHALMIA.—Excited by a variety of acrid and corrosive substances applied to the eye, as lime, etc. A portion of black muslin is spread over the cornea. The eyelashes are sometimes extracted, and caustic applied to excite disease in the eyelids. When ophthalmia is thus excited, its progress is ordinarily very rapid, arriving at its height within a few hours.

OZÆNA.—Produced by impregnating a piece of sponge with some offensive juices or oils mixed with decayed cheese, and putting the imbued sponge into the nostrils.

PAINS.—The detection is here often difficult. The non-existence of pain cannot be proved, and great pain may be present without any appearance externally. The imposition is more frequently detected by inconsistencies and contradictions in the patient's history of the case than in any other manner.

PALPITATION.—White hellebore, given in the dose of 10 or 12 grains, and repeated, will occasion general indisposition and undue action of the heart. To detect it, cut off the supply.

SHAKING PALSY.—May be suspected if the person be in an ordinary state of vigor. To detect it, use violent remedies and means recommended under Chorea.

PARALYSIS.—Violent remedies are here required, as cold affusion, actual cautery, electric shocks, etc. May be detected by anæsthetics, as under Aphonia.

PHTHISIS PULMONALIS.—Individuals with long necks and contracted shoulders have simulated phthisis by covering the chest with blisters, cicatrices of issues, etc., and by taking drugs which cause paleness. May be detected by attentive examination of the symptoms.

POLYPUS NASI.—Produced by introducing the testicle of a young cock or the kidney of a rabbit into the nostril, and retaining it there by means of a sponge fastened to it.

PORRIGO OR SCALLED HEAD.—Produced by applying nitric acid to the head, after protecting the face with fatty substances; but the chronic state is imitated by the use of depilatories of different kinds applied sometimes in patches, so as to resemble *Porrigo decalvans.*

PREGNANCY.—Produced by wearing pads and assuming the longing after particular articles of diet, etc. Detected by the absence of the areola, the presence of a pad, and, if necessary, by examination *per vaginam.*

PROLAPSUS ANI.—Produced by a portion of the intestine of the ox, in which a sponge filled with a mixture of blood and milk is placed.

PROLAPSUS UTERI.—A similar fraud.

PULSE, WEAKNESS OR DEFECT OF.—Produced by ligatures applied to the corresponding arm. Slowness of pulse may be caused by the use of veratrum viride. Detected by examining whether the arteries of the two arms beat alike, and if a ligature be placed on the arm.

RHEUMATISM, CHRONIC.—Complaint of great suffering on moving the limbs, and of pain and stiffness of the joints. Detected by careful observation and the use of anæsthetics, as under Aphonia. It is frequently feigned, and not easy of detection. See *Pains.*

SCROFULA.—Produced by exciting ulcers below the angles of the jaw. Detected by examining the general habit, and observing whether the ulcerations be glandular, and the discharge of a scrofulous character.

SCURVY.—Produced by covering the teeth with wax, and then applying acid corrosive substances to the gums. Detected by examining the general habit—whether debilitated, cachectic, and possessing the usual general signs of scorbutus.

STAMMERING.—Simulators of this defect generally state that it is connate, or ascribe it to a fit of apoplexy or severe fever. Where the organs of speech were perfect, and the moral evidence of the previous existence of the infirmity was not satisfactory, the French authorities used to confine the soldiers, and not supply them with food until they called for it without stammering.

STRABISMUS.—If the person be roused suddenly from sleep, the eyes will be right, as they also are during sleep. Under anæsthetics they would be so likewise.

STRICTURE OF THE URETHRA.—Detected by passing a bougie.

SWELLING OF THE LEGS.—Produced by ligatures round the thighs. To detect it, examine the limbs uncovered.

SYNCOPE.—Ligatures are sometimes used to prevent the pulse being felt. Lotions are applied to the face to make it pale. Detected by using sternutatories and by the absence of some of the symptoms of syncope. Examine the naked arms. Wash the face.

TUBERCULOSIS. See *Phthisis.*

TYMPANY.—Persons have possessed the power of swallowing air so as to distend the stomach and to simulate tympany.

ULCER OF THE EAR.—Produced by introducing a tent imbued with blistering plaster into the ear, and repeating the application until the tube becomes ulcerated, and a discharge of puriform matter is established. The fetid smell is imitated by dropping into the ear a mixture of empyreumatic oil, asafœtida, and old cheese; also by introducing a little honey into the meatus. May be detected by careful examination.

ULCERS OF THE LEGS, ETC.—Produced by corro-

sives or irritants; sometimes by abrasion, by rubbing sand on the shin-bone. At others they are pretended, by gluing on a piece of spleen or the skin of a frog. Artificial ulcers have usually a more distinct margin, and are more readily healed than others, the latter being generally indicative of an impaired constitution.

URINE, BLOODY.—The fruit of the Indian fig (*Cactus opuntia*) colors the urine as red as blood. Cantharides will cause it. Blood may also be procured and mixed with the urine. May be detected by making the patient pass his urine in the presence of the physician, and examining the vessel before and after, and by cutting off the supply of any substance which could cause the appearance.

URINE, INCONTINENCE OF.—Difficult, at times, of detection. Give the person a full dose of opium, and introduce the catheter when he is asleep. If there be urine, the incontinence is feigned.

VARICOSE VEINS.—Produced by a ligature placed tightly round the limb. They may be excited in this manner, or aggravated if already existing. Detected by examining the limb.

Fel. Bile. **F. anguil'læ,** see *Bile.* **F. bovi'num** or **bo'vis** (Ph. U. S.), bile of ox. **F. bo'vis,** see *Bile.* **F. bo'vis inspissa'tum** (Ph. U. S.), inspissated ox-bile. **F. bo'vis purifica'tum** (Ph. U. S. and Br.), see *Bile of the ox.* **F. natu'ræ,** aloes. **F. tau'ri,** see *Bile.* **F. ter'ræ,** Erythræa centaurium, Ludus Helmontii. **F. ur'si,** see *Bile.* **F. vit'ri,** see *Vitrum.*

Feld'wood. Verbascum thapsus, species of Gentiana.

Fel'leous. Biliary; bilious.

Fel'lic acid. $C_{26}H_{40}O_4$. An acid derived from bile.

Felliducous, fel-lid'u-kus (*fel, duco,* to lead). Cholagogue.

Fellifluous, fel-lif'lu-us (*fel,* bile, *fluo,* to flow). Cholagogue.

Fellineus, fel-lin'e-us. Bilious.

Fellinic (fel-lin'ik) **acid.** Acid derived from digesting bilin with muriatic acid.

Fel'lis obstruc'tio (obstruction of bile), **suffu'sio,** or **superfu'sio.** See *Icterus.*

Fell'wort. Gentiana lutea.

Felo de se. Suicide.

Fel'on. Paronychia; whitlow; inflammation of cellular tissue around the finger; periphalangeal cellulitis.

Fel'onwort. Solanum dulcamara.

Felt'ing. Tangling. Term applied to the hair when inextricably interlaced, as occurs occasionally in women from inattention.

Fel'wort. Gentiana lutea.

Fe'male. In animals, one that engenders and bears young; also used adjectively, as female sex, etc. **F. blade,** blade of an instrument made for reception of the male blade. **F. cath'eter,** short catheter for the female bladder. **F. fern,** Asplenium filix fœmina; anthelmintic. **F. parts,** vulva. **F. pronu'cleus,** nucleus derived from the germinal vesicle of the ovum.

Femel'la. Female.

Fe'men. Thigh (inner part); femur; vulva.

Femina. Female.

Fem'inal. Pubes.

Femin'eous. Female.

Feminescence, fem-in-es'sence (*fœmina,* female). Possession or assumption of certain male characteristics by the female.

Feminin'ity. Feminity.

Feminism, fem'in-izm (*fœmina,* female). Defective or abnormal sexual development of the male, leading to assumption of female characteristics and tastes.

Femin'ity. Aggregation of characteristics of the female.

Femoræ'us. Cruræus.

Fem'oral (*femur,* thigh). Belonging or relating to the thigh. **F. arch,** crural arch; Poupart's ligament. **F. ar'tery,** literally artery of the thigh. The *superficial femoral* is a continuation of the external iliac; becomes afterward popliteal. *Deep* or *Profunda femoris* is a branch of it. *Common femoral artery* is part of the superficial femoral above the point at which the deep artery is given off. **F. bone,** os femoris or thigh-bone. **F. canal',** crural canal. **F. crest,** linea aspera. **F. her'nia,** see *Merocele.* **F. lig'ament,** falciform process. **F. ring,** crural canal. **F. sheath,** investment of fascia around the femoral artery, made up of a continuation of the transversalis fascia in front and pelvic fascia behind. **F. vein,** chief venous trunk of the lower extremity, accompanying the artery. *Deep femoral* or *Profunda femoris vein* is distributed with the deep femoral artery.

Femoralis, fem-o-ral'is. Femoral; triceps extensor cruris.

Femoreus, fem-o-ra'us. See *Triceps cruris* or *Cruræus.*

Fem'oro. In composition, relating to the femur.

Fem'oro-calca'nean. Relating to the femur and heel.

Fem'oro-calca'neus. Plantaris.

Fem'oro-caud'al. Relating to the femur and tail.

Femorocele, fem-or-o-se'le (Eng. fem'or-o-seel) (*femur, kele,* hernia). Femoral hernia.

Fem'oro-coccyge'us. Relating to femur and coccyx.

Fem'oro-cuta'neous. Relating to skin of thigh. **F.-c. nerve,** external cutaneous nerve of thigh.

Fem'oro-gen'ital. Relating to thigh and genital organs. **F.-g. nerve,** genito-crural nerve.

Fem'oro-phalange'us. Muscle in lower animals corresponding to plantaris and flexor digitorum brevis in man.

Fem'oro-poplite'al. Relating to thigh and popliteal space or to popliteal region of thigh. **F.-p. ar'teries,** perforating arteries. **F.-p. vein,** branch of femoral vein emptying into short saphenous vein.

Fem'oro-poplit'eo-tib'ial mus'cle. Popliteus.

Fem'oro-prephalangæ'us. Muscle in lower animals corresponding with extensor longus digitorum pedis in man.

Fem'oro-pretib'ial. Relating to thigh and front part of leg. **F.-p. nerves,** branches of long saphenous nerve to inner side of leg.

Fem'oro-tib'ial. Belonging to femur and tibia, as *Femoro-tibial articulation,* knee-joint.

Fem'oro-vas'cular. Relating to femoral canal.

Fe'mur. The thigh; thigh-bone; strongest and longest of all the bones of the body, extending from the pelvis to the tibia, and forming solid part of thigh. It is cylindrical, slightly curved anteriorly, unsymmetrical, and oblique downward and inward. The body of the bone is prismatic, and has behind a prominent ridge, linea aspera. The processes on the femur are at the upper or pelvic extremity—the head supported on a column or neck, the great trochanter, the lesser trochanter; at the inferior or tibial extremity the external condyle, internal condyle, external tuberosity, and internal tuberosity. The femur ossifies from five points: one on each process of the pelvic extremity; one in the body of the bone; and two on the condyles. It is articulated with the pelvis, tibia, and patella. See *Thigh.*

Fenestra, fen-es'trah (window). Anatomists have given this name to two apertures situate in the inner paries of the cavity of the tympanum. One of these, fenestra ovalis or vestibuli or vestibularis, foramen ovale, is oval-shaped, situate at the base of the stapes, and corresponds with cavity of vestibule. The other is fenestra rotunda or cochlearis or triquetra, foramen rotundum. **F. coch'leæ,** see *Fenestra.* **F. cochlea'ris,** see *Fenestra.* **F. larynge'a,** space covered by crico-thyroid membrane, is closed by a fine, transparent membrane, membrana tympani secundaria, tympanum minus or secundarium, membrana fenestræ rotundæ, and corresponds to inner scala of cochlea. Also open space in the blades of the forceps. **F. oc'uli,** pupil. **F. ova'lis,** see *Fenestra.* **F. rotun'da,** see *Fenestra.* **F. semiova'lis,** F. ovalis. **F. trique'tra,** see *Fenestra.* **F. vestib'uli** or **vestibula'ris,** see *Fenestra.*

Fenes'tral or **Fen'estrated** (*fenestra,* window). Having fenestræ. Bandages, compresses, or plasters

with small perforations or openings, which prevent the detention of the discharge.

Fenestrated, fen'es-tra-ted. Fenestral. **F. lay'er,** see *Retina.* **F. mem'brane,** see *Artery.*

Fen'nel. Anethum. **F., dogs',** Anthemis cotula. **F. flower,** nigella. **F. fruit,** fruit of Fœniculum vulgare; has stimulant and carminative properties. **F., hogs',** peucedanum. **F. seed,** fennel. **F., sweet,** anethum. **F. water,** aqua fœniculi.

Fen'ugreek. Trigonella fœnum.

Feraconitine, fer-ak-on'it-een. Pseudaconitine; alkaloid obtained from Nepal aconite.

Feralis pediculus, fer-al'is ped-ik'u-lus. Crab-louse or pediculus pubis.

Fergusson's speculum, fur'gus-son's spek'u-lum. Silvered glass vaginal speculum.

Fe'rine (*fera,* wild beast). Term applied to any malignant or noxious disease.

Ferment, fur'ment (*ferveo,* to be hot). Leaven. Substance having property of modifying the nature of organic or other substances under influence of heat and moisture. Ferments split up carbon compounds at moderate temperatures, leading to formation of other carbon compounds. Certain forms of schizomycetes, capable of producing fermentation, are called *organic ferments.* Ferments such as diastase, ptyalin, and pepsin contain carbon, and are therefore called organic; but, as they have no definite structure, are called *unformed ferments* or *enzymes.* See *Enzymes* (table). **F., curd'ling,** see *Ferments, digestive* (table). **F., diastat'ic,** diastase of saliva and pancreatic juice; see *Ferments, digestive* (table). **F. of liv'er,** glycogen. **F., pep'tic,** pepsin; papayotin. **F., proteolyt'ic,** F. in digestion, changing fibrin into peptone. **F. of sali'va,** ptyalin. **F., sep'tic,** substance from decomposing animal tissues capable of infecting the blood of animals when introduced into it. **F. of stom'ach,** pepsin. **F., un'formed,** enzyme.

Fermenta'tion. Decomposition of a body by action of a ferment, as by that of micro-organisms. See *Ferment.* **F., ace'tic,** change taking place under influence of bacillus aceti in alcoholic solutions, by which they are converted into vinegar. **F., albu'minoid,** change effected in liquids by conversion into albuminous matter. **F., alcohol'ic,** process by which saccharine and other matters are changed into alcohol by decomposition of glucose. **F., ammoni'acal,** change produced in the urine under the influence of the micrococcus ureæ. **F., butyr'ic,** *Butyric acid* or *Butyrous F.,* development of butyric acid from starch, dextrin, glucose, glycerin, etc., under the influence of the bacillus butyricus and other microbes. **F. fe'ver,** fever due to absorption of fibrin ferments. **F., lac'tic,** conversion of sweet into sour milk under the influence of the bacillus lacticus. **F., putrefac'tive,** putrefaction. **F. test,** test for glucose in urine by generation of carbonic acid gas from multiplication of yeast-fungus, saccharomyces cerevisiæ, at a temperature of 75° to 80° F., by adding to three ounces of urine a fluidrachm of ordinary yeast; if sugar is present, fermentation occurs. **F. the'ory of disease,** *Zymotic theory.* Theory that poison in the atmosphere or derived from an affected person acts as a ferment to textural waste-products lingering in the body of a healthy but predisposed person. **F., vi'nous,** F., alcoholic.

Fer'ments, diges'tive. These are agents in various parts of the alimentary canal which exert a special action on the food as it passes along. See *Pepsin, Ptyalin, Trypsin,* etc. The term *Enzyme* has been recently introduced to signify ferments such as those referred to—pepsin, ptyalin, trypsin, etc.—which, though they contain carbon, and are therefore called organic, are not alive and have no definite structure, or, in other words, are not organized (Brunton).

The following table, by Roberts, presents, at a glance, a sketch of the different digestive juices and ferments, and the specific action of the latter on different forms of food materials, as starch, sugar, fat, proteids, etc., in various parts of the alimentary canal:

TABLE OF FERMENTS CONTAINED IN THE DIGESTIVE JUICES.

Digestive Juices.	Ferments contained in them.	Action as Food Materials.
Saliva.	Salivary diastase or ptyalin.	Changes starch into dextrin and sugar.
Gastric juice.	Pepsin.	Changes proteids into peptones in an acid medium.
	Curdling ferment.	Curdles the casein of milk.
Pancreatic juice.	Trypsin.	Changes proteids into peptones in alkaline and neutral media.
	Curdling ferment.	Curdles the casein of milk.
	Pancreatic diastase.	Changes starch into dextrin and sugar.
	Emulsive ferment.	Emulsifies and partially saponifies fats.
Bile.		Assists in emulsifying fats.
Intestinal juice.	Invertin.	Changes cane-sugar into invert sugar.
	Curdling ferment.	Curdles the casein of milk.

(See also table under *Enzymes* (unformed ferments).

Fermen'tum. Ferment; yeast. **F. cerevis'iæ,** yeast. **F. mor'bi,** ferment. **F. ventric'uli,** ferment of stomach; gastric juice.

Fern. Filix. **F. bush,** Comptonia asplenifolia. **F., cin'namon,** Osmunda cinnamomea. **F., ea'gle,** Pteris aquilina. **F., fe'male,** Asplenium filix fœmina, Pteris aquilina. **F., flow'ering,** Osmunda regalis. **F. gale,** Comptonia asplenifolia. **F., male,** Polypodium filix mas. **F., mead'ow,** Comptonia asplenifolia. **F. rock,** Adiantum pedatum. **F. root,** Polypodium vulgare. **F., sweet,** Adiantum pedatum, Comptonia asplenifolia. **F., sweet, shrub'by,** Comptonia asplenifolia.

Fernambu'co wood. Cæsalpinia echinata.

Fern'freckle or **Fern'tickle.** Freckles; ephelides.

Fero'lia Guianen'sis or **variega'ta.** Atlas-wood; inner bark is used in baths, etc.

Feronia elephantum, fer-o'ne-ah el-ef-an'tum (from the goddess *Feronia*). Wood-apple tree; elephant wood or apple; tree of India yielding gum resembling gum arabic; leaves, aromatic and of an odor resembling anise, are carminative; unripe fruit is astringent. **F. pellu'cida,** Ægle marmelos; covolam.

Ferramentum, fer-ram-en'tum. Any surgical instrument made of iron. Instrument used in difficult labor.

Ferraria, fer-rah're-ah. Scrophularia aquatica.

Fer'rate. Salt of ferric acid.

Fer'rated. Containing iron; chalybeate.

Ferra'tus (*ferrum,* iron). Chalybeate.

Ferrein', canal of. Triangular channel which Ferrein (French physician of 18th century) supposed to result from the approximation of the free edges of the eyelids applied to the globe of the eye; he considered it adapted for directing the tears toward the puncta lacrymalia during sleep. Cortical canals, the first portions of the uriniferous ducts while still in the cortical substance of the kidney. **F., cords of,** inferior vocal cords. **F., pyr'amids of,** each papilla of the kidney, according to Ferrein, consists of at least 700 subordinate cones or pyramids. *Pyramids of Ferrein, Pyramides renales Ferreini, Fasciculi pyramidales* or *corticales, Lobuli renum,* cone-shaped extensions of medullary substance of kidney into the cortical portion. **F., tubes of,** cortical portion of uriniferous tubes.

Fer'ri ace'tas. Acetate of iron, ferric acetate, iron liquor; made from carbonate of iron and acetic acid. Dose of the tincture is 15–30 min. **F. æru'go,** F. subcarbonas. **F. et alumin'ii sul'phas,** sulphate of iron and aluminium, is made by treating bicarbonated solution of soft iron and carbonated solution of pure washed alumina, with sulphuric acid. **F. et ammo'nii ci'tras,** ferri ammonio-citras. **F. et ammo'nii mu'rias,**

ferrum ammoniatum. **F. et ammo'nii sul'phas** (Ph. U. S.), sulphate of iron and ammonium, sulphate of iron and ammonia, ammonio-ferric alum; used in atonic uterine leucorrhœa, chronic diarrhœa, and dysentery; externally, in relaxation of uvula, uterus, etc. Dose, v to x grains. **F. et ammo'nii tar'tras** (Ph. U. S.), tartrate of ammonium and iron. Dose, iv to x grains. **F. ammo'nio-chlo'ridum**, ferrum ammoniatum. **F. ammo'nio-ci'tras**, *Ferri et ammonii citras* (Ph. U. S. and Br.), *Ammonio-citrate of iron, Citrate of ammonia and iron, Citrate of iron and ammonium.* It is more soluble than the citrate. Dose, gr. v to gr. x. A potassio-citrate and a sodio-citrate of iron have also been introduced, and a citrate of the magnetic oxide of iron prepared by combining the magnetic oxide with citric acid. **F. ammo'nio-tar'tras**, *Ferri et ammonii tartras* (Ph. U. S.), *Ammonio-tartrate of iron, Tartrate of iron and ammonia, Ammonio-ferric tartrate, T. of iron and ammonium.* It is very soluble. The dose is 5–15 grains in pill or solution. **F. arse'nias** (Ph. Br.), arseniate of iron. Dose, gr. $\frac{1}{40}$–$\frac{1}{20}$. **F. ben'zoas**, unofficinal preparation of iron. Dose, gr. j–v. **F. Borus'sias**, Prussian blue. **F. bro'midum**, *Bromide of iron, Ferrous bromide*, in solution, *Hydrobromate of iron, Ferri hydrobromas.* Tonic and alterative, with the peculiar therapeutical qualities of the bromides. Dose, gr. j–v. **F. carbo'nas**, F. subcarbonas. The dose of the syrup of the bromide is ♏xv–lx. **F. carbo'nas efferves'cens**, *Effervescing carbonate of iron.* Carbonate of iron prepared with tartaric acid, bicarbonate of sodium, sulphate of iron, powdered sugar, and citric acid. **F. carbo'nas sacchara'tus** (Ph. U. S. and Br.), saccharated carbonate of iron; chalybeate tonic. Dose, gr. v–xv, in pill. See *F. protocarbonas.* **F. carbo'nas cum sac'charo**, see *Ferri protocarbonas.* **F. carbona'tum**, graphites. **F. carbure'tum**, graphites. **F. chlo'ridum** (Ph. U. S.), $Fe_2Cl_612H_2O$, *Ferric chloride, Chloride, Sesquichloride, Perchloride*, or *Muriate of iron*, is obtained by the action of muriatic acid and nitric acid on iron wire. Dose, gr. i–iij. It is generally prescribed in the form of *Tinctura ferri chloridi.* It is considered one of the most reliable preparations of iron. Dose, ♏x–xxx. A concentrated solution of the perchloride has been used as an injection for the radial cure of aneurism, and it has been employed wherever a powerful styptic has been needed. It forms the *Liquor ferri chloridi* (Ph. U. S. and Br.). **F. ci'tras** (Ph. U. S.), *Citrate of iron.* $Fe_2(C_6H_5O_7)_2,6H_2O$. The citrate resembles in medical properties the tartrate and the lactate of iron. Dose, five grains or more. **F. cyanure'tum**, see *Prussian blue.* **F. deutocarbo'nas fus'cus**, F. subcarbonas. **F. deutox'idum ni'grum**, æthiops martialis. **F. ferrocy'anas**, Prussian blue. **F. ferrocyan'idum**, Prussian blue. **F. ferrocyanure'tum**, Prussian blue. **F. fi'lum**, iron wire. **F. hydri'odas**, F. iodidum. **F. hydrocy'anas**, Prussian blue. **F. hypercarbure'tum**, graphites. **F. hypophos'phis** (Ph. U. S.), *Hypophosphite of iron.* It has the tonic properties of the iron with the other therapeutic qualities of the hypophosphites. Dose, gr. v–x, three times a day, and in syrup in the dose of a fluidrachm. See *Hypophosphites.* **F. io'didum** or **iodure'tum**, *Iodide* or *Ioduret of iron, Ferrous iodide, Hydriodate of iron, Ferri hydriodas.* The iodide is officinal in the form of the pill and syrup; see *Pilulæ ferri iodidi* and *Syrupus ferri iodidi.* Dose, gr. j–v, and in the syrup of the iodide ♏x–xxx. **F. io'didum sacchara'tum** (Ph. U. S.), saccharated ferrous iodide. Identical with saccharated iodide of iron of the German Pharmacopœia. The ferrous iodide is preserved by contact with sugar of milk. Dose, gr. ij–v. **F. lac'tas** (Ph. U. S.), *Lactate of iron, L. of protoxide of iron.* $Fe(C_3H_5O_3)_2.3H_2O$. Employed in the same cases as the precipitated subcarbonate of iron, and especially in chlorosis. The dose is gr. j–v three times a day, in lozenges. **F. limatu'ra purifica'ta**, *Purified iron filings*—purified by means of the magnet for internal use. The filings are also called *Ferri scobs, F. ramenta, F. fila, Ferri* or *Martis limatura, Speculum indicum, Ferri in pulverem resolutio.* They are considered to possess the general properties of iron—the iron becoming oxidized. **F. et magne'siæ ci'tras**, *Citrate of iron and magnesia.* It is soluble in water, and does not constipate. Dose, from four grains to fifteen, in solution. **F. ma'las**, malate or pomate of iron; agrecable mild tonic. Dose, gr. v–xv. **F. ni'tras**, see *Liquor ferri nitratis.* **F. nitra'tis li'quor**, see *Liquor ferri nitratis.* **F. ox'alas** (Ph. U. S.), *Oxalate of iron.* It is tonic without being astringent. Dose, two or three grains, in pill. **F. ox'idum fu'sum**, F. subcarbonas. **F. ox'idum hydra'tum** (Ph. U. S. and Br.), ferrum oxidatum hydratum. **F. ox'idum hydra'tum cum magne'siâ** (Ph. U. S.), hydrated oxide of iron with magnesia. Composed of solution of tersulphide of iron, magnesia, and water, and used as an antidote to arsenic, being administered freely in tablespoonful doses. **F. ox'idum magnet'icum**, oxidum ferri nigrum. **F. ox'idum ni'grum**, oxidum ferri nigrum. **F. ox'idum ru'brum**, colcothar; ferri subcarbonas. **F. ox'idum sacchara'tum**, *Saccharated oxide of iron.* Dark-brown powder, made by dissolving iron in nitric acid, filtering, evaporating, adding sugar, and an excess of sugar in water of ammonia, and precipitating with alcohol. **F. perchlo'ridum**, see *Ferri chloridum.* **F. percyan'idum**, Prussian blue. **F. perox'idum hu'midum**, ferrum oxidatum hydratum. **F. perox'ydum hydra'tum**, ferrum oxidatum hydratum. **F. persesquini'tras**, see *Liquor ferri nitratis.* **F. persul'phas**, see *Ferri sulphas.* **F. phos'phas** (Ph. U. S. and Br.), *Phosphate of iron, Ferric phosphate.* By double decomposition between sulphate of iron and sodium phosphate. Dose, gr. j–v, as a chalybeate. The British Pharmacopœia has a *Syrupus ferri phosphatis, Syrup of phosphate of iron* (gr. j of the phosphate to f℥j of syrup), the dose of which is a fluidrachm or more. A compound syrup of phosphate of iron has been much used in routine practice in the United States under the absurd name of "chemical food." **F. po'mas**, pomate of iron; ferri malas. **F. et potas'sæ tar'tras**, ferrum tartarizatum. **F. et potas'sii tar'tras** (Ph. U. S. and Br.), ferrum tartarizatum. **F. potas'sio-ci'tras**, see *Ferri ammoniocitras.* **F. potas'sio-tar'tras**, ferrum tartarizatum. **F. protocarbo'nas**, *Protocarbonate of iron, Ferrous carbonate.* The protocarbonate of iron, thrown down from a solution of the sulphate of iron by the carbonate of sodium, readily attracts oxygen and becomes converted into the sesquioxide. To prevent this, it may be associated with honey and sugar, and the mixture be reduced by evaporation to a pilular consistence. The mass consitutes the ferruginous pills of Vallet, Vallet's pills; see *Pilulæ ferri carbonatis.* The *Ferri carbonas saccharatum* (ferri carbonas cum saccharo, saccharine carbonate of iron) is prepared in this manner; also called the *Ferrum carbonicum saccharatum* and *Ferri carbonas saccharata, Saccharated carbonate of iron* of the Ph. B. The protocarbonate is given in the same diseases as the lactate of iron; ten or fifteen grains in the course of twenty-four hours. **F. protosul'phas vir'idis**, F. sulphas. **F. Prus'sias**, Prussian blue. **F. pul'vis**, *Ferrum redactum, Powder of iron, Iron by hydrogen, Reduced iron, Quevenne's iron.* It is very liable to become oxidized, and must be kept in a dry, well-stopped bottle. It has been prescribed in anæmic and especially in chlorotic cases. The ordinary dose is three to six grains or more, three times a day, in pill made with sugar and gum. There is a *Ferrum redactum* in the Ph. B., which is metallic iron with a variable amount of magnetic oxide. **F. pyrophos'phas** (Ph. U. S.) *Pyrophosphate of iron, Ferric pyrophosphate.* A reaction between citrate of iron and pyrophosphate of sodium. On account of its solubility it is a favorite ingredient in the preparation of elixirs of iron, etc. Dose, two to five grains. **F. et quini'næ ci'tras** (Ph. U. S. and Br.), citrate of iron and quinine (ferri citras, 88; quinine, dried, 12; aqua destill., q. s. ad 100, mixed and evaporated). Astringent and stimulant to digestive tract, and prescribed in cases where a combination of these tonics is indicated. Dose, gr. v to x, containing one or two grains of quinine. **F. ramen'ta**, F. limatura. **F. rubi'go**, F. subcarbonas. **F. sal'icylas**, iron sal-

licylate. **F. scobs**, F. limatura. **F. sesquichlo'ridum**, F. chloridum. **F. sesquini'tras**, see *Liquor ferri nitratis*. **F. sesquiox'idum**, F. subcarbonas præcipitatus. **F. so'dio-ci'tras**, see *Ferri ammonio-citras*. **F. et strychni'næ ci'tras** (Ph. U. S.), *Citrate of iron and strychnia*. Separate solutions of *citrate of iron and ammonium* and of *strychnia* with *citric acid* are made in distilled water, which are mixed and evaporated and dried in scales. Dose, gr. j to iij. **F. subcarbo'nas**, *F. carbonas*, *F. rubigo*. (The last two terms, as well as *Ferrugo*, are applied to the subcarbonate or rust, *Ærugo ferri*, *Cacaferri*, formed by the action of moist air on metallic iron.) A protoxide of iron oxidized by the decomposition of water, carbonic acid being attracted from the air. Dose, gr. v to xxx or more. *Ferri subcarbonas*, *Subcarbonate of iron*, *Precipitated carbonate of iron*, may be precipitated from sulphate of iron by carbonate of sodium. It has also been called *Sesquioxide* or *Peroxide of iron*. **F. suc'cinas**, iron succinate; this salt has been recommended for relief of catarrhal jaundice and for those who have a redundancy of fatty tissue. **F. sul'phas** (Ph. U. S. and Br.), *Vitriol*, *Sulphate of iron*, *Ferrous sulphate*, *Green vitriol*, *Copperas*. The United States Pharmacopœia directs it to be made by the action of sulphuric acid on iron wire in water—evaporating, crystallizing, and drying the crystals on bibulous paper. This salt is inodorous and of a strong styptic taste; the crystals are light green, transparent, and soluble in two parts of water; it is tonic and anthelmintic. Dose, gr. j to iij and more. *F. persulphas*, *Persulphate of iron*, *Ferric sulphate*, *Monsel's salt*, is a powerful coagulant and styptic. A formula for *Liquor ferri subsulphatis*, *Solution of subsulphate of iron*, *Solution of persulphate of iron*, *Monsel's solution*, is in the Ph. U. S. **F. s. calcina'tum**, colcothar. **F. s. exsicca'tus** (Ph. U. S. and Br.), *Ferri sulphas exsiccata*, dried sulphate of iron; sulphate of iron exposed to a moderate heat until it is capable of being reduced to powder; in this form it can be made into pills. Dose, gr. ss–ij. **F. s. granula'ta**, *Granulated sulphate of iron*. Ph. B. has a formula for the preparation of this salt, the ingredients being iron wire, sulphuric acid, distilled water, and rectified spirit. Dose, gr. j–v. **F. s. præcipita'tus** (Ph. U. S. and Br.), precipitated sulphate of iron; precipitated ferrous sulphate, identical with granulated sulphate of iron, ferri sulphas granulata (Ph. Br.). **F. sulphure'tum**, *Sulphuret of iron*, *Ferrous sulphide*, *Iron pyrites* (by heating sublimed sulphur over iron filings), a ready means for obtaining hydrosulphuric-acid gas by the addition of sulphuric or chlorohydric acid. **F. tan'nas**, *Tannate of iron* (by adding a solution of a salt of sesquioxide of iron, as the persulphate, to a decoction of nut-galls); tonic and astringent, and extolled in chlorosis. **F. tar'tarum**, ferrum tartarizatum. **F. tritox'idum**, colcothar. **F. valeria'nas** (Ph. U. S.), *Valerianate of iron* (formed by the action of valerianic acid on oxide of iron), dark brick-red powder, insoluble in water, given in hysteria complicating chlorosis. Dose, j to iij gr.

Fer'ric ac'etate. Ferri acetas. **F. chlo'ride**, ferri chloridum. **F. hy'drate**, ferrum oxydatum hydratum. **F. ni'trate**, see *Liquor ferri nitratis*. **F. ox'ide**, colcothar. **F. pyrophos'phate**, ferri pyrophosphas. **F. sul'phate**, see *Ferri sulphas*.

Fer'ricus hy'dras. Ferrum oxydum hydratum.

Ferrocy'anide. Salt produced by union of ferrocyanic acid with a base.

Ferro-ferric hydrate. Oxidum ferri nigrum.

Ferromanganic, fer-ro-man-gan'ik. Composed of iron and manganese.

Ferrosaline (fer-ro-sal-ine') **mix'ture.** See *Mixture, ferrosaline*.

Fer'rous arse'niate. Ferri arsenias. **F. bro'mide**, ferri bromidum. **F. car'bonate**, ferri protocarbonas. **F. i'odide**, ferri iodidum. **F. lac'tate**, ferri lactas. **F. ox'alate**, ferri oxalas. **F. phos'phate**, ferri phosphas. **F. sul'phate**, ferri sulphas. **F. sul'phide**, ferri sulphuretum.

Ferrugineous (fer-ru-gin'e-ous) or **Ferru'ginous.** Chalybeate.

Ferru'go (*ferrum*, *rubigo*, rust). Ferri subcarbonas; ferrum oxidatum hydratum.

Fer'rum. Metal of a bluish-gray color; fibrous texture; brilliant and fine-grained fracture. Specific gravity 7.8; hard, ductile, malleable, and magnetic. Ferrum (Ph. U. S.) is metallic iron in the form of fine, bright, and non-elastic wire. It formerly included also ferri ramenta, iron filings. The medicinal virtues of iron are tonic; producing fetid eructations, when it takes effect, owing to its meeting with acid in the stomach, which oxidizes it and causes the evolution of hydrogen gas. When given in the metallic state, the filings are chiefly used; but the oxides and salts are most commonly employed. **F. ace'ticum**, ferri acetas. **F. ammoniaca'le**, F. ammoniatum. **F. ammoni'aco-cit'ricum**, ferri ammonio-citras. **F. ammonia'tum** or **ammoniaca'le**, **Fer'ri ammo'nio-chlo'ridum**, *Ammoniated iron*, *Ammonio-chloride of iron*. A mixture of subcarbonate of iron, muriatic acid, and muriate of ammonium. Dose, gr. iij–xv. **F. arsenia'tum**, arseniate of iron. **F. arsenic'icum oxydula'tum**, arseniate of iron. **F. Borus'sicum**, Prussian blue. **F. broma'tum**, see *Bromine*. **F. carbo'nicum sacchara'tum**, ferri protocarbonas. **F. et chin'icum cit'ricum**, ferri citras. **F. cyanogena'tum**, Prussian blue. **F. hæmati'tes**, hæmatites. **F. hydrioda'tum**, see *Ferri iodidum*. **F. hydrobro'micum oxida'tum**, see *Bromine*. **F. lac'ticum**, see *Ferri lactas*. **F. mag'nes attracto'rium**, magnet. **F. metal'licum**, ferri pulvis. **F. oxida'tum hydra'tum** (Ph. U. S.), *Ferri oxydum hydratum*, *Ferric hydrate*, *Hydro-oxide of iron*, *Hydrated oxide* or *peroxide of iron*, *Hydrated tritoxide of iron*, *Moist peroxide of iron*. In the Ph. U. S. it is directed to be prepared for instantaneous use as an antidote for arsenic by adding *water of ammonia*, ℥viij, to solution of *tersulphate of iron*, ℥x. From 10 to 20 parts of the hydrated oxide would seem to be more than sufficient to convert 1 part of arsenious acid into the basic salt of iron. **F. oxydula'tum hydrocyan'icum**, Prussian blue. **F. potab'ile**, F. tartarizatum. **F. et potas'sium albumina'tum**, iron and potassium albuminate. Preparation used hypodermically, because easily absorbed, made by precipitating 100 parts of white of egg with 36 parts ferric tersulphate, which is dissolved by addition of 2 parts caustic potassa, dissolved in 50 parts of water. **F. præcipita'tum**, ferri subcarbonas. **F. pulvera'tum**, ferri pulvis. **F. redac'tum** or **reduc'tum**, ferri pulvis. **F. tan'nicum**, ferri tannas. **F. tartariza'tum** or **tartara'tum**, *Ferri et potassæ tartras*, *Ferri et potassii tartras* (Ph. U. S.); when formed into balls or pellets, called *Globi martiales* and *Globuli tartari martiales* or *martiales soluti* or *martiali* or *tartratis ferri et lixiviæ*, *Boli martis*, and *Pyri martiales*; *Tartarized iron*, *Tartrate of potassa and iron*, *Tartrate of iron and potassium*. Made from solution of tersulphate of iron, bitartrate of potassium, distilled water, and water of ammonia. It is one of the mildest of the salts of iron, and not unpalatable. Dose, gr. x to xxx. *Tinctura martis aperitiva*, *Tincture of Ludwig*, *Alcohol cum sulphate ferri tartarisatus*, *Tinctura martis Glauberi*, is essentially a solution of this salt, as is also *Tinctura martis tartarizata*. **F. valerian'icum**, ferri valerianas. **F. vitriola'tum**, ferri sulphas. **F. vitriola'tum us'tum**, colcothar. **F. zoot'icum**, Prussian blue.

Fersæ, fur'se. Rubeola.

Fer'tile. Prolific; fruitful.

Fertility, fur-til'it-e (*fero*, to bear). Fruitfulness as regards number of births rather than procreative power.

Fertiliza'tion. Action of rendering fruitful; vitalizing action of the male element on the ovum. See *Fecundation*.

Ferula, fer'u-lah (staff) (*ferio*, to strike). Splint. **F. Africa'na**, Bubon galbanum. **F. allia'cea**, Indian asafœtida; same medicinal properties as asafœtida. **F. ammonif'era**, Dorema ammoniacum. **F. asafœt'ida**, see *Asafœtida*. **F. erubes'cens**, Ferula rubricaulis. **F. galbanif'lua**, Persian plant, source of galbanum. **F. grave'olens**, Anethum graveolens. **F. nar'thex**, plant of S. Asia, source of asafœtida.

F. opop'onax, Pastinaca opoponax. **F. Per'sica,** see *Sagapenum.* **F. rubricau'lis,** a source of galbanum. **F. scorodos'ma,** a source of asafœtida. **F. sum'bul,** plant of Asia; root, sumbul, is used as a nervous stimulant; see *Sumbul.* **F. tingita'na,** see *Ammoniac, gum.*

Ferulyl, fer'u-lil. C_9H_{11}. Compound radical from oil of asafœtida.

Fe'rus (savage). Homicidal.

Fervor, fur'vor. Intense heat.

Fese. Form of elephantiasis met with in the S. Pacific.

Fes'ter. To corrupt or rankle; when applied to a sore, to suppurate or discharge a thin fluid as evidence of irritation.

Festination, fes-tin-a'shun (*festino,* to hesitate). Hesitation of step or gait in walking, as observed in advanced stage of paralysis agitans, the steps increasing in rapidity.

Festooned. Arranged like a festoon, as *festooned line* at cardiac end of stomach, produced by transition from one form of epithelium to another; or *festooned rings* at various openings of the heart.

Festucæ caryophyllorum, fes-tu'ke kar-e-o-fil-lo'-rum. Stalks of clove.

Festucaria, fes-tu-kar'e-ah. Distoma. **F. len'tis,** distoma ophthalmobium.

Fe'tal. Fœtal.

Fetich, fet'ish. Charm; presumed quality of a person or an object which produces in an individual an intense impression or feeling, but which has no real existence as such quality.

Fetichism, fet'ik-ism. Effect produced on an individual by a fetich or charm, as erotic or religious fetichism, from imaginary or supposed qualities which are not really possessed by such charm or fetich.

Feticide, fe'te-side. Fœticide.

Fet'id (*fœteo,* to stink). Having a bad smell. **F. aloes,** Aloes caballina. **F. bronchi'tis,** chronic catarrhal bronchitis. **F. buck'eye,** Æsculus glabra. **F. na'sal catarrh',** ozæna.

Fet'lock. Part of leg of horse where tuft of hair grows behind pastern-joint. **F. joint,** joint between great metacarpal bone and first phalanx of horse.

Fe'tor. Fœtor.

Fet'terwort. Helleborus fœtidus.

Fe'tus. Fœtus; pregnant.

Feuil'lea or **Fevillea cordifolia,** fev-il'le-ah kord-e-fo'le-ah. W. Indian plant; seeds and expressed oil are emeto-cathartic. Bitter principle is called *Feuillin.*

Fe'ver (*fervor,* heat). Frequent and often dangerous affection indicated by rigors, increased heat of skin, quick pulse, languor, and lassitude, with delirium in some instances. Fevers are usually divided into the idiopathic or essential and the symptomatic. Idiopathic fevers arise without obvious local cause; the symptomatic are dependent upon local irritation. Idiopathic fevers may be divided into: 1. Those attended with distinct paroxysms—intermittents; 2. Remittent and continued fevers; and 3. Fevers complicated with eruptions—the exanthematous. These divisions admit of great variety, owing to climate, season, age, etc. When of very brief duration fevers are said to be *ephemeral;* when continuing without any break or intermission, *continued;* when intermitting in degree or paroxysms, *intermittent;* when attended with distinct remissions, *remittent;* when characterized by great prostration of vital powers, *adynamic;* when caused by some recognized contagion, as small-pox, *specific.* When the clinical thermometer indicates 104° F. or over, the fever is said to be "high."

The exciting causes may be common, as irritations in the intestines, external injuries, stimulants, etc. Great diversity has prevailed regarding the theory of fever. Its primary seat has been placed in various organs, but although in fever all the functions are morbidly impressed, the impression is doubtless first made on the nervous system and the system of nutrition, and thence conveyed by sympathy to every part of the body. When fever is devoid of inflammatory complication, the quantity of fibrin in the blood is not augmented. It frequently remains in the healthy proportion, and at times diminishes to an extent not met with in any other acute disease. Alteration of the blood in fevers, consisting generally in a diminution of the fibrinous element, is the reverse of what occurs in inflammation. Many phenomena of fever are influenced by periodicity. The types of intermittents are strong evidences of such an influence.

In the treatment of fever it is important to bear in mind its tendency, particularly in exanthemata, to run a definite course and terminate in restoration to health; also the disposition to local determination or hyperæmia, the most frequent cause of the fatal termination of fever. Symptoms must be attentively studied to deduce, as far as possible, indications of cure. Attention must be paid to the prevalent epidemic; in some seasons fevers are very malignant, in others they are mild.

Fe'ver, abdom'inal. Enteric fever; typhoid fever. **F., abdom'inal ty'phus,** typhoid fever. **F., accli'mating,** or **Acclima'tion f.,** strangers'. **F., ad'enomeninge'al,** mucous or pituitous or catarrhal fever; fever accompanied with considerable mucous secretion, especially from the digestive tube; typhoid fever. **F., adeno-ner'vous,** plague of the Levant. **F., adynam'ic,** fever attended with great prostration of the vital powers, as typhoid and typhus fever. **F., adynamo-atax'ic,** F., adynamic. **F., Af'rican,** malignant bilious remittent fever, prevailing on the western coast of Africa. **F. after transfu'sion,** febrile reaction observed to occur after transfusion of blood in the human being. **F. and ague,** intermittent fever. **F., al'gid,** pernicious intermittent, with icy coldness; often fatal. See *Algidus.* **F., am'bulatory,** form of typhoid fever in which the patient is not compelled to go to bed until symptoms become severe. **F., angeiocar'dic,** fever accompanying endocarditis. **F., anom'alous,** fever with irregular progress and type. **F., apho'nic,** variety of intermittent in which the voice is lost during the paroxysm. **F., aph'thous,** fever with sore mouth, occurring in some animals. **F., apoplec'tic,** comatose fever; intermittent or continued fever attended with apoplectic symptoms. **F., ar'dent,** continued fever of tropical regions, chiefly among recruits newly arrived, and due to exposure to the sun; fever having symptoms like those of typhoid fever; thermic fever; continued fever; yellow fever. **F., arthrit'ic,** fever characterized by inflammation of the joints, as in gout and rheumatism. **F., artic'ular erup'tive** or **artic'ular rheumat'ic,** dengue. **F., artific'ial,** fever produced designedly, as by the internal or external use of stimulants, generally for purpose of malingering. **F., asep'tic,** fever from injury; traumatic fever. **F., asthen'ic,** low continued fever, with great prostration, heart weakness, cold perspiration, etc.; term generally appropriated to typhoid fever. **F., asthmat'ic,** pernicious intermittent, accompanied with symptoms of asthma. **F., atax'ic,** term including pernicious or malignant fever, typhous fevers, etc. **F., atax'o-adynam'ic,** fever characterized by ataxia and adynamia. **F., atrabil'iary,** hemorrhagic malarial fever. **F., atyp'ical,** F., anomalous. **F., auric'inous,** jaundice. **F., autum'nal,** fall fever; typhoid fever; more correctly, remittent fever. **F., bal'last,** disease caused on shipboard by ballast furnished from scraping and digging the banks of rivers abounding with animal and vegetable decay and filth. **F., Barcelo'na,** fever, yellow. **F., bas'tard,** illegitimate fever; F., anomalous. **F., bath,** morbid condition induced by continued use of excessive quantities of mineral waters or baths. **F., Bengal,** remittent fever prevalent in that region. **F., benign,** fever pursuing its course mildly. **F., bil'iary,** relapsing fever accompanied with jaundice. **F., bil'io-gas'tric,** typhoid fever. **F., bil'ious,** common remittent fever of summer and autumn; generally supposed to be owing to, or connected with, derangement of the biliary system; gastritis; typhoid fever. **F., bil'ious relaps'ing,** relapsing fever with jaundice. **F., bil'ious remit'tent,** remittent fever with bilious vomiting, jaundice, prostration, etc. **F., bil'ious remit'-**

ting or **remit'tent, yel'low**, fever, yellow. **F., black,** fever, purpuric, malignant; cerebro-spinal meningitis. **F., blad'dery**, pemphigus acutus. **F. blis'ter**, vesicular or pustular eruptions appearing particularly about the mouth during or after febrile disturbance. **F., Boa Vis'ta**, malignant bilious remittent fever, resembling yellow fever, very fatal at Fernando Po in 1845. **F., Bo'na**, malignant paludal fever which prevailed among the troops of the garrison at Bona, in Algeria, from 1832 to 1835. **F., bone**, see *Inflammation*. **F., bouquet**, dengue. **F., brain**, F., cerebral; phrenitis. **F., brain, water**, hydrocephalus internus. **F., break'bone** or **buck'et**, dengue. **F., bulam'**, fever, yellow. **F., bul'lous**, pemphigus acutus. **F., cais'son**, see *Caisson disease*. **F., calv'ing**, puerperal fever of cows. **F., camp**, continued fever occurring in camp or in the army; typhus or typho-malarial of armies; see *Typhus gravior*. **F., carbun'cular**, contagious anthrax. **F., cardial'gic**, fever accompanied with violent cardialgia during the paroxysm. **F., cardit'ic**, intermittent fever accompanied with pain at the heart, palpitation, and perhaps syncope. **F., catalep'tic**, malarial fever attended with convulsions. **F., catame'nial**, fever occurring at each monthly period or at the menopause. **F., catar'rhal**, F., adeno-meningeal; influenza. **F., cath'eter**, F., urethral. **F., cat'tle plague**, fever occurring at time of prevalence of rinderpest. **F., cephalal'gic**, intermittent or other fever, accompanied with intense headache; intermittent cephalalgia. **F., cephal'ic**, febrile affection of children—intermediate between the acute form of active cerebral congestion and the chronic form—attended by fever, pain in the head, disorder, or more generally constipation of the bowels, and phenomena often supposed to be premonitory of hydrocephalus. **F., cer'ebral**, brain fever, fever generally ataxic, in which the brain is considerably affected; ataxic typhus fever. **F., cerebrospi'nal**, cerebrospinal meningitis. **F., cess'pool**, typhoid fever. **F., Cha'gres**, Panama fever; severe form of endemic fever common on the isthmus of Panama. **F., Chickahom'iny**, form of typhomalarial fever which attacked many of the U. S. troops stationed during the War of the Rebellion in the marshes of the river of that name. **F., child'bed**, puerperal fever; see *Peritonitis*. **F., chlorot'ic**, chlorosis. **F., chol'eric**, variety of malarial fever accompanied with cholera morbus. **F., chol'eric, of in'fants**, cholera infantum. **F., chron'ic**, protracted fever; hectic fever. **F., colliq'uative**, fever characterized by rapid emaciation, copious evacuations, and rapid prostration of strength. **F., colo'nial**, pernicious Australian malarial fever. **F., co'matose**, F., apoplectic. **F., conges'tive**, fever accompanied by obscure symptoms, or by great oppression and depression, in which it is difficult, and often impossible, to induce reaction. It occurs in various parts of this country, especially in the fall, and is very common in India. Term used in some parts of the Southern United States to include winter typhus, typhoid fevers, and typhoid pneumonia, as well as intermittents and autumnal remittents. Cerebrospinal meningitis. **F., conta'gious**, typhus. **F., con'tinent**, see *Continent* and *Continued fever*. **F., contin'ual**, see *Continued fever*. **F., contin'ued, com'mon**, synochus. **F., contin'ued mala'rial**, typhomalarial fever. **F., convul'sive**, intermittent or remittent fever accompanied by convulsions. **F., coun'try**, fever due to exposure to the miasms of malarious localities, as in the Southern States. **F., Cre'ole yel'low**, hemorraghic malarial fever. **F., crit'ical**, ephemeral fever; remittent or intermittent fever. **F., cuta'neous**, exanthematous fever. **F., dan'dy**, dengue. **F., delir'ious**, pernicious intermittent characterized by delirium in the paroxysms. **F., den'gue**, see *Dengue*. **F., den'tal** or **of denti'tion**, fever occurring during first dentition; may induce cerebral symptoms. **F., dep'urative** or **dep'uratory**, fever to which was attributed the property of purifying the blood, or which indicated that such depuration had occurred. **F., diaphoret'ic**, malarial fever with excessive sweating during the paroxysm. **F., di'ary**, ephemera. **F., diges'tive**, chilliness followed by increased heat and quickness of pulse, which frequently accompanies digestion. **F., doub'le**, intermittent with two paroxysms in a given time, instead of one. **F., doub'le quar'tan**, fever whose paroxysms occur two days in succession and fail the third day; the first paroxysm resembling the fourth, and the second paroxysm the fifth. **F., doub'le quotid'ian**, intermittent whose paroxysms return twice every day at corresponding hours. **F., doub'le ter'tian**, intermittent whose paroxysms return every day; the first corresponding with the third, the second with the fourth, and so on. Intermittent having two paroxysms every second day, and free from paroxysms on other days. **F., duodec'imane**, supposititious intermittent whose paroxysms recur on the twelfth day or every eleven days. **F., dynam'ic**, synocha; sthenic fever; relapsing fever. **F., dysenter'ic**, fever associated with dysentery. **F., endem'ial, endem'ic**, or **endem'ical**, remittent f. **F., enter'ic**, fever of enteritis; typhoid fever; any fever with marked intestinal symptoms. **F., enterit'ic**, typhoid fever. **F., en'tero-mala'rial**, fever in which the bacillus of typhoid fever is detected in the stools, and that of malaria in the blood. **F., en'tero-mesenter'ic**, typhoid fever. **F., ephem'eral**, ephemera. **F., epigastral'gic**, pernicious intermittent in which there are severe epigastric pains from gastro-enteritis. **F., epilep'tic**, variety of intermittent accompanied with attacks of epilepsy. **F., erethet'ic**, irritative fever. **F., erot'ic**, chronic fever accompanying or attended with erotic excitement. **F., errat'ic**, see *Erratic*. **F., erup'tive**, exanthemata; see *Eruptive fevers*. **F., erup'tive, artic'ular**, dengue. **F., essen'tial**, fever that is not symptomatic, but which itself constitutes a morbid condition; see *Idiopathic*. **F., exac'erbating**, remittent fever. **F., exanthem'atous**, eruptive fever; see *Exanthem*. **F. of exhaus'tion**, fever resembling the fever of fatigue, due to prolonged exertion, lack of rest, and insufficient food. **F., faint'ing, of Per'sia**, singular and fatal epidemic, presenting points of analogy with cholera, which prevailed at Teheran in 1842. **F., fall**, F., autumnal. **F., fam'ine**, adynamic febrile phenomena induced by want of sufficient food; relapsing fever; typhus fever. **F., fatigue**, fever, sometimes fatal, following excessive labor, exposure, and exertion. **F., fermenta'tion**, see *Sapræmia*. **F., fifteen-day**, see *Relapse*. **F., five-day**, see *Relapse*. **F., gall**, remittent fever. **F., ganglion'ic**, F., glandular. **F., gan'grenous**, fever accompanied by gangrene, especially of the limbs and genitals; pernicious malarial fever with gangrene. **F., gaol**, F., jail. **F., Gar'rick**, see *Fever, Siddons*. **F., gastral'gic**, intermittent fever with acute burning lacerating pain at the stomach. **F., gas'tric**, stomachic fever; bilious fever, because supposed to be dependent on affection of the stomach; also called meningogastric or gastrobilious fever. The term gastric fever is sometimes applied to typhoid fever, to simple continued fever, and to acute dyspepsia. **F., gas'tric hepat'ic**, fever due to chronic gastric irritation. **F., gas'tro-adynam'ic**, fever in which the symptoms of bilious and adynamic fever are joined. **F., gas'tro-angioten'ic**, fever in which the symptoms of bilious fever are united with those of inflammatory fever. **F., gas'tro-atax'ic**, fever in which the symptoms of bilious fever are united with those of ataxic fever. **F., gastrobil'ious**, F., gastric. **F., gastrocephal'ic**, simple continued fever. **F., gastro-enter'ic**, fever of the South-western States, attended with gastro-intestinal symptoms, weak pulse, etc.; typhoid fever. **F., Gibral'tar**, autumnal fever of hemorrhagic malarial type, resembling yellow fever. **F., gland'ular**, acute fever in which lymphatic glands are irritated and swollen. **F., hæmagas'tric**, F., yellow. **F., hæmopto'ic**, variety of masked intermittent with periodical hæmoptysis as the chief symptom. **F., har'vest**, F., gastric. **F., hay**, *Summer catarrh, Hay asthma, Rose catarrh* or *cold, June cold, Autumnal catarrh, Idiosyncratic coryza, Summer fever, Summer bronchitis*. Catarrh to which certain persons are subject in summer; ascribed in England to the efflu-

vium of hay, but this is not the probable cause. It is a catarrh with sneezing, headache, weeping, snuffling, and cough, with at times fever and general discomfort. It disappears spontaneously, to recur in subsequent years about the same period. **F., heat,** thermic fever; insolation. **F., hebdom'adal,** supposititious fever whose paroxysms return weekly and on the same day. **F., hec'tic,** see *Consumption* and *Hectic fever.* **F., hemorrhag'ic,** stage of reaction or erethism following hemorrhage. **F., hepat'ic** or **hepatal'gic,** pernicious intermittent with violent pain in the right hypochondrium; fever due to inflammation of the liver. **F., herpet'ic,** continued fever in which a herpetic eruption occurs as fever diminishes. **F., hidrot'id,** hidrosis. **F., hill,** form of remittent fever occurring in the hilly districts of India; jungle fever. **F., horrif'ic,** congestive algid fever. **F., hos'pital,** typhus fever. **F., hu'moral,** fever in which an alteration or deterioration of the humors is suspected. **F., Hunga'rian** or **Hun'gary,** epidemic typhus common among the soldiers in Hungary; a fatal form which prevailed there especially about the middle of the sixteenth century. **F., hydropho'bic,** pernicious intermittent with dread of liquids. **F., hyperpyret'ic,** or **F., hyperther'mic,** fever with marked increase of temperature. **F., hyster'ic,** hysteria accompanied by fever or occurring with each paroxysm of an intermittent. **F., ic'teric,** fever accompanied with jaundice; some intermittents exhibit this complication at each paroxysm. **F., ic'teric, remit'ting,** see *Relapse.* **F., ic'tero-hæmatu'ric,** hemorrhagic malarial fever. **F., idiopath'ic,** see *F., essential,* and *Idiopathic.* **F., il'eo-ty'phus,** typhoid fever. **F., illegit'imate,** malarial fever of anomalous or irregular form. **F., incuba'tion of,** see *Incubation* and *Eruptive fevers.* **F., in'fantile,** tubercular meningitis of children. **F., in'fantile remit'tent,** spurious worm fever; remitting fever of children. Fever occurring in childhood often assuming characters of hydrocephalus; it appears generally to depend upon a morbid condition of the stomach and bowels. Typhoid fever of children. **F., inflam'matory,** synocha. **F., insid'ious,** fever at first seeming devoid of danger, but subsequently becoming more or less malignant; ambulatory typhoid. **F., intermit'tent,** see *Intermittent fever.* **F., intes'tinal,** see *Typhoid.* **F., I'rish,** typhus fever; asthenic variety of relapsing fever. **F., ir'ritative,** irritation, morbid; symptomatic fever indicating constitutional irritation. **F., jail,** typhus fever occurring in jails or prisons. **F., jun'gle,** see *Jungle fever.* **F., lake,** fever produced by exposure to the malaria in the neighborhood of lakes. **F., lazaret',** see *Lazaret.* **F., lentic'ular,** miliary fever. **F., lit'toral,** malarial fever occurring at the sea-shore. **F., lo'chial,** acceleration of the circulation sometimes occurring during the discharge of the lochia. **F., low,** asthenic fever; typhoid fever. **F., lung,** pneumonia; catarrh. **F., ly'ing-in,** puerperal fever. **F., mac'ulated,** typhus. **F., mala'rial** or **mala'rious,** fever induced by malarious or miasmatic emanations, as intermittent and remittent fever. **F., malig'nant,** fever making its approaches insidiously and subsequently becoming formidable; any fever exhibiting a very dangerous aspect, typhus gravior. **F., malig'nant pestilen'tial,** yellow fever. **F., Mal'ta,** endemic fever of Isle of Malta, with excessive sweating, painful joints, etc. **F., marsh,** F., malarial. **F., masked,** dead or dumb ague, dumb chill; anomalous intermittent, the paroxysms of which have not the regular stages or are masked. **F., Mediterra'nean,** form of remittent fever peculiar to that region. **F., melan'ious,** typhoid fever. **F., melanu'ric,** hemorrhagic malarial fever. **F., mem'branous,** fever from inflammation of a serous or mucous membrane. **F., meningogas'tric,** gastric fever. **F., menorrhag'ic,** febrile and other constitutional symptoms attendant upon menstruation and menorrhagia. **F., men'tal hec'tic,** slow fever from depressed mental conditions. **F., mercu'rial,** slight fever from full doses or overdoses of preparations of mercury. **F. mesenter'ic,** species of fever appearing to belong either to the mucous or bilious types. Typhoid fever. **F., miasmat'ic,** F., malarial. **F., miasmat'ic ty'phoid,** typhomalarial fever. **F., mil'iary,** fever attended with miliary eruption. **F., mil'itary,** typhus fever. **F., milk,** fever preceding or accompanying the secretion of milk in women recently delivered; coming on generally about the third day after delivery. It commonly terminates in twenty-four hours. **F., mixed,** synochus; enteromalarial fever. **F., moun'tain,** malarial or adynamic fever belonging to mountainous regions, as the Rocky Mountains, and met with only at high altitudes. **F., mu'cous,** F., adenomeningeal; typhoid fever; catarrhal fever. **F., naut'ical,** ship or typhus fever. **F., Neapol'itan,** Malta fever. **F., necro'sial,** fever accompanying necrosis of bone. **F., nephrit'ic,** intermittent fever accompanied with nephritic pain during the paroxysm. **F., ner'vous,** fever particularly characterized by derangement of the nervous system; typhus fever; typhoid fever; slight fever from emotion. See *Typhoid fever.* **F., ner'vous, with exanthem'atous erup'tion,** typhoid. **F., ner'vous hec'tic,** constitutional derangement in those who are mentally disturbed. **F. nests,** conditions which propagate low fevers or conditions of the system, in cities especially. **F., neural'gic,** dengue. **F., neuropur'puric,** fever, purpuric malignant epidemic; cerebro-spinal meningitis. **F., Ni'ger,** malignant bilious remittent, fatal to expeditions sent out by the British government to explore the Niger, in 1841–42, and previously. **F., night-soil,** typhoid fever. **F., non'ane,** supposititious fever whose paroxysms recur every ninth day or every eight days. **F. of non-elimina'tion,** fever due to constipation. **F., nosoco'mial,** hospital fever, a form of typhus. **F., ochlot'ic,** fever from crowd-poisoning; typhus fever; see *Ochlotic.* **F., oc'tane,** intermittent whose paroxysms recur every eighth day. **F., palu'dal,** malarial fever. **F., Panama,** fever, Chagres. **F., paroxys'mal,** remittent fever. **F., period'ic** or **period'ical,** intermittent or remittent fever. **F., peritone'al,** puerperal peritonitis. **F. pernic'ious,** intermittent fever attended with great danger, and destroying the majority of those affected by it in the first four or five paroxysms, sometimes in the very first. **F., pernic'ious mala'rial,** fever, pernicious. **F., pestilen'tial,** the plague; severe case of typhus; yellow fever; sweating sickness. **F., pestilen'tial, of cat'tle,** murr. **F., pete'chial,** typhus; cerebrospinal meningitis. **F., Peye'rian,** typhoid fever. **F., pharynge'al,** see *Pharyngeal.* **F., phthis'ical,** hectic fever of tuberculosis. **F., pitu'itary** or **pitu'itous,** F., adenomeningeal. **F., pleurit'ic,** fever attending pleurisy; intermittent or remittent fever accompanied with inflammation of the pleura. **F., pleu'ropneumon'ic,** pleuro-pneumonia. **F., pneumon'ic,** intermittent fever accompanied with inflammation of the lungs; pneumonia. **F. poi'son,** see *Poison.* **F., pri'mary,** essential or idiopathic fever. **F., pris'on,** typhus fever. **F., pseu'do,** morbid irritation. **F., puer'peral,** childbed fever; name given to several acute diseases supervening on delivery; generally a malignant contagious variety of peritonitis, running its course very rapidly, and passing into a typhoid condition unless met at the very onset by the most active sedative measures. It is now considered as due to septic infection; see *Peritonitis* and *Puerperal fever.* **F., p. adynam'ic** or **malig'nant,** see *Peritonitis.* **F., pu'king,** fever accompanied with vomiting; milk-sickness. **F., pulic'ular** or **punctic'ular,** petechial fever. **F., pur'ple,** fever, purpuric malignant; cerebrospinal meningitis. **F., pur'puric malig'nant,** malignant purple fever; name proposed by Dr. Stokes for epidemic disease which prevailed in Ireland in 1866–7, and variously termed purple fever, neuropurpuric fever, malignant purpura, cerebrospinal typhus, black fever, cerebrospinal meningitis, and black death; see *Meningitis, cerebrospinal.* **F., pu'rulent,** F., pyogenic. **F., pu'trid,** typhus gravior. **F., pye'mic,** fever accompanying pyæmia. **F., pyogen'ic,** fever accompanying suppuration; fever resembling or attendant upon pyæmia, often resulting in abscesses. **F., pythogen'ic** or **pythogenet'ic,** typhoid fever. **F.,**

quar'tan, intermittent fever in which the paroxysms recur every fourth day. **F., qui'nic,** fever accompanied by a cutaneous eruption, said to affect those engaged in the preparation of the sulphate of quinia. **F., qui'nine,** fever with hæmaturia, chills, dyspnœa, etc., caused in susceptible persons by taking quinine internally. **F., quin'tan,** fever whose paroxysms return every fifth day. **F., quotid'ian,** see *Quotidian.* **F., recur'rent,** see *Relapse.* **F., red-tongue,** typhoid fever. **F., reg'ular,** intermittent whose paroxysms follow a determinate type; opposed to atypic and anomalous fever. **F., relap'sing,** see *Relapse.* **F., remit'tent,** see *Remittent fever.* **F., r., bil'ious,** see *F., bilious,* and *Relapse.* **F., r., of chil'dren,** or **in'fantile,** see *Fever, infantile remittent.* **F., remit'ting ic'teric,** see *Relapse.* **F., rheumat'ic,** rheumatism, acute. **F., Ro'man,** pernicious malarial fever occurring at certain seasons in Rome and vicinity. **F. root,** Triosteum perfoliatum. **F., rose,** form of hay fever occurring about time of flowering of roses. **F., sail'or's,** typhus fever; yellow fever. **F., sapræ'mic,** fever associated with sapræmia; that is, the introduction into the blood of the chemical products of putrefaction, a form of septic poisoning. **F., scar'let,** see *Scarlet.* **F., scorbu'tic,** febrile movement sometimes accompanying scorbutus or scurvy. **F., sea'soning,** F., acclimation; F., strangers'. **F., sec'ondary,** febrile condition recurring in certain affections after having ceased; coming on at the time of the maturation of the variolous pustules, or as the eruption of scarlatina, etc. disappears; symptomatic fever; suppurative fever. **F., sep'tan,** intermittent whose paroxysms recur every six days, and consequently on the seventh day. **F., sep'tic,** fever the result of septicæmia. **F., septicæ'mic,** fever accompanying septicæmia. **F., sev'en-day,** see *Relapse.* **F., seventeen'-day,** see *Relapse.* **F., sex'tan,** fever occurring every five days, and consequently on the sixth day. **F., ship,** see *Typhus.* **F., Sid'dons,** low fever which prevailed in Edinburgh in the last century, supposed to be due to the crowding together of persons to see the great actress Mrs. Siddons; a similar fever occurring during the performances of Garrick was called Garrick fever. **F., Sier'ra Leone,** form of remittent fever prevalent in that region. **F., sim'ple,** fever without any predominant character—bilious, inflammatory, or nervous, and unaccompanied by any local determination, hyperæmia, or complication. It may be continued, remittent, or intermittent. **F., sim'ple contin'ued,** most favorable form of continued fever, having a tendency to wear itself out, provided injurious influences be avoided. The prognosis is consequently favorable, and the treatment simple, consisting in perfect repose of body and mind, abstinence, and relieving the thirst by cold drinks. **F., singul'tous,** fever accompanied with singultus or hiccough. **F., so'lar,** dengue. **F., so'porose,** comatose fever. **F., specif'ic,** essential fever. **F., spiril'lum,** relapsing fever. **F., splen'ic,** contagious anthrax. **F., spot'ted,** typhus gravior, cerebro-spinal meningitis. **F., starva'tion,** fever due to poverty and starvation. **F., ster'coral,** fever produced by an accumulation of fæces in the intestines. **F., stiffnecked,** dengue. **F., stomach'ic,** gastric fever. **F., stran'gers',** acclimating or seasoning fever; yellow or remittent fever, endemic in certain places, to which strangers are especially liable. **F., subcontin'ual,** remittent fever. **F., subin'trant,** intermittent in which one paroxysm is scarcely finished before another begins. **F., su'datory** or **su'doral,** F., sweating. **F., sum'mer,** F., hay. **F., sun,** dengue; insolation. **F., sup'purative,** pyæmia; fever associated with suppuration. **F., sur'gical,** a febro-inflammatory affection after a surgical operation, inducing morbid changes in different and perhaps distant parts of the body. **F., sweat'ing,** intermittent fever with very pronounced sweating stage; miliaria; sudor Anglicus. **F., sympathet'ic** or **symptomat'ic,** constitutional disturbance occurring as a phenomenon of many different diseases. **F., syn'copal,** a variety of pernicious intermittent with fainting in every paroxysm. **F., syn'ochal** or **syn'ochoid,** synochus; simple continued fever. **F., syphilit'ic,** fever accompanying syphilis or owing to a syphilitic taint. **F., ter'tian,** fever whose paroxysm returns on the third day, and consequently every two days. **F., tet'anoid,** cerebro-spinal meningitis. **F., ther'mic,** heat-stroke; effect of prolonged exposure to high temperature; insolation. **F., third-day,** tertian. **F., trag'ic,** low fever in which the patient declaims like an actor during the delirium. **F., traumat'ic,** fever supervening on wounds or surgical operations. **F., trembling,** intermittent fever. **F., trop'ical,** yellow fever. **F., tuberculous,** fever attending tuberculosis. **F., typh,** see *Typhus.* **F., ty'phoid,** see *Typhus.* **F., typhoid, of India,** cholera. **F., typhomala'rial** or **ty'phoid mala'rial,** miasmatic typhoid fever; a fever in which there is a mixture of the phenomena of typhous and malarial fevers, as frequently seen in active military service. **F., ty'photy'phus,** mild form of typhus fever with several characteristic typhoid symptoms. **F., ty'phous,** typhus. **F., ure'thral,** *Catheter f., Urinary f.,* aggregate of febrile phenomena resembling exactly those of ague, observed, at times, after the passage of a bougie or catheter for stricture of the urethra. **F., u'rinary,** F., urethral. **F., vac'cinal,** fever symptomatic of vaccina. **F., varicel'lar,** symptomatic fever of varicella; see *Varioloid.* **F., var'ioloid** or **vari'olous,** see *Varioloid.* **F., ver'minous,** worm fever, produced by presence of worms in the digestive tube or accompanied by their expulsion. **F., ver'nal,** intermittent or other fever occurring in the spring; formerly considered salubrious. **F., vesic'ular,** pemphigus acutus. **F., vit'ular** or **vit'ulary,** parturient apoplexy of cows. **F., Wal'cheren,** *Gall-sickness;* remittents and intermittents, with enterocolitis, to which the British troops were exposed on the expedition to Walcheren in 1809. **F., walk'ing ty'phoid,** ambulatory typhoid fever. **F., water brain,** hydrocephalus internus. **F., white,** slight fever sometimes attendant on chlorosis. **F., win'ter,** see *Tongue, black*; also pneumonia. **F., worm,** verminous fever. **F., worm, spu'rious,** fever, infantile remittent. **F., wound,** traumatic fever. **F., yel'low,** *Endemial causus* of the West Indies, *Bilious remitting yellow fever, Malignant pestilential fever, Hæmogastric fever* or *pestilence, Black vomit, Bulam, Gibraltar,* and *Barcelona fever;* vulg., in the West Indies, *Mulatto Jack* and *Yellow Jack.* Very acute and dangerous febrile affection, characterized by jaundice, tenderness in the epigastrium, vomiting, hemorrhages, etc., complicated in its second stage with a jaundiced appearance, accompanied by vomiting of black matter. It occurs, endemically, annually within the tropics, but epidemically in the temperate regions. It runs through its stages with much greater rapidity than the gastroenteritis of our climates. Hemorrhages may occur from different organs. It is probably due to an undetermined micro-organism. **F., yel'low, mild,** see *Relapse.* **F., yel'low, remit'tent,** bilious remittent fever.

Fe'ver-bush. Laurus benzoin; prinos.

Fe'ver-drops, War'burg's. See *Bebeeru.*

Feveret, fe'ver-et. Febricula.

Fe'verfew (*febris, fugo,* to drive away). Matricaria.

Fe'ver-grass. Chrysopis graminifolia; used as a cataplasm in the Southern States.

Fe'ver-gum tree. Eucalyptus globulus.

Fe'verish. Feverous; that which causes fever; febrifacient or febrific; state of one laboring under fever; fever-sick.

Fe'verishness. Febriculosity; state of having fever; slight febrile disorder.

Fe'verous. Feverish.

Fe'ver-plant. Ocymuna viride; Datura arborea.

Fe'ver-root. Pterospara andromedea; triosteum perfoliatum.

Fe'ver-sick. See *Feverish.*

Fe'ver-tree. Pinckneya pubens; Eucalyptus globulus. **F., Austra'lian,** Alstonia constricta. **F., Geor'gia,** Pinckneya pubens.

Fe'ver-twig. Celastrus scandens.

Fe'verweed. Eryngium fœtidum; Gerardia pedicularia.

Fe'verwood. Laurus benzoin.

Fe'verwort. Eupatorium perfoliatum; triosteum.

Fevil'lea cordifo'lia. The seed of the fruit of this plant of W. Indies and Brazil is emeto-cathartic and vermifuge, and an antidote for snake-bites. **F. monosper'ma**, species of cucurbitaceous plant from Brazil; seeds are cathartic. **F. triloba'ta**, the oil of the seeds of this Brazilian species is used externally in gout and rheumatism.

Fews. Sempervivum tectorum.

Fex'ism. Appearance characteristic of tribe of Styrian cretins, called Fexi.

Fi'ber. Castor fiber.

Fi'bra. Fibre. **F. au'rea**, coptis. **F. auric'ulæ**, lobe of ear. **F. muscula'ris**, muscular fibre. **F. ner'vea**, nerve-fibre. **F. primiti'va**, axis-cylinder. **F. san'guinis**, fibrin.

Fi'bræ (pl. of **Fibra**) **accesso'riæ.** Accessory fibres. **F. adamanti'næ**, enamel fibres. **F. arcifor'mes** or **arcua'tæ**, see *Arciform.* Fibres connecting contiguous cerebral convolutions; fibres passing from one optic tract to the other, connecting internal geniculate bodies. Thin bundles of fibres crossing from posterior columns of medulla oblongata to opposite side. **F. circula'res**, middle layer of muscular fibres in wall of stomach; muscular fibres near ciliary border of iris; sphincter pupillæ. **F. collatera'les**, transverse fibres passing between pillars of external abdominal ring; intercolumnar fibres. **F. denta'les**, denticulated fibres. **F. elas'ticæ**, elastic fibres. **F. heterodesmot'icæ**, fibres connecting great nervous centres with other regions or organs. **F. homodesmot'icæ**, nerve-fibres connecting similar nerve-centres or ganglia. **F. horizonta'les**, raphe of medulla oblongata. **F. intercolumna'res**, F. collaterales. **F. len'tis**, fibres of crystalline lens. **F. longitudina'les**, radiating muscular fibres of iris; outer layer of muscular fibres of wall of stomach. **F. medulla'res**, striæ acusticæ. **F. na'si**, pinnæ of nose. **F. ner'veæ** or **nervo'sæ**, nerve-fibres. **F. obli'quæ**, inner layer of muscular fibres of wall of stomach. **F. pal'lidæ**, ciliary processes. **F. pro'priæ**, fibres connecting contiguous cerebral convolutions; bundles of nerve-fibres in cortex of cerebellum passing from one convolution to another. **F. pulmo'num**, lobes of lungs. **F. rec'tæ**, fibres in median septum of medulla oblongata, continuation of middle superficial fibræ arcuatæ. **F. semicircula'res**, semicircular fibres, as of cerebellum. **F. sensiti'væ**, sensory nerve-fibres. **F. tendin'eæ**, white fibres of which tendons are made up. **F. transilien'tes**, fibres connecting cerebral convolutions that are not in contact. **F. transver'sæ**, transverse white lines on floor of fourth ventricle.

Fi'bre. Organic filament, of solid consistence and more or less extensible, entering into the composition of animal and vegetable textures. Three elementary fibres or tissues are described: 1. Cellular or areolar, formed chiefly of thin plates, of a whitish color and extensible, which seem to consist of concrete gelatin. 2. Nervous, pulpy, or medullary, formed of a soft substance contained in a cellular sheath, and consisting of albumin united to a fatty matter. 3. Muscular, composed of round filaments, of a grayish or reddish color, and formed of fibrin. A very small or ultimate fibre is called a *Fibril* or *Fibrilla.*

Fi'bre or **Fi'bres, achromat'ic.** Cell-threads passing from pole to pole in dividing nucleus. **F., albugin'eous**, see *Albuginea.* **F., anastomo'sing**, fibres of any kind that anastomose. **F., ar'ciform** or **ar'cuate**, see *Arciform.* **F., Ar'nold's spi'ral**, F., spiral. **F., associa'tion**, white nerve-fibres between contiguous cerebral convolutions. **F., augmen'tor**, nerve-fibres which quicken the action of the heart and increase its force. **F., bone**, bundles of connective-tissue fibres in bone, binding together the osseous lamellæ. **F., car'dio-inhib'itory**, inhibitory nerve-fibres passing from par vagum to the heart. **F., car'neous**, F., muscular. **F. cells**, plastic cells, fibro-plastic cells; cells or corpuscular elements of the lymph of plastic inflammation; cells supporting hair-cells of crusta acustica of internal ear. **F., centrip'etal**, afferent nerve-fibres; nerve-fibres connecting nervous masses of different grades. **F., chromat'ic**, F., nuclear. **F., coiled**, F., spiral. **F., collat'eral**, F., association; F., longitudinal. **F., conver'ging**, nervous fibres which associate different portions of the nervous centres with each other. They form the commissures. **F. of Cor'ti**, rods or pillars of; see *Corti.* **F., crys'talline**, F., lens. **F., decussa'ting**, bundles of white fibrous tissue constituting great part of lamellæ of bone. **F., den'tal** or **den'tine**, delicate processes passing into the dentinal canals from odontoblasts. **F., depress'or**, fibres of depressor nerve producing an inhibitory influence on the vasomotor nervous centre. **F., diverg'ing**, fibres composing the columns of the medulla oblongata, which separate in their progress to the periphery of the cerebrum and cerebellum. **F., enam'el**, hexagonal rods making up the dental enamel. **F., ganglion'ic, gelat'iniform**, or **gelat'inous**, non-medullated fibres, as of the sympathetic system. **F. of Ger'dy**, superficial transverse ligament of the fingers. **F., inhib'itory**, nerve-fibres transmitting inhibitory influences to important organs or nerve-centres. **F., intercolum'nar**, F. collaterales. **F., lamel'lar** or **lam'inar**, fibres of white fibrous tissue. **F., lens**, hexagonal fibres, called also crystalline fibres, constituting chief part of crystalline lens. **F., longitu'dinal**, associated nerve-fibres passing from front to back part of brain. **F., med'ullated**, form of nerve-fibre consisting of two constituents, a sheath of medullary nerve substance and an axis-cylinder; see *Nerve-fibre.* **F. of Mül'ler**, delicate nerve-fibres constituting internal limiting membrane of retina; see *Tunica Jacobi.* **F., neuromus'cular**, epithelium of muscle. **F., nu'clear** or **nucleoplas'mic**, delicate filiform nervous fibres making up the network of a nucleus of a cell. **F., pedunc'ular**, nerve-fibres connecting the cerebrum with the medulla oblongata and pons Varolii. **F., per'forating**, F., bone. **F., pul'monary**, nerve-fibres going to the lungs, particularly from par vagum. **F. of Remak**, fibres peculiar to the sympathetic nerve, but believed by some to be neurilemma and to consist of fibro-cellular bundles. **F. of Ret'zius**, see *Retzius.* **F., secre'tory**, sympathetic nerve-fibres distributed to secreting glands. **F., semicir'cular**, semicircular fibres constituting portion of anterior peduncles. **F., Sharp'ey's**, F., bone. **F., soft**, non-medullated nerve-fibres. **F., spi'ral**, delicate process of nervous matter in the cell of a sympathetic ganglion. **F. of Tomes**, minute dentinal fibres. Processes of odontoblasts of pulp which fill the dentinal tubules.

Fi'bril. See *Fibre.* **F., nu'clear** or **nucleoplas'mic**, see *Fibres, nuclear.* **F., prim'itive** or **ul'timate**, elementary fibre; also those composing axis-cylinder.

Fibrilla, fi-bril'lah (dim. of **Fibra**). Fibril. **F., ax'is** or **elemen'tary**, fibril, primitive. **F. muscula'ris**, muscular fibre. **F., prim'itive** or **ul'timate**, see *Fibril, primitive.*

Fibril'lar. Relating or appertaining to fibrils, as F. contraction, contraction of separate muscular fibrils.

Fibrillated, fi'bril-la-ted. Formed of fibrils.

Fibrillation, fi-bril-la'shun. Formation of fibrils; also twitching of the muscles observed in progressive muscular atrophy.

Fi'brin. Immediate animal principle—solid, white, and inodorous; insipid; heavier than water; without action on the vegetable blues; elastic when moist, hard and brittle when dry. It enters into the composition of the chyle and the blood; is the self-coagulable material in them, and is produced in the retrograde metamorphosis of the tissues. It is in small proportion in the blood, but the amount increases in inflammation, while in continued fever it is diminished. Muscular fibrin, syntonin, or musculin is different from the fibrin of the blood; in its chemical character peculiar, and has been called muscular substance. In certain diseased actions fibrin or coagulable lymph, gluten, is separated from the blood, and is found in considerable quantity on the surfaces of membranes

and in the cavities of the body. See *Liquor sanguinis* and *Fibrinogen*. **F. fer'ment**, supposed agent in production of fibrin by spontaneous coagulation; paraglobulin.

Fibrination, fi-brin-a'shun. Act of adding fibrin to the blood; opposite to defibrination.

Fibrinogen, fi-brin'o-gen (*fibrin, gennao*, to engender). Hybrid term to denote a proteid in plasma which, under certain circumstances, as action of fibrin-ferment, yields greater part of fibrin. See *Fibrinoplastin*.

Fibrinogenous, fi-brin-oj'en-us (same etymon). Producing fibrin. **F. sub'stances**, fibrinogen.

Fibrinoplas'tic bod'ies. Modified cells of connective tissue seen in inflammation. **F. mat'ter**, paraglobulin. **F. sub'stance** or **Fibrinoplas'tin**, paraglobulin; supposed by some that when united with fibrinogen, under action of ferment, fibrin results. See *Protagon*.

Fibrinoplastin, fi-brin-o-plas'tin (*fibrin, plasso*, to form). See *Fibrinoplastic*. **F. casts**, see *Cast*.

Fibrinous, fi'brin-us. Composed of fibrin or having the appearance of fibrin. **F. bronchi'tis**, variety of bronchitis, in the acute or chronic stage, in which fibrinous casts of some of the bronchial tubes are formed; see *Bronchitis*. **F. cal'culus**, see *Calculus*. **F. degenera'tion**, necrosis with coagulation. **F. pneumo'nia**, see *Pneumonia*.

Fibrinpep'tone. Condition of fibrin after stomachal digestion.

Fibrinu'ria (*fibrin, ouron*, urine). Rare condition of urine in which, owing to presence of fibrin, that fluid spontaneously coagulates after being voided.

Fi'bro. In composition, appertaining or relating to fibrous tissue.

Fibro-areolar (fi-bro-ar-e'o-lar) **tis'sue.** Connective tissue composed of fibrous and areolar tissue.

Fi'broblast (*fibro, blastos*, bud). Cell developing into fibrous or connective tissue.

Fibrobronchitis, fi-bro-bron-ke'tis. Fibrous or rheumatic inflammation of the bronchial tubes; croupous bronchitis.

Fibrocalca'reous. Term applied to fibrous tumors accompanied with a deposit or coating of calcareous matter.

Fibrocarcino'ma. Cancerous formation with granular degeneration.

Fibrocartilage, fi-bro-kart'il-age. Organic tissue partaking of the nature of the fibrous tissue and of cartilage; dense, resisting, elastic, firm, supple, and flexible. Fibrocartilages are distinguished into *membraniform*, serving as moulds to certain parts, as the alæ nasi and eyelids; *vaginiform*, forming sheaths for the sliding of tendons; *interarticular*, met with in the movable articulations; *uniting*, forming junction between two bones, as the symphysis pubis. Fibrocartilages are sometimes formed adventitiously, as the result of a morbid process in different organs. Circumferential fibrocartilages consist of a rim of fibrocartilage surrounding the margin of the articular cavity, the glenoid cavity of the shoulder. They deepen the articular surface and protect the bones. **F., acro'mio-clavic'ular**, cartilage of Weitbrecht. **F., circumferen'tial**, see *Fibrocartilage*. **F., connect'ing**, F., interosseous. **F., fal'ciform**, F., semilunar. **F., interme'diary** or **interme'diate**, F. between radius and ulna at the wrist. **F., interos'seous**, F. between bones, as of pubes, *Interpubic fibrocartilage*, where there is but little motion. **F., mar'ginal**, F., circumferential. **F., pu'bic**, F. between surfaces of pubic bone. **F., scap'ulo-clavic'ular**, F. of Weitbrecht. **F., semilunar**, cartilages between head of tibia and condyles of femur. **F., ses'amoid**, sesamoid cartilages. **F., tar'sal**, tarsal cartilages; see *Tarsus*. **F., trian'gular**, F. of wrist, between radius and ulna. **F., white**, cartilage containing white fibrous tissue. **F. of Wris'berg**, cuneiform cartilages of larynx. **F. of wrist**, triangular fibrocartilage between ulna and bones of wrist.

Fibrocartilag'ines (pl. of **Fibrocartilago**). Fibrocartilages. **F. falca'tæ** or **falcifor'mes**, semilunar cartilages on head of tibia. **F. intervertebra'les**, intervertebral cartilages or disks.

Fibrocartilag'inous. Relating to or consisting of fibrocartilage.

Fibrocartila'go. Fibrocartilage. **F. trique'tra**, fibrocartilage, triangular.

Fibrocellular, fi-bro-sel'u-lar. Fibro-areolar; partaking of the fibrous and of the cellular or areolar tissue, as the fascia transversalis. **F. tu'mor**, tumor, fibrocellular; fibroma.

Fibrochondritis, fi-bro-kon-dre'tis (*fibro, chondros*, cartilage). Inflammation of fibrocartilage.

Fibrochondrosteal, fi-bro-kon-dros'te-al (*fibro, chondros*, cartilage, *osteon*, bone). Consisting of fibrocartilage and bone.

Fibrocystic, fi-bro-sis'tic. Possessing the nature of fibrous and cystic matter. **F. tu'mor**, form of cystic degeneration of fibrous tumors.

Fibro-elastic, fi-bro-e-las'tik. Containing white and elastic tissue.

Fibro-enchondroma, fi-bro-en-kon-dro'mah. Enchondroma having some fibrous tissue in its composition.

Fi'bro-fat'ty degenera'tion. Fatty condition of the placenta with fibrous degeneration of the villi of the chorion and part of the decidua.

Fibrogen, fi'bro-jen. Fibrinogen.

Fibroglioma, fi-bro-gli-o'mah. Tumor composed of fibroma and glioma.

Fi'broid (*fibro, eidos*, resemblance). Fibrous; fibrous tumor, fibroma. **F. degenera'tion**, gradual transformation, occurring chiefly in membranous tissues, into a material having a fibre-like character; may result from pressure, or follow upon chronic inflammation accompanied with exudation; fibrosis. This form of degeneration of the lung is called cirrhosis of the lung. **F. infiltra'tion**, see *Infiltration*. **F. phthi'sis**, see *Phthisis*. **F. tu'mor**, see *Tumor, fibrous*.

Fibrolipo'ma (*fibro, lipos*, fat). Fibroma with neoplasm of adipose tissue. Lipoma well supplied with connective tissue.

Fibro'ma. Tumor of fibrous connective tissue; it may be hard, dense, and firm, or soft like adipose matter; fibrous tumor. The fibres constituting the chief part of the growth are loosely or densely packed according to the variety, and are arranged either without definite plan or in intercrossing bundles of various sizes or in whorls around the blood-vessels. The cells, like those of normal fibrous tissue, are generally few in number, and are usually most abundant around the vessels. They are minute, spindle-shaped, fusiform, or stellate bodies, the latter having processes of varying length which communicate with similar processes from neighboring cells. These cells in size and number vary with the rapidity and age of growth—the slower and older the growth, the denser the tissue, the flatter and less numerous the cells. (Green). **F., are'olar**, F. molluscum. **F. congen'itum**, nævus verrucosus. **F., cor'neal** or **cor'neous**, F., lamellar. **F. cu'tis**, fibroma of skin; F. molluscum, neuroma cutis, or keloid. **F., cys'tic**, F. in which cystic degeneration has occurred. **F., diffuse**, elephantiasis. **F. dissemina'tum**, molluscum. **F. doloro'sum**, fibroneuroma. **F. fungoï'des**, chronic infectious cutaneous disease with reddish or livid spots, afterward becoming crusts or tumors; granuloma fungoides. **F. of the heart**, circumscribed tumor occurring very rarely in the cardiac walls or under the endocardium or pericardium. **F. keloï'des**, keloid. **F. of the kidneys**, small, white, fibrous nodules which sometimes are present in the renal pyramids. **F., lacu'nar**, cystic fibroma of mamma. **F. lipomato'des**, xanthoma. **F. mollus'cum**, soft insensitive neoplasm of connective tissue from the cutis vera, characterized by tumors of various sizes. It is frequently congenital. **F., mu'coid** or **mu'cous**, fibroma having a large amount of intercellular substance, and transformed by mucoid degeneration. **F. ossif'icum**, fibroma in which calcareous transformation has occurred. **F. of the o'vary**, see *Ovary, tumors of the*. **F., pap'illary**, fibrous hypertrophy

of papillæ of skin. **F. pen'dulum,** form of F. molluscum having a pedicle. **F., soft,** F. molluscum; wen. **F. teleangeiectat'icum,** F. having extensive dilatation of blood-vessels on its surface; molluscum fibrosum.

Fibromato'sis. Growth or development of fibroma.

Fibromem'branous. Composed of fibre and membrane.

Fibromu'cous. Possessing the nature of fibrous and of mucous membranes; term applied to fibrous membranes intimately united with other membranes of a mucous nature, as the pituitary membrane, the membrane of the urethra, etc.

Fibromus'cular. Composed of fibrous and muscular tissues. Term applied to tumors, *F. tumors,* in which the fibrous tissue is largely intermingled with muscular fibres. See *Myoma.*

Fibromyitis, fib-ro-me-e'tis. Inflammation of muscular tissue with fibrous degeneration.

Fibromyo'ma (*fibro, mus,* muscle). Myoma having fibrous tissue blended with it; fibroma, fibroid myoma. **F. lipomato'des,** fibromyoma with neoplasm of adipose tissue.

Fibromyomitis, fib-ro-me-om-e'tis. Inflammation of fibromyoma.

Fibromyomotomy, fi-bro-mi-o-mot'o-me (*fibro, mus,* muscle, *tome,* incision). Operation for excision of fibromyoma.

Fibromyxoma, fi-bro-miks-o'mah (*fibro, muxa,* mucus). Tumor made up of fibrous and mucous tissue. Fibroid tumor complicated with myxoma.

Fibromyxo-sarcoma, fi-bro-miks'o-sar-ko'mah (*fibro, muxa,* mucus, *sarcoma*). Sarcoma and myxoid tissue combined. Sarcoma transformed by mucous degeneration.

Fibroneuroma, fi-bro-nu-ro'mah. Tumor consisting of connective tissue occurring upon a nerve or distributed among the nerve-filaments.

Fibronu'clear or **Fibronu'cleated.** Term applied to tumors whose texture consists of filaments infiltrated with oval nuclei.

Fibropericarditis, fi-bro-per-e-kar-de'tis. Fibrinous inflammation of the pericardium.

Fibroplastic, fi-bro-plas'tik (*fibro, plasso,* to form). Epithet for a morbid formation constituted of the elements of areolar tissue, transformed, in part, into fibre; fibrosarcomatous. **F. cells,** see *Fibre-cells.* **F. tu'mor,** sarcoma; fibrosarcoma. Sarcoma with addition of fibrous tissue.

Fibroserous, fi-bro-se'rus. Possessing the nature of fibrous and serous membranes. *F. membranes* are composed of a fibrous and a serous sheet intimately united; for example, dura mater, pericardium, tunica albuginea testis, etc.

Fibro'sis. Constitutional fibroid degeneration, often associated with degeneration of arteries.

Fi'brous. Fibroid. Composed of fibres. The fibrous system comprises, particularly, the periosteum and perichondrium, articular capsules and ligaments, tendons, dura mater, pericardium, tunica sclerotica, tunica albuginea testis, outer membrane of the spleen, etc. Under simple fibrous tissues are classed the white and yellow fibrous tissues and areolar tissue. Both the yellow and the white may be detected in the areolar tissue. The white exists alone in ligaments, tendons, fibrous membranes, aponeuroses, etc. The yellow exists separately in the middle coat of the arteries, the chordæ vocales, ligamentum nuchæ of quadrupeds, etc., and differs from the white in possessing a high degree of elasticity. **F. cone,** corona radians. **F. epu'lis,** see *Epulis.* **F. growth,** tumor, fibrous. **F. lay'er,** layer of nerve-fibres of retina. **F. mat'ter of the brain,** see *Cerebrum.* **F. mem'branes,** see *Membranes, fibrous.* **F. phthi'sis,** see *Phthisis pulmonalis.* **F. plates,** fibro-cartilages of metatarso-phalangeal articulation. **F. pneumo'nia,** interstitial pneumonia; see *Pneumonia.* **F. pol'ypus,** tumor attached to the uterus by a slender peduncle. **F. rings,** fibro-cartilaginous rings with which the mitral and tricuspid valves of the heart are connected. **F. sys'tem,** see *Fibrous.* **F. tu'mor,** see *Tumor, fibrous.*

Fibrovascular, fi-bro-vas'ku-lar. Relating to structures that are fibrous and abundantly supplied with vessels.

Fibula, fib'u-lah (a clasp or brace). Spellbone, splint or splinter-bone of the leg. Long, small bone, situate at the outer part of the leg; the superior or tibial extremity is rounded, and forms the caput or head, and is articulated with the tibia. The inferior or tarsal extremity is articulated with the tibia and astragalus, and forms the malleolus externus or outer ankle by means of its coronoid process. The body of the bone is separated from the tibia by the interosseous space.

Fib'ulad. See *Fibular aspect.*

Fibulæus, fib-u-le'us. Peroneus muscle.

Fib'ular. Relating to the fibula; peroneal. **F. ar'tery,** peroneal artery. **F. a., supe'rior,** branch from any one of the important arteries of the leg passing across the fibula. **F. as'pect,** aspect toward the side on which the fibula is situated. *Fibulad* is used adverbially to signify toward the fibular aspect. **F. commu'nicating nerve,** peroneal communicating nerve. **F. nerve,** peroneal nerve. **F. notch,** groove on the tibia for articulation with the fibula.

Fibula're. Name for embryonic tarsal bone, afterward os calcis.

Fibula'ris. Relating to the fibula. **F. bre'vis,** peroneus brevis. **F. lon'gus** or **pri'mus,** peroneus longus. **F. secun'dus,** peroneus brevis.

Fibulation, fib-u-la'shun (*fibula,* clasp). Infibulation.

Ficaria (fik-ar'e-ah) (*ficus,* fig) **aquat'ica.** Scrophularia aquatica. **F. commu'nis, ranunculoï'des,** or **ver'na,** Ranunculus ficaria.

Fic'arin. Neutral principle from Ficaria communis, used for hemorrhoids.

Ficatio, fik-ah'she-o. Ficus; sycosis.

Fick, an'gle of. Angle formed by lines projected between lines drawn from front of foramen magnum along surface of base of skull and to point of chin.

Fick's ky'mograph. Apparatus for ascertaining the blood-pressure: it consists of a metal tube containing alcohol, which is connected with the artery by a tube filled with carbonate of sodium in solution. Increase of pressure causes the tube to straighten, and diminished pressure causes it to bend; a lever records these changes on a cylinder.

Fi'coid (*eidos,* resemblance). Resembling a fig in form or character.

Ficoin, fik'o-in. Form of papayin obtained from Ficus.

Ficosis, fik-o'sis. Ficus; sycosis.

Fi'cous. Relating to ficus.

Fi'cus. Figwart; fleshy excrescence, often soft and reddish, sometimes hard and scirrhous, hanging by a peduncle or formed like a fig on the eyelids, chin, tongue, anus, or organs of generation, in which last it is generally syphilitic; condyloma; hemorrhoids; ficus carica. **F. Ægypti'aca,** Ceratonia siliqua. **F. Amboinen'sis,** plant of Molucca; sap is expectorant; bark antipyretic and astringent. **F. anthelmin'tica,** the juice of this Peruvian tree is anthelmintic. **F. arbutifo'lia,** Mexican tree, used externally for poisoned wounds. **F. Bengalen'sis,** F. Indica. **F. Benjami'na,** amate, Mexican fig tree. **F. car'ica,** fig tree; the fig is a pleasant fruit when ripe, as well as when dried as it is found in the shops; it is laxative, and used, at times, as a cataplasm, especially in gum-boils. **F. citrifo'lia,** tree of E. and W. Indies and Mexico; root is expectorant and emetocathartic; infusion is employed in aphthæ and lepra. **F. commu'nis,** F. carica. **F. complica'ta,** samatito; Mexican fig tree. **F. conglomera'ta** or **cu'nia,** fruit of E. Indian tree, used in aphthæ, and externally as a bath in elephantiasis. **F. dolia'ria,** fig tree of Brazil; juice is drastic and vermifuge; properties are due to *doliarin,* vegetable pepsin. **F. elas'tica,** E. Indian tree; a source of caoutchouc. **F. excel'sa,** plant of E. Indies, root of which is used in aphthæ, affections of the liver, fevers, and diarrhœa. **F. gamella'ria,** F. doliaria. **F. glomera'ta,** cluster fig of E. Indies; root is expectorant and antidysenteric; bark is used

externally for ulcers. **F. go'nia**, bark of this E. Indian tree is used in aphthæ and odontalgia, and in affections of the kidney and bladder. **F. heterophyl'la**, E. Indian tree; juice of the root is used in colic and dysentery; bark of the root in asthma and respiratory affections. **F. In'diæ gra'na**, Coccus cacti. **F. In'dica**, banyan tree; see *Musa paradisiaca*, *Caoutchouc*, *Carica papaya*, *Lacca*. **F. nit'ida**, fruit of this E. Indian tree is used in aphthæ. **F. oppositifo'lia**, E. Indian tree; various parts are emetic, tonic, and antiperiodic. **F. pas'sa**, dried fig. **F. racemo'sa**, country fig tree of E. Indies; used as a tonic, and in hæmaturia and menorrhagia, diabetes, and sluggish conditions of the liver. **F. religio'sa**, sacred fig of E. Indies; alterative; bark of root used externally for ulcers; see *Lacca*. **F. Rumph'ii**, various parts of this plant of Asia are expectorant, and used also in cutaneous diseases. **F. sep'tica**, the various parts of this plant of Molucca are diuretic, cathartic, expectorant, and anthelmintic. **F. undula'ta**, E. Indian tree; used in aphthæ. **F. un'guium**, condition of the nails in which the posterior wall is swollen, everted, and more or less inflamed. **F. vene'rea**, venereal wart; condyloma. **F. vulga'ris**, F. carica.

Fid'dles. Scrophularia aquatica.

Fidgets, fid'jets. General restlessness and troublesome uneasiness of the nerves and muscles, with increased sensibility and inability of fixing the attention, with a perpetual desire for changing the position; technically called *dysphoria*.

Fidicinales, fid-is-in-al'ees (*fidicen*, a harper). Lumbricales manûs.

Fidispinalis, fid-e-spin-al'is. Multifidus spinæ.

Field of fixa'tion. Surface over which the point of sight or of clearest vision on the retina can be moved by motion of the eye. **F. hos'pital**, hospital on battlefield, or portable, to be carried on march. **F. of regard'**, F. of fixation. **F. of view**, whatever is embraced in a view from any point, whether near or distant. **F. of vis'ion**, external space from which appreciable rays of light strike upon the retina; space on the retina capable of appreciating impressions. This field is contracted in some affections of the retina or of the cerebrum. **F., vis'ual**, field of vision.

Field'weed. Anthemis cotula, Erigeron Philadelphicum.

Field'wort. Gentiana amarella.

Fifteen-day fe'ver. Relapsing fever.

Fifth nerve. Trifacial nerve. See *Trigemini*. **F. ven'tricle**, see *Ventricles of the brain*.

Fig. Fruit of Ficus carica. **F., In'dian**, Cactus opuntia; Ficus Indica; Opuntia vulgaris. **F., sa'cred**, Ficus religiosa. **F. sen'na**, see *Cassia senna*.

Figura, fig-u'rah. Figure. **F. veno'sa** (venous figure), venous circle in the embryo which bounds the vascular area.

Figuration, fig-u-ra'shun (*figuro*, to fashion). Imagination.

Fig'ure. Contour of any part. **F., achromat'ic** or **achro'mative**, spindle shape assumed by achromatic fibrils in a dividing cell; see *Fibres, achromatic*. **F., chromat'ic** or **chro'mative**, shape produced by chromatic fibrils in a dividing cell; see *Fibres, chromatic*. **F., coiled**, convolution. **F., divis'ion** or **nu'clear**, figure formed by nucleus during caryocinesis; intermediate stage in the course of direct nuclear division. **F., po'lar**, poles in dividing cell, subsequently the location of daughter nuclei.

Fig'ure-of-8. Bandage with turns arranged to resemble somewhat a figure of 8; twisted suture.

Fig'wart. Ficus condyloma.

Fig'wort. Scrophularia nodosa; Ranunculus ficaria. **F. wa'ter, great'er**, Scrophularia aquatica.

Fi'la (pl. of **Filum**, thread) **interme'dia ner'vi acus'tici.** Nervous filaments passing between the facial and auditory nerves. **F. ner'vea**, nerve-fibres. **F. olfacto'ria**, olfactory filaments. **F. parotide'a**, filaments of auricularis magnus nerve to parotid gland. **F. spermat'ica**, spermatozoa.

Filaceous, fil-a'se-us. Filamentous.

Fil'ament (dim. of **Filum**, a thread). Small thread or fibril; glairy, thread-like substance forming in the urine in some diseases, and depending on a particular secretion from the mucous membrane of the urinary passages. **F., achromat'ic**, fibril, achromatic. **F., chromat'ic**, fibril, chromatic. **F. of Mül'ler**, see *Fibres of Müller* and *Tunica Jacobi*. **F., nu'clear**, fibril, nuclear. **F., nucleoplas'mic**, fibril, nuclear. **F., olfac'tory**, olfactory hairs. **F., sem'inal** or **spermat'ic**, spermatozoid. **F., ter'minal**, thread-like inferior termination of spinal cord.

Filamen'ta ner'vea Wrisber'gii. Nerve of Wrisberg.

Filamentous, fil-am-en'tus. Filaceous; thread-like; filiform; containing thread-like substances, as filamentous tunic or decidua.

Fil'aments of Mül'ler. Connective-tissue fibres between limiting membranes of retina.

Filamen'tum. Filament; frænum.

Filaria, fil-ah're-ah (*filum*, a thread). Genus of parasitic worms found in various organs of animals, as Nematoidea; see *Parasites*. **F. Bancrof'ti**, filaria Medinensis. **F. bronchia'lis**, filaria found in the bronchial tubes. **F. conjuncti'væ**, species found under the conjunctiva, especially of negroes. **F. dermathem'ica**, filaria causing papulo-pustular disease of the skin, as in craw-craw of Africa. **F, dracun'culus**, F. Medinensis. **F. Guineen'sis**, dracunculus. **F. hom'inis** (*homo*, man), F. bronchialis; F. sanguinis. **F. hom'inis o'ris**, F. found in the mouth of a child. **F. immitis**, present in the portal vein in a case of hæmaturia; ova were also discovered in the wall of the bladder and in the uterus. **F. labia'lis**, occurring in a pustule in the upper lip. **F. lacrima'lis**, F. conjunctivæ. **F. len'tis**, species found in lens in the catarrh; see *Parasites*. **F. Medinen'sis**, dracunculus or Guinea worm of Egypt, India, and W. Indies, producing abscesses in the skin. Tarragon. **F. oc'uli**, F. conjunctivæ; F. lentis; see *Parasites*. **F. san'guinis**, filaria seen in blood-vessels and lymphatics, producing chyluria, elephantiasis, etc. The pathological condition is called *Filariasis* or *Filariosis*. **F. Wuchere'ri**, F. sanguinis.

Fila'rial. Relating to filaria.

Filari'asis or **Filario'sis.** See *Filaria sanguinis*.

Fil'bert. Corylus avellana.

File, den'tal. Dental file.

File-cut'ter's disease. In making steel files they are laid on a lead bed, and the fine particles of lead are raised in a cloud whenever the file is struck by the chisel, and may be inhaled, giving rise to lead-poisoning, a form of pneumono-koniosis.

Filetum, fil-a'tum (*filum*, a thread). Frænum of the tongue.

Filicic (fil-is'ik) **acid.** $C_{14}H_{18}O_5$. Crystallizable acid from male fern.

Filicin, fil'is-in. Active principle of root of Aspidium filix mas, or male fern.

Filicula, fil-ik'u-lah (dim. of **Filix**, fern). Polypodium filix mas. **F. dul'cis**, Polypodium vulgare.

Filiform, fil'e-form (*filum*, a thread, *forma*, form). Threadlike, as the filiform papillæ of the tongue, filiform or thready pulse, filiform bougie, etc. See *Papillæ*.

Filipendula, fil-e-pen'du-lah (*filum*, a thread, *pendo*, to hang). Spiræa filipendula.

Filipuncture, fi'li-punk-shur. Operation for aneurism by introduction of fine wire or catgut into the sac, leaving it there to produce coagulation.

Filitan'nic acid. Tannic acid obtained from Filix mas.

Filix (fe'liks) **aquat'ica** or **flo'rida.** Spiræa filipendula. **F. flor'ida**, Osmunda regalis. **F. fœmin'ea**, Pteris aquilina. **F. mas**, Aspidium filix mas; Polypodium filix mas. **F. non-ramo'sa denta'ta**, Polypodium filix mas. **F. nymphæ'a**, Pteris aquilina. **F. pinna'ta**, Polypodium filix mas. **F. ven'eris**, Adiantum pedatum.

Fillæa suaveolens, fil-le'ah swav-a'o-lens. Erythrophlæum Guineense.

Fil'let (*filum*, a thread). Fascia. Bandage like a

noose. Lemniscus. **F. of cor'pus callo'sum,** gyrus fornicatus. **F. lemnis'cus,** lemniscus. **F., ol'ivary,** fasciculus of nerve-fibres surrounding olivary body of medulla oblongata.

Fill'ing. In dentistry, operation of stuffing the cavity of a carious tooth with some indestructible substance to prevent the access of extraneous matters. The materials employed are gold foil, sponge or crystalline gold, tin foil, mastic, gutta percha, etc. See *Plugging.*

Filobacteria, fe'lo-bak-te-re-ah. Thread-like bacteria, desmobacteria for example. See *Bacteria.*

Fi'lopressure (*filum,* wire, *premo, pressum,* to press). Pressure with wire, as over an artery.

Filovarico'sis. Varicose swelling on nerve-fibres of axis-cylinder.

Fil'ter. Filtrum. **F., res'piratory,** respirator.

Fil'trate. Filtered liquid.

Filtration, fil-tra'shun (*filtrum,* filter). Pharmaceutical operation, consisting in passing fluid through a filter or strainer, to clarify it. In ancient physiology, action by which different humors are separated from the mass of the blood.

Fil'trum. A filter; any porous material through which fluid is passed to separate it from the matters suspended in it. **F. ventric'uli laryn'gis,** furrow or groove between the cartilages of Santorini and of Wrisberg in the larynx.

Filum, fe'lum (thread). Filament. **F. car'neum,** muscular fibre. **F. corona'rium,** thread-like process along the sides of the auriculo-ventricular opening. **F. du'ræ ma'tris,** process of dura mater around the filum terminale of the spinal cord. **F. muscula're,** muscular fibre. **F. spermat'icum,** spermatozoid. **F. termina'le,** slender ligament, prolonged from the nervous sheath formed by the spinal pia mater, which descends through the centre of the cauda equina, and is attached to the dura mater lining the canal of the coccyx. In structure it is essentially the same as that of the spinal cord proper, except that nerve-roots are not connected with it.

Fimbria, fim'bre-ah. Band or fringe, as the fimbria or fimbriated or fringed extremity of the Fallopian tube. Fibre. **F. cor'nu ammo'nis,** a white band extending along the hippocampus, and reflected outwardly from its interior border. **F. ova'rica,** a long fimbria of Fallopian tube directed toward the ovary.

Fimbriæ, fim'bre-e (pl. of **Fimbria**). Threads. **F. carno'sæ co'li,** appendiculæ pinguedinosæ. **F. of Fallo'pian tube,** see *Fimbria.* **F. lin'guæ,** wavy fold of sublingual mucous membrane. **F. oviduc'tûs,** fimbriæ of Fallopian tube; see *Fimbria.* **F. synovia'les,** connective-tissue filaments projecting into interior of joints.

Fimbriated, fim'bre-a-ted. See *Fimbria.* **F. body,** fimbria cornu ammonis. **F. extremi'ty,** see *Fimbria.*

Fimbriocele, fim-bre-o-se'le (Eng. fim'bre-o-seel) (*fimbria, kele,* tumor). Hernia involving the fimbriated extremity of the Fallopian tube.

Fimus, fe'mus. Excrement; fæces.

Fin'ger. See *Digitus.* **F., an'nular,** see *Digitus.* **F., ear,** see *Digitus.* **F., club,** see *Kyllosis.* **F., contract'ed,** Dupuytren's contraction. **F., fal'ry,** Digitalis purpurea. **F., Hippocrat'ic,** fusiform tumefaction of the last phalanx of the index finger especially, with curving of the nails, mentioned by Hippocrates as characteristic of phthisis, but present in many cases of disturbed hæmatosis. **F., in'dex,** see *Digitus.* **F., lit'tle,** see *Digitus.* **F., mid'dle,** medius digitus. **F., ring,** annular finger. **F. stall,** covering for injured or sore fingers; see *Digitale.* **F., supernu'merary,** a form of monstrosity in which there are more fingers than usual. **F., trig'ger,** occasional interference with flexion and extension of finger, ending in a jerk; see *Trigger.* **F., webbed,** syndactylism.

Fi'nis as'peræ arte'riæ (end of the trachea). Larynx.

Fir, bal'sam. Pinus balsamea. **F. moss, upright,** Lycopodium selago. **F. oil,** see *Pinus sylvestris.* **F., Scotch,** Pinus sylvestris. **F., spruce, Norway,** Pinus abies. **F. tree, sil'ver, Europe'an,** Pinus picea. **F. wool,** see *Pinus sylvestris.* **F., yew-leaved,** Pinus abies.

Fire. Inflammation. **F. damp,** hydrogen, carburetted. **F. mea'sles,** see *Rubeola.* **F., Per'sian,** see *Anthrax,* **F., pink,** Silena Virginica. **F. root,** Acorus calamus. **F., St. An'thony's,** erysipelas. **F. weed,** Erechthites hieracifolia; senecio. **F., wild,** erysipelas.

Fi'ring. Cauterization.

First breech presenta'tion. See *Presentation.* **F. face presenta'tion,** see *Presentation.* **F. inten'tion,** see *Intention.* **F. nerve,** olfactory nerve.

Fir-wool. Wool made by beating pine leaves, and applied over rheumatic or other painful regions. **F.-w. oil,** distilled oil from fresh leaves of Pinus sylvestris; pine-needle oil.

Fish ex'tract. Extract prepared from fish, resembling extract of flesh.

Fish'berries. Menispermum cocculus. **F. poi'son,** Cocculus Indicus.

Fish'glue. Isinglass.

Fish'poison. Berries of Cocculus Indicus. Poison of fish from presence of ptomaïnes.

Fish'skin. Ichthyosis.

Fish'tongue. Instrument—so called from its shape—used for the removal of the wisdom teeth.

Fissiculation, fis-sik-u-la'shun (*fissiculo,* to open or make incisions). Opening made with a scalpel.

Fis'sile. Inclined or able to split.

Fission, fis'shun. Reproduction by splitting. See *Generation.*

Fissipar'ity. Generation by fission or splitting.

Fissiparous, fis-sip'ar-us (*findo,* to split, *pario,* to bring forth). Generating by splitting. See *Generation.*

Fissura, fis-su'rah. Fissure. **F. a'ni,** fissure of the anus. Painful superficial breach of surface in the anal region, frequently attended with anal spasm and with ulcer on the verge of or within the sphincter. **F. ante'rior,** sulcus or furrow between frontal and parietal lobe. **F. antit'rago-helici'na,** furrow in cartilage of ear between processus helicis caudatus and antitragus. **F. Bichat'ii,** transverse cerebral fissure. **F. calcari'na,** calcarine fissure. **F. callo'so-margina'lis,** calloso-marginal sulcus. **F. cana'lis Fallo'pii,** hiatus Fallopii. **F. centra'lis,** central fissure; F. of Sylvius; median f. **F. cerebel'li longitudina'lis,** valley of cerebellum. **F. cerebel'li transver'sa,** great horizontal fissure between upper and lower surface of cerebellum. **F. cer'ebri centra'lis,** furrow separating frontal and parietal lobes of brain. **F. cer'ebri collatera'lis,** deep groove on upper surface of occipital and temporo-sphenoidal lobes of the brain. **F. cer'ebri horizonta'lis,** calcarine fissure. **F. cer'ebri infe'rior,** horizontal portion of fissure of Sylvius. **F. cer'ebri latera'lis,** fissure of Sylvius. **F. cer'ebri latera'lis ante'rior,** ascending portion of fissure of Sylvius. **F. cer'ebri latera'lis poste'rior,** F. cerebri inferior. **F. cer'ebri longitudina'lis,** fissure, longitudinal, of the brain. **F. cer'ebri mag'na,** anterior transverse fissure of the brain. **F. cer'ebri pari'eto-occipita'lis,** parieto-occipital fissure. **F. cer'ebri poste'rior,** calcarine fissure. **F. cer'ebri supe'rior,** ascending portion of fissure of Sylvius. **F. cer'ebri transver'sa ante'rior** or **transver'sa mag'na,** transverse fissure of brain, anterior. **F. cer'ebri transver'sa par'va poste'rior,** posterior transverse fissure of brain. **F. choroi'dea,** opening to interior of eye through which middle germ-layer passes to form vitreous humor; anterior transvere fissure of brain. **F. collatera'lis,** F. cerebri collateralis. **F. contraja'cens,** contrafissura. **F. dor'si latera'lis,** furrow on spinal cord of neck, near posterior median fissure. **F. dor'si mesa'lis,** posterior fissure of spinal cord. **F. endo-mesognath'ica,** middle incisive fissure separating premaxillary bones from superior maxillary bone. **F. ethmoïda'lis,** fissure in cribriform plate of ethmoid. **F. fos'sæ Syl'vii ante'rior** or **ascen'dens,** ascending portion of fissure of Sylvius. **F. fos'sæ Syl'vii poste'rior** or **horizonta'lis,** F. cerebri inferior. **F. fove'æ rhomboida'lis longitudina'lis** or

me'dia, median groove in floor of fourth ventricle of brain. **F. Gla'seri**, fissure at bottom of glenoid fossa of temporal bone. **F. hippocam'pi**, hippocampal fissure; calcarine fissure. **F. horizonta'lis**, calcarine fissure. **F. incisi'va**, fissure separating premaxillary bones from superior maxillary. **F. interlobula'ris**, interlobular fissure. **F. intermesognath'ica**, fissure between two premaxillary bones, mesognathion of each side. **F. interparieta'lis**, fissure between parietal bones. **F. i'ridis**, coloboma. **F. larynge'a pharyn'gis**, see *Larynx*. **F. latera'lis**, fissure of Sylvius. Furrow on spinal cord of the neck, near posterior median fissure. **F. latera'lis ante'rior**, ascending portion of fissure of Sylvius. **F. latera'lis poste'rior**, F. cerebri inferior. **F. longitudina'lis ante'rior**, fissure dividing spinal cord and medulla oblongata longitudinally into two halves. **F. longitudina'lis cerebel'li**, valley of the cerebellum. **F. longitudina'lis cer'ebri**, fissure dividing cerebral hemispheres on median line. **F. longitudina'lis poste'rior**, posterior median fissure of spinal cord. **F. mag'na Syl'vii**, fissure of Sylvius. **F. mag'na vul'væ**, opening of the vulva. **F. mastoï'dea squamo'sa**, fissure that occasionally takes the place of the squamo-mastoid suture. **F. media'na ante'rior**, anterior median fissure of the spinal cord. **F. media'na poste'rior**, posterior median fissure of the spinal cord. **F. me'so-exognath'ica**, lateral incisive fissure. **F. occipita'lis, occipita'lis inter'na**, or **occipita'lis perpendicula'ris inter'na**, parieto-occipital fissure. **F. occipita'lis exter'na** or **occipita'lis perpendicula'ris exter'na**, transverse occipital sulcus. **F. occipita'lis horizonta'lis** or **poste'rior**, calcarine fissure. **F. olfacto'ria**, narrow top of each nasal fossa. **F. orbita'lis infe'rior**, fissure between body of upper jaw and greater ala of sphenoid groove on orbital surface of upper jaw. **F. orbita'lis supe'rior**, sphenoidal fissure. **F. o'ris**, aperture of mouth. **F. palati'na**, vertical fissure between pterygoid process and superior maxillary bone, transmitting internal maxillary artery. **F. palpebra'rum**, see *Palpebra*. **F. paralle'la**, upper and largest furrow of temporal lobe. **F. pari'eto-occipita'lis** or **perpendicula'ris**, parieto-occipital fissure. **F. pe'tro-** or **petro'so-basila'ris**, petro-basilar fissure. **F. pe'tro-** or **petro'so-mastoï'dea**, fissure behind tympanic division of temporal bone. **F. petro'sa superficia'lis**, hiatus Fallopii. **F. petro'so-angula'ris**, space at base of skull between petrous bone and greater ala of sphenoid. **F. petroso-squamo'sa**, line or seam separating, in the fœtus, squamous and petrous portions of temporal bone. **F. pe'tro-tympan'ica**, fissure at bottom of glenoid fossa of temporal bone. **F. pila'ris**, capillary fracture, fissure, or crack. **F. poste'rior**, calcarine fissure; parieto-occipital fissure. **F. præoccipita'lis**, notch on lower border of outer surface of hemisphere, indicating division of occipital and temporal lobe. **F. pterygoï'dea**, space between pterygoid plates of sphenoid. **F. pter'ygo-palati'na, F. palatina, F. puden'di**, opening of the vulva. **F. Rolan'di**, central groove on surface of hemisphere. **F. sphenoida'lis** or **sphenoida'lis superior**, sphenoidal fissure. **F. sphe'no-palati'na, F. palatina, F. sphenopetro'sa**, fissure at base of skull between spine of sphenoid and petrous bone. **F. spina'lis**, spina bifida. **F. ster'ni**, congenital fissure of sternum from imperfect union of its cartilages. **F. subic'uli inter'na**, deep fissure between the eminentia collateralis and the hippocampus major. **F. Syl'vii**, fissure of Sylvius. **F. tegumen'ti-tym'pani**, shallow furrow on petrous portion of temporal bone in young people, indicating osseous union. **F. tempora'lis infe'rior**, collateral fissure. **F. transver'sa ante'rior**, F. cerebri centralis. **F. transver'sa cerebri**, transverse cerebral fissure. **F. tym'pano-squamo'sa**, F. Glaseri. **F. ventra'lis**, anterior median fissure of spinal cord. **F. ventrilatera'lis**, furrow on spinal cord of cervical region, occasionally found near anterior median fissure. **F. ventrimesa'lis**, anterior median fissure of spinal cord. **F. vesico-genita'lis**, median fissure of lower abdomen-wall, with separation of symphysis pubis. **F. vul'væ**, cleft of vulva. **F. vul'væ mag'na**, opening of the vulva. **F. zygomat'ico-sphenoida'lis**, space occasionally found in place of spheno-zygomatic suture.

Fissuration, fish-shu-ra'shun. Formation or production of fissure.

Fissure, fis'shure (*findo*, to cleave). A cleft or opening in a bone; a fracture in which the bone is cracked, not separated, as in fracture. Congenital fissures frequently exist in the cranial bones, the result of incomplete ossification. Narrow, long, superficial solution of continuity around the external openings of the mucous membranes. Chap observed, particularly on the callous hands of workmen in certain mechanical employments. Small chapped ulcerations in young children, due to contact of the fæces and urine with the delicate skin of the thighs, nates, and genital organs. Clefts on the genital organs in the vicinity of the anus in those laboring under syphilis; usually called rhagades. Small cleft or chapped sore, especially on the lips or hands. Cerebral fissures are furrows in the structure of the brain. **F., abdom'inal**, extensive abdominal hernia. **F., ad-occip'ital**, fissure of cerebrum across caudal portion of præcuneus. **F., amyg'daline**, cerebral fissure on mesal aspect of tip of temporal lobe; see *Fissura* and *Monster*. **F., ante'rior me'dian**, see *Fissures of spinal cord*. **F. of anus**, fissura ani. **F., auric'ular**, aperture on lower surface of petrous portion of temporal bone, for auricular branch of pneumogastric nerve. **F., basirrhi'nal**, small fissure near tip of temporal lobe. **F., basi-Syl'vian**, basal portion of F. of Sylvius. **F. of Bichat**, transverse fissure of the brain. **F. of blad'der**, congenital fissure in wall of bladder. **F. of bone**, see *Fissure*. **F., cal'carine**, see *Calcarine*. **F., callo'sal**, space between dorsal portion of corpus callosum and cortex. **F., callo'so-mar'ginal**, F. on nasal surface of hemisphere of brain between corpus callosum and margin. **F., cen'tral**, aggregate of the cavities or ventricles of the brain. **F., chorioi'dal**, transverse cerebral fissure. **F., circumin'sular**, F. around base of insula. **F., collat'eral**, F. on mesal part of cerebrum; eminentia collateralis. **F., den'tate**, hippocampal fissure. **F. of duc'tus veno'sus**, see *Liver*. **F., ecto-occip'ital**, transverse f. near tip of occipital lobe. **F., ectorrhinal**, F. at side of base of olfactory crus. **F., ethmoid'al**, superior meatus of nares. **F., fau'cial**, F. on middle surface of fourth lobe. **F. for gall-bladder**, see *Gall-bladder*. **F. of Gla'ser** or **Glase'rius**, fissure, glenoid. **F., gle'noid**, this divides the glenoid cavity of the temporal bone into two parts, and gives passage to the chorda tympani, etc. **F., great horizon'tal**, fissure between upper and lower parts of cerebellum. **F. of he'lix**, a small vertical fissure of the helix of the ear, a little above the tubercle, for the attachment of the attrahens aurem muscle. **F., hippocam'pal**, cerebral fissure from splenium to near tip of temporal lobe. **F., horizon'tal**, calcarine fissure; peduncular sulcus. **F., inci'sor**, incisive suture; F. between intermaxillary part of upper maxillary bone and the rest of that bone. **F., infraor'bitar**, suborbitar fissure. **F., in'sular**, any fissure crossing the insula. **F., intercer'ebral**, longitudinal fissure. **F., intergy'ral**, fissure between two cerebral convolutions. **F., interhemispher'ic**, longitudinal fissure. **F., interlamel'lar**, F. between lamellæ of cerebellum. **F., interlo'bar**, fissure between any two cerebral lobes. **F., interlob'ular**, longitudinal fissure; great longitudinal fissure of brain. **F., interme'diate**, paramedian sulcus. **F., interpal'pebral**, F., parietal. **F., interpari'etal**, F., parietal. **F., interpedunc'ular**, F. between crura cerebri. **F., intragy'ral**, small fissure between larger ones. **F., intrapari'etal**, F., parietal. **F. of i'ris**, coloboma. **F., lambdoid'al**, occipital fissure. **F., lat'eral**, antero-lateral groove of spinal cord. **F. of lip**, hare-lip. **F., longitu'dinal**, great longitudinal f. of brain, separating two hemispheres; groove on inferior surface of liver. **F., mar'ginal**, fissure at right angles to corpus callosum. **F., max'illary**, F. on inner surface of superior maxillary bone. **F. of the nip'ple**, formation of fissures in the female breast during lactation. **F., occal'carine**,

F. of which calcarine and occipital fissures are divisions. **F., occip'ital, F., occip'ito-pari'etal,** deep interlobar f. between occipital and parietal lobes of cerebrum. **F., occipito-tem'poral,** F., collateral. **F., olfac'tory,** F. in olfactory lobe for olfactory bulb and crus. **F., or'bital,** see *Orbitar fissure.* **F., or'bitar, infe'rior,** spheno-maxillary fissure. **F., or'bitar, supe'rior,** sphenoidal fissure. **F. of pal'ate,** cleft of palate. **F., pal'pebral,** F. between upper and lower eyelids. **F., paracen'tral,** F. passing nearly around paracentral lobe. **F., pari'etal,** interparietal or intraparietal f., beginning near end of central f., and connected with occipital lobe. **F., perpendic'ular,** F., occipital. **F., por'tal,** transverse f. of liver; see *Liver.* **F., postcal'carine,** F. in occipital cerebral region, connected with calcarine fissure. **F., postfront'al,** frontal fissure. **F., posthippocam'pal,** calcarine f. **F., postoccip'ital,** fissure constituting front margin of superior occipital convolution. **F., postsep'tal,** F. at back part of occipital lobe. **F., pre-Syl'vian,** anterior portion of fissure of Sylvius. **F. of rec'tum,** F., anal. **F. or Fur'row of Rolan'do,** transverse fissure between two superior cerebral convolutions, met with above the fissure of Sylvius. It is slightly posterior to the coronal suture, and corresponds very nearly with the line of suture between the frontal and parietal bones. **F., sagit'tal,** intercerebral fissure. **F. of Santori'ni,** see *Fissures.* **F., semilu'nar,** notch at the anterior edge of the cerebellum, where it receives fibres connecting it to the cerebellum and mesocephalon. **F., small cer'ebral,** inferior transverse fissure. **F., sphenoid'al,** triangular fissure on sphenoid bone, transmitting branches of fifth pair of nerves and ophthalmic vein. **F., sphenomax'illary,** fissure between superior maxillary and sphenoid bones. **F., spi'nal,** spina bifida. **F. of spleen,** hilus of spleen. **F., subfront'al,** fissure between frontal convolutions. **F. of Syl'vius,** deep, narrow sulcus, ascending obliquely backward from the temporal ala of the sphenoid bone, near to the middle of the parietal bone, and parting the anterior and middle lobes of the cerebrum on each side. **F. of the tra'gus,** fissure on the anterior surface of the tragus of the ear. **F., trans'verse, of the brain,** great transverse fissure, fissure of Bichat. A fissure passing beneath and behind the edge of the middle lobe of the brain, and extending beneath the hemisphere of one side to the same point of the opposite side. **F., umbil'ical,** front part of longitudinal fissure of liver. **F. of ure'thra,** epispadias; hypospadias. **F. of ve'na ca'va,** see *Liver.* **F. of ver'tebra,** spina bifida.

Fis'sures of the cer'ebrum. See *Fissure.* **F. of liv'er,** see *Liver.* **F. of lungs,** see *Lung.* **F. of medul'la oblonga'ta,** see *Medulla spinalis.* **F. of Santori'ni,** irregular fissures in cartilage of external auditory meatus and the tragus. **F. of spi'nal cord,** see *Medulla spinalis.*

Fist. The clenched hand.

Fistula, fist'yu-lah (pipe or reed). Fistule. A solution of continuity, the opening of which is narrow, and the disease kept up by an altered texture of parts, so that it is not disposed to heal. It may be cutaneous or deep-seated; incomplete or blind, when it has but one opening; complete, when there are two openings, the one communicating with an internal cavity, the other externally. Incomplete fistulæ may be internal or external; the former open internally, the latter open externally. External incomplete fistulæ are kept up by caries or necrosis of bones, by extraneous bodies in any of the living textures, or by purulent cavities, the walls of which have not become united. Internal incomplete fistulæ generally soon become complete, since the discharge escaping from them into the cavities into which they open has a constant tendency to make its way outwardly, and soon occasions ulceration of the integuments. Fistulæ have received different names, according to the discharge which they afford and the organs in which they are seated, as lacrymal, biliary, salivary, synovial, and urinary. Those dependent on diseased bone, cartilage, tendon, etc. do not heal until after the exfoliation of the morbid part. Fistulæ of excretory ducts are produced either by an injury of the duct itself or by the retention and accumulation of the fluids to which they have to give passage; thus, fistula lacrymalis, dropsy of the lacrymal sac, commonly proceeds from the obliteration of the nasal ducts or from atony of the lacrymal sac, preventing the tears from passing into the nostrils. Cassia fistula. **F., abdom'inal,** fistula of wall of abdomen. **F., aë'rial,** opening resulting from injury to the larynx and trachea, allowing the air of respiration to pass through. **F. a'ni, an'al,** or **a'no** generally occurs from mechanical pressure or impediment. The principal indication in the treatment of fistulæ of the excretory canals being to put a stop to the constant discharge of the secretions, etc. through the preternatural channel, the fistulous passage is at times laid open, and a communication established with the natural excretory canal; at others strong pressure is employed to procure its obliteration. **F. au'ris congen'ita,** congenital fissure or fistula in the outer ear, a remnant of fœtal life. **F. Bellinia'na,** uriniferous tube. **F., bil'iary,** form of fistula usually met with in the right hypochondriac region, generally caused by ulceration of the gall-bladder. **F., blind,** incomplete fistula; see *Fistula.* **F., branch'ial,** fistula in cervical region communicating with pharynx. **F., bron'chial,** see *Fistula, parietal.* **F., cer'vical,** F. opening on the neck or into the cervix uteri. **F. ciba'lis,** œsophagus. **F. col'li congen'ita,** fistulous canal in cervical region from non-closure of a branchial cleft. **F., complete',** see *Fistula.* **F. cor'neæ,** fistula of the cornea. This results from a penetrating wound of the cornea continuing unhealed, but becoming closed over by the conjunctiva. The aqueous humor escapes from the anterior chamber and raises the conjunctiva in the form of a vesicle, which should be removed with scissors and the opening in the cornea touched with nitrate of silver. **F. cru'ris,** fibula. **F., den'tal,** F., alveolar. **F. du'ra ma'tris,** sinus of the dura mater. **F., en'tero-vagi'nal,** fistula leading from intestinal canal above the rectum to the vagina. **F., en'tero-ves'ical,** fistula leading from bladder to intestines. **F., fe'cal,** fistula of the intestines due to injury or gunshot wound; see *Anus, artificial.* **F., fron'tal,** abscess communicating with frontal sinus. **F., gas'tric,** F. of the stomach, a form of fistula in the epigastric region from traumatic causes, as gunshot wounds of the stomach, discharging gastric juice, mucus, or the contents of that organ. **F., gas'tro-col'ic,** fistulous communication between the stomach and the colon. *F., gastro-duodenal,* is a similar condition between the stomach and duodenum. **F., gas'tro-cuta'neous,** fistulous communication between the stomach and the external surface of the body. **F., gas'tro-duode'nal,** see *F., gastro-colic.* **F., gas'tro-intes'tinal,** fistula leading from the stomach to the intestine. **F., gas'tropul'monary,** fistula leading from the stomach into the lung. **F., gas'tro-vagi'nal,** rare form of fistula from stomach and abdomen into vagina. **F., gen'itou'rinary,** fistula between urinary and genital apparatus. **F. gingiva'lis,** F., alveolar. **F., hepat'ic,** F., biliary. **F., hypogas'tric,** F. in hypogastric region. **F., incomplete',** blind fistula; see *Fistula.* **F., in'guinal,** F. in inguinal region. **F., inter'nal,** fistula that has no outlet externally. **F., intes'tinal,** fistula communicating with intestine, variously called intestino-tubal, intestino-uterine, intestino-vaginal, intestino-vesical, as they connect with the Fallopian tube, uterus, vagina, or bladder. **F. lacryma'lis,** F. of lacrymal apparatus; see *Fistula.* **F., lac'teal,** milk fistula; mastosyrinx. **F., larynge'al,** F. of larynx. **F., laryn'go-pharynge'al,** F. of larynx and pharynx. **F. lympha'lis,** lymphatic or lymph fistula, form of fistula in the cervical region, usually congenital, discharging a thin fluid, and dependent on imperfect closure of a lymphatic of the neck. **F. mam'mæ** or **mam'mary,** milk fistula; mastosyrinx. **F., me'troperitone'al,** F. between uterine cavity and peritoneum. **F., mus'cular,** F. after abscess of muscular tissue. **F. nervo'rum,** neurilemma. **F., œsopha-**

ge'al, F. of œsophagus. **F., pari'etal**, channel of communication formed by ulceration through the external walls, as of the chest or abdomen. If the pulmonary pleura be perforated, and an opening takes place into the bronchial tubes, a bronchial or even pulmonary fistula may be formed. **F., pe'nile**, abscess of urethra opening externally on the penis; see *Penile*. **F., perine'al**, F. produced by abscess of perineum communicating with organs in vicinity. **F., perine'o-vagi'nal**, fistula resulting from partial closure of a ruptured perineum, leaving a small orifice near the sphincter ani, or from penetration of the presenting part of the fœtus through the perineum during parturition. **F., pharynge'al**, F. opening into pharynx. **F., pleu'ro-pul'monary**, fistula of pleura communicating with lung, as from empyema. **F. pulmona'lis** or **pul'monary**, pleural adhesion with unnatural opening between lung and chest-wall; trachea. **F., pu'rulent**, F. attended with suppuration. **F., rec'tal** or **rec'ti**, fistula in ano. **F., rec'to-la'bial, rec'to-ure'thral**, and **rec'to-vag'inal**, see *F., recto-vesical*. **F., rec'to-ves'ical**, term applied to fistulous communication between the rectum and bladder; *recto-urethral fistula* and *recto-vaginal fistula* are applied to similar communications between the rectum and the urethra or vagina; and *vesico-uterine, recto-labial, vesico-vaginal, urethro-vaginal*, and *vesico-utero-vaginal fistula* to a similar relation of the bladder and uterus, rectum and labia, bladder and vagina, urethra and vagina, and bladder, uterus, and vagina, respectively. **F., rec'to-vul'var**, rectal fistula having its outlet at the vulva. **F., re'nal**, fistula affecting pelvis of kidney. **F. sac'ci lacryma'lis**, opening on face leading into lacrymal sac, from abscess in it. **F. sa'cra**, medulla spinalis; vertebral column; aqueduct of Sylvius. **F., sa'cral**, fistula situated in sacral or lumbo-sacral region. **F. saliva'tus**, salivary fistula; see *Salivary*. **F., scro'tal**, fistula of urethra opening externally on scrotum. **F., spermat'ic**, fistula resulting from inflammation of the testicle, in which spermatic fluid and pus are commingled. **F. spiritua'lis**, trachea. **F. stercora'lis** or **stercoro'sa, stercora'ceous** or **ster'coral**, fecal fistula; artificial anus. **F., syno'vial**, fistula connecting with synovial membranes or joints. **F., Thi'ry's**, artificial fistula of the intestine for collecting the intestinal juice. **F., thora'cic**, fistula between chest-wall and chest-cavity or contents, as from empyema. **F., tra'cheal**, F. between trachea and external surface of body. **F., umbil'ical**, F. opening at the umbilicus, congenital or acquired. When there is communication with the ovary, it is called *umbilico-ovarian fistula*. **F., u'rachal**, F. connected with the urachus. **F., ure'teral** or **ure'teric**, F. of ureter. When it communicates with the rectum, uterus, or vagina, it is called *uretero-rectal, uretero-uterine*, or *uretero-vaginal* fistula. **F. ure'terum re'num**, see *Calix*. **F. ure'thra**, F. connected with the urethra. When there is communication with the penis, perineum, rectum, or scrotum, it is termed *urethro-penal, urethro-perineal, urethro-rectal*, and *urethro-scrotal*. **F. uri'næ, urina'lis**, or **u'rinary**, F. of any part of the urinary apparatus; see *Fistula*. **F. urina'ria**, urethra. **F., urogen'ital**, F., genito-urinary. **F., Vel'la's**, artificial fistula resembling Thiry's fistula. **F. ventric'uli**, F., gastric; œsophagus. **F., ves'ical**, F. of urinary bladder. If communicating with the abdomen, cervix uteri, ovary, rectum, urethra and vagina, uterus, uterus and vagina, or vagina alone, it is called *vesico-abdominal, vesico-cervical* or *vesico-cervico-uterine, vesico-ovarian, vesico-rectal* or *vesico-intestinal, vesico-urethro-vaginal, vesico-uterine, vesico-utero-vaginal*, and *vesico-vaginal* fistula, respectively. See *F., recto-vesical*.

Fistule, fist'yule. Fistula.

Fis'tulose or **Fistulous**, fist'u-lus. Relating to or resembling a fistula.

Fit. Paroxysm; convulsion.

Fit'-plant or **Fit'-root.** Monotropa uniflora.

Fits, nine-day. Trismus nascentium.

Five-day fe'ver. Relapsing fever, so called from period of its relapse.

Five-fin'gers. Panax quinquefolium; Potentilla Canadensis; Ampelopsis quinquefolia.

Five-leaf. Potentilla reptans.

Five-leaves. Ampelopsis quinquefolia.

Fixatio mononcœa, fix-ah'she-o mon-o-ne'ah. Melancholy. See *Mononœa*.

Fixa'tion. Fixed or steady attention of the eye to a special point. Suturing of a displaced organ, as in hysterorrhaphy, etc. **F. for'ceps**, instrument for holding the eye during operation. **F. line**, line projected through the point of vision and rotary centre of the eye. **F. point**, point of sight of which the image on the retina is in the central part of most distinct vision.

Fixator, fix-a'tor. That which fixes or makes strong; muscle whose action is to keep parts or organs in place or comparatively immovable. **F. ba'seos sta'pedis**, collection of elastic fibres attached to base of stapes and wall of tympanum. **F. la'bii superio'ris**, depressor alæ nasi.

Fixed (*figo, fixum*, to fasten). Term applied to body not capable of being volatilized by fire, as fixed oils, in contradistinction to volatile oils. **F. air**, carbonic-acid gas. **F. oil**, compound of glycerin with one or more fatty acids; see *Fixed*. **F. ver'tebræ**, those not separately movable, as sacrum and coccyx.

Fixi dentes, fiks'e den'tees. Teeth of the second dentition.

Flabellation, flab-el-la'shun (*flabello*, to agitate the air). Operation recommended by Paré, consisting in keeping fractured limbs and their dressings cool by the renewal of the air around them, either by a fan or by repeated change of position.

Flabelliform, flab-el'li-form (*flabellum*, fan, *forma*, form). Fan-shaped.

Flabellum, flab-el'lum (fan). Fibres radiating like a fan from the stria terminalis.

Flaccidity, flas-sid'it-e (*flaccidus*, flabby). Softness of a part, offering little resistance on pressure.

Flacourtia cataphracta, flak-oor'te-ah kat-af-rak' tah. Shrub of E. Indies; fruit is used in diarrhœa; leaves are used for hoarseness. **F. sepia'ria**, same habitat. Bark is used externally in rheumatism and gout; leaves and root are given internally in snakebites.

Flag, blue. Iris versicolor. **F., blue, slen'der**, Iris Virginica. **F., dwarf**, Iris lacustris. **F., myr'tle**, Acorus calamus. **F. root** or **F., sweet**, Acorus calamus. **F., yel'low**, Iris pseudacorus.

Flagel'la (pl. of **Flagellum**, a small twig or branch). Delicate motile or vibratile filament or process connected with some cells.

Flagellation, flaj-el-la'shun (*flagellum*, a scourge). Treatment of disease by whipping or striking as a stimulant to the part scourged, and by its effect on the hypogastric region checking post-partum hemorrhage. **F. ma'nia**, form of *scourging mania*, or theomania, which prevailed in Europe in the 13th and 14th centuries.

Flagelliform, flaj-el'le-form. Long and slender like a whip.

Flagellum, flaj-el'lum. Long delicate cilium. Cord-like process of protoplasm connected with various cells and concerned in locomotion.

Fla'jan's disease. Exophthalmic goitre.

Flame, vi'tal. Vital principle.

Flamed. Inflamed. Disinfection of knives and instruments through a flame.

Flam'ma (flame). Flame; fleam. **F. cor'dis** or **vita'lis**, vital or animal heat.

Flam'mon. Lachesis rhombeata.

Flammula, flam'mu-lah (dim. of **Flamma**). Fleam; Ranunculus ficaria. **F. cor'dis**, vital or animal heat. **F. Jo'vis**, Clematis recta. **F. ma'jor**, Ranunculus lingua. **F. mi'nor**, Ranunculus flammula. **F. vita'lis**, animal or vital heat.

Flanks. Regions of the body extending on the sides from the inferior margin of the chest to the crista ilii.

Flap. Portion of the soft parts of the body separated from those beneath by operation, such as ampu-

lation, but still attached by the base. Hence there may be flap wounds and flap operations. When the flap is taken from one part and applied to another in plastic operations, the operation is said to be by migration of the flap. At times the flap is made to slide over the part to which it has to adhere; the operation is then said to be by the sliding of the flap. The flap is also, at times, rolled, inverted, etc. **F. amputa'tion,** see *Amputation.* **F., cuta'neous,** F., skin. **F. dock,** digitalis. **F. extrac'tion,** operation for cataract, employed in cases in which the substance of the lens will flow through the small corneal opening made by the surgeon. **F., skin** or **teg'mentary,** flap including skin and fascia.

Flap-split'ting opera'tion. Operation for lacerated perineum; consisting in splitting with scissors the recto-vaginal septum from side to side, commencing in the middle line. The operator then draws the vaginal flap upward with the forceps, and the inferior flap downward, and the sutures are passed from left to right.

Flare. Saliva. **F., pigs',** adeps suillus.

Flat foot. See *Kyllosis.* **F. top,** Vernonia Noveboracensis.

Flatuarius, flat-u-ar'e-us (*flatus,* wind). Alchemist.

Flatulence, flat'u-lence. *Flatuosity, Wind, Windiness, Ventosity, Vapor.* Formation or accumulation of wind in, or emission from, the digestive tube.

Flat'ulent. Affected with or producing flatulence, as certain kinds of food.

Flatulentia (flat-u-len'she-ah) or **Flatuosity,** flat-u-os'it-e. Flatulence.

Flat'us (*flo,* to blow). Crepitation, flatulence. **F. furio'sus,** painful movable tumor of various parts, once considered as the effect of very subtile vapors. **F. spi'næ,** spina ventosa. **F. vagi'næ,** collection of gas in the vagina.

Flavedo, flav-a'do (*flavus,* yellow). Yellowness. **F. cor'ticum ci'tri,** see *Citrus medica.* **F. cu'tis,** see *Xanthopathia.* **F. icteri'tia,** yellow color of jaundice.

Flavicomous, flav-ik-o'mus (*flavus,* yellow, *kome,* hair). Having yellow or yellowish hair.

Fla'vor. Quality of a sapid body, appreciated by the taste and smell combined, and more especially by the latter.

Fla'vus. Yellow.

Flaw-flower. Anemone pulsatilla.

Flax, com'mon. Linum usitatissimum. **F., purg'ing,** Linum catharticum. **F. toad,** Antirhinum linearia.

Flax'dresser's phthisis, te'sis. Disease of the lung induced by inhalation of fine particles of flax. See *Pneumoconiosis.*

Flax'seed. Seed of Linum usitatissimum. **F., ground,** Lini farina. **F. meal,** see *Linum usitatissimum.* **F. oil,** oleum lini. **F. poul'tice,** cataplasma lini. **F. tea,** infusum lini compositum.

Flea, com'mon. Pulex irritans.

Flea'bane, Can'ada. Erigeron Canadense. **F., great,** Conyza squarrosa. **F., nar'row-leaved,** Erigeron Philadelphicum. **F., Philadel'phia,** Erigeron Philadelphicum. **F., skevish',** Erigeron Philadelphicum. **F., va'rious-leaved,** Erigeron heterophyllum.

Fleam (flame). Surgical instrument for phlebotomy, consisting of a small metallic box containing a spear-pointed cutting instrument, which, by means of a spring, can be forced into the vein. Lancet.

Flea'seed. Mucilaginous seed of Plantago psyllium.

Flea'wort. Plantago psyllium.

Flec'tens (*flecto,* to bend). Producing flexion; flexor, as a muscle. **F. par lumbo'rum,** quadratus lumborum.

Flec'tor. Flexor.

Fleece of Stil'ling. White woolly fibres described by that histologist as surrounding the corpus dentatum of the cerebellum.

Fleg'men or **Fle'men.** Tumor about the ankles. Congestion of the lower extremities. Chap on the feet or hands.

Fleischl's law. That excitability of a motor nerve varies uniformly at different points. **F.'s hæmom'eter,** see *Hæmometer.*

Fleisch'mann's bur'sa. Bursa between the tongue and mucous membrane, to the outer side of the genioglossus muscle.

Fle'ma sala'da. Acrodynia.

Flesh. Soft parts of an animal, particularly the muscles, which are called muscular flesh. **F. germ,** bioplast. **F. juice,** meat-juice. **F., proud,** fungosity.

Flesh-colored ascle'pias. Asclepias incarnata.

Flesh'-formers. See *Aliment.*

Flesh'worm. Trichina. **F. disease,** trichiniasis.

Flesh'y. Corpulent; resembling flesh; purely muscular. **F. col'umns,** columnæ carneæ. **F. pons,** projection of cardiac wall between right auriculoventricular opening and pulmonary artery.

Fletus, fla'tus (*fleo,* to weep). Lacrymation.

Flexibilitas, fleks-ib-il'it-as. Flexibility. **F. ce'rea,** cataleptic condition of cramp, with very flexible extremities.

Flexibility, fleks-i-bil'it-e (*flecto,* to bend). Capability of being bent; tendons exhibit this property in a marked manner.

Flexible, fleks'ib'l. Readily bent; capable of being bent without breaking or cracking, as a flexible catheter. **F. collo'dion,** collodium flexile.

Flexicostate, fleks-e-kos'tate (*flecto,* to bend, *costa,* rib). Having bent ribs.

Flex'ile. Readily bent.

Flexion, fleks'yun. State of being bent; opposite condition to extension; action of a flexor muscle. Bending of the child's head forward on the chest in labor. Surgical procedure in maintaining a limb or part in a flexed position. **F., forced** or **for'cible,** flexion practised to the fullest possible degree, to check hemorrhage, to stretch a nerve, or break up an ankylosed condition.

Flexor (bender). Muscle whose office it is to bend certain parts. **F. accesso'rius,** F. longus digitorum pedis. **F. accesso'rius plan'tæ,** plantar head of flexor longus pollicis. **F. antibrach'ii radia'lis,** biceps flexor cubiti. **F. antibrach'ii ulna'ris,** brachialis anticus. **F. bi'ceps brach'ii** or **cu'biti,** biceps flexor cubiti. **F. bi'ceps cru'ris,** see *Biceps flexor cruris.* **F. brach'ii,** coraco-radialis. **F. bre'vis cap'itis,** rectus capitis anticus minor; atloïdo-suboccipitalis. **F. bre'vis dig'iti quin'ti,** F. parvus minimi digiti. **F. bre'vis digito'rum, F. bre'vis digito'rum pe'dis, F. bre'vis digito'rum pe'dis perfora'tus,** muscle placed at the middle of the sole of the foot; narrower and thicker behind than before, where it is divided into four portions. It arises from the posterior part of the inferior surface of the second phalanx of the last four toes. It bends the second phalanges of the toes on the first, and the first on the metatarsal bones, thus augmenting the concavity of the vault of the foot. **F. bre'vis hallu'cis,** F. brevis pollicis pedis. **F. bre'vis min'imi dig'iti,** F. parvus minimi digiti. **F. bre'vis min'imi dig'iti accesso'rius,** occasional accessory slip of flexor brevis minimi digiti. **F. bre'vis min'imi dig'iti pe'dis,** muscle situate at the anterior and outer part of the sole of the foot, arising from the posterior extremity of the fifth metatarsal bone, and inserted into the posterior part of the first phalanx of the little toe, which it bends. **F. bre'vis pol'licis ma'nûs,** muscle situate at the outer part of the palm of the hand, divided into two portions by the tendon of the flexor longus pollicis. It arises from the os magnum, the anterior annular ligament of the carpus, and the third metacarpal bone, and is inserted into the superior part of the first phalanx of the thumb, and into the two ossa sesamoidea at the articulation of the first phalanx with the first metacarpal bone; bends the first phalanx of the thumb on the first metacarpal bone, and the latter upon the trapezium. **F. bre'vis pol'licis pe'dis,** situate at the anterior and inner part of the sole of the foot; is thin and narrow behind, thick and divided into two portions before; arises from the inferior part of the os calcis and the last two cuneiform bones, and is inserted at the inferior part

of the base of the first phalanx of the great toe, and into the two sesamoid bones of the corresponding metatarso-phalangean articulation. It bends the first phalanx of the great toe on the first metacarpal bone. **F. cap'itis**, rectus capitis anticus major. **F. cap'itis bre'vis**, atloido-suboccipitalis. **F. cap'itis par'vus**, atloido-styloideus. **F. car'pi exte'rior**, F. carpi radialis; palmaris magnus. **F. car'pi inte'rior**, F. carpi ulnaris. **F. car'pi radia'lis**, palmaris magnus. **F. car'pi radia'lis bre'vis**, occasional supernumerary muscle passing from shaft of radius to its insertion on trapezium and second metacarpal bone. **F. car'pi radia'lis profun'dus**, F. carpi radialis brevis. **F. car'pi ulna'ris**, see *Cubital* (muscles). **F. car'pi ulna'ris bre'vis**, supernumerary flexor carpi muscle inserted on unciform bone. **F. commu'nis subcuta'neus**, palmaris longus muscle. **F. cru'ris**, large flexor muscle, made up at origin of iliacus and psoas magnus muscles, and inserted on lesser trochanter of femur. **F. cru'ris bi'ceps, exter'nus**, or **fibula'ris**, biceps flexor cruris. **F. cu'biti**, biceps flexor cubiti. **F. dig'iti min'imi pe'dis accesso'rius**, accessory slip of flexor longus digitorum pedis to little toe. **F. digi'ti par'vi min'imi**, abductor minimi digiti. **F. dig'iti secun'di pe'dis**, rare supernumerary muscle from posterior tibial region to second toe. **F. digito'rum commu'nis bre'vis**, F. brevis digitorum pedis. **F. digito'rum commu'nis lon'gus pe'dis**, F. longus digitorum pedis. **F. digito'rum fibula'ris**, F. longus pollicis pedis. **F. digito'rum ma'nûs commu'nis profun'dus**, F. profundus perforans. **F. digito'rum ma'nûs per'forans**, F. profundus perforans. **F. digito'rum ma'nûs perfora'tus**, F. sublimis perforatus. **F. digito'rum ma'nûs subli'mis** or **superficia'lis**, F. sublimis perforatus. **F. digito'rum pe'dis lon'gus accesso'rius**, see *F. longus digitorum pedis profundus perforans*. **F. digito'rum per'forans**, thick, flat, long muscle, seated beneath the *Flexor sublimis perforatus;* its upper extremity is simple, and arises from the anterior surface of the ulna and from the interosseous ligament; its inferior extremity terminates by four tendons, which, after having passed through slits in the sublimis, are inserted into the anterior surface of the last phalanges of the four fingers. It bends the third phalanges on the second, and in other respects has the same use as the flexor sublimis perforatus. **F. digito'rum per'forans pedis**, F. longus digitorum pedis profundus perforans. **F. digito'rum perfora'tus pe'dis**, F. brevis digitorum pedis perforatus. **F. digito'rum profun'dus pe'dis**, F. longus digitorum pedis profundus perforans. **F. digito'rum subli'mis pe'dis**, F. brevis digitorum pedis perforatus. **F. digito'rum superficia'lis**, F. sublimis perforatus. **F. digito'rum tibia'lis**, F. longus digitorum pedis profundus perforans. **F. fem'oris**, ilio-psoas. **F. fibula'ris**, F. longus pollicis pedis. **F. hallu'cis bre'vis**, F. brevis pollicis pedis. **F. hallu'cis lon'gus**, F. longus pollicis pedis. **F. lon'gus digito'rum pe'dis profun'dus per'forans**, muscle situate at the posterior and deep-seated part of the legs; broader at middle than at extremities, the inferior of which is divided into four portions. It arises from the posterior surface of the tibia, and its tendons are attached to the posterior part of the lower surface of the three phalanges of the last four toes. It bends the three phalanges on each other, and the toes on the metatarsus, and extends the foot on the leg. The *Accessorius flexoris longi digitorum pedis* is a small muscle of the sole of the foot, passing obliquely from the os calcis to the outer edge of the flexor longus, whose force it augments and whose obliquity it corrects. **F. lon'gus hallu'cis**, F. longus pollicis pedis. **F. lon'gus pol'licis**, F. longus pollicis manûs. **F. lon'gus pol'licis ma'nûs**, situate at the anterior and profound part of the forearm; it arises from the upper three-quarters of the anterior surface of the radius and interosseous ligament, and is inserted, by a tendon, into the anterior surface of the last phalanx of the thumb. It bends the second phalanx of the thumb on the first, the first on the corresponding metacarpal bone, and this upon the radius. It also bends the hand on the forearm. **F. lon'gus pol'licis pe'dis**, situate at the posterior and profound part of the leg; it arises from the posterior surface of the fibula and the interosseous ligament, and is inserted, by a long tendon, into the inferior part of the first phalanx of the great toe. It bends the third phalanx on the first, and this upon the corresponding metatarsal bone, augments the concavity of the sole of the foot, and extends the foot on the leg. **F. ma'nûs me'dius**, palmaris longus. **F. ma'nûs radia'lis**, F. carpi radialis. **F. ma'nûs ulna'ris**, F. carpi ulnaris. **F. metatar'si**, peroneus tertius; see *Peroneal muscles*. **F. min'imi dig'iti par'vus**, F. brevis minimi digiti pedis. **F. os'sis metacar'pi min'imi dig'iti**, opponens minimi digiti. **F. os'sis metacar'pi pol'licis**, opponens pollicis. **F. palma'ris**, palmaris longus; see *Palmar muscles*. **F. par'vus min'imi dig'iti** arises from the anterior annular ligament of the carpus and the process of the os unciforme, and is inserted at the inner side of the superior extremity of the first phalanx of the little finger. It bends the first phalanx of the little finger. **F. per'forans**, F. profundus perforans. **F. per'forans pe'dis**, F. longus digitorum pedis. **F. perfora'tus**, F. sublimis perforatus. **F. perfora'tus pe'dis**, F. brevis digitorum pedis. **F. pol'licis pro'prius lon'gus**, F. longus pollicis. **F. pri'mi interno'dii**, opponens pollicis. **F. primi internodii digito'rum manûs**, lumbricalis manûs. **F. primi et secundi ossis pol'licis**, F. brevis pollicis manûs. **F. profun'dus accesso'rius**, supernumerary slip of flexor profundus digitorum. **F. pro'prius dig'iti secun'di pe'dis**, muscle from posterior portion of tibia to second toe. **F. radia'lis**, F. carpi radialis. **F. ra'dii**, biceps flexor cubiti. **F. secun'di interno'dii digito'rum pe'dis**, F. brevis digitorum pedis. **F. s. i. pol'licis**, F. brevis pollicis manûs. **F. subli'mis**, F. brevis digitorum pedis. **F. s. digito'rum**, F. sublimis perforatus. **F. s. perfora'tus**, thick, flat muscle seated at the anterior part of the forearm; upper extremity arises from the internal condyle of the humerus, from the coronoid process of the ulna, and from the anterior edge of the radius. The lower extremity divides into four tendons, which slide under the anterior annular ligament of the carpus and are inserted into the second phalanges of the last four fingers, after having been slit to allow the tendons of the flexor profundus to pass through. It bends the second phalanges on the first, these on the carpal bones, and the hand on the forearm. **F. sur'face**, flexor face for origin of flexor muscles, as posterior portion of tibia or anterior portion of radius. **F. ter'tii interno'dii**, F. longus pollicis manûs. **F. t. i. digito'rum ma'nûs**, F. profundus perforans. **F. t. i. pe'dis**, F. longus digitorum pedis profundus perforans. **F. t. i. pol'licis**, F. longus pollicis manûs. **F. tibia'lis**, F. longus digitorum pedis.

Flexura, fleks-u'rah. Curvature. **F. co'li dex'tra** or **hepat'ica**, flexure, hepatic. **F. c. ili'aca** or **infe'rior**, sigmoid flexure. **F. c. lie'na'lis**, flexure, splenic. **F. c. pri'ma**, flexure, hepatic. **F. c. secun'da** or **sinis'tra**, flexure, splenic. **F. duode'ni infe'rior**, bend or flexure between descending and transverse duodenum. **F. d. supe'rior**, flexure between horizontal and descending duodenum. **F. duode'no-jejuna'lis**, bend at junction of duodenum and jejunum. **F. ili'aca**, sigmoid flexure. **F. os'sis**, fracture, greenstick. **F. sigmoï'dea**, sigmoid flexure.

Flexuræ cephalicæ, fleks-u're sef-al'e-se. Cranial flexures of embryo. **F. transver'sæ**, transverse flexures or arches made by papillæ of fingers.

Flexure, fleks'ure. Bend or joint; curve. **F., ante'rior, of cor'pus callo'sum**, genu of corpus callosum. **F., ba'si-cra'nial**, anterior flexure of embryo at base of brain. **F., caud'al**, anterior flexure of embryo at caudal part. **F., cephal'ic** or **cra'nial**, name given to several flexures of the cranial extremity of the embryo at an early stage of its existence. **F., cer'vical**, F., neck. **F., encephal'ic**, F., cephalic. **F., hepat'ic**, bend between ascending and transverse colon at inferior surface of the liver. **F., neck**, curve or angle formed between the spinal cord and medulla oblongata. **F., sig'moid**, sigmoid flexure. **F., splen'ic,**

bend between transverse and descending colon in vicinity of spleen.

Flies, Span'ish. See *Cantharis.*

Flix. Flux; dysentery. Linum usitatissimum.

Flix'weed. Sisymbrium sophia.

Float'ing. Lying loosely attached. Hemorrhage. **F. kid'ney,** movable kidney, from looseness of surrounding tissues. **F. ribs,** two lower ribs, because less fixed or more freely movable than the others.

Flocci, flok'se (pl. of **Floccus,** flock of wool). See *Villous membranes.* **F. volitan'tes,** see *Metamorphopsia.*

Floccilation (flok-sil-la'shun), **Floccile'gium,** or **Floccitation,** flok-sit-a'shun (*floccus,* flock of wool). Carphology.

Flocco'rum (gen. pl. of **Floccus**) **vena'tio** (*venor,* to hunt). Carphology.

Flocculär, flok'u-lar. Flocculent; relating to flocculus of cerebellum. **F. fos'sa,** depression on posterior surface of temporal bone for lodgment of flocculus of cerebellum. **F. pro'cess,** flocculus.

Floc'culent. Containing small wool-like cloudy flakes.

Floc'culi (pl. of **Flocculus**). See *Villous membranes.*

Flocculus (flok'u-lus) (dim. of **Floccus,** flock of wool) **accesso'rius secunda'rius** or **succenturia'tus.** Accessory lobule of cerebellum near flocculus. **F. cerebel'li,** pneumogastric lobule; long and slender prominence extending from the side of the vallecula around the corpus restiforme to the crus cerebelli, lying behind the filaments of the pneumogastric nerves.

Flock. Collection of flocculent matter.

Flog'ging. Flagellation.

Flood'ing. Metrorrhagia; excessive uterine hemorrhage, as during childbirth.

Flood's lig'ament. Gleno-humeral ligament.

Floor, pel'vic. See *Pelvic.*

Flo'ra med'ica. Botany of medicinal plants.

Flor'entine iris. See *Iris.*

Flo'res (pl. of **Flos**). Flowers. **F. aca'ciæ,** flowers of acacia. **F. a'ëris,** acetate of copper. **F. antimo'nii,** flowers of antimony. **F. ar'nicæ,** flowers of arnica. **F. auran'tii,** orange flowers. **F. ben'zoës,** benjamin, flowers of. **F. bora'cis,** boric acid. **F. calcatrip'pæ,** larkspur flowers. **F. car'thami,** safflower. **F. caryophyl'li,** cloves. **F. cas'siæ,** flowers of cassia. **F. chamomil'læ,** matricaria; German chamomile. **F. chamomil'læ Roman'æ,** chamomile flowers; see *Anthemis.* **F. ci'næ,** santonica. **F. consol'idæ** or **C. rega'lis,** larkspur flowers. **F. cos'so** or **ko'so,** see *Hygienia Abyssinica.* **F. lavand'ulæ,** lavender flowers. **F. ma'cidis,** see *Myristica moschata.* **F. ma'cis,** mace. **F. mal'væ vulga'ris,** flowers of Malva sylvestris. **F. martia'les,** ferrum ammoniatum. **F. na'phæ,** orange flowers. **F. rhœ'ados,** flowers of red poppy. **F. ro'sæ,** rose flowers. **F. sa'lis ammoni'aci,** ammonii carbonas. **F. sa'lis ammoni'aci martia'les,** ferrum ammoniatum. **F. sambu'ci,** flowers of sambucus. **F. sul'phuris,** flowers of sulphur or sublimed sulphur. **F. sul'phuris lo'ti,** washed sulphur. **F. un'guium,** small opaque white round spots on the nails. **F. verbas'ci,** flowers of mullein. **F. zin'ci,** zinc oxide.

Flor'ida all'spice. Calycanthus Floridus. **F. an'ise tree,** Illicium Floridanum. **F. ar'row root,** arrow root from zamia. **F. fe'ver,** variety of fever occurring in Florida and some of the Southern U. States, and in the tropics, considered to be due to the continued high temperature. **F. rhat'any,** Krameria lanceolata.

Flos. Flower; virginity. **F. Jo'vis,** crocus. **F. lac'tis,** cream. **F. sa'lis,** soda, subcarbonate of. **F. sanguin'eus monar'di,** Tropæolum majus. **F. sul'phuris,** sublimed sulphur. **F. trinita'tis,** Viola tricolor. **F. virginita'tis,** hymen.

Flos'culi. Small flowers. **F. ci'næ,** santonica.

Flour. Farina. **F., cold,** see *Pinoli.* **F. of meat,** see *Meat.* **F. of mustard,** see *Sinapis.* **F., pota'to,** see *Solanum tuberosum.* **F., wheaten,** farina tritici.

Flourensia thurifera, flor-ren'se-ah thu-rif'er-ah. Species of Chilian plants; root is expectorant.

Flourens's doc'trine. Doctrine according to which the entire cerebrum takes part in every psychical process.

Flow. Flux; discharge. **F., men'strual,** menstrual discharge.

Flow'er, angle of. Angle formed by lines projected from nasion to top of frontal process of malar bone.

Flower de luce. Iris Germanica.

Flow'ers. Solid and volatile substances obtained by sublimation, as flowers of benjamin, flowers of sulphur, etc. Meuses. **F. of an'timony,** antimonial oxide. **F. of ben'zoin,** benjamin, flowers of. **F. of cam'phor,** sublimed camphor. **F., Col'linson's,** Collinsonia Canadensis. **F. of sul'phur,** sublimed sulphur. **F., white,** leucorrhœa. **F. of zinc,** oxide of zinc formed by burning zinc in the air.

Fluctuatio, fluk-tu-ah'she-o (*fluctuo,* to undulate). Fluctuation. Looseness of exfoliated bone or carious tooth. **F. au'rium,** tinnitus aurium.

Fluctuation, fluk-tu-a'shun. Undulation of a fluid in a natural or artificial cavity, felt by pressure or percussion—peripheric fluctuation. In ascites fluctuation is felt by one hand applied to one side of the abdomen, while the other side is struck with the other hand. In abscesses fluctuation is perceived by pressing on the tumor, with one or two fingers alternately, on opposite points. **F., periph'eric,** see *Fluctuation.* **F., pleu'ral,** F., thoracic. **F., rhon'chal,** see *Rhonchal.* **F. by succus'sion,** see *Succussion.* **F., thora'cic,** undulation felt on palpating over the intercostal space.

Fluel'len or **Fluel'lin.** Antirhinum elatine; veronica.

Flu'id (*fluo,* to flow). Body whose particles move easily on each other, but have not sufficient cohesion to remain united when subjected to pressure. The human body is largely composed of fluids, about 6.667 parts in 10.000. **F., amniot'ic,** liquor amnii. **F., a'queous,** aqueous humor. **F., Bur'nett's disinfect'ing,** see *Burnett.* **F., cephalorachid'ian,** cephalospinal fluid. **F., cephalospi'nal,** see *Cephalospinal.* **F., cerebrospi'nal,** cephalospinal fluid. **F., cœl'ian,** cerebrospinal fluid in central canal of medulla spinalis and ventricles. **F., Con'dy's disinfect'ing,** see *Condy's disinfecting fluid.* **F. of Cotun'nius,** perilymph. **F., elec'tric,** see *Electricity.* **F., enter'ic,** succus entericus. **F. ex'tract,** see *Extract.* **F., exuda'tion,** coagulable lymph. **F., form'ative,** cytoblastema. **F., galvan'ic,** see *Electricity.* **F., intes'tinal,** intestinal juice. **F. of lab'yrinth,** perilymph. **F., lac'teal,** milk; any fluid resembling milk. **F., Ledoy'en's disinfect'ing,** see *Ledoyen.* **F., lymphat'ic,** lymph. **F., ner'vous,** supposed fluid contents of nerves. **F., nu'clear,** achromatin. **F., nu'tritive,** chyle, blood, lymph. **F., perax'ial,** fluid around axis-cylinder. **F. of Scar'pa,** vitreous fluid in membranous labyrinth of ear. **F., sem'inal** or **spermat'ic,** semen or sperm. **F., subarach'noid,** cerebrospinal fluid. **F., subarachnoi'dean,** cephalospinal fluid.

Fluidam'ber. Liquidamber.

Flu'idum cerebrospina'le. Cephalospinal fluid. **F. ner'veum,** nervous fluid.

Fluke. Distoma hepaticum. **F., bron'chial,** see *Distoma Ringeri.* **F. disease,** rot of sheep. **F. liv'er,** distoma hepaticum. **F. worm,** distoma hepaticum.

Flu'men dysenter'icum (*flumen,* stream). Dysentery.

Flumina, flu'min-ah. Subarachnoid canals made by arachnoid membrane crossing fissures and furrows.

Flu'or (*fluo,* to flow). Flux; flow; fluorine. **F. al'bus ante'rior,** leucorrhœa. **F. al'bus intestino'rum,** cœliac flux. **F. al'bus malig'nus,** gonorrhœa impura. **F. al'bus poste'rior,** discharge of mucus and pus from the rectum. **F. metrica'lis,** uterine leucorrhœa. **F. mulie'bris,** leucorrhœa. **F. mulie'bris gal'licus,** gonorrhœa in woman. **F. mulie'bris non-gal'licus,** leucorrhœa. **F. san'guinis pulmo'num,** bronchorrhagia; hæmoptysis. **F. san'guinis vesi'cæ,** cystorrhagia. **F. uteri'nus,** uterine leucorrhœa.

Fluorescence, flu-or-es'sence. Property by which some media exert a peculiar influence in dispersing

light of certain color and refrangibility, both of which qualities become altered. Dilute solution of quinine, for example, changes dark-blue and violet to sky-blue. **F. of the eye,** all the media of the eye possess slight fluorescence.

Fluorescin, flu-or-es'in. $C_{20}H_{12}O_5$. Dark-brown crystal, used for diagnosticating lesions of the cornea and detecting foreign bodies in it.

Fluor'ic ac'id. Solution of hydrofluoric acid in water.

Fluorine, flu'or-een. Non-metallic element, not isolated, but forming fluorides, and, with hydrogen, hydrofluoric acid. Its salts are corrosive poisons unless well diluted.

Flu'oroscope. Instrument by which quinine may be detected in urine by its fluorescence.

Flush or **Flush'ing.** Temporary redness and heat produced by accumulation of blood in the capillaries of the face, as emotion, hectic fever, etc. To flush signifies also to become flushed; to wash out suddenly and forcibly. **F. of the peritone'um,** process of washing out the cavity of the peritoneum with warm water after operation of abdominal section. See *Irrigation.*

Flushes. Condition accompanied by hot and cold sensations, existing sometimes after removal of both ovaries and tubes.

Flux (*fluo,* to flow). Flow; excessive discharge of fluid; dysentery. **F. of the bel'ly,** diarrhœa. **F., bil'ious,** discharge of bile either by vomiting or by stool, or by both, as in cholera; bilious diarrhœa. **F., blood'y,** dysentery. **F., bron'chial,** bronchorrhœa. **F., catame'nial,** menstrual flow. **F., cœ'liac,** chronic dysentery, chylous diarrhœa, chylorrhœa. **F., gas'tric,** gastrorrhœa. **F., hemorrhoid'al,** see *Hæmorrhois.* **F., hepat'ic,** see *Hepatirrhœa.* **F., men'strual,** menses. **F., mu'cous,** mucous diarrhœa. **F., pas'sive,** watery diarrhœa not connected with organic change. **F., sal'ivary,** ptyalism. **F., seba'ceous,** seborrhœa; stearrhœa. **F., se'rous,** see *Ephidrosis.* **F. of sperm,** spermatorrhœa. **F. of u'rine,** incontinence of urine.

Fluxio, fluks'e-o (*fluo,* to flow). Fluxion. **F. al'ba,** leucorrhœa. **F. arthrit'ica,** gout. **F. luna'ris,** menses. **F. mat'ricis,** leucorrhœa. **F. vul'væ,** leucorrhœa.

Fluxion, fluk'shun. Flow of blood or other humor toward an organ with greater force than natural; determination; congestion, as of the mouth, from inflammation around the teeth.

Flux'root. Asclepias decumbens; A. tuberosa.

Flux'us. Discharge. **F. al'bus,** leucorrhœa. **F. alvi'nus,** diarrhœa. **F. capillo'rum,** alopecia. **F. chylo'sus** or **cœli'acus,** cœliac flux. **F. cœli'acus per re'nes,** chyluria. **F. colliquati'vus,** colliquative diarrhœa. **F. cruen'tus** or **dysenter'icus,** dysentery. **F. hæmorrhoïda'lis,** hemorrhoidal flux. See *Hæmorrhois.* **F. hepat'icus,** see *Hepatirrhœa* and *Hepateros.* **F. lienter'icus,** lientery, lienteric diarrhœa. **F. luna'ris,** menses. **F. mat'ricis,** leucorrhœa. **F. menstrua'lis,** menstruation. **F. men'struus,** menses. **F. mulie'bris,** leucorrhœa. **F. pil'orum,** alopecia. **F. sali'nus,** saline flux; moist eczema; see *Eczema.* **F. sali'væ,** salivation; ptyalism. **F. seba'ceus stearrhœ'a,** augmentation of secretion from the sebaceous follicles of the skin. **F. splen'icus,** melæna. **F. vene'reus,** gonorrhœa. **F. ventric'uli,** gastrorrhœa.

Flux'weed. Sisymbrium sophia; Galium pilosum.

Fly ag'aric. Agaricus muscarius, from which an alkaloid, *muscarine,* is obtained; used in phthisis for night-sweats, in epilepsy, cutaneous affections, etc. **F. fun'gus,** F. agaric. **F. golding,** Coccinella septempunctata. **F. poi'son,** Amianthium muscætoxicum. **F. sick'ness,** Australian disease characterized by nausea and vomiting. **F., Span'ish,** cantharides. **F. trap,** Apocynum androsæmifolium, Sarracenia purpurea.

Foal'foot. Colt's-foot. See *Tussilago.*

Fo'cal. Relating to a focus. **F. disease,** disease of nervous system centrally localized. **F. dis'tance,** distance from principal point to principal focus. **F. hem'orrhage,** hemorrhage that is localized, and not general or diffused. **F. length,** focal distance. **F. myeli'tis,** minutely localized inflammation of spinal cord. **F. planes,** planes passing through foci perpendicular to principal axis. **F. sclero'sis,** chronic indurated sclerosis, not diffused or disseminated.

Focile, fos'il-e. Name formerly given to the bones of the leg, as well as those of the forearm. **F. infe'rius** or **ma'jus,** ulna. **F. ma'jus,** tibia. **F. mi'nus,** fibula. **F. mi'nus** or **supe'rius,** radius.

Fo'cus. Point of meeting of rays of heat or of light when reflected or refracted; centre of greater force of morbid process. *Conjugate foci* are so situate that a ray of light from one focus will be reflected to the other. Parallel rays, after being reflected or refracted, meet at the *principal focus.* **F. apoplec'ticus,** cavity remaining in encephalon after effusion of blood and its subsequent absorption.

Fœcundatio, fe-kun-dah'she-o. Fecundation.

Fœcunditas, fe-kun'dit-as. Fecundity.

Fœcundus, fe-kun'dus. Fecund.

Fœmen, fe'men. Thigh; vulva; perineum.

Fœmina, fe'min-ah. Female; woman.

Fœminescentia, fe-min-es-sen'she-ah. Femininescence.

Fœnic'uli fruc'tus. Fennel fruit.

Fœniculum, fe-nik'u-lum (dim. of **Fœnum,** hay). Anethum. **F. aquat'icum,** Phellandrium aquaticum. **F. capilla'ceum,** F. vulgare. **F. dul'ce,** sweet fennel, variety of F. vulgare. **F. errat'icum,** Peucedanum silaus. **F. mari'num,** Crithmum maritimum. **F. officina'le,** anethum. **F. porci'num,** peucedanum. **F. vulga're,** anethum.

Fœn'ugreek. Trigonella fœnum.

Fœ'num camelo'rum (hay of camels). Juncus odoratus; Andropogon Schœnanthus. **F. Græ'cum,** Trigonella fœnum.

Fœtabulum, fe-tab'u-lum (*fœteo,* to smell badly). Encysted abscess.

Fœtal, fe'tal. Relating to the fœtus or to parts connected with it. **F. car'tilage,** temporary cartilage. **F. circula'tion** differs from that of the adult in several respects. Commencing with the placenta, where it probably undergoes a change analogous to what occurs in the lungs in extra-uterine existence, the blood proceeds by the umbilical vein as far as the liver, where a part of it is poured into the vena porta, the other part proceeding into the vena cava inferior; the latter, having received the suprahepatic veins, pours its blood into the right auricle. From the right auricle a part of the blood is sent into the right ventricle; the rest passes directly through into the left auricle by the foramen ovale. When the right ventricle contracts the blood is sent into the pulmonary artery, but as the function of respiration is not going on, little blood passes to the lungs; the rest goes through the ductus arteriosus into the aorta. The blood received by the left auricle from the lungs, as well as that which passed through the foramen ovale, is transmitted into the left ventricle, by the contraction of which it is sent into the aorta, and by the umbilical arteries, which arise from the hypogastric, it is returned to the placenta. **F. cotyle'dons,** villous tufts of placenta. **F. en'velopes,** envelopes surrounding the fœtus, as decidua reflexa, chorion, and amnion. **F. expres'sion,** application of force over the womb to expedite extrusion of the fœtus. **F. head.** The following round measurements of the fœtal head for obstetrical purposes have been given by Tarnier and Chantreuil:

Maximum diameter	5.31	in., or	13.5	cm.
Occipito-mental "	5.11	"	13	"
Occipito-frontal "	4.72	"	12	"
Suboccipito-bregmatic diameter	3.75	"	9.5	"
Biparietal diameter	3.75	"	9.5	"
Bimastoid "	2.75	"	7.5	"
Fronto-mental diameter	3.15	"	8	"
Bitemporal diameter	3.15	"	8	"
Trachelo-bregmatic diameter	3.75	"	9.5	"
Great circumference	14.57	"	37	"
Small "	12.80	"	32.5	"

F. inclu'sion, fœtus included in a fœtus. **F. mem'branes**, membranes covering the fœtus, as allantois, amnion, chorion. **F. mur'mur**, sound heard in listening over the abdomen of a pregnant woman. **F. nutri'tion**, supply of nutritive material to fœtus in utero. **F. preg'nancy**, F. inclusion. **F. shock**, movement of the fœtus recognized in ausculting a pregnant abdomen.

Fœta'tion. Pregnancy; gestation.

Fœticide, feet'i-side (*fœtus, cædo*, to kill). Destruction of life of fœtus; criminal abortion. One who commits this crime.

Fœtid, fe'tid. Fetid.

Fœtor, fe'tor (bad smell). Offensive odor. **F. ala'rum**, disagreeable odor from the axillæ. **F. o'ris**, offensive breath.

Fœtus, fe'tus. Unborn young of any creature. Anatomists generally apply to the germ the name *embryo*, which it retains until the third month of gestation, and with some until the period of quickening, while *fœtus* is applied to it in its latter stages. The terms are often used indiscriminately. When the ovule has been fecundated in the ovarium it proceeds slowly toward and enters the uterus, with which it becomes ultimately connected by means of the placenta. Generally, there is one fœtus in utero; sometimes there are two; rarely three.

The following chronological table by Beaunis and Bouchard exhibits the progress of development of the fœtus (Gray):

First Week.—During this period the ovum is in the Fallopian tube. Having been fertilized in its upper part, it slowly passes down, undergoing segmentation, and reaches the uterus probably about the end of the first week. During this time it does not undergo much increase in size.

Second Week.—The ovum rapidly increases in size, and becomes imbedded in the decidua, so that it is completely enclosed in the decidua reflexa by the end of this period. An ovum believed to be of the thirteenth day after conception is described by Reichert. There was no appearance of any embryonic structure. The equatorial margins of the ovum were beset with villi, but the surface in contact with the uterine wall and the one opposite to it were bare. In another ovum, described by His, believed to be of about the fourteenth day, there was a distinct indication of an embryo. There was a medullary groove bounded by folds; in front of this a slightly prominent ridge, the rudimentary heart. The amnion was formed, and the embryo was attached by a stalk, the allantois, to the inner surface of the chorion. It may be said, therefore, that these parts, the amnion and the allantois, and the first rudiments of the embryo, the medullary groove and the heart, are formed at the end of the second week.

Third Week.—By the end of the third week the flexures of the embryo have taken place, so that it is strongly curved. The protovertebral disks, which begin to be formed early in the third week, present their full complement. In the nervous system the primary divisions of the brain are visible, and the primitive ocular and auditory vesicles are already formed. The primary circulation is established. The alimentary canal presents a straight tube communicating with the yolk-sac. The pharyngeal arches are formed. The limbs have appeared as short buds. The Wolffian bodies are visible.

Fourth Week.—The umbilical vesicle has attained its full development. Projection of the caudal extremity. Projection of the upper and lower limbs. Cloacal aperture. The heart separates into a right and left heart. Spinal ganglia and anterior roots. Olfactory fossæ. Lungs. Pancreas.

Fifth Week.—Vascularity of the allantois in its whole extent. First trace of hands and feet. The primitive aorta divides into primitive aorta and pulmonary artery. Conduit of Müller and genital gland. Ossification of clavicle and lower jaw. Cartilage of Meckel.

Sixth Week.—The activity of the umbilical vesicle ceases. The pharyngeal clefts disappear. The vertebral column, primitive cranium, and ribs assume the cartilaginous condition. Posterior roots of the nerves. Membranes of the nervous centres. Bladder. Kidneys. Tongue. Larynx. Thyroid gland. Germs of teeth. Genital tubercle and folds.

Seventh Week.—The muscles begin to be perceptible. Points of ossification of the ribs, scapula, shafts of humerus, femur, tibia, intermaxillary bone, palate, upper jaw (its four points).

Eighth Week.—Distinction of arm and forearm and of thigh and leg. Appearance of the interdigital clefts. Capsule of the lens and pupillary membrane. Completion of the interventricular and commencement of the interauricular septum. Salivary glands. Spleen. Suprarenal capsules. The larynx begins to become cartilaginous. All the vertebral bodies are cartilaginous. Points of ossification for the ulna, radius, fibula, and ilium. The two halves of the bony palate unite. Sympathetic nerve.

Ninth Week.—Corpus striatum. Pericardium. Distinction between ovary and testicle. Formation of the genital furrow. Osseous nuclei of vertebral bodies and arches, frontal, vomer, malar bone, shafts of metacarpal bones, metatarsal bones, and phalanges. The union of the hard palate is completed. Gall-bladder.

Third Month.—Formation of the fœtal placenta. The projection of the caudal extremity disappears. It is possible to distinguish the male and female organs at the commencement of the third month. The cloacal aperture divided into two parts. The cartilaginous arches on the dorsal region of the spine close. Points of ossification for the occipital, sphenoid, os unguis, nasal bones, squamous portion of temporal and ischium. Orbital centre of superior maxillary bone. Commencement of formation of maxillary sinus. Pons Varolii. Fissure of Sylvius. Formation of eyelids and of hair and nails. Mammary gland. Epiglottis. Union of the testicle with the canals of the Wolffian body. Prostate.

Fourth Month.—The closure of the cartilaginous arches of the spine is complete. Osseous points for the first sacral vertebræ and pubes. Ossification of the malleus and incus. Corpus callosum. Membranous lamina spiralis; cartilage of the Eustachian tube. Tympanic ring. Fat in subcutaneous cellular tissue. Tonsils. Closure of genital furrow and formation of scrotum and prepuce.

Fifth Month.—The two layers of decidua begin to coalesce. Osseous nuclei of axis and odontoid process Lateral points of first sacral vertebra; median points of second. Osseous points of lateral masses of ethmoid. Ossification of stapes and petrous bone. Ossification of germs of teeth. Appearance of germs of permanent teeth. Organ of Corti. Eruption of hair on head. Sudoriferous glands. Glands of Brunner. Follicles of tonsils and base of tongue. Lymphatic glands. Commencement of limitation of uterus and vagina.

Sixth Month.—Points of ossification for the anterior root of the transverse process of the several cervical vertebra. Lateral points of second sacral vertebra; median points of third. The sacro-vertebral angle forms. Osseous points of the manubrium sterni and of the os calcis. The cerebral hemisphere covers the cerebellum. Papillæ of the skin. Sebaceous glands. The free border of the nail projects from the corium of the dermis. Peyer's patches. The walls of the uterus thicken.

Seventh Month.—Additional points of first sacral vertebra; lateral points of third; median point of fourth. First osseous point of body of sternum. Osseous point for astragalus. Disappearance of Meckel's cartilage. Cerebral convolutions. Insula of Reil. Separation of tubercula quadrigemina. Disappearance of pupillary membrane. The testicle passes into the vaginal process of the peritoneum.

Eighth Month.—Additional points for the second sacral vertebra; lateral points for the fourth; median points for the fifth.

Ninth Month.—Additional points for the third sacral vertebra; lateral points for the fifth. Osseous point for the middle turbinated bone; for the body and great cornu of the hyoid; for the second and third pieces of the body of the sternum; for the lower end of the femur. Ossification of the bony lamina spiralis and axis of the cochlea. Opening of the eyelids. The testicles are in the scrotum.

Fœ'tus, abdom'inal. F., ventral. **F., acephal'ic,** fœtal monstrosity devoid of a head. **F., alliga'tor,** one affected with general keratosis. **F., anencephal'ic,** fœtus in which the brain is not developed. **F., circula'tion in the,** fœtal circulation. **F., compressed,** mummified fœtus flattened by pressure of second fœtus or pressed into parchment-like mass against the walls of the uterus. **F., exencephal'ic,** fœtus in which there is protrusion of the brain. **F. in fœtu, inclu'ded,** or **inclu'sus,** monstrosity in which one fœtus is found contained in another; cryptodidymus. **F., har'lequin,** F., alligator. **F., mum'mified,** F., compressed, F. papyraceus. **F. ova'ricus, ova'rius,** or **ova'rian,** fœtus produced during ovarian pregnancy. **F. papyra'ceous,** mummified fœtus, F., compressed. **F., pseudencephal'ic,** see *Pseudencephalus.* **F., retained,** retention of fœtus in abdominal cavity in tubal pregnancy. **F. sanguinolen'tus,** dead fœtus with effusions of blood externally and internally. **F., sec'ondary,** F., compressed. **F. septimes'tris,** seven months' fœtus. **F. syreniformis** (*syren,* mermaid, *forma*), one with lower extremities conjoined. **F., tu'bal** or **tuba'rius,** F. produced during Fallopian or tubal pregnancy. **F., ven'tral,** fœtus produced during abdominal pregnancy. **F., vi'able** or **vita'lis,** fœtus that is viable or capable of independent life. **F. zephyr'ius,** mole.

Fold or **Folds.** Duplication of mucous or serous membranes between various structures, as arytenoepiglottidean, recto-uterine, recto-vesical, and vesico-uterine folds. **F. of Doug'las,** recto-uterine folds. **F., gen'ital,** see *Genital.* **F., glos'so-epiglot'tic** or **epiglottide'an,** folds of mucous membrane of tongue passing from its base to the epiglottis. **F., hippocam'pal,** gyrus, hippocampal. **F., hypoblas'tic,** duplication in the hypoblast, finally giving rise to the notochord. **F., intes'tinal, of blas'toderm,** splanchnopleure. **F., occip'ital,** superior occipital convolution. **F., posthippocam'pal,** subcalcarine gyrus. **F., postmar'ginal,** præcuneus. **F., postoccip'ital,** inferior occipital convolution. **F., rec'to-u'terine,** utero-sacral ligament; folds of Douglas. Duplications of peritoneum passing from cervix uteri to vicinity of second sacral vertebra and enclosing the rectum. **F., rec'to-vagi'nal,** Douglas's pouch. **F., rec'to-ves'ical,** duplication of peritoneum passing from rectum to bladder. **F. of rec'tum,** semilunar folds in upper part of the rectum. **F., ves'ico-u'terine,** fibres from muscular coat of the uterus passing to the bladder.

Fo'lia. Leaves. **F. aconi'ti,** aconite leaves. **F. althæ'æ,** marshmallow leaves. **F. apalachi'nes,** see *Ilex Paraguensis.* **F. baros'mæ,** buchu. **F. belladon'næ,** belladonna leaves. **F. bu'chu,** buchu leaves. **F. casta'neæ,** leaves of Castanea vesica. **F. cerebel'li,** convolutions of cerebellum. **F. cicu'tæ,** conium leaves. **F. co'cæ,** Erythroxylon coca leaves. **F. coni'i,** conium leaves. **F. digita'lis,** digitalis leaves. **F. dios'mæ,** buchu leaves. **F. eucalyp'ti,** eucalyptus leaves. **F. hyoscy'ami,** hyoscyamus leaves. **F. jaboran'di,** leaves of jaborandi. **F. juglan'dis re'gia,** leaves of English walnut. **F. lau'ri,** laurel leaves. **F. laurocer'asi,** cherry-laurel leaves. **F. mati'co,** matico leaves. **F. melis'sæ,** leaves of balm. **F. men'thæ piperi'tæ,** peppermint leaves. **F. nicotia'næ,** tobacco leaves. **F. orienta'lia,** senna leaves. **F. rosmari'ni,** rosemary leaves. **F. sabi'næ,** leaves of savin. **F. sal'viæ,** salvia. **F. sen'næ,** senna leaves; leaves of Cassia Marilandica. **F. stramo'nii,** stramonium leaves. **F. supralunа're,** anterior crescentic lobe of cerebellum. **F. u'væ ur'si,** uva ursi leaves.

Folia'ceous (*folium,* leaf). Resembling a leaf.

Foliaceum ornamentum, fo-le-as'e-um orn-am-en'tum (*folium,* leaf). See *Tuba Fallopiana.*

Foliate (fo'le-ate) (leaf-like) **papil'læ.** Fungiform papillæ at tip of tongue.

Foliated, fo'le-a-ted. Composed of leaves; having a leaf-like appearance or shape.

Fo'lioles. Small leaves. **F. of cerebel'lum,** cerebellar convolutions. **F. of di'aphragm,** divisions of central tendon of diaphragm.

Fo'lium. Leaf; anterior fontanelle; lamina of cerebellum. **F. cacu'minis** (*cacumen,* top), lobule at back part of upper surface of vermiform process of cerebellum. **F. centra'le,** central lobe of cerebellum.

Fol'licle or **Fol'licles** (dim. of **Follis,** bag). Small secreting baglike cavity, crypt, or gland, formed by depression of skin or mucous membranes. Follicular secretions keep parts on which they are poured supple and moist, and preserve them from the action of irritating bodies with which they have to come in contact. See *Crypta.* **F., ag'gregate,** aggregated glands. **F., ag'minate** or **ag'minated,** agminated glands. **F., cil'iary,** Meibomian glands. **F., closed,** solitary and agminated glands of the intestines. **F. of De Graaf,** folliculi Graafiani. **F., den'tal,** sac of tooth in process of development. **F., Graaf'ian,** folliculi Graafiani. **F., hair,** see *Hair.* **F. of intes'tines,** see *Intestine.* **F. of Lie'berkühn,** see *Intestine.* **F. of Littré,** glands of Littré. **F., lymphat'ic,** lymphatic glands. **F., Malpig'hian,** Malpighian corpuscles. **F., Naboth'ian,** vesicles in mucous membrane in canal of cervix uteri from obstructed follicles. **F., nail,** see *Nail.* **F., ova'rian,** folliculi Graafiani. **F., pal'pebral,** Meibomius, glands of. **F. of Pey'er,** Peyeri glandulæ. **F., seba'ceous,** sebaceous glands. **F., sol'itary,** solitary glands, Brunner's glands. **F., splen'ic,** Malpighian corpuscles. **F., sudorip'arous,** sudoriparous glands. **F., syno'vial,** bursæ mucosæ. **F. of tooth,** see *Groove, dental.*

Follic'ular, Follic'ulous, or **Follic'ulose.** Relating or appertaining to follicles; as follicular inflammation, inflammation affecting crypts or follicles, folliculitis. **F. bod'y,** gland of Bartholin. **F. coli'tis,** inflammation of the lymph-follicles of the ileum and colon, existing in children who are fed artificially. **F. degenera'tion of the cer'vix,** see *Cystic degeneration.* **F. eleva'tions,** tubercles, pearly. **F. enteri'tis,** inflammation of lining membrane of the intestines, and particularly of solitary glands. **F. ophthal'mia,** see *Ophthalmia.*

Folliculi, fol-lik'u-le (pl. of **Folliculus**). Follicles. **F. a'ëris,** air-cells. **F. aggrega'ti,** aggregated glands. **F. agmina'ti,** agminated glands. **F. cilia'res,** Meibomian ducts or follicles. **F. Graafia'ni,** follicles or vesicles of De Graaf; Graafian or ovarian vesicles. Small spherical vesicles in the stroma of the ovary, having at least two coats, the outer termed *ovicapsule* and *tunic of the ovisac,* the latter *ovisac* and *membrana propria;* see *Membrana granulosa.* They exist in the fœtus. The ovum or ovule is contained in and formed by them. The follicles themselves are ovisacs. The interior of the follicles contains a clear, light-yellowish fluid (liquor folliculi), of the density of the serum of the blood, in which are almost always isolated granules, nuclei, and cells, which appear to be detached portions of the membrana granulosa. **F. ova'rii,** folliculi Graafiani. **F. pilo'rum,** hair-follicles. **F. rotun'di et oblon'gi cervi'cis u'teri,** Nabothi glandulæ. **F. san'guinis,** globules of blood. **F. seba'cei,** sebaceous glands. **F. seba'cei coro'næ glan'dis,** see *Sebaceous glands.* **F. solita'rii** or **spora'des,** solitary glands of the intestines; Peyer's glands, which belong to this class.

Folliculitis, fol-lik-u-li'tis. Follicular inflammation. **F. absce'dens infan'tum,** furuncle in children, with successive development of boils. **F. bar'bæ,** F. of the beard; sycosis. **F. blennorrhag'ica,** gonorrhœa complicated with involvement of the follicles of Morgagni. **F. decal'vans** or **epilato'ria,** inflammation of the hair-follicles, with loss of hairs and atrophied condition of the skin. **F. seba'cea,** acne. **F., ure'thral,** inflammation of follicles of Morgagni. **F., vul'var,** inflammation of sebaceous follicles of the vulva.

Follic'ulose. Of a follicular character. **F. gland,** follicle.

Folliculosis, fol-lik-u-lo'sis. Disease of the follicles.

Folliculus, fol-lik'u-lus. Follicle; vulva. **F. a'ëris,** air-chamber; space at the larger end of the bird's egg, formed by the separation of two layers of the shell membrane, and inservient to the respiration of the young being. **F. den'tis,** dental follicle. **F. fel'lis** or **fel'leus,** gall-bladder. **F. genita'lis,** scrotum. **F. Graaf'ii,** folliculi Graafiani. **F. muco'sus,** see *Follicle.* **F. ova'rius,** Graafian follicle. **F. pi'li,** see *Hair.*

Foment' (*foveo,* to keep warm). To apply a fomentation to a part.

Fomentation, fo-men-ta'shun. Sort of partial bathing by the application of cloths previously dipped in hot water or some medicated decoction, acting chiefly by virtue of the warmth and moisture, except in the case of narcotic fomentations, where some additional effect is obtained. A dry fomentation is a warm, dry application, as a hot brick wrapped in flannel, a bag half filled with chamomile flowers made hot, etc.

Fomen'tum. Fomentation. **F. sic'cum,** fomentation, dry.

Fomes morbi, fo'mees mor'be (*fomes,* fuel). Focus, centre, or seat of disease. **F. ventric'uli,** hypochondriasis, spleen.

Fomites, fom'it-ees (pl. of **Fomes,** fuel). Substances supposed to retain contagious effluvia—as woollen goods, feathers, cotton, etc.—and thus to act as disease-producers.

Fons (a fount) Fontanelle. **F. lacryma'rum,** see *Canthus.* **F. medica'tus,** mineral water. **F. pul'sans** or **pulsat'ilis,** anterior fontanelle. **F. saluta'ris,** mineral water. **F. sote'rius,** mineral water. **F. vita'lis,** respiratory centre; see *Centrum vitale.*

Fontainea pancheri, fon-ta'ne-ah pan-che're. Tree of New Caledonia; oil of the seeds is used externally as an epispastic, and internally as a drastic.

Fonta'na, canal' of (after Dr. Felix Fontana, Italian physiologist of 18th century). Triangular canal at the inner side of the ciliary circle; partly formed by the groove at the inner edge of the cornea and sclerotica. **F.'s mark'ings,** minute transverse markings or lines on nerves that have been divided. **F., spaces of,** spaces between prolongations of ligamentum pectinatum or suspensory ligament of the iris.

Fontanel or **Fontanel'la.** Fontanelle.

Fontanelle, font-an-el' (dim. of **Fons,** fountain). *Opening of the head.* Name given to a space occupied by a cartilaginous membrane in the fœtus and newborn child, situate at the union of the angles of the bones of the cranium. There are six fontanelles: great or sincipital or anterior, situate at the junction of the sagittal and coronal sutures; small or bregmatic, occipital or posterior, situate at the part where the posterior and superior angles of the parietal bones unite with the upper part of the os occipitis; two sphenoidal, in the temporal fossæ; two mastoid or of Casserius, at the union of the parietal, occipital, and temporal bones. **F., ante'rior,** see *Fontanelle.* **F., ante'rior lat'eral,** sphenoidal fontanelle. **F., ante'rior me'dian,** anterior fontanelle. **F., bregmat'ic,** see *Fontanelle.* **F. of Casser,** F., mastoid. **F., frontopari'etal,** F., anterior. **F., lat'eral,** F., mastoid; F., sphenoidal. **F., mas'toid,** see *Fontanelle.* **F., me'dian,** anterior and posterior fontanelles. **F., na'sofron'tal,** occasional f. at junction of nasal and frontal bones. **F., occip'ital,** see *Fontanelle.* **F., occip'itopari'etal,** F., posterior; see *Fontanelle.* **F., poste'rior,** see *Fontanelle.* **F., pos'tero-lat'eral,** F., mastoid. **F., pul'satile,** F., anterior. **F., sagit'tal,** unusual f. in sagittal sutures. **F., sincip'ital,** F., anterior. **F., sphenoid'al,** F. at place of meeting of frontal, parietal, sphenoid, and temporal bones.

Fontes (fon-tees) (pl. of **Fons**) **sulphu'rei cal'idi.** Waters, mineral, sulphureous.

Fonticulus, fon-tik'u-lus (dim. of **Fons,** fountain). Exutory, issue; small ulcer produced by art, either by caustics or cutting instruments, the discharge from which is kept up with a view to fulfil certain therapeutical indications. The pea issue is kept up by means of a pea placed in it; sometimes formed of wax; at others, the young blasted fruit of the orange is employed. The common dried garden pea answers the purpose; the seton is also an issue. Fontanelle. **F. ante'rior** or **fronta'lis,** anterior fontanelle. **F. Casse'rii,** mastoid fontanelle. **F. fronta'lis,** anterior fontanelle. **F. gut'turis,** depression on upper surface of sternum. **F. latera'lis ante'rior,** fontanelle, sphenoidal. **F. latera'lis Casse'rii** or **poste'rior,** F., mastoid. **F. latera'lis poste'rior,** fontanelle, mastoid. **F. ma'jor,** fontanelle, anterior. **F. major quadrangula'ris** or **supe'rior ante'rior,** F., anterior. **F. mastoï'deus,** fontanelle, mastoid. **F. mi'nor,** fontanelle, posterior. **F. mi'nor, occipita'lis, poste'rior, supe'rior poste'rior,** or **triangula'ris,** F., posterior. **F. occipita'lis,** fontanelle, posterior. **F. quadrangula'ris,** fontanelle, anterior. **F. sphenoida'lis,** fontanelle, sphenoidal. **F., supe'rior ante'rior,** fontanelle, anterior. **F., supe'rior poste'rior,** fontanelle, posterior. **F. triangula'ris,** fontanelle, posterior.

Food. See *Aliment.* (Under this head will be found a classification of foods according to their chemical constitution. The subject of *Dietetics* and the arrangement of *Dietaries* for civil life in hospitals, for the military and naval services and hospitals, and for adaptation to various ages and various diseases, will be found in works on Food and Dietetics.) **F., chem'ical,** see *Ferri phosphas.* **F., farina'ceous,** see *Farinaceous.* **F. of the gods,** asafœtida. **F., res'piratory,** according to Liebig's teaching the fats and carbohydrates, which he thought alone partook in the evolution of heat. **F. yolk,** substance in cells of the ovum for after-nutrition of the embryo.

Foods, isodynam'ic. Foods that produce an equal amount of heat. **F., plas'tic,** according to Liebig's teaching the nitrogenous metabolism of the body depends on the function of the proteids to make tissue; therefore they have received the name plastic foods.

Fool's parsley. Æthusa cynapium. **F.'s stones, male,** Orchis mascula.

Foot. Pes. **F. bath,** bath for the feet; pediluvium. **F. clo'nus,** spasmodic contraction of ankle-joint upon extension of knee and rapidly executed pressure against front of sole of foot; see *Reflex, foot.* **F., flat,** see *Kyllosis.* **F., fun'gous, of In'dia,** mycetoma; Madura foot. **F., pe'duncle of,** crus cerebri. **F. phenom'enon,** F. clonus. **F. presenta'tion,** footling case. **F. re'flex,** see *F. Clonus* and *Reflex.* **F. rot,** paronychia of sheep. **F., splay,** talipes valgus. **F., tabet'ic,** hypertrophy of bones of foot in tabes.

Foot-and-mouth disease. Eczema epizoötica. See *Murrain.*

Foot'ling case or **presenta'tion.** Presentation of the foot or feet in parturition.

Foramen, for-am'en (*foro,* to pierce). Cavity, pierced through and through; orifice of a canal. See *Lumen.* **F. acus'ticum,** meatus auditorius internus. **F. alveola're ante'rius,** see *Palatine canals.* **F. a. infe'rius,** inferior dental foramen. **F. a. poste'rius,** see *Palatine canals.* **F. am'plum pel'vis,** obturatorium foramen. **F. anon'ymum Ferrei'ni,** opening into aquæductus Fallopii. **F. aor'ticum,** aortic opening of diaphragm. **F. aquæduc'tus Fallo'pii,** stylomastoid foramen. **F. atlanta'le,** foramen in the atlas formed by partial conversion of a groove on the upper surface into a foramen. **F. audito'rium exter'num,** see *Auditory canal, external.* **F. a. inter'num,** see *Auditory canal, internal.* **F. of Bichat,** see *Canal, arachnoid.* **F. of Botal,** fœtal opening between auricles of heart. **F. of Buz'zi,** depression near centre of yellow spot of the eye in line of vision. **F. cæ'cum ante'rius,** deep depression at base of the brain in front of the pons. **F. c. of fron'tal bone,** small cavity at inferior extremity of internal coronal crest. **F. c. of medul'la oblonga'ta,** tolerably deep fossa at the point where the median furrow at the anterior surface of the medulla oblongata meets the pons. **F. c. Morga'gni,** F. cæcum of tongue. **F. c. os'sis maxilla'ris**

superio'ris, see *Palatine canals*. **F. c. of phar'ynx**, slight pit seen occasionally taking the place of the pharyngeal bursa. **F. c. poste'rius**, F. cæcum of medulla oblongata. **F. c. ret'inæ**, F. of Buzzi. **F. c. retro-ana'le**, slight pit seen occasionally in the newborn behind the anus. **F. c. of tongue**, small cavity in middle of upper surface of the tongue near its base. Opening of duct of thyroid gland continued from fœtal life. **F. c. of Vicq d'Azyr**, F. cæcum of medulla oblongata. **F. carot'ico-clinoï'deum**, foramen formed occasionally by conversion of the carotid groove, a speculum of bone bridging it over. **F. carot'icum exter'num**, carotid foramen. **F. c. inter'num**, internal opening of carotid canal. **F., carot'id**, see *Carotica foramina* and *Foramen caroticum*. **F. centra'le**, central foramen, surrounded by limbus luteus and yellow spot of retina, discovered by Sömmering, situate about two lines to the outside of the optic nerve, and in direction of the axis of the eye; not strictly a foramen. **F. c. coch'leæ**, the opening in depression at the bottom of internal auditory meatus. **F. c. ret'inæ**, F. centrale. **F. clinoï'deo-carot'icum**, F. carotico-clinoideum. **F. commu'ne ante'rius**, passage between third and lateral ventricle. Vulva. **F. c. poste'rius**, anus. **F. cor'neæ**, opening made by anterior border of sclerotic on removal of cornea. **F. cos'to-transversa'rium**, opening between the rib and articulating transverse process of vertebra. **F., den'tal**, foramen on internal surface of ramus of lower jaw for passage of inferior dental nerve and vessels. **F. dex'trum diaphragma'tis**, opening for ascending vena cava in central tendon of diaphragm. **F. epiplo'icum**, F. of Winslow. **F. ethmoï'deum**, orbitar foramen, internal. **F. of Ferrein'**, hiatus Fallopii. **F. fronta'le**, frontal notch on supraorbital ridge converted into foramen. **F. of Ga'len**, foramen of Botal. **F. incisi'vum**, see *Palatine canal*. **F. infra-orbita'rium**, see *Suborbitar canal*. **F. infrapubia'num**, obturator foramen. **F. infrapyrifor'me**, opening in the great sciatic notch below the pyriformis muscle. **F. interclinoï'deum commu'ne**, opening or canal formed by the osseous union of the anterior and posterior clinoid processes. **F., interver'tebral**, see *Vertebræ*. **F. irregula're**, jugular foramen. **F. ischiad'icum**, foramen formed by sacro-sciatic ligament passing over ischiatic notch. **F. is'chio-pu'bicum**, obturator foramen. **F. jugula're**, lacerum posterius foramen. **F. jugula're spu'rium**, foramen occasionally seen in the temporal bone, between the glenoid fossa and tympanic portion. **F. labia'le**, F. mentale. **F. lac'erum in ba'si cra'nii**, lacerum posterius foramen. **F. lac'erum infe'rius**, spheno-maxillary fissure. **F. lac'erum orbita'le**, sphenoidal fissure. **F. lac'erum supe'rius**, sphenoidal fissure. **F. of Magen'die**, opening in pia mater covering fourth ventricle. **F. mag'num**, large opening in the occipital bone for passage of spinal cord and medulla oblongata, vertebral arteries, the spinal roots of the spinal accessory nerves, communicating veins from sinuses of the brain, and membranes common to the brain and spinal cord. **F. mandibula're poste'rius**, dental foramen, inferior. **F., mas'toid**, foramen behind mastoid process of temporal bone, giving passage to a small artery and vein. **F. maxilla're ante'rius**, F. mentale. **F. maxilla're infe'rius, inter'num**, or **poste'rius**, dental foramen, inferior. **F. medul'læ spina'lis**, vertebral foramen. **F. meninge'um**, small foramen on the outer wall of the orbit, at the upper portion of the great wing of the sphenoid or in the suture between it and the frontal bone. **F. menta'le**, mental foramen, external opening of inferior dental canal on the lower jaw. **F. menta'le ante'rius**, an additional mental foramen occasionally met with. **F. menta'le infe'rius**, dental foramen, inferior. **F. of Monro'**, opening behind anterior pillar of fornix, somewhat above the anterior commissure, by which the third ventricle communicates with the lateral ventricle; called after Monro 2d. **F. Morga'gnii**, F. cæcum of tongue, and tongue. **F. nasa'le** or **na'so-ethmoida'le**, small opening in the nasal bone. **F. nutrit'ium**, nutritious foramen in a bone for the medullary artery. **F., obtura'tor, obturato'rium**, or **obtura'tum**, obturator foramen. **F. occipita'le mag'num**, foramen magnum. **F. o. supe'rius**, large elliptical opening formed by extension of the tentorium, and occupied by the crura cerebri. **F. oc'uli**, pupil. **F. œsophage'um**, œsophageal or cardiac orifice of the stomach; elliptical opening in the diaphragm for transmission of the œsophagus and vagus nerves. **F. oö'des**, foramen ovale. **F. opercula're**, the orifice in the dura mater by which the infundibulum reaches the pituitary fossa. **F. op'ticum**, round opening near base of lesser wing of sphenoid for passage of optic nerve. **F. o. choroï'deæ**, passage for optic nerve through the choroid; see *Optic nerves*. **F. o. sclerot'icæ**, passage for optic nerve through the sclerotic coat. **F. orbita'rium inter'num**, orbitar foramen, internal. **F. o. supe'rius**, orbitar foramen, superior, and F. supraorbitarium. **F. ova'le**, obturator foramen. **F. o. cox'æ**, oval foramen of hip-bone. Foramen in inner paries of middle ear, opening into the vestibule. Foramen in sphenoid bone, *F. ovale of sphenoid bone*, through which the branch of the fifth pair issues from the cranium. Aperture in fœtus between the auricles of the heart, *F. of Botal*, *F. ovale of heart*. Also fenestra ovalis and foramen of Monro. **F. o. of Pacchio'ni**, F. occipitale superius. **F. o., pa'tency of**, see *Cyanopathy*. **F. palati'num ante'rius**, see *Palatine canals*. **F. p. latera'le**, passage from posterior palatine canal to middle meatus of nose. **F. p. ma'jus**, palatine foramen, posterior. **F. p. poste'rius**, palatine foramen, posterior; inferior opening of accessory palatine canals. **F. pala'to-maxilla're**, see *Palatine canals*. **F., pari'etal**, occasional foramen near upper edge of parietal bones for passage of artery and vein. **F. profun'dum**, sternal infundibulum. **F. pter'ygo-palati'num**, palatine foramen, posterior; see *Sphenoid bone*. **F. quadra'tum** or **quadrilat'erum**, venæ cavæ. **F. reces'sûs latera'lis**, opening through pia mater in lateral recess of fourth ventricle. **F. Rivi'ni** or **Rivinia'num**, opening or slit in bony ring of attachment of membrana tympani. **F. rotun'dum**, opening at anterior part of base of greater wing of sphenoid, for passage of superior maxillary division of fifth pair; see *Fenestra*. **F. saphe'næ**, saphenous opening. **F. scapula're**, suprascapular foramen. **F. of Scar'pa**, see *Scarpa*. **F. sclerot'icæ anti'cum**, F. corneæ. **F. sclerot'icæ posti'cum**, F. opticum scleroticæ. **F. singula're**, foramen in small fossa at the bottom of the internal auditory meatus, transmitting branch of the auditory nerve. **F. sinis'trum infe'rius diaphragma'tis**, opening for the passage of the aorta, back of the diaphragm. **F. sinis'trum supe'rius diaphragma'tis**, F. œsophageum. **F. pro si'nu petro'so inferio'ri**, occasional opening in the petro-basilar fissure, at base of skull, for discharge of the inferior petrosal sinus. **F. of Sömmering**, F. centrale of retina. **F., sphe'no-pal'atine**, see *Palate bone*. **F. sphe'no-spino'sum**, F. spinosum. **F. spina'le**, vertebral foramen; F. spinosum. **F. spino'sum**, small foramen in front of the spinous process of the sphenoid bone, through which the middle artery of the dura mater enters the cranium. **F. steno'nis** or **F. Stenso'ni**, see *Foramina of Stenson*. **F., ster'nal**, orifice occasionally found between the third and fourth pieces of the second bone of the sternum from arrest of development. **F. stylomastoï'deum**, foramen at the inferior surface of the petrous portion of the temporal bone, terminating the aqueduct of Fallopius, and giving passage to the facial nerve. **F. subarcua'tum**, aperture on posterior surface of the petrous bone of the fœtus. **F. supe'rius et ma'jus**, helicotrema. **F. suprapyrifor'me**, opening in the great sciatic notch, above the pyramidalis muscle, for passage of the gluteal vessels and superior gluteal nerve from the pelvis. **F. sutu'ræ petro-basila'ris anom'alum**, F. pro sinu petroso inferiori. **F. of Tari'ni** or **Tari'nus**, hiatus Fallopii. **F. thyroï'deum**, obturator foramen. Aperture in thyroid cartilage for the passage of the superior laryngeal artery. **F. transversa'rium**, aperture in the transverse process of a cer-

vical vertebra for the passage of the vertebral artery and vein. **F. ve'næ ca'væ**, foramen in the diaphragm through which the vena cava passes. **F. ve'næ saphe'næ**, saphenous opening. **F. veno'sum**, F. venæ cavæ. **F. vertebra'le**, see *Vertebræ*. **F. of Vesa'lius**, small aperture in the sphenoid bone at the inner side of the foramen ovale. **F. vo'meris**, posterior opening of the canal between the sphenoid bone and the vomer; canalis vomeris. **F. of Wins'low**, hiatus of Winslow. **F. zygomat'ico-facia'le**, opening on the face of the temporo-malar canal. **F. zygomat'ico-orbita'le**, opening on the orbit of the temporo-malar canal. **F. zygomat'icum ante'rius** or **exter'num** or **facia'le**, F. zygomatico-faciale. **F. zygomat'icum inter'num** or **orbita'le** or **supe'rius**, F. zygomatico-orbitale.

Foram'ina (pl. of **Foramen**) **caro'tica-tympan'ica.** Minute openings on the external surface of the carotid canal communicating with the tympanum. **F., con'dyloid**, four foramina in the occipital bone. **F. conjuga'ta** or **conjugatio'nis**, intervertebral foramina. **F. cribro'sa**, apertures in the horizontal plate of the ethmoid for the olfactory nerve. **F. of di'aphragm**, see *Diaphragm*. **F. diplo'ica**, foramina of the diploic canals. **F. intersacra'lia**, apertures between the sacral canal and the intersacral canals. **F. ischiad'ica**, foramina formed by the sacro-sciatic ligaments passing across the sciatic notches. **F. of Morga'gni**, see *Urethra*. **F. nervi'na**, apertures in labium tympanicum through which the auditory nerve passes to the organ of Corti. **F. nutri'tia os'sium**, nutrient foramina of bones. **F. orbita'ria**, ethmoidal foramina. **F. palati'na mino'ra**, accessory palatine foramina. **F. papilla'ria**, minute openings of the excretory tubes on the papillæ of the kidney. **F. of Scar'pa**, openings in the line of the articulation of the palate processes of the upper jaw-bones. **F. of Sten'son**, two lateral foramina which assist in making the anterior palatine canal. **F. Thebe'sii**, openings resembling vascular orifices, found below the orifice of the vena cava superior in the right auricle, and supposed to be the openings of veins, venæ minimæ cordis. **F. transversa'ria accesso'ria**, occasional accessory foramina in transverse processes of cervical vertebræ.

Foramin'ula (small foramina) **carot'ico-tympan'ica.** Foramina carotico-tympanica.

Fora'tio (*foro*, to bore). Perforation; trepanning.

Forbes's amputa'tion. Modification of Chopart's amputation, in which the scaphoid bone and part of the cuboid are retained.

Force (*fortis*, strong). Power producing action. Powers inherent in organization are called vital forces. Organic force and muscular force designate that of the organs in general, or of the muscles in particular. To the latter the word *dynamic* corresponds, and the absence of this force is termed *adynamia*. **F. of assimila'tion**, plastic force. **F., cap'illary**, capillary attraction. **F., catalyt'ic**, see *Catalysis*. **F., cell**, see *Cell-force*. **F. of forma'tion**, plastic force. **F., germ**, plastic force. **F., metabol'ic**, see *Metabolic force*. **F. of nutri'tion**, plastic force. **F., osmo'tic**, see *Osmotic force*. **F. of vegeta'tion**, plastic force. **F., vi'tal**, quality of vital power that distinguishes living matter from the dead.

Forced move'ments. Compulsory movements caused by lesion of the cerebellum, as after experiments on animals.

Forceps, for'seps (*ferrum*, iron, *capio*, to take). Pincers. Instrument for removing bodies which it would be inconvenient or impracticable to seize with the fingers. Various kinds of forceps are employed by the surgeon, obstetrician, or dentist. Term also applied to fibres which curve backward into the posterior lobes from the posterior border of the corpus callosum. **F., ante'rior** or **mi'nor**, is prolongation of the fibres to the frontal lobe. **F., ax'is-trac'tion**, obstetrical forceps provided with a device for exerting downward and backward traction. See *Parturition*. **F., poste'rior** or **ma'jor**, is a collection of such fibres passing backward and outward.

Forcipressure, for'se-pres-sure. Compression of a bleeding vessel by spring forceps.

Fore. Before or anterior, as fore-brain, forearm, etc.

Fore'arm. Part of the upper extremity comprised between the arm and the hand, and composed of two bones (radius and ulna) and twenty muscles.

Fore'-brain. Expansion in the fœtus at the anterior extremity of the medullary tube; prosencephalon.

Fore'finger. The second finger.

Fore'front or **Fore'head.** Front part of the head.

Fore'gut. Anterior portion of the alimentary embryonic canal, including the pharynx, œsophagus, stomach, and duodenum.

For'eign bod'y. Extraneous body, of interest medically and surgically when present in the body in canals, organs, or viscera, in which it may cause irritation or inflammation.

Fore'-limb. Upper extremity of man; anterior extremity of animals.

Fore'milk. Colostrum.

Fore'neck. Front of the neck; throat.

Forensic, for-en'sik (*forum*, court of justice). Relating to law. **F. anat'omy**, see *Anatomy*. **F. med'icine**, legal medicine; medical jurisprudence.

Fo'res (pl. of **Foris**, gate). Vulva.

Fore'skin. Prepuce.

Fore'top. Front.

For'fex. Scissors; forceps. **F. denta'ria**, dental forceps.

Forfic'ula auricula'ris (dim. of **Forfex**, scissors). Earwig; insect of the order Orthoptera, which occasionally enters the meatus auditorius externus and excites intense pain. It may be destroyed by tobacco-smoke or by oil placed in the meatus.

Forget'-me-not. Myosotis arvensis; expectorant properties. Ajuga chamæpitys; Veronica chamædrys.

For'mal. Methylal; methylene dimethylate.

Formam'idate of mer'cury. Mercuric formamidate.

For'mamide. Amide of formyl (NH_2CHO).

For'mate of ammo'nium. Combination of formic acid and ammonia administered in chronic paralytic disease in the dose of five grains. **F. of so'dium**, see *Sodium formate*.

Formatio, for-mah'she-o. Formation; membrane. **F. granulo'sa**, membrana granulosa. **F. reticula'ris**, two tracts of nervous substance—one gray, the other white—in the medulla oblongata are so called.

Forma'tion. Act of forming or growing; body or substance so formed. **F., new**, neoplasm. **F., retic'ular**, formatio reticularis

Form'ative (*formo*, to form). Plastic.

Formed mate'rial. Every cell is, according to Beale, composed of matter in two conditions: living and formative germinal matter; and lifeless formed material. The former selects nutrient matter, which permeates the latter in its passage toward the germinal matter.

For'mic ac'id. $HCHO_2$. Acid originally procured from red ants; an oxidative product of methylic acid; exists in stings of insects. Diluted with water, it has been used externally on paralyzed limbs. **F. e'ther** ($C_2H_5CHO_2$), colorless soluble liquid with peach-kernel odor, procured by distillation of mixture of formate of sodium, alcohol, and sulphuric acid.

Formica, for-me'ka. Ant or pismire. It contains an acid juice and gross oil, formerly extolled as aphrodisiacs. The chrysalides of the animal are said to be diuretic and carminative, and have been used in dropsy. A black wart, verruca formicaria, is so called because the pain attending it resembles the biting of an ant. Varicose tumor on the anus and glans penis; miliary herpes. **F. ambulato'ria**, herpes circinatus. **F. corrosi'va**, herpes exedens, herpes esthiomenus, herpes phlyctænodes; lupus erythematodes. **F. ru'fa**, wood-ant; formerly source of formic acid.

Formicant, for'me-kant (*formica*, ant). Epithet given to the pulse, *pulsus formicans*, when extremely small, scarcely perceptible, unequal, and communi-

cating a sensation like that of the motion of an ant felt through a thin texture.

Formication, for-me-ka'shun (*formica*, ant). Itchy or irritating sensation, as if ants were creeping on the skin.

For'mix (*formica*, ant). Herpes esthiomenus; lupus.

Formula, form'u-lah (dim. of **Forma**, form or manner). Prescription or detailed statement of ingredients of a prescription. **F. extempora'nea**, see *Magistral*. **F. magistra'lis**, see *Magistral*. **F. med'ica**, prescription. **F. officina'lis**, see *Magistral*.

Formulary, form'u-lar-e. Collection of medical formulæ or receipts.

For'myl. Radical of formic acid, CHO. **F. chlo'ride** or **perchlo'ride**, chloroform. **F. terbro'mide**, bromoform. **F. teri'odide**, iodoform. **F. trichlo'ride**, chloroform. **F. trii'odide**, iodoform.

Formyl'ic ac'id. Formic acid.

Form'ylum. Formyl. **F. chlora'tum**, chloroform. **F. ioda'tum**, iodoform. **F. perchlora'tum** or **trichlora'tum**, chloroform.

For'nical. Relating to the fornix.

For'nicate convolu'tion or **gy'rus**. Gyrus fornicatus.

For'nices arteria'rum. Arches of branches of renal artery in passing from one part of the kidney to another. **F. vasculo'si re'num**, F. arteriarum.

For'niciform. Arched.

For'nix (arch or vault). Medullary body in the brain, *F. cerebri*, below the corpus callosum and above the middle ventricle, on the median line. This body, curved upon itself, terminates anteriorly by a prolongation, constituting its anterior pillar, crus or columna fornicis, and posteriorly by two similar prolongations called posterior pillars or crura. See *Achicolum* and *Vault*. **F. centra'lis**, F. cerebri. **F. cer'ebri**, fornix. **F. conjuncti'væ**, point of reflection of conjunctiva upon the globe of the eye. **F. cra'nii**, vault of skull. **F. humera'lis**, vault of the shoulder, made up of the acromion and coracoid processes and coraco-acromial ligament. **F. na'si**, roof of the nose. **F. peripher'icus**, convolution of corpus callosum; gyrus fornicatus. **F. pharyn'gis**, roof of pharynx. **F. tricuspida'lis**, F. cerebri. **F. vagi'næ**, upper part of vagina, in which cervix uteri terminates. **F. ve'rus**, corpus callosum.

Forskah'lea angustifo'lia. Plant of the Canary Islands; diaphoretic.

Forstero'nia diffor'mis (after T. F. Forster, English botanist). Indigenous; used as a wash, with milk, to remove freckles; juice destroys warts.

Forsyth'ia suspen'sa. Plant of China and Japan; fruit is antispasmodic and sedative. A glucoside having antipyretic properties is obtained from it.

Fortifica'tion spec'trum. A subjective visual sensation noticed in migraine, in which the edge has a luminous appearance like walls of Troy.

For'tune-tell'er. Leontodon taraxacum.

For'ty-knot. Achyranthes repens.

Fos'sa (*fodio*, to dig). Cavity of greater or less depth, the entrance to which is always larger than the base. Fossæ of bones are simple when they belong to one bone only, as the parietal fossæ; and compound when several concur in their formation, as the orbitar fossæ, temporal fossæ, the fossæ of the skull, etc. **F. acetab'uli**, acetabular fossa. **F., amyg'daloid**, amygdaloid excavation; space between the anterior and posterior pillars of the fauces occupied by the tonsils. **F. amyn'tæ**, bandage for fractures of the nose, called from Amyntas of Rhodes, its inventor, consisting of a long band applied around the head, the turns being crossed at the root of the nose. **F., ancone'al**, olecranon fossa. **F. anon'yma**, navicular fossa. **F., ante'rior**, see *Fossæ cerebrales* and *Skull, fossæ of*. **F., ante'rior ma'jor**, coronoid fossa. **F., ante'rior mi'nor**, slight depression on humerus for reception of head of radius when the arm is thoroughly flexed. **F. anthe'licis**, depression on the ear opposite the antihelix; navicular fossa. **F. arcua'ta**, foramen subarcuatum. **F. articula'ris maxil'læ inferio'ris**, glenoid fossa. **F. axilla'ris**, axillary space. **F. basila'ris**, basilar fossa or groove of occipital bone. **F. bul'bi ure'thræ**, part of urethra in bulb of corpus spongiosum. **F. cæru'lea**, dark spot on floor of fourth ventricle. **F. cani'na**, depression on external surface of the superior maxillary bone. **F. cap'itis fem'oris**, depression on the head of the femur to which the round ligament is attached. **F. capit'uli ra'dii**, F., anterior minor. **F. carotide'a**, superior carotid triangle of neck. **F. cerebel'li**, inferior occipital fossa, lodging corresponding portion of the cerebellum. **F. cerebel'li supe'rior**, groove between lobes of upper surface of cerebellum. **F. cerebra'les**, see *Fossæ of skull*. **F. coch'leæ**, depression at bottom of internal auditory meatus for entrance of cochlear nerve to internal ear. **F. con'chæ**, concha. **F. corona'lis**, depression on the orbitar plate of the frontal or coronal bone, supporting the anterior lobe of the brain. **F. coronoï'dea**, coronoid fossa; cavity before the inferior extremity of the humerus, in which the coronoid process of the ulna is engaged during flexion of the forearm. **F. cotyloï'dea**, cotyloid cavity or acetabulum; cotyloid notch. **F. cru'ris hel'icis**, sulcus cruris helicis. **F. cubita'lis** or **cu'biti**, coronoid fossa; depression at end of elbow. **F. cyst'idis fel'leæ**, fossa for gall-bladder; see *Gall-bladder*. **F., digas'tric**, deep groove on the mastoid portion of the temporal bone, giving origin to the digastric muscle. **F., dig'ital**, F., trochanteric. **F., Douglas's**, Douglas's pouch. **F. duc'tus veno'si**, fissure for ductus venosus; see *Liver*. **F. duode'no-jejuna'lis**, depression in peritoneum from fold made by duodenum and jejunum. **F. ellip'tica**, depression for reception of utricle on wall of vestibule of internal ear. **F. ethmoïda'lis**, ethmoid fossa; shallow gutter on the upper surface of the cribriform plate of the ethmoid bone, in which is lodged the olfactory bulb. **F. of the gall-blad'der**, see *Gall-bladder*. **F. gen'u**, popliteal space. **F. glan'dis**, see *Glans*. **F. glan'dulæ lacryma'lis**, lacrymal fossa. **F. glandula'ris**, lacrymal fossa. **F., glen'oid**, glenoid cavity or fossa of scapula. **F. guttura'lis**, guttural fossa; depression forming the guttural region of the base of the cranium, between the foramen magnum and posterior nares. **F. of he'lix**, groove between helix and antihelix. **F. hemispher'ica**, see *Crista vestibuli*. **F. hyaloï'dea**, see *Hyaloid*. **F. hypophys'eos**, depression on upper surface of body of sphenoid bone for reception of the pituitary body. **F., il'iac**, see *Iliac fossæ*. **F. il'io-pectine'a**, Scarpa's triangle. **F. incisi'va**, F. myrtiformis. **F. incu'dis**, fossa on posterior wall of tympanum for short process of incus. **F., infraclavic'ular**, see *Infraclavicular*. **F., infraor'bitar**, canine fossa. **F., infraspi'nous**, see *Infraspinous fossa*. **F. infratempora'lis**, zygomatic fossa. **F. innomina'ta**, navicular fossa. **F. intercondyl'ica**, fossa on trochlea of thigh-bone to receive patella. **F. intercondyloï'dea**, fossa between condyles of femur. **F. interpeduncula'ris**, space between crura cerebri and mammillary tubercles. **F., ischiorec'tal**, perineal fossa. **F. jugula'ris**, jugular fossa; see *Suprasternal*. **F. lacryma'lis**, lacrymal fossa. **F. laryn'go-pharynge'a**, depression of mucous membrane at entrance to larynx. **F. lenticula'ris**, see *Hyaloid membrane*. **F. ligamen'ti veno'si**, fissure of ductus venosus. **F. longitudina'lis dex'tra ante'rior**, depression for gall-bladder on under surface of liver. **F. longitudina'lis dex'tra poste'rior**, fissure of vena cava. **F. longitudina'lis sinis'tra ante'rior**, umbilical fissure; see *Liver*. **F. longitudina'lis sinis'tra poste'rior**, fissure of ductus venosus. **F. mag'na mulie'bris**, vulva. **F. mag'na Syl'vii**, fissure of Sylvius. **F. Malgaign'ii**, superior carotid triangle of neck. **F. mandibula'ris**, glenoid fossa. **F. maxilla'ris**, canine fossa. **F., men'tal**, small depression on each side of the symphysis on the anterior surface of the body of the inferior maxilla, for the attachment of muscles. **F. Morgagn'ii**, F. navicularis urethræ. **F. myrtifor'mis**, depression in the superior maxillary bone just above the incisor teeth; see *Myrtiform*. **F. navicula'ris auric'ulæ**, F. of helix. **F. navicula'ris larynge'i**, F. laryngo-pharyngea. **F. navicula'ris ure'thræ**, perceptible dilatation of urethra near base of glans penis. **F. navicula'ris vul'væ**,

small depression between entrance of vagina and posterior commissure of labia majora or fourchette. **F., occip'ital**, see *Fossæ, occipital.* **F. olecra'nii**, olecranon. **F. orbicula'ris**, see *Crista vestibuli.* **F. ova'lis**, navicular fossa; see also *Crista vestibuli* and *Oval fossa.* **F. ova'rii**, depression on back wall of pelvis on which the ovary rests. **F. palati'na**, palate. **F. pararecta'lis**, peritoneal depression at side of rectum. **F. paravesica'lis**, peritoneal pouch on each side of the bladder. **F. patella'ris**, see *Hyaloid membrane.* **F. pedunculo'ris**, horizontal fissure of cerebellum. **F. perinæ'i**, perineal fossa. **F. pituita'ria**, sella turcica. **F. poplitæ'a**, popliteal fossa; hollow of ham; popliteal region. **F., por'tal**, see *Liver.* **F. poste'rior hu'meri**, olecranon fossa. **F. proces'sûs coronoï'dei**, coronoid fossa. **F., pter'ygoid**, see *Pterygoid.* **F. pter'ygo-maxilla'ris** or **F. palati'na**, spheno-maxillary fossa. **F. pu'bovesica'lis**, abdomino-vesical pouch. **F. rec'to-uteri'na**, recto-vaginal pouch. **F. rhomboï'dea** or **rhomboida'lis**, fourth ventricle. **F. Rolan'di**, furrow on upper surface of cerebral hemispheres separating parietal and frontal lobes. **F. of Rosenmüller**, depression or fossa in the pharyngeal wall, back of aperture of Eustachian tube. **F. rotun'da**, see *Crista vestibuli.* **F. sac'ci lacryma'lis**, lacrymal fossa. **F. sagitta'lis**, longitudinal fissure of liver. **F. scaphoï'des**, navicular fossa of helix. **F. sel'læ**, pituitary fossa. **F. semiluna'ris**, sigmoid fossa or cavity. **F. semiova'lis**, see *Crista vestibuli.* **F. sigmoï'dea**, broad deep groove on inner process of mastoid portion of temporal bone, supporting part of lateral sinus. **F. sphe'no-maxilla'ris**, see *Spheno-maxillary.* **F. subarcua'ta**, depression on posterior surface of temporal bone to lodge flocculus of cerebellum. **F. subinguina'lis**, Scarpa's triangle. **F., sublin'gual**, oval depression in inferior maxillary bone for lodging of sublingual gland. **F., submax'illary**, oblong depression on inferior maxillary bone for lodging submaxillary gland. **F., subor'bitar**, canine fossa. **F., subpyram'idal**, deep fossa under the pyramid and behind fenestra rotunda in middle ear. **F. subrotun'da**, see *Navicula, Crista vestibuli.* **F. subscapula'ris**, see *Scapula.* **F. sulcifor'mis**, see *Crista vestibuli.* **F. supraclavicula'ris**, supraclavicular space between trapezius and sterno-cleido-mastoid muscles; fossa between sternal and clavicular portions of sterno-mastoid muscle. **F. supracondyloï'dea**, fossa separating internal supracondylar tubercle from internal tuberosity of femur. **F. suprapatella'ris**, depression on anterior surface of femur above the trochlea. **F. suprasphenoïda'lis**, pituitary fossa. **F. supraspina'ta**, supraspinous fossa. **F. suprasterna'lis**, see *Suprasternal.* **F. supratrochlea'ris ante'rior**, coronoid fossa. **F. s. poste'rior**, olecranon fossa. **F. of Syl'vius**, fissure of Sylvius. **F. tempora'lis**, temporal fossa. **F. tonsilla'ris**, interval between pillars of fauces occupied by the tonsil. **F. trag'ica of con'cha**, excavation or fossa in front of the meatus auditorius externus, concealed by the tragus, and forming, as it were, the vestibule of the meatus. **F. transver'sa**, see *Liver.* **F. triangula'ris**, depression on front surface of arytenoid cartilage; fossa between crura of antihelix. **F. trique'tra**, navicular fossa. **F., trochanter'ic**, deep depression in the great trochanter of the femur for the attachment of the tendon of the obturator externus muscle. **F. trochlea'ris**, small depression in frontal bone for attachment of pulley of trochlearis. **F. tu'bæ Eusta'chii**, groove in petrous portion of temporal bone for cartilaginous portion of Eustachian tube. **F. umbilica'lis**, see *Liver.* **F. u'tero-recta'lis**, recto-uterine pouch. **F. u'tero-vesica'lis**, vesico-uterine pouch. **F. of ve'na ca'va**, fissure of vena cava. **F. vesi'cæ fel'leæ** or **vesica'lis**, F. cystidis felleæ. **F. ves'ico-recta'lis**, recto-vesical pouch. **F., zygomat'ic**, see *Zygomatic.*

Fos'sæ (pl. of **Fossa**) **cerebel'li.** Occipital fossæ, inferior. **F. cerebra'les**, *Cerebral fossæ;* fossæ or excavations at the base of the cranium. They are nine in number: three occupy the median line, and three are placed at each side; they are distinguished into *anterior, middle,* and *posterior.* **F., con'dyloid**, cavities posterior to condyles of occipital bone. **F. costa'les**, depressions on bodies of dorsal vertebræ for articulation with ribs. **F. cra'nii**, skull, fossæ of. **F. digita'les**, see *Impression.* **F., il'eo-cæ'cal**, see *Ileo-cæcal fossæ.* **F. na'rium**, nasal fossæ. **F., na'sal**, nasal fossæ. **F., occip'ital**, see *Occipital.* **F. of skull**, see *Skull, fossæ of.* **F. transversa'les**, depressions on transverse processes of dorsal vertebræ for attachment of ribs.

Fossette. A small fossa or depression.

Fos'sil wax. Ozokerite.

Fosso'rium (*fossor*, a digger). Fleam.

Fos'sula (dim. of **Fossa**, a ditch). Fovea. White spot or ulceration of the eye. **F. coch'leæ** or **cochlea'ris**, fovea cochleæ. **F. cor'neæ**, corneal ulcer. **F. fenes'træ ova'lis**, small fossa in inner tympanic wall, in which the oval window, fenestra ovalis, is situated. **F. f. rotun'dæ**, depression in promontory of tympanum containing fenestra rotunda. **F., infe'rior**, depression at lower part of internal auditory meatus. **F. menta'lis**, mental fossa. **F. petro'sa**, depression on base of temporal bone for petrosal ganglia of glosso-pharyngeal nerve. **F. sulcifor'mis**, depression leading to aqueduct of vestibule. **F., supe'rior**, depression at lower part of internal auditory meatus, having entrance to aqueduct of Fallopius. **F. trochlea'ris**, depression for attachment of pulley of superior oblique muscle of the eye on orbital surface of frontal bone. **F. ulna'ris**, sigmoid cavity of radius. **F. vestibula'ris infe'rior**, posterior part of fossula inferior.

Fos'sulæ (pl. of **Fossula**, small fossa) **costa'les.** Facets on the bodies of the dorsal vertebræ for articulation with the ribs. **F. olfacto'riæ**, foramina cribrosa. **F. vestibula'res superio'res**, small openings at bottom of internal auditory meatus for passage of vestibular nerve.

Foth'ergill's disease. Facial neuralgia. **F.'s face'ache**, facial neuralgia. **F.'s pills**, see *Pilulæ aloes et colocynthidis.* **F.'s sore throat**, see *Scarlatina.*

Fo'tus (*foveo*, to keep warm). Fomentation. **F. commu'nis**, decoctum papaveris.

Fouchard's disease. Alveolo-dental periostitis.

Foul in the foot. Foot rot; suppurative inflammation of certain portions of hoofs of cattle.

Foun'der. Inflammation of sensitive laminæ or layers of foot of the horse.

Foun'tain decussa'tion. Crossing of fibres of basal portion of crura cerebri under posterior longitudinal fasciculus.

Four o'clock. Mirabilis jalapa.

Fourchette (F.) (dim. of **Fourche**, a fork). Surgical instrument for raising and supporting the tongue during the operation of dividing the frænum. In anatomy, the posterior commissure of the labia majora. Ensiform cartilage, from being sometimes cleft like a fork. Semilunar notch at the superior or clavicular extremity of the sternum; interclavicular notch. Frog of horse's foot.

Fourth nerve. Trochlear nerve. **F. ven'tricle**, cavity situate at back of medulla oblongata and pons, in front of central portion of cerebellum; the superior angle of the ventricle communicates with the third ventricle; the lower angle with central canal of medulla oblongata and spinal cord.

Fou'sel oil. Fusel oil.

Fo'vea (dim. **Foveola**) (*fodio*, to dig). Slight depression. Pudendum muliebre; see *Vulva.* Fossa navicularis. Vapor bath for the lower extremities. **F. ante'rior**, depression at the upper part of fourth ventricle. **F. ante'rior ma'jor**, coronoid fossa. **F. ante'rior mi'nor**, depression on humerus for reception of radius. **F. articula'ris latera'lis**, part of cervical vertebra articulating with prominence of vertebra beneath it. **F. articula'ris transversa'lis**, facet for articulation of rib on the transverse process of dorsal vertebra. **F. as'pera**, depression on the body of the sphenoid bone, between the internal pterygoid and the vaginal processes. **F. axilla'ris**, axilla. **F. bur'sæ pharynge'æ**, occasional depression in front of pharyngeal tubercle on the basilar process of occipital bone. **F. cani'na**, canine fossa. **F. cap'itis fem'oris**, depression on the head of the femur for

insertion of the round ligament. **F. capit'uli ra'dii**, depression on the head of the radius for articulation with humerus. **F. cardi'aca**, hollow above ensiform process, opening over the septum transversum into the front part of alimentary canal of embryo. **F. carot'ica**, superficial depression near greater cornu of the hyoid. **F. carotide'a**, superior carotid triangle of the neck. **F. centra'lis laryn'gis**, depression on front wall of larynx in middle line. **F. centra'lis ret'inæ**, foramen centrale retinæ. **F. coch'leæ**, depression at lower part of internal auditory meatus. **F. coronoï'dea**, coronoid fossa. **F. cribro'sa infe'rior** and **poste'rior**, small openings at bottom of internal auditory meatus for passage of branches of auditory nerve. **F. crura'lis**, peritoneal depression over crural ring. **F. cu'biti**, triangular depression at bend of elbow. **F. digita'ta**, posterior cornu of lateral ventricle. **F. ellip'tica**, depression for reception of utricle on inner wall of vestibule. **F. glan'dulæ lacryma'lis**, depression on orbital plate of frontal bone for lacrymal gland. **F. glenoï'dea**, glenoid cavity. **F. hemiellip'tica**, F. elliptica. **F. hemisphæ'rica**, depression for saccule on inner wall of vestibule. **F. hyaloï'dea**, fossa patellaris. **F. ili'aca**, anterior portion of inner surface of ilium, for iliacus muscle. **F. infe'rior**, triangular depression at lower part of fourth ventricle. **F. inguina'lis**, see *Inguinal fossæ*. **F. interclavicula'ris**, concave surface of upper border of sternum, between points of attachment of clavicles. **F. interligamento'sa**, peritoneal depression or pouches formed by urachal folds; see *Inguinal fossæ*. **F. jugula'ris**, space above sternum between origins of sternomastoid muscle. **F. lacryma'lis**, F. glandulæ lacrymalis. **F. lam'inæ cartila'ginis cricoï'deæ**, depression for the crico-arytenoidei postici muscles on posterior surface of cricoid cartilage. **F. malle'oli latera'lis**, depression above the internal malleolus for attachment of the deltoid ligament. **F. maxilla'ris**, canine fossa. **F. navicula'ris**, dilatation of urethra within the glans. **F. nu'chæ**, triangular depression at back of neck, below the occipital bone. **F. oblon'ga**, the depression on the anterior surface of the arytenoid cartilages for insertion of the thyro-arytenoid muscle. **F. occip'ito-cervica'lis**, F. nuchæ. **F. oc'uli**, orbit. **F. olec'rani**, olecranon fossa. **F. orbita'lis poste'rior**, depression on the body of the sphenoid below the optic foramen. **F. ova'lis cor'dis**, depression on the septum auricularum of the heart, at situation of the foramen ovale of the fœtus. **F. ova'lis fas'ciæ la'tæ**, saphenous opening. **F. ova'lis vestib'uli**, F. elliptica. **F. palati'na**, depression on the back part of the hard palate, containing palatine glands. **F. patella'ris oc'uli**, fossa patellaris. **F. pharyn'gis**, depression in wall of pharynx; fossa of Rosenmüller. **F., posterior**, olecranon fossa; F., inferior. **F. retro-maxilla'ris**, fossa for parotid gland. **F. rotun'da** or **rotun'da vestib'uli**, F. hemisphærica. **F. semiellip'tica**, F. elliptica. **F. sulcifor'mis**, fossula sulciformis. **F., supe'rior**, F., anterior. **F. supratrochlea'ris ante'rior**, coronoid fossa. **F. supratrochlea'ris poste'rior**, olecranon fossa. **F. triangula'ris**, ventricle of Arantius. **F. trique'tra auric'ulæ**, fossa triangularis. **F. trochlea'ris**, depression on orbital surface of frontal bone for attachment of pulley of superior oblique muscle. **F. tym'pani**, tympanum; in embryonic life, a depression in the petrous bone. **F. vestib'uli infe'rior**, posterior part of fossula inferior.

Fo'veæ (pl. of **Fovea**) **articula'res.** Facets on the bodies of the vertebræ at point of articulation with the ribs. **F. glandula'res**, depressions on the interior of the skull, corresponding to the glandulæ Pacchioni.

Fove'ola (small pit) **cap'itis.** Dark red spot in centre of fovea capitis; anterior fontanelle. **F. cap'itis fem'oris**, fovea capitis femoris. **F. coccyge'a**, small fistula-like pit just back of the anus. **F. radia'lis**, depression between extensors of thumb, in which is the radial artery. **F. ret'inæ**, foramen centrale retinæ. **F. retro-ana'lis**, foramen cæcum retro-anale; Fovea coccygea. **F. triangula'ris**, triangular space or depression between columns of fornix. **F. ventric'uli quar'ti**, fourth ventricle.

Fove'olæ of bone, F. Howshipia'næ. Small depressions made by osteoclasts of Kölliker. **F. ethmoïda'les**, ethmoid cells. **F. of kid'ney, F. papilla'rum renal'ium**, pits at extremity of renal papillæ into which tubuli uriniferi empty.

Fove'olate. Having a small depression or depressions.

Fowl chol'era. Affection of fowls caused by a microorganism, and attended with debility and choleraic symptoms. See *Bacillus choleræ gallinaceæ*.

Fow'ler's solu'tion. Liquor potassii arsenitis.

Fox'berry. Arbutus uva ursi.

Fox'glove. Digitalis.

Fox'tail. Lycopodium clavatum; emeto-cathartic.

Foy'er (F.). Focus; chief seat of disease.

Fractu'ra. Fracture. **F. assula'ris** or **commuti'va**, comminuted fracture. **F. complica'ta**, complicated fracture. **F. den'tis**, fracture of a tooth. **F. imperfec'ta**, incomplete fracture. **F. mul'tiplex**, multiple fracture. **F. partia'lis**, incomplete fracture. **F. penetrati'va** or **per'forans**, perforating fracture; see *Fracture, buttonhole*. **F. sim'ple**, see *Fracture*. **F. surcula'ria**, fracture, greenstick.

Frac'ture. Solution of continuity in a bone. Simple fracture is when the bone only is divided; compound fracture is a division of the bone with a wound of the integuments communicating with it, the bone, indeed, generally protruding. In comminuted fracture the bone is broken into several pieces; and in complicated fracture there is, in addition to the injury of the bone, a lesion of some considerable vessel, nerve-trunk, etc. In impacted fracture one end of the bone is driven into another. Fractures are termed transverse, oblique, etc. according to their direction. The treatment of fractures consists, in general, in reducing the fragments when displaced, maintaining them when reduced, preventing the symptoms which may be likely to arise, and combating them when they occur. Reduction of fractures must be effected by extension, counter-extension, and coaptation. The parts are kept in apposition by position, rest, and an appropriate apparatus. **F., Bar'ton's**, see *F. of radius*. **F., bent**, F., greenstick. **F., but'tonhole**, perforating fracture; incomplete fracture from a sabre blow or gunshot wound, in which a piece is fairly punched out from a bone. **F., cam'erated**, camerosis. **F., cap'illary**, F., linear. **F., Colles's**, fracture of lower end of radius, transverse or oblique, with displacement of lower fragment backward. **F., com'minuted**, see *Fracture*. **F., com'plicated**, see *Fracture*. **F., com'posite**, F., multiple. **F., com'pound**, see *Fracture*. **F., cu'neated** or **cu'neiform**, V-shaped or wedge-shaped fracture at articular extremity of the bone. **F., depressed**, fracture in which a fragment is depressed below the natural surface. **F., direct**, fracture occurring directly at point of injury. **F., Dupuytren's**, fracture of inferior extremity of fibula, the foot being dislocated outward and backward. **F., epiphyse'al**, diastasis. **F., extracap'sular**, F. of neck of humerus or femur outside the capsular ligament. **F., fis'sured**, F., linear. **F., Gosselin's**, wedge-shaped fracture of inferior extremity of tibia extending into the ankle-joint. **F., green'stick**, incomplete fracture of long bone in childhood, in which the central earthy part may be broken, while the surrounding membranous part retains its continuity; the bone being only bent, not separated. **F., hair**, F., linear. **F., hick'ory-stick**, F., greenstick. **F., impact'ed**, fracture in which the extremity of one fractured bone is driven tightly into the other. **F., incomplete'**, form of fracture in which the bone is not broken completely across. **F., indirect**, F. occurring at a distance more or less remote from application of force producing the injury. **F., intraartic'ular**, F. involving a joint. **F., intracap'sular**, F. of neck of humerus or femur within the capsular ligament. **F., intra-u'terine**, F. of some part of the fœtus. **F. lin'ear**, F. in a direct line, without apparent displacement of fragments of the bone. **F., longitu'dinal**, F. on the long axis of a bone. **F., mul'tiple**, F. of a bone in different places, or of several

bones in one place or more. **F., oblique,** see *Fracture.* **F., open,** F., compound. **F., par'tial,** F., incomplete. **F., pen'etrating** or **per'forated,** F. with perforation, as by a bullet or other missile; F., buttonhole. **F., per'forating,** F., buttonhole. **F., Pott's,** fracture of the fibula with displacement of the tibia, the foot being turned outward. **F. of the ra'dius, Bar'ton's,** *Barton's fracture;* fracture of the lower extremity of the radius, commencing at the articular surface and extending upward for an inch or more, to terminate on the dorsal aspect. Owing to the extensor muscles drawing up the separated portion of the bone, and with it the carpus, a deformity results often confounded with dislocation. It was first well described by Dr. John Rhea Barton of Philadelphia. **F. of the ra'dius, Col'les's,** Colles's fracture; fracture of the radius about an inch and a half above the radiocarpal articulation, well described by Prof. Colles of Dublin. **F., Sal'iswitch,** longitudinal fracture or splitting of the bone of the arm. **F., sec'ondary,** F. following some other lesion of the bone. **F., sil'ver-fork,** F. of radius, Colles's. **F., sim'ple,** see *Fracture.* **F., spi'ral,** twisted f. of long bone. **F., splint'ered,** F., comminuted; splintering of bone without fracture of the body of the bone. **F., sponta'neous,** F. from slight injury, the bone being already diseased. **F., stel'late,** star-like fracture of a bone. **F., subcuta'neous,** simple fracture that has no communication with the exterior of the body. **F., tor'sion,** F., spiral. **F., trans'verse,** see *Fracture.* **F., V-shaped or wedge-shaped,** F. usually at articular extremity of long bone, having shape implied in its name, but not necessarily involving the joint.

Frac'ture-box. Box for retaining a fractured limb in position.

Fræ'na (pl. of **Frænum**) **Morgagn'ii.** F. of the valve of Bauhin. **F. of the valve of Bau'hin,** name given by Morgagni to the projecting lines formed by the junction of the extremities of the two lips of the ileocœcal valve, *fræna* or *retinacula Morgagnii.*

Fræn'ula (pl. of **Frænulum**) **a'ry-epiglot'tica.** Aryteno-epiglottic folds. **F. glosso-epiglot'tica,** glosso-epiglottic folds. **F. labio'rum,** frænum labiorum. **F. lin'gulæ,** processes associating lingula of cerebellum with lateral hemispheres. **F. of lips,** frænum labiorum. **F. val'vulæ co'li,** fræna of valve of Bauhin.

Fræ'nulum (dim. of **Frænum**). See *Frænum* and *Bridle.* **F. cer'ebri,** F. veli medullaris anterioris. **F. clitor'idis,** frænum clitoridis. **F. epiglot'tidis,** glosso-epiglottic ligament. **F. glan'dis,** frænum penis. **F. labio'rum,** fourchette. **F. lin'guæ,** frænum linguæ. **F. lin'guæ posterio'ris** or **poste'rius,** glosso-epiglottic ligament. **F. lin'gulæ,** F. veli medullaris anterioris. **F. no'vum,** tænia semicircularis. **F. præpu'tii,** frænum penis. **F. puden'di,** fourchette. **F. of valve of Vieus'sens,** F. veli medullaris anterioris. **F. ve'li medulla'ris anterio'ris,** narrow slip given off by the commissure of the encephalic testes, which strengthens the junction of the testes with the valve of Vieussens. **F. vul'væ,** fourchette.

Fræ'num. A bridle; membranous folds which bridle and retain various organs. **F. clitor'idis,** slight duplicature formed by the union of the internal portions of the upper extremity of the nymphæ. **F. epiglot'tidis,** glosso-epiglottic ligament. **F. glan'dis,** F. penis. **F. labio'rum,** there are two of these, one for the upper, the other for the lower lip, uniting these parts to the maxillary bone; they are formed by the mucous membrane of the mouth. Fourchette. **F. lin'guæ,** triangular reflection formed by the mucous membrane of the mouth, and situate between the inferior paries of that cavity and the inferior surface of the tongue. When the frænum extends as far as the extremity of the tongue, it cramps its movements, interferes with sucking, etc.—an inconvenience remedied by carefully snipping it with scissors. **F. pe'nis,** membranous reflection which fixes the prepuce to the lower part of the glans. When too short it prevents the prepuce from sliding over the glans. **F. præpu'tii,** F. penis.

Fragaria, frag-ah're-ah (*fragro,* to smell sweetly). *Strawberry,* ord. Rosaceæ. Fruit is agreeable and wholesome, and the roots have been esteemed tonic and slightly diuretic. **F. anseri'na,** Potentilla anserina. **F. In'dica,** indigenous plant, root and leaves of which are astringent and diuretic. **F. pentaphyl'lum,** Potentilla reptans. **F. tormentil'la officina'lis,** tormentilla. **F. ves'ca** or **vulga'ris,** wood or English strawberry; rhizome is diuretic. **F. Virginia'na,** *Wild strawberry;* indigenous plant with astringent leaves.

Fragilitas, fraj-il'it-as (*fragilis,* brittle). Fragility, brittleness. State of being easily broken or torn. **F. crin'ium,** brittleness of the hair. **F. os'sium,** brittleness of the bones, friability of the bones; extreme facility with which bones break in certain diseases of the osseous texture, owing to a deficiency of the animal matter.

Fragility, fraj-il'it-e. See *Fragilitas.*

Frag'ment (*frango,* to break). Portion of a fractured bone.

Fragmentation, frag-men-ta'shun. Division into fragments; referring to cell or nuclear division or disintegration.

Frag'um. Fruit of fragaria or strawberry.

Frambœ'sia or **Frambe'sia.** Hard papillary growth, as in lupus, syphilis, sycosis, etc.; yaws, epian, pian. Disease of the Antilles and of Africa, characterized by tumors, of a contagious character, resembling strawberries, raspberries, or champignons; ulcerating and accompanied by emaciation. **F. America'na** or **Guineen'sis,** yaws; see *Frambœsia.* **F. Illyr'ica,** scherlievo. **F. non-syphilit'ica,** variety of frambœsia on back of head and neck, met with in some parts of Europe. **F. Sco'tica,** sibbens. **F. syphilit'ica,** pemphigus foliaceus vegetans. **F. trop'ica,** endemic form of frambœsia occurring in tropical regions.

Franciscea or **Franciscia unifiora,** fran-sis'se-ah u-ni-flo'rah. Manaca, of Brazil; bark is diuretic, purgative, emmenagogue, antispyhilitic; employed also in chronic rheumatism. A powerful alkaloid derived from its root is called *Francisceine.*

Francoa appendiculata, fran'ko-ah ap-pen-dik-u-lat'ah. Plant of Chili, the juice of which is astringent, and applied to hemorrhoids, as is also the juice of **F. sonchifo'lia,** which has the same habitat.

Frangula, fran'gu-lah (*frango,* to break). Bark of Rhamnus frangula. **F. al'nus,** Rhamnus frangula. **F. Califor'nica,** Rhamnus Californica. **F. Carolinia'na,** Rhamnus Caroliniana. **F. Purshia'na,** Rhamnus Purshiana. **F. vulga'ris,** Rhamnus frangula.

Frangulin, fran'gu-lin. $C_{20}H_{20}O_{10}$. Glucoside from the bark of Rhamnus frangula; purgative.

Frankenia grandiflora, frank-en'e-ah grand-e-flo'rah. Yerba rheuma. California herb, astringent and aromatic. Used externally for injections in catarrhal and other conditions of external organs.

Frank'fort agree'ment. General understanding as to the methods of measuring skulls made at Frankfort Congress of Anthropology in 1882. **F. green,** arsenite of copper. **F. plane,** cranial plane formed by lines projected from the upper border of the external opening of the external auditory meatus to the lower border of the orbit. **F. pro'file line,** line drawn through intersuperciliary point (point where the line drawn between the middle of the superciliary arches crosses the median line) and the alveolar point (centre of the anterior border of the upper alveolar arch).

Frankincense (frank'in-sense), **Af'rican** or **Ara'bian.** Daniellia thurifera. **F., com'mon,** see *Pinus abies.* **F. tree,** Daniellia thurifera. **F., true,** Juniperus lycia; olibanum.

Franklinism, frank'lin-izm. Static electricity.

Frankliniza'tion. Therapeutic employment of Franklinism or static electricity.

Frasera, fra-ze'rah (after John Fraser, a botanical collector). American calumba; F. Walteri. **F. Carolinen'sis,** see *Calumba.* **F. officina'lis,** see *Calumba.* **F. verticilla'ta,** American calumba. **F. Walteri,** see *Calumba.*

Fra'ter uteri'nus (uterine brother). Twin brother in the uterus.

Frater'nitas or **Fratratio**, frat-rah'she-o (*frater*, brother). Consanguinity of parts in health or disease.

Frax'in. Glucoside from Fraxinus excelsior and Æsculus; bitter.

Fraxinel'la (dim. of **Fraxinus**) **al'ba, F. dictam'nus, F. pu'mila, F., white,** Dictamnus albus.

Fraxinin, fraks'in-in. Bitter principle ($C_{42}H_{28}O_{27}$) from the bark of Fraxinus excelsior.

Frax'inite. Extract from the leaves of Fraxinus excelsior; purgative.

Frax'inus acumina'ta or **F. America'na.** White ash. Bitter and astringent bark has been used as antiperiodic and in dysmenorrhœa. **F. apet'ala, F. au'rea, F. cris'pa, F. Europæ'a, F. excel'sa,** F. excelsior. **F. excel'sior,** systematic name of the European ash tree. The fresh bark has a moderately strong, bitterish taste, and has been said to be a resolvent, diuretic, and antiperiodic. It has been given in intermittents and in gout and rheumatism, and as an antidote to serpent-bites. The seeds, called bird's tongue, are diuretic. The acid of the wood is diaphoretic. **F. florif'era,** F. ornus. **F. juglandifo'lia,** green ash of N. America; bark and fruit are diuretic and antisyphilitic. **F. Macedo'nica,** F. excelsior. **F. or'nus,** flowering or manna ash. Systematic name of the trees whence manna flows. In Sicily F. rotundifolia and F. excelsior are also regularly cultivated for the purpose of procuring manna, their condensed juice. Manna is inodorous, sweetish, and very slightly bitter; in friable, whitish, or pale yellow flakes, soluble in water and alcohol. It is laxative, and a purgative for children, who take it readily on account of its sweetness. The dose is ℥ss to ℥ij. Its immediate principle is mannite or mannin; used as a substitute for manna. **F. panicula'ta,** F. ornus. **F. quadrangula'ta,** blue ash, indigenous, ord. Oleaceæ. **F. rotundifo'lia,** F. ornus. **F. sambucifo'lia,** black or water ash, of U. States and Canada; tonic and astringent. **F. vir'idis,** F. juglandifolia.

Freck'le. Eruption of lentigo. **F. moth,** chloasma. **F., sun,** lentigo.

Fremissement (F.) fra-mece'mong. Fremitus, thrill, tremor, purr, vibration.

Fremitus, frem'it-us (*fremo*, to murmur). Vibration; thrill, as that conveyed by voice, friction, etc., to listener or percussor over the chest. **F., aneurys'mal,** aneurysmal thrill. **F., bronch'ial,** sound of bronchial râle heard through the wall of the chest. **F., cav'ernous,** sound of vibration of fluid in cavity of lungs heard upon auscultation of chest. **F., endocar'dial,** thrill of interior of heart heard on auscultation. **F. feli'nus,** purring thrill or tremor felt by hand placed over præcordial region during ossification or contraction of auriculo-ventricular openings. **F., fric'tion,** thrill perceptible to the hands in many cases of pleurisy, when the surfaces have become roughened from deposition, as well as in rare cases of pericarditis. In the former case it is called the pleural, in the latter the pericardial friction fremitus. **F., hydat'id,** thrill noticed in percussion over hydatid tumors. **F., pec'toral,** pectoral or tactile vibration; obscure diffused resonance of the voice felt when the hand is applied to the chest. **F., pericar'dial,** see *F., friction.* **F., pleu'ral,** friction sound of the pleura heard on auscultation; see *F., friction.* **F., res'piratory,** sound heard on auscultation of the air-passages, caused by contraction of calibre or other causes. **F., rhonch'al** or **rhonch'ial,** sound caused by the vibration of the bronchial tubes, appreciable on the surface of the chest, from sibilant, sonorous, and mucous rhonchi. **F., vo'cal,** thrill felt by the hand placed over the chest, modified by the greater or less elasticity of the air-cells and tissue of the lungs, and other causes; the fremitus being lessened after pleurisy, and augmented when the pulmonary tissue is thickened, as in pneumonia. F., pectoral.

Fre'na (pl. of **Frenum**). See *Fræna* and *Alveolus.*

F. of ileo-cæ'cal valve, fræna of valve of Bauhin. **F. of lips,** frænum labiorum. **F. Morgag'nii,** fræna of valve of Bauhin.

Frena'tor mus'cle. Muscle moving head of atlas and axis. **F. nerve,** inhibitory nerve.

French ber'ries. Fruit of rhamnus infectorius, of S. Europe. **F. chalk,** talc. **F. crust,** syphilis. **F. distem'per,** syphilis. **F. lactuca'rium,** thridace. **F. lav'ender,** lavandula stœchas. **F. let'ter,** condom. **F. mar'igold,** Tagetes erecta, T. patula. **F. nut,** Juglans regia. **F. pox,** syphilis. **F. rhu'barb,** root of Rheum rhaponticum; used as a laxative in veterinary medicine.

Fren'ga. See *Scherlievo.*

Frenula, fren'u-lah. Frænula.

Fren'ulum or **Fre'num.** Frænulum.

Frenzy, fren'ze. Phrenitis. See *Mania.*

Fret. Chafing; intertrigo; tetter; herpes.

Fret'ting. Chafing; tormina.

Fre'tum Hal'leri. Constricted portion of heart of fœtus between ventricle and bulb of aorta. **F. o'ris,** isthmus of fauces.

Freund's opera'tion. Operation devised for total extirpation of the uterus through the abdominal walls.

Freziera theoïdes, frez-e-a'rah tha-o-e'dees. W. Indian plant, leaves of which are astringent.

Friable, fri'a-b'l. Easily crushed or broken.

Fri'ar's bal'sam. Tinctura benzoini composita. **F.'s caps,** Aconitum napellus. **F.'s el'bow,** Thevetia iccotli.

Fricatio, frik-ash'e-o (*frico*, to rub). Friction.

Frica'tor (*frico*, to rub). See *Shampooing.* One who practises massage. Masturbator.

Fricato'rium. Liniment.

Fricatrix, frik-at'riks. Female who practises massage. Female who acts as a male with another female.

Fricke's episior'rhaphy. Denudation of both labia majora and union by sutures for cure of prolapse of the vagina and uterus, and for the restoration of the vaginal sphincter apparatus.

Frictio, frik'she-o. Friction. **F. hu'mida,** moist friction. **F. sic'ca,** dry friction.

Fric'tion. Action of rubbing—as of a part of the surface of the body—more or less forcibly to excite action of the skin, with the hands, a brush, flannel, etc., *dry friction* or rubbing; or with ointments, liniments, tinctures, etc., *moist friction* or rubbing. **F. frem'itus,** see *Fremitus.* **F. sound,** rubbing sound, as of inflamed serous membranes against one another, such as the pleura, pericardium, peritoneum, etc.

Fric'tional electric'ity. Static electricity.

Fric'trix. Female who practises massage; female who acts as a male with another female.

Fric'tum. Liniment.

Friedreich's (freed'reich's) **disease.** Hereditary locomotor ataxia. **F.'s sign,** symptom occurring in adhesive pericarditis, characterized by collapse of the cervical veins during diastole.

Frigefacientia, frig-e-fas-e-en'she-ah (*frigus*, cold, *facio*, to make). Refrigerants.

Fright, precor'dial. Intense feeling of anxiety over the precordial region, dependent on disorder of pneumogastric nerve and sympathetic system.

Frigid, frij'id (*frigeo*, to be cold). Cold; not easily moved to sexual desire; impotent.

Frigidarium, frij-id-ar'e-um. Cold bath or cold apartment of a bath.

Frigidity, frij-id'it-e. Sensation of cold; impotence and sterility.

Frigidus, frij'id-us. Frigid.

Frigorific, frig-or-if'ik (*frigus*, cold, *fio*, to become). That which has the power of producing cold. The effects of frigorific mixtures are owing to the rapid absorption of heat when solids pass into the liquid state. They are made by the addition of various substances to snow or pounded ice, such as sodium chloride, ammonium chloride, potassium nitrate, ammonium nitrate, calcium chloride, mineral acids, etc., or by the rapid solution of various salts, without the

use of snow or ice. The salts must be finely powdered and dry.

Frigus, frig'us. Cold; chill. **F. feb'rium,** chill of fever. **F. ten'ue,** slight chill.

Fringe flow'er or tree. Chionanthus Virginica; indigenous; bark is cathartic and diuretic. **F., Haver'sian or syno'vial,** vascular fringe passing from synovial membranes into an articular cavity.

Fringed. Laciniated; fimbriated.

Fritch's disease. Colporrhaphy of posterior wall of vagina.

Fritillaria (frit-il-lar'e-ah) **corona'ria or imperia'lis.** Crown imperial of Persia; nectar of flower is emetic. Alkaloid obtained from it is called *Imperialine.* **F. melea'gris,** checkered daffodil; has same properties as F. coronaria.

Frog lil'y. Nuphar advena.

Frog'face. Appearance of nose and face resembling that of a frog, a result of some forms of nasal polypus.

Frog'flower. Ranunculus.

Frog'leaf. Brasenia hydropeltis.

Frog'tongue. Ranula.

Frog'wart. Orchis mascula and other species of orchis; Ranunculus hederaceus.

Frons. Front; forehead.

Front. Anterior part, as of a body or organ. Forehead, brow; part of the visage extending from one temple to the other, and comprised in a vertical direction between the roots of the hair and the superciliary ridges.

Fron'tal. Relating or belonging to the front, forehead, or frontal bone. **F. an'gle,** angle formed between horizontal plane and plane of direction of forehead. Angle formed by lines projected from middle point of upper edge of external auditory meatus to glabella and bregma. Angle formed by lines projected from metopion to bregma and nasion. Anterosuperior angle of parietal bone. **F. arc,** arc on exterior of cranium between bregma and nasion. **F. a'rea,** region in cranium extending from supraorbital arch to coronal suture. **F. ar'tery,** this is given off by the ophthalmic, itself a branch of the internal carotid. It makes its exit from the skull at the upper part of the base of the orbit, and ascends the forehead between the bone and the orbicularis palpebrarum, dividing into three or four branches distributed to neighboring muscles. Branches of the cerebral arteries to supply the frontal lobe are also called *frontal arteries.* **F. ar'tery, exter'nal,** supraorbital artery. **F. bone,** double bone in the fœtus, single in the adult, situate at the base of the cranium and at the superior part of the face. It forms the vault of the orbit; it lodges the ethmoid bone in a notch at its middle part, and is articulated, besides, with the sphenoid, parietal, nasal, lacrymal, superior maxillary, and malar bones. **F. cells,** ethmoidal cells completed by union with portion of frontal bone. **F. convolu'tions,** convolutions of frontal lobe of cerebral hemispheres; they are the superior, middle, and inferior, or first, second, and third frontal convolutions. **F. crest,** ridge on internal surface of os frontis for attachment of falx cerebri. **F. diam'eters,** diameters of frontal region. **F. em'inence,** prominent part of forehead, indicating seat of embryonic formation of os frontis; F. protuberance. **F. flex'ure,** bend between metencephalon and myencephalon in embryonic life. **F. font'anelle,** anterior fontanelle. **F. fur'row,** groove extending upward from the frontal spine, and becoming gradually larger in its course, to lodge the upper part of the superior longitudinal sinus and to give attachment to the falx cerebri. **F. gy'ri,** F. convolutions. **F. in'dex,** proportion between maximum and minimum frontal diameters, taking the maximum at 100; or between maximum transverse diameter and minimum frontal, taking the former at 100. **F. lobe,** anterior and superior part of the cerebral hemispheres. **F. mus'cle,** anterior portion of occipito-frontalis muscle. **F. nerve,** this is the greatest of the three branches of the ophthalmic nerve—the first division of the fifth pair. It proceeds along the superior paries of the orbit, and divides into two branches; the one, *internal,* making its exit from the orbitar fossa, passing beneath the pulley of the oblique muscle; the other, *external,* issuing from the same cavity by the foramen orbitarium superius. **F. nerve, exter'nal,** supraorbital nerve. **F. nerve, inter'nal,** supratrochlear nerve. **F. pro'cess,** superior angle of malar bone. Occasional prolongation of temporal to frontal bone. **F. protu'berance,** protuberance of the frontal bone above the superciliary arch; F. eminence. **F. semicir'cular canal,** superior semicircular canal of labyrinth. **F. si'nuses,** two deep cavities in the substance of the frontal bone, separated from each other by a median septum, and opening below into the anterior cells of the ethmoid bone. **F. spine,** situate in the middle of the under part of the bone, and formed by the coalescence of the inner tables for the attachment of the falx cerebri. **F. sul'ci,** furrows or sulci on superior surface of frontal cerebral lobe; see *Frontal furrow.* **F. su'ture,** vertical suture between two halves of frontal bone in fœtal life. **F. tract,** fibres from frontal lobe on middle part of the crusta. **F. tri'angle,** triangle having its apex at metopion (point of crossing of intertuberal and median lines) and its base at the superior facial diameter (that measured between external extremities of fronto-malar sutures). **F. tuberos'ity,** frontal protuberance. **F. vein,** vein from cranial plexus terminating in the angular vein. **F. ver'tebra,** in embryonic life, combination of presphenoid bone, orbito-sphenoid bones, and frontal bone.

Frontale, fron-tal'e. Medicine applied to the forehead; frontal bone.

Fronta'lis. Surgeons have given this name to a bandage or topical application to the forehead. **F. mus'cle,** frontal muscle. **F. et occipita'lis,** occipitofrontalis.

Fron'to-alve'olar in'dex. Relation of extreme width of alveolar arch of superior maxillary bone to smallest frontal diameter, which is taken at 100.

Fronto-ante'rior. Occipito-posterior; position of fœtal head during labor in which the forehead presents at entrance to pelvis.

Fronto-cerebel'lar fi'bres. Frontal tract of anteroinferior portion of crura cerebri.

Fronto-cot'yloid. Relating to the forehead and acetabulum, as f.-c. presentation.

Frontodym'ia. See *Cephalodymia* and *Cephalopagus.*

Fronto-ethmoid'al fora'men. Cæcum foramen (of frontal bone).

Fronto-glabel'lar an'gle. Relation of prominence of frontal protuberance and glabella.

Fronto-go'nial in'dex. Relation of inferior facial and smallest frontal diameters, latter being taken at 100.

Fronto-lac'rymal. Relating to forehead and lacrymal bone.

Fronto-lat'eral sul'cus. Oblique sulcus passing in front of anterior extremity of inferior frontal furrow.

Fronto-ma'lar diam'eter, or'bital. Space between opposite external orbital points. **F.-m. in'dex,** relation of smallest frontal diameter to diameter between malar points, latter being taken at 100. **F.-m. su'ture,** suture between frontal and malar bones.

Fronto-mar'ginal sul'cus. Furrow on superior surface of cerebral hemispheres, being apparently the prolongation obliquely of the superior frontal furrow.

Fronto-max'illary in'dex. Ratio of middle anterior facial diameter to smallest frontal diameter, taking latter at 100.

Fronto-men'tal diam'eter. Space between frontal tuberosity and mental point.

Fronto-na'sal mus'cle. Pyramidalis nasi. **F.-n. nerve,** supratrochlear nerve.

Fronto-na'so-max'illary. Relating to frontal, nasal, and maxillary bones.

Fronto-nu'chal. Relating to forehead and nucha.

Fronto-or'bital. Relating to forehead and orbit.

Fronto-pari'etal in'dex. Frontal index. **F.-p. su'ture,** coronal suture.

Fronto-sphenoid'al. Relating to frontal and sphenoid bones.

Fronto-tem'poral. Relating to frontal and temporal bones.

Fronto-zygomat'ic in'dex. Ratio of superior frontal diameter to maximum width between zygomatic arches.

Frost'bite. Effect of extreme cold on the skin or other part of the body, such as dermatitis and gangrene. See *Congelation.*

Frost'grapes. Vitis cordifolia.

Frost'plant. Helianthemum Canadense.

Frost'weed. Erigeron Philadelphicum, Helianthemum Canadense.

Frost'wort. Helianthemum Canadense.

Froth'y. Epithet given to the fæces or sputa when mixed with air.

Fructification, fruk-tif-ik-a'shun (*fructus, facio,* to make). Fecundation or reproduction in the animal.

Fructus, fruk'tus. Fruit. **F. anacar'dii,** cashew nut. **F. ane'thi,** dill fruit. **F. ani'si vulga'ris,** anise. **F. a'pii,** celery seed. **F. auran'tii,** bitter orange. **F. auran'tii dul'cis,** sweet orange. **F. ave'næ,** oats. **F. ave'næ excortica'tus,** groats. **F. be'læ,** bael fruit. **F. can'nabis,** hempseed. **F. cap'sici,** capsicum. **F. cardamo'mi,** cardamom. **F. ca'ricæ,** fig. **F. car'ui,** caraway. **F. cas'siæ,** cassia fistula. **F. chenopo'dii anthelmin'tici,** chenopodium. **F. cit'ri,** lemon. **F. coc'culi,** cocculus indicus. **F. colocyn'thidis,** colocynth. **F. coni'i,** fruit of Conium maculatum. **F. corian'dri,** coriander. **F. cube'bæ,** cubeb. **F. cydo'niæ,** quince. **F. cymi'ni,** cumin. **F. dau'ci,** carrot fruit. **F. fœnic'uli,** fennel. **F. fœnic'uli aquat'ici,** phellandrium. **F. horæ'i,** fruit (summer); see *Fructus.* **F. immatu'rus,** abortion. **F. junip'eri,** juniper. **F. lau'ri,** laurel fruit. **F. lu'puli,** hops. **F. papav'eris,** capsules of poppy. **F. petroseli'ni,** parsley fruit. **F. rham'ni cathar'ticæ,** buckthorn berries. **F. sambu'ci,** fruit of Sambucus nigra. **F. trit'ici,** wheat.

Frugivorus, fru-giv'or-us (*fruges,* fruits, *voro,* to eat). One that eats fruits.

Fruit (*fruor,* to enjoy). In botany, the seed with its enclosing pericarp. In the ordinary acceptation, eatable seed-cases generally, such as require no preparation to render them fit for food. The cerealia afford highly nutritious fruits; summer fruits (fructus horæi), including strawberries, cherries, currants, raspberries, figs, grapes, etc., are refrigerant and grateful, but afford little nourishment. Also the fœtus while contained in the womb of the mother.

Fruitillaria Thunbergii, frute-il-lar'e-ah thunbur'je-e. *Bai-mo.* Corm of this plant is employed in China for rheumatism and painful joint affections, and in Japan for cure of ulcers.

Fruit-sugar. Glucose.

Fru'men. Pharynx; œsophagus.

Fru'ment (*frumentum,* wheat or grain). Pottage made of wheat; food made of wheat boiled in milk.

Frumen'tum. Any kind of grain from which bread is made, especially wheat; triticum. **F. cornicula'tum,** ergot; Triticum durum. **F. cornu'tum,** ergot. **F. In'dicum,** Zea mays. **F. luxu'rians,** ergot. **F. Saracen'icum,** buckwheat. **F. temulen'tum,** ergot. **F. Tur'cicum,** Zea mays. **F. tur'gidum,** ergot.

Frumen'ty. Frument.

Fuchsine, fu'seen. *Rosëin, Aniline red, Eosin, Magenta.* Monohydrochlorate of rosaniline; reputed to be of value in the treatment of albuminuria in doses of gr. ½ to gr. iv; must be given with caution, as it sometimes contains arsenic. Employed in solution as a stain for microscopical sections, imparting an intense red hue to solutions; used also as a corrector of color-blindness; in large doses it is emeto-cathartic.

Fucus, fu'kus (*phukos,* seaweed). F. vesiculosus; paint. **F. amyla'ceus,** edible or Ceylon moss, marine moss; nat. ord. Algæ. It was introduced into England from India; is white, filiform, and fibrous, and has the usual odor of seaweeds; medical properties are similar to those of Irish moss. **F., blad'der,** F. vesiculosus. **F. carragheen',** Chondrus crispus. **F. crisp'us,** chondrus (Ph. U. S.), Irish pearl, carrageen, carragaheen, or corrigeen moss. This fucus is found on the coasts of England, Ireland, Western France, Spain, and Portugal, and as far as the tropics; is also a native of the United States. In Ireland it is used by the poor as an article of diet. As met with in America, it is light yellow, and resembles plates of horn, crisped and translucent. An agreeable jelly is obtained from it by boiling it in water or milk, which forms a good article of diet for consumptives. Its properties are exactly like those of the Iceland moss. **F. digita'tus,** Laminaria digitata. **F. edu'lis,** F. amylaceus. **F. helminthocor'ton,** Corallina Corsicana. **F. Hiber'nicus,** Chondrus crispus. **F. infla'tus,** F. vesiculosus. **F. Irlan'dicus,** F. crispus. **F. lichenoi'des,** F. amylaceus. **F. mari'nus,** F. vesiculosus. **F. na'tans,** gulf-weed. **F. palma'tus,** Halymenia palmatus. **F., sac'charine,** Rhodomela palmata. **F. serra'tus,** serrated wrack; cut-leaf; crabby ore. It contains iodine, and is therefore used for scrofulous swellings. **F. spira'lis,** F. vesiculosus. **F. vesicula'ris,** F. vesiculosus. **F. vesiculo'sus,** *Bladder fucus, Sea oak, Sea wrack, Yellow bladder wrack, Kelpware, Black tang, Cut weed,* of Europe and America. Useful assistant to sea-water in the cure of disorders of the glands, and has been said to be efficacious in obesity. When the wrack, in fruit, is dried, cleaned, exposed to a red heat in a crucible with a perforated lid, and reduced to powder, it forms æthiops vegetabilis, pulvis quercus marinæ, used like the burnt sponge in bronchocele and other scrofulous swellings. Its efficacy depends on the iodine it contains.

Fugacious, fu-ga'shus (*fugio,* to fly). Epithet for symptoms, as redness, swelling, etc., which appear and disappear almost immediately afterward; ephemeral.

Fu'gax. Fugacious.

Fuge (*fugo,* to expel). "An expeller;" common suffix having such a signification; hence febri*fuge,* vermi*fuge,* etc., agents that drive away fever, expel worms, etc.

Fugile (fu'jil-e) or **Fugilla,** fu-jil'lah. Cerumen of the ear; nebulous suspension in, or deposition from, the urine; abscess near the ear; abscess in general.

Ful'gurant or **Fulgurating,** ful'gur-a-ting. Resembling a flash of lightning in suddenness, as pains of progressive locomotor ataxia.

Fulgura'tion (*fulgur,* lightning). Effect of lightning, either direct or indirect; condition in which fulgurating pains occur, as in progressive locomotor ataxia.

Fuliginos'ity. See *Fuliginous.*

Fuliginous, fu-lij'in-us (*fuligo,* soot). Having the color of soot, as the lips, teeth, or tongue when they assume a brownish color, or rather are covered with a coat of that color. The condition is called *Fuliginosity.*

Fuligo, fu-le'go. Soot. Wood-soot consists of volatile alkaline salt, empyreumatic oil, fixed alkali, etc. A tincture prepared from it has been used as an antispasmodic in hysterical cases; an ointment in some cutaneous affections. **F. al'ba philosopho'rum,** ammonii chloridum.

Fuligokali, fu-le-gok'al-e (*fuligo,* soot, *kali,* potassa). Analogous preparation to anthrakokali, soot being used in the place of coal, and employed in the same diseases. Medical lye, soot tea, alkaline solution, dyspeptic lye, Physick's lye tea, has been used for many years in Philadelphia; made by mixing a quart of hickory ashes, half a pint of soot, and a gallon of boiling water, allowing the mixture to stand for twenty-four hours, and decanting.

Full'ers' earth. Cimolia purpurescens.

Full'ing. Massage of muscles against the bones under them.

Ful'mar oil. Reddish oil obtained from fulmar petrel, off the northern coast of Great Britain; analogous to cod-liver oil.

Ful'minant or **Fulminating,** ful'min-a-ting (*fulmen,*

lightning). Term applied to a disease occurring suddenly, and proceeding rapidly to fatal termination.

Ful'ness. Plenitude, plethora, repletion; state of being filled. A feeling of weight or distension in the stomach or other part of the system.

Ful'vous. Dark, dull, yellow color.

Ful'wa butter. Fixed oil from seeds of Bassia butyracea, used in rheumatism.

Fumaria, fu-mah're-ah (*fumus*, smoke). Fumitory, common fumitory. The plant is sedative, tonic and alterative, laxative and diuretic. The leaves are extremely succulent, and have a bitter, somewhat saline taste. The infusion of the dried leaves and the expressed juice of the fresh plant are said to clear the skin of leprous disorders. **F. bulbo'sa,** the root of this plant is a variety of corydalis; emmenagogue and anthelmintic. **F. ca'va,** F. bulbosa. **F. ma'jor,** F. bulbosa. **F. me'dia,** fumaria. **F. officina'lis,** fumaria. **F. parviflo'ra,** plant of S. and W. Europe, resembling Fumaria officinalis. It is antiperiodic and anthelmintic, and used in some forms of skin disease. **F. tenuifo'lia,** F. parviflora.

Fumaric (fu-mar'ik) **ac'id.** Acid ($C_4H_4O_4$) obtained from Fumaria officinalis, Cetraria islandica, and various fungi.

Fume. Smoke or vapor. **F. of the earth,** Fumaria officinalis.

Fumigatio, fu-me-gah'she-o (*fumigo*, to make smoke). Fumigation. **F. antiloi'mica Gaubii,** see *Disinfection*. **F. Guytonien'sis,** see *Disinfection*. **F. Smythia'na,** see *Disinfection*.

Fumigation, fu-mig-a'shun. Operation of filling a circumscribed space with gas or vapor, with the intention either of purifying the air, of perfuming it, or of charging it with a substance proper for acting upon a part of the surface of the human body. Hence fumigations have been distinguished into aqueous, aromatic, sulphurous, mercurial, disinfecting, Guytonian, etc. Benzoin generally constitutes the chief ingredient in the fumigating pastilles, to which any variety of odoriferous substances may be added. **F., chlo'rine,** see *Disinfection*. **F., ni'trous,** see *Disinfection*. **F., oxymuriat'ic,** see *Disinfection*. **F., sul'phurous,** fumigation by means of burnt sulphur, used in various skin diseases and as a disinfectant.

Fu'migator. Apparatus for fumigation.

Fumiter'ra or **Fumitory,** fu'mit-or-e. Fumaria.

Fu'mus al'bus. Hydrargyrum. **F. cit'rinus,** sulphur. **F. ter'ræ,** fumaria.

Funambulatio, fu-nam-bu-lah'she-o (*funis*, cord, *ambulo*, to walk). Exercise which consists in scaling ropes.

Function, funk'shun (*fungor*, to act). Action of an organ or set of organs; any act necessary for accomplishing vital phenomena. Function is a special office in the animal economy, having as its instrument an organ or apparatus of organs; thus, respiration is a function. Vital functions are those essential to life, as innervation, circulation, respiration; animal functions, those belonging to the encephalon—viz. the functions of the intellect, the affections, the voluntary motions; and natural functions, those relating to assimilation, such as the actions of the abdominal viscera, of the absorbent and exhalant vessels, etc.

Functional, funk'shun-al. Relating or belonging to the function of an organ or to the functions in general. **F. diseases,** diseases that concern the function of an organ, not its structure. **F. or Vi'tal phenom'ena,** those produced by modification in the action of an organ or organs, in contradistinction to those of a material or physical character.

Fun'da (a sling). Four-tailed bandage, composed of a fillet or long compress cleft at its extremities to within about two inches of its middle; used in diseases of the nose and chin and in fracture of the lower jaw. **F. Gale'næ, maxil'læ,** or **maxilla'rius,** funda. **F. Retz'ii,** looplike process of lower band of anterior annular ligament of ankle, passing from fore part of os calcis, and binding down tendons of long extensor of toes. **F. superficia'lis vesi'cæ,** slinglike muscular masses near attachment of the urachus to the bladder.

Fun'dal. Relating to the fundus uteri.

Fundament, fun'dam-ent (*fundus*, the bottom). Anus. **F., falling down of,** prolapse of the bowel; proctocele.

Fundamen'tal. The sacrum has been called the fundamental bone, because it serves as a base to the vertebral column. The sphenoid bone is so denominated, from its being situate at the base of the cranium. **F. fascic'ulus,** bundle of fibres remaining in the anterior column of medulla spinalis and medulla oblongata after exclusion of the pyramidal tracts.

Fundamen'tum. Fundament; foundation. **F. cellula're,** stroma.

Fun'dus (bottom). Base of any organ ending in a neck or having an external aperture, as the bladder or uterus. Vulva. **F. of blad'der,** F. vesicæ. **F. of eye,** F. oculi. **F. of gall-blad'der,** F. vesicæ felleæ. **F. glands,** tubular glands of cardiac extremity of stomach. **F. oc'uli,** bottom of cavity of globe of the eye, seen ophthalmoscopically. **F. sac'ci lacryma'lis,** upper end of lacrymal sac. **F. of stom'ach,** greater curvature of stomach. **F. of u'rinary blad'der,** F. vesicæ. **F. u'teri,** upper extremity or expanded portion of uterus. **F. vagi'næ,** upper extremity of vagina; see *Vagina*. **F. ventric'uli,** cardiac extremity of stomach. **F. vesi'cæ,** broad part or base of bladder. **F. vesi'cæ fel'leæ,** upper expanded part of gall-bladder.

Fu'nes (pl. of **Funis**) **cor'dis.** Columnæ carneæ. **F. semicircula'res,** semicircular canals. **F. ventric'uli,** see *Stomach*.

Fun'gating tu'mor. Tumor composed of exuberant granulations from a neglected sebaceous cyst whose contents have been discharged by ulceration.

Fun'gi (pl. of **Fungus**). See *Fungus*.

Fungiform, fun'je-form (*fungus*, mushroom, *forma*, shape). Having the shape of a mushroom. **F. papil'læ,** see *Papillæ of the tongue*.

Fun'goid (*fungus, eidos*, resemblance). Fungiform; having the shape of or growing like a mushroom, as the fungoid or fungiform papillæ of the tongue. Mycetoid. **F. degenera'tion of the endome'trium,** fungous projecting masses from the lining membrane of the uterus. **F. disease,** encephaloid.

Fungos'ities, u'terine. Fungoid degeneration of the endometrium.

Fungosity, fun-gos'it-e. Quality of that which is fungous; fungous excrescence. Fungosities or excessive granulations which arise in wounds or ulcers—proud flesh—are easily repressed by gentle compression, dry lint, cupri sulphas, or other gentle caustics. At times the more powerful agents are necessary, and sometimes excision is required. **F., ure'thral,** urethral papilloma.

Fun'gous. Having exuberant characters of fungosity or fungus. **F. foot of In'dia,** mycetoma. **F. granula'tions,** see *Fungosity*.

Fun'gus (pl. **Fungi**). Mushroom order of plants, class Cryptogamia in the Linnæan system. Some of the fungi, ord. Mucoraceæ, found as parasites in man and the mammalia are the following: Tricophyton tonsurans, on the hairy scalp; T. sporuloïdes, on ulcers; Microsporum Audouini, in the hair-follicles; M. mentagrophytes, at the roots of the hair; M. furfur, in the skin; Mucor mucedo, in a cavity of gangrene of the lung; Achorion Schönleini, in the hairy scalp and hair-follicles; Aspergilli species, in the meatus auditorius externus; Puccinia favi, in favus; Oïdium albicans, in aphthæ. In pathology, fungus is commonly used synonymously with fungosity. See *Mycosis*. **F. al'bus salig'neus,** Dædalea suaveolens. **F. artic'uli,** spina ventosa; fungous arthritis. **F., bleed'ing,** hæmatodes fungus; medullary sarcoma. **F. bovis'ta,** lycoperdon. **F. cancro'sus hæmato'des,** hæmatodes f. **F. cancro'sus medulla'ris,** medullary sarcoma; see *Encephaloid*. **F. cerebra'lis,** medullary sarcoma. **F. cer'ebri,** fungous excrescence of the brain through an aperture in the cranium; hernia cerebri; see *Encepha-*

loid. **F. chirurgo'rum,** lycoperdon. **F. cra'nii,** fungous excrescence of cranial bones. **F. cynosba'ti,** bedeguar. **F. disease of In'dia,** see *Mycetoma.* **F. of du'ra ma'ter,** fungous tumor arising from the dura mater. **F., er'got,** Claviceps purpurea. **F. fagino'sus,** Morchella esculenta. **F. fis'sion,** see *Schizomycetes.* **F., fly,** Agaricus muscarius. **F. foot,** mycetoma. **F. germ,** blastomycetes. **F. hæmato'des,** hæmatodes fungus; medullary sarcoma; cavernous angeioma. **F. ignia'rius,** Boletus igniarius. **F. lar'icis,** Boletus laricis. **F. of Mal'ta,** Cynomorion coccineum. **F. mam'mæ,** cancer of the breast. **F. medulla'ris,** medullary sarcoma; see *Encephaloid.* **F. melano'des,** cancer, melanotic. **F. Meliten'sis,** Cynomorion coccineum. **F. musca'rius,** fly agaric. **F., parasit'ic,** F. on the living body; saprophyte. **F. petræ'us mari'nus,** Umbilicus marinus. **F. porrig'inis,** see *Porrigo favosa.* **F. querci'nus,** Boletus igniarius. **F. rosa'rum,** bedeguar. **F. sal'icis,** Dædalea suaveolens. **F. sambu'ci** or **sambuci'nus,** Peziza auricula. **F. seca'lis,** ergot. **F., split,** schizomycetes. **F., su'gar,** saccharomyces cerevisiæ. **F. test for su'gar,** see *Sugar.* **F. tes'tis,** fungus of testicle; may be malign or malignant; hernia testis. **F. of thrush,** oïdium albicans. **F. umbilica'lis,** fungus of stump of umbilical cord in new-born children. **F. vasculo'sus,** nævus vascularis.

Fu'nic or **Funic'ular** (*funis,* a cord). Relating to the funis umbilicalis or umbilical cord, as the funicular process of the peritoneum. **F. ar'tery,** cremasteric artery. **F. bel'low's sound, mur'mur,** or **souf'fle,** see *Bellow's sound, funic.*

Funiculi (fu-nik'u-le) (pl. of **Funiculus**) **grac'iles.** Posterior median columns or fasciculi of the medulla oblongata. Along the posterior border of each corpus restiforme, and separated from it by a groove, is a narrow white cord, separated from its fellow by the fissura longitudinalis posterior. The pair of cords are the funiculi graciles. Each funiculus forms an enlargement—processus clavatus—at its upper end, and is then lost in the corpus restiforme. **F. of medul'la oblonga'ta,** F. graciles. **F. of medul'la spina'lis,** columns of spinal cord. **F. sil'iquæ,** longitudinal fibres in the groove separating the corpus olivare from the corpus pyramidale and corpus restiforme. They enclose the base of the corpus olivare, those lying on its inner side forming the funiculus internus, and those on its outer side the funiculus externus.

Funiculi'tis. Inflammation of the umbilical cord or of the spermatic cord.

Funiculus, fu-nik'u-lus (dim. of **Funis**). Cord; bundle of fibres of nerves; column of spinal cord; umbilical cord. **F. ante'rior** (of the spinal marrow), anterior column of spinal cord; see *Nerve* and *Columns of spinal cord.* **F. an'tero-latera'lis,** lateral column of spinal cord. **F. brach'ii,** median vein of arm. **F., Bur'dach's,** F. cuneatus. **F. cerebra'lis,** anterior column of spinal cord. **F. cine'reus,** gray column of spinal cord. **F. cunea'tus** or **cuneifor'mis,** collection of fibres on outer side of funiculi graciles, continuous below with lateral posterior column of spinal cord, and above with the restiform body. Bundles of white fibres of the funiculi graciles and cuneati making up the posterior column of the medulla oblongata are prolonged below, as those of the posterior column of the cord. The lateral cuneate funiculus is also called F. of Rolando. **F. dorsa'lis,** spinal cord. **F. exter'nus,** see *Funiculi siliquæ.* **F. furca'lis,** form of divergent or forked insertion of the umbilical cord, the vessels passing into the placenta at different points. **F. grac'ilis,** see *Funiculi graciles.* **F. gris'ens,** gray column of spinal cord. **F. Hippoc'ratis,** tendo Achillis. **F. innomina'tus,** fasciculus teres. **F. inter'nus,** see *Funiculi siliquæ.* **F. latera'lis,** lateral column of spinal cord. **F. ligamento'sus,** ligament between the styloid process of ulna and cuneiform and pisiform bones. **F. longitudina'lis,** fasciculus teres. **F. me'dius,** lateral column of spinal cord. **F. ner'veus,** habena. **F. oliva'ris,** lateral column of spinal cord prolonged upward into the medulla oblongata. **F. ova'lis,** F. olivaris. **F. poste'rior,** posterior column of spinal cord; see *Column* and *Nerve.* **F. pyramida'lis,** pyramid of spinal cord; see *Pyramid.* **F. restifor'mis,** restiform body. **F. Rolan'di** or **Rolando,** F. cuneatus. **F. sacra'lis,** portion of sympathetic nerve distributed to the pelvis. **F. scle'ræ** or **sclerot'icæ,** bundle of connective-tissue fibres following the course of the short ciliary arteries. **F. solita'rius,** solitary bundle; respiratory fasciculus. **F. spermat'icus,** spermatic cord. **F. spina'lis,** spinal cord. **F. te'res,** fasciculus teres. **F. transver'sus,** anterior cerebral commissure. **F. tu'beris,** infundibulum. **F. tym'pani,** chorda tympani. **F. umbilica'lis** or **umbilica'ris,** umbilical cord; navel-string; cordlike substance extending from the placenta to the umbilicus of the fœtus; composed of the amnion, an albuminous secretion called the jelly of the cord, cellular substance, an umbilical vein, and two umbilical arteries. The former conveys the blood from the placenta to the fœtus; the latter return it. All these parts are surrounded by a sheath—investitura or vagina funiculi umbilicalis. The usual length of the cord is from sixteen to twenty-two inches. **F. u'teri,** round ligament of uterus. **F. varico'sus,** cirsocele.

Fu'nis. Cord; umbilical cord. See *Laqueus.* **F. argente'us,** medulla spinalis. **F. Hippoc'ratis,** Achillis tendo. **F. umbilica'lis,** funiculus umbilicalis.

Fun'nel. Infundibulum; siphon.

Fun'nel-shaped pel'vis. Type of female pelvis resembling the male pelvis, having long and narrow diameters.

Fun'nybone. *Crazybone.* When the ulnar nerve is suddenly and forcibly pressed upon above the elbow, it gives occasion to a tingling in the fingers to which it is distributed. In familiar language this is said to be produced by pressing on the funnybone.

Fur. Coat or covering; term often applied to layer of greater or less thickness which covers the surface of certain organs, and particularly of the tongue and the interior of the mouth. It is designated variously, according to its appearance, bilious, yellow, white coat or fur, etc. It is at times owing to the evaporation of the watery portions of the secretions; at others, to a morbid condition of the secretions; generally, to both causes combined. The tongue in such condition is said to be coated or furred.

Furca, fur'kah (fork). Structure or part having a forklike appearance. **F. orbita'lis,** small forklike portion of bone supporting the optic nerve in the embryo, and constituting the earliest formation of the orbit.

Furcel'la or **Furc'ula** (dim. of **Furca,** fork). Upper part of the sternum; the clavicle; rudiment of embryonic epiglottis; fourchette. **F., infe'rior,** xiphoid cartilage.

Furcifer, fur'sif-ur (*furca,* fork, *fero,* to carry). Penis.

Furcilla, fur-sil'lah (dim. of **Furca,** fork). Furcella; fourchette.

Furcula, fur'ku-lah (dim. of **Furca,** fork). Forked process or prominence. Furcella; clavicle; fourchette; upper end of sternum.

Furcular, furk'u-lar. Resembling a small fork; relating to the clavicle or to the fourchette.

Fur'fur or **Fur'fura.** Bran, decoction of which is sometimes employed as an emollient; scarf or scurf, dandruff.

Furfuraceous, fur-fur-a'she-us. Scurfy; canicaceous; resembling bran; name given to eruptions in which the epidermis is detached in small branlike scales, also to branlike sediment observed at times in the urine.

Fur'furamide. See *Furfurin.*

Furfuration, fur-fur-a'shun. Branny or furfuraceous desquamation; porrigo; pityriasis.

Fur'furine. By the action of dilute sulphuric acid on corn meal or bran an oil is obtained—furfurol or furfurole. By the action of ammonia on this, furfuramide or furfurolamide results; and by the action of dilute potassa on this the alkaloid furfurin is obtained, having tonic and antiperiodic properties.

Nitrate of furfurine has been used as an antineuralgic in doses of two or three grains.

Furfurisca, fur-fur-is'kah. Pityriasis.

Fur'furol. See *Furfurin.*

Furfurol'amide. See *Furfurin.*

Fur'furous. Furfuraceous.

Fu'ria. Madness; mania. **F. inferna'lis**, vermiform insect in Sweden said to cause malignant anthrax. **F. medinen'sis**, filaria medinensis.

Furibun'dus, Furio'sus, or **Fu'rious** (*furor*, madness). Violently insane; one laboring under mania.

Fur'neaux-Jor'dan method of lithotomy. Perineal lithotomy.

Fu'ror. Fury; mania. **F. amator'ius**, erotomania. **F. bre'vis**, transitory mania; rage. **F. genita'lis**, erotomania. **F. ma'nia**, mania. **F. melancholi'cus**, a form of melancholy. **F. transito'rius**, transitory mental derangement. **F. uteri'nus**, nymphomania.

Furred. See *Fur.*

Fur'row. Sulcus; groove. **F., auric'ulo-ventric'ular**, auriculo-ventricular groove. **F., dor'sal**, groove in median line of the back in which are prominences caused by the spinal processes of the vertebræ; primitive groove. **F., gen'ital**, groove on inferior surface of genital tubercle in embryo, which by its closure or patency determines the sex of the fœtus; see *Genital.* **F., in'guinal**, fold of groin. **F., interventric'ular**, name given to two longitudinal grooves extending from base to apex of heart. **F. kerati'tis**, see *Keratitis dendritica, K. ulcerans*, and *K. mycotica.* **F., mentola'bial**, see *Mentolabial.* **F., merid'ian**, groove passing through germinal and nutritive poles in segmentation of ovum. **F., ra'dial**, F., meridian. **F. of Rolan'do**, fissure of Rolando. **F., spi'nal**, F., dorsal. **F., ver'tical**, F., meridian. **F., vitel'line** or **yolk**, furrow on ovum denoting segmentation.

Fur'rowed band. Indented ridge of gray matter between the amygdalæ and the uvulæ of the cerebellum.

Fur'uncle. Furunculus. **F., an'thracoid**, small carbuncle. **F., wasp's-nest**, furunculus vespajus.

Furunc'ular or **Furunculous**, fur-unk'u-lus (*furo*, to rage). Relating or appertaining to furunculus. **F. skin diseases**, phlogoses.

Furunculi (pl. of **Furunculus**) **atonici**, fur-unk'u-le at-on'is-e. Ecthyma. **F. nu'cleus** or **ventric'ulus**, see *Furunculus.*

Furunculoid, fur-unk'u-loid (*furunculus, eidos*, resemblance). Resembling furunculus.

Furunculosis, fur-unk-u-lo'sis. Growth or production of furunculi or boils.

Furunculus, fur-unk'u-lus. Boil; furuncle. Small phlegmon appearing under the form of a conical, hard, circumscribed tumor, having its seat in the dermal texture. After an uncertain period it becomes pointed, white or yellow, and gives exit to pus mixed with blood. When it breaks, a small, grayish, fibrous mass sometimes appears, consisting of dead areolar tissue; this is called the core, ventriculus or nucleus furunculi. The abscess does not heal until after its separation. The indications of treatment are to discuss by application of leeches and warm fomentations, or to encourage suppuration by warm, emollient cataplasms. When suppuration is entirely established the part may be opened or suffered to break, according to circumstances. A *blind boil* is an indolent, imperfectly suppurating, phlegmonous tumor, of the kind described above, often seated in a sebaceous follicle, as in acne indurata. **F. anthracoï'des**, small carbuncle. **F. aton'icus**, ecthyma. **F benig'nus**, furuncle. **F. Delhi'nus**, Delhi boil. **F. follicula'ris**, furuncle involving a sebaceous gland. **F. gangrænes'cens** or **gangræno'sus**, anthrax. **F. malig'nus**, anthrax. **F. neurit'icus**, form of erythanthema neuriticum. **F. orienta'lis**, disease variously called Aleppo or Delhi boil, Biskra button, etc. **F. panula'tus**, slowly-forming chronic tubercle, opening at last like a weaver's shuttle. **F. parasit'icus**, boil caused by parasites. **F. suppurato'rius**, boil. **F. termin'thus**, berry or fungous carbuncle; see *Terminthus.* **F. vespa'jus**, large, slowly-forming suppurating furuncle, at last opening in numerous places, like a wasp's nest.

Furze. Ulex Europæus.

Fusanus lanceolatus (fu-san'us lan-se-o-lat'us), **persica'rius**, or **spica'tus.** Species of sandalwort of Australia, from which oil of sandalwood is procured.

Fusaria (*fusus*, spindle) **lumbricoï'des.** Ascaris lumbricoïdes. **F. margina'ta**, ascaris marginata. **F. mys'tax**, ascaris mystax. **F. rena'lis**, eustrongylus gigas. **F. vermicula'ris**, ascaris oxyuris or vermicularis. **F. viscera'lis**, strongylus gigas. **F. Werneri**, ascaris marginata.

Fusce'do (*fuscus*, dusky). Darkness or duskiness, as of the skin. **F. cu'tis**, melasma cutis. **F. sola'ris**, see *Chloasma* and *Melanopathy.*

Fuschine. Fuchsine.

Fu'sel oil. Amylic alcohol.

Fusibility, fu-ze-bil'it-e. Property of being fusible. See *Fusion.*

Fusible, fu'zib'l. See *Fusion.* **F. cal'culi**, urinary calculi made up of calcium phosphate and triple phosphates; see *Calculi, urinary.*

Fusiform, fu'ze-form (*fusus*, spindle). Spindle-shaped.

Fusion, fu'zhun (*fundo*, to melt). Melting; liquefaction. Transition of a solid body into a liquid by the aid of heat. Substances capable of such transition are said to be fusible, or to be possessed of fusibility.

Fus'ti. Stalks of caryophyllus or cloves.

Fus'tic tree. Cladrastris tinctoria. Xanthoxylum.

Fustigation, fus-tig-a'shun. Flagellation; application of faradic current by tapping the surface.

Fus'tin. Yellow coloring matter of male fern.

Fututio, fu-tu'she-o (*futuo*, to have sexual intercourse). Coition.

Fututrix, fu-tu'trix. Female who practises tribadism, acting as a male with another female.

G.

G. An abbreviation of gramme.

Gabal'la. Cabal.

Gaboon'. Akazga.

Ga'dic or **Gadin'ic ac'id.** $C_{28}H_{58}O_4$. Fatty acid derived from cod-liver oil.

Gadinine, gad'in-een. $C_7H_{17}NO_2$. Ptomaïne in putrefying codfish, etc., and in bacteria of human excrement. See *Ptomaïnes* (table).

Gad'uine. $C_{35}H_{46}O_9$. Dark-brown principle obtained from oleum morrhuæ.

Ga'dus (cod) **æglifi'nus.** See *Oleum morrhuæ.* **G. calla'rias** or **cilia'ris,** see *Oleum morrhuæ.* **G. carbona'rius,** see *Oleum morrhuæ.* **G. lo'ta,** see *Oleum morrhuæ.* **G. merlan'gius,** whiting fish. **G. merluc'cius,** see *Oleum morrhuæ.* **G. morrhu'a,** see *Oleum morrhuæ.* **G. pollach'ius,** see *Oleum morrhuæ.*

Gæephagia, je-ef-aj'e-ah. Geophagism.

Gæephagus, je-ef'ag-us. Geophagist.

Gæ'in. Bitter extractive from Geum urbanum.

Gæophagia, je-of-aj'e-ah (*gaia,* earth, *phago,* to eat). Geophagism.

Gæoph'agus. Geophagist.

Gaert'ner, canal of. See *Gärtner.*

Gaf'eds. Cagots.

Gaf'fets. Cagots.

Gag. Plug, wedge, or other instrument to separate the jaws and keep the mouth open. To retch.

Ga'gea arven'sis. Tuber of this European liliaceous herb is emetic and antispasmodic, and is externally applied to ulcers. **G. lu'tea,** Our Lady's cowslip, and **G. praten'sis** have similar properties.

Gait. Characteristic mode of walking or running, modified in a number of diseases of the nervous system. **G., atax'ic,** slow, irregular jerking gait characteristic of progressive locomotor ataxia. **G., cerebel'lar,** gait characteristic of disease of the cerebellum, the nervous centre of co-ordination of movements, consisting in want of steadiness or regularity. **G., frog,** hopping gait of diplegia of children.

Ga'la. Milk.

Galactacrasia, gal-ak-tah-kras'e-ah (*galacto, a, krasis,* mixture). Morbid mixture or defective constitution of milk.

Galactacratia, gal-ak-tah-krat-e'ah (*galacto, a, kratos,* power). Want of power to retain milk.

Galactæmia, gal-ak-te'me-ah (*galacto, haima,* blood). Condition of the blood in which it contains milk.

Galactagen'tia, Galactago'ga, or **Galactagogues,** gal-ak'tah-gogs (*galacto, ago,* to drive). Agents that promote secretion or flow of milk.

Galactangeiolouci'tis (*gala, angeion,* vessel, *leukos,* white). Inflammation of lymphatic glands or vessels after lactation.

Galactapostema, gal-ak-tap-os-ta'ma (*galacto, apostema,* abscess). Milk abscess.

Galacthæ'mia (*galacto, haima,* blood). Milk streaked with blood.

Galactia, gal-ak'te-ah. *Galactorrhœa.* Redundant flow of milk, which may occur without being provoked by suckling; when to a great extent, it sometimes causes wasting. Disordered lactation.

Galac'tic. Lactic.

Galactidrosis, gal-ak-tid-ro'sis (*galacto, hidrosis,* sweating). Sweating of milk or milk-like fluid during lactation.

Galactifer (gal-ak'tif-er) or **Galactif'erous** (*galacto, fero,* to carry). Galactophorous.

Galac'tin. Gummy substance from seeds of Medicago sativa.

Galac'tine. Casein. Alkaloid ($C_{54}H_{78}N_4O_{45}$) derived from milk.

Galactinidro'sis. Galactidrosis.

Galactinom'yces. Galactomyces.

Galac'tinous. Lactic; milky; containing milk.

Galactirrhœa, gal-ak-tir-rhe'a (*galacto, rheo,* to flow). Galactia; galactorrhœa.

Galactischesis (gal-ak-tis'kes-is) or **Galactos'chesis** (*galacto, ischesis,* restraint or retention). Retention or suppression of milk.

Galac'to (*gala,* milk). In composition, milk.

Galactoblasts, gal-ak'to-blasts (*gala,* milk, *blastos,* bud). Bodies containing fat- or oil-globules in acini of mammary gland.

Galactocatarac'ta. Milky cataract.

Galactocele, gal-ak-to-se'le (Eng. gal-ak'to-seel) (*galacto, kele,* tumor). Milk-tumor; distension of one or more of the galactophorous sinuses by milk; lactiferous engorgement. Tumor produced by retention of milk, galactoma. Tumor produced by effusion into the tunica vaginalis, having milky or whitish appearance, considered to be true milk. Chylocele.

Galactochrous, gal-ak-tok'ro-us (*galacto, chroa,* color). Having the color of milk; milky.

Galactoden'dron u'tile (*galacto, dendron,* tree). Cow-tree of South America. When incision is made into the trunk an agreeable and nutritious milky fluid flows out.

Galactodensimeter, gal-ak-to-dens-im'et-ur (*galacto, densus,* dense, *metron,* measure). Hybrid term for galactometer.

Galacto'des. Having a milky appearance, as urine.

Galactodiæta, gal-ak-to-de-e'tah (*galacto, dixta,* diet). Milk diet.

Galactodiarrhœ'a. Cœliac flux. Diarrhœa with milk-colored stools.

Galactœdema. Œdematous galactocele.

Galactoferous, gal-ak-tof'er-us. Galactophorous.

Galactogan'glion (*galacto, ganglion,* knot). Milk knot or tumor of breast from distension of milk-duct.

Galactogenous, gal-ak-toj'en-us (*galacto, gennao,* to produce). Producing milk.

Galactoglycosuria, gal-ak-to-glik-os-u're-ah (*galacto, glukus,* sweet, *ouron,* urine). Presence of sugar of milk in the urine.

Galac'togogue (*galacto, ago,* to expel). Causing secretion or discharge of milk.

Galactohæmia, gal-ak-to-he'me-ah (*galacto, haima,* blood). Secretion of bloody or blood-like milk.

Gal'actoid (*galacto, eidos,* resemblance). Resembling milk.

Galacto'ma. Tumor produced by retention of milk; galactocele.

Galactomapostema (gal-ak-to-map-os-ta'mah) or **Galactomastopostema,** gal-ak-to-mas-to-pos-ta'mah. Milk abscess.

Galactomastoparectoma, gal-ak-to-mas-to-par-ek-to'mah (*galacto, mastos,* breast, *parekteino,* to extend). Mammary abscess.

Galactometastasis, gal-ak-to-met-as'tas-is. Metastasis of milk, the secretion occurring in some other part than the breast.

Galactom'eter (*galacto, metron,* measure). Graduated instrument for appreciating the quantity of cream in milk.

Galactomyces, gal-ak-tom'is-ees (*galacto, mukes,* fungus). Medullary sarcoma or carcinoma; encephaloid.

Galacton'cus (*galacto, onkos,* swelling). Galactocele.

Galactoph'agist (*galacto, phago,* to eat). One who lives on milk.

Galactophagous, gal-ak-tof'ag-us (*galacto, phago,* to eat). That which feeds on milk. Name given to certain people with whom milk constitutes the chief nourishment.

Galactophlebi'tis (*galacto, phleps,* vein). Phlebitis of suckling children.

Galactophlysis, gal-ak-tof'lis-is (*galacto, phlusis,* vesicular eruption). Crusta lactea. Eruption of milky vesicles occurring during suppressed lactation.

Galactophora, gal-ak-tof'or-ah (*galacto, phero,* to bear). Galactopoetica.

Galactophore, gal-ak'to-for (same etymon). Lactiferous; galactophorous.

Galactophoritis, gal-ak-to-for-e'tis. Inflammation of the galactophorous ducts.

Galactophorous, gal-ak-tof'or-us (*galacto, phero,* to bear). Lactiferous; producing or conveying milk; galactagogue. **G. ducts,** lactiferous ducts. **G. recep'tacle,** see *Lactiferous vessels.* **G. sac,** see *Lactiferous vessels.* **G. si'nuses,** see *Lactiferous vessels.*

Galactoph'orus. Artificial nipple to facilitate sucking, when the faulty conformation of the nipple prevents the child from laying hold of it.

Galactophthisis, gal-ak-to-te'sis (*galacto, phthisis,* wasting). Wasting away or debility from excessive lactation.

Galactophygus, gal-ak-tof'ig-us (*galacto, pheugo,* to shun). Arresting or dispersing the secretion of milk, as belladonna, tobacco, iodide of potassium, etc. The first-named is the article popularly employed.

Galactopiometer, gal-ak-to-pe-om'et-ur (*galacto, pion,* fat, *metron,* measure). Galactometer; cremometer.

Galactoplania, gal-ak-to-plan'e-ah (*galacto, plane,* wandering). Extravasation of milk into the areolar membrane. Secretion of milk elsewhere than from the breasts; galactidrosis; galactophlysis.

Galactoplero'sis (*galacto, plerosis,* repletion). Redundance of milk; galactorrhœa.

Galactopœa (gal-ak-to-pe'ah), **Galactopœ'ia,** or **Galactopoet'ica** (*galacto, poieo,* to make). Galactagogues. Substances to which has been attributed the property of favoring the secretion of milk and augmenting its quantity.

Galactopoe'sis or **Galactopoiesis,** gal-ak-to-poi-a'sis. Secretion or formation of milk.

Galactopoiet'ic. Producing milk; galactagogue.

Galactoposia (*galacto, posis,* drink), gal-ak-to-po'ze-ah. Drinking of milk; treatment of disease by means of milk; milk diet.

Galactopotes, gal-ak-top'o-tees. A drinker of milk; galactophagist; one subjected to a milk diet.

Galactopyra, gal-ak-top'ir-ah (*galacto, pur,* fire, fever). Milk fever.

Galactopyretic, gal-ak-to-pir-et'ik (*puretos,* fever). Relating to milk fever.

Galactorrhœa, gal-ak-tor-rhe'ah (*galacto, rheo,* to flow). Excessive or abnormal excretion or flow of milk, especially after weaning; often confounded with polygalactia. Galactia. **G. erro'nea,** galactoplania. **G. sacchara'ta,** saccharorrhœa lactea.

Galacto-saccharum, gal-ak'to-sak'ar-um. Sugar of milk.

Galactoschesis, gal-ak-tos'kes-is. Galactischesis.

Galactoscope, gal-ak'to-skope (*galacto, skopeo,* to see). Instrument for determining the quality of milk. Lactometer.

Gal'actose. $C_6H_{12}O_6$. Carbohydrate resulting from treating lactose with dilute acids or by fermentation.

Galactosis, gal-ak-to'sis. Secretion or formation of milk.

Galactospongus, gal-ak-to-spon'gus (*galacto, spongos,* sponge, fungus). Medullary carcinoma; M. sarcoma. See *Encephaloid.*

Galactos'tasis (*galacto, stasis,* fixed state). Stagnation or check to flow of milk.

Galactosyrinx, gal-ak-to-sir'inks (*galacto, surinx,* tube). Milk fistula; lacteal fistula.

Galactotherapy, gal-ak-to-ther'ap-e (*galacto, therapeuo,* to cure). Treatment of disease by exclusive diet of milk. Administration of drugs to act on the mother's or nurse's milk.

Galactotrophy, gal-ak-tot'ro-fe (*galacto, trophe,* nourishment). Nourishment by means of milk.

Galactozemia, gal-ak-to-za'me-ah (*galacto, zemia,* loss). Loss or diminished secretion of milk.

Galactozyme or **Galazyme,** gal'az-ime (*galacto, zume,* ferment). Result of the fermentation of milk by means of yeast; used as a remedy for phthisis. Koumyss.

Galactuchos, gal-ak-tu'kos (*galacto, echo,* to have). Suckling; giving milk.

Galacturia, gal-ak-tu're-ah (*galacto, ouron,* urine). Chyluria.

Galæmia, gal-e'me-ah (*gala, haima,* blood). Galactohæmia.

Galam but'ter. Bambuk or shea butter; expressed oil from seeds of Bassia Parkii.

Galanga or **Galangal,** gal-an'gal. Maranta galanga. **G. ma'jor,** rhizome of Alpinia galanga, as **G. mi'nor** and **G. sinen'sis** are of Alpinia officinarum; all are stimulant and aromatic.

Galan'gin. Derivative from rhizome of Alpinia galanga.

Galan'thus niva'lis. Snowdrop of Europe; juice is used internally as emetic and antipyretic; the herb externally for cataplasms.

Galarrhœus lathyris, gal-ar-rhe'us lath'ir-is (*gala, rheo,* to flow). Euphorbia lathyris. **G. palus'tris,** Euphorbia palustris.

Galax aphylla, gal'aks af-il'lah. Carpenter's leaf, beetleweed; indigenous. The root is astringent, and the leaves, in domestic practice, are applied to cuts and wounds.

Galaxia, gal-aks'e-ah. Thoracic duct.

Galazyme, gal'a-zime (*gala, zume,* ferment). Galactozyme. Koumyss.

Gal'banum. Bubon galbanum. **G., long-leaved,** Bubon galbanum. **G. plas'ter,** emplastrum galbani.

Galbuli, gal'bu-le. Balls. **G. junip'eri,** juniper berries.

Galbulus, gal'bu-lus. A rare variety of congenital jaundice, in which the yellow color continues through life.

Gale, gal'e. Myrica gale. **G., Scotch, G., sweet,** Myrica gale.

Galea, gal'a-ah. Amnion; bandage of Galen; headache affecting the whole head; caul. **G. aponeurot'ica cap'itis,** tendinous expansion uniting the frontal and occipital portions of the occipito-frontalis muscle. **G. cap'itis,** G. aponeurotica capitis. **G. tendino'sa Santori'ni,** G. aponeurotica capitis.

Galeamaurosis, gal-e-am-au-ro'sis (*galea,* cat). Amaurotic cat's eye.

Galeancon (gal-e-an'kon) or **Galian'con** (*galea,* cat or weasel, *ankon,* elbow). Shortening of the arm from dislocation of the shoulder; one who has short arms.

Galeanthropy, gal-e-an'thro-pe (*galea,* cat, *anthropos,* man). Variety of melancholy in which the patient believes himself changed into a cat; affection similar to lycanthropy and cynanthropy.

Galega, gal-e'gah. *Goat's rue.* Slightly aromatic, and sudorific; it is also said to improve the secretion of milk. **G. apolline'a,** Tephrosia apollinea. **G. litora'lis,** poisonous W. Indian plant; anthelmintic; juice of leaves is cathartic. **G. officina'lis,** galega; antipyretic, antispasmodic, and diuretic; the leaves are galactagogue. **G. Per'sica,** galega. **G. purpu'rea,** Tephrosia apollinea. **G. toxica'ria,** Tephrosia toxicaria. **G. Virginia'na,** *Turkey pea, Hoary pea, Devil's shoe-strings, Virginia goat's rue,* or *Catgut;* used in some parts of the United States as anthelmintic in decoction of the root; it is also galactagogue. **G. vulga'ris,** galega.

Ga'len (who lived in the second century), **anastomo'sis of.** Intralaryngeal anastomosis of inferior and superior laryngeal nerves. **G., band'age of,** see *Bandage of Galen.* **G., veins of,** see *Cardiac veins* and *Choroides vene.*

Galen'ic or **Galenical,** ga-len'ik-al. Relating to the doctrine of Galen or Galenism. Drugs that are not chemical. **G. med'icine,** Galenism.

Galenism, ga'len-izm. Doctrine of Galen.

Galenist, ga'len-ist. Follower of the doctrine of Galen.

Gale'nius. Galenic.

Galeob'dolon or **Galeopdolon,** gal-e-op'do-lon (*galea,* weasel, *bdullo,* to emit a stench). Galeopsis.

Galeopsis (gal-e-op'sis) or **Galiop'sis** (*galea,* weasel, *opsis,* appearance, the corolla having been supposed to resemble the head of the weasel). Hedge-nettle. Plant formerly used as vulnerary and anodyne. Lamium album. **G. angustifo'lia,** G. grandiflora.

G. du'bia, G. grandiflora. **G. grandiflo'ra**, plant is regarded in Germany as a bitter resolvent and pectoral. **G. lad'anum**, G. grandiflora. **G. ochroleu'ca**, G. grandiflora. **G. prostra'ta**, G. grandiflora. **G. seg'etum**, G. grandiflora. **G. tet'rahit**, hemp-nettle of Europe. **G. versic'olor**, possessed of the same virtues as G. grandiflora. **G. villo'sa**, G. grandiflora.

Galerop'ia or **Galeropsia**, gal-er-op'se-ah (*galeros*, bright, *opsis*, vision). Oxyopia; form of exaggerated vision in which everything appears brighter and more distinct than in natural vision.

Ga'lex aphyl'la. Carpenter's leaf, whose root is used in Southern States as an astringent.

Galiancon, gal-e-an'kon (*galea*, weasel, *ankon*, elbow). One who has short arms, the condition being called *Galianconism*.

Galingale, gal'in-gale. Galangal; Kæmpferia galanga; cyperus.

Galinsoga (gal-in-so'gah) **parviflo'ra.** Plant of S. America, with antiscorbutic properties.

Galipea (gal-ip-e'ah) **cuspa'ria.** Cusparia febrifuga. **G. officinal'is**, see *Cusparia febrifuga*.

Galipeine, gal-ip-e'een. White crystallized alkaloid, $C_{20}H_{21}NO_3$, from cusparia bark.

Ga'lium or **Gallium**, gal'le-um (*gala*, milk, because some species curdle milk). G. verum. **G. Africa'num**, leaves and flowers are used in diarrhœa. **G. al'bum**, G. mollugo. **G. aparanoï'des** or **apari'ne**, *Goosegrass, Cleaver's bees, Cleavers, Gooseshare, Robin-run-the-hedge, Hayriff*. Expressed juice is aperient diuretic in incipient dropsies and antiscorbutic; the plant is used in decoction in lepra and psoriasis. **G. asprel'lum**, *Rough bedstraw, Rough ladies' bedstraw;* indigenous; has the diuretic properties of most of its genus. **G. brachycar'pon**, G. aparine. **G. Cauca'sicum**, G. verum. **G. circæ'zans**, *Wild licorice, Master of the woods*. Indigenous plant, demulcent, expectorant, and diuretic. **G. crucia'tum**, this herb of Europe and Asia is an astringent and stomachic tonic, and externally styptic. **G. Græ'cum**, herb of Greece employed as an astringent in dysentery and hemorrhages. **G. infes'te**, G. aparine. **G. lu'teum**, G. verum. **G. mollu'go**, *Wild madder, Stickygrass, Greater ladies' bedstraw, Whiptongue;* herb and flowers have been used in epilepsy. **G. odora'tum**, Asperula odorata. **G. palus'tre**, European plant employed in epilepsy. **G. pilo'sum**, *Hairy bedstraw, Flux weed;* used for poisonous bites. **G. rig'idum**, French herb employed as antispasmodic and diaphoretic. **G. scaber'rimum**, G. aparine. **G. tincto'rum**, American species, closely allied in properties to G. verum. **G. trif'idum**, *Small bedstraw, Dyer's cleavers;* indigenous; has properties of its class; used in skin diseases. **G. trifio'rum**, *Sweet-scented bedstraw;* indigenous; crystalline odorous principle, called *coumarin*, is derived from it. **G. tubercula'tum**, G. verum. **G. Tyrolen'se**, G. mollugo. **G. ve'rum**, *Ladies'* or *Yellow ladies' bedstraw, Cheeserennet, Bedstraw, Cleavewort, Goosegrass, Savoyan, Clabbergrass, Milksweet, Poor robin, Gravelgrass, Hundred-fold*. Tops have been used in epilepsy and hysteria; leaves and flowers possess the property of curdling milk; flowers are antispasmodic.

Gall. Bile. See *Chafing, Eczema impetiginodes, Quercus infectoria*, and *Vitrum*. **G. of the earth**, Prenanthes, P. alba. **G. nut**, see *Quercus infectoria*. **G. of the ox**, see *Bile*. **G. of the skin**, chafing. **G., Turk'ey**, see *Quercus infectoria*.

Gal'la. Quercus infectoria. **G. max'ima orbicula'ta**, Quercus infectoria.

Gallacetophenone (gal-las-e-to-fe'none) or **Gallactophenone.** Derivative of pyrogallol; yellow powder, used as a substitute for pyrogallol in psoriasis.

Gal'læ Chinen'ses (gall of the oak). Chinese galls. **G. Halepen'ses**, Quercus infectoria. **G. Japon'icæ**, excrescences containing a large percentage of tannic acid, on Rhus semialata. **G. Levant'icæ**, Quercus infectoria. **G. quer'cûs**, Quercus infectoria. **G. tinctor'iæ**, Quercus infectoria. **G. Tur'cicæ**, Quercus infectoria.

Gallatura, gal-lat-u'rah (*gallus*, a cock). Molecule; cicatricula.

Gall'-bladder. Membranous, pyriform reservoir, lodged in a superficial depression at the inferior surface of the right lobe of the liver, called fossa of the gall-bladder or fissure of the gall-bladder. It receives, by the hepatic and cystic ducts, a portion of the bile secreted by the liver when the stomach is empty, which becomes in it more acrid, bitter, and thick. It receives an artery called the *cystic*. Its veins empty into the vena porta. Its nerves come from the hepatic plexus, and its lymphatic vessels join those of the liver. Its duct, the cystic or gall-duct, unites with the hepatic duct to form the common choledoch or bile-duct. In the interior of the cystic duct the mucous membrane is arranged in a series of crescentic folds in a spiral manner, constituting the valve of Amussat. The following measurements have been made of this organ:

Length	80–110 mm.
Width at fundus	34 "
Width in the middle	23 "
Capacity	33–35 c.cm. (Krause) (corresponding to 33.5–37.5 g. of bile).
Wall	1–2 mm. thick.
Glands	1 mm. in diameter.

Gall-duct. See *Gall-bladder*.

Gall-fe'ver. Intermittent fever.

Gal'li gallina'cei cap'ut. Gallinaginis caput.

Gal'lic acid. $C_7H_6O_5$. See *Acidum gallicum*.

Gallinaginis caput, gal-lin-aj'in-is kap'ut (*gallinago*, woodcock). Oblong, rounded projection, formed by the mucous membrane in the prostatic portion of the urethra, on the sides of which the ejaculatory ducts open.

Galline, gal'leen. Pyroligneous acid.

Gallitrichum, gal-lit'rik-um. Salvia sclarea.

Gallium, gal'le-um. Galium.

Gal'lop rhythm. Heart sounds heard on auscultating a heart in rapid action, which have been compared to the canter of a horse, as in interstitial nephritis and sclerosis of the arteries.

Gal'loping consump'tion. Phthisis, rapidly progressive to an unfavorable issue.

Gallotan'nic ac'id. Tannic acid derived from galls.

Galls. Quercus infectoria. **G., Busso'rah**, Quercus infectoria. **G., Chinese'**, see *Rhus semialata*. **G., Mec'ca**, Quercus infectoria.

Gall'sickness. Fever, Walcheren.

Gall'stone colic. Colica hepatica.

Gall'stones. Calculi, biliary.

Gal'lus (*galli*, priests of Cybele, who castrated themselves). Eunuch.

Gall'weed. Gentiana quinqueflora, root of which is tonic.

Gall'wort. Linaria vulgaris.

Galton's whistle. Instrument for testing the audibility of shrill notes, consisting of a whistle made of brass tubing; a plug is adjusted to the lower end, by means of which the tube can be shortened or lengthened, thus altering the pitch of the note.

Galvan'ic. Relating to galvanism. **G. apparatus**, apparatus for generating and supplying the galvanic current. **G. battery**, term applied to the apparatus producing galvanic electricity, or to the cells. The best forms of cell have a high electro-motive force, an abundant quantity of current, and constancy without loss of force from polarization. The latter point is very important, and many of the improvements in batteries have been made with the view of reducing this to a minimum. To prevent polarization, effort must be made to check or prevent accumulation of hydrogen on the positive pole, as the condensation of hydrogen on the inactive plate sets up a reverse electro-motive force, and so reduces the available electro-motive force of the cell and, of course, the available area of the plates. Nearly all batteries lose electro-motive force rapidly when a large current is taken from them (Steavenson and Jones).

The following table gives a concise statement of the characteristics of some well-known batteries.

GALVANIC BATTERIES.

Name.	Active Plate.	Excitant.	Depolarizer.	Passive Plate.	Approximate Electromotive Force (volts).
Smee	Zinc.	Dilute sulphuric acid 1–8.	None.	Platinized silver.	.8
Bichromate	"	" " " 1–8.	Chromic acid.	Carbon.	1.9
Latimer Clark's standard cell	"	Zinc sulphate.	Mercurous sulphate	Mercury.	1.438 (legal), 1.434 (true).
Daniell	"	Zinc sulphate or dilute sulphuric acid 1–12.	Copper sulphate in porous pot.	Copper.	1.079
Grove	"	Dilute sulphuric acid.	Strong nitric acid in porous pot.	Platinum.	1.9
Bunsen	"	" "		Carbon.	1.9
De la Rue	"	Ammonium chloride, saturated solution.	Silver chloride.	Silver.	1.
Skrivanoff	"	Sodium or potassium hydrate, 75 per cent.	" "	"	1.5
Leclanché	"	Ammonium chloride, saturated solution.	Manganese dioxide, with or without porous pot.	Carbon.	1.48

G. belt, belt to be worn at the waist, made up of small cells, thus making continuous application of galvanic electricity. A *galvanic chain* of links of zinc and copper moistened with diluted vinegar is similarly worn. **G. caut'ery,** see *Galvano-cautery* and *Moxa.* **G. cir'cle,** a single galvanic cell in action, or a series of cells forming a compound circle. **G. cur'rent,** *Voltaic current,* current generated from the cells; called *Faradic current* when it passes through a coil of wire. **G. disks,** disks of two different metals placed alternately one above the other, separated by some moistened material. **G. el'ements,** the metals employed in galvanic batteries. **G. pes'sary** and **G. poul'tice** are two different forms of medical application of galvanism, the principle of each being the same—the employment of galvanic currents established by the use of dissimilar metals and acid or moisture.

Galvanism, gal'van-izm. Voltaism, voltaic or chemical or contact electricity (after Galvani). Electricity dependent upon antecedent chemical action. Series of phenomena consisting in sensible movements, executed by animal parts endowed with irritability, when placed in connection with two metallic plates of different nature, between which a communication is established by direct contact or by means of a metallic wire. Galvanism has been employed medicinally in the same cases as electricity, and especially in neuralgic affections. See *Galvanic battery.*

Gal'vanist. One who habitually employs galvanism.

Galvaniza'tion. Medical application of the current of galvanic electricity; act of affecting with galvanism. **G., lo'calized,** localized galvanism. Mode of employing galvanism, by which the electric influence may be arrested at will in the skin; or, without any incision or puncture, the skin may be traversed, and the electric influence be limited to the organs which it covers—to the nerves, muscles, and even the bones. See *Electrization, localized,* and *Localization.*

Gal'vanize. To place under the influence of the galvanic current.

Galvanocauterization, gal-van-o-kaw-ter-i-za'shun. Cauterization by means of galvanic electricity.

Galvanocautery, gal-van-o-kaw'ter-e. Wire for cauterization into which the galvanic current for heating is passed.

Gal'vano-contractil'ity. Muscular contractility under influence of the galvanic current.

Gal'vano-farada'ic or **Galvano-faradic,** gal'van-o-far'-ad-ic. Relating to galvanism and faradism.

Galvano-faradization, gal'van-o-far-id-i-za'shun. Application of continued and interrupted current in combination.

Galvano-hypnotism, gal'van-o-hip'no-tizm. Hypnotic state caused by galvanic current passed through the brain of one affected with hysteria.

Galvanolysis, gal-van-ol'is-is. Electrolysis.

Galvano-magnetism, gal'van-o-mag'net-izm. Electro-magnetism.

Galvanometer, gal-van-om'et-ur. Instrument to measure and indicate intensity, direction, and other properties of the galvanic current by deflection of the magnetic needle.

Galvanopuncture, gal-van-o-punk'shure. Electropuncture.

Galvanoscope, gal'van-o-skope. Instrument for determining the existence and direction of a galvanic current.

Galvanoscopy, gal-van-os'ko-pe. Medical examination by the aid of galvanism.

Galvanotherapeu'tics or **Galvanotherapy,** gal-van-o-ther'ap-e. Employment of galvanism as a therapeutic agent.

Galvanotonus, gal-van-ot'on-us. Electrotonus. Persistent contraction of a muscle after the current to the motor nerve is closed.

Galvesia punctata, gal-ve'se-ah punk-tat'ah. Scrophularious Peruvian plant; aromatic and carminative.

Gam'ba. Patella, leg, hoof.

Gambeer, Gambiera, or **Gam'bir.** See *Catechu* and *Nauclea gambir.*

Gambo'dic acid. $C_{65}H_{35}O_{12}$. Acid resin from gamboge, resembling gambogic acid.

Gamboge, gam-boje'. Cambogia.

Gambo'gia or **Gamboï'dia.** Cambogia.

Gambogic (gam-bo'jik) **acid.** Cambogic acid.

Gambogium, gam-bo'je-um. Cambogia.

Gamenomania, gam-en-o-man'e-ah. Mania for entering upon the married state.

Gamic, ga'mik (*gamos,* marriage). Relating to fecundation; sexual.

Gammacism, gam'ma-sizm (*gamma,* Greek letter Γ). Difficulty or imperfection in the articulation of the guttural consonants; stuttering over emission of such sounds as *g* and *k.*

Gam'mism. Psammism.

Gamogenesis, gam-o-jen'es-is (*gamos,* sexual union, *genesis,* production). Sexual generation or reproduction.

Gamomania, gam-o-man'e-ah (*gamos,* marriage). Mania for entering upon the married state.

Gamomorphism, gam-o-mor'fizm (*gamos,* wedding, *morphe,* form). Puberty; full sexual development.

Gam'phe or **Gamphe'le.** Gena; maxillary bone.

Gan'game or **Gan'gamum** (drag-net). Epiploon; omental region.

Gan'glia (pl. of **Ganglion**) **aberran'tia.** Small, abnormally-located masses of gray matter on the posterior roots of the spinal nerves. **G. accesso'ria trun'ci cervica'lis,** small ganglionic masses connected with the cervical sympathetic system. **G. carot'ica,** carotid ganglia. **G. caverno'sa,** carotid ganglion. **G. cer'ebri posti'ca,** thalami nervorum opticorum. **G. cervica'lia** or **cervi'cis,** cervical ganglia. **G. cilia'ria accesso'ria,** accessory or unusual ganglia on ciliary nerves. **G. cœli'aca,** semilunar ganglia. **G. of crus,** corpora striata; cortical part of cerebrum. **G. of crus'ta,** caudate and lenticular nuclei and substantia nigra. **G. cubita'lia,** lymphatic glands along the brachial artery. **G. dorsa'lia,** lymphatic glands on

thoracic wall. **G., form'ative,** see *Ganglion.* **G. genita'lia,** ganglionic masses in aortic and spermatic plexuses. **G., glossopharynge'al,** jugular ganglion; petrous ganglion. **G., hemispher'ical,** hemispheres of the brain. **G. hordeifor'mia,** G. dorsalia. **G. of increase,** see *Ganglion.* **G. intercala'ria,** G. aberrantia. **G. interme'dia trun'ci cervica'lis,** G. accessoria trunci cervicalis. **G., lum'bar,** lymphatic glands of the lumbar region. **G. me'dia,** thalami optici. **G. mesenter'ica,** mesenteric glands. **G. nervo'rum,** ganglions, nervous; see *Ganglion.* **G. prostat'ica,** small ganglia in prostatic plexus. **G. puden'da,** G. prostatica. **G., res'piratory,** see *Encephalon.* **G. retifor'mia,** plexuses of nerves with accompanying ganglia in organs which have unstriated muscular fibres. **G. segrega'ta,** ganglia of the sympathetic system. **G., sensory,** see *Sensory ganglia.* **G. sola'ris,** semilunar ganglia. **G. spermat'ica,** spermatic ganglia. **G. splanch'nica,** semilunar ganglia. **G., stomatogas'tric,** see *Encephalon.* **G., sympathet'ic, of head,** ophthalmic, otic, spheno-palatine, and submaxillary ganglia. **G. of tegmen'tum,** corpora quadrigemina and thalami optici. **G. thyroï'dea inferio'ra,** sympathetic ganglia in course of inferior thyroid artery.

Gan'gliac, Gan'gliar, or **Gan'gliated.** Ganglionic.

Gangliastheni'a. Neurasthenia.

Gan'gliform or **Gan'glioform** (*ganglion, forma,* form). Having the shape of a ganglion.

Gangliitis, gan-gle-e'tis. Ganglionitis. **G. centra'lis** or **medulla'ris,** cholera. **G. peripher'ica,** mild form of cholera.

Gangliocytin, gan-gle-o-si'tin. Nuclein.

Gangliolum, gan-gle'o-lum (dim. of **Ganglion**). Small ganglion. **G. tympan'icum,** glandula tympanica.

Ganglioma, gan-gle-o'mah. Tumor of the lymphatic glands or ganglions, and especially epithelioma of them.

Gan'glion (knot). In anatomy, a name generally given to a knot-like enlargement in the course of a nerve. It is applied, however, to organs differing considerably from each other in size, color, texture, functions, etc. They are divided into glandiform, lymphatic, and nervous ganglia. 1. *Glandiform ganglions,* called also adenoid, vascular, and sanguineous ganglions. Blind, aporic, ductless, blood, and vascular glands are organs formed of agglomerated globules, pervaded by blood-vessels surrounded by areolar membrane, and containing a milky or yellowish fluid. To this class belong the spleen, thymus, thyroid, and suprarenal glands. 2. *Lymphatic ganglions;* see *Lymphatic.* 3. *Nervous ganglions,* ganglia of increase, formative ganglia. Enlargements or knots in the course of a nerve, belonging, in general, to the system of the great sympathetic. One exists on the posterior root of every spinal nerve, and on one cerebral —the fifth. They have been regarded as small brains, or centres of nervous action, independent of the encephalon, and intended exclusively for organic life. Being formed by the union of the cerebral and spinal nerves, they may send out the influence of both these nervous centres to the parts to which the nerves proceeding from them are distributed. Ganglia are chiefly composed of vesicular neurine, and appear to be concerned in the formation and dispensation of nerve-power. Also a globular, hard, indolent tumor, situate in the course of a tendon, especially at the wrist, and formed of a viscid, albuminous fluid, contained in a cyst. The cyst is sometimes loose, but usually communicates, by a narrow footstalk, with the sheath of a tendon, or even with the synovial capsule of a neighboring articulation. Treatment consists in compression, percussion, the use of discutients, extirpation, or incision. Also enlarged bursa mucosa. Lymphatic nodule. **G. abdomina'le,** G., semilunar. **G. abdomina'le centra'le,** cœliac plexus. **G. abdomina'le max'imum,** semilunar ganglion. **G. acus'ticum,** combination of G. nervi vestibuli and G. spinale. **G., ad'enoid,** G., glandiform. **G. of An'dersch,** petrous ganglion. **G., an'nular,** annulus gangliformis; see *Ciliary ligament.* **G., ante'rior cer'ebral,** corpus striatum alone, or with corpus lenticulare. **G., ante'rior, of op'tic thal'amus,** anterior tubercle of optic thalamus. **G. of Ar'nold,** otic ganglion. **G., aud'itory,** accessory ganglion of the auditory nerve, between vestibular root and restiform body; tuberculum acusticum. **G. of Au'erbach,** layer of nodular ganglionic nervous masses in the intestines between the circular and longitudinal muscular fibre layers. **G., auric'ular,** otic ganglion. **G., az'ygous,** G. opposite coccyx; see *Trisplanchnic nerve.* **G., ba'sal,** ganglia at the base of the brain, including corpus striatum, optic thalamus, and corpora quadrigemina. **G., ba'sal op'tic,** mass of cells below third ventricle in tuber cinereum, near the optic tract. **G. of Bid'der,** two ganglia observed in the heart of the frog, situate in the auricular groove. **G. of Boch'dalek,** small thickening formed by a branch of the anterior dental nerve uniting with a branch of the posterior nasal nerve from Meckel's ganglion; supramaxillary plexus. **G., car'diac,** cardiac ganglion. **G. cardi'acum infe'rius** or **mag'num or Wrisber'gii,** cardiac ganglion. **G. cardi'acum mi'nus,** superior cardiac ganglia. **G., carot'ic** or **carot'id,** see *Carotic* or *Carotid nerve.* **G., cav'ernous,** see *Carotic* or *Carotid nerve.* **G. cell-layer,** layer of cortical substance of brain having nerve-cells resembling motor cells of spinal cord. **G. cells,** nerve-cells imbedded in gray matter of cerebro-spinal axis and ganglia, and in some of the sympathetic nerves. **G. cerebel'li,** corpus dentatum. **G., cer'ebral,** great cerebral nervous centres. **G., cer'ebral ante'rior,** corpora striata. **G., cer'ebral poste'rior,** thalami nervorum opticorum. **G. cer'ebri ante'rius,** corpora striata. **G. cervica'le,** ganglion in utero-vaginal plexus; also masses of gray matter connected with sympathetic system in the neck. There are three of these, *G., superior,* variously called *First ganglion, G. fusiforme, G. magnum, G. olivare,* and *G. supremum; G., middle,* variously called *Second ganglion* and *G. thyroïdeum;* and *G., inferior,* variously called *Third ganglion, G. tertium, G. infimum.* **G. cervica'le u'teri,** G. cervicale. **G. cervica'le va'gi,** ganglia of trunk of vagus or pneumogastric nerve. **G. cilia're,** corpus dentatum. **G. cilia're accesso'rium,** detached nervous masses associated with orbital nerves. **G., cil'iary,** ophthalmic ganglion. **G. of cir'cumflex nerve,** ganglionic enlargement on a branch of that nerve. **G., Cloquet's,** ganglion on branches of naso-palatine nerves; naso-palatine plexus. **G. coccyge'um,** small ganglion in front of coccyx. **G., coch'lear,** G. spirale; G. Cortii. **G., cœ'liac,** cœliac plexus; semilunar ganglion. **G. cor'puscles,** see *Neurine.* **G. Cor'tii, G. of Corti** (after Corti, Italian anatomist), plexus of dark-bordered nerve-fibres formed by nerves of the cochlea in the cavities of the osseous zone, which contain an aggregation of bipolar, oval, minute ganglionic cells that probably intercept all fibres of cochlear nerves in their course. **G. cra'nio-cervica'le,** ganglion cervicale (superior). **G. cro'chu,** hippocampal convolution. **G. diaphragmat'icum,** small ganglion connected with the phrenic plexus at its junction with the phrenic nerve; G., phrenic. **G. of Ehr'enritter,** jugular ganglion; reddish-gray mass on the glosso-pharyngeal nerve in foramen lacerum, above the ganglion of Andersch. **G., extraventric'ular,** lenticular nucleus. **G. of fa'cial nerve,** enlargement on that nerve in Fallopian canal. **G., first cer'vical,** superior cervical ganglion. **G. of fifth nerve,** G. of Gasser. **G., fu'siform,** superior cervical ganglion. **G. of Gas'ser,** ganglion of fifth nerve; semicircular knot on the fifth pair, before its division into three branches, on the apex of the petrous portion of the temporal bone; resembles ganglia on posterior roots of spinal nerves. **G. genicula'tum,** G. of facial nerve; see also *Corpora geniculata.* **G., glan'diform,** see *Ganglion.* **G. glob'ules,** see *Neurine.* **G. haben'ulæ,** small ganglion near the point of entrance of posterior commissure into the thalamus opticus. **G. im'par,** see *Trisplanchnic nerve;* G. coccygeum. **G. incisi'vum** or **incisu'rum,** G. Cloqueti. **G., inter-**

carot'id or **intercarot'icum**, anterior branches of the superior cervical ganglion ramify upon the external carotid artery and its branches, forming around each a delicate plexus, on the nerves composing which small ganglia are occasionally found, named, according to position, intercarotid, lingual, temporal, and pharyngeal. The intercarotid ganglion is made up of arterial glomeruli gathered into masses and surrounded by dense plexuses of nerves. **G., interos'seous**, ganglion of this nerve at the wrist. **G., interpedunc'ular**, small mass of gray fibres between peduncles of brain. **G., interver'tebral**, see *Vertebral nerves*. **G. intervertebra'le cap'itis**, G. of Gasser; in fœtal life, ganglionic mass afterward developed into superior ganglia of pneumogastric and glosso-pharyngeal. **G. jugula're glosso-pharynge'i** or **supe'rius**, G. of Ehrenritter. **G. jugula're va'gi**, G. of root of vagus nerve, **G. of Laumonier**, see *Carotid* or *Carotic nerve*. **G., lentic'ular**, ophthalmic g. **G., lin'gual**, see *Ganglion, intercarotid;* submaxillary ganglion. **G. lingua'le mol'le**, lingual ganglion. **G., lymphat'ic**, see *Lymphatic*. **G. maxilla're**, submaxillary ganglion. **G. of Meckel'**, spheno-palatine ganglion; inferior submaxillary ganglion. **G. of Meiss'ner**, see *Meissner*. **G. mesenter'icum supe'rius**, ganglion in solar plexus, near point of origin of artery of that name. **G. Müller'i**, G. of Ehrenritter. **G. nasa'le**, spheno-palatine g. **G., nasopal'atine**, G. Cloqueti; see *Naso-palatine ganglion*. **G. ner'vi glossopharynge'i supe'rius**, G. of Ehrenritter; jugular g.; petrous g. **G. ner'vi op'tici**, ganglionic layer of retina. **G. ner'vi vestib'uli**, small masses on vestibular nerve of ear. **G., ner'vous**, neuroma. **G. oliva're**, cervical (inferior) ganglion; G. of trunk of pneumogastric nerve. **G., ophthal'mic**, see *Ophthalmic ganglion*. **G., op'tic**, quadrigemina tubercula. **G., or'bitar**, G., ophthalmic. **G. o'ticum**, otic g. **G., petro'sal**, see *Petrous ganglion*. **G., pe'trous**, see *Petrous ganglion*. **G., pharynge'al**, see *G., intercarotid*. **G. pharynge'um mol'le**, pharyngeal g.; see *G., intercarotid*. **G. plexifor'me**, G. of Gasser. **G. of pneumogas'tric**, ganglionic structure in the pneumogastric as it passes through the foramen lacerum posterius. **G. postpyramida'le**, nucleus clavatus. **G. pter'ygo-palati'num**, spheno-palatine g. **G. rena'le**, mass of cells in solar plexus, near point of origin of renal artery. **G. ret'inæ**, delicate layer of large ganglion cells, with processes branching to optic nerve-fibres of internal molecular layer. **G. rhini'cum**, spheno-palatine ganglion. **G. of Ribes**, nervous ganglion upon the anterior communicating artery of the brain at the point of junction of the right and left trunks of the sympathetic. **G., sanguin'eous**, G., glandiform. **G. semiluna're**, G. of Gasser; ophthalmic ganglion. **G., sen'sory**, see *Sensory ganglia*. **G. sola're**, semilunar ganglion. **G., sphenoi'dal**, spheno-palatine ganglion. **G., sphenopal'atine**, see *Spheno-palatine*. **G., spi'nal**, see *Encephalon*. **G. spina'le in'fimum**, G. impar; see *Trisplanchnic nerve*. **G. spira'le**, ganglion Cortii. **G. splanch'nico-suprarena'le**, ganglion on small splanchnic nerve. **G. splanch'nicum**, ganglion on great splanchnic nerve; semilunar ganglion. **G. stella'tum**, first dorsal ganglion of sympathetic nerve. **G. sublingua'le**, submaxillary ganglion. **G., submax'illary**, see *Submaxillary*. **G. of the supe'rior larynge'al branch**, see *Pneumogastric nerves*. **G. supe'rius va'gi**, ganglion of root of vagus nerve. **G. supramaxilla're poste'rius**, occasional plexus on superior dental nerves. **G. supre'mum sympath'ici**, ganglion cervicale (superior). **G. tec'ti**, nucleus of gray matter in cerebellum, over roof of fourth ventricle. **G., tem'poral**, see *G., intercarotid*. **G. thora'cicum pri'mum**, G. cervicale (inferius). **G. thyroi'deum**, ganglion cervicale (medium); see *Trisplanchnic nerve*. **G. thyroï'deum supe'rius**, occasional ganglion situate above middle cervical ganglion. **G. transver'sum**, G. semilunare. **G. trun'ci va'gum**, G. of trunk of vagus. **G., vas'cular**, G., glandiform. **G., ver'tebral**, G. cervicale inferius; see *Trisplanchnic nerve*. **G. of Wris'berg**, cardiac ganglion.

Gan'glionary. Ganglionic.

Ganglionemphraxis, gan-gle-on-em-fraks'is (*ganglion, emphraxis*, obstruction). Obstruction of lymphatic glands.

Ganglion'ic. *Ganglionary, Gangliar, Gangliated.* Relating to ganglia; nerves are so called in the course of which ganglions are met with, as the greater part of the branches of the great sympathetic or trisplanchnic nerve, the posterior roots of the spinal nerves, etc. *Ganglionics* are agents affecting the ganglionic or great sympathetic system of nerves, as stimulants and sedatives. **G. ar'teries**, branches from trunks forming the circle of Willis, which furnish blood to the basal ganglia. **G. cel'lular lay'er**, layer of bulbus olfactorius, having nerve-cells resembling pyramidal cells of cortex cerebri. **G. col'umns of spi'nal cord**, see *Columns of spinal cord*. **G. lay'er**, outer layer is made up of strata of large, vertically oval nuclei, which are contained in bipolar spindle-shaped cells, which are prolonged into fibres; the outer layer consists of large nerve-cells, mostly spheroidal, each of which is connected below with nerve-fibres from adjacent layer. **G. nerve**, trisplanchnic nerve. **G. ner'vous sys'tem**, see *Trisplanchnic nerve*. **G. sali'va**, saliva excited by irritation of submaxillary ganglion.

Ganglioni'tis or **Gangliïtis**, gan-gle-e'tis. Inflammation of a nervous ganglion or of a lymphatic ganglion; adenitis. **G., mesenter'ic**, inflammation of the mesenteric glands; adenitis mesenterica. **G. periph-er'ica et medulla'ris**, cholera.

Gangliopathy, gan-gle-op'ath-e (*ganglion, pathos*, affection). Disease of the ganglionic nervous system; condition in which debility is associated with paralysis, hyperæsthesia, or dysæsthesia of the solar plexus and the central ganglia of the sympathetic system.

Gan'glium. Ganglion. **G. Gasse'ri**, ganglion of Gasser.

Gangræna, gan-gre'nah (*graino*, to gnaw or eat). Gangrene. **G. alope'cia**, alopecia. **G. ca'ries**, caries. **G. idiopath'ica**, senile gangrene. **G. neurot'ica**, gangrene following Reynaud's disease. **G. nosocomia'lis** or **nosocomio'rum**, hospital gangrene. **G. o'ris**, cancer aquaticus. **G. os'sis**, spina ventosa. **G. os'sium**, caries. **G. Pott'ii**, see *Gangrene*. **G. pulmo'num**, gangrenous inflammation of the lungs. **G. seni'lis**, gangrene of old people; see *Gangrene*. **G. sic'ca**, dry gangrene. **G. spha'celus** or **sponta'nea**, sphacelus. **G. tonsilla'rum**, cynanche maligna. **G. ustilagin'ea**, ergotism. **G. vagi'næ**, putrescency or gangrene of the vagina.

Gangrænescen'tia. Gangrænosis.

Gangræn'icus or **Gangræno'des.** Gangrenous or gangrenoid.

Gangrænoma, gan-gre-no'mah. Gangrenous growth.

Gangrænopsis, gan-gre-nop'sis (*gangræna, opsis*, countenance). Cancer aquaticus; gangrenous inflammation of the eyelids or cheek.

Gangrænosis, gan-gre-no'sis. State of being gangrenous or of becoming gangrenous.

Gangrænosus, gan-gre-no'sus. Gangrenous.

Gangrene, gan'green. Local death; privation of life or partial death of an organ. It is attended with a sudden diminution of feeling in the part affected; livid discoloration; detachment of the cuticle, under which a turbid fluid is effused; and with crepitation, owing to the disengagement of air into the areolar texture. When the part has become quite black, and incapable of all feeling, circulation, and life, it constitutes the second stage, or mortification, and is called sphacelus. Gangrene is frequently used synonymously with mortification, local asphyxia being the term employed for the condition in which the parts are in a state of suspended animation, and consequently susceptible of resuscitation. When the part is filled with fluid entering into putrefaction, the affection is called humid or moist gangrene; when it is dry and shrivelled, it constitutes dry gangrene, mummification. To this class belongs senile gangrene or spontaneous gangrene of old people, which rarely

admits of cure. Gangrene of any kind may be caused by violent inflammation, external injury (traumatic gangrene), contusion, a burn, congelation, the ligature of a large arterial trunk, mechanical obstruction to the return of blood (static gangrene), or by some inappreciable internal cause. **G., ca'seous,** caseation. **G., cir'cumscribed pul'monary,** localized gangrene generally involving the lower lobes of the lung at the periphery, due to traumatism or plugging up of blood-vessels. **G., decu'bital,** bed-sore. **G., dry,** see *Gangrene*. **G., embol'ic,** gangrene caused by an embolus or clot that interferes with the circulation of the blood. **G., ful'minant,** acute inflammatory gangrene. **G., hos'pital,** see *Hospital gangrene*. **G., hu'mid,** see *Gangrene*. **G. of the lungs,** gangrenous inflammation of the lungs. **G., moist,** see *Gangrene*. **G., pul'monary,** gangrenous inflammation of the lungs. **G., pulp'y,** hospital gangrene. **G., se'nile,** see *Gangrene*. **G., sponta'neous,** see *Gangrene*. **G., stat'ic,** see *Gangrene*. **G., symmet'rical,** Raynaud's disease. **G., traumat'ic,** see *Gangrene*.

Gangrenous, gan'gren-us. Affected with or relating to gangrene. **G. ero'sion of cheek,** cancer aquaticus. **G. stomati'tis,** see *Stomatitis gangrænosa*.

Gan'nal's solu'tion. Solution for preserving animal substances, made by dissolving ℥j of acetate of aluminium in f℥xx of water. It has been employed externally in parasitic skin diseases and as an antiseptic.

Gant'elet (F.) or **Gaunt'let** ([F.] *gant*, glove). Bandage enveloping the hand and fingers like a glove, made with a long roller about an inch broad, and applied so that the fingers are covered to their tips. The demigauntlet includes only the hand and base of the fingers. Both bandages are used in fractures and luxations of the fingers, burns of the hand, etc. See *Chirotheca*.

Gant's opera'tion. Operation for relief of ankylosis of the hip, consisting in section of the thigh-bone below the trochanter.

Gaol cachexia, jail kak-eks'e-ah. See *Cachexia*.

Gapes. Respiratory disease of fowls from presence of a parasite, *sclerostoma syngamus*.

Ga'ping. Yawning.

Gaps, cra'nial. Congenital fissure of the skull.

Garcinia cambogia (gar-sin'e-ah kam-bo'je-ah) or **cambogioïdes,** kam-bo-ge-o-e'dees (after Dr. L. Garcin, an English traveller, who described it). Ord. Guttiferæ. Tree of Ceylon and E. India, affording concrete juice similar to gamboge. **G. Celeb'ica,** species of E. and W. Indies; fruit is febrifuge. **G. flor'ida,** sangshihsee; grows in Asia; fruit is demulcent and refrigerant; leaves are emetic, stimulant, and diuretic. **G. gambo'gia,** G. cambogia. **G. grandiflo'ra,** similar in general and therapeutic properties to G. florida. **G. gummif'era** grows in India; exudes resin; said to have antispasmodic properties. **G. gut'ta,** G. cambogia, G. morella. **G. Hanbur'ii** or **Hanbur'yi,** Siamese and Cochin Chinese tree, the officinal source of gamboge in some pharmacopœias. **G. In'dica,** G. purpurea. **G. ko'la,** African tree; seeds are bitter, astringent, and stimulant. **G. Malabar'ica,** resin of this tree of Malabar is cathartic. **G. mangosta'na,** systematic name of the mangostan, mangoustan, mangostine, or mangosteen tree, mangostana; growing in abundance in Java and the Molucca Islands. The fruit, about the size of an orange, is eaten in almost every disorder. The dried bark is used medicinally in chronic diarrhœa, dysentery, and tenesmus, and a strong decoction in ulcerated sore throat. **G. morel'la,** this tree of the E. Indies and Ceylon is a source of an excellent quality of gambogia. **G. papil'la,** G. cambogia. **G. pedicella'ta,** G. Hanburii. **G. picto'ria,** Mysore gamboge tree; Indian tree from which gamboge is derived. **G. purpu'rea,** from this species concrete oil of mangosteen is obtained, called in India kokum butter. The oil is extracted from the fruit by boiling. It is used in India in cases of chaps. **G. Zeylan'ica,** G. cambogia.

Gar'den angel'ica. Angelica archangelica. **G. ar'tichoke,** Cynara scolymus. **G. cress,** peppergrass, leaves of Lepidium sativum; diuretic, expectorant, antiscorbutic. **G. en'dive,** Cichorium endivia. **G. mar'igold,** Calendula officinalis. **G. nastur'tium,** Tropœolum majus. **G. night'shade,** Solanum nigrum. **G. rad'ish,** Raphanus sativus. **G. sage,** Salvia officinalis. **G. sorrel,** Rumex acetosa. **G. spurge,** Euphorbium lathyris. **G. thyme,** Thymus vulgaris.

Garde'nia campanula'ta (after Dr. Alex. Garden of Carolina). Indian bush; berries are anthelmintic and purgative. **G. dumeto'rum,** Randia dumetorum. **G. flor'ida,** Japanese and Chinese plant, fruit of which is employed in phthisis, cutaneous affections, fevers, etc. The fruit of **G. grandiflo'ra,** which has the same habitat, has similar properties. **G. medicina'lis,** plant of Guinea; its fruit has the same effects as other fruits of the genus Gardeniaceæ. **G. radi'cans,** fruit has same properties as G. florida. **G. spino'sa,** Randia dumetorum. **G. suave'olens,** Brazilian plant; leaves and internal part of husk of fruit are tonic.

Garden'ic acid. See *Gardenin*.

Gardenin, gard'en-in. Yellow crystallized compound derived from Gardenia lucida by dissolving its resin in alcohol. When gardenin is treated with nitric acid, a red crystallized acid is obtained, *gardenic acid*, $C_{14}H_{10}O_6$.

Garetum, gar-a'tum. Posterior part of knee-joint.

Gargale (gar'gal-e), **Gargalis'mus,** or **Gar'galus** (*gargalizo*, to tickle). Titillation, irritation, itching; masturbation; animal magnetism.

Gargareon, gar-gah're-on. Uvula.

Gargarisatio, gar-gar-iz-ah'she-o. Gargling.

Gargarism, gar'gar-izm (*gargarizo*, to wash the mouth, to gargle, formed by onomatopœia). Gargle; liquid medicine intended to be retained in the mouth for a certain time, and to be thrown in contact with the uvula, velum pendulum, tonsils, etc.; the liquid being agitated by the air issuing from the larynx, the head being thrown back. Gargles are employed in various diseases of the mouth and throat, and are made of stimulants, sedatives, astringents, refrigerants, etc., according to circumstances. The process is termed gargling.

Gargarisma, gar-gar-iz'mah. Gargarism, gargle.

Gargarismus, gar-gar-iz'mus. Gargling.

Gargarization, gar-gar-i-za'shun. Gargling.

Gar'get. Phytolacca decandra. Inflammation of the udder of cows; form of distemper in hogs.

Gargina (gar-ge'nah) **balsam.** See *Dipterocarpus*.

Gargle, gar'g'l. See *Gargarism*.

Garg'ling. See *Gargarism*.

Gar'lic. Allium. **G., common** or **English,** Allium sativum. **G., hedge,** alliaria. **G., meadow,** Allium Canadense.

Gar'lock. Sinapis arvensis.

Garos'mus. Chenopodium vulvaria.

Garou (gar-oo') **bark.** Daphne gnidium.

Garretum, gar-ra'tum. Posterior portion of knee-joint.

Gar'rick fe'ver. See *Fever, Siddons*.

Gar'rod's thread test for uric acid. Five to six minims of acetic acid are added to ℥ij of blood-serum in a glass dish. When the fluids are thoroughly mixed a thread is introduced; if uric acid is present, crystallization will occur along the thread after a few hours.

Garrotte, gar-rot' (F.) (*garrotter*, to tie fast). Compressing bandage, tightened by twisting a small cylinder of wood, by which the arteries of a limb are compressed, for the purpose of suspending the flow of blood in cases of hemorrhage, aneurism, amputation, etc.

Garrulitas, gar-ru'lit-as (*garrio*, to chatter). Loquacity. **G. cun'ni** or **vul'væ,** audible discharge of flatus from the vagina.

Gar'rya Fremont'ii. *California shrub, Skunk-bush*, and, from its reputed antiperiodic properties, *Fever* or *Quinine bush*. Astringent, bitter, soluble alkaloid, called *garryine*, has been derived from it.

Gar'ryine. See *Garrya Fremontii*.

Gärt'ner, canals or **ducts of.** Excretory ducts of the Wolffian bodies disappear in the human female,

but in some of the lower animals, as the pig, they persist and receive this name.

Garu'ga or **Garu'ja pinna'ta.** Malabar plant, of genus Burseraceæ, leaves of which are used in diseases of the liver.

Garuleum bipinnatum, gar-u'le-um bip-in-nat'um. S. African plant, snakeroot, used as antidote to the bites of venomous serpents. It is also used in chest diseases, as asthma, and in affections in which free secretion from the mucous membrane of the bronchia is indicated. It is also diaphoretic and diuretic.

Ga'rum. Laxative pickle made by collecting the liquor flowing from salted and half-putrefied fish; formerly used as a condiment.

Gas. Air. Name once given to carbonic acid developed in the vinous fermentation; afterward it was appropriated to every permanently elastic fluid; that is, which preserves its aëriform state at all temperatures. Ultimately it was extended to all aëriform bodies. Non-permanent gases are generally termed vapors; they return to the liquid state when a portion of their caloric is abstracted. Permanent gases are numerous, and the principal ones may be divided with regard to their effects on the animal economy:

1. *Irrespirable gases.*	Ammoniacal gas, chlorohydric acid gas, deutoxide of nitrogen, nitrous acid gas, and chlorine.
2. *Negatively deleterious gases.*	Hydrogen, nitrogen, carbonic acid.
3. *Positively deleterious gases.*	Oxygen, protoxide of nitrogen, carburetted hydrogen, carbonic oxide, sulphuretted hydrogen, and arseniuretted hydrogen.

Some gases, as oxygen, are exciting; others, as azote, depressing; while others, again, as protoxide of nitrogen or laughing gas, produce singular effects.

Gas ammoniaca'le. Ammonia. **G. anima'le san'guinis,** gas sanguinis. **G. azo'ticum,** azote. **G. azo'ticum oxygena'tum,** nitrogen, gaseous oxide of. **G. cau'tery,** see *Cautery.* **G. hepat'icum,** hydrogen, sulphuretted. **G. hydroge'nium sulphure'tum,** hydrogen, sulphuretted. **G., intox'icating,** nitrogen, gaseous oxide of. **G., laugh'ing,** nitrogen, gaseous oxide of. **G. of the lungs,** gas, pulmonary. **G., marsh,** hydrogen, carburetted. **G., ni'trous, dephlogisticated,** nitrogen, gaseous oxide of. **G., ox'ygenated muriat'ic ac'id,** chlorine. **G., oxymuriat'ic ac'id,** chlorine. **G. palus'tre,** miasm, marsh. **G., par'adise,** nitrogen, gaseous oxide of. **G., pul'monary,** gas of the lungs; expired air, which contains, besides common air, an increase of carbonic acid, water, and some animal matter. **G. san'guinis** (gas of blood), halitus or vapor given off by freshly-drawn blood. **G., sew'er,** mixture of numerous deleterious and other gases, in which disease-producing micro-organisms may exist and be disseminated. **G. sul'phuris,** sulphurous acid.

Gas'eous or **Gaz'eous.** Relating or appertaining to, or having the form of, gas.

Gas'es, irres'pirable. Gases whose entrance into the larynx give rise to reflex spasm of the glottis; their presence in the trachea causes inflammation and death.

Gas'kell's clamp. Clamp for compressing the heart, used in experiments on that organ, intended to hinder impulses from being conveyed from one part of the heart to the other, so that the pulsations of the auricles and ventricles may be separately registered.

Gasp'ing. See *Anhelation.*

Gasse'rian gan'glion. See *Ganglion of Gasser.*

Gas-sphyg'moscope. Apparatus by which arterial movement of the pulse is indicated on the flame of a lamp.

Gas'ter (belly). Uterus, abdomen, stomach. **G. mus'culi,** belly of muscle; see *Muscle.*

Gasteralgia, gas-ter-al'je-ah. Gastralgia.

Gasterangemphraxis (gas-ter-an-jem-fraks'is), **Gasterangiemphrax'is,** or **Gasteremphrax'is** (*gaster, ancho,* to strangle, *emphrasso,* to obstruct). Obstruction of the pylorus; obstruction or congestion of the vessels of the stomach.

Gasterasthenia, gas-ter-as-then-e'ah (*gaster, asthenia,* debility). Debility of the stomach.

Gasterataxia, gas-ter-at-aks'e-ah (*gaster, ataxia,* irregularity). Gastric disorder, impediment, or weakness; embarras gastrique. **G. aquo'sa,** softening of the coats of the stomach, and in some parts induration, abscess, etc.

Gastereche'ma or **Gastrechema,** gas-trek-a'mah (*gaster, echema,* sound). Sound heard on auscultating or percussing the region of the stomach.

Gasteremphraxis, gas-ter-em-fraks'is (*gaster, emphraxis,* obstruction). Gasterangemphraxis.

Gasterhysterotomy, gas-ter-his-ter-ot'o-me (*gaster, hustera,* uterus, *tome,* section). Operation for opening the womb by section of the abdomen. Laparohysterotomy.

Gaste'ria. Aloe.

Gas'teric. Gastric.

Gasterohysterotomy (gas-tur-o-his-ter-ot'o-me) or **Gasterysterotomy,** gas-ter-is-ter-ot'o-me. Gasterhysterotomy.

Gastradenitis, gas-trad-en-e'tis. Gastro-adenitis.

Gastræmia, gas-tre'me-ah (*gastro, haima,* blood). Hyperæmia of the stomach.

Gas'tral. Gastric.

Gastral'gia (*gastro, algos,* pain). Cardialgia; pain in the stomach or in the gastric region; gastrodynia.

Gastranabole, gas-tran-ab'o-la (*gaster, anabole,* throwing up). Bringing up of contents of stomach by vomiting or at pleasure, as in rumination.

Gastraneu'ria (*gaster, neuron,* nerve). Want of tone or action of the nerves of the stomach.

Gastraneurysma, gas-tran-u-riz'mah (*gastro, aneurusma,* dilatation). Aneurism of the stomach; dilatation of the stomach.

Gastrangemphraxis, gas-tran-jem-fraks'is. Gasterangemphraxis.

Gastrataxia, gas-trat-aks'e-ah. Gasteratáxia.

Gastratrophia, gas-trat-rof'e-ah (*gastro, atrophia,* wasting). Atrophy of the stomach.

Gastreche'ma. Gasterechema.

Gastrecphlogia, gas-trek-flo'ge-ah (*gaster, ekphlogosis,* setting on fire). Inflammation of the stomach; variola gastrica.

Gastrec'tasis or **Gastrectasia,** gas-trek-tah'ze-ah (*gastro, ektasis,* dilatation). Dilatation of the stomach.

Gastrec'tomy (*gaster, ektome,* excision). Excision of a portion of the stomach.

Gastrelcobrosis, gas-trel-ko-bro'sis (*gastro, helkos,* ulcer, *brosis,* eating). Corrosion and perforation of the stomach.

Gastrelcosis, gas-trel-ko'sis (*gastro, helkosis,* ulceration). Ulceration of the stomach. When accompanied with hectic, it constitutes gastrophthisis or gastrophthoë. See *Ulcus perforans.*

Gastrelytrotomia, gas-trel-it-ro-tom'e-ah. Laparoelytrotomy. See *Cæsarean section.*

Gastremphraxis, gas-trem-fraks'is. Gasteremphraxis.

Gastrencephaloma, gas-tren-sef-al-o'mah (*gastro, enkephalos,* brain, *oma,* tumor). Encephaloid of the stomach.

Gastrenchyta, gas-tren'kit-ah (*gastro, en, chuo,* to pour). Stomach-pump.

Gastrenteralgia, gas-tren-tur-al'je-ah (*gastro, enteron,* intestine, *algos,* pain). Pain or neuralgia in the stomach and bowels.

Gastrenteric, gas-tren-ter'ik. Gastro-enteric.

Gastrenteritic. Gastro-enteritic.

Gastrenteritis, gas-tren-tur-e'tis. Gastro-enteritis.

Gastrenteromala'cia or **Gastrenteromalaxis,** gas-tren-tur-o-mal-aks'is (*gastro, enteron,* intestine, *malakia,* softening). Softening of the stomach and intestines.

Gastrepatic, gas-trep-at'ik. Gastrohepatic.

Gastrepatitis, gas-trep-at-e'tis (*gastro, hepatitis,* inflammation of the liver). Inflammation of the stomach and liver.

Gastrepiploic, gas-trep-ip'lo-ik. Gastroepiploic.

Gastrerethis'ia or **Gastrerethis'mus** (*gastro, ere-*

thizo, to irritate). Irritability or irritation of the stomach.

Gastreupeptic, gas-tru-pep'tik (*gastro*, *eu*, well, *peptos*, digestible). Promoting digestive action.

Gas'tric. Belonging or relating to the stomach. **G. ac'ids**, see *Gastric juice*. **G. ar'teries**, these are three in number: arteria gastro-epiploica dextra, a. gastro-epiploica sinistra, and a. coronaria ventriculi. **G. catarrh'**, gastritis. **G. catarrh', chron'ic**, pyrosis. **G. cri'ses**, see *Crisis*. **G. fe'ver**, fever associated with disorders of stomach; typhoid fever. **G. fis'tula**, abnormal communication between stomach and external surface of body, through the abdominal walls. **G. flux**, gastrorrhœa. **G. fol'licles**, gastric glands. **G. glands**, tubular glands having outlet on lining membrane of stomach. **G. im'pulse**, see *Heart*. **G. influen'za**, see *Influenza*. **G. juice**, fluid secreted from the mucous membrane of the stomach. As met with, it is a mixture of the fluids secreted by that organ with those of the supradiaphragmatic portion of the alimentary canal. Owing to such admixture the most contrary properties have been assigned to it. It was found by the author to contain, in man, chlorohydric and acetic acids, associated with a ferment, pepsin. Gastric juice contains in every 1000 parts, water, 992.60; pepsin, 3.04; free hydrochloric acid, 2.20; alkaline chlorides, 2.0; phosphates of calcium, magnesium, and iron, .16. **G. juice, artific'ial**, digestion effected outside the stomach by admixture of materials like those of the gastric juice or by the gastric juice itself. **G. lymphat'ic glands**, glands along curvatures of stomach. **G. nerves**, two cords or branches by which the pneumogastric nerves terminate, and which descend on the anterior and posterior surfaces of the stomach. Filaments of the great sympathetic, accompanying the gastric vessels. **G. omen'tum**, epiploön, gastrocolic. **G. plex'us**, nervous network formed by the solar plexus, accompanying coronary artery of the stomach, and passing along the lesser curvature of the stomach, to which it gives branches. **G. si'phon**, see *Siphon, gastric*. **G. veins** follow the same distribution as the arteries, and open into the vena porta abdominis.

Gastricism, gas'tris-izm. Theory that refers all, or almost all, diseases to accumulation of saburræ in the digestive passages; acute gastritis; indigestion.

Gastricity, gas-tris'it-e. Disorder of stomach; indigestion.

Gastricolous, gas-trik'o-lus (*gastro*, *colo*, to inhabit). Having a habitat in the stomach; a parasite, for example.

Gastril'oquist or **Gastriloquus**, gas-tril'o-kwus. Ventriloquist; engastrimyth.

Gastrimargia, gas-trim-ar'je-ah (*gastro*, *margoo*, to rage). Gluttony.

Gastrimargus, gas-trim-ar'gus (same etymon). A glutton.

Gastrismus, gas-triz'mus. Gluttony. See *Saburra*.

Gastritic, gas-trit'ik. Relating to gastritis.

Gastritis, gas-tre'tis. Inflammation of the stomach; gastric catarrh; disease characterized by pyrexia, great anxiety, heat, and pain in the epigastrium, increased by taking anything into the stomach, vomiting, and hiccough. It may be seated either in the peritoneal or mucous coat, most frequently in the latter—*esogastritis*, *endogastritis*, *gastromycoderitis*, *gastritis mucosa*—being excited directly by acrid ingesta. Various forms of dyspepsia have been supposed by some to be nothing more than chronic gastritis or endogastritis. Gastric catarrh, a common form of gastritis, marked by active congestion of the organ with excessive secretion of mucus, is often produced by excess in eating or drinking. **G., arthrit'ic**, rheumatism or gout of the stomach. **G. bacilla'ris**, G. caused by bacilli. **G., croup'ous** or **diphtherit'ic**, gastritis with formation of false membrane; may occur sometimes as an extension of pharyngeal diphtheria. **G., follic'ular** or **gland'ular**, inflammation of glands of stomach, especially a form met with in marasmus of old persons; yellow spots of adipose matter appearing on the lining membrane of the stomach. **G., gland'ular**, see *Gastro-adenitis*. **G., mam'millated**, chronic form of gastritis in which the lining membrane of the stomach is mammillated, some of the glands being dilated and degenerated, while others are atrophied. **G. membrana'cea**, G., diphtheritic. **G. myco'tica**, gastritis caused or accompanied by fungi in the stomach. **G. parasita'ria** or **parasit'ica**, gastritis caused by parasites in the stomach, as worms, etc. **G. parenchymato'sa**, G., glandular. **G., phleg'monous**, acute inflammation of the submucous connective tissue of the stomach, usually accompanied with fibrinous exudation and ulceration and abscess, and gradually invading the muscular and peritoneal coats. It sometimes occurs in typhus fever, blood-poisoning, etc. **G. prolif'era**, gastritis with localized patches of hypertrophied mucous membrane; usually a sequence of prolonged alcoholism; sometimes these patches appear to be warty prominences, and the condition is then called *G. verrucosa*. **G. purulen'ta** or **submucos'a**, G., phlegmonous. **G., sup'purative**, G., phlegmonous. **G., toxic**, gastritis from poison that has been swallowed. **G. verruco'sa**, see *G. prolifera*.

Gas'tro (*gaster*, belly or stomach). In composition, the stomach or belly.

Gastro-adenitis, gas-tro-ad-en-e'tis. Condition of the stomach, especially after acute poisoning by phosphorus or arsenic, in which the gastric glands are inflamed and enlarged, and the epithelial cells filled with a finely granular mass, or at a later stage fatty granules.

Gastro-arctia, gas-tro-ark'te-ah (*gastro*, *arcto*, to constrict). Narrowness or constriction of the stomach.

Gastro-arthritic, gas-tro-arth-rit'ik (*gastro*, *arthron*, joint). Relating to gout of the stomach, or to inflammation of the stomach with inflammation of a joint. **G.-a. atax'ia**, dyspepsia. **G.-a. aton'ia**, dyspepsia. **G.-a. bronchi'tis**, fever, adenomeningeal. **G.-a. enteri'tis, follic'ular**, dothienenteritis; see *Typhus*.

Gastro-arthritis, gas-tro-arth-re'tis. Simultaneous inflammation of the stomach and of a joint; gout.

Gastro-ataxia, gas-tro-at-aks'e-ah. Debility or disorder of the stomach; dyspepsia.

Gastro-aton'ia. Atonic dyspepsia; condition of want of tone in the stomach.

Gastroblennozemia, gas-tro-blen-no-za'me-ah. Abnormal secretion of mucus in the stomach.

Gastrobronchitis, gas-tro-bron-ke'tis. Gastritis and bronchitis combined.

Gastrobrosis, gas-tro-bro'sis (*gastro*, *brosis*, act of gnawing). Corrosion and perforation of the stomach. **G. ulcero'sa.** Destruction and perforation of the coats of the stomach by ulceration.

Gastrocatharsis, gas-tro-kath-ar'sis. Clearing out of the stomach by bringing up its contents by vomiting or at pleasure, as in rumination.

Gastrocele, gas-tro-se'le (Eng. gas'tro-seel) (*gastro*, *kele*, tumor). Hernia of the stomach; hernia formed by the stomach through the upper part of the linea alba; see *Epigastrocele*.

Gastrocephalitis, gas-tro-sef-al-e'tis (*gastro*, *kephale*, head). Inflammation of the stomach and brain, a concomitant of certain malignant fevers.

Gastrocholecystitis, gas-tro-kol-e-sis'te-tis (*gastro*, *chole*, bile, *cystitis*, inflammation of the bladder). Gastritis with inflammation of the gall-bladder.

Gastrocholia, gas-tro-kol'e-ah (*gastro*, *chole*, bile). Bilious derangement of the stomach.

Gastrocholosis, gas-tro-kol-o'sis (*gastro*, *chole*, bile). Gastric or bilious fever.

Gastrocne'me or **Gastrocnemia**, gas-trok-na'me-ah (*gastro*, *kneme*, leg). Calf of the leg.

Gastrocnemii, gas-trok-na'me-e. Name of the two fleshy masses occupying the posterior and superficial part of the leg, gemelli or gemini, and constituting the gastrocnemius externus of English anatomists. They are distinguished into internal and external, distinct above, but united at their inferior extremity. They are long, flat, and thick, and arise—the former from the posterior part of the outer condyle of the femur; the latter, from the posterior part of the inner condyle of the same bone. The aponeurosis, uniting

these muscles below, joins with that of the solaris, and forms with it a large tendon, *Tendo Achillis*, which is inserted at the posterior part of the calcaneum. These muscles extend the foot on the leg and the leg on the foot. They can also bend the leg and the thigh reciprocally on each other. The gastrocnemius and soleus constitute, together, the triceps suræ, triceps suralis, or triceps extensor pedis. See *Soleus*.

Gastrocne'mium. Calf of the leg.

Gastrocne'mius. See *Gastrocnemii*.

Gastrocœliac (gas-tro-se'le-ak) or **Gastrocœ'lic.** Cœliac.

Gastrocolic, gas-tro-kol'ik. Belonging to the stomach and colon. **G. omen'tum**, gastrocolic epiploon.

Gastrocol'ica. Cardialgia; gastric colic.

Gastrocolitis, gas-tro-ko-le'tis (*gastro*, *kolon*, colon). Inflammation of the stomach and colon; dysentery.

Gastrocolpotomy, gas-tro-kol-pot'o-me (*gastro*, *kolpos*, vagina, *tome*, section). Form of Cæsarean section in which an opening is made through the vagina into the uterus; laparo-elytrotomy. See *Cæsarean section*.

Gastrocystis, gas-tro-sist'is (*gastro*, *kustis*, bladder). Blastosphere.

Gastrocystitis, gas-tro-sist-e'tis. Inflammation of the stomach and bladder.

Gastrodermatitis (gas-tro-dur-mat-e'tis) or **Gastrodermitis**, gas-tro-dur-me'tis (*gastro*, *derma*, skin). Inflammation of the skin caused by or associated with disease of the stomach.

Gastrodermis, gas-tro-dur'mis (*gastro*, *derma*, skin). Epithelium of the alimentary canal from the throat to the anus.

Gastrodiabrosis, gas-tro-de-ab-ro'sis. Corrosion and perforation of the stomach.

Gastrodialysis, gas-tro-de-al'is-is (*gastro*, *dialusis*, dissolution). Solution of continuity of the coats of the stomach.

Gastrodiatrema, gas-tro-de-at-ra'mah (*gastro*, *dia*, through, *trema*, perforation). Perforation of the coats of the stomach.

Gastrodiatresis, gas-tro-de-at-ra'sis (same etymon). Production or formation of perforation through the coats of the stomach.

Gastrodidymus (gas-tro-did'im-us) or **Gastrod'ymus** (*gastro*, *didumos*, twin). Monstrosity in which twins are united by the abdomen.

Gastrodisc, gas'tro-disk (*gastro*, *diskos*, disk). Disk-like. Appearance of the innermost germ-layer of the embryo on the inner surface of the external germ-layer.

Gastroduodenal, gas-tro-du-o-de'nal. Relating to the stomach and duodenum. **G. ar'tery**, branch of hepatic artery to the duodenum and greater curvature of the stomach.

Gastroduodenitis, gas-tro-du-o-den-e'tis. Inflammation of the stomach and duodenum. See *Gastroenteritis*.

Gastroduodenocholecystitis, gas-tro-du-o-de-no-kol-e-sis-te'tis. Inflammation of the stomach, duodenum, and gall-bladder.

Gastroduodenopyra, gas-tro-du-o-den-op'ir-ah (*gastro*, *duodenum*, *pur*, fire or fever). Adenomeningeal fever; pituitary fever.

Gastroduodenostomy, gas-tro-du-o-den-os'to-me (*gastro*, *duodenum*, *stoma*, mouth). Operation for establishing an artificial opening between the stomach and the duodenum; a form of gastroduodenal fistula.

Gastroduodenotyphus, gas-tro-du-o-de-no-ti'fus. Typhus fever.

Gastrodyme, gas'tro-dime. Gastrodidymus.

Gastrodyne, gas-trod'in-a (*gastro*, *odune*, pain). Cardialgia; gastralgia; gastrodynia.

Gastrodyn'ia. Cardialgia; gastralgia. **G. flatulen'ta**, colica flatulenta.

Gastrodysneuria, gas-tro-dis-nu're-ah (*gastro*, *dys*, with difficulty, *neuron*, nerve). Disorder of the nervous apparatus of the stomach.

Gastro-ectas'ia or **Gastro-ectasis**, gas-tro-ek'tas-is (*gastro*, *ektasis*, dilatation). Dilatation of the stomach.

Gastro-elytrotomy, gas-tro-el-it-rot'o-me (*gastro*, *elutron*, vagina, *tome*, section). Laparo-elytrotomy. See *Cæsarean section*.

Gastro-encephalitis, gas-tro-en-sef-al-e'tis. Inflammation of the stomach accompanied with cerebral symptoms.

Gastro-encephalo'ma. Encephaloma of the stomach.

Gastro-enteral'gia (*gastro*, *enteron*, intestine, *algos*, pain). Pain in the stomach and intestine.

Gastro-enteric (gas-tro-ent-er'ik) or **Gastrenter'ic** (*gastro*, *enteron*, intestine). Relating to the stomach and intestine.

Gastro-enteritic (gas-tro-ent-er-it'ik) or **Gastrenterit'ic** (*gastro*, *enteron*, intestine). Relating to gastro-enteritis.

Gastro-enteritis (gas-tro-en-ter-e'tis), **Gastrenteri'tis**, or **Gastro-ectasis**, gas-tro-ek'tas-is. Inflammation of the stomach and small intestine. Gastro-enteric disease. According to Broussais, essential fevers are forms of gastro-enteritis. Membranous inflammation of the bowels in veterinary medicine. **G.-e., follic'ular**, typhoid fever. **G.-e. muco'sa**, inflammation of the mucous membrane of the stomach and intestines. **G.-e. nervo'sa**, typhoid fever.

Gastro-enterocoli'tis. Inflammation of the stomach, small intestine, and colon.

Gastro-entero-meningitis, gas-tro-en'ter-o-men-in-je'tis (*gastro*, *enteron*, intestine, *meninx*, membrane). Gastro-enteritis complicated with meningitis, and perhaps phlebitis and carditis.

Gastro-enteropathy, gas-tro-ent-er-op'ath-e. Gastro-intestinal disease.

Gastro-enterostomy, gas-tro-ent-er-os'to-me (*gastro*, *enteron*, intestine, *stoma*, mouth). Operation for creating fistulous communication between the stomach and intestine.

Gastro-enterotomy, gas-tro-ent-er-ot'o-me (*gastro*, *enteron*, intestine, *tome*, incision). Operation of opening the stomach and bowel through the abdominal wall.

Gastro-epiploic, gas-tro-ep-ip-lo'ik. Relating to the stomach and epiploon. **G.-e. ar'teries**, gastrica inferior arteries, are two in number, right and left. The right, also called gastrohepatic, gastrica inferior dextra, gastro-epiploica dextra, is furnished by the hepatic artery, descends behind the pylorus, and passes from right to left along the great curvature of the stomach. It gives branches to the pancreas, duodenum, stomach, omentum majus, and terminates by anastomosing with the gastro-epiploica sinistra, gastrica sinistra, or inferior sinistra. This—the left—arises from the splenic artery, and passes from left to right along the great curvature of the stomach, distributing branches more particularly to the stomach and omentum majus. It terminates by joining the right gastro-epiploic. **G.-e. gan'glions** or **glands** are the lymphatic ganglions or glands, situate toward the great curvature of the stomach, between the two anterior laminæ of the omentum majus. **G.-e plex'us**, branches of the hepatic plexus distributed to the left gastro-epiploic artery. **G.-e. veins** are distinguished, like the arteries, into the right and left. They empty themselves, the former into the superior mesenteric, the latter into the splenic vein.

Gas-tro-epiplo'ica dex'tra. Right gastro-epiploic artery. **G.-e. sinis'tra**, left gastro-epiploic artery.

Gastrogen'ital. Relating to the stomach and genital organs.

Gastrohæmorrha'gia. Hemorrhage from the stomach; vomiting of blood.

Gastrohepatic, gas-tro-hep-at'ik (*gastro*, *hepar*, the liver). Relating to the stomach and liver. **G. ar'tery**, occasional artery, being the common trunk of the gastric and hepatic arteries. **G. omen'tum**, epiploon, gastrohepatic.

Gastrohepatitis, gas-tro-hep-at-e'tis (*gastro*, *hepar*, liver). Simultaneous inflammation of the stomach and liver.

Gastrohypernervia, gas-tro-hip-er-nur've-ah. Morbidly increased activity of the nerves of the stomach.

Gastrohyperneu'ria. Morbidly increased activity of the nerves of the stomach.

Gastrohyponervia, gas-tro-hip-o-nur've-ah. Want of tone or nervous force of the stomach.

Gastrohyponeu'ria. Want of tone or nervous force of the stomach.

Gastrohysterectomy, gas-tro-his-tur-ek'to-me (*gastro, ektome,* excision). Excision of a portion of the stomach; cæsarean section.

Gastrohysteropexy, gas-tro-his'ter-o-pex-e. Operation for attachiug the uterus by suture to the abdominal wall for relief of displacements of that organ.

Gastrohysterotomy, gas-tro-his-ter-ot'o-me (*gastro, hustera,* uterus, *tome,* section). Laparo-hysterotomy; Cæsarean section.

Gastro-intes'tinal. Gastro-enteric.

Gastro-jejunostomy, gas-tro-jej-u-nos'to-me (*gastro, jejunum, stoma,* mouth). Operation for making fistulous communication between the stomach and jejunum.

Gastrolienal, gas-tro-li'en-al (*gastro, lien,* spleen). Gastrosplenic.

Gastrolith, gas'tro-lith (*gastro, lithos,* stone). Calculus in the stomach.

Gastrolithiasis, gas-tro-lith-e'as-is. Formation of concretions or gastroliths in the stomach.

Gastrology, gas-trol'o-je (*gastro, logos,* description). Description or physiology of the stomach.

Gastromalacia, Gastromalaxia (gas-tro-mal-aks'-e-ah), or **Gastromalacosis,** (*gastro, malakia,* softening). Softening of the stomach; may be induced also after death by action of gastric secretions.

Gastroman'tis (*gastro, mantis,* diviner). Engastrimyth.

Gastromeles (gas-trom'el-ees) or **Gastrom'elus** (*gastro, melos,* limb). Monster with one or more supernumerary limbs on the abdomen.

Gastromelia, gas-tro-mel'e-ah. Condition of gastromelus.

Gastromenia, gas-tro-men'e-ah (*gastro, men,* month). Vicarious menstruation from the stomach.

Gastromeningitis, gas-tro-men-in-je'tis (*gastro, meningitis,* inflammation of membrane). Gastric fever.

Gastrometri'tis. Simultaneous inflammation of stomach and uterus.

Gastrometrotomy, gas-tro-met-rot'o-me (*gastro, metra,* uterus, *tome,* section). Laparo-hysterotomy; Cæsarean section.

Gastromyce'tes. Gasteromycetes.

Gastromycoderis, gas-tro-mik-od'er-is (*gastro, mukos,* mucus, *deris,* skin). Lining or mucous membrane of the stomach.

Gastromycoderi'tis (same etymon). Inflammation of the mucous membrane of the stomach.

Gastromyelo'ma (*gastro, muelos,* marrow). Gastro-encephaloma.

Gastronephritis, gas-tro-nef-re'tis. Gastritis with nephritis.

Gastronesteostomy, gas-tro-nes-te-os'to-me. (*gastro, nestis,* jejunum, *stoma,* mouth). Gastrojejunostomy.

Gastroneu'ria or **Gastronervia,** gas-tro-nur've-ah. Nervous action; condition or influence of the stomach.

Gastronosus, gas-tron'os-us (*gastro, nosos,* disease). Gastropathy.

Gastronusus, gas-tro-nu'sus (*gastro, nosos,* disease). Gastropathy.

Gastro-œsophagitis, gas-tro-e-sof-aj-e'tis. Inflammation of the stomach and œsophagus.

Gastro-omen'tal. Relating to stomach and omentum, as gastro-omental arteries, gastro-epiploic arteries.

Gastropancrea'tic. Relating to the stomach and pancreas, as gastro-pancreatic ligament, peritoneal fold from pyloric orifice of stomach to anterior part of pancreas.

Gastropancreatitis, gas-tro-pan-kre-at-e'tis. Gastritis with pancreatitis.

Gastroparal'ysis. Paralysis of the stomach.

Gastroparietal, gas-tro-par-i'et-al (*gastro, paries,* wall). Relating to the wall of the stomach or of the abdomen covering that organ.

Gastrop'athy or **Gastropathia,** gas-tro-path-e'ah (*gastro, pathos,* disease). Disease of the stomach.

Gastropericarditis, gas-tro-per-e-kar-de'tis. Gastritis associated with pericarditis.

Gastroperiodyn'ia (*gastro, peri,* around, *odune,* pain). Violent periodical neuralgic pain at the pit of the stomach. *Sool* of India.

Gastroperitoni'tis. Simultaneous inflammation of stomach and peritoneum.

Gastropharyngitis, gas-tro-far-in-je'tis. Gastritis associated with pharyngitis.

Gastrophrenic, gas-tro-fren'ik (*gastro, phren,* diaphragm). Belonging to the stomach and diaphragm. **G. lig'ament,** reflection of the peritoneum descending from the inferior surface of the diaphragm to the cardia.

Gastrophthalmia, gas-trof-thal'me-ah. See *Ophthalmia gastrica.*

Gastrophthisis (gast-tro-te'sis) or **Gastroph'thoe,** (*gastro, phthio,* to waste away). See *Gastrelcosis.* Emaciation or wasting away from disease of the abdomen.

Gastroplegia, gas-tro-plej'e-ah (*gastro, plege,* stroke). Paralysis of the stomach.

Gastroplethora, gas-tro-pleth-o'rah. Plethora or congestion of the stomach.

Gastropleuritis, gas-tro-plu-re'tis. Gastritis associated with pleurisy.

Gastropneumonia, gas-tro-nu-mo'ne-ah. Pneumonia with gastric complications; gastritis associated with pulmonary symptoms.

Gastropneumonic, gas-tro-nu-mon'ik. Relating to the stomach and lung; pneumogastric.

Gastropyloric, gas-tro-pi-lor'ik. Relating to the stomach and pylorus.

Gastroptosis, gas-tro-to'sis (*gastro, ptosis,* falling). Falling or dragging down of the stomach.

Gastropul'monary. Relating to the stomach and lungs; as gastropulmonary fistula, an artificial communication between the stomach and lungs; pneumogastric.

Gastropyra, gas-trop'ir-ah (*gastro, pur,* fever). Gastric fever.

Gastropyr'etus. Gastric fever.

Gastrorrhagia, gas-tror-rhaj'e-ah (*gastro, rhegnumi,* to break forth.) Hemorrhage from the stomach; vomiting of blood.

Gastror'raphy, Gastror'aphy, Gastror'rhaphy, or **Gastrorrhaphe,** gas-tror'raph-e (*gastro, rhaphe,* suture). Suture used for uniting penetrating wounds of the stomach or abdomen, or gastric fistula of abdomen, when too extensive or too unequal to be kept in contact by position, adhesive plaster, or appropriate bandages. Interrupted and quilled sutures are those chiefly employed. Operation for relief of gastric fistula.

Gastrorrhexis, gas-tror-rheks'is (*gastro, rhexis,* rupture). Rupture of the stomach; corrosion and perforation of the stomach.

Gastrorrhœa, gas-tror-rhe'ah (*gastro, rheo,* to flow). Gastric catarrh or flux. Increased or excessive secretion of mucus from the lining membrane of the stomach. Cœliac flux.

Gastrosacchorrhœa (gas-tro-sak-or-rhe'ah) or **Gastrosuccorrhœa,** gas-tro-suk-or-rhe'ah. Excessive secretion or flow of gastric juice.

Gastroschisis, gas-tros'kis-is (*gastro, schisis,* fissure). Fissure of the wall of the abdomen.

Gastroscirrhus, gas-tro-skir'rhus. Scirrhous induration or cancer of the stomach.

Gastroscope, gas'tro-skope (*gastro, skopeo,* to examine). Instrument for viewing, by reflected light, the interior of the stomach.

Gastroscopy, gas-tros'ko-pe. Examination of the stomach or abdomen as a means of diagnosis. Examination with a gastroscope.

Gastroseisis (*gastro, seisis,* skaking). Concussion of the stomach.

Gastro'ses. Generic name for diseases seated in the stomach.

Gastrospasmus, gas-tro-spaz'mus. Spasm or cramp of the stomach.

Gastrosplenic, gas-tro-splen'ik (*gastro, splen,* the

spleen). Relating to the stomach and spleen. **G. ar'teries,** arteriæ gastricæ breves. **G. lig'ament** or **omen'tum,** peritoneal fold between the fundus of the stomach and the covering spleen. **G. vein,** splenic vein.

Gastrosplenitis, gas-tro-splen-e'tis. Inflammation of the stomach and spleen.

Gastrospongio'ma. Fungosity of the stomach.

Gastrostenosis (*gastro, stenos,* contracted). Stricture of the stomach. **G. cardi'aca** et **pylor'ica,** narrowness of the orifices of the stomach, usually from cancer.

Gastrostomy, gas-tros'to-me (*gastro, stoma,* mouth). Operation for making a fistulous opening into the stomach through the wall of the abdomen. See *Sectio abdominalis.*

Gastrothoracic, gas-tro-thor-as'ik. Relating to the stomach and thorax.

Gastrothoracodidymus, gas-tro-tho-rak-o-did'im-us (*gastro, thorax, didumos,* twin). Double monster united at the thorax and abdomen.

Gastrotomy, gas-trot'o-me (*gastro, tome,* section). Several different operations have been so called, as Cæsarean section, incision into the abdomen for removal of internal strangulation or volvulus, to remove tumors, or to reduce hernia; laparotomy, abdominal section, an opening made in the stomach to remove a foreign body from it. Sometimes synonymous with gastrostomy.

Gastrotrachelotomy, gas-tro-trak-el-ot'o-me (*gaster, trachelos,* neck, *tome,* incision). Opening of the uterus through the abdomen for delivery of fœtus by incision through the cervix uteri.

Gastrotubotomy, gas-tro-tu-bot'o-me (*gastro, tuba,* tube, *tome,* section). Hybrid term for operation of opening the Fallopian tube through an abdominal incision; laparosalpingotomy.

Gastrox'ia or **Gastroxynsis,** gas-trox-in'sis (*gastro, oxus,* acid). Dyspepsia attended with excessive acidity, nausea, or vomiting, and pain.

Gastroxytes, gas-trox'it-ees. Gastroxia. Larval form of animals in scale higher than protozoa.

Gastrula, gas'tru-lah (small stomach). Gastrule. Period in animal development in which it is composed of a small sac made up of two layers of cells, this sac or cavity being the primitive alimentary canal.

Gastrulation, gas-tru-la'shun. Formation and development of gastrula.

Gastrypalgia, gas-trip-al'je-ah (*gastro, hupo,* under, *algos,* pain). Slight gastralgia.

Gastrypectasia (gas-trip-ek-tah'ze-ah) or **Gastrypectasis,** gas-trip-ek'tas-is (*gastro, hupo,* under, *ektasis,* dilatation). Slight dilatation or distending of the stomach.

Gastryperneuria, gas-trip-er-nu're-ah (*gastro, huper,* in excess, *neuron,* nerve). Morbidly increased activity of the nerves of the stomach.

Gastryperpathia, gas-trip-er-path-e'ah (*gastro, huper,* over, *pathos,* disease). Severe disease of the stomach.

Gastryponeuria, gas-trip-o-nu're-ah (*gastro, huper,* under, *neuron,* nerve). Want of tone or nervous force of the stomach.

Gastrypopathia, gas-trip-o-path-e'ah (*gastro, hupo,* under, *pathia,* disease). Slight affection of the stomach.

Gastryporrhagia, gas-trip-or-rhaj'e-ah (*gastro, hupo,* under, *rhage,* flow). Slight gastrorrhagia.

Gastryporrhœa, gas-trip-or-rhe'ah (*gastro, hupo,* under, *rheo,* to flow). Slight gastrorrhœa.

Gastrypostenosis, gas-trip-o-sten-o'sis (*gastro, hupo,* under, *stenosis,* narrowness). Slight narrowness or constriction of the stomach.

Gastrysterotomy, gas-tris-ter-ot'o-me. Laparohysterotomy; gastro-hysterotomy.

Gath'ered. In condition of abscess. **G. breast,** see *Mastitis.*

Gath'ering. Abscess, suppuration.

Gau'dia fœ'da (foul enjoyments). Masturbation.

Gaultheria, gaul-the're-ah (after Dr. Gaulther of Quebec). *Mountain tea, Partridge berry, Berried tea, Grouseberry, Deerberry, Spiceberry, Teaberry, Redberry, Wintergreen, Redberry tea, Ground berry, Ground ivy, Ground holly, Hill berry, Box berry, Chequer* or *Checker berry.* American plant, the leaves of which—Gaultheria (Ph. U. S.)—in infusion are stimulant and anodyne. The oil—Oleum Gaultheriæ (Ph. U. S.)—consistsing chiefly of salicylate of methyl, is used, on account of its pleasant flavor, to cover the taste of other medicines. Gaultheria and the oil are both used as antipyretics in rheumatism; dose of the oil, gtt. ij–x. **G. fra'grans** or **fragrantis'sima,** Indian wintergreen, growing in E. Indies and Japan; the oil is stimulant and antispasmodic. **G. hu'milis,** gaultheria. **G. procum'bens,** gaultheria.

Gaulther'ilene. $C_{10}H_{16}$. Derivative from oil of gaultheria.

Gaul'therin. Neutral principle from Betula lenta, convertible into oil resembling oil of gaultheria.

Gaultie'ra re'pens. Gaultheria procumbens.

Gaunt'let (*gant,* glove). Gantelet.

Gautiera (gaut-e-a'rah) **re'pens.** Gaultheria.

Gau'tier's pseu'do-xan'thine. Base ($C_4H_5N_5O$) resembling xanthine, obtained from fresh muscle-tissue of beef.

Gauze. Exceedingly thin sheer material. **G., absorb'ent,** gauze from which all dressing and oily matters have been removed. **G., antisep'tic,** unirritating antiseptic covering for wounds and surgical dressing, made by adding antiseptic materials, as carbolic acid, iodoform, corrosive sublimate, etc. See *Antiseptic.* Boracic acid, salicylic acid, thymol, and other substances are similarly used.

Gavage, gav-azh' (F.). Forced feeding, as by passage of food into the stomach through an œsophageal tube.

Gavard's mus'cle. Oblique fibres of muscular coat of the stomach.

Gay feath'er. Liatris spicata and other species of liatris.

Gaylussacia (gay-loos-sak'e-ah) or **Gaylussac'ea resino'sa** (after Gay-Lussac). Black huckleberry. Indigenous plant whose leaves and root, as well as those of Gaylussacia dumosa, dwarf huckleberry, and of G. frondosa, blue tangle, indigenous, are used in decoction as astringents in diarrhœa, sore throat, etc.

Gazel. Ribes nigrum; R. rubrum.

Gazeol, gaz'e-ol. Mixture of impure ammonia, 20°, acetone, benzol, impure naphthalin, and fresh tar, which, when evaporated in a hot-water bath, has been used for inhalation in whooping cough and bronchial and pulmonary affections.

Gazeous, gaz'e-us. Gaseous.

Gazogene, gaz'o-geen (*gas, geno,* to generate). Portable apparatus for preparing aerated or carbonated water.

Gedeola, ged-e'o-lah. Convex part of liver.

Gehr'ung's pes'sary. Instrument to be used in cystocele, intended to act as a support to the anterior wall of the vagina.

Geisoma (gi-so'mah), **Gei'son** (*geison,* eaves of a house), or **Geisum.** Part of frontal bone directly over the eyes.

Geissine (geis'seen) or **Geissospermine,** geis-so-spur'meen. $C_{19}H_{24}N_2O_2 + H_2O$. Alkaloid from bark of Geissospermum læve; cardiac sedative; in large doses poisonous.

Geissospermum (geis-so-spur'mum) **læ've.** Tree of Brazil, from which pao-pareira bark is obtained; tonic, antipyretic, and astringent. **G. vello'sii,** tree of Brazil, whose bark is used in intermittent fever as antipyretic and antiperiodic. Leaves, coroba leaves, are sometimes used medicinally; poisonous.

Gela'pium or **Gelappium,** jel-ap'pe-um. Convolvulus jalapa; Ipomœa jalapa.

Gelasina, gel-as-e'nah. Dimple.

Gelasi'ni (*gelao,* to laugh). Dimples. **G. incisi'vi,** incisive teeth.

Gelas'ma or **Gelas'mus** (*gelao,* to laugh). Canine laugh; convulsive laughter.

Gelatigenous, gel-at-ij'en-us (*gelatin, gennao,* to engender). Forming gelatin or gelatinous structure.

Gelatin (jel'at-in) or **Gelatine**, jel'at-een (*gelo*, to congeal). Immediate animal principle, semitransparent, insipid, inodorous, insoluble in cold water, very soluble in hot, which it thickens and transforms into jelly on cooling; it is obtained pure from fresh calves' feet; it is a nutritious substance, and, when dissolved in a considerable quantity of water, forms an emollient fluid, much used in therapeutics, but not easy of digestion. Two forms of gelatin are glutin, or gelatin proper, and chondrin. Gelatin is used, in form of suppository, to induce rectal evacuations. **G., an'imal**, gelatin. **G. cul'ture**, culture of micro-organism prepared on gelatin. **G., nu'trient**, G. culture. **G., su'gar of**, glycocin. **G. suppos'itory**, laxative suppository containing gelatin. **G. of Wharton**, jelly of the cord. Soft, dense, fluid, gelatinous substance enveloping the umbilical cord.

Gelati'na. Gelatin, jelly. **G. alba** or **albis'sima**, purified gelatin. **G. anima'lis**, gelatin. **G. aquat'ica** (aquatic gelatin), Brasenia hydropeltis. **G. Wharto'ni**, G. of Wharton.

Gelatiniform, jel-at'in-i-form. Resembling gelatin. **G. mat'ter of intes'tine**, albuminose.

Gelatinize, jel'at-in-ize. To form or convert into jelly.

Gelat'inoid (*gelatin, eidos*, resemblance). Resembling gelatin. Colloid gelatinoids include gelatin, chondrin, collagen, elastin, keratin, and mucin.

Gelat'inous. Relating to, or having the character or appearance of, gelatin or jelly. Viscid. **G. cap'sules**, see *Capsules*. **G. lay'er**, layer in the olfactory bulb resembling the molecular layer of the cortex of the brain. **G. nerve-fi'bres**, see *Nerve-fibres*.

Gelation, jel-a'shun (*gelo*, to congeal). Congelation; frostbite.

Gela'tum petro'leum. Petrolatum.

Gel'ding (G. *gelten*, to castrate). Castration. Eunuch.

Gelid, jel'id. Cold as ice.

Gelifica'tion. Gelatinization.

Gelin, jel'in. Cellulose; collagen.

Gelly, jel'le (*gelo*, to congeal). *Jelly*. Substance of soft consistence, tremulous and transparent, obtained by appropriate treatment from animal or vegetable matters. Vegetable jelly is found in the currant, mulberry, and almost all acid fruits when ripe; is scarcely soluble in cold water, but readily soluble in boiling water, the jelly being, however, almost all deposited on cooling.

Gelose, jel'ose. Substance resembling gelatin found in Japanese isinglass; agar-agar. Parabin.

Gelosin, jel'o-sin. Jellylike substance from Gelidium corneum, used for making suppositories, bougies, etc., and as a culture medium for bacteria.

Gelsemia, jel-sem'e-ah. See *Gelseminum*.

Gelsemic (jel-sem'ik) **ac'id**. Crystallizable acid glucoside found in Gelsemium sempervirens.

Gelsemine, jel'sem-een. White bitter alkaloid from Gelsemium sempervirens; dose, gr. $\frac{1}{60}$–$\frac{1}{20}$. See *Gelseminum*.

Gelseminia, jel-sem-in'e-ah. See *Gelseminum*.

Gelseminic (jel-sem-in'ik) **ac'id**. Gelsemic acid.

Gelsem'inine. Alkaloid obtained from Gelsemium sempervirens.

Gelseminum (jel-sem'in-um) or **Gelsemium** (jel-sem'e-um) **nit'idum** or **sempervi'rens**. Yellow jessamine. Flowers, root, etc. of this shrub of the Southern States, nat. ord. Apocyneæ, are employed, and effluvia from the former are said sometimes to induce stupor. The rhizome and rootlets are officinal under the name Gelsemium. Gelseminum is a nervous and arterial sedative, and in overdoses a poison. The antidotes to gelsemium-poisoning are atropine, stimulants, and artificial respiration. It is usually prescribed in the form of tincture. An alkaloid, *Gelseminia*, *Gelsemine*, or *Gelsemia*, has been obtained from the bark of the root; it is excessively bitter and poisonous.

Gelsem'ium el'egans. Chinese plant, rhizome of which contains an alkaloid having tetanic effects. **G. lu'cidum** or **nit'idum** has antispasmodic and analgesic properties.

Gelu, jel'u. Gelly.

Gelus, jel'us. Laughter. See *Risus*.

Gely's (zha'le's) **su'ture**. See *Suture*.

Gemel'lary. Twin-bearing or producing.

Gemelli, jem-el'le (twins). Twin muscles or organs. Gastrocnemii; ischiotrochanterianus; testicles. **G. su'ræ**, gastrocnemius.

Gemellip'arous (*gemellus*, twin, *pario*, to bring forth). Producing twins.

Gemellus, jem-el'lus. One of two children, twins, born at the same accouchement or gestation. Relating to twins, as twin conception. **G. mus'culus**, long portion of triceps brachialis, united to the inner portion. Marsupialis. Bifemorocalcaneus muscle.

Gemination, jem-in-a'shun. Production of twins; duplication.

Gemini, jem'in-e (twins). Gastrocnemii; ischiotrochanterianus; testicles.

Geminiformis, jem-in-e-for'mis. Gemellus inferior muscle.

Gem'inum. Optic lobes. **G. cen'trum semicircula're**, tænia semicircularis.

Gem'inus. Gemellus.

Gemipoma, jem-e-po'mah. Mamma.

Gemitus, jem'it-us. Sighing; groaning.

Gemma, jem'mah (bud). Granulation. **G. oc'uli**, crystalline.

Gemmation, jem-ma'shun. Generation by buds, which grow and become distinct from one another. **G., genera'tion by**, see *Generation*.

Gemmification, jem-me-fik-a'shun. Gemmation.

Gemmiparity, jem-mip-ar'it-e (*gemma*, bud, *pario*, to bring forth). Gemmation; generation by budding. See *Generation*.

Gemmiparous, jem-mip'ar-us (bud-bearing). See *Generation*.

Gem'mule. Small bud; ovule.

Gen (*gennao*, to generate). In composition, generating.

Gena, ja'nah. Cheek, forming lateral part of the mouth. Externally, the cheeks have no precise limits; they are continuous, above, with the lower eyelid; below, they descend as far as the base of the jaw; before, they terminate at the alæ nasi and at the commissures of the lips; and behind, at the ear. They are formed of three layers, dermoid, muscular, and mucous.

Genal, je'nal. Relating to the cheeks. **G. glands**, molar glands.

Gendarus'sa ro'sea or **vulga'ris**. Indian plant, nat. ord. Acanthaceæ, leaves of which are emetic and diaphoretic; root, astringent.

Genea, jen'e-ah. Generation, birth; descent from parent to child.

Geneagenesis, jen-e-ah-jen'es-is (*genea*, generation, *genesis*). Alternate generation. See *Generation*.

Geneanthropy, jen-e-an'thro-pe (*genea*, *anthropos*, man). Anthropogeny.

Genelas, gen-i'as (*genu*, chin). Downy hairs which first cover the cheek; bandage passing under the chin.

Geneion, gen-i'on. Beard; chin.

Gen'eral anat'omy. See *Anatomy*. **G. paral'ysis**, general paresis; paralytic dementia; cerebral affection characterized by paralysis of motion and speech and of sensation, and finally dementia. **G. practi'tioner**, one who practises in all departments of medicine, surgery, or obstetrics, and does not limit his attention to any one department, as a specialist does. A surgeon-apothecary.

Generalization, jen-er-al-i-za'shun. Extension of disease through the general system or over a large surface of the body. Deduction of laws and principles from minor facts.

Generatio, gen-er-ah'she-o. Generation. **G. æquiv'oca**, spontaneous generation; see *Generation*. **G. alter'na**, alternate generation; see *Generation*. **G. cal'culi**, lithia. **G. homoge'nea**, see *Generation*. **G. origina'ria**, spontaneous generation; see *Generation*. **G. ovovivip'arous**, see *Generation*. **G. primig'ena** or **primiti'va**, see *Generation*. **G. sexua'lis**, see *Gamogenesis*. **G. sponta'nea**, see *Generation*.

Generation, gen-er-a'shun (*geno,* to engender). Procreating; breeding; act of procreating the species; aggregate of functions concurring, in organized beings, toward the production of their kind. The act of generation means the union of the sexes; see *Coition.* The writers of antiquity believed that all organized bodies are produced either by what is termed univocal or regular generation—homogenesis, generatio homogenea, propagatio—which applies to the upper classes of animals and vegetables; or by spontaneous generation—autogenia, heterogenesis, heterogenia, generatio heterogenea, æquivoca, primitiva, primigena, originaria, or spontanea—which they considered applicable to the very lowest classes only, as the mushroom, the worm, the frog, etc. Many distinguished naturalists still consider that beings low in the scale of animality are produced in the latter way. Spontaneous generation and equivocal generation have been regarded by many as synonymous; by others as the production of a new being from the mere combination of inorganic elements; while by equivocal generation they understand the evolution of a new being from organized beings dissimilar to itself, through some irregularity in functions or the incipient decay or degeneration of tissues.

According to ancient theories, the ovaries of the female furnish a prolific fluid similar to that of the male; the fœtus results from the mixture of the two seeds in copulation. Others conceived that the ovaries contain ova, which are not developed until vivified by the male sperm. Others, again, believed in the pre-existence of germs, created since the origin of the world, but encased in each other, and becoming developed in succession; hence the first female must have contained the germs of all subsequent generations, and the number of these germs must go on always diminishing, until ultimately extinct. This was the system of evolution of germs.

The simplest kind of reproduction does not require sexual organs. The animal separates into several fragments, forming so many new individuals. This is *Fissiparous generation, Fissiparism, Generation from fission.*

Another form—*Gemmation, Gemmiparous generation*—consists in the formation of buds, sporules, or germs on some part of the body, which at a particular period drop off and form as many new individuals, requiring but one parent—*Monogeny.* In *Oviparous generation* the egg is hatched out of the body. In *Ovoviviparous generation* the new being is hatched in the excretory passages. In *Viviparous generation* the new individual is born under its appropriate form. In *Marsupial* or *Marsupiate generation* the young, being born at a very early stage of development, is received and nourished in a marsupium or pouch. In *Alternate generation, Geneagenesis,* the young do not resemble the parent at birth, and remain dissimilar during their whole life, so that their relationship is not apparent until a succeeding generation; thus the cercaria undergoes a change into the distoma; see *Metagenesis* and *Parthenogenesis.* All these kinds of reproduction require the union of sexes—*Digeny.*

All the acts comprising the function of generation in man may be referred to five great heads: copulation; conception or fecundation; gestation or pregnancy; delivery or accouchement; and lactation.

Genera'tion, act of. See *Generation.* **G., alter'nate,** see *Generation* and *Metagenesis.* **G. asex'ual,** see *Agamogenesis.* **G., change'able,** metagenesis; alternate generation; see *Generation.* **G., equiv'ocal,** see *Generation* **G. by fecunda'tion,** see *Generation* and *Fecundation.* **G. by fis'sion,** or **fissip'arous,** see *Generation.* **G. by gemma'tion,** see *Generation.* **G., gemmip'arous,** see *Generation.* **G., interstit'ial,** accrementation. **G., marsu'pial,** see *Generation.* **G., nonsex'ual,** see *Agamogenesis.* **G., organs of, female,** see *Genital organs* and *Vulva.* **G., organs of, male,** see *Genital organs.* **G., ovip'arous,** see *Generation.* **G., ovovivip'arous,** see *Generation.* **G., reg'ular,** see *Generation.* **G., sex'ual,** see *Gamogenesis.* **G., sponta'neous,** abiogenesis; see *Generation.* **G., univ'ocal,** see *Generation.* **G., vir'ginal,** parthenogenesis. **G., vivip'arous,** see *Generation.*

Gen'erative. Relating to or assisting in generation; genital. **G. or'gans,** see *Genital organs.*

Gener'ic. Pertaining to a genus or to the same genus; hereditary. **G. ataxia,** paramyoclonus multiplex.

Generous, jen'er-us (*generosus,* of a noble race). Name given to wines containing a large quantity of alcohol.

Gene'siac or **Genesial,** jen-e'ze-al. Genital; generative. **G. cycles,** periods in woman's sexual life, from puberty to conception, thence to pregnancy, and through the period of lactation.

Genesic, gen-e'sik. Genetic.

Genesiology, gen-e-se-ol'o-je (*genesis,* generation, *logos,* discourse). Doctrine of generation.

Genesis, jen'es-is. Generation; origin or first formation; act or process of reproduction.

Genetalis, jen-et-al'is. Genital.

Genetic (jen-et'ik) or **Genetical,** jen-et'ik-al. Genital; relating to sexual organs or functions; relating to generation; inherited. Agent or drug affecting the generative organs. **G. diseases,** diseases of the sexual functions.

Genetous, jen'et-us. Congenital.

Ge'nial or **Genian,** je'ne-an (*geneion,* chin). Relating to the chin. **G. apoph'ysis** or **pro'cess,** prominence at the posterior part of the symphysis menti, formed of four small tubercles. **G. tu'bercles,** see *Genian apophysis.*

Genica, jen'ik-ah. Remedies affecting the reproductive organs.

Geniculare, jen-ik'u-lar. Relating to the geniculum.

Geniculate, jen-ik'u-late (*geniculum,* small knee or joint). Bent in shape like a knee. **G. bod'ies,** corpora geniculata. **G. gan'glion,** enlargement or ganglion on facial nerve in Fallopian canal. **G. tract,** portion of pyramidal tract of crus cerebri.

Geniculatum, jen-ik-u-lat'um. Geniculate.

Genic'ulum. Small knee or joint; geniculate body.

Genio, jen-e'o (*geneion,* chin). In composition, chin.

Genio-epiglotticus, jen-e'o-ep-e-glot'tik-us. Fibres of genioglossus occasionally connected with the epiglottis.

Genioglossus, jen-e-o-glos'sus (*genio, glossa,* tongue). Flat triangular muscle extending from the genian apophysis to the inferior surface of the os hyoides and tongue, which last it carries forward. An *accessory muscle,* having the same origin, is inserted into the root of the tongue.

Geniohyoglos'sus. Muscle having same origin as genioglossus, and inserted into the length of the tongue, pharynx, and hyoid bone, regulating the various movements of the tongue. Genioglossus.

Geniohyoid (je-ne-o-hi'oid) **mus'cle.** Geniohyoïdeus. **G. nerve,** offshoot from hypoglossal nerve to geniohyoïdeus muscle.

Geniohyoï'deus, Geniohyo'des, or **Geniohyoï'des.** Muscle arising from the genian apophysis and inserted at the anterior part of the body of the os hyoides; it raises the os hyoides and carries it forward. It may also contribute to depress the lower jaw, in contracting toward the os hyoides.

Geniopharyngeus, jen-e-o-far-in-ja'us (*genio, pharunx,* pharynx). Bundle of fibres passing from the lower jaw to the sides of the pharynx and forming part of the constrictor pharyngis superior muscle.

Genioplas'tice. Genioplasty.

Genioplasty, je'ni-o-plas-te (*genio, plasso,* to form). Plastic operation in the region of the chin; operation for restoring the chin. At times used instead of *Genyoplasty* for the operation restoring the cheek.

Genipi, jen'ip-e. Achillea moschata. **G. al'bum,** Achillea moschata, Artemisia rupestris. **G. ve'rum,** Achillea atrata.

Genista, jen-is'tah. Spartium scoparium. **G. Canarien'sis,** see *Rhodium lignum.* **G. hirsu'ta,** Spartium scoparium. **G. pur'gans** grows in south of France; cathartic. **G. scopa'ria,** Spartium scoparium. **G. spino'sa In'dica,** Bahel Schulli; Oriental

tree, a decoction of the roots of which is diuretic; the leaves boiled in vinegar have the same effect. **G. tincto'ria,** *Dyer's broom* or *weed, Dye weed, Base broom, Kendall green, Wood-waxer, Green weed, Woodwex;* a shrub cultivated in this country and in Europe. Flowering tops and seeds are cathartic and diuretic.

Genistoï'des hirsu'ta or **tincto'ria** (*genista, eidos,* resemblance). Genista tinctoria.

Genital, jen'it-al (*geno,* to generate). *Genesial.* Relating to generation or to organs of generation. **G. cord,** a cord formed in the fœtal development of the generative organs by the union of the two ducts of Müller with the lower parts of the Wolffian ducts. **G. cor'puscles,** simple corpuscles of touch in the genital organs. **G. duct,** duct of Müller. **G. em'inence,** G. protuberance. **G. fis'sure,** furrow extending from the genital protuberance in the embryo to the cloaca. **G. folds,** see *Genital organs.* **G. furrow,** see *Genital organs.* **G. glands,** see *Genital organs.* **G. nerve,** external spermatic nerve. **G. or'gans,** sexual organs; *Genital, Noble, Natural,* or *Private parts; Privities, Privy parts, Privy members.* The parts inservient to the reproduction of the species. In man they are numerous; some secreting the sperm, as the testicles and their appendages; others retaining it, as the vesiculæ seminales; and another for carrying it into the organs of the female—the penis. In the female the parts of generation form an apparatus perhaps more complicated than that of the male. Some are inservient to copulation, as the vulva, vagina, etc.; others to conception and the preservation of the product for a determinate time—as the uterus and appendages; while others concur in the alimentation of the infant after birth, as the mammæ. About the sixth week of fœtal development, when there is no distinction of sex, a genital tubercle appears, soon surrounded by two folds of skin, the genital folds (which become labia minora or corpora cavernosa, according to sex), and on the lower aspect a groove, genital furrow, soon after appears (which at a later date becomes the cavernous portion of the urethra or rima pudendi, according to sex). External distinction of sexes is made by transitions from these primitive forms. The internal generative organs are developed from the Wolffian body, the genital glands—masses of cells lying on the inside of that body—and the genital duct, anterior to the duct of the Wolffian body.

The following weights and measurements have been made of the organs of generation in the two sexes (Vierordt):

Male Organs of Generation.

Testicle:
- Weight (testicle with epididymis) (right) 23 g., (left) 26 g. (Durog).
- Volume . . . . . 14–24 c.cm. (Krause).

Corpus Highmori, from above below . . . . 18–27 mm. long.
posteriorly . . . . . 7 } broad.
anteriorly . . . . . 2 }
Spermatic canals . . . . . 0.2 in diameter.
Number of lobules of testicle formed by spermatic canals 100–200
Entire length of spermatic canals . . . . . 276–341 m.
Internal surface of spermatic canals, 867–2142 cm. (Henle, 1867 cm.).
Coni vasculosi . . . . . 9–14 mm. long.
Vasa efferentia:
- At apex of conus . . . . . 0.4–0.6 mm. thick.
- At base . . . . . 0.2 mm.

Spermatozoa (Krause), 0.052–0.062 mm. long.
- Head, 0.0045 long, 0.002–0–0.003 broad, 0.001–0.002 thick.
- Body, 0.006 long, 0.0007–0.001 thick.
- Tail, 0.041–0.052 long, finer than the body.

Epididymis (stretched) . . . . . 68–81 mm. long.
Head . . . . . 10 broad, 6–8 high.
Body and tail . . . . . 5.6–6.8 broad.
Thickness (antero-posterior) 2.3–3.4
Canal of epididymis, 6.5–10 m. long, 0.2–0.4 mm. thick.
Vas deferens, about 300 mm. long (stretched, 400–450).
Middle piece, 2.5–3 in diameter; lumen, 0.6–0.8.
Male urethra: 150–170 long—viz.: pars prostatica . . 23–27
" membranacea 18–23
" cavernosa . 110–120
Seminal vesicles: 41–45 long, 16–18 broad, 9 thick.
Ejaculatory ducts, 20 long; over 2 in breadth at commencement, and 0.8 in breadth at the end.
Colliculus seminalis, 9–11 long, 2–3 in height and breadth at upper end.
Prostate: Weight, 20.5 g. (Bischoff), 19 g. (Krause). Volume, 15 c.cm.
On an average, 27 mm. long (23–34).
45 broad (32–47).
20 thick (14–23), measured in a sagittal line.
Cowper's glands . . . . . 5–9 mm. in diameter.
Main duct, 4.5–6.8 long; at origin, 1.5; at mouth, 0.5 broad.

The following are some of the measurements of the various parts of the genito-urinary apparatus:

Penis: Weight . { Bladder, Urethra, Penis, } . . . . . 193 g. (Bischoff).

Penis in Erection.

Volume, 60 c.cm. (Krause) . . . . . 278 c.cm. (Krause).
Length, 90–110 cm. . . . . 210 mm.
Breadth and thickness, 27 40–45
Preputial glands, 0.3–0.7.

Female Organs of Generation.

Ovary: Average weight (according to Puech), 7.0 (5½–10) gm.

	Length (mm.).	*Breadth* (mm.).	*Thickness* (mm.).	*Volume* (c.cm.).
In virgins (Krause)	41–52	20–27	10–11	4–5
In women from 35–40 years of age who have borne children	27–41	14–16	7–9	2–5

Tunica albuginea . . . . . 0.1–0.5 mm. thick.
Number of follicles:
- In a child 3 years of age . . . . . 400,000 (Sappey).
- In a girl aged 18 . . . . . 36,000 (Henle).

Graafian follicles up to . . . . . 10–12.
Ripe (human) ovum . . . . . 0.1–0.3 mm. in diameter.

Dimensions of the Ovaries (Mm.).

(Middle average, according to Puech.)

New-born children, 19.8 mm.	*Right.*			New-born children, 18.2 mm.	*Left.*	
	Length.	*Height.*	*Thick.*	*Length.*	*Height.*	*Thickness.*
6–11 year, 26.7	9	4.4		24	8.4	4.5
13–15 year, 29.6	15	10		25	14	9.3
19–35 year, 36.5	18	13.7		35	16.7	13.1

Middle average of both ovaries (Raciborski): 35.7 length; 17.3 height; 13.4 thickness.

Uterus.

Weight, 33–41; after-births, 102–117 g. Volume, 35–50 c.cm.; after-births, 86–102.

	Virgins.	*After-Births.*
Length of uterus from fundus to external mouth	74–81 mm.	87–94 mm.
Cervix: Length	29–34	
Breadth	25	27–32
Thickness	16–20	18–25

End of pregnancy, weight . . . . . 700 g.
Volume . . . . . 5960–6160 c.cm.
Height . . . . . 320 mm.
Breadth . . . . . 270 mm.
Thickness . . . . . 140 mm.

G. protu'berance, prominence in front of genital embryonic opening, becoming afterward clitoris or penis, according to sex. **G. ridge,** longitudinal eminence in embryo, in which is genital gland. **G. tu'bercle,** see *Genital organs.*

Genitale, jen-it-al'e. Sperm. **G. ca'put,** glans penis.

Genitalia, jen-it-al'e-ah. Genital organs. **G. vi'ri,** the male genital organs.

Genitality, jen-it-al'it-e. Power or capacity of performing generative functions.

Genitals, jen'it-als. Genital organs.

Genito. In composition, genital, or relating to the genital organs.

Genito-cru'ral nerve. Subpubial or internal inguinal nerve. Branch of the second lumbar nerve, which, passing through the psoas muscle and approaching the femoral arch, divides into two branches—internal, scrotal, or genital, and external or femoral cutaneous branch.

Genito-enteric (jen'it-o-en-ter'ik) **fold.** Peritoneal fold for spermatic or ovarian artery.

Genito-spi'nal cen'tre. Space of a few lines in the spinal cord corresponding with the fourth lumbar vertebræ, which, when excited, produces contraction of the bowels; affecting also the bladder, uterus, etc.; and, in the dog, causes erection of the penis and ejaculation of semen. The *ano-spinal centre* is a corresponding point in the lower part of the lumbar region, pre-

siding over the reflex contraction of the sphincter ani. The *cilio-spinal centre*, in the cervico-dorsal portion of the cord, presides over the contraction of the radiated fibres of the iris.

Genito-urinary, jen-it-o-u'rin-a-re. Relating to the genital and urinary apparatus. **G.-u. appara'tus**, collection of organs for the functions of reproduction and urination. **G.-u. tract**, canals or passages connected with the genito-urinary apparatus; see *Uro-genital*.

Genitu'ra. That which is fecundated or engendered in the maternal womb. Embryo; fœtus; infant. Also whatever concerns the generative act, as semen, genital organs, etc. Generation.

Genium, jen-e'um (*geneion*, chin). Chin.

Gennesis, gen-na'sis. Genesis; generation.

Gennetica, gen-net'ik-ah. Genital organs.

Gennetici (gen-net'is-e) **morbi.** Genetic or genital diseases.

Genneticocnesmus, gen-net-ik-o-nez'mus (*gennetica*, *knesmos*, itching). Itching of the genital organs.

Genneticonosi or **Genneticonusi**, gen-net-ik-on-u'se (*gennetica*, *nosos*, disease). Diseases of the genitals.

Genne'ticus. Genital.

Ge'noblast (*genos*, race, *blastos*, germ). Ovum; spermatozoid; product of sexual union. Cell of sexual system.

Genometabole, gen-o-met-ab'o-la (*genos*, sex, *metabole*, change). Sexual change formerly imagined to take place after change of life in woman.

Genonusi, gen-on-u'se (*genos*, sex, *nousos*, disease). Sexual diseases.

Genoplasty, je'no-plas-te (*genu*, jaw, *plasso*, to form). Genioplasty; meloplasty.

Gen'sang or **Gen'seng**. Panax quinquefolium.

Gentia, jen'she-ah. Gentianina; gentisic acid. **G., aut'umn**, Gentiana amarella.

Gentian, jen'she-an (after Gentius, king of Illyria, who used some species medicinally). Gentiana lutea; triosteum; Erythræa centaurium. **G., bit'ter**, gentiopicrin. **G., blue** or **Catesbian**, Gentiana Catesbæi. **G., com'mon**, Gentiana lutea. **G. cross'worts**, Gentiana cruciata. **G., fel'wort**, Gentiana amarella. **G., horse**, triosteum. **G. root**, see *Gentiana lutea*. In several European countries root of G. purpurea, G. punctata, G. Catesbæi, G. maurophylla, and G. pannonica. **G., south'ern**, Gentiana Catesbæi. **G. violet stain**, used for staining pathological tissue specimens and micro-organisms. **G., white**, Laserpitium latifolium, triosteum, Gentiana alba. **G., yellow**, Gentiana lutea; see *Calumba*.

Gentiana, jen-she-an'ah. G. lutea. **G. acau'lis** or **G. alba**, Laserpitium latifolium. **G. amarella**, felwort or autumn gentian of America and Europe; tonic and antipyretic. **G. amarylloï'des**, G. quinqueflora. **G. asclepiadea**, milkweed or willow gentian of Central Europe; root is tonic. **G. auricula'ta** grows in Northern Asia; tonic and antiscorbutic. **G. cachenlaguen**, Chironia Chilensis. **G. Catesbæ'i** or **Catesbia'na**, *Blue gentian*, *Catesbian* or *Southern gentian*, *Bluebells*, *Bitterroot;* ord. Gentianaceæ. Pure and simple bitter; root may be used wherever that of the *Gentiana lutea* is proper. **G. centau'rium**, Erythræa centaurium. **G. chiray'ta, chirayi'ta,** or **chira'ta,** chirata (Ph.U.S. and Br.), chirayita, chirayeta; a native of India; the herb and root have been much employed in that country in dyspepsia and as an antiperiodic in intermittents and atonic leucorrhœa. It yields its virtues to alcohol and water. **G. crini'ta**, see *G. quinqueflora*. **G. crucia'ta**, European species of gentian; very bitter in all its parts. Has been used in hydrophobia for some fancied curative effect. **G. erythræ'a**, species growing in China; antiarthritic and aperient, and used also for diseases of the eye. **G. fimbria'ta**, G. crinata. **G. Gerar'di**, chironia or erythræa centaurium. **G. lu'tea**, systematic name of officinal gentian, *Gentiana*, *Yellow gentian*, *Gentian*, *Felwort;* ord. Gentianeæ. Plant common in the mountains of Europe. Root is extremely bitter, and yields its virtues to ether, alcohol, and water; is tonic and stomachic; in large doses, aperient; usually given in infusion or tincture. **G. macrophyl'la**, Siberian species used in delirium, convulsions, etc. **G. ma'jor**, G. lutea. **G. mi'nor**, G. cruciata. **G. ochroleu'ca**, see *G. saponaria*. **G. pannon'ica**, root is used as substitute for G. lutea, as are also G. punctata and G. purpurea, latter growing in Alpine regions. **G. Peruvi'ana**, Chironia Chilensis. **G. pneumonan'the**, marsh gentian; all parts are bitter. **G. praten'sis**, G. amarella. **G. puncta'ta**, see *G. pannonica*. **G. purpu'rea**, root is bitter tonic; see *G. pannonica*. **G. quinqueflo'ra**, *Gall weed*, five-flowered gentian, and **G. crini'ta**, fringed gentian, indigenous, are possessed of virtues similar to Gentiana lutea. **G. ru'bra**, G. lutea. **G. sapona'ria**, soapwort gentian, and **G. ochroleuc'a**, Sampson's snake-root, indigenous, have tonic properties of Gentiana lutea, and are tonic diaphoretics. **G. scan'dens**, Chinese plant, root and leaves of which are bitter tonic. **G. serra'ta** grows in Northern America and Europe; bitter tonic. **G. spathula'ta**, variety of Asclepiadea, antiphlogistic; used in hæmaturia. **G. vet'erum**, G. lutea. **G. villo'sa**, G. ochroleuca.

Gentian'æ ra'dix. Gentian root.

Gentianel'la autumna'lis. Gentiana amarella. **G. crucia'ta**, Gentiana cruciata.

Gentian'ic ac'id. $C_4H_{10}O_5$. Yellow acid crystallized principle obtained from gentian.

Gentiani'na, Gen'tianine, Gen'tianin, Gentian'eine, or **Gentiania**, jen-she-an'e-ah. Neutral substance obtained from gentian.

Gentianite (jen'she-an-ite) or **Gen'tianose.** Crystalline substance ($C_{16}O_{66}H_{33}$) obtained from roots of various species of gentian.

Gentilitious, jen-til-ish'us. Hereditary.

Gentiopicrin, jen-she-o-pik'rin (*gentian*, *pikros*, bitter). $C_{20}H_{30}O_{12}$. Bitter principle of gentian.

Gentiotan'nin, Gentiotan'nic ac'id. Tannic acid of gentian.

Gentis'ic or **Gentisinic** (jen-tis-in'ic) **acid.** Gentianic acid.

Gentisin, jen'tis-in. Gentianic acid.

Ge'nu. Articulation of the leg with the thigh; femorotibial or knee-joint; the knee. The most complicated articulation in the body, formed by the inferior extremity of the femur, the superior extremity of the tibia, and the patella. The articular surfaces of the bones are covered by layers of cartilage and by the synovial membrane of the articulation. The soft parts of this joint are the ligamentum patellæ, two lateral ligaments distinguished as internal and external; a posterior ligament, ligamentum posticum Winslowii; two crucial ligaments, one anterior, the other posterior; two interarticular fibrocartilages; some albugineous fibres, which form an imperfect capsule, etc. The knee receives its arteries from the femoral and popliteal; they bear the name of articular. Its veins have the same distribution as the arteries, and discharge their blood into the saphena and crural. Its nerves are furnished by the sciatic, popliteal, and crural. The joint is protected by the tendons and muscles surrounding it. **G. aquæduc'tus Fallo'pii**, flexure in Fallopian aqueduct. **G. cap'sulæ inter'næ**, bend dividing internal capsule of brain into two parts. **G. cor'poris callo'si**, see *Corpus callosum*. **G. ever'sum, G. excurva'tum, G. extror'sum**, G. varum. **G. facia'lis**, bend of facial nerve-fibres around eminence in bottom of fourth ventricle or in Fallopian aqueduct. **G. intror'sum flex'um, G. inver'sum**, G. valgum. **G. recurva'tum**, curving backward of knee-joint, from muscular paralysis and weakness of ligaments of this articulation. **G. trac'tûs op'tici**, flexure in tractus opticus. **G. ure'thræ prostat'icum**, bend in prostatic urethra. **G. val'gum**, knock-knee, the legs being bent outward from the knee. **G. va'rum**, bow-leg, bandy-leg; opposite of G. valgum.

Gen'ua arcua'ta. Having the knees bent outward; bow-legged; genu varum. **G. intror'sum flex'a**, having the knees bent inward; knock-kneed. **G. val'ga**, knock-knee. **G. va'ra**, having the knees bent inward; knock-kneed.

Genual, jen'u-al. Relating to the knee or to the genu of the corpus callosum.

Genuclast, jen'u-klast (*genu*, knee, *klao*, to break). Apparatus for forcibly breaking up adhesions at the knee-joint.

Genuflexion, jen-u-fleks'yun (*genu*, *flexus*, bent). Bending or flexion of the knee.

Genugra, jen'u-grah (*genu*, *agra*, seizure). Gonagra.

Genuinus, gen-u-e'nus. Legitimate.

Genupectoral, jen-u-pek'tor-al (*genu*, *pectus*, breast). Relating to knee and chest. **G. posi'tion** or **post'ure**, position in which the knee is to the breast; method employed in retroflexion of the uterus. The patient assumes the knee-chest position for several minutes twice daily, drawing the vulva open so as to allow the air to enter, which acts as a repositor to the uterus.

Genus, je'nus (*genos*, race). Collection or group of species analogous to each other, and which can be united by common characters. When a species cannot be referred to a known genus, it constitutes a distinct one. **G. curatio'nis**, reason, mode, or manner of cure.

Gen'y. Jaw; chin; beard.

Genyantralgia, jen-e-an-tral'je-ah (*geny*, *antron*, antrum, *algos*, pain). Pain in the antrum of Highmore.

Genyantritis, jen-e-an-tre'tis (*geny*, *antron*, antrum). Inflammation of the antrum of Highmore.

Genyantron (jen-e-an'tron) or **Genyan'trum** (*geny*, *antron*, cave). Antrum of Highmore.

Genyocynanche, jen-e-o-sin-an'ke. Mumps; cynanche parotidæa.

Genyoplasty (jen'e-o-plas-te) or **Gen'yplasty** (*geny*, *plasso*, to form). Plastic operation on the cheek. See *Genioplasty*.

Genys, jen'is. Jaw; chin; beard.

Geoffræ'a or **Geoffroy'a iner'mis** (after Dr. E. F. Geoffroy, a French naturalist). Cabbage tree, cabbage-bark tree, wormbark tree. Ord. Leguminosæ. Odor of the bark is very pleasant It is anthelmintic and cathartic. **G. Jamaicen'sis**, G. inermis. **G. pis'o'nis** or **racemo'sa**, G. inermis. **G. retu'sa**, Andira retusa. **G. spinulo'sa**, Brazilian tree, seed of which, angelim seed, is anthelmintic. **G. Surinamen'sis** has similar properties. The alkaloid active principles of G. Jamaicensis and G. Surinamensis, jamaicine and surinamine, have been separated from them. **G. vermif'uga**, S. American plant having fruit, the almond of which, called angeline, is vermifuge.

Geography (je-og'raf-e), **med'ical** (*ge*, earth, *grapho*, to describe). Noso-geography; description of the surface of the globe as regards the influence of situation on the health, vital functions, and diseases of its inhabitants, vegetable and animal, but principally on those of man.

Geophagism, je-of'ag-ism (*ge*, earth, *phago*, to eat). Earth-eating, clay-eating, dirt-eating; act or practice of eating earth.

Geophagist, je-of'aj-ist. Earth-eater, clay-eater; one who eats earth.

Geophila (je-of'il-ah) **diversifo'lia.** Plant of Malabar; used in diarrhœa and externally as application to diseases of the eye. **G. renifor'mis**, plant of W. Indies and S. America; emetic.

Georgia (jor'je-ah) **bark.** Tonic and antipyretic bark of Pinckneya pubens. **G. pink**, Phlox Carolina.

Georgopathia, jor-jo-path-e'ah (*georgos*, tiller of the earth, *pathos*, disease). Pellagra.

Geræol'ogy or **Geratology**, ger-at-ol'o-je (*geras*, old age, *logos*, discourse). Doctrine or description of old age, its pathology, hygienic conditions, etc.

Ger'aflour. Dianthus caryophyllus.

Gera'nin. Astringent substance from rhizome of several species of geranium.

Geranis, jer'an-is (a crane). Bandage used by the ancients in fractured clavicle, dislocation of the shoulder, etc.

Gera'nium (*geranos*, crane, its pistil being like the bill of the crane). Ord. Geraniaceæ. Crane's bill. **G. Carolinia'num**, see *G. Robertianum*. **G. cicuta'rium**, Erodium cicutarium. **G. dissec'tum**, Australian or cut-leaved geranium; jagged-leaved dove's foot of Australia and Europe. **G. fœt'idum**, G. Robertianum. **G., fox**, G. Robertianum. **G. macula'tum**, in northwestern parts of the United States. The rhizome of this plant, geranium (Ph. U. S.), *Spotted crane's bill, Crowfoot, Alum root, Tormentil, Storkbill*, is employed as an antisyphilitic. **G. Mexica'num** grows in Mexico; its root is used in diarrhœa and dysentery. **G. mol'le**, dove's foot g.; therapeutic action like that of G. Robertianum. **G. moscha'tum**, European plant, used as excitant and diaphoretic. **G. Noveboracen'se**, G. maculatum. **G. purpu'reum**, G. Robertianum. **G. Robertia'num**, stinking crane's bill, herb Robert. This plant is antiperiodic, astringent, diuretic, antispasmodic, and slightly stimulant, and externally applied in painful sores and inflammations. G. Carolinianum has similar properties. **G. sanguin'eum**, astringent and styptic, contains a large amount of tannin. **G. silvat'icum**, crowflower, wood geranium; root and flowers are astringent. **G. stria'tum**, roots are tonic and astringent. **G., wild**, G. pratense, G. Robertianum, Erodium cicutarium. **G., wood**, G. silvaticum. Most of the species of geranium have been used as astringents.

Gerardia pedicularia, ger-ar'de-ah ped-ik-u-lar'e-ah. Fever-weed, lousewort; indigenous; sedative and diaphoretic. **G. quercifo'lia**, golden oat of the West and South; root is used as antidote for snakebites. **G. tubero'sa**, flowers of this plant of Martinique are expectorant.

Ger'as. Old age.

Geratic, ger-at'ik (*geras*, old age). Relating to old people. **G. diseases**, developmental diseases of old persons.

Geratol'ogy. See *Gerœology*.

Ger'dy's fi'bres. Superficial transverse digital ligaments. **G.'s lig'ament**, deep layer of axillary fascia attached to the clavicle. **G.'s opera'tion for her'nia**, operation for invagination of scrotum into inguinal canal.

Geric'terus, ger-ik'ter-us (*geras*, old age, *ikteros*, jaundice). Jaundice of old age.

Gerlach's net'work or **plex'us.** Delicate network of minute fibrils of nerves in gray matter of cord. **G.'s the'ory**, theory as to relation of nerve-fibres and ganglionic cells of spinal cord.

Ger'lier's disease. Peculiar endemic neurosis of the Swiss, attended with vertigo, paralysis, ptosis, pain in the back of the head and neck.

Germ. Rudiment of new being, not yet developed, or still adherent to the mother; living particle which has been detached from already existing living matter. The study of the mode in which diseases arise from the influence of germs is called the germ theory of disease. **G. cell**, germinal cell. **G., den'tal**, dental follicle; earliest development of a tooth. **G. disease**, disease caused by a micro-organism. **G. disk**, proligerous disk; area germinativa. **G. enam'el**, see *Groove, dental*. **G. epithe'lium**, columnar epithelium, remains of the germ epithelium which affords a cover superficially to the ovaries. **G. flesh**, see *Sarcophyte*. **G. force**, plastic force. **G. hill**, proligerous disk. **G. lay'ers**, laminæ making up the embryo, as ectoderm, mesoderm, and entoderm; outer, middle, and inner covering of embryo. **G. spot**, see *Molecule*. **G. theory**, theory of specific causes, as bacteria, in the origin and development of diseases; see *Molecule*. **G. ves'icle**, see *Molecule*.

Ger'man cham'omile. Matricaria. **G. leech**, hirudo medicinalis. **G. mea'sles**, rötheln; see *Rubeola*. **G. pellitory**, root of Anacyclus officinarum. **G. rhu'barb**, Rheum rhaponticum and other species of rheum. **G. san'darac**, resin from bark of Juniperus communis. **G. sarsaparil'la**, Carex arenaria.

German'der, com'mon. Teucrium chamædrys. **G., creep'ing**, Teucrium chamædrys. **G. ma'rum**, Teucrium marum, **G., small**, Teucrium chamædrys. **G., wa'ter**, Teucrium scordium.

Germareum, jur-mar'e-um (*germen*, germ). Part

of generative apparatus of the female concerned in development of ova.

Germen, jir'men (*gero*, to produce). Germ, sperm. **G. denta'le**, dental pulp. **G. fal'sum**, mole. **G. fœmin'eum**, germinal vesicle. **G. spu'rium**, conception, false.

Germicidal, jur-me-si'dal. Destroying germs, as germicidal treatment so directed.

Germ'icide (*germ, cædo*, to kill). Any agent that will destroy germs or micro-organisms, or their spores, on which contagious and infectious disease may depend; as mercuric chloride and iodide, aluminium acetate, sulphurous acid, heat (at continuous temperature of 230° and over), etc.

Germifuge, jur'me-fuje (*germen, fugo*, to drive away). Expelling or driving away germs.

Ger'minal, Ger'minative. Relating or belonging to a germ or to germination; having power of germination. **G. a'rea**, localized accumulation of cells on surface of blastodermic membrane, indicating position of future embryo. **G. cell**, see *Cytoblast*. **G. disk**, proligerous disk. **G. epithe'lium**, layer of epithelial cells on middle of genital ridge of embryo. **G. lay'ers**, see *Germ layers*. **G. mat'ter**, see *Cytoblast, Bioplasm*. **G. mem'brane**, blastoderm; see *Molecule*. **G. nu'cleus**, see *Molecule*. **G. pole**, pole of ovum on which is germinal spot. **G. spot**, nucleolus of the ovule; see *Molecule*. **G. streak**, primitive streak; nucleus of cell of ovum. **G. ves'icle**, nucleus of the ovule; see *Molecule*. **G. wall**, thickened border of blastoderm in ova that have only partially undergone segmentation.

Germinating, jur'min-a-ting. Undergoing process of germination. **G. cells**, cells forming a boundary to stomata, where the lymphatics originate.

Germination, jer-min-a'shun. Beginning of vegetation in seed or plant; first development of germs.

Germinative, jur'min-a-tiv. Germinating or having power of germinating.

Germitox'ic. Agent that destroys a germ by poisoning it.

Germogen, jur'mo-jen. Nucleated protoplasmic mass, separating ultimately into ova.

Germs, dissemina'tion of. See *Panspermia*. **G., pre-existence of**, see *Preformation*.

Germule, jerm'yule. Diminutive germ.

Ge'ro, Geron'to (*geron*, aged person). In composition, old or aged.

Geroboscia (ger-o-bos'se-ah) or **Gerontobos'cia** (*gero, boske*, food). Nourishment or maintenance proper for the aged.

Gerocomeum, ger-o-ko-me'um. Hospital for the aged.

Geroco'mia or **Gerocom'ice** (*geron*, aged person, *komeo*, to take care of). Part of medicine whose object is the preservation of the health of the aged—the hygiene of old people.

Gerocomi'um or **Gerocome'um.** Hospital for the aged.

Geromaras'mus or **Gerontatrophy**, ger-on-tat'ro-fe (*geronto, atrophia*). Debility and emaciation of old persons, Marasmus senilis.

Gerontine, ger-on'teen (*geronto*, old). $C_5H_{14}N_2$. Leucomaïne resembling cadaverine found in cell-nuclei in the liver, especially of old dogs. Paralyzant of nerve-centres. See *Leucomaïnes* (table).

Geron'to. In composition, old or aged.

Gerontoboscia, ger-on-to-bos'se-ah. Nourishment or maintenance proper for the aged.

Gerontocomice, ger-on-to-kom'is-e. Gerocomia.

Gerontocomi'um. Hospital for the aged.

Gerontophthalmia, ger-on-tof-thal'me-ah. Ophthalmia of old persons.

Gerontopia, ger-on-to'pe-ah (*geronto, ops*, eye). Weakness of sight of the aged. Presbyopia.

Gerontopityriasis, ger-on-to-pit-e-re'as-is. Pityriasis senilis.

Gerontotox'on, Gerontox'on, or **Gerotoxon**, ger-o-toks'on (*gero, toxon*, bow). Bow-shaped obscurity at the under margin of the cornea, *Arcus senilis*, common to old people, and supposed by some to indicate the existence of fatty degeneration of the heart. It is due to fatty degeneration of the corneal tissue.

Gerotropheum, ger-o-trof-a'um (*gero, trophe*, nourishment). Gerocomium.

Gerotrophia, ger-o-trof'e-ah (*gero, trophe*, nourishment). Nourishment or maintenance proper for the aged.

Gersa, gur'sah. Fæcula; plumbi subcarbonas. **G. serpenta'riæ**, see *Arum maculatum*.

Gerydrocephalus, ger-id-ro-sef'al-us. Hydrocephalus senilis.

Gesta'tio (*gesto*, to bear). Gestation. **G. extrauteri'na**, extra-uterine or ectopic pregnancy. **G. ova'ria**, ovarian pregnancy.

Gestation, jes-ta'shun (*gesto*, to carry). The time during which a female who has conceived carries the embryo in her uterus up to time of delivery. See *Pregnancy*. Bearing or carrying of an individual; as gestation on horseback, gestation in a carriage, etc. **G., abdom'inal**, pregnancy in which fœtus is contained in cavity of peritoneum. **G., cor'nual**, pregnancy occurring in a rudimentary cornu of a uterus bicornis. **G., double**, twin pregnancy; uterine pregnancy with extra-uterine pregnancy also. **G., ectop'ic**, extra-uterine pregnancy. **G., extra-u'terine**, pregnancy in which fœtus is not carried in the interior of the uterus. **G., Fallo'pian**, form of pregnancy in which fœtus is carried in Fallopian tube. **G., interstit'ial** or **intramu'ral** or **intermu'ral**, pregnancy, interstitial. **G., intra-ova'rian**, G., ovarian. **G., intraperitone'al**, G., abdominal. **G., mul'tiple**, pregnancy in which there are several fœtuses. **G., mu'ral**, pregnancy, interstitial. **G., ova'rian**, pregnancy in which fœtus is in the ovary. **G., pari'etal**, G., interstitial. **G., peritone'al**, G., abdominal. **G., plu'ral**, G., multiple. **G., preternat'ural**, extra-uterine pregnancy.; **G., pri'mary**, form of pregnancy in which the ovum becomes connected, at an early stage, with the peritoneum. **G., prolonged** or **protract'ed**, pregnancy prolonged beyond the usual period. **G., sec'ondary**, G. in which ovum has sought a new position from its original one. **G., tu'bal, tuba'rian**, or **tu'bular**, G., Fallopian. **G., tu'bo-abdom'inal**, extra-uterine pregnancy in which fœtal sac is made up of abdominal end of Fallopian tube and plastic matter. **G., tu'bo-ova'rian**, in this form of extra-uterine pregnancy the sac is formed of abdominal extremity of Fallopian tube and the ovary. **G., tu'bular**, G., tubal. **G., twin**, pregnancy in which there are two fœtuses. **G., u'terotubal**, pregnancy in which ovum is partly in the uterus and partly in the extra-uterine Fallopian tube. **G., ven'tral**, G., abdominal.

Gesticulation, jes-tik-u-la'shun (*gestus*, gesture). Act of making gestures; a symptom in disease indicating great encephalic erethism.

Gethyllis spiralis, geth-il'lis spir-al'is. S. African plant, the orange-colored fruit of which is used in spirit or tincture in flatulence and colic.

Geum, je'um. G. rivale. **G. al'bum** or **Alep'picum**, water avens of Canada and U. S., used for headache and gastric affections. **G. aquat'icum**, G. rivale. **G. Canaden'se**, G. album. **G. caryophylla'tum**, G. urbanum. **G. Chiloen'se** or **coccin'eum**, Chilean species, used in amenorrhœa. **G. hy'bridum**, G. rivale. **G. monta'num**, root of this Alpine plant is tonic, astringent, and antipyretic. **G. nu'tans** or **palus'tre**, G. rivale. **G. Plin'ii**, G. urbanum. **G. riva'le**, water or purple avens, chocolate root, ord. Rosaceæ. The root is tonic and astringent, and has been used in intermittents, dyspepsia, diarrhœa, hemorrhage, etc. **G. urba'num**, *Common avens, Herb Bennet, Yellow avens, Star of the north, Blessed herb*. The root of this plant has been used in intermittents, dysentery, chronic diarrhœa, debility, etc. **G. ver'num**, Western early avens, has the same properties as **G. Virginia'num**, *White avens, Evan root, Chocolate root, Bennet, Throatroot, Cureall;* common from Maine to Carolina and Kentucky; has the same medical properties as G. rivale; used in dysentery; G. album.

Geuma, gu'ma. Taste.

Geusion'osi or **Geusionusi**, gu-se-on-u'se (*geusis*,

nosos, disease). Diseases of the organ or sense of taste.

Geusis, gu'sis, Taste or exercise of that sense; root of the tongue.

Geusterion, gu-ster'e-on. Organ of taste; seat of taste.

Geu'stica or **Geustice**, gu'stis-e. Science of taste.

Geuth'mos. Taste.

Ghat'ti. East Indian gum, like gum arabic.

Ghee. Boiled butter, clarified; used as basis for ointments, salves, etc. in India.

Gher'kin. Fruit of Cucumis sativus.

Giant, ji'ant. One much above ordinary stature or of excessive growth. **G. cells**, myeloplaxes.

Gi'antism. Growth or development much above ordinary stature or dimensions.

Gianuzzi's cres'cents. Crescentic masses of cells in sublingual gland of some animals.

Gib'ba or **Gib'ber.** Hump; gibbosity. **G. ul'næ**, olecranon.

Gibberos'itas or **Gibbositas**, gib-bos'it-as (*gibbus*, arched or vaulted). Gibbosity; gibberosity; gibbousness; angular deformity or curvature of the spine. Phenomenon occurring in different diseases, particularly in rickets and caries of the vertebræ. See *Hump*. **G. cario'sa**, vertebral disease; Pott's disease. **G. re'nis**, lateral convex edge of kidney. **G. ul'næ**, olecranon.

Gibbon's hy'drocele. Hydrocele complicated with large hernia.

Gibbos'ity or **Gibbousness**, gib'bus-ness. Gibbositas.

Gib'bus. Hump. **G. of kid'ney**, external convex border of kidney. **G. Pot'tii**, vertebral disease. **G. re'nis**, lateral convex edge of kidney.

Gibert's pityri'asis. Pityriasis rosea.

Gibral'tar fe'ver. Yellow fever.

Gid. Disease of sheep, due to presence of a hydatid, cœnurus, in the brain.

Gid'diness. Vertigo.

Gid'dy. Dizzy; having feeling of vertigo.

Gigante'a. Helianthus annuus; laminaria.

Giganteus. jig-an-ta'us. Gigantic.

Gigantic, ji-gan'tik. Relating to one much above the ordinary stature.

Gigantism. ji-gant'izm. Giantism.

Gigan'toblast. Large germ in the blood of those affected with pernicious anæmia.

Gigantodès, jig-an-to'dees. Gigantic.

Gigantina helminthocorton, jig-ar-te'nah hel-mintho-kor'ton. Corallina Corsicana. **G. lichenoï'des**, Fucus amylaceus. **G. mamillo'sa**, species found on eastern coast of the United States, resembling Chondrus crispus. **G. murica'ta**, Fucus lichenoides.

Gigarum, jig'ar-um. Arum maculatum. **G. serpenta'ria**, Arum dracunculus.

Gi'gas. Giant.

Gilarum, jil-ar'um. Thymus serpyllum.

Gill or **Gill-over-the-ground.** Glechoma hederacea. **G. cov'er** or **flap**, operculum; see *Branchiæ*.

Gil'la theophras'ti or **vitri'oli.** Sulphate of zinc.

Gillenia stipulacea, gil-len'e-ah stip-u-lah'se-ah. Small-flowered Indian physic; has the same properties as **G. trifoliat'a**, *Common gillenia, Indian physic, Western dropwort, Indian hippo, Ipecac, Bowman's root, Meadow sweet, Beaumont root.* Ord. Rosaceæ. The root of this shrub and of G. stipulacea, which grows plentifully in the United States, is a safe and efficacious emetic in the dose of about thirty grains. It resembles ipecacuanha in properties.

Gillenin, gil'len-in. White bitter principle of gillenia.

Gilles de la Tourette's disease. Neurosis whose chief symptoms are motor incoordination, involuntary repetition of words, and use of obscene language.

Gil'liflower. Dianthus caryophyllus. **G., wall, win'ter**, or **yel'low**, Cheiranthus cheiri.

Gills. Branchiæ. **G., trache'al**, see *Branchiæ tracheales*.

Gim'bernat's lig'ament (after Gimbernat, a Spanish surgeon). Fibrous triangular expansion detached from the posterior and inner part of the crural arch and inserted into the crest of the pubis. This ligament forms the inner part of the superior aperture of the crural canal. It is one of the most frequent causes of strangulation in crural hernia. See *Fascia lata*.

Gin. *Hollands.* Spirit distilled from corn and juniper berries, or from some substitute for them, and possessing the properties of other spirituous liquors; it is diuretic and carminative, and in popular medicine is more used than other varieties, in colic or intestinal pain. See *Spirit*.

Gin-drink'er's liv'er or **Gin liv'er.** Cirrhosis of the liver; nutmeg liver.

Gingel'ly oil. Oil of Sesamum orientale.

Gin'ger. Amomum zingiber; Sedum acre. **G., Barba'does**, Amomum zingiber. **G., black**, Amomum zingiber. **G., com'mon**, Zingiber officinale; black ginger. **G., gar'den**, capsicum. **G., In'dian**, Asarum Canadense. **G., Jamai'ca**, Amomum zingiber. **G. plant**, Tanacetum vulgare. **G., preserved**, see *Amomum zingiber*. **G., white**, Amomum zingiber. **G., wild**, Asarum Canadense.

Gingerine, jin'jer-een. Oleo-resin derived from ginger.

Gingerol, jin'jer-ol. Pungent liquid obtained from ginger, isomeric with capsicum.

Gingiber, jin'jib-er. Ginger. See *Zingiber*.

Gingibrachium, jin-je-brak'e-um (*gingivæ*, gums, *brachium*, arm). Scurvy so called because the gums and arms are chiefly affected by it; also called gingipedium, because the lower limbs are in many cases the seat of scorbutic spots. See *Porphyra nautica*.

Gingil'ly or **Gingil'i oil.** Oil of sesamum.

Gingipedium, jin-je-pa'de-um (*gingivæ*, gums, *pes*, foot). See *Gingibrachium* and *Porphyra nautica*.

Gingiva, jin-je'vah. Gum (of the mouth). **G. cæru'lea**, blue gingival line; see *Gingival*.

Gingi'væ (pl. of **Gingiva**). The gums; portion of mucous membrane of the mouth covering the maxillary bones to the level of the alveolar arches. Gums are formed of a red tissue, more or less solid and of a fibro-mucous nature, adhering strongly to the necks of the teeth, and transmitting between the roots and their alveoli a very thin expansion—the alveolo-dental periosteum. The gums fix the teeth and contribute greatly to their stability.

Gingival, jin'jiv-al. Relating to the gums. **G. line**, reddish streak or margin at the reflected edge of the gums, seen in phthisis and chronic blood diseases, and also in pregnant and puerperal women. In lead-poisoning the line is blue.

Gingivalgia, jin-jiv-al'je-ah (*gingiva*, gum, *algos*, pain). Pain or neuralgia of the gums.

Gingiva'rium. Wash for the mouth and gums.

Gingivitis, jin-jiv-ī'tis (*gingivæ*, gums). Inflammation of the gums.

Ginglymo-arthro'dia. See *Ginglymoid*.

Ginglymoid, gin'glim-oid (*ginglumos*, hinge, *eidos*, resemblance). Resembling a ginglymus or hinge; epithet applied to joints resembling a hinge, *ginglymo-arthrodia* or *ginglymoid joint*, as the metatarso-phalangeal articulation.

Ginglymus, gin'glim-us. Species of diarthrodial articulation, only admitting of motion in two directions, like a hinge, as knee-joint or elbow-joint. **G., lat'eral**, diarthrosis rotatorius. **G. joint**, see *Ginglymoid*. **G., tro'choid**, articulation in which one bone turns upon another, as the atloido-axoid articulation.

Gino'ra America'na or **syphilit'ica.** Juice is diuretic and diaphoretic.

Ginseng, jin'seng. Panax quinquefolium. **G., Asiat'ic**, Panax schinseng. **G., blue**, Caulophyllum thalictroïdes. **G., Chinese**, ginseng. **G., dwarf**, Aralia triphylla. **G., horse**, triosteum. **G., white**, triosteum. **G., yel'low**, Caulophyllum thalictroïdes.

Giraldès (jir-al'daze), **organ of.** See *Organ of Giraldès* and *Paradidymus*.

Girdle, gur'dl. Belt. See *Cingulum*. **G. bone**, sphenethmoid bone. **G., mercu'rial**, cingulum mercuriale. **G., pel'vic**, pelvic arch. **G., sea**, Lamin-

aria digitata. **G. sensa'tions,** subjective perception causing impression that a girdle or band is tied about the trunk or limbs. **G., shoul'der,** pectoral arch.

Giz'zard. See *Ventriculus callosus.*

Glabella, glab-el'lah (*glaber,* smooth). Part of the face between the eyebrows. **G. coccyge'a,** smooth cutaneous surface over hiatus at lower extremity of sacral canal, foveola coccygea.

Glabellad, glab-el'lad. See *Glabellar.*

Glabellar, glab-el'lar. Epithet for aspect toward the glabella. *Glabellad* is used adverbially to signify toward the glabellar aspect. **G. length,** antero-posterior diameter of the skull.

Glabel'lo-obeliac diameter. Measurement from glabella to obelion.

Glabel'lo-occip'ital plane. Plane vertical to median plane of skull.

Glabel'lum. Glabella.

Glabel'lus. Devoid of hair.

Glabrities, glab-rish'e-ees (*glaber,* smooth). Baldness.

Glab'rous. Smooth; bald.

Glacial, gla'shal (*glacies,* ice). Icy; having the appearance of ice, as glacial phosphoric acid.

Glacialis, glas-e-al'is. Glacial. **G., hu'mor,** crystalline.

Glacia'tion. Having appearance like ice.

Glacies, glas'e-ees. Ice.

Gladiole, glad'e-ole. Gladiolus.

Gladi'olin. Alkaloidal substance found in the tissue of the brain.

Gladiolus, glad-e'o-lus (dim. of **Gladius,** sword). Gladiolus communis; see *Sternum.* **G. cæru'leus,** Iris Germanica. **G. commu'nis,** corn-flag; root has been used as aphrodisiac, and applied in cataplasms to scrofulous tumors. **G. lu'teus,** Iris pseudacorus. **G. sege'tum,** corn-flag, European corn-flag of Southern Europe; used as aphrodisiac and in amenorrhœa. **G. ster'ni,** see *Sternum.* **G. vulga'ris,** G. communis.

Gladius, glad'e-us (sword). Penis; bistoury.

Glair. Albumen ovi.

Glairine, glair-een'. Glairy organic substance produced by genus of Schizomycetes, called beggiatoa.

Glama, glam'ah. Sebaceous humor, secreted mainly by the follicles of Meibomius, which sometimes glues the eyelids together.

Gland (acorn, kernel). Glands are organs which separate from the blood any fluid whatever. When composed of several lobules, united by common vessels, they have been called *Conglomerate glands,* as the parotid, pancreas, etc. Reddish and spongy, knot-like bodies, met with in the course of the lymphatics, are called *Conglobate glands;* see *Ganglion* (lymphatic). Various organs, whose functions are still in dispute, are called glands, as pineal gland, pituitary gland, glands of Pacchioni, thyroid gland, thymus gland, suprarenal glands, etc. By some the word is restricted to soft, granular, lobated organs, composed of vessels and a particular texture, of which there are in the human body the testicles, the liver, pancreas, and kidneys. These *permanent glands,* or glands with permanent ducts, are destined to draw from the blood the molecules necessary for the formation of new fluids, and to convey these fluids externally by means of excretory ducts. Several glands, besides their excretory ducts, have special reservoirs in which the fluids secreted by them collect, remain for a greater or less space of time, and undergo slight modifications before being evacuated, such as the gall-bladder for the liver, the urinary bladder for the kidneys, etc. The term gland is sometimes appropriated to a tumor formed by inflammation or engorgement of a lymphatic ganglion. The glans penis and glans clitoridis are so called, although not glands.

Gland or **Glands.** See *Quercus alba.* **G., abdom'inal sal'ivary,** pancreas. **G., absorb'ent,** lymphatic glands. **G., acces'sory,** glands accessory to other glands; G., Cowper's. **G., acces'sory lac'rymal,** G. of Krause. **G., acces'sory lactif'erous,** G., Montgomery's. **G., acces'sory, of pan'creas,** Brunner's glands. **G., acces'sory, of paro'tid,** see *Parotid.* **G., acces'sory suprare'nal,** small bodies connected with suprarenal capsules. **G., acces'sory thy'reoid,** small glandular bodies lying in various positions around the thyreoid gland. **G., a'cinous,** G., racemose; see *Acinus.* **G., ag'gregate** or **ag'gregated,** G., Méry's; G., Peyer's; trachoma glands of Henle; lymph-follicles of conjunctiva; see *Bruch.* **G., ag'minated,** Peyer's glands. **G., albu'minous,** gland, secretion from which contains albumin. **G., amyg'dalous,** tonsil. **G., anal,** lymphatic and odoriferous glands of region of anus. **G., anom'alous,** ductless glands. **G., anteprostat'ic,** see *Cowper's glands.* **G., an'terior lin'gual,** G. of neck. **G., apor'ic,** ganglions, glandiform. **G., arytæ'noid,** acinous glands of larynx, near arytenoid cartilages. **G., asso'ciate parot'id,** G., accessory parotid; see *Parotid.* **G., auric'ular,** glands of external ear. **G., ax'illary,** lymphatic glands of axillary region. **G. of Bartholi'nus,** Cowper's glands (in female); Méry's glands; vulvovaginal glands; sublingual glands. **G. of Bau'hin,** see *Lingual glands.* **G. of bil'iary ducts,** hepatic glands. **G. of Blan'din,** anterior lingual glands. **G., blind,** ganglions, glandiform; ductless glands. **G., blood,** see *Ganglion.* **G., Bow'man's,** see *Bowman.* **G., bron'chial,** G., thyreoid; lymphatic glands of bronchi and trachea adjacent. **G. of Bruch,** see *Bruch.* **G., Brun'ner's,** see *Brunner's glands.* **G., buc'cal,** see *Buccal glands.* **G., bulbo-cav'ernous** or **bulbo-ure'thral,** Cowper's glands; Méry's glands. **G., car'diac,** acinous glands at inferior extremity of œsophagus; superior mediastinal lymphatic glands. **G., carot'ic** or **carot'id,** see *Glandula carotica.* **G., ceru'minous,** see *Ceruminous.* **G. of cheeks,** buccal glands. **G., coccyge'al,** see *Coccygeal intercarotid ganglion.* **G., cer'vical,** lymphatic glands of neck. **G., circuman'al,** G., anal. **G., closed,** G., ductless. **G., cœl'iac,** lymphatic glands in front of abdominal aorta. **G., conglom'erate,** G., racemose; see *Gland.* **G., con'voluted,** tubular gland with convoluted extremity. **G., Cowper's,** Méry's glands; vulvovaginal glands; see *Cowper's glands.* **G., cuta'neous,** glands of skin connected with hair, sweat, and sebaceous secretion. **G., den'tal, of Serres,** see *Tooth.* **G., diapnog'enous,** see *Perspiration.* **G., dor'sal,** lymphatic glands near posterior margin of axilla. **G., duct'less,** see *Glandiform ganglion.* **G., duode'nal,** Brunner's glands; lymphatic glands of mesentery connected with the duodenum. **G. of Duver'ney,** Cowper's glands (in the female); vulvovaginal glands. **G. of Ebner,** serous glands. **G., ex'cretory,** glands secreting fluids that are to be gotten rid of from the economy, as urine, etc. **G., external sal'ivary,** G., parotid. **G., follic'ular,** follicle. **G. of Galea'ti,** follicles of Lieberkühn. **G., gas'tric,** see *Stomach.* **G., ge'nal,** G., buccal. **G., gen'ital,** see *Genital.* Testicles and ovaries, or same organs when embryonic. **G., glo'bate,** conglobate glands. **G., glom'erate,** G., racemose. **G., gut'tural,** G., pharyngeal. **G., hæmatopoiet'ic,** ductless or vascular glands, as spleen, suprarenal capsules, thymus, etc., whose functions are presumed to be connected with changes in the blood passing through them. **G., Harder'ian,** or **G. of Harder,** small gland existing in certain mammals at the inner canthus of the eye. **G., Haver'sian** or **of Hav'ers,** synovial glands; S. fringes. **G., hon'eycomb,** Peyer's glands. **G., infundib'ular,** infundibulum of brain. **G., in'guinal,** lymphatic glands of groin. **G. of the integ'ument,** hair, sweat, and sebaceous glands. **G., intercarot'id,** small ganglion at or near division of common carotid artery. **G., intes'tinal,** glands in the large and small intestines, as Lieberkühn's crypts or follicles; Peyer's, Brunner's, and solitary glands. **G., ju'gular,** G., cervical. **G. of Krause,** acinous glands in conjunctiva. **G., lac'rymal,** see *Lacrymal.* **G., lactif'erous,** mammary g.; Montgomery's g. **G., lentic'ular,** lenticulares glandulæ, conglobate glands of stomach. **G., Lie'berkühn,** crypts of Lieberkühn; Lieberkühn's glands; see *Intestine.* **G. of Littré,** see *Urethra.* **G. of Lusch'ka,** coccygeal gland. **G., lymphat'ic,** see *Conglobate* and *Lymph* or *Lymphatic.* **G., mam'mary,** see *Mammary.* **G., Meibo'mian,** see *Meibomius.* **G. of Méry,** Cowper's glands. **G., mesera'ic** or **mesen-**

ter'ic, see *Mesenteric*. **G., mil'iary**, sebaceous glands; sweat-glands. **G., mixed**, muco-salivary glands. The alveoli of these glands are partly mucous and partly serous; the latter, however, predominate. **G., mo'lar**, buccal glands. **G., Moll's**, glands which open into hair-follicles of eyelashes; they are modifications of sweat-glands. **G., Montgom'ery's**, very minute g. of areola of mamma, having milky or fatty secretion. **G. of Morgagn'i**, see *Urethra*. G. of Littré; lateral arytenoid glands. **G., mucilag'inous, of Hav'ers**, synovial glands or fringes. **G., mucip'arous** or **mu'cous**, glands concerned in secretion of mucus; those belonging to mucous membranes. **G. of Naboth**, see *Nabothi glandulæ*. **G., nerve**, suprarenal capsules. **G., ner'vous, of pel'vis**, coccygeal gland. **G. of Nuck** or **of Nuhn**, anterior lingual glands. **G., odorif'erous**, glands secretion of which is odorous, as G. of Tyson. **G., oil**, sebaceous gland. **G., oxyn'tic**, G. of stomach, presumably concerned in acid secretion. **G. of Pacchio'ni**, glandulæ Pacchioni. **G., pal'pebral**, Meibomius g. **G., pancreat'ic**, see *Pancreas*. **G., parot'ic** or **parot'id**, see *Parotid*. **G. of Peck'lin**, Peyeri glandulæ. **G., pep'tic** or **pep'sin**, see *Peptic* and *G., oxyntic*. **G., per'manent**, see *Gland*. **G., per'spiratory**, G., sudoriparous. **G. of Pey'er**, glandulæ Peyeri. **G., pin'eal**, see *Pineal*. **G., pitu'itary**, hypophysis cerebi. **G., plex'iform**, Peyer's glands. **G., prepu'tial**, odoriferous sebaceous glands on glans penis and prepuce. **G., pros'tate**, prostate gland. **G., pylo'ric**, numerous gastric glands in that region of stomach. **G., ra'cemose**, see *Racemose*. **G., re'nal**, capsules, renal. **G., Rivi'ni's**, sublingual g. **G., sali'val** or **sal'ivary**, salivary glands. **G., sal'ivary abdom'inal**, pancreas. **G., seba'ceous** or **sebif'erous**, sebaceous glands. **G., sem'inal**, testes. **G., se'rous**, G., albuminous. **G., sex'ual**, testes and ovaries, or their embryonic forms. **G., Skene's**, two tubular glands on each side of floor of female urethra. **G. of skin**, G., cutaneous. **G. of small intes'tine**, Peyer's glands, Brunner's glands, follicles of Lieberkühn. **G., sol'itary**, Brunner's glands, small white projections on lining membrane of the entire intestine. **G., staph'yline**, G., palatine. **G. of stom'ach**, gastric glands; peptic glands. **G., subconjuncti'val**, Meibomius, glands of. **G., sublin'gual**, see *Sublingual*. **G., submax'illary**, see *Submaxillary*. **G., sudorif'erous** or **sudorip'arous**, sweat-glands; see *Perspiration*. **G., suprare'nal**, capsules, renal. **G., sweat**, see *Perspiration*. **G., syno'vial**, synovial fringes. **G., tar'sal, G., tar'so-conjuncti'val**, Meibomius, glands of. **G., tem'porary**, glands consisting of a single primary vesicle or sacculus, which, having elaborated secretion in its interior, bursts, discharges it, and disappears. Graafian vesicles and the gland-cells are examples. **G., thy'mus**, see *Thymus*. **G., thy'reoid** or **thy'roid**, see *Thyroid*. **G., tracho'ma**, see *G., aggregated*, and *Bruch*. **G., tympan'ic**, vascular fusiform ganglion on tympanic nerve. **G. of Ty'son**, G., preputial; sebaceous glands of Tyson. **G., ure'thral**, G. of Littré. **G., u'terine**, tubular glands contained in the mucous membrane of the body of the uterus. **G., vas'cular**, G., hæmatopoietic; ganglion or ganglia, glandiform. **G. of Vesa'lius**, pulmonary g.; bronchial g. **G., vit'elline**, vitellarium. **G. vul'vo-vagi'nal**, G. of Bartholin; G. of Cowper (in female); muciparous glands on both sides of outlet of the vagina. **G., Weber's**, mucous glands of the tongue. **G. of Wil'lis**, albicantia corpora; mammillary tubercules. **G., yolk**, vitellarium. **G., Zeiss's**, sebaceous glands opening into the follicles of the eyelashes.

Glandebalæ, glan-deb'al-e. Hair in the axillary space.

Glan'ders. Equinia. **G., farcy**, see *Equinia*.

Glandiferous, glan-dif'er-us (*gland*, *fero*, to bear). Bearing or possessing gland or glands.

Glan'diform. Adenoid; adeniform; resembling a gland. **G. cor'puscle**, acinus. **G. gan'glion**, see *Ganglion*.

Glandium, glan'de-um. Thymus.

Glan'dula (dim. of **Glans**). A small gland; gland, glandule. **G. angula'ris**, submaxillary gland. **G. atrabilia'ris**, capsule, renal. **G. ad au'res**, parotid. **G. Avicen'næ**, encysted tumor. **G. Bartholinia'na**, sublingual gland. **G. basila'ris**, pituitary gland. **G. carot'ica**, carotic or carotid gland; ductless gland, formerly regarded as intercarotic ganglion of the great sympathetic, seated at the upper end of the common carotid and its branches. **G. coccyge'a**, coccygeal gland. **G. col'li**, tonsil. **G. concre'ta Monro'i**, part of lacrymal gland next to eyebrow. **G. Cow'peri**, Cowper's gland. **G. foram'inis obturato'rii**, lymphatic gland at inner extremity of foramen thyroideum. **G. innomina'ta**, caruncula lacrymalis. **G. innomina'ta Gale'ni**, portion of lacrymal gland next to orbit. **G. intercarot'ica**, carotid gland. **G. lacryma'lis**, lacrymal gland. **G. lacryma'lis acceso'ria** or **infe'rior** or **palpebra'lis**, inferior palpebral portion of lacrymal gland. **G. lacryma'lis supe'rior**, upper or orbital portion of lacrymal gland. **G. lactif'era**, mammary gland. **G. lingua'lis**, sublingual gland. **G. maxilla'ris**, submaxillary gland. **G. muco'sa**, conglobate gland. **G. orbita'ria**, lacrymal gland. **G. parotidæ'a**, parotid. **G. paro'tis accesso'ria**, accessory parotid gland. **G. pinea'lis**, pineal gland. **G. pituito'sa** or **pituita'ria**, pituitary gland. **G. præhyoï'dea**, relic of ductus thyreoglossus of fœtal life. **G. pros'tata ante'rior**, occasional accessory gland in front of prostate. **G. pros'tata mulie'bris**, spongy tissue around meatus urinarius in female. **G. Rivinia'na**, sublingual gland. **G. saliva'lis abdom'inis**, pancreas. **G. saliva'lis exter'na**, parotid. **G. saliva'lis inter'na**, submaxillary and sublingual glands, viewed collectively. **G. so'cia parot'idis**, accessory parotid. **G. sublingua'lis**, sublingual gland. **G. submaxilla'ris**, submaxillary gland. **G. suprahyoï'dea**, G. præhyoïdea. **G. thy'mus**, thymus. **G. thyreoï'dea**, thyroid gland. **G. thyreoï'dea accesso'ria**, see *Thyroid gland*. **G. tympan'ica**, vascular mass surrounding tympanic nerve as it enters the small canal in the petrous portion of the temporal bone.

Glan'dulæ (pl. of **Glandula**). Glands. **G. acino'sæ**, see *Acinus*. **G. acino'sæ subconjunctiva'les**, acini under conjunctival fold. **G. aggrega'tæ**, Peyeri glandulæ. **G. agmina'tæ**, Peyeri glandulæ. **G. ana'les**, anal glands. **G. antibrach'ii**, deep lymphatic glands of forearm. **G. a'picis lin'guæ**, racemose glands near tip of the tongue. **G. articula'res**, synovial glands. **G. arytenoï'deæ**, arytenoid glands. **G. assisten'tes**, prostate gland. **G. aureola'res**, see *Mamma*. **G. auricula'res**, lymphatic glands of parotid region. **G. Bartholinian'æ**, Bartholin's glands. **G. Blandi'ni**, G. apicis linguæ. **G. Brun'neri** or **Brunnerian'æ**, Brunner's glands. **G. bucca'les**, buccal glands. **G. cardia'les**, glands of cardiac portion of the stomach. **G. cerumino'sæ**, ceruminous glands. **G. cervi'cis u'teri**, Nabothi glandulæ. **G. concatena'tæ**, deep cervical glands. **G. conglomera'tæ**, conglomerate glands. **G. congrega'tæ Monro'i**, inferior part of lacrymal gland. **G. coro'næ pe'nis**, preputial glands; see *Sebaceous glands*. **G. Cow'peri**, Cowper's glands. **G. cubita'les**, brachial glands. **G. cu'tis spira'lis**, sudoriparous glands. **G. digesti'væ**, glands of cardiac portion of stomach. **G. du'ræ ma'tris**, Pacchioni, glands of. **G. du'ræ menin'gis**, Pacchioni, glands of. **G. facia'les profun'dæ**, internal maxillary glands. **G. facia'les superficia'les**, G. auriculares. **G. follicula'res lin'guæ**, lingual glands. **G. follic'uli cilia'res**, Meibomius, glands of. **G. fun'di**, peptic glands. **G. gas'tro-epiplo'icæ**, lymphatic glands of stomach. **G. gena'les**, buccal glands; salivary glands of cheek. **G. glomifor'mes**, sudoriparous glands. **G. humerar'iæ**, lymphatic glands of arm. **G. in ag'mine congrega'tæ intestino'rum**, Peyeri glandulæ. **G. inguina'les**, inguinal glands. **G. interarytenoï'deæ**, arytenoid glands. **G. intercartilagin'eæ**, mucous glands between cartilages of the trachea, at posterior part. **G. interior'es rena'les**, corpora Malpighiana. **G. inter'næ re'ni**, corpora Malpighiana. **G. intestina'les**, Peyeri glandulæ. **G. jugula'res**, jugular or deep cervical glands. **G. kama'la**, glands from capsules of Mallotus Philip-

pinensis, remedy for tapeworm. **G. labia'les,** labial glands. **G. lactif'eræ,** see *Mammary gland.* **G. lactif'eræ aberran'tes,** sebaceous glands of areola of the nipple. **G. lactif'eræ accesso'riæ,** sebaceous glands of aureola of the nipple. **G. laryn'gis posterio'res,** arytenoid glands. **G. lenticula'res,** solitary glands; see *Lenticular.* **G. Lieberkühnian'æ,** Lieberkühn's glands. **G. lingua'les,** lingual glands. **G. Littria'næ** or **Litt'rii,** Littré's gland; see *Urethra.* **G. lu'puli,** lupulin. **G. Malpi'ghi,** see *Spleen.* **G. Meibomia'næ,** Meibomius, glands of. **G. mesera'icæ,** mesenteric glands. **G. min'imæ,** Lieberkühn's glands. **G. mola'res,** molar glands; buccal glands. **G. mucip'aræ,** mucous glands; glands of pyloric end of stomach. **G. mucip'aræ racema'tim conges'tæ intestino'rum,** Peyeri glandulæ. **G. muco'sæ,** mucous glands; Lieberkühn's glands. **G. muco'sæ coagmina'tæ intestino'rum,** Peyeri glandulæ. **G. muco'sæ lingua'les,** lingual glands. **G. myrtifor'mes,** carunculæ myrtiformes. **G. odorif'eræ,** or **o. glan'dis,** or **o. pe'nis,** or **o. Tyso'ni,** preputial glands; see *Sebaceous glands.* **G. œsophage'æ,** œsophageal glands. **G. Pacchio'nii,** Pacchioni, glands of. **G. palati'næ,** palatine glands. **G. palpebra'les seba'ceæ,** Meibomius, glands of. **G. parotide'æ,** G. auriculares. **G. pelvi'næ,** iliac glands, internal. **G. Peyeria'næ,** Peyeri glandulæ. **G. pharynge'æ,** pharyngeal glands. **G. plexifor'mes,** Peyeri glandulæ. **G. pros'tatæ mulie'rum,** vascular spongy eminence surrounding orifice of female urethra. **G. rena'les inter'næ,** corpora Malpighiana. **G. Rottle'ræ,** kamala. **G. seba'ceæ,** sebaceous glands. **G. seba'ceæ cilia'ris,** Meibomius, glands of. **G. seba'ceæ glan'dis,** preputial glands; see *Sebaceous glands.* **G. seba'ceæ palpebra'rum,** Meibomius, glands of. **G. so'ciæ,** Peyeri glandulæ. **G. solita'riæ,** Brunner's glands. **G. spu'riæ,** Peyeri glandulæ; ganglions, glandiform. **G. subauricula'res,** mastoid glands. **G. sudorif'eræ** or **sudorip'aræ,** sudoriparous glands; see *Perspiration.* **G. supraclavicula'res,** lower set of deep cervical glands. **G. suprarena'les,** capsules, renal. **G. tarsa'les,** Meibomius, glands of. **G. tubulo'sæ,** see *Tubular.* **G. Tyso'ni,** preputial glands; see *Sebaceous glands.* **G. uteri'næ** or **utricula'res,** glands in interior of uterus. **G. vascula'res** or **vasculo'sæ,** blood-glands; see *Ganglion.* **G. Vesalia'næ,** bronchial glands. **G. vestibula'res,** Cowper's glands (in the female). **G. vulvovagina'les,** Cowper's glands (in the female).

Gland'ular. Having the appearance, form, or texture of glands. **G. carcino'ma,** see *Carcinoma.* **G. gran'ules,** corpora Malpighiana. **G. sub'stance of the kidney,** see *Kidney.* **G. vagini'tis,** condition of the vagina in which the papillæ of the mucous vaginal membrane are inflamed or in a congested, hypertrophied state; glassy swelling; see *Swelling.*

Glan'dules. Small glands. **G. of Malpig'hi,** see *Corpora Malpighiana.*

Gland'uliform. Gland-shaped.

Gland'ulose. Glandular; glanduliform.

Glanduloso-carneus, glan-du-lo'so-kar'ne-us. Term applied to a fleshy excrescence in the bladder.

Glans (acorn). Extremity of the penis and of the clitoris. The *glans penis* is conical, slightly flattened, and continuous with the urethra, which opens at its apex; is circumscribed by a projecting edge called corona glandis, behind which is a depression, collum or sulcus retroglandularis, fossa glandis. It is covered by a thin mucous membrane, is furnished at its base with sebaceous follicles, called glandulæ odoriferæ Tysoni, the secretion from which is termed smegma præputii; and it can almost always be covered by the reflection of the skin, called the prepuce. It is formed of a spongy texture, susceptible of being thrown into erection. The *glans clitoridis* is smaller, imperforate, and covered with a sort of prepuce formed by the mucous membrane of the vulva. Glans is also a word employed synonymously with bronchocele, gland, pessary, suppository. **G. clitor'idis,** see *Glans.* **G. Jo'vis Theophras'ti,** Fagus castanea. **G. pe'nis,** see *Glans.* **G. phal'li,** G. penis; see *Glans.* **G. pitu'itam excip'iens,** pituitary gland; hypophysis cerebri. **G. ul'næ,** olecranon. **G. unguenta'ria,** ben nut; see *Guilandina moringa, Myrobalanus.*

Gla'rea. Gravel or sand in the urinary canals or passages.

Gla'ser, fis'sure of. Fissure dividing the glenoid fossa of the temporal bone.

Glass. Vitrum. **G. eye,** artificial eye; amaurosis of the horse. **G. liq'uid,** potassium silicate.

Glass'blower's cramp. Permanent contraction of the third and fourth fingers of glassblowers.

Glass'es. Spectacles; eye-glasses; optical lenses.

Glass'pox. Coniform varicella or chicken-pox, in which the vesicles are generally acuminated.

Glass'wort. Salicornia herbacea; antiscorbutic.

Glas'sy. Like glass, as the expression of the eyes of a corpse. **G. swell'ing,** see *Swelling.*

Glau'ber's salts (after R. Glauber, a German chemist). Sodium sulphate.

Glaucedo, glaw'sa-do. Glaucoma.

Glauci'na (from its color, *glaukos,* sea-green). Natural cowpox.

Glaucine, glaw'seen. Alkaloid in Glaucium luteum; glaucina.

Glau'cium or **Glau'cum lu'teum.** Horn poppy, European plant; narcotic; juice applied externally is anodyne.

Glauco'ma (*glaukos,* sea-green). Among the older pathologists the synonym of cataract; now applied to opacity of the vitreous humor or of the tunica hyaloidea; manifested by a grayish or greenish spot, apparent through the pupil, characterized by rapidly-increasing presbyopia, periodical dimness of vision, diminution of the field of vision, increased tension of the globe, excavation of the optic disk, dilated pupil, halos around a bright light, corneal anæsthesia, pain, etc., all of these symptoms not being constant. In *glaucoma fulminans* the impairment of vision occurs very rapidly, perhaps in a few hours. The disease was almost incurable until Von Graafe employed iridectomy; see *Optic papilla.* **G., ab'solute,** glaucoma with destruction of vision. **G., Don'ders's,** simple atrophy of. **G. ful'minans,** see *Glaucoma.* **G., hemorrhag'ic,** glaucoma with intraocular hemorrhage. **G. im'minens,** initial stage approaching glaucoma, when a few or many of the symptoms of the disease are present in a minor degree. **G., inflam'matory,** glaucoma with symptoms of inflammation. **G. ring,** glaucomatous cup. **G., sec'ondary,** glaucoma as a sequel of disease or injury.

Glaucom'atous. Relating to or affected with glaucoma. **G. cup,** see *Optic papilla.*

Glaucopicrine, glaw-ko-pik'reen. Bitter alkaloid obtained from Glaucium luteum and Chelidonium majus.

Glaucosis, glaw-ko'sis. Loss of sight from glaucoma; glaucoma itself.

Glechoma (glek-o'mah) **hed'era, hedera'cea,** or **hirsu'ta.** This plant, ord. Labiatæ, has a strong smell, and a bitterish, somewhat aromatic taste; expectorant and tonic.

Gleditschia (gled-itsch'e-ah) **Chinen'sis.** Chinese plant; expectorant, cathartic, anthelmintic. **G. spino'sa** or **triacan'thos,** ord. Leguminosæ. Honey locust, indigenous in North America; pulp is expectorant; poisonous alkaloid is derived from the unripe fruit, to which the name *Gleditch'ine* is given.

Gleet. Chronic gonorrhœa; chronic discharge from any mucous membrane, usually applied to muco-purulent discharges from urethritis.

Gleichenia (gli-ken'e-ah) **Herman'ni.** Fern of Asia and Australia, used in diarrhœa, aphthæ, etc.

Gleme, gla'ma. Sebaceous humor sometimes gluing the eyelids together.

Glenard's disease. See *Enteroptosis.*

Gle'ne. Pupil; anterior part of the eye; eyeball; eye; crystalline lens; glenoid cavity.

Glenitis, glen-e'tis (*glene,* crystalline lens, *itis,* inflammation). Inflammation of the crystalline lens.

Gle'no-brachia'lis. Occasional muscle passing from surgical neck of humerus to be inserted with the biceps.

Gle'no-hu'meral lig'ament. Ligamentous fibres passing from glenoid fossa to lower tuberosity of the humerus.

Gle'noid (*glene, eidos*, resemblance). Any shallow articular cavity which receives the head of a bone, such as the glenoid cavity or fossa of the scapula, articulated with the head of the humerus; also the glenoid cavity or fossa of the temporal bone, receiving the condyle of the lower jaw. Relating to the socket of the eye. **G. cav'ity**, see *Glenoid*. **G. crest**, ridge separating articular surface of patella into two parts. **G. fis'sure**, Glaserian fissure. **G. fos'sa**, see *Glenoid*. **G. lig'ament**, fibro-cartilaginous ring which seems formed by the expansion of the tendon of the long head of the biceps brachialis, and surrounds the glenoid cavity of the scapula, the depth of which it increases. Fibro-cartilages of the fingers.

Glenoid'al. Glenoid.

Gle'no-radia'lis. Long head of biceps flexor cubiti muscle.

Gle'no-ulna'ris. Fibres of long head of biceps flexor cubiti distributed to bicipital fascia of forearm.

Glia, gle'ah (glue). Neuroglia. **G. cells**, cells of Dieters on basilar membrane and cochlea.

Gliabacte'ria. Micro-organisms having zooglœa around them.

Gliacoc'cus. Coccus having glutinous envelope.

Gli'adin. Organic principle in gluten.

Gli'ding. Movement of surfaces on each other, backward and forward, without displacement; lateral movement of flap in plastic surgery. **G. joint**, arthrodia. **G. move'ment**, sliding movement of articular surfaces upon each other.

Glioma, gle-o'mah (glue). A variety of round-celled sarcoma originating in the neuroglia, or connective tissue of nerves, occurring in the brain, auditory nerve, and retina, and containing no nerve-elements. **G. fibro'sum ret'inæ**, G. retinæ. **G. medul'læ**, syringomyelia. **G. myxomato'des**, gliomyxoma. **G. ret'inæ**, tumor originating in the neuroglia of the retina, and in its structure resembling cerebral glioma. Sometimes it resembles both glioma and sarcoma, and is then called *Gliosarcoma*. **G. sarcomato'des**, gliosarcoma. **G. teleangeiectat'icum**, G. with excessive vascular distribution.

Gliomatosis, gle-o-mat-o'sis. Abnormal increase or development of glioma, as in syringomyelia. **G., med'ullary**, syringomyelia.

Gliomyxoma, gle-o-miks-o'mah (*glioma, muxa*, mucus). Glioma characterized by partial conversion into mucous tissue.

Gliosarcoma, gle-o-sark-o'mah. Lymphosarcoma, tumor having characteristics of glioma and sarcoma. **G. of ret'ina**, glioma retinæ.

Glio'sis. Indurated and excavated places in gray matter of brain, giving rise to atrophy of optic nerves and bulbs of olfactory nerves, with degeneration of posterior column of spinal cord and other symptoms, occasionally confounded with general paralysis.

Glischrasma, glis-kras'mah (*glischros*, gluey). Viscidity or siziness.

Glischrobacte'rium (*glischros*, gluey). Bacterium considered as producing mucous degeneration of urine.

Glischrocholus, glis-krok'o-lus (*glischros*, gluey, *chole*, bile). Epithet for excrement which is glutinous and bilious.

Glischrotes, glis'kro-tees. Viscidity or siziness.

Glischrous, glis'krus. Glutinous; viscid.

Glis'son's cap'sule. Dense areolar membrane surrounding the vena porta and its ramifications in the liver.

Glis'ter. Enema.

Glo'bate. Conglobate.

Glob'ba nu'tans or **silves'tris.** Plant of tropical Asia, root of which is astringent. **G. unifor'mis**, root of this species is used in colic and diarrhœa.

Globe. Bandage (head). **G. of eye**, see *Eye*. **G. flow'er**, Cephalanthus occidentalis, Trollius laxus. **G., hyster'ic**, globus hystericus. **G., oc'ular**, eyeball. **G., ten'sion of**, see *Tension*. **G., u'terine**, globular appearance of womb after birth of child. **G., vitel'line**, segmentation cell.

Glo'bi martia'les (martial balls). See *Ferrum tartarizatum*.

Glo'bin. Proteid residue from decomposition of hæmoglobin.

Globula'ria al'ypum. *Globularia, Wild senna of Europe, Montpellier turbith.* The bitter leaves of this plant have been used in intermittents and in constipation. The resin of the root is cathartic like that of jalap.

Glob'ule. A small globe; a small pill.

Glob'uli (pl. of **Globulus**) **al'bi.** White globules or corpuscles of blood. **G. Aran'tii**, corpora Arantii. **G. arteria'rum ter'mini**, acinus of gland. **G. gan'glii**, nerve-cells. **G. lymphat'ici**, lymphatic corpuscles. **G. mammilla'res**, mammillary eminences; corpora albicantia. **G. martia'les** or **mar'tis**, ferrum tartarizatum. **G. medulla'res**, mammillary eminences; corpora albicantia. **G. na'si**, extremity of the nose. **G. sanc'ti** or **san'guinis**, globules of the blood. **G. tar'tari martia'les**, ferrum tartarizatum. **G. tartra'tis fer'ri** or **lixiv'iæ**, ferrum tartarizatum. **G. vagina'les**, vaginal suppositories.

Globulimeter, glob-u-lim'et-ur. Instrument for determining the relative number of red corpuscles.

Glob'ulin. Crystallin; blood casein. Colorless substance remaining after abstraction of the coloring matter of the blood-globule. A peculiar albuminous principle may be obtained also from a watery extract of the crystalline lens. Albuminose of red corpuscles. Proteid substance occurring in urine, usually associated with serum-albumen. To detect its presence the urine is rendered slightly alkaline by ammonium hydrate and filtered after several hours, thus separating the phosphates. Ammonium sulphate in saturated solution is then added to the filtrate. Should a precipitate occur, it is globulin. Globulin is found in the lardaceous form of nephritis, and also in acute nephritis. **G., ac'id**, syntonin. **G., fi'brino-plas'tic**, paraglobulin. **G., se'rum**, paraglobulin.

Glob'ulins. A class of proteids insoluble in water, but soluble in weak saline solutions, including fibrinogen, globulin, vitellin, myosin, and paraglobulin. The solutions are coagulable by heat. Also blood-plaques; blood-plates; minute leucocytes.

Globulinu'ria. Presence of globulin in urine.

Globulism, glob'u-lizm. Homœopathy.

Glob'ulose. When pepsin is digested with globulin the result is globulose, a variety of hemialbumose. Globular.

Glob'ulus (dim. of **Globus**). Globule; suppository; corpus albicans. **G. Aran'tii**, corpuscle of Arantius; see *Sigmoid valves*. **G. hyster'icus**, see *Angone*. **G. na'si**, apex or lip of columna nasi. **G. sanguin'eus**, see *Punctum saliens*. **G. stape'dius os'sis**, orbicular bone.

Glo'bus. Ball or globe. Epileptic aura. **G. hyster'icus**, see *Angone*. **G. ma'jor**, head of epididymis. **G. mi'nor**, tail of epididymis. **G. pal'lidus**, nucleus lenticularis of the brain. **G. uteri'nus**, round tumor formed by the uterus in the lower part of the abdomen immediately after delivery. **G. vitella'ris**, yelk of ovum and its surrounding membrane.

Glomerate, glom'er-ate (*glomus*, ball). Conglomerate.

Glomerule, glom'er-ule (dim. of **Glomus**, ball). Small ball or coil formed by an agglomeration of vessels, as glomerule of Malpighi. See *Corpora Malpighiana*. **G. of kid'ney**, tuft or mass of blood-vessels in corpus Malpighianum. **G. of periodon'tium**, periodontal tufts resembling those of the kidney. **G. of Ruysch**, corpora Malpighiana. **G. of spleen**, corpora Malpighiana.

Glomer'uli (pl. of **Glomerulus**) **arterio'si coch'leæ**, glomerules or branches of auditory artery in the cochlea. **G. of kid'ney**, corpuscles of Malpighi. **G. Malpigh'ii**, corpora Malpighiana. **G. plexuo'si**, occasional glomerules seated in the thoracic duct. **G. rena'les**, corpora Malpighiana.

Glomerulitis, glom-er-u-le'tis. Involvement of

the glomeruli of Malpighi in inflammation of the kidney.

Glomerulo-nephritis, glom-er'u-lo-nef-re'tis. Inflammation of structure of the kidney commencing with the glomeruli.

Glomerulus, glom-er'u-lus. Glomerule. **G. arte'rio-coccyge'us** or **arterio'sus coccyge'us,** coccygeal gland. **G. cauda'lis,** coccygeal gland. **G. choroï'deus,** part of choroid plexus of the lateral ventricle of the brain. **G. olfacto'rius,** ball made by a coil of fibres of the olfactory nerve.

Glom'ulus. Glomerule.

Glo'mus. Glomerule. **G. choroï'deus,** glomerulus choroïdes.

Glonoïn, glo'no-in. Nitroglycerin. Trinitroglycerin. Liquid substance prepared by adding glycerin to a mixture of sulphuric acid and fumigating nitric acid, pouring it into water, and washing upon a filter. Oleaginous substance of sweet taste, slightly soluble in water, but readily in alcohol and ether. Active poison; used therapeutically in Bright's disease, angina pectoris, asthma, cerebral anæmia, etc. Dose, one drop of a 1 per cent. solution, gradually increased.

Glorio'sa super'ba. Plant of E. Indies, nat. ord. Liliaceæ, root of which is narcotic, tonic, and antiperiodic.

Glos'sa. Tongue. Power of speech. Speech.

Glossagra, glos'ah-grah (*glossa, agra,* seizure). Pain in the tongue.

Glos'sal. Relating to the tongue.

Glossalgia (glos-al'je-ah) or **Glottal'gia** (*glossa, algos,* pain). Pain in the tongue. Glossodynia.

Glossanischum (glos-an-is'kum), **Glossanochum** (glos-san'ok-um), or **Glossanoch'eus** (*glossa, anecho,* to hold up). Instrument for holding up the tongue.

Glossanthrax, glos-an'thrax (*glossa, anthrax,* carbuncle). Anthrax or carbuncle of the tongue; disease more common in cattle than in man.

Glossectomy, glos-sek'to-me (*glossa, ektome,* excision). Excision or amputation of the tongue.

Glossepiglottic, glos-ep-e-glot'tik. Relating to the tongue and epiglottis.

Glossianus, glos-se-an'us. Lingual; lingualis muscle.

Glossitis, glos-se'tis. Inflammation of the tongue. When it affects the whole of the tongue it is a serious disease, and requires the vigorous use of antiphlogistics. Dissecting glossitis produces deep furrows and cracks, and gives rise to increased pain by the action of the secretions of the mouth and of alimentary matters. **G., aph'thous,** aphthæ. **G., dissect'ing,** see *Glossitis.* **G., follic'ular,** glossitis involving follicles of tongue and larynx, with ulceration. **G., gum'matous,** syphilitic inflammation of the tongue, with gummatous deposits. **G., mu'cous,** stomatitis; inflammation of mucous membrane of tongue and mouth. **G. papil'læ,** inflammation of papillæ of tongue. **G., scle'rous,** sclerosed condition of the tongue.

Glos'so (*glossa,* tongue). In composition, relating or appertaining to the tongue.

Glosso-ataxia, glos-so-at-aks'e-ah (*glosso, ataxia,* want of co-ordination). Want of muscular co-ordination of the tongue.

Glossocace, glos-sok'as-e (*glosso, kakos,* evil). Ulceration of the tongue, with symptoms of adynamic fever.

Glossocarcinoma, glos-so-kar-sin-o'mah (*glosso, karkinoma,* cancer). Cancer of the tongue.

Glossocardia Bosvallia, glos-so-kar'de-ah bos-val'-le-ah. E. Indian plant; bitter, aromatic, emmenagogue.

Glossocat'ochus or **Glossocatoche,** glos-so-kat'o-ke (*glosso, katecho,* to arrest). Tongue-holder; instrument to depress the tongue in order to examine diseases of the fauces. The finger or the handle of a spoon or a spatula is generally used.

Glossocele, glos-so-se'le (Eng. glos'so-seel) (*glosso, kele,* hernia, tumor). Hernia of the tongue; projection of the tongue from the mouth, depending generally on an inflammatory swelling. Chronic glossocele, or œdematous engorgement, sometimes proceeds to a great length, and deforms the dental arches, the lips, etc.

Glossocoma, glos-so-ko'mah. Cramp or spasm of the tongue.

Glossoc'omon, Glossoc'omum, or **Glossocomion,** glos-so-ko'me-on (*glosso, komeo,* to guard). Small case for holding the tongues of wind instruments. By extension it is applied to the box or cradle in which fractured limbs are kept.

Glossodesmus, glos-so-des'mus (*glosso, desmos,* bandage). Frænum of tongue; bandage for the tongue.

Glossodynia, glos-so-din'e-ah. Pain or neuralgia of the tongue.

Glosso-epiglottic (glos-so-ep-e-glot'tik) or **Glosso-epiglottidean,** glos-so-ep-e-glot-tid-e'an. Belonging to the tongue and epiglottis. Term applied to fleshy fibres passing from the base of the tongue toward the epiglottis; more evident in some mammalia than in man. Their use seems to be to raise the epiglottis and to remove it farther from the glottis. They have been called also retractores epiglottidis. **G.-e. folds,** folds of mucous membrane passing from root of tongue to epiglottis, between which are the *Glosso-epiglottic fossæ.* **G.-e. fræn'ula** or **fræ'na,** G. ligaments. **G.-e. lig'aments,** three folds of mucous membrane connecting the anterior surface of the epiglottis with the root of the tongue.

Glossography, glos-og'raf-e (*glosso, graphe,* description). Anatomical description of the tongue.

Glossogyne (glos-og'in-e) **Chinen'sis.** Root is used in toothache and as an expectorant, and the leaves are employed externally in burns.

Glossohyal, glos-so-hi'al. Name given by Geoffroy Saint-Hilaire to the posterior cornua of the os hyoides.

Glos'soid. Having the shape of the tongue.

Glos'so-la'bial. Relating to tongue and lips.

Glosso-labio-laryngeal, glos'so-lab'e-o-lar-in-je'al. Relating to tongue, lips, and larynx. **G.-l.-l. paral'ysis,** chronic bulbar paralysis in which progressive symmetrical paralysis exists, affecting the lips and neighboring muscles of face, tongue, pharynx, and occasionally the larynx.

Glosso-labio-pharyngeal, glos'so-lab'e-o-far-in-je'al. Relating to tongue, lips, and pharynx.

Glosso-laryngeal, glos'so-lar-in-je'al. Relating to the tongue and larynx.

Glossology, glos-ol'o-je (*glosso, logos,* treatise). Study of the tongue in disease; treatise on the tongue or on speech. Nomenclature.

Glossolysis, glos-sol'is-is (*glosso, lusis,* solution). Paralysis of the tongue or of articulation.

Glossomanteia or **Glossomantia,** glos-so-man-te'a (*glosso, manteia,* divination). Prognosis from condition of the tongue.

Glossomegistus, glos-so-mej-is'tus (*glosso, megistos,* greatest). Glossocele; hypertrophy of the tongue; protrusion of enlarged tongue.

Glosson'cus (*glosso, onkos,* tumor). Swelling of the tongue. **G. inflammato'rius,** swelling of the tongue from inflammation.

Glosso-palatine (glos'so-pal'at-ene) **arch.** Anterior arch of fauces; palatoglossus; relating to tongue and palate.

Glossopalatinus, glos-so-pal-at-e'nus. Glossostaphylinus; paralysis affecting the muscles of speech and deglutition.

Glossopathy, glos-sop'ath-e (*glossa,* tongue, *pathos,* disease). Disease of the tongue.

Glosso-pharyngeal, glos-so-far-in-je'al. Glossopharyngeus; pharyngoglossal. **G.-p. nerve,** pharyngoglossal nerve. **G.-p. nu'cleus,** situate in floor of fourth ventricle, and continuous with anterior extremity of vagus nucleus. **G.-p. paral'ysis,** term usually applied to the glosso-pharyngeal nerve itself, as well as the muscle.

Glossopharynge'us. Belonging to the tongue and pharynx. Some anatomists thus designate certain fleshy bundles arising from the lateral parts of the base of the tongue, and inserted into the parietes of the pharynx. They form part of the constrictor pharyngis superior.

Glossophytia, glos-so-fit'e-ah (*glosso*, *phuton*, vegetation). Enlargement of papillæ filiformes of tongue, with darkening of pigment; black tongue.

Glossoplegia, glos-so-plej'e-ah (*glosso*, tongue, *plege*, stroke). Paralysis of the tongue, due to traumatic injury to, or pressure upon, the hypoglossal nerve.

Glossoptosis, glos-so-to'sis (*glosso*, *ptosis*, falling). Glossocele.

Glossorrhagia, glos-sor-rhaj'e-ah (*glossa*, tongue, *rhegnumi*, to break forth). Hemorrhage from the tongue.

Glossorrhaphy, glos-sor'rhaf-e (*glossa*, tongue, *rhaphe*, suture). Suture or stitching of the tongue.

Glossoscopy, glos-sos'ko-pe (*glosso*, *skopeo*, to view). Inspection of the tongue as an index of disease.

Glossosemeiotics, glos-so-sem-i-ot'iks (*glossa*, *semeiotice*, semeiology). Signs of disease taken from the tongue.

Glossospas'mus (*glosso*, *spasmos*, spasm). Cramp or spasm of the tongue.

Glossospatha, glos-so-spath'ah (*glosso*, *spathe*, spatula). Spatula for pressing down the tongue; tongue-depressor.

Glossostaphylinus, glos-so-staf-il-e'nus (*glosso*, *staphule*, uvula). Small, thin, narrow, and long muscle arising from the base of the tongue, and inserted at the inferior and lateral part of the velum palati.

Glossosteresis, glos-so-ster-a'sis (*glosso*, *steresis*, privation). Extirpation of the tongue.

Glossostrophia, glos-so-strof'e-ah (*glosso*, *strepho*, to turn). Doubling of the point of the tongue upward and backward; said to have been a mode of suicide.

Glossotomy, glos-sot'o-me (*glosso*, *tome*, section). Dissection or amputation of, or anatomy of, the tongue.

Glos'sy skin. Shiny smoothness of skin, with atrophy and burning pain, after injury of a nerve; the pain being called *causalgia*.

Glossypertrophy, glos-hy'per-trof-e (*glosso*, *huper*, over, *trophe*, nourishment). Hypertrophy or supernutrition of the tongue.

Glot'ta. Glossa; tongue.

Glottagra, glot'tag-rah (*glotta*, *agra*, seizure). Pain in the tongue.

Glottalgia, glot-tal'ge-ah (*glotta*, *algos*, pain). Pain in the tongue.

Glot'tic. Relating to the tongue or to the glottis.

Glottis (*glottis*, mouth-piece of a flute). A small, narrow, oblong aperture in the larynx, comprised between the chordæ vocales, capable of being modified by muscular contraction, as may be required by the voice. By the chordæ vocales voice is produced. The glottis is nearly an inch long in the adult male; less in the female and child. Rima glottidis or vocalis is the aperture in which the voice is produced, and therefore synonymous with glottis, as given above; also ventricle of the larynx, or even the whole of the larynx. **G., false**, cavity between superior or false vocal cords. **G., infe'rior**, glottis. **G. interarytenoi'deus**, posterior cavity of larynx between arytenoid cartilages. **G. ligamento'sus**, anterior part of larynx between inferior or true vocal cords. **G., lips of**, thyreo-arytenoid ligaments. **G., poste'rior**, G. interarytenoïdeus. **G., spasm of**, asthma thymicum. **G. spu'ria**, G., superior. **G., supe'rior**, cavity between the superior or false vocal cords. **G., true** or **ve'ra**, glottis.

Glottiscope, glot'tis-kope (*glottis*, *skopeo*, to view.) Laryngoscope.

Glottitis, glot-te'tis. Inflammation of the tongue.

Gloutius, gloot'e-us (*gloutos*, breech). Gluteal. **G. max'imus** et **ex'timus**, glutæus maximus. **G. secun'dus** et **me'dius**, glutæus medius. **G. ter'tius** et **in'timus**, glutæus minimus.

Glover's su'ture. See *Suture*.

Glucæmia, glu-se'me-ah (*glukus*, sweet, *haima*, blood). Saccharine condition of the blood.

Glucogen'esis or **Glucogenia**, glu-ko-jen'e-ah. Generation or formation of sugar, as in the liver.

Glucohæmia, glu-ko-he'me-ah. Saccharine condition of the blood.

Glu'cose, Gly'cose (*glukus*, sweet). Dextrose, grape-, fruit-, starch-, and honey-sugar. A variety of sugar, a carbohydrate occurring naturally in many vegetable juices and in honey; also in blood, bile, liver, lungs, heart, urine, etc. Compared with cane-sugar, it is much less soluble in water and less disposed to crystallize; and, when injected into the blood-vessels, does not pass off to the like extent by the kidneys. Diabetic, urinary, and hepatic sugar have the same chemical composition as glucose.

Glucosides, glu'co-sides. Certain proximate, non-nitrogenous vegetable principles, which, by ebullition with dilute acid, or action of ferments, or other method of decomposition, take up the elements of water and yield glucose, accompanied by a second substance, differing in each case according to the body operated on. The more important glucosides, some of which are interesting pharmaceutically and therapeutically, are amygdalin, from bitter almonds, etc.; arbutin, from arbutus uva ursi; cathartic acid, from senna; colocynthin, from colocynthis; digitalin, from digitalis; glycyrrhizin, from licorice root; helleborin, from hellebore root; jalapin, from resin of jalap; salicin, from willow bark; scammonin, from scammony resin; tannin, from various barks, leaves, etc.

Glu'cosines. Bases obtained by the action of ammonia on glucose ptomaïnes.

Gluco'sis. Glycosuria; diabetes mellitus.

Glucosuria, glu-ko-su're-ah (*glukus*, sweet, *ouron*, urine). Glycosuria; diabetes mellitus.

Glucusimide, glu-cu'sim-ide. Saccharin.

Glue band'age. A bandage used in the treatment of fractures; glue, diluted with alcohol, being applied over an ordinary roller. **G. car'tilage**, chondrin. **G. fish**, ichthyocolla.

Glue'bone. Osteocolla.

Glue'fish. Ichthyocolla.

Glu'ge's cor'puscles. Cells or corpuscles which have experienced fatty degeneration.

Glu'side. Saccharin.

Glutæ'al. Gluteal.

Glutæ'o-perinea'lis. Relating to glutæus muscle and perinæum. Unusual origin of muscular fibres of superficial transversus perinæi from fascia of glutæus maximus.

Glutæus, glu-te'us (*gloutos*, buttock). Gluteal. **G. accesso'rius**, accessory fasciculi of glutæus medius. **G. mag'nus** or **ma'jor**, G. maximus. **G. max'imus**, muscle situate at the posterior part of the pelvis and at the upper and posterior part of the thigh; large, thick, and quadrilateral, and attached above to the posterior part of the crista ilii, to the part of the ilium comprised between the crista and the upper curved line, to the posterior surface of the sacrum, coccyx, and great sacro-sciatic ligament; and below it terminates by a broad aponeurosis inserted into the rugged surface descending from the trochanter major to the linea aspera of the femur. This muscle extends the thigh on the pelvis and rotates the thigh outward, and is greatly concerned in station and progression. **G. me'dius**, muscle situate in part beneath the preceding; broad, very thick, radiated, and triangular; attached above to the crista ilii, and to the part of the outer surface of that bone between the three anterior fourths of its crista, its upper curved line, and its lower; and below it ends by a tendon inserted at the upper edge of the great trochanter. It is an abductor of the thigh, but can turn the thigh outward or inward according as its posterior or inferior fibres are thrown separately into contraction. **G., mid'dle**, G. medius. **G. min'imus** or **mi'nor**, muscle situate beneath the preceding, flat, triangular, and with radiated fibres; attached above to the external surface of the os ilii from the inferior curved line to the acetabulum, and below inserted into the anterior part of the great trochanter. It has the same uses as the preceding. **G. min'imus accesso'rius**, small occasional muscle in front of G. minimus, passing from the anterior portion of the ilium to the great trochanter of the femur. **G. pri'mus**, G. magnus; tensor fasciæ latæ. **G. profun'dus**, ilio-trochantericus parvus. **G. quar'tus**, G. minimus accessorius; iliacus minor. **G.**

secun'dus, G. medius. **G. superficia'lis,** ilio-trochantericus medius. **G. ter'tius,** G. minimus.

Glutamic (glu-tam'ik), **Glutan'ic,** or **Glutamin'ic ac'id.** Acid produced by the splitting up of proteids. See *Amidoglutaric acid.*

Gluteal, glu-te'al. That which belongs or relates to the nates or to the glutæi muscles. **G. aponeuro'sis,** upper and back part of the femoral fascia. In it is a remarkable opening, the gluteal arch, for the passage of the gluteal vessels and nerves. **G. arch,** see *Gluteal aponeurosis.* **G. ar'tery,** posterior iliac artery. One of the largest branches of the hypogastric artery. It makes its exit from the pelvis at the upper part of the superior sciatic foramen, gains the posterior part of the pelvis, and divides into two branches, the superficial and deep-seated. The last subdivides into three secondary branches, whose ramifications are distributed particularly to the glutæi, longissimus dorsi, sacro-lumbalis, etc., and anastomose with the sciatic and internal circumflex arteries. **G. ar'tery, infe'rior,** sciatic artery. **G. ar'tery, supe'rior,** gluteal artery. **G. bur'sa,** see *B. glutæi.* **G. fold,** crease or fold between the nates and the thigh. **G. fur'row,** deep groove between the nates. **G. lines,** curved lines of the ilium. **G. mus'cles,** see *Glutæus.* **G. nerves,** branches of the sacral plexus, chiefly distributed to the glutæi muscles. **G. re'flex,** contraction of the gluteal muscles upon irritation or application of sudden blows to the skin of the nates, from the action of the spinal centre in the lumbar region. **G. re'gion,** region of the nates. **G. ridge,** prominence on the femur for the attachment of the glutæus maximus. **G. tuberos'ity,** G. ridge. **G. veins,** branches of the internal iliac vein following the course of the gluteal artery.

Glu'ten (glue, paste). Vegetable gluten, vegetable casein. Principle of vegetables; soft, grayish-white, viscid consistence, and very elastic; a combination of four protein substances. Water and alcohol do not dissolve it. It is soluble in vegetable and in weak mineral acids at a high temperature. The farinæ in which it is found are those preferred for the preparation of bread, on account of the property it has of making the paste rise. Also anything glutinous, as plasma of blood. **G., an'imal,** fibrin. **G. articulo'rum,** synovia. **G. bread,** see *Bread, gluten.* **G. car'nis,** see *Sarcocolla.* **G. ca'sein,** portion of gluten that is insoluble in alcohol. **G., com'mon,** see *Gluten.* **G. fi'brin,** substance immediately precipitated after evaporation of solution of gluten in alcohol.

Glute'o-fas'cial bur'sa. Bursa between tendon of glutæus maximus and origin of vastus externus.

Glute'o-fem'oral. Relating to gluteal and femoral regions. **G.-f. crease,** gluteal fold.

Glute'o-perinea'lis. See *Glutæo-perinealis.*

Gluteo-trochanteric, glu-te'o-tro-kan-ter'ik. Relating to gluteal region and trochanter. **G.-t. bur'sa,** bursa between gluteus maximus muscle and great trochanter of femur.

Gluteus, glu-ta'us. Glutæus.

Glu'ti or **Glu'tia.** Nates; quadrigemina corpora.

Glu'tin. Gelatin; gliadin.

Glutinant, glu'tin-ant (*glutino,* to glue). Agglutinant.

Glutina'ria. Saliva.

Glutina'tion. Agglutination.

Glu'tinative. Agglutinative.

Glu'tino-pep'tonate of mer'cury. Glutin-peptone sublimate.

Glu'tinose. Glutinous.

Glu'tinous (*gluten,* paste, glue). Viscid, sticky.

Glu'tin-pep'tone sub'limate. White powder prepared by treating gelatin with hydrochloric acid; it contains corrosive sublimate; used hypodermically in the treatment of syphilis. It is stated that it does not cause abscesses or much pain.

Glu'tinum. Gluten; glue.

Gluti'tis (*gloutoi,* nates). Inflammation of gluteal muscles.

Glu'toi. Nates.

Glutophthisis, glu-to-te'sis. Wasting away of gluteal muscles; phthisis due to abscess in the gluteal region.

Glutopyosis, glu-to-pi-o'sis (*glutoi,* nates, *puosis,* suppuration). Suppuration of gluteal muscles.

Glu'tos. Glutus.

Glut'ton (*glutio,* to gulp down). An excessive eater.

Glut'tony. Excessive appetite, owing often to habitual indulgence.

Gluttupatens, glut-tu-pat'ens (*gluttus,* œsophagus, *pateo,* to extend). Stomach.

Glut'tus or **Glu'tus** (sing. of **Gluti,** nates). Trochanter major; œsophagus; buttock.

Glycæmia, glis-e'me-ah. Saccharine condition of the blood.

Glycamil, gli'kam-il (*glycerin, amylum,* starch). Plasma.

Glycamyl, glis'am-il (same etymon). Glycerite of starch.

Glycansis, glik-an'sis (*glukus,* sweet). Edulcoration.

Gly'cerate. Glycerin ether; glycerole; glycerite.

Glycera'ton. Glycyrrhiza.

Glycerin, glis'er-in (*glukus,* sweet). Sweet principle of fats and oils, from which it is obtained by their decomposition. Chemically, it is glycerylic alcohol, C_3H_53HO, or hydrate of the radical glyceryl, C_3H_5; colorless, odorless, syrupy liquid; sp. gr. 1.25. It is soluble in water and alcohol, but not soluble in ether, chloroform, or oils. It has also received the names glyceric alcohol, hydrate of glyceryl, glyceryl, or propenyl. It is used externally in cutaneous diseases, as psoriasis, pityriasis, lepra, and ichthyosis. It keeps the parts moist, as it does not evaporate readily. Solutions of other substances in glycerin have been variously styled glyceroles, glycerins, glycerates, glycerites, glycerata, glycerina. Its solvent powers are remarkable, a very large number of dissimilar substances being soluble in it. It is thus a valuable excipient for medicines. With iodine it forms iodized glycerin. Internally, glycerin is alterative and nutritive, and has been prescribed as a substitute for cod-liver oil. The British Pharmacopœia recognizes several officinal *glycerina* or glycerins, being solutions in glycerin, as Glycerinum acidi carbolici, G. acidi gallici, G. acidi tannici, G. amyli, G. boracis, G. plumbi subacetatis, G. tragacantha; and the Ph. U. S. has two *Glycerita,* G. amyli and G. vitelli. **G., bu'tyrate of,** see *Butter.* **G., i'odized,** see *Iodine.* **G. lymph,** solution of vaccine lymph in glycerin.

Glyc'erin-phosphor'ic ac'id. Product of decomposition of lecithin; a glycero-phosphate of neurine found in brain, seminal fluid, etc. It is formed when glycerin and phosphoric acid unite; produced by the decomposition of lecithin.

Glycerinum, glis-er-e'num. Glycerina, glycerita.

Glycerita, glis-er-e'tah. Several preparations under this name have been officinal at various times, as G. acidi carbolici, G. acidi gallici, G. acidi tannici, picis liquidæ, and G. sodii boratis. The Ph. U. S. has a glyceritum vitelli, glycerite of yelk of egg, made of 45 parts of fresh yelk of egg and 55 parts of glycerin. Such an emulsion, under the name of *glyconin,* has been used in France for medicinal and toilet purposes. The U. S. officinal glycerite may be used as a vehicle for cod-liver oil and as an external protective application in burns, erysipelas, skin diseases, etc. In the Ph. Br. they have been grouped under head of glycerinum. Glyceratum amyli and G. vitelli ovis are alone officinal in Ph. U. S.

Gly'cerite. Glyceritum. See *Glycerin.*

Glycerobo'rate. Compound of glycerin and a borate; see *Boroglyceride.*

Glycerol, glis'er-ole. Glycerin. Also a combination of glycerin with some other remedial agent; see *Plasma* and *Glycerin.* **G. trini'trate,** nitro-glycerin.

Gly'cerolate, Glycerola'tion. Glycerite.

Glycero-phosphor'ic acid, Glyc'erin-phosphor'ic acid. Glycyrrhizin.

Glyceryl, glis'er-il. Hypothetic radical of glycerin. **G. bo'rate,** boroglyceride. **G., hy'drate of,** glycerin.

Glycin, gli'sin. Glycocoll.

Glyci'ne abrus. Abrus precatorius. **G. apios,** Apios tuberosa. **G. triloba,** E. Indian species; purgative.

Glycipicros, glis-ip-ik'ros (*glyco, pikros,* bitter). Solanum dulcamara.

Gly'co, Gly'cy (*glukus,* sweet). In composition, sweet.

Glycocene, gli'ko-seen. Glycogen.

Glycochol'ic acid (*glyco, chole,* bile). Chief acid of bile. Composition, $C_{26}H_{43}NO_6$.

Gly'cocin or **Gly'cocoll** (*glyco, kolla,* glue). Sugar of gelatin. Albuminous principle produced by action of caustic alkalies on gelatin or meat.

Gly'cogen. Animal starch, animal dextrin, hepatic dextrin, liver starch. The peculiar white carbohydrate, resembling inulin, in liver, placenta, muscles, testicles, cartilage, and tissues of embryo. It is isomeric with starch. Sugar produced by its transformation is identical with grape-sugar.

Glycogenesis, gli-ko-jen'es-is. Generation or formation of sugar, as in the liver.

Glycogen'ic. Relating to the formation of sugar.

Glycogen'ous. Containing glycogen. Capable of forming glucose.

Glycogeny, gli-koj'en-e (*glyco, genesis,* generation). Generation or formation of sugar, as in the liver.

Glycohæmia (glik-o-he'me-ah) or **Glucohæmia** (*glyco, haima,* blood). Saccharine condition of the blood.

Glycol'amine. Glycocoll.

Glycoleucin, gli-ko-lu'sin (*glyco, leukos,* white). White, sweet substance from the brain.

Glyconin, gli'kon-in. Emulsion made of glycerin and yelk of eggs. A similar preparation is used in the French hospitals in burns, erysipelas, and as a dietary article.

Glycopolyurea, glik-o-pol-e-u're-ah (*glukus,* sweet, *poly,* much, *ouron,* urine). Diabetes mellitus with excess of uric acid.

Glycorrhœ'a. Elimination of saccharine matter, as in the urine. **G. urino'sa,** diabetes mellitus.

Gly'cose. Glucose. See *Glycerite.*

Gly'coside. Glucoside.

Glycosometer, gli-kos-om'et-ur (*glukus,* sweet, *metron,* measure). Instrument for measuring amount of glucose in urine, based on reduction of cupric tartrate by the latter.

Glycosuria, glik-o-su're-ah (*glyco, ouron,* urine). Formation or passage of saccharine urine; diabetes mellitus.

Gly'cy. In composition, sweet.

Glycychymus, glis-ik'im-us (*glukus,* sweet, *chumos,* chyme). Sweet chyme before bile has changed its taste.

Glycyl, gli'sil. Glyceril. **G. hy'drate,** glycerin.

Glycyphyton, glis-if'it-on (*glycy, phuton,* a plant). Glycyrrhiza.

Glycypikron, glis-e-pik'ron. Bitter-sweet; dulcamara.

Glycyramarin, glis-ir-am'ar-in. Bitter principle derived from glycyrrhiza.

Glycyrrhetin, glis-ir-ret'in. Resinous matter from action of acids on glycyrrhiza; glucoside of glycyrrhiza.

Glycyrrhiza, glis-ir-rhe'zah (*glycy, rhiza,* a root). Licorice, liquorice. Ord. Leguminosæ. The root of this Southern European plant, G. glabra, has a sweet taste, is mucilaginous, and used as a demulcent, chiefly in catarrh. The extract made from it and sold in the shops is known as Spanish licorice or licorice juice. **G. echina'ta,** source of Russian licorice. **G. glab'ra,** glycyrrhiza. **G. glandulif'era,** variety of G. glabra. **G. lepido'ta,** species found in Western United States.

Glycyrrhi'zate of ammo'nium. Glycyrrhizinum ammoniatum.

Glycyrrhizic (glis-ir-rhi'zik) **acid.** Active ingredient of glycyrrhiza, in which it exists in the form of glycyrrhizate of ammonia.

Glycyrrhizin, glis-ir-rhi'zin. Glucoside of glycyrrhiza.

Glycyrrhizi'num ammonia'tum (Ph. U. S.). Dark-brown soluble substance, used as substitute for licorice. Dose, gr. v–x.

Glycyrrhœa, glis-ir-rhe'ah (*glycy, rheo,* to flow). Discharge of saccharine matter from the system, as in **G. urino'sa,** diabetes mellitus.

Glys'ter. Clyster, enema.

Glyzi'na. Glycyrrhizinum ammoniatum.

Gmelina (mel-e'nah) **arbo'rea.** Verbenaceous tree of Malabar; root is bitter, tonic, stomachic; employed in dyspepsia, dropsy, gout, malarial fevers, gonorrhœa, etc. **G. Asiat'ica,** mucilaginous plant of E. Indies, used as demulcent expectorant. **G. parvifo'lia,** same locality, order, and properties as G. Asiatica. **G. villo'sa,** E. Indian tree with astringent root.

Gmelin-Heintz reac'tion. Gmelin's test.

Gmelin's (mel'in's) **test.** Color test for bile-pigments, consisting of production of colors of the spectrum by adding yellow or fuming nitric acid to bile.

Gnampsis, namp'sis. Curvature.

Gnaphalium (naf-al'e-um) **Califor'nicum** (*gnaphalon,* a lock of wool). California plant with astringent properties. **G. canes'cens,** Mexican plant; astringent, emollient, and expectorant. **G. congloba'tum,** European species; expectorant. **G. dioi'cum,** Antennaria dioica. **G. macroceph'alum,** *White balsam plant, Everlasting life,* grows in California; diuretic, anodyne, diaphoretic, and hypnotic. **G. margarita'ceum,** *Cudweed, Pearly life everlasting;* indigenous plant. **G. plantaginifo'lium** or **plantagin'eum,** Antennaria plantaginifolia, and **G. polyceph'alum,** *Common everlasting, Sweet-scented life everlasting, Catfoot,* are astringent, diaphoretic, and anodyne. **G. ro'seum** is a bitter tonic; **G. Sprange'lii,** a California species, is astringent; and **G. vira-vira,** of Chili, is diaphoretic and antipyretic.

Gnathalgia, nath-al'je-ah (*gnatho, algos,* pain). Facial or maxillary neuralgia.

Gnathankylosis, nath-an-kil-o'sis (*gnatho, ankulosis,* stiffness of joint). Ankylosis of the lower jaw.

Gnathanthropolypus, nath-an-thro-pol'ip-us (*gnathantrum,* the antrum of Highmore). Polypus of the antrum of Highmore.

Gnathantrum, nath-an'trum (*gnatho, antron,* antrum). Antrum of Highmore.

Gnathic, nath'ic (*gnathos,* jaw). Relating to the jaw or cheeks. **G. in'dex,** index of comparison of basialveolar length with basinasal, the latter being assumed at 100.

Gnathion, nath'e-on. Mental point; most projecting point in middle line of lower jaw on anterior inferior border.

Gnathitis, nath-e'tis. Inflammation of the cheek or upper jaw.

Gnath'mos or **Gnathmus,** nath'mus. Jaw; cheek.

Gnath'o. In composition, the jaw or cheek.

Gnathocephalus, nath-o-sef'al-us (*gnatho, kephale,* head). Monster without visible head externally, but exhibiting voluminous jaws.

Gnathocynanche, nath-o-sin-an'ke. Cynanche parotidæa.

Gnathogramma, nath-o-gram'ma. Local part of nasal line; groove on face from middle of the cheek to the nose.

Gnath'on. Glutton.

Gnathoneuralgia, nath-o-nu-ral'je-ah. Facial or maxillary neuralgia.

Gnathoparalysis, nath-o-par-al'is-is. Paralysis of the lower jaw, due to affection of inferior maxillary nerve.

Gnathopharyngeus, nath-o-far-in-ja'us. See *Constrictores pharyngis.*

Gnathoplasty, nath'o-plas-te (*gnatho, plastikos,* formative). Formation of an artificial cheek; plastic surgery of cheek and jaw.

Gnathoplegia, nath-o-plej'e-ah (*gnatho, plege,* a stroke). Paralysis of the cheek; paralysis of the lesser portion of the trifacial nerve, supplying the muscles of mastication.

Gnathorrhagia, nath-or-rhaj'e-ah (*gnatho, rhegnumi,*

to burst forth). Hemorrhage from the internal surface of the cheeks or jaws.

Gnathoschisis, nath-os'kis-is (*gnatho, schisis,* fissure). Fissure of the jaw.

Gnathospas'mus. Lockjaw. See *Trismus.*

Gnathus, nath'us. Cheek; jaw; part of the jaws in which the teeth are fixed. See *Bucca, Gena,* and *Maxillary bone.*

Gnesius, na'se-us. Legitimate.

Gnethum fumikulare, ne'thum fu-mik-u-lar'e. Species of fir in the E. Indies; alterative and antipyretic.

Gnidia (nid'e-ah) **imber'bis** and **G. pinnifo'lia.** Two species of genus Thymelœaceæ, of S. Africa; both purgative.

Gnidium, nid'e-um. Daphne gnidium.

Gnome, no'ma. Intellect; reason.

Gnoscopene, nos-ko'peen. Unimportant white acicular alkaloid of opium, $C_{34}H_{36}N_2O_{11}$, in mother liquor after purification of narceine.

Gnosis, no'sis. Knowledge; common suffix, as in Dia*gno'sis,* Pro*gno'sis,* etc.

Go'a ipecacuanha. Naregamia. **G. pow'der,** substance deposited in Andira araroba of Brazil, from which the proximate principle, chrysarobin, is extracted.

Goaconax. Balsam of tolu.

Goagurre. E. India wood of varieties of Strychnos.

Goat bush. Castela Nicholsonii, bark of which is a bitter tonic like quassia. **G. pep'per,** Capsicum frutescens. **G. stones,** Orchis mascula.

Goat's beard, com'mon. Tragopogon. **G.'s milk,** see *Milk, goat's.* **G.'s milk, artificial,** see *Milk, goat's.* **G.'s rue,** Galego officinalis; Tephrosis Virginiana. **G.'s thorn,** Astragalus verus. **G.'s weed,** Capraria biflora; astringent, in infusion.

Gob'let cells. Cells having shape of a goblet found among cells of epithelium of mucous membranes, as of alimentary canal. **G., emet'ic,** see *Calix vomitorius.*

Go'craw. Gokhree.

God'frey's cor'dial. Celebrated anodyne nostrum, for which the following form is recommended by a committee of the Philadelphia College of Pharmacy: tinct. opii, Oiss; syrupi nigri, Oxvj; alcoholis, Oij; aquæ, Oxxvj; potassii carbonatis, ℥ijss; olei sassafras, f℥iv.—M.

God's mark. Mark formerly placed on houses in England as a sign that the plague was there.

Goemin, go'em-in. Neutral substance resembling isinglass, resulting from precipitation from decoction or mucilage of Chondrus crispus by alcohol.

Gœthe's bone. Bone formed from the supraorbital bone by failure in the closure of the transverse suture.

Gog'gle-eyed. Exophthalmus.

Gog'gles. Close spectacles in framework accurately fitting the exterior of the eye.

Go'go. Plant of W. Africa; cathartic and vermifuge.

Goit're, gwoi'tr (*guttur,* throat). Bronchocele. **G., aë'rial,** bronchocele communicating with the trachea; localized emphysema of the neck. **G., am'yloid,** form of goitre with amyloid degeneration of the vessels and glands. **G., ane'mic,** exophthalmic goitre. **G., aneurys'mal,** pulsating G. with dilated vessels. **G., a'queous,** G., cystic. **G., calca'reous,** G. with calcareous degeneration. **G., can'cerous,** cancer of the thyroid gland. **G., col'loid,** cystic G. having colloid matter in its interior. **G., cys'tic,** G. made up of cysts containing aqueous or gummy matter. **G., exophthal'mic,** see *Exophthalmic.* **G., fi'broid** or **fi'brous,** G. from hypertrophy of connective tissue and subsequent obliteration of the glandular structure from pressure. **G., follic'ular,** G. with increased development of follicles and adjacent connective tissue. **G., gelat'inoid,** G., colloid. **G., gland'ular,** G., follicular. **G. leaf,** see *Laminaria digitata.* **G., lu'nar** or **men'strual,** sudden rapid enlargement of the thyroid gland before or during menstruation. **G., os'seous,** G., calcareous. **G., parenchy'matous,** G., follicular. **G., pitu'itary,** goitrous degeneration of the pituitary gland. **G., puer'peral,** G. forming during gestation and disappearing after delivery. **G., pul'sating,** G. with arterial pulsation; exophthalmic g. **G., scir'rhous,** G., fibrous. **G., se'rous,** G., cystic. **G., soft gland'ular,** G., follicular. **G. sticks,** the stems of a seaweed in S. America chewed by the inhabitants where goitre prevails. **G., sto'ny,** G., calcareous. **G., unilat'eral,** G. in which only one lobe or side of the thyroid gland is involved. **G., vas'cular,** G. with varicose condition of the veins or aneurism. **G., vesic'ular,** G., aërial.

Goit'rous. Relating to goitre; one affected by goitre.

Gok'rhu. *Gokeroo.* Fruit of Pedalium murex, of the E. Indies. Demulcent, diuretic, and diluent.

Go'la. Kola.

Gol'coin, gol'ko-in. Glyconin.

Gold. Solid, yellow, brilliant, hard, ductile, malleable, tenacious, and heavy metal, found in nature either in native state or combined with a little silver, copper, or iron; s. g. 19.3. It is given medically as a tonic, alterative, antisyphilitic, etc. The officinal chloride is the trichloride. Common name of Calendula officinalis, Myrica gale, Chrysanthemum segetum. The chloride or muriate of gold, chloride of oxide of gold, has been used in syphilis, exostoses, and in venereal, scrofulous, or cancerous glandular enlargements. It may be rubbed on the tongue or gums in dose of gr. $\frac{1}{8}$ to $\frac{1}{4}$, or internally, $\frac{1}{16}$ of a grain, in pill. Other preparations, as the cyanide or tercyanide; the metallic gold in a state of division, obtained by amalgamating gold with mercury, and driving the latter off by heat, and in the form of filings; the chloride of gold and sodium, hydrochlorate or muriate of gold and soda, nitromuriate of gold, oxide of gold, peroxide of gold, auric acid, and iodide of gold (tri-iodide being the officinal one),—have been employed in the like affections, and with similar results. **G. ars'enate,** mixture of chloride of gold and sodium and neutral arsenate of sodium; an effective agent in nervous diseases. **G. bro'mide,** auri bromidum. **G. chain,** Sedum acre; Cytisus laburnum. **G., chlo'ride of,** see *Gold.* **G., cy'anide of,** see *Gold.* **G., hydrochlo'rate of,** see *Gold.* **G., i'odide of,** see *Gold.* **G. leaf,** *Gold-foil;* used to gild pills and to plug carious teeth. **G. monobro'mide,** yellowish-gray substance used as a nervine and an antispasmodic in epilepsy. **G. monocy'anide,** yellow powder with the formula AuCN; said to be useful in tuberculosis; dose, gr. $\frac{1}{15}$ to gr. $\frac{1}{3}$, in cachets. **G., mu'riate of,** see *Gold.* **G., nitromu'riate of,** see *Gold.* **G., ox'ide of,** see *Gold.* **G., perox'ide of,** see *Gold.* **G. and so'da, hydrochlo'rate of,** see *Gold.* **G. and so'da, mu'riate of,** see *Gold.* **G. and so'dium, chlo'ride of,** this preparation of gold is the one commonly employed, and is used in gastric catarrh, torpid liver, cirrhosis of the kidney, spinal sclerosis, syphilis, and other diseases. The dose is gr. $\frac{1}{40}$–$\frac{1}{20}$. **G., ox'ide of,** see *Gold.* **G., tercy'anide of,** see *Gold.* **G., white,** Chrysanthemum leucanthemum. **G., yel'low,** Chrysanthemum segetum.

Gold-beater's skin. Intestina recta of the ox, beaten quite smooth for the manufacture of gold-leaf. Used as a defensive dressing for slight cuts, etc.

Gold'en bug. Coccinella septempunctata. **G. chain,** gold chain. **G. flow'er,** chrysanthemum. **G. knop,** Coccinella septempunctata. **G. rag'weed,** Senecio aureus. **G. rod,** Solidago virgaurea. **G. rod, fragrant,** Solidago odora. **G. rod, rig'id,** Solidago rigida. **G. rod, sweet-scented,** Solidago odora. **G. seal,** see *Calumba, Hydrastis Canadensis.* **G. sene'cio,** Senecio aureus. **G. show'er,** Cytisus laburnum. **G. shrub,** Palicourea speciosa. **G. sul'phur,** antimony pentasulphide. **G. sul'phuret of an'timony,** antimony pentasulphide. **G. thread,** Coptis trifolia.

Gold'ens, Gold'ings, or **Golds.** Chrysanthemum leucanthemum; Calendula officinalis.

Gold'thread. Coptis.

Golindrina (gol-in-dre'nah) or **Gollindrinara,** gollin-drin-ah'rah. Euphorbia prostata; E. polycarpa, species of Opercularia of Peru having antipyretic properties.

Goll, col'umn or **tract of.** See *Columns.* **G., nu'cleus of,** clavate nucleus.

Gol'land. Ranunculus; Chrysanthemum segetum.

Gom'bo. Hibiscus esculentus.

Gomorte'ga or **Gomortegia** (gom-or-tej'e-ah) **nit'ida.** Aromatic tree of Chili; leaves are astringent; fruit is eaten for food.

Gomphia, gom'fe-ah. Button-flower. **G. angustifo'lia,** E. Indian plant; root is aromatic and bitter; leaves are used in gastralgia. **G. hexasper'ma,** Brazilian plant; bark is astringent. **G. Malabar'ica,** plant of Malabar; leaves are antiperiodic, and root and bark are used externally in cutaneous affections. **G. obtusifo'lia,** roots and leaves of this plant of Jamaica are tonic and stomachic. **G. oval'is,** plant of Brazil; root is used in toothache.

Gomphiasis (gom-fe'as-is) or **Gomphias'mus** (*gomphos,* nail). Disagreeable acid sensation in the mouth; looseness of the teeth in their sockets; toothache.

Gom'phioi. Molar teeth.

Gomphocarpus (gom-fo-kar'pus) **cris'pus** (*gomphos,* nail, *karpos,* fruit). S. African plant, the root of which, formerly known to the Dutch apothecaries as radix asclepiadis crispæ, is extremely bitter and acrid; diuretic; infusion used in dropsy, tincture in colic. **G. fructico'sus,** Cape cotton shrub; wild Australian cotton plant; plant of Africa, adulterant of senna. **G. pedunicula'tus,** plant resembling G. crispus in therapeutic effect.

Gompho'ma. Gomphosis.

Gompho'sis. Immovable articulation, in which one bone is received into another, like a nail or peg into its hole; as articulations of the teeth with the alveoli, or styloid process into vaginal process of temporal bone. Impaction of fœtal head.

Gomphrena macrocephala, gom-fre'nah mak-ro-sef'al-ah. Species of Brazil, having therapeutic action of G. officinalis. **G. officina'lis,** herb of Brazil, ord. Amaranthaceæ, root of which is stimulant and tonic in dyspepsia, colic, diarrhœa, dysentery, malarial fevers, etc. **G. procum'bens,** leaves of this Mexican plant are used as cataplasms in ulcers and other sores; root is tonic and astringent.

Gom'phus. Clavus.

Gomu'to palm or **Gomu'tos gomu'to.** Tree of East Indies yielding a sweet juice called toddy.

Gonacrasia, gon-ak-ras'e-ah (*gono, a, krasis,* mixture). Spermatorrhœa.

Gonacratia, gon-ak-rat-e'ah (*gono, a, kratos,* power). Spermatorrhœa.

Go'nads. Sexual organs.

Go'næ. Genitals.

Gon'agra or **Gonyagra,** gon'e-ag-rah (*gony, agra,* seizure). Gout or rheumatism in the knees.

Gonalgia (gon-al'je-ah) or **Gonyal'gia** (*gony, algos,* pain). Pain in the knee, generally gout, but it may depend on some other disease, either of the knee or of another part, particularly of the hip-joint.

Gonarthritis, gon-arth-re'tis (*gony, arthron,* joint, *itis*). Inflammation of the knee-joint.

Gonarthrocace, gon-arth-rok'as-e (*gony, arthron,* joint, *kakos,* bad). White swelling of the knee; hydrarthrus.

Gonarthromeningitis, gon-arth-ro-men-in-je'tis (*gony, arthron,* joint, *meninx,* membrane). Inflammation of synovial membrane of knee.

Gonarthrot'omy (*gonu,* knee, *arthron,* joint, *tome,* incision). Operation of opening the knee-joint.

Gonatal'gia. Gonalgia.

Gonatan'cos. Bend of knee; abnormal curvature of knee.

Gonatocele, gon-at-o-se'le (Eng. gon'at-o-seel). Gonocele.

Gonatorrheum'a. Gout or rheumatism in the knee.

Gonaura, gon-au'rah (*gona, aura,* air). Aura seminis. See *Sperm.*

Go'ne. Semen; gonorrhœa; uterus; offspring; superfœtation; birth.

Gonecyst, gon'e-sist (*gono, kustis,* bladder). Vesiculæ seminales.

Gonecystitis, gon-e-sist-e'tis (*gono, kustis,* bladder, *itis*). Inflammation of the vesiculæ seminales.

Gonecyston'cus (*gono, kustis,* bag, *onkos,* tumor). Swelling of vesiculæ seminales.

Gonecystopyo'sis (*gono,* sperm, *kustis,* bladder, *puon,* pus). Suppuration of vesiculæ seminales.

Gonepoet'icus or **Gonepœus,** gon-e-pe'us (*gono, poieo,* to make). Augmenting the secretion of semen; exciting the venereal act.

Gonepoiesis, go-ne-poi-a'sis (same etymon). Secretion or production of semen.

Gongro'na. Bronchocele; ganglion.

Gongrophthisis, gon-gro-te'sis (*gongros,* excrescence, *phthisis*). Phthisis pulmonalis.

Gongylidium, gon-gil-id'e-um (*gongulos,* round). Pill.

Gongyl'ion or **Gongylis,** gon'gil-is. Pill.

Gongyloid, gon'gil-oid (*gongulos,* round). Round like a ball.

Go'nic (*gonos,* semen). Relating to sperm or genital organs.

Gon'imos or **Gonimus,** gon'im-us. Critical; procreative.

Goniocath'eter (*gonia,* angle). Angular or crooked catheter.

Goniomele, go-ne-o-ma'la (*gonia,* angle, *mele,* probe). Angular or crooked probe or sound.

Goniometer, go-ne-om'et-ur (*gonia,* angle, *metron,* measure). Instrument for measuring angles, as facial angle.

Gonion, go'ne-on. Outer side of angle of lower jaw taken as a point of craniometrical guidance.

Goniosis, go-ne-o'sis. Weak pulse, result of exhaustion.

Go'nio-zygomat'ic in'dex. Index of relation of bigoniac and bizygomatic diameters of cranium.

Goni'tis (*gonu,* knee). Inflammation of the knee.

Gono (*gonos,* sperm). In composition, sperm.

Gonobolia (gon-o-bol'e-ah) or **Gonobolis'mus** (*gono, bole,* throwing). Ejaculation of sperm.

Gonob'olus conduran'go. Condurango.

Gonocace, gon-ok'as-e (*gony, kakos,* evil). White swelling of the knee; hydrarthrus.

Gonocele, gon-o-se'le (Eng. gon'o-seel) (*gono, kele,* tumor). Spermatocele; swelling of the testicles and cord; swelling of the knee (*gonu,* knee).

Gonochor'isis or **Gonochoris'mus** (*gonos,* offspring, *chorizo,* to separate). Division of the sexes; transformation of hermaphroditic sexual organs into distinctive sexual apparatus. The individual whose sex is thus determined is said to be *Gonochoristus.*

Gonococ'cus of Neisser (*gonos,* sperm, *kokkos,* kernel). Micrococcus of gonorrhœa, considered its specific micro-organism. Discovered in 1878, under the name staphylococcus gonorrhœæ.

Go'nocyte (*gonos,* offspring, *kutos,* cell). Ovum in interior of which is female pronucleus. **G., male,** spermatozoid.

Gonodis'cus. Proligerous disk.

Gonoïdes (gon-o-e'des) or **Go'noid.** Similar to sperm; spermatoid.

Gonolobus (gon-ol'o-bus) **conduran'go** (*gonia,* angle, *lobos,* pod). Shrub of South America; bark is an alterative and stomachic tonic. **G. macrophyl'lus,** indigenous; root is cathartic; the juice is an arrow-poison. **G. obli'quus,** juice of this plant of Central United States is emeto-cathartic.

Gonophyse'ma (*gonu,* knee, *phusema,* distension). Distension or emphysema of knee-joint.

Gonopoesis, gon-o-po-a'sis. Secretion or production of semen.

Gonopœus, gon-o-pe'us. Increasing spermatic secretion; exciting the venereal act.

Gonopoiet'icus (*gono, poieo,* to make). Augmenting secretion of sperm.

Gonorrhoblepharrhœ'a. Gonorrhœal ophthalmia.

Gonorrhœa, gon-or-rhe'ah (*gono, rheo,* to flow, because the old writers believed it to be a flux of semen). Inflammatory discharge of mucus from the membrane of the urethra in both sexes; from that of the prepuce in man, and the vagina in woman. It may

be excited spontaneously, or by irritants directly applied, pseudogonorrhœa; but is usually produced by impure connection. Gonorrhœa pura or benigna is a form that does not follow impure connection, but gonorrhœa impura, or clap, is the result of impure commerce, being a specific inflammation of the uterus or vagina, characterized by mucous discharge intermixed with specific matter, and accompanied with burning pain on micturition. It is decidedly infectious, but is a distinct disease from syphilis, and never produces it. It depends on the presence of a micro-organism, the *Gonococcus of Neisser;* see *Gonococcus* and *Micrococcus gonorrhœæ*. Inflammation of the bladder and of the testicles frequently occurs during acute gonorrhœa, and stricture of the urethra in chronic gonorrhœa. Gonorrhœal rheumatism may also occur. Inflammatory symptoms usually subside in four or five weeks, sometimes leaving behind more or less of the gonorrhœa mucosa or gleet.

When it affects the glans penis, gonorrhœa is called G. spuria, G. balani or præputialis, balanoblennorrhœa, balanorrhœa, balanitis, blennorrhagia spuria or notha, external clap. When gonorrhœa is of the impure kind, it is called balanorrhagia. When implicating both the glans and the prepuce, it is called balanoposthitis.

In consequence of repeated attacks of gonorrhœa, or of the debility induced by a single attack, it not unfrequently happens that a constant, small discharge occurs, or remains behind, after all danger of infection is removed. The discharge consists of globular particles contained in slimy mucus, and is generally devoid of the yellow color characterizing the discharge of gonorrhœa virulenta. It is unattended with pain, scalding, etc. This is called gleet, gonorrhœa longa or chronica, gonorrhœa mucosa, blennorrhœa longa or chronica, blennorrhœa, etc. It is commonly a disease of some duration. **G., ante'rior chron'ic**, chronic gonorrhœa of the anterior portion of the urethra, from the meatus to the triangular ligament. **G. bal'ani**, G. spuria, gonorrhœal balanitis. **G. benig'na**, see *Gonorrhœa, Leucorrhœa*. **G. catarrha'lis**, pseudogonorrhœa; see *Gonorrhœa*. **G. chorda'ta**, chordee; see *Gonorrhœa*. **G. chron'ica**, gleet; see *Gonorrhœa*. **G. contagio'sa**, see *Gonorrhœa*. **G. dormien'tium**, seminal discharge during sleep, and occasioned by libidinous dreams; spermatorrhœa; see *Pollution*. **G. fœmina'rum**, G. of women. **G. impu'ra**, see *Gonorrhœa*. **G. laxo'rum**, pellucid discharge from the urethra while awake, without erection, but with venereal thoughts. **G. libidino'sa**, G. laxorum; see *Pollution*. **G. lon'ga**, gleet; see *Gonorrhœa*. **G. malig'na**, see *Gonorrhœa*. **G. mar'ium**, G. of men. **G. muco'sa**, gleet; see *Gonorrhœa*. **G. non-contagio'sa**, G. pura. **G. no'tha invetera'ta**, leucorrhœa. **G. oneirog'onos**, G. dormientium; pollution. **G., poste'rior chron'ic**, chronic gonorrhœa of the posterior portion of the urethra, from the triangular ligament to the posterior border of the prostate gland. **G. præputia'lis**, see *Gonorrhœa*. **G. sic'ca**, urethritis without discharge. **G. spu'ria**, balanitis; see *Gonorrhœa*. **G. syphilit'ica**, see *Gonorrhœa* and *Gonorrhosyphilis*. **G., u'terine**, G. of uterus. **G. vene'rea**, virulent g.; see *Gonorrhœa*. **G. ve'ra**, pollution; spermatorrhœa. **G. virulen'ta**, see *Gonorrhœa*.

Gonorrhœ'al or **Gonorrho'ic**. Relating to gonorrhœa. **G. iri'tis**, see *Iritis*. **G. ophthal'mia**, see *Ophthalmia*. **G. rheum'atism**, see *Rheumatism*. **G. threads**, see *Threads*.

Gonorrhoprostatitis, gon-or-rho-pros-tat-e'tis. Inflammation of prostate gland accompanying gonorrhœa.

Gonorrhorchi'tis. Gonorrhœal inflammation of the testicles.

Gonorrhosyph'ilis. Syphilis from urethritic discharge of one affected with secondary syphilis.

Gonos. Semen; penis.

Gonoscheoce'le (Eng. gon-os'ke-o-seel). Spermatocele.

Gon'ose. Containing semen.

Gonostro'ma (*gonos*, offspring, *stroma*, bed). Proligerous disk.

Gonostromatosore, gon-o-stro-mat'o-sore (*gonos*, offspring, *stroma*, layer, *soros*, heap). See *Cumulus*.

Gonoze'mia (*gono*, *zemia*, loss). Spermatorrhœa.

Gon'y. Knee.

Gonyagra, gon'e-ag-rah (*gony*, *agra*, seizure). Gout or rheumatism in the knee.

Gonyalgia, gon-e-al'je-ah (*gony*, *algos*, pain). Pain in the knee.

Gonyancon, gon-e-an'kon (*gony*, *ankon*, curvature). Curvature or bending of the knee. Bent knee.

Gonyba'tia (*gonu*, knee, *baino*, to go). Walking or progression on the knees.

Gonycampsis, gon-e-kamp'sis (*gony*, *kampsis*, curvature). Curvature or bending of the knee.

Gonycrotus, gon-ik'ro-tus (*gony*, *kroteo*, to strike). One who is knock-kneed or in-kneed. See *Entogonyancon*.

Gonyectypo'sis (*gony*, *extuposis*, raising up or embossing). Curvature of the knee outward; genu varum.

Gonyocamp'sis. Curvature or bending of the knee.

Gonyoce'le (Eng. gon'e-o-seel) (*gonu*, knee, *kele*, tumor). Tumor or swelling of the knee.

Gonyon'cus (*gonu*, knee, *onkos*, tumor). Tumor or swelling of the knee.

Gonyorrheuma, gon-e-or-rhu'mah. Gout or rheumatism of the knee.

Gonytyle, gon-it'il-e (*gonu*, knee, *tule*, prominence). Indurated prominence of the knee.

Good King Harry or **Henry**. Chenopodium bonus Henricus.

Goodye'ra pubes'cens (after Goodyer, English botanist). *Adder's violet, Rattlesnake leaf, Rattlesnake plantain, Networt, Netleaf, Scrofula leaf* or *weed, Cancer weed.* Ord. Orchidaceæ. Indigenous plant, the fresh leaves and roots of which are applied to scrofulous sores.

Goose'berry. Ribes uva crispa.

Goose'bill. Galium aparine.

Goose'flesh. Horrida cutis.

Goose'foot. Chenopodium anthelminticum. **G., an'gular-leaved**, Chenopodium bonus Henricus. **G., mer'cury**, Chenopodium bonus Henricus. **G., stink'ing**, Chenopodium vulvaria.

Goose'grass. Galium aparine, G. verum, Polygonum aviculare.

Goose'grease. Adeps anserinus. **G., poi'son**, decomposed goosegrease, which, after being eaten, causes giddiness, prostration, and vomiting.

Goose'pimples. See *Horrida cutis*.

Goose'share or **Goose'tongue**. Galium aparine.

Goose'skin, Horrida cutis.

Gor'dius Medinen'sis. Dracunculus.

Gorge. Fauces; lower part of the neck; the female bust.

Gorget, gor'jet. Instrument representing a long gutter, in the shape of a throat, especially employed in operations of lithotomy and fistula in ano, and in operations within the vagina. **G., cut'ting**, see *Lithotomy gorget*. **G. for fis'tula in a'no**, this consists of a semi-cylindrical wooden or metal staff, four inches long, without including the handle, and furnished with a wide groove; introduced into the rectum to prevent the point of the bistoury from injuring the intestine when the internal orifice of the fistula is deeply situate. **G., lithot'omy**, cutting gorget; this is used in operation for the stone, to divide the prostate and neck of the bladder, to enable the surgeon to introduce the forceps and extract the stone. Besides cutting gorgets, there are also blunt gorgets, intended to be introduced into the wound, their concavity serving as a guide for the forceps into the bladder.

Gor'ham's pu'pil photom'eter. Instrument consisting of a bronzed tube, one end of which is closed by a cap which is perforated with holes. The cap is provided with a slot; on the cylinder the distance between each pair of holes is marked.

Go-sin-ju. See *Evodia glauca*.

Gosselin's frac'ture. Fracture of lower extremity of tibia, involving the ankle-joint.

Gos'sum. Bronchocele.

Gossypii radix, gos-sip'e-e rad'iks. See *Gossypium.*

Gossypium, gos-sip'e-um. G. herbaceum; cotton. Nat. ord. Malvaceæ. Seeds of the cotton tree, Gossypium arboreum, have been administered in coughs, on account of the mucilage they contain, and a decoction of a pint of the seeds to a quart of water has been given in the Southern States in intermittents. The bark of the root is officinal in Ph. U. S. under the name Gossypii radicis cortex. It is emmenagogue, abortifacient, and parturifacient, and is given in fluid extract. A decoction of the root, gossypii radix, is emmenagogue and parturifacient. Cotton wool, cotton, raw cotton, gossypium (Ph. U. S.), is used in medicine for making moxas, etc., and is applied in the treatment of recent burns and scalds, as a surgical dressing in abscesses and suppurating surfaces, etc., French wadding, made from purest cotton, being preferred. Saturated with glycerin, glycerized cotton, it has been employed as a dressing for wounds, ulceration of the os uteri, etc.; mixed with iodine, iodized cotton, it has been applied, bound with a bandage, over glandular enlargements, especially scrofulous swellings of children. Oil from the seed has been used as substitute for olive oil in liniments, ointments, lead plaster, etc. **G. Barbaden'se** grows in E. and W. Indies and United States; infusion is galactagogue. **G. depura'tum,** absorbent cotton. **G. ful'minans,** pyroxylin. **G. hæmostat'icum,** styptic cotton. **G. herba'ceum,** cotton plant, principal source of India cotton; gossypium. **G. ioda'tum,** iodized cotton. **G. purifica'tum,** absorbent cotton. **G. salicyla'tum,** salicylated cotton. **G. styp'ticum,** hæmostatic cotton.

Gotium, go'te-um. Bronchocele.

Goua'nia Dominguen'sis or **gla'bra.** Chewstick or chawstick shrub of Jamaica. Nat. ord. Rhamneæ. Stomachic tonic, chewed by the natives. Used in infusion as a mouth-wash. The juice is tonic. **G. leptostach'ya,** leaves are employed as cataplasms for ulcers and sores.

Gouge. Curved chisel.

Goulard's ce'rate (after the proposer). Ceratum plumbi subacetatis. **G.'s ex'tract,** liquor plumbi subacetatis. **G.'s lo'tion,** liquor plumbi subacetatis dilutus. **G.'s solution** (lead-water), liquor plumbi subacetatis dilutus. **G.'s water,** liquor plumbi subacetatis dilutus.

Gou'ra. Cucurbita lagenaria and C. ovifera; kola nut.

Gourd. Cucurbita. **G., bit'ter,** Cucumis colocynthis. **G., bot'tle,** Cucurbita pepo. **G., sour,** Adansonia digitata. **G., tow'el** or **was'hing,** Luffa Ægyptiaca.

Gourd'worm. Distoma hepaticum.

Gout. Gout received its name from (F.) *goutte,* drop, because believed to be produced by a liquid which is distilled drop by drop on the diseased part. Name was first used about 1270, and has been admitted into the different languages. Gout is an inflammation of the fibrous and ligamentous parts of the joints, and is accompanied by an excess of uric acid and deposits of urate of sodium in and around the joints. It generally attacks, first, the great toe, whence it passes to the other smaller joints, producing or being attended with sympathetic phenomena, particularly in the digestive organs; after this it may attack the greater articulations. It is extremely fugitive and variable in recurrence, and may be acquired or hereditary. In the former case it rarely appears before the age of thirty-five; in the latter, it is frequently observed earlier. It is often difficult to distinguish it from rheumatism. A combination is supposed to exist sometimes; hence called rheumatic gout, *Rheumatoid arthritis, Chronic rheumatic arthritis,* or *Chronic osteo-arthritis.* See *Rheumatism.* During the paroxysm a burning, lancinating pain is experienced in the affected joint, with tumefaction, tension, and redness. One or more joints may be attacked either at the same time or in succession, and in either case the attack terminates by resolution in a few days. This is acute, inflammatory, or regular arthritis, regular gout, *Arthrosia podagra regularis, Arthragra legitima* or *vera* or *genuina* or *normalis.* At other times pains in the joints exist of more or less acute character, the swelling being without redness. These pains persist, augment, and diminish irregularly without exhibiting intermission, and consequently without having distinct paroxysms. The disease is then called atonic, asthenic, imperfect, or irregular gout, *Chronic gout, Arthritis atonica* or *asthenica, Arthrosia podagra larvata, Dysarthritis, Arthragra.* It may appear primarily or succeed attacks of regular gout.

Gout may also attack internal organs, when it is called *Arthritis aberrans* or *erratica* or *planetica* or *vaga, Planarthragra, Arthragra anomala, Podagra aberrans, Wandering, Misplaced,* or *Anomalous gout.*

Retrograde or retrocedent, *Abarticular, Extra-articular, Flying, Recedent,* or *Misplaced gout, Arthritis retrograda, Podagra retrograda, Arthrosia podagra complicata* or *retrocedens,* is when it leaves the joints suddenly and attacks some internal organ, as the stomach, intestines, lungs, brain, etc. The term *arthritis uratica* has been applied also to gout resulting from abnormal exudations of urates into the articular cavities and the parenchyma of the cartilage, bones, etc. bounding the joints.

Gout is also called, according to the part affected, podagra, gonagra, chiragra, etc. It may be acute or chronic, and give rise to concretions, arthritic calculi, chiefly composed of urate of sodium, or to nodosities, when it is called arthritis nodosa. See *Arthritis deformans.*

G., abartic'ular, see *Gout.* **G., anom'alous,** that which attacks unusual regions. **G., artic'ular,** see *Gout.* **G., asthen'ic** or **aton'ic,** chronic gout; see *Gout.* **G., car'diac,** gout affecting the heart and inducing irregularity of its action, disturbing the circulation, producing dyspnœa, etc. **G., cer'ebral,** *Gouty apoplexy, Apoplectiform cerebral gout, Gouty meningitis;* various cerebral symptoms connected with or dependent upon the gouty diathesis, mainly those of cerebral disease due to other causes. **G., chron'ic,** see *Gout.* **G., diaphragmat'ic,** angina pectoris. **G., extra-artic'ular,** see *Gout.* **G., fly'ing,** see *Gout;* acute rheumatism. **G., gas'tro-enter'ic,** gastro-enteritic symptoms occurring during gouty attack. **G., irreg'ular,** retrocedent gout; see *Gout.* **G., lar'val** or **masked,** painful symptoms, as headache, indicating a general gouty diathesis, without usual symptoms, as localized pain, heat, redness. **G., metastat'ic,** gout, retrograde; wandering or retrocedent gout; see *Gout.* **G., neural'gic,** painful affections dependent upon gouty diathesis, sometimes cerebral in their manifestations. **G., œdem'atous,** G. in which there is swelling without other local symptoms of gout, as pain, redness, or heat. **G., rece'dent,** see *Gout.* **G., reg'ular,** acute gout. **G., retroce'dent** or **ret'rograde,** see *Gout.* **G., rheumat'ic,** see *Gout* and *Rheumatism, acute.* **G., spi'nal,** G., vertebral. **G., sthen'ic,** see *Gout.* **G. stones,** calculi, arthritic. **G., suppressed,** gout, retrograde. **G., topha'ceous,** G. with formation of bony or cartilaginous growths around extremities of bones, with deposits of sodium urate on the cartilages of the joints, and subcutaneous concretions. **G., ver'tebral,** chronic deformative inflammation of the vertebræ, attended with surface pains, difficulty of movement, induration, etc.

Gout'weed or **Goutwort.** Ægopodium podagraria; Ligusticum podagraria.

Gout'y. Arthritic; podagric. **G. iri'tis,** iritis associated with a gouty condition. **G. kid'ney,** granular kidney of chronic inflammation of kidney. **G. liver,** interstitial hepatitis. **G. meningi'tis,** gout, cerebral. **G. rheum'atism,** see *Gout* and *Rheumatism, acute.*

Gow'an, ewe. Bellis. **G., horse,** matricaria; Chrysanthemum leucanthemum; Leontodon taraxacum. **G., milk,** Leontodon taraxacum. **G., yel'low,** ranunculus; chrysanthemum; leontodon.

Gow'ers's tract. Ascending antero-lateral tract of spinal cord.

Gow'land's lo'tion. Solution, principal ingredients of which are bitter almonds, corrosive sublimate, and alcohol.

Gown, red. Scrophulus. **G., yel'low,** icterus infantum.

Goyrand's her'nia. Inguino-interstitial hernia. **G.'s opera'tion,** operation for tying internal mammary artery by peculiar angular incision near the border of the sternum.

Graafian (gra'fe-an) **fol'licles or ves'icles.** Folliculi Graafiani.

Gracilaria lichenoïdes, gras-il-lar'e-ah lik-en-o-e'des (*gracilis,* slender). Fucus amylaceus; Gigartina lichenoïdes.

Gracilis, gras'il-is. Slender, lean. Slender rectus interior or internus femoris muscle situate at the inside of the thigh; thin and very long, and arising from the descending ramus of the pubes, to be inserted at the inner and inferior part of the tuberosity of the tibia. It bends the leg and causes adduction of the thigh. **G. ante'rior,** rectus femoris in animals. **G. bi'ceps,** occasional form of gracilis muscle, in which it has two heads of origin. **G. inter'nus** or **is'chio-femora'lis,** muscle corresponding in some animals to the human quadratus femoris. **G. par'vus,** oxyuris vermicularis.

Gracillimus (gras-il'lim-us) **oc'uli or or'bitæ.** Slender separate fasciculus of obliquus superior muscle of the eye. **G. su'ræ,** plantaris.

Grad'uate (*gradus,* step, degree). In medicine or pharmacy, one who has attained a degree. In pharmacy, a glass marked for measuring purposes.

Graduated, grad'u-a-ted (*gradus,* degree). Divided or marked off in degrees. **G. com'press,** a compress formed of pieces gradually diminishing in size, the smallest piece being applied directly to the affected surface.

Græa, gre'ah. Pellicle which forms on milk. Folds of skin around the umbilicus. An old woman.

Gräfe's opera'tion for extrac'tion. Modified linear extraction for cataract. The long, slender knife used in the operation is called *Gräfe's knife.* **G.'s sign** or **symptom,** distinct motion of the globe of the eye apart from that of the eyelid.

Graft. To unite a part to another, so that it may receive support from it; to engraft. The operation is called grafting or engrafting. To transplant living tissue to other parts, in order to supply loss of surface, etc. The part so transplanted is called a *graft.* Nerves and tendons may be grafted as well as skin. **G. the'ory,** theory of the causation of diseases which supposes that contagious particles are portions detached from a living being modified by a diseased process, and capable of impressing on the healthy organism with which they come in contact changes similar to those which preceded their own modification in the body from which they were detached.

Graft'ing, skin. See *Skin-grafting.* **G., sponge,** use of antiseptic sponge in grafting to supply a basis for the granulations.

Grain. 60th part of a Troy drachm = .06479 gramme. Granule. **G. oil,** fusel oil; amylic alcohol. **G., oil'y,** Sesamum orientale. **G. poi'soning,** ergotism.

Grain-founder or **Grain-sick.** Excessive impaction of the stomach of the horse with food.

Grains, Guin'ea. See *Pepper, Malagueta.* **G. of par'adise,** Amomum granum paradisi, A. Malagueta.

Gram. Gramme.

Gra'ma. Triticum repens.

Gramal'la. Cassia fistula.

Gramen, gram'en (grass). Triticum repens. **G. Ægypti'acum,** G. crucis cyperioïdis. **G. al'bum, arven'se,** or **cani'num,** Triticum repens. **G. cru'cis cyperioï'dis,** Ægyptian cock's foot grass; roots and plants possess the virtues of Triticum repens, and have been used in the earlier stages of dropsy. **G. dioscor'idis,** Triticum repens. **G. In'dicum,** Andropogon muricatus. **G. ma'jor,** Sarsaparilla Germanica. **G. orienta'le,** Juncus odoratus. **G. re'pens,** Triticum repens. **G. ru'brum,** Sarsaparilla Germanica.

Gramia, gram'e-ah. See *Lippitudo.*

Graminiv'orous (*gramen,* grass, *voro,* to eat). Feeding or subsisting on grass.

Grammarium, gram-mar'e-um. Gramme; scruple.

Gramme, gram'me (a line). Edge of the cornea; iris. Line.

Gramme, gramm. Ancient weight, equivalent to the 24th part of an ounce, or 24 grains, or a scruple, avoirdupois. At the present day a gramme is equal in weight to a cubic centimetre of distilled water, 15.43234 grains, Troy.

Grammitis aurea, gram-me'tis aw're-ah. Asplenium ceterach. **G. cet'erach,** Asplenium ceterach.

Gram's method. Method employed for staining bacteria. To a filtered saturated solution of anilin oil in water a saturated alcoholic solution of gentian-violet is added until slight opalescence appears; the sections are first soaked in absolute alcohol for ten minutes, and then allowed to remain in the staining solution for from one to three minutes.

Grana, gran'ah (pl. of **Granum**). Hemicrania. **G. coccognid'ii,** mezereon fruit. **G. gnid'ii,** mezereon fruit. **G. Guineen'sia,** pepper, Malagueta. **G. lentis'ci,** buds of Pistacia lentiscus; astringent and tonic. **G. Malaguet'ta, Meliguet'ta,** or **Meniguei'ta,** Grana paradisi. **G. Moluc'ca** or **Molucca'na,** Croton tiglium. **G. moscha'ta** or **mos'chi,** Hibiscus abelmoschus. **G. orien'tis,** see *Menispermum cocculus.* **G. paradi'si,** see *Amomum granum paradisi.* **G. re'gia,** seeds of Ricinus communis. **G. sylves'tra,** cochineal insects. **G. tig'lii** or **tig'lia,** see *Croton tiglium.* **G. til'ii,** Croton tiglium. **G. tritic'ea,** see *Hyoides os.*

Granadilla (gran-ad-il'lah), **apple-shaped** (dim. of **Granada,** pomegranate). Passiflora maliformis. **G. cæru'lea,** Passiflora cærulea.

Grana'ti flo'res (*granum,* because full of grains or seeds). Pomegranate flowers. **G. fruc'tûs cor'tex,** see *Punica granatum.* **G. radi'cis cor'tex,** see *Punica granatum.*

Granatin, gran-at'in. Substance derived from bark of root of Punica granatum, having a laxative effect; also from rind of unripe pomegranate.

Granatum, gran-at'um. Punica granatum.

Grand mal. See *Epilepsy.*

Grandebalæ, gran-deb'al-e. Hair in the arm-pits.

Grandiflorine, gran-de-flo'reen. Bitter poisonous alkaloid from fruit of solanum.

Grandino'sum os (*grando,* hail). Cuboid.

Gran'do (nail). Chalaza; chalazion; tubercle.

Gran'dry, cor'puscles of. Tactile corpuscles of skin of bills and tongue of certain birds and of the epidermis of the mammalia.

Gran'gea maderaspata'na. E. Indian species; tonic, antispasmodic.

Granil'la. Triticum repens.

Graniv'orous (*granum,* grain, *voro,* to eat). Feeding on grain or seeds.

Grantris'tum. Anthrax.

Granula (gran'u-lah) (pl. of **Granulum**) **Pacchio'nii.** Pacchionian bodies. **G. san'guinis,** globules of the blood. **G. sem'inis,** seminal granules; see *Sperm.*

Gran'ular. Composed of or containing granules or small particles. **G. bod'ies of Donné,** colostrum corpuscles. **G. conjuncti'va** or **conjunctivi'tis,** trachoma; see *Conjunctivitis.* **G. degenera'tion** or **disorganiza'tion,** first stage of fatty degeneration. **G. degenera'tion of kid'ney,** kidney, Bright's disease of. **G. eye'lid,** trachoma. **G. forma'tion of Mey'nert,** layer of irregular ganglionic cells in cortical substance of brain. **G. kid'ney,** see *Kidney, Bright's disease of.* **G. lay'er of ret'ina,** cerebral layer of retina. **G. lid,** trachoma. **G. liv'er,** cirrhosis. **G. ophthal'mia,** see *Ophthalmia.* **G. ova'rian cell,** granular cells in fluid of ovarian cysts. **G. tin,** see *Tin.* **G. vagini'tis,** see *Glandular vaginitis.*

Gran'ulated. Formed of granules; granular. **G. liv'er,** cirrhosis.

Granula'tio. Granulation. **G. fungo'sa,** fungous granulation.

Granulation, gran-u-la'shun. Granulations are the reddish, conical, flesh-like shoots forming at the surface of suppurating wounds and ulcers; they are the product of inflammatory excitement. They form the basis of the cicatrix. Also minute, round, firm, shining, semi-transparent tumors, met with in the lungs particularly; see *Trachoma*. In pharmacy, granulation is a process by which a metal is reduced to fine grains, by melting it, and causing it, while liquid, to pass through a sieve into a vessel of water, or by shaking or rubbing the melted metal in an appropriate vessel, as in the formation of granular tin or zinc. **G., cer'ebral,** Pacchionian bodies. **G., exu'berant** or **fun'gous,** large granulations bathed with thin mucopurulent matter, the result of œdema of the part or due to abnormal plastic force. **G., mil'iary,** miliary tubercles; small, transparent grains, of variable size—from a millet-seed to a grain of hemp—presumed to be the primitive state of tubercles. **G. tis'sue,** elementary form of embryonic tissue; met with also in ordinary granulations, and in the earliest stage of all rapidly developed new formations having their origin from connective tissue. The process of repair in cases of destruction of tissue, as by an abscess, is by this tissue, formed by new fibrous tissue and blood-vessels developed from the fibrous tissues and vessels adjacent to the affected part. **G. tu'mor,** morbid product formed by partition and multiplication of the connective-tissue cells into groups of others resembling lymph-cells, lying in the intercellular substance, with a tendency to fatty degeneration, as elephantiasis, lupus, etc.; see *Granuloma*.

Gran'ule (dim. of **Granum**, a grain). Small grain; small compact particle; small cell-mass; cytoblast. In pharmacy, small pill or globule. **G. cells,** cells resulting from fatty degeneration of various cell-formations. **G., element'ary,** minute protoplasmic masses in the blood. **G., gland'ular** or **gland,** acinus. **G. lay'er,** layer of olfactory bulb; also layer of cortical substance of brain, each containing groups of small cells. **G. masses of Schultze,** see *Globules*.

Gran'ules. See *Granule*. **G. of the brain,** nuclei of the cells of the gray substance of the brain. **G. of chyle,** molecular base of chyle. **G., lymph,** lymph-corpuscles. **G. of Malpig'hi,** Malpighian corpuscles. **G., sem'inal,** minute, rounded, granulated bodies observable in the semen; see *Sperm*.

Granu'lia. Tuberculosis.

Granuli'tis. Miliary tuberculosis.

Granulo'ma. Granulation tumor. **G. fungoï'des,** chronic cutaneous affection, consisting at first of flat, reddish, dry spots, afterward encrusted and converted into distinct tumors; mycosis fungoides. **G., infec'tious,** infectious growth made up of granulation tissue. **G. of the i'ris,** small nodular tumor of the iris, of a tubercular nature; some authors do not regard these tumors as tubercular, but consider them to be granulomata; see *Tubercular iritis*. **G., syphilit'ic,** syphiloma.

Gran'ulose. Granular. Term also applied to a soluble carbohydrate, a constituent of starch, which is acted on by organic ferments, organic acids, and diluted mineral acids.

Granulos'ity. Collection of granular masses.

Gran'ulous. Granular.

Gran'ulum (dim. of **Grana**). Granule.

Gra'num. Grain. **G. re'gium,** castor-oil seeds.

Gran'ville's lo'tion. See *Lotion, Granville's counter-irritant*.

Grape. Vitis vinifera. Grease of horses, having clusters of knots or knobs on the legs. Tubercular growths on serous membranes of cattle. **G., bear's,** Arctostaphylos uva ursi. **G., dried,** Uvæ passæ. **G., dy'er's,** Phytolacca decandra. **G., Europe'an,** Vitis vinifera. **G., false,** Ampelopsis quinquefolia. **G., moun'tain** or **Or'egon,** Berberis aquifolium. **G., sea'side,** see *Kino*. **G. su'gar,** glucose.

Grape-cure. Medication consisting in the use of grapes for meat and drink, nothing more at the farthest being allowed than a piece of dry bread; and continued for weeks. Its effects are altogether revellent, and resemble in many respects those of hydropathy.

Grape-tree. Varieties of Coccoloba.

Grape'wort. Actæa spicata; Bryonia dioica.

Graph'ic or **Graphical,** graf'ik-al (*grapho*, to write). Pertaining to the act of delineating, as automatic tracing. Written. **G. meth'od,** mode of studying diseases of the heart and great vessels by tracings of an instrument, the sphygmograph, for example.

Graphidoïdes (graf-id-o-e' dees), **Graphio'des,** or **Graphioï'des** (*graphis*, style, *eidos*, resemblance). Styloid.

Graphites, graf-i'tees (*grapho*, to write). Carburet of iron, black lead; astringent and desiccative, and used externally in treatment of herpes and other cutaneous affections.

Graph'ium. Pencil; a sound. **G. pencilloï'des,** form of fungus met with in the external auditory canal.

Graphoï'des (*graphis*, style, *eidos*, resemblance). Styloid.

Graphology, graf-ol'o-je (*grapho*, to write, *logos*, description). Description of handwriting; diagnosis of certain nervous conditions of faulty co-ordination by handwriting of the patient.

Graphomania, graf-o-man'e-ah (*graphe*, writing). Insane desire to write.

Graph'oscope (*grapho*, *skopeo*, to see). Peculiar convex lens for treatment of asthenopia.

Graphospasm, graf'o-spasm (*grapho*, to write, *spasmos*, spasm). Writer's cramp.

Graptophyl'lum (*graptos*, painted, *phullon*, leaf) **Horten'se.** Caricature plant of Asia; bark and leaves are employed for dissipating glandular swellings.

Grass. Asparagus; Triticum repens. **G., bear's,** Yucca filamentosa. **G., Bermu'da,** Cynodon dactylon. **G., bit'ter,** Aletris farinosa. **G., blue-eyed,** Sisyrinchium Bermudianum. **G., brome,** Bromus ciliatus. **G., brome, soft,** Bromus ciliatus. **G., Cana'ry, cul'tivated,** Phalaris Canariensis. **G., couch,** Triticum repens. **G., dog,** Triticum repens. **G., eel,** Pila marina. **G., Egyp'tian cock's foot,** Gramen crucis cyperioïdis. **G., goat's,** scorzonera. **G., knot,** Polygonum aviculare. **G., lil'y,** Sisyrinchium Bermudianum. **G. oil of Nemaur,** Oleum graminis Indici. **G., physic,** Sisyrinchium Bermudianum. **G., rib,** Plantago lanceolata. **G., scurvy,** Sisyrinchium Bermudianum. **G., silk,** Yucca filamentosa. **G., sweet,** Acorus calamus. **G. tree,** xanthorrhœa. **G. tree resin,** resin from various species of xanthorrhœa, used in Australia for bowel affections. **G., vi'per's,** scorzonera. **G., yellow-eyed,** Xyris bulbosa.

Grass-stag'gers. Paraplegia prevailing among horses or cattle.

Gra'sus. Cinabra; hircismus; bromidrosis.

Gratia Dei, grash'e-ah da'e (grace of God). Gratiola officinalis; Geranium pratense. **G. Robertian'um,** scutellaria.

Gra'ting. Sound made by friction of rough surfaces against one another.

Gratiola (grash-e'o-lah) **au'rea.** Indigenous; emetocathartic and diuretic. **G. Carolinien'sis,** grown in the South and West; has medical properties of C. officinalis. **G. centauroï'des,** G. officinalis. **G. officina'lis,** hedge hyssop, herb of grace; European plant; inodorous, with strong, bitter, nauseous taste; anthelmintic, hydragogue cathartic, emetic, and diuretic; used in dropsy. **G. Virginian'a,** indigenous plant with similar virtues.

Gratiolacrin, grash-e-o-lak'rin. Fatty resin from Gratiola officinalis.

Gratiolaretin, grash-e-o-lar-et'in. $C_{34}H_{28}O_6$. See *Gratiolin*.

Gratiolet (grash-e-o-la'), **angle of.** Corono-facial angle.

Gratioletin, grash-e-o-let'in. See *Gratiolin*.

Gratiolin, grash-e'o-lin. Crystalline glucose obtained from Gratiola officinalis. When gratiolin is acted on by dilute sulphuric acid, gratioletin (crystalline), $C_{34}H_{28}O_{10}$, and gratiolaretin, $C_{34}H_{28}O_6$, both result.

Gratiosoletin, grash-e-o-sol-a'tin. See *Gratiosolin.*

Gratioso'lin. $C_{46}H_{42}O_{25}$. Bitter amorphous glucoside from Gratiola officinalis. When treated with dilute acids, a yellow bitter substance, gratiosoletin, results.

Grattage (F.) grat-tazh'. Gentle curetting of interior wall of the uterus with a brush.

Grav'ative. Weighty, as tumors.

Grave (*gravis,* heavy). Serious. **G. plant,** Datura sanguinea. **G. wax,** adipocera.

Gravedo, grav-a'do (*gravis,* heavy.) Catarrh; coryza; cranial rheumatism. **G. neonato'rum,** snuffles.

Grav'el. A disease occasioned by small concretions, similar to sand or gravel, which form in the kidneys, pass along the ureters to the bladder, and are expelled with the urine. They are commonly composed of urates and animal matter, and are deposited at the bottom of the vessel immediately after the excretion of the urine. Vegetable diet and alkaline drinks are the best prophylactics. See *Calculi, urinary.* A "fit of the gravel" is excruciating suffering induced by the passage of gravel from the kidney to the bladder. It can only be relieved by anæsthetics, opiates, warm bath, etc. Sometimes the deposit is in fine particles, like sand. See *Lithiasis.* **G., bil'iary,** see *Cholelithiasis.* **G., cys'tine,** see *Cystine.* **G. grass,** Galium verum. **G., hair'y,** G., pileous. **G., phosphat'ic,** phosphatic calculus. **G. pi'leous,** species of gravel containing hairs, phosphate of lime, ammoniaco-magnesian phosphate, and a little uric acid. **G. plant,** Epigæa repens. **G., red** or **u'ric-ac'id,** uric-acid calculus. **G. root,** Eupatorium purpureum; Collinsonia Canadensis. **G. weed,** Onosmodium Virginianum; Diervilla Canadensis; Epigæa repens. **G., white,** phosphatic calculus.

Graveolens, grav-a'o-lens (*gravis, oleo,* to smell). Fetid.

Graves, disease of. Exophthalmic goitre.

Grav'id (*gravis,* heavy). Pregnant. **G. u'terus,** uterus during any period of pregnancy.

Gravidin, grav'id-in. White sediment in the urine of pregnant women, which is said, by its decomposition, to give rise to the pellicle kyestein.

Gravidism, grav'id-izm (*gravidus,* pregnant). Pregnancy, or condition symptomatic of pregnancy.

Graviditas, grav-id'it-as. Fecundation; pregnancy. **G. abdomina'lis,** pregnancy, abdominal. **G. cervica'lis,** cervical pregnancy. **G. extra-uteri'na,** ectopic or extra-uterine pregnancy. **G. extra-uteri'na in ova'rio,** pregnancy, ovarian. **G. extra-uteri'na secunda'ria,** see *Metacyesis.* **G. interstitia'lis** or **intramura'lis,** pregnancy, interstitial. **G. mola'ris,** mole. **G. ovaria'lis, ovar'ica,** or **ova'rii,** pregnancy, ovarian. **G. seroti'na,** prolonged gestation. **G. spu'ria,** pregnancy, false. **G. tuba'ria,** pregnancy, tubal. **G. tu'bo-abdomina'lis,** tubo-abdominal pregnancy. **G. tu'bo-ova'ria,** tubo-ovarian pregnancy. **G. tu'bo-uteri'na,** interstitial pregnancy. **G. u'teri substan'tia,** pregnancy, interstitial. **G. uteri'na,** pregnancy.

Gravidity, grav-id'it-e. Pregnancy.

Gravimeter, grav-im'et-ur (*gravis, metron,* measure). Areometer. Instrument for ascertaining specific gravity.

Gravimetry, grav-im'et-re (same etymon). Measurement of specific gravity.

Gra'vis. Heavy. **G. odor puer'peri,** heavy odor peculiar to the lochial discharge.

Grav'ity, specif'ic. See *Specific gravity.*

Gray col'umns. See *Columns of spinal cord.* **G. com'missure,** see *Spinal commissure.* **G. haired,** see *Poliosis.* **G. lo'tion,** lotio nigra or black wash. **G. mat'ter of brain,** vesicular or cortical substance of the cerebrum and cerebellum; see *Neurine.* **G. m., infraventric'ular,** gray nervous matter in the floor of the fourth ventricle. **G. m., interme'diate,** part of gray matter of spinal cord between the arteries and posterior cornua. **G. m. of op'tic lobe,** stratum opticum. **G. m. of pons,** gray matter of pons Varolii. **G. m., retic'ular,** reticulation of gray nervous matter, particularly of the medulla oblongata. **G. m., spi'nal,** gray matter of spinal cord. **G. mill,** Lithospermum officinale. **G. pow'der,** hydrargyrum cum cretâ.

Grease. Specific inflammation affecting the skin of the heels of the horse; eczema of feet of the horse. **G., bar'row's,** adeps suillus. **G., goose,** adeps anserinus. **G. pox,** see *Grease.*

Green bark. Bebeeru. **G. blind'ness,** blindness as to green colors. **G. bri'er,** Smilax rotundifolia; root is demulcent and diuretic. **G. drag'on,** Arisema dracontium; root is diaphoretic and expectorant. **G., em'erald,** arsenite of copper. **G., French,** arsenite of copper. **G. leech,** Hirudo officinalis. **G., Par'is,** arsenite of copper. **G., Scheele's,** arsenite of copper. **G., Schweinfurth's,** arsenite of copper. **G. sick'ness,** chlorosis. **G. wa'ters,** lochial discharge when prolonged.

Green'heart. Nectandra rodiæi. See *Bebeeru.*

Green's opera'tion for entro'pion. Operation employed in cicatricial entropion of the upper eyelid, occurring after trachoma.

Green'stick frac'ture. See *Fracture, greenstick.*

Green'weed. Genista tinctoria.

Greffotome, gref'fo-tome (*greffe,* graft, *tome,* incision). Knife specially made for removal of skin grafts.

Gregarina, greg-ar-e'nah (*grex,* flock). Genus of protozoa, family Gregarinidæ. See *Pleurococcus* and *Sporozoa.* **G. pulmona'lis** or **pulmo'num,** cysts and parasitic organisms in the lungs. Distoma Ringeri.

Gregarinosis, greg-ar-in-o'sis. Disease of fowls caused by parasitic organisms, gregarinæ.

Gremium, gra'me-um. Vulva; breast; lap.

Grenadine, gren'ad-een. Form of mannite from Punica granatum.

Gressorial, gres-so're-al (*gradior, gressum,* to proceed). Having limbs adapted to walking; able to walk; ambulatory.

Gressura, gres-su'rah. Perineum.

Gres'sus (*gradior, gressum,* to step). Walking.

Grewia micros, gru'e-ah mik'ros. Species of Tiliaceæ growing in Ceylon; bitter, aromatic, and astringent. **G. orienta'lis,** E. Indian species; all parts are aromatic and bitter and antiarthritic. The berries and fruit of several other species, as *G. Asiatica, G. elastica, G. sapida,* etc., are used in manufacture of refreshing drinks, as sherbet.

Grielum, gre'el-um. Apium petroselinum; Smyrnium olusatrum.

Griesinger's disease, gre-sing'er's dis-eze'. Anæmia with dropsy, variously called dirt-eating disease, Egyptian chlorosis, etc., but occasionally due to a parasite, anchylostomum duodenale.

Griff or **Grif'fo.** See *Mulatto.*

Grif'fith's base. Ptomaïne, $C_{10}H_{17}N$, obtained from cultures of the bacterium allii. **G.'s mix'ture,** mistura ferri composita, Ph. U. S. **G.'s pills,** pilulæ ferri composita.

Grinde'lia (after D. H. von Grindel of Dorpat) **glutinosa,** glu-tin-o'sah. California plant having somewhat similar properties to G. robusta. Ord. Compositæ. **G. hirsu'tala,** California plant recommended as an antidote to the poisonous effects of Rhus obtusifolia, the juice or a decoction being rubbed on the parts affected. **G. robus'ta,** officinal in Ph. U. S., grows in N. and S. America; leaves and flowering tops are employed; antiperiodic, antispasmodic, stimulant to bronchial mucous membrane; used in asthma, chronic bronchitis, and whooping cough. From it are obtained an oil having terebinthinate odor, a resin, and a bitter alkaloid, *Grin'deline.* **G. squamo'sa,** snake-head grindelia, similar to G. robusta in physical and therapeutic properties; used also in hypertrophy of the spleen.

Grind'ers. Molar teeth.

Grinder's asth'ma or **disease rot.** Aggregation of functional phenomena caused by inhalation of particles thrown off during operation of grinding metallic substances, such as enlargement of bronchial tubes, phthisis, etc.

Grind'ing pains. Pains of early stage of labor.

Gripe. Pain, sometimes crampy, in the abdomen.

See *Gripes*. **G., cut'ting on the,** apparatus minor; see *Lithotomy*.

Gripes. Tormina; colic. **G., wa'tery,** popular name for a dangerous disease of infancy common in England, resembling cholera infantum of this country.

Griphosis, grif-o'sis (*grupos*, bent). Curving inward, as of the nails.

Grippe (F.) (*gripper*, to seize). Epidemic catarrhal disease; influenza. It is often complicated with severe abdominal, cephalic, or thoracic symptoms, rheumatism, nervous exhaustion, and other morbid conditions.

Grislea (gris'le-ah) **tomento'sa.** Dried flowers of this E. Indian shrub are astringent and excitant, and applied externally to offensive ulcers.

Gris'tle. Cartilage.

Grit. Gravel. **G. gru'el,** water gruel; demulcent, and used as a vehicle for clysters.

Grits. Groats.

Grit'ti's amputa'tion. Amputation of inferior part of thigh, the patella being included in the rectangular flap and sawn so as to be applied to the surface of the femur.

Groan. Sighing or suspiration accompanied by peculiar vocal sound.

Groats, Oats that have the hulls taken off; grits. In the United States fine hominy is called grits, and wheat prepared in the same way is likewise so designated; also called wheaten hominy. See *Avena*.

Gro'cer's itch. See *Eczema impetiginodes;* psoriasis.

Grog. Spirits, water, and sugar. **G. blos'soms** or **roses,** gutta rosea; acne rosacea.

Groin. Region of union of anterior wall of the abdomen with the thigh.

Grom'ell, Grom'well, or **Gro'myl.** Lithospermum officinale.

Grono'via scan'dens (after Gronov, Dutch scientist). Plant of S. America; antisyphilitic.

Groo'groo oil. Concrete oil from fruit of Acrocomia sclerocarpa of S. America.

Groove. Furrow, sulcus, channel, linear excavation, or gutter. **G., a'nal,** depressed surface in embryo indicating future location of anus. **G., an'terolat'eral,** groove on spinal marrow indicating place of exit of anterior roots of spinal nerves. **G., auric'uloventric'ular,** transverse furrow on outside of heart indicating division of that organ into auricles and ventricles. **G., ax'ial,** groove, medullary. **G., bas'ilar,** G. on inner surface of basilar process of occipital bone on which rest the pons Varolii and medulla oblongata. **G., bicip'ital,** sulcus in upper portion of front of humerus, chiefly for attachment of long tendon of biceps muscle. **G., carot'id,** depression on body of sphenoid bone for reception of internal carotid artery and cavernous sinus. **G., cav'ernous,** G., carotid. **G., cor'neal,** see *Cornea*. **G., den'tal,** slight longitudinal furrow on the margin of the jaw about the end of the second month of fœtal life. **G., dor'sal,** G., medullary. **G., horizon'tal,** peduncular sulcus. **G., infraor'bital,** G. on orbital surface of upper jaw for infraorbital artery and nerve. **G., interme'diate,** furrow on spinal cord in cervical region near posterior median fissure. **G., lac'rymal,** sulcus for lacrymal sac formed by lacrymal sphenoid bones. **G., mas'toid,** digastric fossa. **G., med'ullary,** sulcus on back part of embryo in its early development, succeeding the primitive groove and becoming afterward the medullary tube. **G., na'sal,** groove of nasal bone for nasal nerve; embryonic groove from mouth to nasal cavities. **G., neu'ral,** G., medullary. **G., occip'ital,** G. on mastoid process for occipital nerve. **G., olfac'tory,** depression in cribriform plate of ethmoid in which lies the olfactory bulb. **G., op'tic,** groove on body of sphenoid bone for lodgment of optic chiasm. **G., pos'tero-lat'eral,** longitudinal groove on medulla oblongata and spinal cord, indicating place of exit of posterior spinal roots. **G., prim'itive,** primitive streak or trace; bright streak in the long axis of the pellucid part of the area germinativa, after it presents a central pellucid and a peripheral opaque part, and passes from the round to the pear shape. **G., scap'ular,** scapular notch. **G., sig'moid,** G., carotid. **G., subcla'vian,** two depressions on first rib, lodging respectively the subclavian artery and vein. **G., supe'rior, of cerebel'lum,** peduncular sulcus. **G. of Syl'vius,** fissure of Sylvius. **G., ventric'ular,** longitudinal furrow of the heart. **G., ver'tebral,** G., medullary.

Grooved. Canaliculated; having a small channel or gutter, as a grooved probe.

Grossula'ria. Ribes uva crispa. **G. ni'gra,** Ribes nigrum. **G. non-spino'sa,** Ribes nigrum. **G. ru'bra,** Ribes rubrum.

Ground ber'ry. Fragaria; Gaultheria procumbens. **G. cen'taury,** Polygala sanguinea. **G. cher'ry,** Physalis viscosa. **G. hem'lock,** Taxus Canadensis. **G. hol'ly,** gaultheria. **G. ivy,** Gaultheria, Glechoma hederacea. **G. lau'rel,** Epigæa repens. **G. line,** distance on skull between the basion and nasion. **G. ma'ple,** Heuchera Americana. **G. nut,** Apios tuberosa, Arachis hypogea, Bunium flexuosum, Aralia trifolia. **G. nut oil,** expressed oil from the seeds of Arachis hypogæa, used in making plasters or cerates; pignut. **G. pine,** Teucrium chamæpitys. **G. pine, French,** Teucrium iva. **G. plum,** Astragalus caryocarpus; astringent. **G. sub'stance,** matrix.

Ground'sel. Senecio. **G. tree,** Baccharis halimifolia.

Grouse'berry. Gaultheria; Empetrum nigrum.

Grove's cell. See *Galvanic battery*.

Growth. Development of the body, particularly in the direction of its height. Any adventitious tissue, as a morbid growth or tumor. See *Development*.

Grub. Larve. See *Ectozoa*.

Grubs. Acne punctata; comedo.

Gru'el, grit. See *Grits*. **G., wa'ter,** see *Avena* and *Grits*.

Gru'mous (*grumus*, clot). Clotted; thickened.

Gru'mus. Coagulum; clot; thrombus.

Grup'ta. Crypt.

Grutel'lum. Oatmeal.

Gru'tum. Hard white tubercle of the skin, resembling in size and appearance a millet-seed, on the eyelids, the root of the nose, the scrotum, and ear. Groats.

Gryphius (grif'e-us) **pes.** Griffon's foot. Instrument of which Ambrose Paré speaks, used for extracting moles from the uterus.

Gryphosis (grif-o'sis) or **Grypo'sis** (*grupos*, bent). Curvature or crookedness in general, or of the nails only, as in onychogryphosis.

Grypotes, grip'o-tees. See *Grypus*.

Grypus, grip'us (*grupos*, bent). One who has a crooked or aquiline nose. The condition is termed *Grypotes*.

Guachama or **Guachama'ca.** Resinous extract from the milky juice and sap of the wood of a Venezuelan tree, which acts like curare, but more speedily, in controlling the convulsive action of the motor apparatus. *Guachamacine*, its alkaloid, is identical with curarine.

Guacin, gwah'sin. Yellow resinous matter from Mikania guaco; diaphoretic and cardiac stimulant.

Guaco, gwah'ko. Mikania guaco, growing in the valleys of the Madalena, Rio Cauca, etc., in S. America. Juice is used against the bites of poisonous reptiles, both in prevention and cure; tonic, stimulant, antispasmodic, antipyretic.

Guaiac, gwi'ak. Guaiacum.

Guaiaci (gwi'as-e) **lig'num.** See *Guaiacum*. **G. resi'na,** see *Guaiacum*.

Guaiacic (gwi'as-ik) **ac'id.** Acid derived from wood or resin of guaiacum.

Guaiacine, gwi'as-een. See *Guaiacum*.

Guaiacol, gwi'ak-ol. $C_7H_8O_2$. Oily liquid constituting 60 to 90 per cent. of creasote. Product of dry distillation of guaiacum; ingredient of wood-tar creasote, or by fractional distillation of beechwood-tar creasote. Guaiacol has been employed as a substitute for creasote in the treatment of pulmonary tuberculosis. *Guaiacol carbonate* and *G. biiodide* have also been employed

in tuberculosis. **G. ben'zoate,** benzoyl-guaiacol. **G. sal'icylate** forms white crystals; soluble in alcohol; dosage and therapeutic properties identical with salol.

Guaiacol'ic salol. Guaiacol salicylate.

Guiaconic (gwi-ak-o'nik) **acid.** $C_{38}H_{40}O_{10}$. An amorphous component of resin of guiacum.

Guaiacum, gwi'ak-um. Resin of guiacum; G. officinale; guaiaci resina, guaiac, and the wood, guaiaci lignum, are both officinal. The resin is obtained as an exudation by incisions made into the wood or by the application of heat. The base of the guaiacum is a peculiar resin, guaiacine. Guaiacum is stimulant and diaphoretic, and in large doses purgative. It is administered in chronic rheumatism, gout, scrofula, cutaneous diseases, and the sequelæ of syphilis. Guaiacum is also a test for the detection of blood-stains: two drops of tincture of guaiacum and two minims of ozonic ether are added to urine in a test-tube; if blood is present, a blue color appears at the junction of the two liquids. **G. angustifo'lium,** tree growing in Texas and Mexico, having somewhat similar properties to Guaiacum officinale. **G. nati'vum,** guaiacum. **G. officina'le,** guaiacum. **G. sanc'tum** grows in W. Indies; has similar properties to G. officinale. **G. test for blood,** see *Guaiacum.* **G. wood,** wood of G. officinale and G. sanctum; yields more than 20 per cent. of resin.

Guaiaretic (gwi-ar-et'ik) **acid.** $C_{20}H_{26}O_4$. One of the components of guaiacum.

Gualtheria, gwal-the're-ah. Gaultheria.

Guanidine, gwan'id-een. Carbondiamide-imide; monacid base, CN_3H_5, in the shape of colorless crystals, soluble in alcohol and water.

Guanine, gwan'een. Leucomaïne, $C_5H_5N_5O$, found in guano; also frequently in the liver, spleen, and pancreas, and in animal and vegetable tissues, in the excrement of the spider, etc.; regarded in animals of the lower order as the end-product of all change. Acted on by nitric acid, it is converted into xanthin. It generally occurs as a colorless, amorphous powder.

Guano, gwan'o. Bird-manure. Excrement of different kinds of marine birds—mews, divers, sheerbreaks, etc., but especially the sulla variegata; found in enormous layers in the S. American islands of the Pacific, and is used as manure; also as dressing for wounds, lepra, eczema, and other skin diseases.

Guarana, gwar-an-ah'. Paullinia sorbilis.

Guaranin, gwar'an-in. Caffeine procured from guarana. See *Caffeine* and *Coffea Arabica.*

Guarea abletii, gwar-a'ah ab-la'te-e. Meliaceous tree of S. America, with abortifacient and emmenagogue properties. **G. pur'gans,** Brazilian species; bark is bitter and cathartic. **G. Swartz'ii,** W. Indian species; bark is emeto-cathartic. **G. trichillioï'des,** species of W. Indies; emeto-cathartic.

Guarer'ba orba. Momordica elaterium.

Guav'a ap'ple. Psidium pomiferum.

Guaya'va. Psidium pomiferum.

Guaycuru. Baycuru.

Gua'za. Gunjah.

Guazuma (gwah-zu'mah) **tomento'sa** or **ulmifo'lia.** Bastard cedar of W. Indies, S. America, and India; inner bark is used in syphiloderms, various non-specific cutaneous affections, and leprosy; outer bark is diaphoretic.

Gubernac'ular (*guberno,* to govern). Relating or appertaining to the gubernaculum. **G. cord,** see *Gubernaculum testis.*

Gubernaculum (gu-ber-nak'u-lum) **den'tis** (rudder of a tooth). Cord passing from the follicle of the permanent tooth along a small long canal behind the alveolus of the milk tooth, and becoming continuous with the gum. It has been supposed to direct the permanent tooth outward. The canal has been termed iter dentis. **G. Hunte'ri,** G. testis. **G. tes'tis,** triangular fibro-cellular cord, which, in the fœtus, arises from the ramus of the ischium and the skin of the scrotum, and proceeds to the posterior part of the testicle, before this organ issues from the abdomen; supposed to be a continuation of the fascia superficialis with muscular fibres from the internal oblique muscle, which pass upward to the testis when in the abdomen, and by their contraction draw the testis down, and ultimately form the cremaster muscle. The peritoneal pouch, processus vaginalis, which passes down into the scrotum, considerably precedes the testis in its descent, and into its posterior part a columnar elevation projects, filled with soft tissue, called plica gubernatrix. There is also a fibrous structure attached, below, to the lower part of the scrotum, and surrounding the peritoneal pouch above, termed the gubernacular cord. Gubernaculum testis includes both of these.

Gubler's (goob'ler's) **tumor.** Tumefaction back of the wrist occurring after lead-poisoning.

Gudden's com'missure. Fibres passing between the optic tracts connecting the internal geniculate bodies.

Guel'der rose. Viburnum opulus; irritant narcotic poison.

Guettarda, get-tar'dah (after Guettard, French scientist). Shrub or tree of Central America. **G. ambig'ua,** bark of this Jamaica tree is tonic, as is also that of **G. argente'a,** or black guava, of Guiana. **G. sempervi'rens,** Malabar shrub; antiarthritic. **G. specio'sa,** E. Indian species, leaves of which are considered parturifacient.

Gui'ac. Guaiac.

Guiacol, gwi'ak-ol. Guaiacol.

Guia'na bark. Bark of Portlandia hexandra and P. grandiflora; antipyretic. Therapeutic properties are similar to those of cinchona.

Gui'der (leader). Tendon.

Guidonia (gwid-o'ne-ah) **adstrin'gens.** Plant of Peru; employed as vulnerary.

Guilandina (gil-an-de'nah) (after Melchior Guilandinus (Wieland), professor at Padua) **bonducella.** Cæsalpinia bonducella. **G. dioi'ca,** Gymnocladus Canadensis. **G. echina'ta,** Cæsalpinia echinata. **G. microphyl'la,** root is used in renal diseases and lithiasis. **G. morin'ga,** a plant, ord. Leguminosæ, affording ben nut and lignum nephriticum. Ben nut or oily acorn is a W. Indian nut furnishing oil, oleum balaninum, oil of ben, that is purgative. The wood of the guilandina, Lignum nephriticum, has been used in decoction in affections of the urinary organs; Cæsalpinia bonducella.

Guillotine (gil'lo-teen), **ton'sil.** Amygdalatome.

Guin'ea grains. Grains of Amomum Malagueta. **G. pep'per,** cubebs, African; capsicum.

Guinea-worm disease. See *Dracunculus.*

Guirila. Caucasian or Persian insect powder. See *Anthemis pyrethrum.*

Guizo'tia Abyssin'ica or **olea'cea.** Oil of seeds of this plant of Abyssinia and E. Indies is used externally in rheumatism.

Gu'la. Œsophagus, pharynx; voracity.

Gu'læ imbecil'litas (weakness of the throat). Paralysis of the pharynx. **G. princip'ium,** pharynx.

Gulan'cha. Roots and stems of Tinospora cordifolia; diuretic, tonic, antiperiodic.

Gull. Chrysanthemum.

Gull and Sutton's disease. Arterio-sclerosis; atheroma.

Gul'la. Gula.

Gul'let (*gula,* gullet). Œsophagus, pharynx.

Gulo'sus (*gula,* gullet). Glutton.

Gum. An immediate principle of vegetables, solid, uncrystallizable, inodorous substance, of a mawkish taste, unchangeable in the air, insoluble in alcohol, but soluble in water, with which it forms a mucilage. It is obtained from a variety of trees. Nitric acid changes gum into mucic and oxalic acids. Arabin, bassorin, and curasin are some of the chief constituents. Gums are used in medicine as demulcents, emollients, and relaxants, particularly in catarrh and intestinal irritations, and in pharmacy are employed in the form of emulsions, pills, etc. Caoutchouc. Portion of mucous membrane of the mouth; see *Gingivæ.* **G., aca'cia,** acajou, cashew gum. **G., ac'aroid,** xanthorrhœa. **G. ad'ragant,** tragacanth. **G. ammo'niac,** ammoniacum. **G. angi'co,** gum of species of acacia in Brazil. **G., an'imal,** carbohydrate

($C_{12}H_{20}O_{10}+2H_2O$) found sometimes in the lungs, salivary glands, etc. **G. an'ime**, anime. **G. ar'abic**, acacia. **G., artifi'cial**, dextrin. **G., Austra'lian**, G. arabic from various unofficinal species of acacia; acaroid resin. **G., Bar'bary**, G. arabic from Acacia gummifera and G. nilotica. **G., Basso'ra**, Bassora gum. **G. ben'jamin**, benzoin. **G., black'boy**, see *Xanthorrhœa*. **G., blue**, blue line on gum noticed when the system is affected by lead. **G., Bot'any Bay**, Australian kino; acaroid resin; see *Xanthorrhœa*. **G., Brit'ish**, dextrin. **G., Bu'tea**, see *Butea frondosa*. **G., Cape**, exudation from Acacia horrida of Cape of Good Hope. **G. caran'na**, caranna. **G. cis'tus**, ladanum. **G. dammar'**, ethereal solution of the resin of this species of pine is used for microscopic mounting. **G., doc'tor** or **doctor's**, resin from Rhus metopium, of Jamaica, is used in jaundice, ascites, diseases of the liver, syphilis, etc. **G. drag'on**, tragacantha. **G., East In'dia**, see *Feronia elephantum*. **G. elas'tic**, caoutchouc. **G., eucalyp'tus**, kino, Australian; see *Eucalyptus*. **G. of the eye**, sebaceous secretion from Meibomian glands, sometimes gluing the eyelids together. **G., fall'ing away of**, ulatrophia. **G., Galam**, variety of gum Senegal. **G., Gedda**, variety of Turkey gum. **G., getta'nia**, gutta-percha. **G., gray**, exudation from various species of eucalyptus. **G., hem'lock**, see *Pinus Canadensis*. **G., hog**, hog gum. **G., indig'enous**, gummi nostras. **G., i'vy**, see *Hedera helix*. **G., Jid'do**, G., Gedda. **G., ju'niper**, sandarac. **G. lan'cet**, an instrument like a fleam for separating the gum from the cervix of the tooth prior to extraction; the operation is called lancing the gums. **G. maguey**, gum resembling acacia from Agave Americana. **G. mesquite**, see *Mesquite*. **G., New Hol'land**, G., Australian. **G., O'renburg**, see *Pinus larix*. **G., pec'toral**, see *Acacia*. **G. plant**, grindelia. **G., pure**, arabin, caoutchouc. **G. rash**, strophulus. **G., red**, strophulus; Australian kino, eucalyptus gum; G., Gedda. **G. res'in**, gummiresina; strophulus. **G. san'darach**, sandarac. **G. sas'sa**, sassa. **G., Sen'eca** or **Sen'ega**, acaciæ gummi or neonatorum; acaroid resin; oleo-resin of a species of copaifera. **G., shrink'ing of**, ulatrophia. **G., spon'gy**, condition of gum observed in scurvy, etc., in which the capillaries are dilated and gums infiltrated. **G., sweet**, Liquidambar styraciflua. **G. thap'sia**, T. garganica. **G. thus**, turpentine. **G. tor**, Turkey gum. **G. trag'acanth**, tragacanth. **G. tree**, name of various trees, but especially the genera Eucalyptus and Xanthorrhœa. **G. tree, brown**, see *Kino*. **G. tu'no**, balata. **G. tu'ric**, Turkey gum. **G., water**, see *Acacia*. **G. wax**, liquidambar. **G., white**, Liquidambar styraciflua, Strophulus albidus. **G., yel'low**, icterus of infants.

Gumbo. Abelmoschus esculentus.

Gum'boil. Parulis.

Gum'chi. Seeds of Abrus precatorius.

Gum'ma. An elastic tumor formed in the periosteum, and produced by the syphilitic virus when it has been long in the constitution. When opened it contains matter like gum. These gummy tumors have been met with in all the important viscera, in the skin, cellular tissue, bones, etc. Consisting at first of granulation tissue, they are at last, by changes in their growth, made up of atrophied, disintegrated, and degenerated products imbedded in an imperfect fibrillated tissue; syphiloma. **G. Gal'licum**, syphiloma. **G. i'ridis**, iritis gummosa. **G., syphilit'ic**, syphiloma.

Gum'mata (pl. of **Gumma**). Gummy tumors.

Gum'matous. Of the nature of gummatous tumor or syphiloma. **G. iri'tis**, see *Iritis*. **G. syph'ilide**, see *Syphilide*.

Gum'mi. Gum. **G. aca'ciæ Arab'icæ**, acacia. **G. acan'thinum**, acacia. **G. acaroï'des**, see *Xanthorrhœa*. **G. adstrin'gens Fothergil'li**, kino. **G. ammoni'acum**, ammoniac. **G. an'ime**, anime. **G. arab'icum**, acacia. **G. astrag'ali tragacan'thæ**, tragacantha. **G. Austra'le**, Australian gum. **G. Babylon'icum**, gum arabic. **G. Barbar'icum**, see *Barbary*. **G. Bas'sora**, see *Bassora*. **G. bo'gia**, cambogia. **G. brel'isis**, caranna. **G. cit'rinum**, acaroid resin. **G. copalli'num**, copal. **G. elas'ticum**, caoutchouc. **G. el'emi**, elemi. **G. euphor'biæ**, see *Euphorbia officinarum*. **G. fla'vum**, acaroid resin. **G. gaman'dræ**, cambogia. **G. Gambien'se**, kino. **G. ge'nu**, sandarac. **G. getta'nia**, gutta-percha. **G. de Goa**, cambogia. **G. Got'ta**, cambogia. **G. guai'aci**, guaiac. **G. gut'ta** or **gut'ti**, cambogia. **G. hed'eræ**, see *Hedera helix*. **G. de je'mu**, cambogia. **G. junip'eri**, sandarac. **G. ki'no**, kino. **G. lac'cæ**, lacca. **G. lad'anum**, see *Cistus creticus*. **G. la'mac**, acacia. **G. lar'icis**, see *Pinus larix*. **G. laxati'vum**, gamboge. **G. lentis'ci**, mastich. **G. leu'cum**, acacia. **G. lig'ni sanc'ti**, resin of guaiacum. **G. ly'cium**, catechu. **G. mas'tiche**, mastich. **G. meto'pium**, galbanum. **G. mimo'sæ**, gum arabic. **G. nos'tras**, indigenous gum; name given to several species of gum flowing spontaneously from indigenous fruit trees, as the almond, cherry, peach, etc. **G. oli'bani**, olibanum. **G. Orenburgen'se**, see *Pinus larix*. **G. pana'cis**, see *Pastinaca opoponax*. **G. plas'ticum**, gutta-percha. **G. ad pod'agram**, cambogia. **G. resi'na**, see *Gummiresina*. **G. ru'brum adstrin'gens Gambien'se**, see *Butea frondosa* and *Kino*. **G. sanc'tum**, resin of guaiac. **G. Sen'eca** or **Sen'ega**, acacia; Senegal gum. **G. Senegalen'se** or **Sen'ica**, Senegal gum. **G. Serapio'nis**, acacia. **G. Smyr'næ**, myrrh. **G. tacamahac'a**, tacamahac. **G. theba'icum**, acacia. **G. torriden'se**, Bassora gum. **G. tragacan'tha**, tragacantha. **G. Uralen'se**, see *Pinus larix*.

Gum'mic acid. Arabic acid; arabin.

Gum'mide. Compound which, when decomposed by acids or alkalies, yields glucose.

Gummido'des or **Gummiodes**, gum-me-o'dees. Mucilaginous.

Gummiresina, gum-me-res-e'nah. Gum-resin; milky juice obtained by making incisions into the branches, stalks, and roots of certain vegetables. Gum-resins are compounds of resin, gum, essential oil, and other vegetable matters; are solid, opaque, brittle, of a strong odor, acrid taste, variable color, and are heavier than water. They are generally powerful stimulants. **G. ammoni'acum**, ammoniac. **G. asafœt'idæ**, asafœtida. **G. gal'banum**, galbanum. **G. gut'ta**, gamboge.

Gummos'itas. Syphiloma.

Gum'mous or **Gum'my.** Mucilaginous. Having appearance of syphiloma.

Gums. Gingivæ.

Gum'wood. Eucalyptus wood.

Gun'cotton. Pyroxylin; see *Collodion*. **G., ethe'real solu'tion of**, collodion. **G., sol'uble**, pyroxylin.

Gunde'lia hacub or **tournefor'tia**, Persian and Syrian plant; stomachic, tonic, diuretic, and emetocathartic.

Gun'jah. Cannabis Indica.

Gunne'ra Chilen'sis (after J. Ernst Gunner, botanist and bishop of Drontheim). Chilian and Peruvian plant; juice is refrigerant; root styptic and astringent. **G. macroceph'ala**, Java plant; fruit is stimulant. **G. perpen'sa**, African plant, decoction of which is a domestic remedy for dyspepsia; tincture has been used in gravel; infusion of leaves is demulcent and expectorant; leaves are applied to wounds and ulcers.

Gun'powder. Explosive mixture of charcoal, sulphur, and nitre. Has been used as an antiperiodic, disinfectant, and stomachic; externally in ringworm.

Gun'shot wound. See *Wound*.

Gurges, gur'jes. Throat; pharynx.

Gurgina (gur-je'nah) **balsam.** See *Dipterocarpus*.

Gur'gle or **Gur'gling** (same etymon as **Gargling**). Gushing with a noise, as water from a bottle. Rhonchus or râle heard on auscultation when there is a cavity in the lungs containing pus, or over the intestines, as in passage of gas through the ileo-cæcal valve. Cavernous rattle or rhonchus. The size of the bubbles heard varies, and hence the rhonchus has been called cavernous and cavernulous. If the cavern be large, the râle resembles the gurgling of a bottle.

Gurgu'lio. Curculio; penis; uvula; pharynx; œsophagus.

Gur'gun or **Gur'jun balsam.** See *Dipterocarpus.* **G. oil,** wood oil, oleo-resin from dipterocarpus, resembling copaiva. Given externally as an alterative in leprosy, in emulsion. Dose, ʒj to ʒij.

Gurju'nic acid. Acid produced by acting upon gurjun balsam with alcohol.

Guru nut. Kola acuminata.

Gussenbauer's su'ture. Suture for wounds of intestines, for uniting mucous and serous membranes by one stitch.

Gusta'tion. Taste.

Gustative (gus'ta-tiv) or **Gustatory,** gus'ta-to-re (*gusto,* to taste). Appertaining to, or connected with, taste or sense of taste.

Gus'tatory. Relating to taste; gustative. **G. anæsthe'sia,** impairment or loss of sense of taste; often a symptom of hysteria. **G. cells,** spindle-shaped cells in taste-bulbs of tongue. See *Cells, olfactory.* **G. cen'tre,** hypothetical centre for appreciation of taste in gyrus circinatus. **G. hyperæsthe'sia,** increased delicacy or sensitiveness of taste. **G. nerve,** lingual nerve. **G. paræsthe'sia,** peculiar perversions of the sense of taste. **G. paral'ysis,** loss of sense of taste in anterior part of tongue, a not unusual sequela of paralysis of the fifth nerve. **G. re'gion,** parts of tongue, tip, and root-side of soft palate, etc., concerned in sense of taste.

Gustav'ia (after Gustavus III. of Sweden) **angus'ta.** The fruit of this plant of Cayenne is laxative and refrigerant; leaves are used externally in obstruction of the bowels. **G. fastuo'sa** or **G. hexapet'ala,** plants of Brazil having same therapeutic action as G. angusta. **G. meizocar'pa** or **tetrapet'ala,** G. angusta.

Gus'tus. Taste. **G. deprava'tus,** perverted or depraved taste. See *Parageustia.*

Gut. Intestine. **G., blind,** cæcum.

Guth'rie's amputa'tion. See *Amputation.* **G.'s mus'cle,** ischio-urethralis muscle.

Guts, slip'periness of. Lientery.

Gutta (*drop*). A drop. Apoplexy. Cambogia. Gout. By the plural—guttæ—is meant a pharmaceutical mixture—mistura contracta—to be given in drops. Gutta also denotes catarrhal discharge; flow of a liquid drop by drop; gutta-percha, as it flows from the tree, etc. Gutta and guttæ also signify certain cutaneous spots or eruptions. **G. ca'dens,** metallic tinkling noticed in pneumothorax. **G. cadi'va** or **cadu'ca,** epilepsy. **G. caman'dræ** or **gamba,** cambogia. **G. camboi'da, gar'ner, gem'mu,** or **gemou,** gamboge. **G. obscu'ra,** cataract. **G. opa'ca,** cataract. **G. per'cha,** concrete juice of a tree (Isonandra gutta) indigenous in Singapore and its vicinity, and belonging to the nat. order Sapotaceæ. Plunged into boiling water, it softens, when it may be moulded like caoutchouc to any form, which it retains on cooling. A solution of gutta-percha in chloroform—traumaticine—has been used with advantage, topically, in various cutaneous affections, scrofulous and indolent ulcers, and as an ectrotic in small-pox. **G. rosa'cea,** gutta rosea. **G. r. hypertroph'ica,** hypertrophic or hyperplastic rosacea. **G. r. syphilit'ica,** serpiginous syphilitic eruption on the forehead. **G. ro'sea** or **rosa'cea,** acne, *Carbuncled face, Rosy drop, Coppernose, Bottlenose, Grogblossoms, Grogroses, Brandyface, Rumbud;* eruption of small, suppurating tubercles, with shining redness and an irregular granular appearance of the skin of the part of the face affected. The redness commonly appears first at the end of the nose, and then spreads on both sides. It is often produced by hard drinking. The affection is usually obstinate. **G. ru'bra,** rosacea. **G. sere'na,** old name for amaurosis.

Guttæ (pl. of **Gutta**) **ab'batis Rousseau.** Laudanum abattis Rousseau. **G. ac'idæ ton'icæ,** elixir acidum Halleri. **G. ammoni'aci,** see *Ammoniac gum.* **G. gum'mi,** gamboge. **G. ni'græ** (black drops), acetum opii, common black drop. The celebrated black drop, Lancaster or Quaker's black drop, was made of opium, verjuice, nutmegs, saffron, sugar, and yeast. One drop was equal to three of laudanum. It was imitated to a certain extent in the U. S. Pharmacopœia, in *Acetum opii,* vinegar of opium. See *Acetum opii.* **G. ni'græ Britan'nicæ,** acetum opii. **G. ophthal'micæ,** collyria or eye-washes.

Guttate, gut'tate. Having drop-shaped spots. **G. chorioidi'tis,** see *Chorioiditis.*

Guttat'im. Drop by drop.

Gutte'ria. Bronchocele.

Gut-tie. Convolvulus.

Gut'tur. Throat; larynx; trachea. **G. globo'sum** (globous throat), bronchocele. **G. tu'midum,** bronchocele.

Guttural, gut'tur-al (*guttur,* throat). Relating or belonging to the throat; sounds produced in the throat, as certain letters. **G. ar'tery,** superior thyroid artery. **G. ar'tery, infe'rior,** inferior thyroid artery. **G. canal',** Eustachian tube. **G. car'tilage,** arytenoid cartilage. **G. cough,** cough occasioned by irritation of the larynx or trachea. **G. duct,** Eustachian tube. **G. fos'sa,** region at base of skull between hard palate and foramen magnum. **G. glands,** pharyngeal glands. **G. her'nia,** bronchocele. **G. sound,** sound produced, as it were, in the throat.

Guttura'lis, Gutturna'lis, or **Gutturni'nus cartila'go.** Arytenoid cartilage.

Gut'turis os (bone of throat). Hyoid bone.

Gutturnia, gut-tur'ne-ah. Arytenoid cartilages.

Gut'turo-max'illary. Relating to throat and jaw. **G.-m. ar'tery,** internal maxillary artery.

Gut'turo-pal'atine. Relating to throat and palate. **G.-p. nerve,** posterior palatine nerve.

Gut'turose. Goitrous.

Gutturo-tet'any. Stammering, consisting of tetanic closure of the glottis in using the voice, particularly in pronouncing letters like *k, g,* and *q.*

Guyon's sign. Ballottement of the kidney.

Gwal'ior ul'cer. Endemic form of ulcer, named from place of its prevalence.

Gym'na (*gumnos,* naked). Genital organs; pudenda.

Gymnaden'ia (*gumnos,* naked, *aden,* gland) **conop'sea.** European orchid; nervous sedative. **G. odoratis'sima,** antiperiodic; flowers and distilled water from this plant are tonic, and the seeds are used in epilepsy.

Gymnasion, jim-naz'e-on. Exercise.

Gymnasium, jim-naz'e-um. Formerly an establishment for bodily exercises, as wrestling, running, etc.; now used in Germany especially for an academy or higher school; place for gymnastic exercise.

Gymnast, jim'nast. Manager or patron of a gymnasium; athlete; one whose profession it is to prevent or cure diseases by gymnastics.

Gymnas'tic therapeu'tics. Kinesipathy.

Gymnastics. Part of hygienic medicine treating of bodily exercises; medical gymnastics. The ancients had also athletic gymnastics and military gymnastics.

Gymne'ma lactif'erum. Ceylon cowtree, kiriaghuma; tree of the family Apocynaceæ, the juice of which is used by the Cingalese as milk. **G. sylves'tre,** plant of Africa and Southern Asia; antidote for snake-bites.

Gym'noblast (*gumnos,* naked, *blastos,* germ). Gymnocyte.

Gymnocladus (jim-nok'lad-us) **Canaden'sis** or **dioi'ca** (*gumnos,* naked, *klados,* branch). *Coffee tree, Kentucky coffee-bean tree, Mahogany, Nickar tree, Bonduc.* Order Leguminosæ. Indigenous tree; leaves are cathartic; seeds are a good substitute for coffee; they resemble in therapeutic action physostigma; bark is bitter; oil is purgative.

Gym'nocyte (*gumnos,* naked, *kutos,* cell). A cell devoid of cell-membrane, as the white blood-corpuscles.

Gymnocy'tode. Non-nucleated protoplasmic mass.

Gymnogramme (jim-no-gram'me) **cet'erach.** Asplenium ceterach.

Gymnophthal'mus (*gumnos,* naked, *ophthalmos,* eye). Having eyelids absent, so as to give appearance of the eyes being uncovered.

Gymnoplast (jim'no-plast) or **Gymnoplastia** (*gum-*

nos, naked, *plasso*, to form). Protoplasmic matter, or naked cells, without envelopes, such as white blood-corpuscles.

Gymnopteris (jim-nop'ter-is) **cet'erach** (*gumnos*, naked, *pteris*, fern). Asplenium ceterach.

Gymno'sis (*gumnos*, naked). Nakedness; denudation.

Gymno'tus. Electrical eel, which is provided with electrical organs, and is capable of giving a strong electrical shock.

Gynæcaner, gin-e'kan-ur (*gune*, a woman, *aner*, a man). Effeminate man.

Gynæcanthe, gin-e-kan'the (*gynæco*, *anthos*, flower). Tamus communis.

Gynæca'rion or **Gynæcarium**, gin-e-kar'e-um. Dwarf of female sex; effeminate dwarf of male sex.

Gynæcatoptron, gin-e-kat-op'tron (*gynæco*, *katoptron*, speculum). Speculum for investigating the female organs of generation; vaginal speculum.

Gynæcea (gin-e-se'ah) or **Gynæceia**, gin-e-sei'ah. Female generative apparatus; liquor amnii; catamenia; lochia; diseases of women in general.

Gynæ'ceous. Feminine; belonging or relating to woman; female.

Gynæceum, gin-e-se'um. Lying-in apartment; antimonium; vulva.

Gynæceus, gin-e-sa'us. Belonging to or relating to woman; female; feminine.

Gynæcia, gin-e'se-ah. Gynæcea; menses; gynecology.

Gynæ'ciac. Gynecic.

Gynæco, gin-e'ko (*gune*, woman). In composition, woman.

Gynæcological, gi-ne-ko-loj'ik-al. Gynecological.

Gynæcologist, gi-ne-kol'o-jist (same etymon). *Gynecologist;* one who devotes himself specially to, or is well acquainted with, the nature, diseases, etc. of women.

Gynæcology, gi-ne-kol'o-je (*gynæco*, *logos*, description). Doctrine or description of the nature, diseases, etc. of women.

Gynæcomania, gin-e-ko-man'e-ah. Nymphomania; insanity arising from love for women.

Gynæcomastus (gin-e-ko-mas'tus), **Gynæcomas'tos**, or **Gynæcomas'thus** (*gynæco*, *mastos*, breast). Man whose breasts are as large as those of a woman; the condition is called *Gynæcomazia*. Enlargement of the female breasts was called *Gynæcomaston*.

Gynæcomazia, gin-e-ko-mah'ze-ah. See *Gynæcomastus*.

Gynæcomystax, gin-e-ko-mis'taks (*gynæco*, *mustax*, beard). Hair on the pubes of women.

Gynæcopathy, gi-ne-kop'ath-e (*gynæco*, *pathos*, affection). Disease peculiar to woman.

Gynæcophonous, gi-ne-kof'o-nus (*gynæco*, *phonos*, murder). Fatal to women.

Gynæcophonus, gi-ne-ko-fo'nus (*phone*, voice). Man who has an effeminate voice.

Gynæcophorus, gin-e-kof'or-us (*gynæco*, *phoreo*, to carry). Bilharzia hæmatobia.

Gynælogia, gin-e-loj'e-ah. Gynæcology.

Gynæmania, gin-e-man'e-ah. Gynæcomania.

Gynandria, gin-an'dre-ah (*gyne*, *aner*, man). Hermaphroditism.

Gynandromorphous, gin-an-dro-mor'fus (*gyne*, *aner*, man, *morphe*, form). Hermaphroditic.

Gynandropsis pentaphylla, gin-an-drop'sis pen-tah-fil'lah. Indigenous plant; diaphoretic; the juice has been used in earache; the bruised leaves are rubefacient.

Gynandrous, gin-an'drus (*gyne*, *aner*, man). Hermaphroditic.

Gynandrus, gin-an'drus (same etymon). Hermaphrodite.

Gynanthropus, gin-an-thro'pus (*gyne*, *anthropos*, man). Hermaphrodite having male elements predominating.

Gynatresia, gin-at-ra'se-ah (*gyne*, *atresia*, imperforation). Closure or imperforation of the external parts of generation of the female.

Gyne, gi'ne. Female; woman.

Gynecic (gi-ne'sik) or **Gyne'sic.** Relating to woman.

Gynecology, gi-nek-ol'o-je. Gynæcology.

Gynecopathic (gi-ne-ko-path'ik) or **Gynæpath'ic.** Relating or appertaining to the diseases of women.

Gynecopathy, gi-ne-kop'ath-e. Gynæcopathy.

Gynepathy, gi-nep'ath-e. Gynæcopathy.

Gynephobia, gi-ne-fo'be-ah (*gyne*, *phobos*, fear). Dread of or aversion to society of women.

Gyniaci (gin-e'a-se) **mor'bi.** Developmental diseases of women, as chlorosis; diseases attending the parturient state and amenorrhœa.

Gyniatrics, gin-e-at'riks (*gyne*, *iatreia*, medication). Treatment of diseases of women; gynecology to exclusion of obstetrics.

Gynida, gin'id-ah. Hermaphrodite.

Gynoarium, gin-o-ah're-um (*gyne*, *oarion*, ovarium). Ovarium.

Gynocar'date of so'dium. Salt of sodium and gynocardic acid; yellowish-white substance, soluble in water, soluble in alcohol. **G. of zinc**, compound of zinc and gynocardic acid; granular powder of a yellowish color; employed in place of gynocardic acid in cutaneous affections.

Gynocardia odorata, gin-o-kar'de-ah o-do-rat'ah (*gyne*, *kardia*, heart). Chaulmoogra. **G. oil**, see *Chaulmoogra*.

Gynocardic (gi-no-kar'dik) **ac'id.** $C_{14}H_{24}O_2$. Crystallizable acid, active principle of chaulmoogra oil; employed in cutaneous affections.

Gynoplastic, gi-no-plas'tik (*gyne*, *plasso*, to form). Relating to plastic operations on the genital organs of woman. Gynoplastic operations are employed for opening or dilating the closed or contracted genital openings of woman.

Gypsophila (jips-of'il-ah) **stria'tum.** African and European herb, nat. ord. Caryophylleæ, root of which, *Levant soaproot*, resembles saponaria.

Gypsum, jip'sum. Plaster of Paris; hydrated calcium sulphate.

Gyp'syweed. Lycopus sinuatus; L. Virginicus.

Gyral, ji'ral. Belonging to gyri or a gyrus.

Gyrating (ji'ra-ting) **move'ments.** Circular movements symptomatic of some brain diseases.

Gyra'tion. Turning or revolving in a circle. Giddiness.

Gyre, jire. Gyrus.

Gyrencephalus, ji-ren-sef'al-us (*guros*, circle, *enkephalos*, brain). Having a brain characterized by numerous convolutions or gyri.

Gy'ri (pl. of **Gyrus**). Convolutions. See *Gyrus*. **G. abrup'ti**, small gyri at end of occipital lobe. **G. bre'ves**, insular convolutions or gyri of island of Reil. **G. cerebel'li**, narrow folds or laminæ of cortical layer of cerebellum. **G. cer'ebri**, cerebral convolutions. **G. coch'leæ**, scalæ of cochlea. **G. cuneifor'mes**, G. abrupti. **G. fascic'uli arcua'ti**, convolutions of temporal lobe of brain. **G. hemisphærio'rum**, cerebral convolutions. **G. in'sulæ Reil'ii**, G. breves. **G. intestina'les**, convolutions or coils of intestines. **G. oper'ti**, G. breves; see *Insula cerebri*. **G. orbita'les**, convolutions situate on orbital surface of frontal lobe of brain. **G. primiti'vi**, convolutions developed in early fœtal life around Sylvian fissure. **G. supraorbita'les**, G. orbitales. **G. transiti'vi**, small convolutions of brain acting as medium of communication between larger ones. **G. uncifor'mes**, G. breves.

Gyro'ma. Gyrus.

Gyro'mia Virgin'ica. Medeola Virginica.

Gyropsori'asis. Psoriasis in circular form.

Gyrus (circle). Convolution. Scala tympani. Scala vestibuli. See *Gyri*. **G. an'gular**, region of brain between fissure of Sylvius and occipital lobe; portion of inferior parietal lobule surrounding upper extremity of superior temporal sulcus. Angular convolution. Temporal gyrus. **G., annec'tant**, four gyri or convolutions connecting g. on superior part of occipital lobe with parietal and temporo-sphenoidal lobes. **G., an'tero-pari'etal**, precentral gyrus. **G., an'tero-tem'poral**, supertemporal gyrus. **G. arcua'tus**, uncinate convolution. **G., ascend'ing fron'tal**, G. con-

stituting front boundary of fissure of Rolando; usually continuous above with superior parietal gyrus. **G., bas'ilar,** G. rectus. **G., basirhi'nal,** fold or tract near top of temporal lobe. **G., bridg'ing,** G., annectant. **G., Bro'ca's,** inferior frontal g.; operculum. **G., callo'sal** or **callo'so-mar'ginal,** convolution of corpus callosum; G., internal. **G. centra'lis ante'rior** and **poste'rior,** convolutions divided by central sulcus. **G., cer'ebral,** round, undulating, tortuous projections observed at the surface of the brain. **G. choroï'des,** convex wall of lateral recess of fourth ventricle. **G. cin'guli,** G. callosus. **G. cor'poris callo'si,** G. callosus. **G. cra'nii,** convolution of the brain. **G. crista'tus,** G. cinguli. **G. cu'nei,** annectant convolution of cuneate lobule, connecting it with G. callosus. **G., den'tate,** small rudimentary convolution in dentate fissure. **G. descen'dens,** descending convolution at extremity of occipital lobe. **G. epithelia'lis** or **epithelia'ris,** convoluted fold of a choroid plexus. **G. fascic'uli,** temporo-sphenoidal convolutions. **G., for'nicate** or **fornica'tus,** G., internal. **G. fronta'lis ascen'dens, infe'rior, me'dius, secun'dus,** and **supe'rior,** convolutions of frontal lobe of cerebral hemispheres. **G. fronta'lis exter'nus,** inferior or third frontal convolution. **G. fronta'lis inter'nus pri'mus,** portion of superior or first frontal convolution on median surface. **G. fronta'lis pri'mus,** superior frontal convolution; inferior frontal. **G. fronta'lis rec'tus,** innermost orbital convolution. **G. fronta'lis ter'tius,** inferior frontal convolution; superior frontal. **G. fronto-parieta'lis media'lis,** upper portion of superior or first frontal convolution. **G. fusifor'mis,** lateral occipito-temporal convolution. **G. glossifor'mis,** middle occipito-temporal convolution. **G. hippocam'pi** or **hippocam'pal,** uncinate gyrus or convolution; continuation of G. fornicatus. **G., infe'rior fron'tal,** lower and external portion of frontal lobe. **G., infe'rior occip'ital,** small convolution between middle and inferior occipital fissures. **G. inflec'tus,** V-shaped gyrus near inflected fissure. **G., inframar'ginal,** superior temporal or temporo-sphenoidal convolution. **G., in'sular,** small convolution forming island of Reil. **G. intercentra'lis,** gyrus between two central fissures. **G., inter'nal,** *G. of corpus callosum;* cerebral convolution of great extent, the principal portion of which is found on the inner surface of each hemisphere above the corpus callosum. In front, it bends downward and backward to the fissure of Sylvius; behind, it extends to the middle lobe and forms the hippocampus major. **G. intestina'lis,** convolution or coil of intestines. **G. lingua'lis,** middle occipito-temporal convolution. **G., longitu'dinal,** middle part of cerebrum between marginal and supercallosal fissures. **G., mar'ginal,** G. bounding the longitudinal fissure on the middle aspect of the hemisphere, separated from G. of corpus callosum by calloso-marginal fissure. **G. margina'lis exter'nus,** G. callosus. **G. margina'lis infe'rior,** superior temporal convolution. **G. media'lis occipita'lis,** cuneate lobule. **G. meditempora'lis,** gyrus between meditemporal or supertemporal fissures. **G. nuclea'ris,** fold of the nuclear gray matter in the olivary body and the corpus dentatum of cerebellum. **G. occipita'lis descen'dens, exter'nus, inferior, me'dius, pri'mus, secun'dus, supe'rior,** and **ter'tius,** convolutions on occipital lobe of brain. **G., occip'itofron'tal,** small convolution on inferior surface of temporo-sphenoidal lobe. **G. occip'ito-tempora'lis exter'nus, inferior, inter'nus, latera'lis** or **supe'rior,** and **media'lis,** convolutions common to occipital and temporal lobes of brain. **G. olfacto'rius,** G. frontalis rectus, olfactory lobe. **G. olfacto'rius exter'nus** and **inter'nus,** roots of olfactory nerve. **G. of oper'culum,** see *Gyri breves.* **G., or'bital, ante'rior, exter'nal, inner, middle,** etc., convolutions on orbital surface of frontal lobe of brain. **G., paracen'tral,** oval or square area on middle aspect of cerebrum; motor area for part of leg. **G., pari'etal,** triangular area between postcentral and parietal fissures. **G. parieta'lis infe'rior,** inferior parietal lobule; gyrus angularis, G. supramarginalis. **G. parieta'lis me'dius,** gyrus angularis. **G. parieta'lis pri'mus** or **supe'rior,** superior parietal lobule. **G. parieta'lis secun'dus,** inferior parietal lobule; gyrus angularis. **G. parieta'lis ter'tius,** gyrus supramarginalis. **G. pari'eto-occipita'lis latera'lis,** middle occipital convolution. **G. parieto-occipita'lis media'lis,** superior occipital convolution. **G. postcentra'lis,** postcentral convolution lying back of centre, separated from præcentral convolution by central sulcus. **G. pos'tero-parieta'lis,** G. postcentralis. **G. post-Rolan'dicus,** G. postcentralis. **G. præcentra'lis,** præcentral convolution lying anterior to centre, separated from postcentral convolution by central sulcus. **G. præ-Syl'vius** or **præ-Syl'vian,** transverse occipital convolution in front of fissure of Sylvius. **G., precen'tral,** G., ascending frontal. **G., preor'bital,** gyrus at junction of frontal and orbital aspects of cerebrum. **G., pri'mary,** cerebral areas in fœtal life bounded by primary fissures. **G. rec'tus,** innermost orbital convolution; orbital portion of marginal gyrus. **G. retro-centra'lis,** G. postcentralis. **G. Rolan'dicus ante'rior** and **poste'rior,** cerebral convolutions separated by central sulcus. **G. semiter'tius,** last spiral of cochlea. **G., sig'moid,** uncinate gyrus. **G., straight,** G. rectus. **G., subcal'carine,** narrow area between calcarine and collateral fissures. **G., subcollat'eral,** gyrus between collateral and subtemporal fissures. **G., subfron'tal,** gyrus having U shape and curving about præ-Sylvian fissure. **G., subtem'poral,** gyrus between meditemporal and subtemporal fissures. **G., superfron'tal,** gyrus between precentral fissure and orbital surface of cerebrum; marginal gyrus. **G., supertem'poral,** gyrus between Sylvian and supertemporal fissures. **G. supramargina'lis,** portion of inferior parietal convolution along superior border of fissure of Sylvius, continuous below with the superior temporo-sphenoidal and ascending parietal fissures. **G., supraor'bital** or **supraor'bitar,** G., inferior frontal. **G. of Syl'vian fis'sure,** G. bounding that fissure. **G. tempora'lis infe'rior, inframargina'lis, me'dius,** etc., convolutions of temporal lobes of brain. **G. tem'poro-occipita'lis,** G. occipito-temporalis. **G. transecun'dus** or **transitio'nis,** portion of convolution of frontal lobe of brain forming arch over anterior part of fissure of Sylvius. **G., tran'sitive,** cerebral convolution associating or annexing principal lobes. **G. transver'sus,** G. præ-Sylvius. **G. uncina'tus,** uncinate convolution from vicinity of posterior extremity of occipital lobe to apex of temporo-sphenoidal; continuation of G. fornicatus. **G., vault'ed,** gyrus fornicatus or G. of the corpus callosum.

H.

H. Abbreviation of hydrogen, of haustus (draught), and of hypermetropia.

Habena, hab-a'nah (bridle). Bandage for uniting the edges of wounds. Peduncle of pineal gland. Frænum retinaculum.

Haben'ula (dim. of **Habena**). Small frænum or bridle. **H. arcua'ta**, internal zone of basilar membrane of cochlea. **H. cona'rii**, anterior peduncle of pineal gland. **H. denticula'ta**, lower border of spiral groove of cochlea; auditory teeth. **H. exter'na**, H. denticulata; H. pectinata. **H. gangliona'ris**, ganglion spirale or Cortii. **H. inter'na**, lamina denticulata. **H. pectina'ta**, outer zone of basilar membrane of cochlea, between external wall of latter and organ of Corti. **H. perfora'ta** or **perforati'va**, area on lower surface of basilar membrane of organ of Corti; H. denticulata. **H. sulca'ta**, upper border of spiral groove of cochlea. **H. tec'ta**, H. arcuata.

Habenulæ (ha-ben'u-le) **of the pin'eal gland.** See *Pineal gland.*

Habenu'lar. Relating to the habenula or frænum. Like a ribbon.

Habil'la de Carthage'na (dim. of **Haba**) (L. *faba*, bean). *Bejuio, Carthagena bean.* Bean of South America, famed as an antidote for the poison of serpents.

Hab'it (*habeo*, to have). Aptitude for repeating certain acts, or a facility resulting from the frequent repetition of the same act; second nature. Habit may predispose to certain diseases or protect against them. Regard should be had to it in studying the progress of disease or its treatment. **H. of body**, aggregate of the physical qualities of the human body. **H. chore'a**, irregular spasmodic action of muscle or sets of muscles, beginning with disordered facial expression or gestures. **H. spasm**, H. chorea.

Habitat, hab'it-at. Natural or customary location or residence of a plant or animal.

Habitudo, hab-e-tu'do (*habeo*, to have). Habit.

Habitus, hab'it-us. Habit. **H. apoplec'ticus**, apoplectic habit. **H. cor'poris**, habit. **H. quadra'tus**, see *Apoplectic.* **H. toro'sus**, see *Apoplectic.*

Habromania, hab-ro-man'e-ah (*habros*, gay). Insanity in which the delusions are of a gay character.

Hachich (hash'ish) or **Hach'isch.** See *Cannabis.*

Hackberry, hak'ber-re. Celtis occidentalis, Prunus padus.

Hack'ing. Massage of a mass of muscles, as of the neck, back, etc.

Hack'matack. Larix Americana.

Had'dock. See *Oleum morrhuæ.*

Hæma, he'mah (*haima*, blood). Blood.

Hæmabarometer, he-ma-bar-om'et-ur (*hæma, baros*, weight, *metron*, measure). Instrument or apparatus for determining specific gravity of the blood.

Hæmacelinosis, he-ma-sel-in-o'sis (*hæma, kelis*, a spot). Purpura simplex, P. hæmorrhagica.

Hæmachroïn, he-mak'ro-in (*hæma, chroa*, a color). Hæmatosin.

Hæmachrome, he'mah-krome (*hæma, chroma*, color). Hæmatin.

Hæmachroses, he-mah-kro'sees (*hæma, chrosis*, coloration). Diseases in which the blood has a different color from usual, as in purpura and cyanosis.

Hæmactus, he-mak'tus. Bloody.

Hæmacyanin, he-mah-si'an-in (*hæma, kuanos*, blue). Blue coloring matter in blood, owing to its containing copper, and in bile.

Hæmacytometer, he-ma-si-tom'et-ur (*hæma, kutos*, cell, *metron*, measure). Instrument for measuring the number of corpuscles in the blood.

Hæmad, he'mad. Blood-corpuscle.

Hæmadon'osos or **Hæmadon'osus** (*hæma, nosos*, disease). Disease of the blood-vessels.

Hæmadostenosis, he-mah-do-sten-o'sis (*hæma, stenosis*, contraction). Narrowness, contraction, or obliteration of blood-vessels.

Hæmadosteo'sis or **Hæmadostosis**, he-mad-ost-o'sis (*hæma, ostosis*, bony tumor). Ossification of the blood-vessels.

Hæmadromograph, he-ma-drom'o-graf (*hæma, dromos*, course, *grapho*, to write). Instrument to ascertain actual or varying velocity of the current of blood.

Hæmadromometer, he-ma-dro-mom'e-tur. Instrument for measuring the rate of movement of the blood.

Hæmadynameter, he-ma-di-nam'e-tur. Hæmadynamometer.

Hæmadynamics, he-ma-di-nam'iks (*hæma, dunamis*, power). Mechanism of the circulation of the blood; science of forces operating to keep the blood in motion.

Hæmadynamometer (he-ma-di-nam-om'et-ur), **Hæmodynamom'eter, Hæmatodynamom'eter, Hæmadynam'eter, Hæmom'eter,** or **Hæmatom'eter** (*hæma, dunamis*, power, *metron*, measure). Instrument for measuring the force of the blood in the vessels. A modification of this instrument has been called *Cardiometer.* See *Manometer.*

Hæmagaster, he-mah-gast'ur. Effusion of blood in the stomach.

Hæmagastric (he-ma-gas'trik) or **Hæmogas'tric pes'tilence.** Yellow fever.

Hæmagogue, he-ma'gog (*hæma, ago*, to drive off). Medicine promoting the menstrual or hemorrhoidal discharges.

Hæmagogum, he-mah-go'gum. Pæonia.

Hæmahysteria, he-mah-his-te're-ah (*hæma, hustera*, uterus). Menorrhagia.

Hæmal, he'mal. Relating to the blood or blood-vessels. **H. arch**, arch formed by the projections anteriorly of the ribs and sternum from the bodies of the vertebræ, enclosing the great blood-vessels. **H. ax'is**, aorta. **H. canal'**, canal formed by series of hæmal arches. **H. cav'ity**, H. canal. **H. sep'tum**, septum of deep fascia on anterior median line. **H. spine**, sternum. **H. sys'tem**, circulation of blood. **H. tube**, H. canal.

Hæmaleucin (he-mah-lu'sin) or **Hæmaleucosis**, he-mah-lu-ko'sis (*hæma, leukos*, white). Fibrinous portion of coagulum; formation of buffy coat of blood in inflammation, pregnancy, etc.

Hæmaleucocytes, he-mah-lu'ko-sites. Cells of medulla of bone giving origin to red blood-corpuscles.

Hæmalopia (he-mæl-o'pe-ah), **Hæmalopis** (he-mah-lo'pis), or **Hæ'malops** (*hæma, ops*, eye). See *Hæmophthalmia.*

Hæmamœba, he-mam-e'bah (*hæma, ameibo*, to change). White blood-corpuscle. **H. cruenta'ta**, red blood-corpuscle.

Hæmangioma, he-man-je-o'mah (*hæma, angeion*, vessel, *oma*, tumor). Neoplasm made up of blood-vessels. Angeioma.

Hæmanthus (he-man'thus) **coccin'eus** (*hæma, anthos*, flower). S. African plant, bulb of which is diuretic; given as oxymel in asthma and dropsy. The fresh leaves are antiseptic, and applied to foul, flabby ulcers and in anthrax. **H. denuda'tus** or **toxica'rius**, *Blood-flower, African tulip;* juice of the bulb is employed as an arrow-poison. Alkaloid from it, *Hæman'thine*, resembles atropine.

Hæmantlia, he-mant-le'ah (*hæma, antleo*, to pump out). Exhausting syringe, to which a reservoir is attached, containing a needle; used for obtaining blood for hæmatological investigations.

Hæmaperitonirrhagia, he-ma-per-it-on-ir-rhaj'e-ah (*hæma, peritonaion*, peritoneum, *rhage*, rupture). Exhalation of blood into the peritoneal cavity.

Hæmaphæin (he-mah-fe'in), **Hæmatophæ'um**, or

Hæmophæ'um (*hæma, phaios,* dusky). Brown coloring matter of blood, probably hæmatin modified by an alkali or by decomposition. In urine it is called urohæmatin.

Hæmaphæ'ism. Passage of reddish-brown urine, due to hepatic changes and disintegration of red corpuscles.

Hæmaphobus (he-maf'o-bus) or **Hæmoph'obus** (*hæma, phobos,* dread). One who has a dread of blood, who cannot look at it without fainting. The condition is called *Hæmaphobia* or *Hæmatophobia.*

Hæmapoesis, he-mah-po-a'sis (*haima,* blood, *poieo,* to make). Hæmatosis.

Hæmapoietic, he-mah-poi-et'ik (*haima,* blood, *poieo,* to make). Blood-forming, as the hæmapoietic function of the liver, the spleen, etc.

Hæmapophyses, he-map-of'e-sees (*hæma, apophuo,* to shoot forth). Costal cartilages. See *Costa.* Portion of typical vertebra forming antero-lateral part of hæmal arch.

Hæmaporia (he-map-or'e-ah), **Hæmatapor'ia,** or **Hæmatopor'ia** (*hæma, aporos,* poor). Paucity of blood. Anæmia.

Hæmaptysis, he-map'tis-is. Hæmoptysis.

Hæmarthron (he-mar'thron), **Hæmar'thros,** or **Hæmarthro'sis** (*hæma, arthron,* joint). Effusion of blood into a joint.

Hæmas, he'mas. Blood-vessel. Hemorrhage.

Hæmastatica, he-mas-tat'ik-ah. Styptics; remedies for arresting hemorrhage.

Hæmastatics, he-mah-stat'iks (*hæma, statike,* statics). Statics of the blood and blood-vessels.

Hæmasthenosis, he-mas-then-o'sis (*hæma, asthenes,* weak). Anæmia. Paucity of blood; obstruction to circulation of blood.

Hæmatachometer, he-mat-ak-om'et-ur. Instrument for measuring the velocity of circulating blood.

Hæmatal, he'mat-al. Relating to the blood or the blood-vessels.

Hæmatalloscopy, he-mat-al-os'ko-pe (*hæmato, alloios,* different, *skopeo,* to view). Mode of distinguishing different kinds of blood from each other.

Hæmatamœba, he-mat-am-e'bah. Hæmamœba.

Hæmatanagoge, he-mat-an-ag-o'ge (*hæmato, ana, ago,* to drive off). Vomiting of blood. See *Hæmatemesis.*

Hæmatangeion, he-mat-an-ji'on (*hæma, angeion,* vessel). Blood-vessel.

Hæmatangionosis (he-mat-an-je-on'o-sus) or **Hæmatangiosis,** he-mat-an-je-o'sis (*hæmato, angeion,* vessel, *nosos,* disease). Disease of blood-vessels.

Hæmataporia, he-mat-ap-or'e-ah. Paucity of blood; anæmia.

Hæmataporrhosis, he-mat-ap-or-rho'sis (*hæmato, apo, orrhos,* serum). Separation of serum from the blood. Cholera.

Hæmatapostasis, he-mat-ap-os'tas-is. Congestion of blood; effusion of blood.

Hæmatapostema, he-mat-ap-os-ta'mah (*hæmato, apostema,* abscess). Abscess containing blood. Hæmatocele.

Hæmatauchen, he-mat-au'ken (*hæmato, auchen,* neck). Accumulation of blood distending the cervix uteri.

Hæmataulica, he-mat-aul'ik-ah (*hæmato, aulos,* tube). System of blood-vessels.

Hæmatauris, he-mat-au'ris (*hæma, auris,* ear). Effusion of blood into the internal ear.

Hæmateclysis (he-mat-ek'lis-is) or **Hæmatol'ysis** (*hæmato, eklusis,* loosening). Dissolution of the blood.

Hæmatein, he-ma-te'in. When hæmatoxylin, coloring of logwood, is acted upon by ammonia, hæmatein, $C_{16}H_{12}O_6$, results; a brownish-red crystallized substance.

Hæmatelytrometra, he-mat-el-it-rom-et'rah (*hæma, elutron,* vagina, *metra,* uterus). Accumulation of blood, especially menstrual blood, in the vagina and uterus, as in atresia vaginæ.

Hæmatemesis, he-mat-em'es-is (*hæmato, emeo,* to vomit). Vomiting of blood. This is generally preceded by a feeling of oppression, weight, and dull or pungent pain in the epigastric and hypochondriac regions, by anxiety, and, occasionally, by syncope. Blood, generally of a grumous aspect, is then passed by vomiting, and sometimes also by stool. It proceeds from rupture of a vessel or from a sanguineous exhalation at the surface of the mucous membrane of the stomach. It is often observed in females whose menstrual secretion is irregularly performed, *H., menstrual,* or *H., vicarious.*

Hæmatencephalon (he-mat-en-sef'al-on) or **Hæmatencephalum,** he-mat-en-sef'al-um (*hæmato, encephalon*). Intracranial hemorrhage; cerebral apoplexy; cerebral hemorrhage.

Hæmatepagoge, he-mat-ep-ag-o'ge (*hæmato, epi, ago,* to drive). Congestion of the blood.

Hæmatepigastrium, he-mat-ep-e-gas'tre-um (*hæmato, epi,* upon, *gaster,* stomach). Hemorrhage into the epigastric region external to the peritoneum.

Hæmatepischesis (*hæma, epischesis,* stoppage). Slow or inactive circulation.

Hæmaterethica, he-mat-er-eth'ik-ah. Division of diseases, including chlorosis, cyanosis, hemorrhages, etc.

Hæmaterous, he-mat-e'rus. Sanguine; bloody or like blood.

Hæmaterphia, he-mat-ur'fe-ah (*hæma, terphos,* rind). Nævus.

Hæmaterythrin, he-mat-er'ith-rin (*hæmato, eruthros,* red). Hæmatin.

Hæmatexostosis, he-mat-ex-os-to'sis (*hæmato, exostosis*). Osteosarcoma, or exostosis with well-defined vessels.

Hæmathermous, he-ma-thur'mus (*hæma, therme,* heat). Warm-blooded.

Hæmathidrosis, he-mat-hid-ro'sis (*hæmato, hidrosis,* sweating). Bloody sweat; sudor cruentus.

Hæmathoracographion, he-mah-thor-ak-o-graf'e-on (*hæma, thorax,* chest, *grapho,* to write). Instrument or apparatus for registering or indicating movements of respiratory air as influenced by movements of the heart and large vessels.

Hæmathorax, he-mah-tho'raks. See *Hæmatothorax.*

Hæmathrosis, he-mah-thro'sis (*hæma, rheo,* to flow). Effusion or extravasation of blood.

Hæmatiasis, he-mat-e'as-is. Hæmatonosus.

Hæmatic, he-mat'ik. Sanguine; relating to blood; medicine acting on the blood as a tonic. **H. ac'id,** yellow substance derived from carbonization of red corpuscles and subsequent action of carbonate of sodium. **H. cri'sis,** sudden change in characteristics of blood in disease.

Hæmatica, he-mat'ik-ah. Diseases of the sanguineous function; medicines that act on the blood. **H. doctri'na,** hæmatology.

Hæmaticus, he-mat'ik-us. Bloody, sanguine.

Hæmatidrosis, he-mat-id-ro'sis (*hæmato, hidrosis,* sweating). Bloody sweat; sudor cruentus. **H. menstrua'lis,** sweating of menstrual blood.

Hæmatimetry, he-mat-im'et-re (*hæmato, metron,* measure). Estimate of the number of blood-corpuscles.

Hæmatin (he'mat-in), **Hem'atine, Hem'atin, Hæmato'sin,** or **Hemato'sine.** $C_{68}H_{70}N_8Fe_2O_{10}$. Red coloring matter of the blood; a component of hæmoglobin residing in distinct particles or globules, and, in the opinion of some observers, in the envelope of the globules; obtained by action of acetic acid on hæmoglobin. With chlorine, iodine, and bromine, it forms crystals of hæmin.

Hæmatinic (he-mat-in'ik) or **Hematin'ic.** Augmenting the number of red corpuscles or the hæmatin of the blood; relating to hæmatin.

Hæmatinometer, he-mat-in-om'et-ur. Apparatus or instrument to determine the amount of hæmatin or hæmoglobin in the blood.

Hæmatinoptysis, he-mat-in-op'tis-is (*hæmatin, ptuo,* to spit). Expectoration of brownish-yellow hæmatinic crystals without red corpuscles. See *Hæmotoidin.*

Hæmatinuria, he-mat-in-u're-ah (*hæmatin, ouron,* urine). Urine containing the coloring matter of the blood without the red corpuscles, as in scurvy, purpura, etc.

Hæmatinus, he-mat-e'nus. Sanguine.

Hæmatischesis (he-mat-is'kes-is) or **Hæmis'chesis** (*hæma, ischo,* to suppress). Retention or suppression of a natural or artificial flow of blood.

Hæmatism, he'ma-tizm. Epistaxis; hemorrhage.

Hæmatisthmus, he-mat-isth'mus (*hæmato, isthmos,* pharynx). Hemorrhage into the pharynx or from the throat.

Hæmatite, he'mat-ite. Resembling blood. Beautiful ore of iron, called bloodstone or hematite; when finely levigated and frequently washed with water, it has been used in hemorrhages, fluxus, uterine obstruction, etc. Vessel containing blood.

Hæmatmus, he-mat'mus (*hæma, atmos,* vapor). Gaseous matter of blood. Halitus, or vapor given off by freshly-drawn blood.

Hæmato, he'ma-to (*haima,* blood). In composition, blood.

Hæmatobium, he-mat-o'be-um. Distoma hæmatobium. Blood-corpuscle.

Hæmatoblast, he'mat-o-blast (*hæma, blastos,* bud). Nucleated corpuscle of marrow, adenoid tissue, and blood-forming tissues, which subsequently become red corpuscles; blood-plaque; partially developed red blood-corpuscle. See *Globules.*

Hæmatocathartic, he-mat-o-kath-ar'tik (*hæmato, katharsis,* purification or purgation). Purifying the blood.

Hæmatocausis, he-mat-o-kau'sis (*hæma, kaio,* to burn). Oxidation of the blood.

Hæmatocele, he-mat-o-se'le (Eng. he-mat'o-seel) (*hæmato, kele,* tumor). Tumor formed by blood, or by blood effused into the areolar texture of the scrotum. Tumor arising from effusion of blood into the tunica vaginalis; scrotal hæmatocele, differing from hydrocele only in the character of the effusion; effusion of blood into the interior of the tunica albuginea itself. It is most commonly caused by wounds or contusions. **H. arterio'sa,** aneurism. **H., catame'nial,** pelvic h. from cessation or obstruction of menses. **H. circumuteri'na,** hæmatocele, pelvic. **H., funic'ular,** H. of the spermatic cord. **H., men'strual,** H. catamenial. **H., pel'vic** or **peri-u'terine,** *Retro-uterine hæmatocele. Pelvic hæmatoma* or *thrombus.* Extravasation of blood into the pouch or peritoneum between the rectum and uterus (*retro-uterine*), or into the subperitoneal tissue behind and around the latter organ (*circumuterine*). Called also *Ovarian, Catamenial* or *Tubal, Intraperitoneal, Extraperitoneal,* etc. Hemorrhage and peritonitis are to be combated. The tumor thus formed is also known as a *Sanguineous pelvic tumor* or *Ovarian apoplexy.* **H., prim'itive,** hæmatocele produced without any apparent cause, *Spontaneous h.* **H., puden'dal,** *Blood tumor* or *Thrombus of the vulva.* Tumor formed by a mass of clotted blood effused into the tissue of one labium, or the areolar tissue immediately surrounding the wall of the vagina, doubtless derived from the vessels of the bulb of the vestibule. **H., retro-u'terine,** H., pelvic. **H., u'terine,** H., pelvic. **H., vagi'nal,** H. of tunica vaginalis testis. **H., vul'var,** H., pudendal.

Hæmatocephalus, he-mat-o-sef'al-us (*hæmato, kephale,* head). Monster in which effusion of blood in the head has given occasion to more or less singular deformities. Blood-tumor of the head.

Hæmatocerebriform (he-mat-o-ser'eb-re-form) **disease** (*hæmato, cerebrum,* brain, *forma,* form). Encephaloid.

Hæmatochezia, he-mat-o-kez'e-ah (*hæmato, chezo,* to go to stool). Discharge of blood by stool.

Hæmatochometer, he-mat-o-kom'e-tur. Instrument for measuring the velocity of the circulating blood.

Hæmatochro'in or **Hæmatochroite,** he-mat-ok'ro-it. Hæmatin.

Hæmatochrosis, he-mat-o-kro'sis (*hæmato, chrosis,* coloration). Bloody discoloration of the skin. Skin disease with change in the color of the blood.

Hæmatochylu'ria (*hæmato, chulos,* chyle, *ouron,* urine). Passage of blood and chyle in the urine, due to the presence in the stomach of filaria sanguinis.

Hæmatochysis, he-mat-ok'is-is (*hæmato, chuo,* to pour out). Hemorrhage.

Hæmatococ'cus. Micro-organism in the blood.

Hæmatocœlia, he-mat-o-se'le-ah (*hæmato, koilia,* cavity of the abdomen). Effusion of blood into the abdomen or within the peritoneal cavity.

Hæmatocœliac (he-mat-o-se'le-ak) **pas'sion.** Dysentery accompanied with passage of blood.

Hæmatocolica, he-mat-o-kol'ik-ah. Colic accompanied with bloody passages.

Hæmatocolpus, he-mat-o-kol'pus (*hæmato, kolpos,* vagina). Effusion of blood into the vagina; accumulation of blood owing to occlusion of the vagina.

Hæmatocrite, he'mat-o-krite (*hæma, krino,* to separate). Instrument to measure the volume of the corpuscles in the blood.

Hæmatocryal, he-mat-ok're-al (*hæmato, kruos,* ice). Cold-blooded.

Hæmatocrystallin, he-mat-o-kris'tal-in (*hæmato, krustallos,* crystal). Hæmaglobin. See *Blood, globules of.*

Hæmatocyanopathy, he-mat-o-si-an-op'ath-e (*hæmato, kuanos,* blue, *pathos,* affection). Cyanopathy.

Hæmatocyanosis, he-mat-o-si-an-o'sis (*hæmato, kuanosis,* blueness). Cyanopathy.

Hæmatocyst, he-mat'o-sist (*hæmato, kuste,* bladder). Blood-cyst or sanguineous cyst. Encysted tumor containing blood. Hemorrhage into the urinary or gall-bladder. Hæmatoma.

Hæmatocystis, he-mat-o-sis'tis (*hæmato, kustis,* bladder). Hemorrhage into the bladder. Hæmatocyst.

Hæmatocyte, he-mat'o-site (*hæma, kutos,* cell). Blood-corpuscle.

Hæmatocytometer, he-mat-o-si-tom'et-ur. Instrument for ascertaining the number of corpuscles in the blood.

Hæmatodes (he-mat-o'dees) or **Hæmato'ides.** *Hæmatoid, Hematoid.* That which contains blood or has the character of blood. **H. fun'gus,** *Spongoid inflammation, Pulpy* or *Medullary sarcoma, Bleeding fungus, Soft* or *Hæmatoid cancer.* A term formerly employed to designate an extremely alarming carcinomatous affection consisting in the development of cancerous tumors, with violent heat and pain, and with fungous and bleeding excrescences, and most frequently met with in the eyeball, the upper and lower extremities, testicle, and mamma, but also in the uterus, ovary, liver, spleen, brain, lungs, thyroid gland, and in the hip- and shoulder-joints.

Hæmatodiarrhœa, he-mat-o-di-ar-rhe'ah. Passage of blood from the bowels.

Hæmatodynamics, he-mat-o-di-nam'iks. Hæmadynamics.

Hæmatodynamometer, he-mat-o-di-nam-om'et-ur. Hæmadynamometer.

Hæmatodyscrasia, he-mat-o-dis-kras'e-ah (*hæmato, duskrasia,* disorder). Disease of the blood.

Hæmatœdema, he-mat-e-de'mah. Œdema bloody in color or contents.

Hæmatogaster, he-mat-o-gast'ur (*hæmato, gaster,* stomach). Effusion of blood in the stomach.

Hæmatogenesis, he-mat-o-jen'e-sis. Formation of blood. Development of blood-corpuscles in embryonic life by division of nuclei of hæmopoietic cells. Red corpuscles are formed in after life by changes in the white corpuscles, and coloration of the latter in the cells of red marrow of bones, in cells of adenoid tissue, and in the spleen.

Hæmatogenetic (he-mat-o-jen-et'ik), **Hæmatog'enous,** or **Hæmatogen'ic.** Favoring hæmatosis or blood-formation; having origin in the blood.

Hæmatoglo'bin (*hæmato, globus,* disk). Hæmoglobin.

Hæmatoglobinuria, he-mat-o-glob-in-u're-ah. Hæmoglobinuria.

Hæmatoglob'ulin. Hæmoglobin. See *Blood, globules of.*

Hæmatography, he-mat-og'raf-e (*hæmato, graphe,* description). Description of the blood.

Hæmatohidrosis, he-mat-o-hid-ro'sis. Hæmatidrosis.

Hæmatoid, he'ma-toid (*hæmato, eidos,* resemblance). Resembling blood. **H. can'cer,** hæmatodes fungus.

Hæmatoïdin, he-mat-o'id-in. *Hæmatinic, Hæmatic, Hæmin,* or *Blood crystals.* Substance found in the midst or in the vicinity of effusions of blood, in minute rhomboidal crystals or in fine needles. It is hæmatin separated from the globules of the blood, and passed from a state of non-crystallizable organic substance to one of a crystalline chemical compound. The term *hæmatinoptysis* has been applied to expectoration containing hæmatinic crystals without red corpuscles.

Hæmatoin, he-mat'o-in. Hæmato-porphyrin.

Hæmatokelidosis, he-mat-o-kel-id-o'sis. Vitiation of the blood.

Hæmatokolpos, he-mat-o-kol'pos (*hæmato, kolpos,* vagina). Accumulation of blood in the vagina.

Hæmatokoprisis, he-mat-o-kop'ris-is (*hæma, koprisis,* defecation). Evacuation of blood with fæces.

Hæmatology (he-mat-ol'o-je) or **Hematol'ogy** (*hæmato, logos,* discourse). Part of medicine treating of the blood. **H., patholog'ical,** observation of the blood to detect its varying character in disease.

Hæmatolyses, he-mat-ol'is-ees (*hæmato, lusis,* solution). Diseases in which there is diminished coagulability of the blood.

Hæmatolysis, he-mat-ol'is-is. Dissolution or decomposition of blood; fluidity of blood.

Hæmatolytic, he-mat-o-lit'ik. Relating to blood that is impoverished or deficient in red corpuscles. Tending to impoverish the blood by diminishing the number of red corpuscles.

Hæmatoma, he-mat-o'mah. Bloody tumor. Tumor of blood, as in the scalp of the new-born. **H. au'ris** or **auricula're,** *Insane ear, Asylum ear.* Effusion of blood under the perichondrium of the ear, which is stripped from the cartilage; or, according to some, the effusion is within the cartilage; considered an unfavorable sign in insanity. **H. of du'ra ma'ter,** meningeal hemorrhage under the dura mater. **H. of the ear,** H. auris. **H. la'bii,** pudendal hæmatocele. **H. neonato'rum,** cephalæmatoma; see *Hæmatocele.* **H., pel'vic,** hæmatocele, pelvic. **H. saccat'um,** encysted tumor containing blood. **H. of the scalp,** cephalhæmatoma. **H. of the u'terus,** hæmatometra.

Hæmatomanti'a (*hæmato, manteia,* divination). Judgment of disease or diagnosis from the appearance of the blood.

Hæmatometachysis, he-mat-o-met-ak'is-is (*hæmato, meta, chuo,* to pour). Transfusion of blood.

Hæmatom'eter. Hæmadynamometer; hæmometer.

Hæmatometra, he-mat-o-met'rah (*hæmato, metra,* uterus). Metrorrhagia. Retention of blood in the uterus.

Hæmatometria (he-mat-o-met're-ah) or **Hæmatom'etry** (*hæma, metron,* measure). Measurement of blood as to amount, dimensions of corpuscles, etc.

Hæmatomma, he-mat-om'mah (*hæmato, omma,* the eye). Effusion of blood into the eye; bloodshot eye; hæmatoma of the eye.

Hæmatomo'mas. Genus of infusoria detected in the blood of animals. **H. Evans'ii,** micro-organism found in blood of certain animals, causing a disease called *surra;* hence called *Surra parasite.* **H. mala'riæ,** plasmodium malariæ.

Hæmatomphalocele he-mat-om-fal-o-se'le (Eng. he-mat-om'fal-o-seel), **Hæmatom'phalum,** or **Hæmatom'phalus** (*hæmato, omphalos,* navel, *kele,* tumor). Umbilical hernia the sac of which encloses bloody serum, or which has at its surface a number of varicose veins, constituting *Varicomphalus.*

Hæmatomyces, he-mat-om'is-ees (*hæmato, mukes,* fungus). Hæmatodes fungus.

Hæmatomye'lia (*hæmato, muelos,* marrow). Hemorrhage into the spinal cord.

Hæmatomyeli'tis. Inflammation of the spinal cord accompanied with hemorrhage.

Hæmatoncus, he-mat-on'kus (*hæmato, onkos,* tumor). Tumor of blood or bloody tumor, such as nævi materni, varicose tumors, etc.

Hæmatonosos (he-mat-on'os-os) or **Hæmatonosus** (*hæmato, nosos,* disease). Disease of the blood; hæmic or blood disease. Disease from internal hemorrhage. Skin diseases with local or general blood disturbance. See *Blood disease.*

Hæmatopathia, he-mat-o-path-e'ah (*hæmato, pathos,* affection). Hæmatonosus.

Hæmatopedesis, he-mat-o-ped-a'sis (*hæmato, pedao,* to spring). See *Diapedesis* and *Hæmatidrosis.*

Hæmatopericardium, he-mat-o-per-e-kar'de-um. Effusion of blood into the pericardium.

Hæmatophæum, he-mat-o-fe'um. Hæmaphæin.

Hæmatophagous, he-mat-of'ag-us (*hæmo, phago,* to eat). Blood-eating.

Hæmatophilia (he-mat-o-fil'e-ah), or **Hæmophil'ia,** or **Hæmorrhophil'ia,** or **Hæmorrhaphil'ia** (*hæmato, phileo,* to love). Disease, hereditary and attended by hemorrhagic diathesis, with unusual obstinacy of traumatic hemorrhage, or tendency to spontaneous bleedings and to swelling of the joints.

Hæmatophlebœs'tasis or **Hæmatophlebostasis,** he-mat-o-fleb-os'tas-is (*hæma, phleps,* vein, *stasis,* suppression). Sudden suppression of hemorrhage.

Hæmatophobia (he-mat-o-fo'be-ah) or **Hæmopho'bia** (*hæmato, phobos,* dread). Dread or sorrow at the sight of blood, producing syncope, etc. Those who were afraid of, or opposed to, bloodletting were formerly called hæmophoboi, blood-funkers.

Hæmatophore, he'mat-o-for (*hæma, phoreo,* to carry). Instrument for transfusion of blood.

Hæmatophthalmia, he-mat-of-thal'me-ah. Hæmophthalmia.

Hæmatophthalmus (he-mat-of-thal'mus) or **Hæmophthal'mus.** Hæmatophthalmia.

Hæmatophthores, he-mat-of'tho-rees (*hæmato, phthora,* corruption). Diseases in which the blood is materially altered in composition, as in typhus.

Hæmatophyllum, he-mat-o-fil'lum (*hæmato, phullon,* leaf). Micro-organism in the blood, as **H. mala'riæ.** Plasmodium malariæ.

Hæmatophyte, he'mat-o-fite (*hæma, phuton,* plant). Vegetable micro-organism in the blood.

Hæmatopisy, he-mat-op'-is-e. Collection of blood in any organ, especially in the uterus, when, owing to faulty conformation, the exit of the menstrual flux is prevented. Drinking of blood.

Hæmatoplania (he-mat-o-pla'ne-ah), **Hæmatoplane'sis,** or **Hæmopla'nia** (*hæmato, plane,* wandering). Vicarious hemorrhage, as in menstruation. **H. menstrua'lis,** menstruation, vicarious.

Hæmatoplasma, he-mat-o-plaz'mah. Liquor sanguinis; blood-plasma.

Hæmatoplast, he'mat-o-plast. Hæmatoblast.

Hæmatoplastic, he-mat-o-plas'tik (*hæmato, plasso,* to form). Blood-formative. Applied to a substance in early fœtal life, hæmatoplastic substance, which breaks up gradually into blood-corpuscles before the formation of blood-vessels.

Hæmatoplethora, he-mat-o-pleth-o'rah. Plethora.

Hæmatopœa, he-mat-o-pe'ah (*hæmato, poieo,* to make). Favoring hematosis.

Hæmatopoe'sis or **Hæmatopoiesis,** he-mat-o-poi-e'sis. Hæmatosis; blood-forming; hæmogenesis.

Hæmatopoetic, he-mat-o-po-et'ik. Favoring or concerned in hæmatosis, as iron.

Hæmatoporia, he-mat-o-por'e-ah. Hæmaporia.

Hæmatoporphyrin, he-mat-o-por'fir-in. $C_{68}H_{74}N_8O_{12}$. Product of decomposition of hæmatin, sometimes found in urine.

Hæmatopo'sia (*hæmato, posis,* drink). Drinking of blood.

Hæmatops (he'mat-ops) or **Hæmatopsia,** he-mat-op'se-ah (*hæmato, ops,* eye). Hæmophthalmia.

Hæmatoptysia (he-mat-op-tiz'e-ah) or **Hæmatoptysis,** he-mat-op'tis-is (*hæmato, ptuo,* to spit). Hæmoptysis.

Hæmatorrhachis, he-mat-or'rha-kis (*hæmato, rhachis,* the spine). Hemorrhage of, into, or around the spinal marrow.

Hæmatorrhagia, he-mat-or-rha'je-ah. Hemorrhage.

Hæmatorrhœa, he-mat-or-rhe'ah (*hæmato*, *rheo*, to flow. Hemorrhage, generally passive.

Hæmatorrhophe'sis (*hæma*, *rhophesis*, absorption). Absorption of blood.

Hæmatorrhosis, he-mat-or-rho'sis (*hæmato*, *orrhos*, serum of the blood). Separation of serum of blood; hence cholera.

Hæmatorrhysis, he-mat-or'rhis-is (*hæmato*, *rheo*, to flow). Hemorrhage.

Hæmatosalpinx, he-mat-o-sal'pinks (*hæmato*, *salpinx*, tube). Hemorrhage or morbid accumulation of blood in the Fallopian tube.

Hæmatoscheocele (he-mat-os-ke-o-se'le) (Eng. he-mat-os'ke-o-seel), **Hæmoscheocele**, or **Hæmatos'cheum** (*hæmato*, *oscheon*, scrotum, *kele*, tumor). Effusion of blood into the scrotum.

Hæmatoscope, he'mat-o-skope (*hæmato*, *skopeo*, to view). Instrument for examination of spectroscopic relations of the blood.

Hæmatoscopy, he-mat-os'ko-pe (*hæmato*, *skopeo*, to view). Examination of blood drawn.

Hæmatosepsis, he-mat-o-sep'sis (*hæmato*, *sepsis*, putrefaction). Septicæmia; dissolution of the blood.

Hæmatosic, he-mat-o'sik. Hæmatopoietic.

Hæmatosin, he-mat-o'sin. Hæmatin. Brown powder made by subjecting blood to process of thickening, pressing, extracting with alcohol, washing, etc.

Hæmatosis, he-mat-o'sis. Septicæmia. Decarbonization or atmospherization of blood. Transformation of venous blood and chyle into arterial blood by respiration. Aëration or arterialization of blood. Formation of blood in general, or sanguification.

Hæmatospectroscope, he-mat-o-spek'tro-skope. Instrument to determine amount of hæmoglobin in blood by spectroscopic examination.

Hæmatosper'mia. Mixture of blood with semen.

Hæmatospilia, he-mat-o-spil'-e-ah (*hæmato*, *spilos*, a spot). Ecchymosis; purpura hæmorrhagica.

Hæmatospongosis, he-mat-o-spon-go'-sis. Development of fungus hæmatodes.

Hæmatospongus, he-mat-o-spon'gus (*hæmato*, *spongos*, sponge, fungus). Hæmatodes fungus; medullary sarcoma.

Hæmatostatics (he-mat-o-stat'iks) or **Hæmostat'ics.** Doctrine of the motion of the blood in living bodies. Remedies for stopping blood. Styptics.

Hæmatosteon, he-mat-os'te-on (*hæmato*, *osteon*, a bone). Effusion of blood into the cavity of bones.

Hæmatostyp'tic (*hæmato*, *statikos*, restraining). Hæmostatic.

Hæmatosymphoresis, he-mat-o-sim-for-e'sis (*hæmato*, *sumphoresis*, accumulation). Congestion.

Hæmatosynagoge, he-mat-o-sin-ag-o'ge (*hæmato*, *sunagoge*, collection). Congestion.

Hæmatotelangiosis, he-mat-o-tel-an-je-o'sis (*hæmato*, *telos*, end, *angeion*, vessel, *osis*). Dilatation of capillary vessels. Aneurism by anastomosis.

Hæmatotherma, he-mat-o-thur'mah (*hæmato*, *therme*, heat). Warm-blooded vertebrata.

Hæmatothermal, he-mat-o-thur'mal. Warm-blooded.

Hæmatothorax (he-mat-o-tho'raks), **Hæmatho'rax**, or **Hæmotho'rax** (*hæmato*, *thorax*, chest). Hemorrhagic pleurisy; pleural hemorrhage; extravasation of blood into the chest.

Hæmatotoxic (he-mat-o-toks'ik) or **Hæmatox'ic.** Poisoning the blood; relating to toxæmia or blood-poisoning; toxæmic.

Hæm'atous. Relating to blood.

Hæmatox'ilic acid. See *Hæmatoxylon.*

Hæmatox'in. Hæmatoxylin.

Hæmatox'yli lignum. Hæmatoxylon.

Hæmatox'ylin. See *Hæmatoxylon Campechianum.*

Hæmatoxylon, he-mat-oks'il-on (*hæmato*, *xulon*, wood. H. Campechianum. **H. Campechian'um**, logwood; the part used in medicine is the heart-wood, *Hæmatoxylon* (Ph. U. S.), nat. ord. Leguminosæ. Logwood is almost inodorous, of a sweetish, subastringent taste, and deep-red color. Its virtues are extracted by water and alcohol. It is astringent and tonic, and is used in the protracted stages of diarrhœa and dysentery. It contains tannic acid and a coloring principle, *Hæmatoxylin* or *Hæmatoxylic acid*, $C_{16}H_{14}O_6$, used for microscopic staining.

Hæmatox'ylum. Hæmatoxylon.

Hæmatozæmia (*haima*, blood, *zemia*, loss). Habitual or periodical hemorrhage.

Hæmatozoa (he-mat-o-zo'ah) or **Hæmatozoa'ria** (*hæmato*, *zoon*, animal). Entozoa in the blood.

Hæmatozymosis, he-mat-o-zi-mo'sis (*hæma*, *zymosis*, fermentation). Fermentation of the blood.

Hæmaturia (he-mat-u're-ah), **Hæmature'sis**, **Hæmure'sis**, or **Hæmu'ria** (*hæmato*, *oureo*, to make urine). Bloody urine. Voiding of blood with the urine; hemorrhage from the mucous membrane of the urinary passages; may proceed from the kidneys, bladder, or urethra. **H., chy'lous**, hæmatochyluria. **H. cys'tica**, discharge of blood from the urinary bladder. **H. ejaculato'ria**, discharge of blood from the urethra accompanying the act of ejaculation of the sperm. **H., mala'rial**, hemorrhagic malarial fever. **H. rena'lis**, hemorrhage from the kidneys; see *Hæmaturia.* **H. semina'lis**, H. ejaculatoria. **H. stillati'tia**, hemorrhage from the urethra. **H. vesica'lis**, hemorrhage from the bladder; see *Hæmaturia* and *Cystorrhagia.*

Hæmau'togram (*hæmo*, *autos*, self, *grapho*, to write). Record of the pulse made by *Hæmautography*, or use of an arterial stream impinging on moving paper or a diagram.

Hæmaxis, he-maks'is (*haimasso*, to let blood). Bloodletting.

Hæmelytrometra, he-mel-it-ro-me'trah (*hæma*, *elutron*, vagina, *metra*, uterus). Collection of blood in the uterus and vagina.

Hæmencephalus, he-men-sef'al-us (*hæma*, *encephalon*). Cerebral apoplexy; hemorrhage within the cranium.

Hæmendocardium, he-men-do-kar'de-um. Inflammation of the lining membrane of the heart.

Hæmentera, he-men'ter-ah (*hæma*, *enteron*, intestine). Melæna.

Hæmerythrum, he-mer'ith-rum (*hæma*, *eruthros*, red). Hæmatin.

Hæ'mic. Relating or appertaining to blood or state of the blood. **H. unit**, proportion of red corpuscles in blood subjected to examination, the normal standard being assumed at 100.

Hæmidrosis, he-mid-ro'sis (*hæma*, *hidrosis*, sweating). Hæmatidrosis. See *Diapedesis.*

Hæ'min. $C_{96}H_{142}Fe_3O_{18}$. Crystals produced artificially from hæmatin; important only as a test for blood-stains. See *Hæmatoidin.*

Hæmischesis, he-mis'kes-is. Hæmatischesis.

Hæmitis, he-me'tis. Alteration of the blood occurring in inflammatory diseases; inflammatory blood.

Hæ'mo. In composition, blood.

Hæmoalbuminu'ria. Hæmaturia of inferior animals.

Hæmo-arthritis, he-mo-ar-thre'tis. Acute rheumatism.

Hæmo'bium. Hæmatobium.

Hæm'oblast. Part of yoke of ovum concerned in hæmatosis.

Hæmocardiorrhagia, he-mo-kard-e-or-rhaj'e-ah (*hæma*, *kardia*, the heart, *rhegnumi*, to break forth). Apoplexy of the heart; effusion of blood into the substance of the heart.

Hæmocardium, he-mo-kar'de-um (*hæmo*, *kardia*, heart). Hæmocardiorrhagia.

Hæmocelidosis, he-mo-sel-id-o'sis (*hæmo*, *kelidoo*, to stain). Purpura.

Hæmocerchnos, he-mo-serk'nos (*kerchnos*, hissing, dry). Spitting of blood, with hissing in the throat; evacuation of dry matters.

Hæmochroin, he-mok-ro'in. Hæmatin.

Hæmochromagen, he-mo-kro'ma-jen. Coloring matter produced by decomposition of hæmoglobin.

Hæmochrome, he'mo-krome (*hæmo*, *chroma*, color). Hæmatin.

Hæmochromom'eter. Apparatus or instrument for determining amount of hæmoglobin.

Hæmochro'sis. Hæmatochrosis.

Hæmococ'ci. Micro-organisms in blood.

Hæmocryphia, he-mo-krif'e-ah (*hæmo, krupto,* to conceal). Retention or suppression of flow of blood.

Hæmocrys'tallin. Hæmoglobin.

Hæmocy'anin (*hæmo, kuanos,* blue). Coloring matter of blood, giving it a blue color, in some of the lower animals.

Hæmocyano'sis. Cyanosis.

Hæmocyte, he'mo-site. Blood-corpuscle.

Hæmocytol'ysis (*hæmo, kutos,* vessel, *lusis,* solution). Dissolution or disintegration of red globules of blood.

Hæmocytometer, he-mo-si-tom'e-tur. Hæmacytometer.

Hæmocytotrip'sis (*hæmo, kutos,* vessel, *thrupsis,* breaking). Breaking up of red globules of blood.

Hæmodacrysis, he-mo-dak'ris-is (*hæmo, dakru,* tear). Production of bloody tears.

Hæmodes, he-mo'dees. Sanguine; bloody.

Hæmodia (he-mo'de-ah) or **Hæmodiaz'mus** (*hæma, odous,* tooth). Great sensibility of the teeth, and especially the setting on edge of those bodies by acid or acerb substances; tooth-edge; teething.

Hæmodiapedesis, he-mo-de-ah-ped-a'sis (*hæmo, diapedesis,* exhalation). Exhalation of blood at the surface of the skin; sweating of blood.

Hæmodiarrhœ'a. Bloody diarrhœa.

Hæmodiasmus, he-mo-de-az'mus. Hemodia.

Hæmodipsa, he-mo-dip'sah (*hæmo, dipsa,* thirst). Fondness for bloodletting.

Hæmodromograph, he-mo-dro'mo-graf (*hæmo, dromos,* running, *grapho,* to write). Instrument or apparatus for recording graphically the velocity of circulating blood.

Hæmodromometer (he-mo-drom-om'e-tur) or **Hæmadromom'eter** (*hæma, dromos,* course, *metron,* measure). Instrument for measuring the rate of the blood's movement.

Hæmodynamics (he-mo-di-nam'iks) or **Hæmatodynam'ics.** Part of science which treats of the motion of the blood.

Hæmodynamom'eter. Hæmadynamometer.

Hæmodyscrasia, he-mo-dis-kras'e-ah. Hæmatonosus.

Hæmogallol, he-mo-gal'lol. Reduction product of hematin; a readily absorbed blood tonic in chlorosis, anæmia, etc. Dose, gr. ij–v (0.12–0.3 g.).

Hæmogastric, he-mo-gas'trik. Hæmagastric.

Hæmoglobin, he-mo-glo'bin (*hæma, globus*). Albuminous coloring matter of red corpuscles of blood, giving color to venous and arterial blood, and composed of hæmatin and globulin; used therapeutically in anæmia and sclerosis.

Hæmoglobinæmia, he-mo-glob-in-e'me-ah. Condition of blood characterized by the existence of free hæmoglobin in it.

Hæmoglobinom'eter, Hæmatinometer.

Hæmoglobinuria, he-mo-glob-in-u're-ah. Urine characterized by existence of free hæmoglobin in it, as in septicæmia and after burns and transfusion of blood.

Hæmoglobulin, he-mo-glob'u-lin. Hæmoglobin.

Hæmographion, he-mo-graf'e-on (*hæma, grapho,* to write). Hæmodynamometer, arranged to indicate graphically the blood-pressure.

Hæmohydrarthrosis, he-mo-hid-rar-thro'sis (*hæmo, hudor,* water, *arthron,* joint). Effusion of blood into a joint.

Hæmohydronephrosis, he-mo-hi-dro-nef-ro'sis (*hæmo, hudor,* water, *nephros,* kidney). Cystic tumor of the kidney, contents of which are blood and urine.

Hæmoid, he'moid (*hæmo, eidos,* resemblance). Sanguine; bloody.

Hæmokelidosis, he-mo-kel-id-o'sis. Hæmocelidosis.

Hæmol, he'mol. A reduction product of hematin; same therapeutic action as hæmogallol.

Hæmoleucocytes, he-mo-lu'ko-sites (*hæmo, leukos,* white, *kutos,* cell). Cells of marrow of bone, from which red blood-corpuscles are developed.

Hæmomanometer, he-mo-man-om'et-ur (*hæmo, manos,* thin, *metron,* measure). Instrument for determining degree of pressure of the circulating blood.

Hæmomediasti'num. Hemorrhagic effusion in the mediastinum.

Hæmomere (*hæmo, meros,* part). Portion of theoretical segment of vertebrate animal, composed of blood-vessels.

Hæmometachysis, he-mo-met-ak'is-is (*hæmo, meta,* through, *chusis,* pouring). Transfusion.

Hæmometer, he-mom'et-ur. Hæmadynamometer.

Hæmometra, he-mo-me'trah (*hæmo, metra,* uterus). Collection of menstrual blood behind an abnormally contracted os uteri, which impedes its discharge.

Hæmometrectasia, he-mo-met-rek-tah'se-ah (*hæmo, metra,* uterus, *ektasis,* dilatation). Dilatation of the womb from blood.

Hæmonephrorrha'gia (*hæmo, nephros,* kidney, *rhage,* rupture). Excessive renal hemorrhage.

Hæmoöphori'tis (*hæmo, oon,* egg, *phoreo,* to bear). Hemorrhagic inflammation of the ovary.

Hæmopathia, he-mo-path-e'ah (*hæmo, pathos,* affection). Hæmatonosus.

Hæmopathol'ogy (*hæmo, pathos,* disease, *logos,* description). Pathology of blood.

Hæmopericardium, he-mo-per-e-kard'e-um. Effusion of blood in the pericardium.

Hæmoperitoneum, he-mo-per-e-to-ne'um. Effusion of blood into the peritoneal cavity.

Hæmopexiæ, he-mo-peks'e-e (*hæmo, pexis,* coagulation). Diseases in which there is increased coagulability of the blood.

Hæmophag'ocytes (*hæma, phago,* to eat, *kutos,* cell). White blood-corpuscles.

Hæmopheum, he-mo-fe'um. Hæmaphein.

Hæmophilia, he-mo-fil'e-ah. Hæmatophilia.

Hæmophobia, he-mo-fo'be-ah. Hæmatophobia.

Hæmoph'oboi, he-mof'o-boi. See *Hæmatophobia.*

Hæmophthalmia (he-mof-thal'me-ah) or **Hæmatophthal'mia** (*hæmo, ophthalmos,* eye). Effusion of blood into the eye; extravasation may be external or internal; bloodshot eye; condition in which all objects appear blood-red.

Hæmoplanesis (he-mo-plan-a'sis) or **Hæmoplania,** he-mo-plan'e-ah. Hæmatoplania. **H. menstrua'lis,** menstruation, vicarious.

Hæmoplasma, he-mo-plas'mah. Blood-plasma.

Hæmoplasmo'dium. Plasmodium malariæ.

Hæmoplastic, he-mo-plas'tik. Hæmatoplastic.

Hæmoplethora, he-mo-pleth-o'rah. Plethora.

Hæmopneumothorax, he-mo-nu-mo-tho'raks (*hæmo, pneuma,* air, *thorax,* chest). Pressure or accumulation of air or blood in the pleural cavity or elsewhere in the chest.

Hæmopoiesis, he-mo-poi-a'sis. Hæmatopoiesis.

Hæmopoiet'ic. Hæmatopoietic.

Hæmoposia, he-mo-po'se-ah. Hæmatoposia.

Hæmoproctia (he-mo-prok'te-ah) or **Hæmoproc'tos** (*hæma, proctos,* anus). Discharge of mucus or blood from hemorrhoids; hæmorrhoids; rectal hemorrhage.

Hæmoptic, he-mop'tik. Hæmoptoic.

Hæmoptoë, he-mop'to-e. Hæmoptysis. **H. laryngea et trachea'lis,** hemorrhage from the larynx and trachea.

Hæmoptoic, he-mop'to-ik. Relating or appertaining to hæmoptysis; one affected with hæmoptysis. **H. fe'ver,** hemorrhage associated with malarial fever.

Hæmoptosis, he-mop-to'sis. Hæmoptysis.

Hæmoptysis, he-mop'tis-is (*hæma, ptuo,* to spit). Spitting of blood; hemorrhage from the mucous membrane of the lungs, characterized by the expectoration of more or less florid and frothy blood. It is generally preceded by cough, dyspnœa, sense of heat in the chest, etc. Constitutional hæmoptysis, dependent on organic affection of the lungs or heart or some faulty conformation of the chest, is a serious disease, almost always announcing phthisis pulmonalis. Accidental hæmoptysis is chiefly dangerous by frequent recurrence, and consequent great loss of blood. The general causes of hæmoptysis are the same as those of other kinds of hemorrhage; it has also particular

causes, as too great exercise of the lungs, loud speaking, playing on wind instruments, breathing acrid vapors, etc. It usually occurs between puberty and the age of 35. Sudden and terrific hæmoptysis is sometimes met with, consisting in a great afflux of blood to the lungs, when it is called *Pulmonary apoplexy* or *extravasation*. Infiltration of blood into the air-cells may occur without any spitting of blood. Extravasation of blood into the tissue of the lungs has been termed *Pneumohemorrhage*. The treatment of hæmoptysis must be like that of internal hemorrhage in general. **H. inter'na,** extravasation of blood into the chest. **H. larynge'a et trachea'lis,** hemorrhage from the trachea. **H. phthi'sis,** phthisis pulmonalis.

Hæmoptysmus, he-mop-tiz'mus. Hæmoptysis.

Hæmormesis, he-mor-ma'sis (*hæmo, ormao,* to drive on). Congestion of blood. Hyperæmia.

Hæmorrhachis, he-mor'rhak-is (*hæmo, rhachis,* spine). Hemorrhage into the spinal marrow.

Hæm'orrhage. Hemorrhage. **H., cap'illary,** bleeding from capillary vessels. **H., consec'utive,** secondary hemorrhage. **H., postpar'tum,** hemorrhage following birth of a child, and coming from the uterus. **H., unavoid'able,** hemorrhage due to separation of the placenta prævia.

Hæmorrhagia, he-mor-rhaj'e-ah (*hæma, rhegnumi,* to break forth). Hemorrhage, **H. acti'va,** active hemorrhage. **H. acti'va na'rium,** epistaxis. **H. arterio'sa,** arterial hemorrhage.. **H., asthen'ic** or **aton'ic,** see *Hemorrhage.* **H. bronch'ica,** bronchorrhagia; hæmoptysis. **H. cer'ebri,** cerebral hemorrhage; apoplexy. **H. per cu'tem,** sudor cruentus. **H. per diæ'resin,** see *Diæresis.* **H. per diapede'sin,** diapedesis. **H. fau'cium,** stomatorrhagia. **H. gas'trica,** hæmatemesis. **H. gingiva'rum,** hemorrhage of the gums. **H. hæmatem'esis,** hæmatemesis. **H. hæmatu'ria,** hæmaturia. **H. hæmop'tysis,** hæmoptysis. **H. hepat'ica** or **hep'atis,** hemorrhage from the liver. **H. intestino'rum,** hemorrhage from the bowels. **H. muco'sa,** leucorrhœa analis. **H. Nabo'thi,** see *Parturition.* **H. narin'ea** or **na'rium,** bleeding at the nose. **H. neural'gica,** intense sciatic neuralgia with extravasations of blood, result of fatty degeneration and atrophy of muscle. **H. o'ris,** bleeding from the mouth. **H. passi'va,** passive hemorrhage; see *Hæmorrhagia.* **H. pe'nis,** stimatosis. **H. proc'tica,** hæmorrhois. **H. pulmo'nis** or **pulmona'lis,** pulmonary apoplexy; see *Hæmoptysis.* **H. re'num,** renal hemorrhge. **H. spina'lis,** apoplexia myelitica. **H. universa'lis,** purpura hæmorrhagica. **H. uteri'na,** uterine hemorrhage. **H. veno'sa,** passive hemorrhage; see *Hæmorrhagia.* **H. ventric'uli,** vomiting of blood. **H. vesi'cæ,** cystorrhagia.

Hæmorrhagic, he-mor-rhaj'ik. Hemorrhagic; relating to hemorrhage. **H. diath'esis,** hæmatophilia. **H. mea'sles,** black measles.

Hæmorrhagophthisis, he-mor-rag-of-te'sis. Phthisis or wasting from hemorrhage.

Hæmorrhaphilia, he-mor-rhaf-il'e-ah. Hæmatophilia.

Hæmorrhelcoma, he-mor-rhel-ko'mah (*hæmo, helkoma,* ulcer). Hemorrhoidal ulcer; ulcer attended with hemorrhage.

Hæmorrhelcosis, he-mor-rhel-ko'sis. Formation of hemorrhoidal ulcer.

Hæmorrhenterorrhœ'a (*haimorrhoïs,* hemorrhoid, *enteron,* intestine, *rheo,* to flow). Diarrhœa from or with hemorrhoids.

Hæmorrhinia, he-mor-rhin'e-ah (*hæmo, rhis,* nose). Bleeding at the nose; epistaxis.

Hæmorrhinorrhagia, he-mor-rhin-or-rhaj'e-ah (*hæmo, rhis,* nose, *rhegnumi,* to break forth). Bleeding at the nose.

Hæmorrhoblennorrhœ'a. Blennorrhœa from or with hemorrhoids.

Hæmorrhobronchorrhœ'a. Bronchorrhœa with hemorrhoids.

Hæmorrhocryp'ia (*haimorrhoïs, kruptos,* hidden). Suppression of hemorrhoidal discharge.

Hæmorrhocystorrhœ'a. Cystorrhœa with hemorrhoids.

Hæmorrhodiarrhœ'a. Hæmorrhenterorrhœa.

Hæmorrhœa, he-mor-rhe'ah (*hæmo, rheo,* to flow). Loss of blood; hemorrhage. **H. intestina'lis,** enterrhorrhagia. **H. petechia'lis,** purpura hæmorrhagica. **H. pulmona'lis,** hæmoptysis. **H. uteri'na,** metrorrhagia. **H. vaso'rum hæmorrhoida'lium,** discharge of blood or mucus from hemorrhoids. **H. ventric'uli,** gastrorrhagia; hæmatemesis. **H. via'rum urina'rium,** hæmaturia.

Hæmorrhoid, he'mor-rhoid. Hæmorrhois.

Hæmorrhoidal (he-mor-rhoid'al) or **Hemorrhoid'al.** Relating to hemorrhoids. **H. ar'teries** have been distinguished into superior, middle, and inferior. First is the termination of the inferior mesenteric artery, assuming the name superior hemorrhoidal when it reaches the upper and posterior part of the rectum. Middle hemorrhoidal is furnished by the hypogastric or internal pudic; it ramifies on the inferior and anterior part of the rectum. Inferior hemorrhoidal arteries are branches of the internal pudic, furnished to the inferior part of the rectum and the anal muscles. **H. nerves,** these emanate from the sciatic and hypogastric plexuses, and cover the rectum with their numerous filaments. **H. plex'us,** continuation of pelvic plexus of nerves upon the rectum; anastomosis of hemorrhoidal veins over the rectum. **H. tu'mors,** see *Hemorrhoids.* **H. veins** follow the same distribution as the arteries, and generally empty themselves into the lesser mesenteric. Some of them assist in the formation of the hypogastric vein. **H. ves'sels** are those distributed to the rectum—the seat of hemorrhoids.

Hæmorrhoïdales nodi, he-mor-rho-id-al'ees no'de. Blind piles; see *Hæmorrhois.*

Hæmorrhoïdes, hem-or-rho'id-ees. See *Hæmorrhois.* **H. cæ'cæ,** blind piles; see *Hæmorrhois.* **H. fluen'tes,** bleeding piles; see *Hæmorrhois.* **H. furen'tes,** blind piles; see *Hæmorrhois.* **H. marisco'sæ,** bleeding piles; see *Hæmorrhois.* **H. non fluen'tes,** blind piles; see *Hæmorrhois.* **H. o'ris,** hemorrhage of the mouth.

Hæmorrhoidrosis, hem-or-rho-id-ro'sis (*hæmorrhois, hidrosis,* sweating). Sweating of hæmorrhoidal blood.

Hæmorrhoids, hem'or-rhoids. Hæmorrhois. **H., ure'thral,** see *Urethra, vascular tumor of.*

Hæmorrhois, he-mor'rho-is (pl. **Hæmorrhoïdes**) (*hæmo, rheo,* to flow). Hemorrhoids; hæmorrhoids; piles. See *Hemorrhoids.* **H. al'ba,** leucorrhœa analis. **H. cæ'ca,** blind pile; see *Hæmorrhois.* **H. cruen'ta,** bleeding pile; see *Hæmorrhois.* **H. cuta'nea,** external hemorrhoid; bloody sweat. **H. ab exa'niâ,** prolapse of the rectum. **H. fluens,** bleeding hemorrhoid. **H. pro'cedens,** prolapse of anus.

Hæmorrhoischesis, he-mor-ro-is'kes-is (*hæmorrhois, rheo,* flow, *ischo,* to restrain.) Suppression or retention of the hemorrhoidal flux.

Hæmorrhometrorrhœa, he-mor-ro-met-ror-rhe'ah. Blennorrhœa of the uterus with hemorrhoids.

Hæmorrhonephrorrhœ'a. Renal blennorrhœa with hemorrhoids.

Hæmorrhophesis, he-mor-rof-a'sis (*hæma, rhophao,* to sip up). Absorption of blood.

Hæmorrhophilia, he-mor-ro-fil'e-ah (*hæmo, rheo,* to flow, *phileo,* to love). Hæmatophilia.

Hæmorrhoproctorrhœa, he-mor-ro-prok-tor-rhe'ah. Hemorrhoidal blennorrhœa.

Hæmorrhoscopia, he-mor-rho-skop'e-ah (*hæmo, rheo,* to flow, *skopeo,* to examine). Hæmatoscopia.

Hæmorrhurethrorrhœa, he-mor-rhur-eth-ror-rhe'ah. Urethral blennorrhœa with hemorrhoid.

Hæmorrhysis, he-mor'rhis-is. Hemorrhage.

Hæmoscheocele, he-mos-ke-o-ce'le (Eng. he-mos'ke-o-seel). Hæmatoscheocele.

Hæmoschistocephalus, he-mo-shist-o-sef'al-us (*hæmo, schistos,* cleft, *kephale,* head). Monster having a cleft in the skull.

Hæmoscopia, he-mo-skop'e-ah. Hæmatoscopia.

Hæmosiderin, he-mo-sid'er-in (*hæmo, sideros,* iron). Pigment containing iron formed on exterior of extravasated blood while hæmoglobin is undergoing composition.

Hæmospasia (he-mo-spas'e-ah) or **Hæmos'pasis.** See *Hæmospastic.*

Hæmospastic, he-mo-spas'tik (*hæma, spao,* to draw). An agent which draws or attracts blood to a part, as a cupping-glass. The operation is termed *Hæmospasia,* the term applied to a process by which the air is exhausted over a considerable surface, as over the extremities, by an appropriate pneumatic apparatus, the *Hæmospastic system.*

Hæmospermatism, he-mo-spurm'at-izm. Formation or ejaculation of semen mixed with blood, from capillary hemorrhage in the vesiculæ seminales from over-distension or from excessive coitus or masturbation.

Hæmostasia (he-mos-taz'e-ah) or **Hæmos'tasis** (*hæma, stasis,* stagnation). Stagnation of blood. An operation, the object of which is to arrest the flow of blood, as by compression or ligation of the great vessels.

Hæmostatic, he-mo-stat'ik (same etymon). Anything that arrests hemorrhage.

Hæmotachometry, he-mo-tak-om'e-tre (*hæma, tachos,* swiftness, *metron,* measure). Measurement of the velocity of circulating blood. An instrument devised for this purpose is called *Hæmotachometer* or *Hæmatachometer* and *Tachometer.*

Hæmotelangiosis, he-mo-tel-an-je-o'sis. Dilatation of capillary vessels; telangiectasis.

Hæmotexia (he-mo-teks'e-ah) or **Hæmotex'is,** he-mo-teks'is (*hæmo, texis,* solution). Dissolution of the blood.

Hæmothorax, he-mo-tho'raks. Hæmatothorax.

Hæmotoxic, he-mo-toks'ik. Toxæmic.

Hæmotox'is. Blood-poisoning.

Hæmotrophy, he-mot'ro-fe (*hæma, trophe,* nourishment). Excess of sanguineous nourishment; plethora.

Hæmotus, he-mo'tus (*hæma, ous,* ear). Effusion of blood into the ear; hæmatoma auris.

Hæmotyphenteritis, he-mo-tif-en-ter-e'tis. Typhoid inflammation of the bowels.

Hæmuresis (he-mu-re'sis) or **Hæmuria,** he-mu're-ah. Hæmaturia.

Hæ'mydor (*hæma, hudor,* water). Serum of the blood.

Hæmydria, he-mid're-ah. Excessive amount of water in the blood; hydræmia.

Hæreditarius, her-ed-it-ar'e-us (*hæres,* heir). Hereditary.

Hæred'itas. Heredity.

Hæsitatio, hes-it-ah'she-o (*hæsito,* to stick fast). Stuttering; stammering. See *Balbuties.*

Hagberry, hag'ber-re. Prunus padus.

Hagenia (hag-en'e-ah) (after Prof. K. C. Hagen of Königsberg) **Abyssin'ica.** Abyssinian tree, ord. Rosaceæ; infusion or decoction of its flowers, *Flores cosso,* is anthelmintic, especially in tapeworm. The dried panicles, *Brayera, Koosso,* are officinal in the Ph. Br. An active resinous principle has been obtained from the flowers, to which the names *Tæniin* or *Tænine* and *Koussin, Koussein,* or *Koussine* have been given.

Hagiospermum, haj-e-o-spur'mum (*hagios,* holy, *sperma,* seed). Artemisia santonica.

Hagioxylum, haj-e-oks'il-um (*hagios,* holy, *xulon,* wood). Guaiacum.

Hahnemannism, han'e-mann-izm (after Dr. S. C. F. Hahnemann, the founder). Homœopathy.

Hair. Pile; conical, corneous substance, free portion or shaft, *scapus,* of which issues to a greater or less distance from the skin, to the tissue of which it adheres by a bulb or button, *bulbus pili,* seated in a hair-follicle, *folliculus pili,* made by inversion of the integument, the epidermis of which forms a root-sheath, *vagina pili.* At the base of the hair-follicle there is a small papilla, well supplied with blood-vessels and nerves, *papilla pili;* at times called, but improperly, *pulpa* or *blastema pili.* Hair receives various names in different parts, as beard, cilia, eyebrows, hair of the head (capilli), etc. See *Capillus.*

The following measurements and statistical facts as to the hair are given by Krause:

Shaft of hair:	0.6 mm.–1.5 in length; 0.007–0.17 in transverse diameter.
The single hair can bear a weight of	60 g.
Hair-roots of finest hairs	0.4 mm. long.
" " thicker "	2–4 " "

	Broad.	*Thick.*
Hair of head	0.05–0.09 mm.	0.04–0.06 mm.
Beard	0.1–0.2	0.07–0.09
Cilia, 6–12 long	0.1	0.09
Vibrissæ	0.13	0.09
Lanugo	0.0016	0.0012
Eyebrows, 7–16 long	0.1	0.9

Total number of hairs on the head	80,000
" " " rest of the body	20,000
The hair of the head in females weighs about	300 g.
Life of hairs:	
On the skin of the head	2–4 years
" margins of the skin of the head	4–9 "
Cilia	100–150 days (Moll).
Daily growth of the hair on the head	0.2–0.3 mm.
When the hair is cut monthly	0.2 "
When the hair is cut every two months	14 per cent. less
In the spring and summer	27 per cent. more than in the fall and winter.
Daily loss of hair in men and women	38–103.

H., aud'itory, delicate nervous fibrils, continuations of spindle-shaped nerve-cells at end of vestibular nerve. **H. bulb,** expanded extremity of hair-root on papilla of hair-follicle. **H. cells,** cells with hair-like terminations in crista acustica and organ of Corti, in internal ear. **H. cu'ticle,** scales forming outer covering of hair. **H. epider'mis,** H. cuticle. **H., fall'ing off of,** alopecia. **H. fol'licle,** involution of epidermis lodging hair-root; see *Hair.* **H. germ,** H. papilla. **H. glands,** sebaceous glands of skin. **H., hy'pertrophy of,** hypertrichosis. **H. knob,** part of old root of hair in hair-follicle. **H. li'chen,** lichen pilaris. **H., mat'ted,** plica. **H., olfac'tory,** cilia-like projections from free ends of olfactory cells in amphibious animals. **H. papil'la,** matrix pili. **H. pith,** medulla of hair. **H., plait'ed,** plica. **H., tac'tile,** hair-like appendages on skin of some animals, considered as associated with sense of touch. **H., tricho'matose,** plica.

Hair-cap moss. Polytrichum juniperinum.

Hair'-salt. Native magnesium sulphate.

Hair'worm. Seta equina. See *Ectozoa.* **H., muscular,** dracunculus.

Hairy. Pilous; covered with hair.

Hake. See *Oleum morrhuæ.*

Hal. (*hals,* salt). In composition, salt.

Halchemia, hal-kem-e'ah (*hal, cheo,* to pour out). Art of fusing salts.

Halcyonium rotundum, hal-ce-o'ne-um ro-tun'dum. Pila marina.

Halelæon, hal-el-e'on (*hal, elaion,* oil). Mixture of oil and salt for removing swellings of the joints.

Half-arches. Pillars of fauces or palate.

Half'breed. See *Halfcaste.*

Halfcast' or Halfcaste'. See *Caste.* Term applied in India to the offspring of a Hindoo and European; since extended to the offspring of mixed races. The subjoined list from Tschudi shows the parentage of the different varieties of halfcastes, and also the proper designations of the latter, as observed in South America:

PARENTS.	CHILDREN.
White father and Negro mother	Mulatto.
White father and Indian mother	Meztizo.
Indian father and Negro mother	Chino.
White father and Mulatta mother	Cuarteron.
White father and Meztiza mother	Creole (only distinguished from the white by a pale brownish complexion).
White father and China mother	Chino-blanco.
White father and Cuarterona mother	Quintero.
White father and Quintera mother	White.
Negro father and Mulatta mother	Zambo-negro.
Negro father and Meztiza mother	Mulatto-oscuro.
Negro father and China mother	Zambo-chino.
Negro father and Zamba mother	Zambro-negro (perfectly black).
Negro father and Cuarterona or Quintera mother	Mulatto (rather dark).
Indian father and Mulatta mother	Chino-oscuro.

Parents.	Children.
Indian father and Meztiza mother	Meztizo-claro (frequently very beautiful).
Indian father and China mother	Chino-cholo.
Indian father and Zamba mother	Zambo-claro.
Indian father with China-chola mother	Indian (with rather short frizzy hair).
Indian father and Cuarterona or Quintera mother	Meztizo (rather brown).
Mulatto father and Zamba mother	Zambo (a miserable race).
Mulatto father and Meztiza mother	Chino (of rather clear complexion).
Mulatto father and China mother	Chino (rather dark).

See also *Mulatto*. Term *half breed* is applied to the offspring of different races of men when crossing. See *Hybrid* and *Mulatto*.

Half-vision. Hemiopsia.

Halicacabum, hal-e-kak'ab-um. Physalis.

Halicore, hal-ik'or-e. Dugong, genus of Cetacea, from fat of which a bland oil is obtained, used as a substitute for cod-liver oil.

Halidrys vesiculosa, hal'id-ris ves-ik-u-lo'sah (*hals*, sea, *drus*, oak). Fucus vesiculosus.

Halimetry, hal-im'et-re. Measurement of salts.

Halinatrum (hal-in-at'rum) or **Halinitrum,** hal-in-it'rum (*hals*, salt, *natrum*, soda). Name given to subcarbonate of soda containing a little subcarbonate of ammonia, found on the plaster of damp walls, in places inhabited by man or animals. Potassii nitras.

Halinus, hal-e'nus. Saline.

Halisteresis, hal-is-ter-a'sis (*hals*, salt, *steresis*, privation). Change in structure of bones by loss or deprivation of salts, leading to osteomalacia.

Halisteretic, hal-ist-er-et'ik. Relating to softening of bones by loss of salts.

Halituous, hal-it'u-us (*halitus*, vapor). Covered with a gentle moisture. Vapor exhaled in all the cavities of the body, so long as the blood is warm, is called halitus. Odorous vapor exhaled by the blood itself while warm is called halitus sanguinis.

Halitus, hal'it-us (vapor). Breath. See *Halituous*. **H. o'ris fœt'idus,** breath, offensive. **H. san'guinis,** gas arising from fresh blood; see *Halituous*.

Hal'ler's net'work. Rete testis. **H.'s zones,** coni vasculosi.

Hallex, hal'leks (*hallomai*, to leap). Thumb. See *Digitus*.

Hall's (Dr. Marshall) ready method. See *Drowning, resuscitation from*.

Hallucal, hal-lu'k'l. Relating to the big toe.

Hallucinatio, hal-lu-sin-ah'she-o (*hallucinari*, to be deceived). Hallucination. **H. hypochondri'asis,** hypochondriasis. **H. ver'tigo,** vertigo.

Hallucination, hal-lu-sin-a'shun. Waking dream, phantasm. Morbid error in one or more of the senses. Perception of objects which do not in fact exert any impression on the external senses. This almost always depends on disorders of the brain, but is not an index of insanity unless the patient believes in the existence of the subject of the hallucination. **H., hypnot'ic,** hallucination of person subjected to hypnotic influence.

Hallus (hal'lus) or **Hallux,** hal'luks (*hallomai*, to leap). Great toe. Pollex or pollex pedis. **H. flex'us** or **rig'idus,** abnormal flexion of first phalanx of great toe, the second phalanx being extended. **H. val'gus,** dislocation of great toe in outward direction. **H. va'rus,** pigeon-toe; deviation or dislocation of great toe inward.

Halmyrodes, hal-mir'o-dees (*halmuros*, saltish). Term for affection in which the heat feels pungent under the finger.

Halmyrus, hal'me-rus. Saline.

Ha'lo (*halos*, circle). Areola of nipple. Circle observed in a flame by one laboring under incipient glaucoma, or around the yellow spot with the inverted image. **H. signa'tus,** impression of a circle made by the ciliary processes on the anterior surface of the vitreous humor.

Halogen, hal'o-jen (*hal, gennao*, to generate). Electro-negative body, as chlorine, iodine, bromine, fluorine, forming salts with electro-positive metals.

Halogenous, hal-oj'en-us (same etymon). Capable of forming salts. See *Halogen*.

Haloid, hal'oid (*hals*, salt, *eidos*, appearance). Salt-like; pertaining to or derived from the halogens.

Halonii'tis. Cellulitis.

Halonitrum, hal-o-nit'rum. Halinatrum.

Halonium, hal-o'ne-um. Areola.

Halopegæ, hal-o-pa'ge (*hal, pege*, a spring). Mineral waters whose chief ingredient is common salt.

Ha'los. Halo; areola.

Halucinatio, hal-lu-sin-ah'she-o. Hallucination.

Ha'lux. Hallux.

Halyme'nia cilia'ta and **H. edu'lis.** Species of algæ used as food in Ireland and Scotland; the latter is also a diuretic and purgative. **H. palma'ta** is also employed as a food and as a vermifuge.

Halysis, hal'is-is (*halusis*, chain). Bothriocephalus. **H. ellip'tica,** tænia elliptica. **H. la'ta,** bothriocephalus latus. **H. margina'ta,** tænia marginata. **H. membrana'cea,** bothriocephalus latus. **H. so'lium,** tænia solium.

Ham. Posterior part of the knee-joint.

Hamamelidin (ham-am-el'id-in) or **Hamame'lin.** Extract of Hamamelis Virginiana, dried and powdered; used for suppositories in piles.

Hamamelis, ham-am-e'lis (*hama*, like to, *melis*, appletree). **H. androg'yna, H. Carolinia'na, H. corylifo'lia,** H. Virginiana. **H. Virginia'na** or **Virgin'ica,** *Witch hazel, Winter witch hazel, Snapping hazelnut, Winter bloom;* ord. Hamamelaceæ. The bark of this tree, native of the United States, is somewhat bitter and sensibly astringent. Cataplasm of the inner rind of the bark is efficacious in painful inflammation of the eyes, also in hemorrhoids; it is sedative and hæmostatic. Hamamelis (Ph. U. S.) is the fresh leaves of Hamamelis Virginica.

Hamarthritis, ham-arth-re'tis (*hama*, at once). Arthritis or gout in all the joints. Universal gout.

Hamate, ha'mate (*hamus*, hook). Uncinate.

Hama'tum os (*hamus*, hook). Unciform bone.

Hamma, ham'mah (knot). Knot or tie for retaining a bandage; truss.

Ham'mer. Malleus. **H. cramp,** H. palsy. **H. pal'sy,** hephæstic hemiplegia; form of paralysis of muscles of the arms and shoulder observed in file-forgers, hammersmiths, etc. **H., ther'mal,** Corrigan's button cautery. **H. toe,** peculiar claw-like condition of toe (the second one especially) caused by permanent extension of the first phalanx and flexion of second and ungual phalanges, producing an upward angle.

Ham'string muscles and **tendons.** See *Hamstrings*.

Ham'strings. Strings or tendons of the ham. The H. muscles are the biceps femoris, whose tendon forms the outer hamstring, and semimembranosus, semitendinosus, gracilis, and sartorius, whose tendons form the inner hamstring. "To hamstring" means to cut the strings or tendons of the ham.

Hamular, ham'u-lar (*hamulus*, small hook). Hook-like. **H. groove,** sulcus for passage of tendon of tensor palati muscle around hamular process of sphenoid bone. **H. pro'cess,** several curved or hook-like processes are so named, as *H. process of humerus*, projection in front of internal condylar ridge of that bone. *H. process of lacrymal bone* passes over the lacrymal duct to connect that bone and the sphenoid. *H. process of pterygoid process of sphenoid bone* or *hamulus* projects from the termination of the internal pterygoid plate.

Hamularia lymphatica, ham-u-lar'e-ah lim-fat'-ik-ah. Curved worm found in the bronchial tube.

Hamulus, ham'u-lus (dim. of **Hamus**, hook). Hook or crook. Hook-like process; unciform bone. See *Hamular process*. **H. cartilagin'eus,** extremity of limbus of spiral lamina at helicotrema. **H. of coch'lea,** H. laminæ spiralis; see *Hamulus*. **H. fronta'lis,**

alar process of ethmoid. **H. lacryma'lis,** see *Hamular process.* **H. lam'inæ spira'lis,** pointed, hook-like process at apex of cochlea, terminating lamina spiralis. **H. os'sis hama'ti,** unciform process. **H. os'sis lacryma'lis,** see *H. process.* **H. os'sis uncina'ti,** unciform process. **H. palati'nus,** curved extremity of inferior turbinate bone, forming joint with palate bone. **H. pterygoï'deus,** see *Hamular process.* **H. of spi'ral lam'ina,** H. laminæ spiralis. **H. trochlea'ris,** spinous process on orbital surface of frontal bone for the attachment of the pulley of the trochlearis muscles. **H. unciformis** or **uncina'tus,** unciform process of ethmoid bone.

Ha'mus. Hook. See *Hamulus.* **H. anatom'icus,** tenaculum.

Ha'my, plane of. Horizontal plane passing through glabella and lambda.

Han'cock's amputa'tion. Modification of sub-astragaloid amputation, the tuberosity of the calcis being saved and turned up to be united to the lower surface of the astragalus, from which a slice of bone is taken.

Hand. See *Manus.* **H., chol'era,** see *Cholera hand.* **H., club,** see *Kyllosis.*

Hand-drop. Wrist-drop; popular term for paralysis of the hand induced by the action of lead.

Han'dle of mal'leus. Process of that bone connecting it with the membrana tympani.

Hand'woman. Midwife.

Han'gee. Pinella tuberifera.

Hang'ers. Crusta genu equinæ. Laminaria digitata.

Hang'nail. *Stepmother's blessing, Wirt-springs, Nail-spring, Spring-nail, Hang-nail, Friend-back, Back-friend.* Portion of epidermis, detached so as to tear the integument in the vicinity of the finger-nails.

Hapantismus, hap-an-tiz'mus (*hapas,* all). Matting or growing together of organic parts.

Haphe, haf'e. Feeling, touch.

Haphemet'ric. Relating to measurement of tactile sensibility.

Haphonosi (haf-on'o-se) or **Haphonu'si** (*haphe, nosos,* disease). Diseases of the sense of touch.

Haphonosus, haph-on'o-sus (same etymon). Anæsthesia.

Haplancyloblepharon, hap-lan-sil-o-blef'a-ron (*haplos,* simple, *ankulos,* bent or stiff, *blepharon,* eyelid). Adhesion between upper and lower eyelids; ankyloblepharon.

Haplo-acne, hap-lo-ak'ne (*haplos,* simple, *acne*). Acne simplex; herpes pustulosus miliaris.

Haploblepharoclei'sis (*haplos,* simple, *blepharon,* eyelid, *kleisis,* closing). Ankyloblepharon.

Haplodermitis, hap-lo-dur-me'tis (*haplos,* simple, *derma,* skin). Simple inflammation of the skin.

Haploli'chen. Lichen simplex.

Haplopap'pus discoï'deus or **Menzies'ii.** Leaves of this Mexican plant, Damiana, ord. Compositæ, are used in fomentations in rheumatism.

Haplopathia, hap-lo-path-e'ah (*haplos,* simple, *pathos,* disease). A simple uncomplicated affection.

Haplophyma, hap-lo-fe'mah (*haplos,* simple, *phuma,* growth). Simple tumor.

Haploscope, hap'lo-skope (*haplos,* simple, *skopeo,* to see). Apparatus for blending two separate fields of vision into one; stereoscope.

Haplotomia, hap-lo-tom'e-ah (*haplos,* simple, *tome,* incision). Simple incision.

Hap'sis. Touch; delirium; bandaging.

Hap'tic. Relating to touch; tactile.

Haptodysphoria, hap-to-dis-for'e-ah (*hapto,* to touch, *dusphoros,* difficult to bear). Painful or sensitive to the touch.

Haptogen (hap'to-jen) or **Haptog'enous membrane** (*hapto,* to attach, *gennao,* to engender). Pellicle forming around fatty matter when albumen is brought in contact with it.

Haptotic, hap-tot'ik (*hapto,* to touch). Doctrine of the phenomena of touch.

Hara keke. *Phormium tenax;* native flax of New Zealand; root is anthelmintic and cathartic; the gum is used in diarrhœa and as a dressing to wounds and abrasions.

Hard. That which offers much resistance. In anatomy, the hard parts are those composing the osseous basis of the body, the skeleton. **H. pal'ate,** anterior or bony part of septum between cavity of mouth and nasal fossæ.

Hard'ening. Induration; sclerosis.

Harde'rian gland. Rudimentary glands in inner canthus of the eye, resembling the lacrymal gland.

Hard'hack. Spiræa tomentosa.

Hard'tack. Army and navy bread, baked without salt and kiln-dried.

Harebell. Campanula rotundifolia. Emetic and expectorant.

Hare'lip. Fissure or perpendicular division of one or both lips; so called because the upper lip of the hare is thus divided. It is generally congenital, at other times accidental, or produced by a wound the edges of which have not been brought into proper contact. It is simple when there is but one division; double, when there are two; complicated, when there is also a division or cleft of the superior maxillary bone and of the palate—*Cleft, Split,* or *Fissured palate, Wolf's jaw*—or a projection of the teeth into the separation of the lip. In the operation for harelip there are two indications to be fulfilled: first, to pare with the knife or scissors the edges of the cleft, and afterward preserve them in contact in order to cause adhesion. Staphylorraphy, or operation for closure of the palate, may also be required. **H. su'ture,** figure-of-8 suture applied over and around a pin which has been passed through the freshened edges of the harelip.

Hare's ear. Bupleurum rotundifolium. **H.'s eye,** lagophthalmia.

Harlequin fœtus, harl'e-kwin fe'tus. Fœtus born with peculiar skin of keratoma diffusum or congenital ichthyosis.

Har'ley's disease. Paroxysmal hæmoglobinuria.

Harmalia, har-mal'e-ah. Aliment.

Harmaline, har'mal-een. Alkaloid obtained from seeds of Peganum harmala; used for dyeing.

Harmine, har'meen. Alkaloid from Peganum harmala.

Harmony (har'mo-ne) or **Harmo'nia.** Suture by harmony, or simply harmony, *False* or *Superficial suture.* Immovable articulation, in which the depressions and eminences presented by the bony surfaces are but slightly marked, appearing as if the junction of the bones took place by simple apposition of their surfaces; as in the union of the superior maxillary bones with each other.

Har'mos or **Harmus,** har'mus (*haro,* to adjust). Articulation; harmony; suture.

Harp'aga. Forceps. Amber.

Harpalyce alba, harp-al'is-e al'bah. Prenanthes alba.

Harpoon, har-poon'. Instrument for seizing a particle of tissue for microscopic examination.

Harp'yia (harpy). Monstrous fœtus.

Harrison's groove. Depression sometimes noticed above the anterior insertion of the diaphragm in chronic dyspnœa.

Hart's thorn. Rhamnus catharticus. **H.'s tongue,** Asplenium scolopendrium. **H.'s truffles,** Elaphomyces granulatus.

Hartshorn, harts'horn. Cornu cervi; liquor cornu cervi. **H. and oil,** linimentum ammoniæ. **H., red,** spiritus lavandulæ compositus. **H., salt of,** see *Ammonii carbonas.*

Hart'wort of Marseilles. Seseli tortuosum.

Har'vest bug. Leptus irritans. **H. mite,** H. bug.

Haschischin (hash-ish'in) or **Hashiscin.** Alcoholic resinous extract from Indian hemp.

Hashabi. Kordofan gum, finest commercial variety of gum arabic.

Hasheesh, Haschisch (hash'ish), **Hashish,** or **Hashisha.** Dried leaves and stalks of Cannabis sativa with dried fruits.

Hash'ish. Haschisch.

Hasner's valve. Crescentic fold of mucous membrane at lower aperture of nasal duct.

Hassall's cor'puscles. Striated granular corpuscles in interior of thymus gland.

Hasta, has'tah (spear). Penis; obstetric perforator. **H. nuptia'lis,** penis. **H. viri'lis,** penis.

Hastella, has-tel'lah (dim. of **Hasta**). Splint.

Hastula regis, has'tu-lah re'jis. Asphodelus ramosus.

Hatch or **Hatch'ing.** Issuing from the egg, as with the oviparous animal after incubation.

Hat'ter's consumption. Pulmonary disease caused by inhalation of particles of fur, dust, etc. in making hats, or of the chemicals, such as mercury, arsenic, or nitrogen tetroxide, employed.

Haunch. Region of the trunk formed by the lateral parts of the pelvis and the hip-joint, including the soft parts. In women, on account of the greater width of the pelvis, the haunches are more prominent than in men. **H. bone,** ilium.

Haustellate, haus-tel'late (*haurio,* to drink up). Epithet for the structure of the mouth, as in insects, for drinking or pumping up liquids.

Haustra coli, haus'tra ko'le (*haustrum,* a bucket). Saccules of the colon.

Haustus, haust'us (*haurio,* to drink). Draught. Liquid medicine, which can be taken at a draught. **H. ni'ger** (black draught), infusum sennæ.

Haut mal, ho mal (F.) (great disease). Epilepsy.

Ha'ver. Avena.

Haversian (hav-ur'se-an) **canals** (after Dr. Clopton Havers). Canals, nutritive, of bones. **H. cancel'li,** H. spaces. **H. fringes,** vascular duplications of articular synovial membranes. **H. glands,** H. fringes. **H. lamel'læ,** lamellæ around the canals of Havers. **H. spaces,** cavities in spongy substance of bones. **H. sys'tem,** whole apparatus named from Havers, including cancelli, canals, lamellæ, and spaces.

Haw. Avena sativa. **H., black,** Virburnum prunifolium.

Hawk'ing. Effort to clear up the throat by forced expiratory effort.

Hawknut. Bunium bulbocastanum.

Hawkweed. Hieracium venosum.

Hawthorn. Mespilus oxyacantha.

Hay asthma. Fever, hay. **H., camel's,** Junctus odoratus. **H. fe'ver,** fever, hay.

Hayem's cor'puscles. See *Blood, globules of.* **H.'s hæ'matoblast,** see *Blood, globules of.*

Hayriff. Galium aparine.

Hazel, beaked or **crooked.** Corylus rostrata. **H., Crot'tle's,** Lichen pulmonarius. **H. nut** (snapping), Hamamelis Virginiana. **H. nut tree,** Corylus avellana. **H. rag,** Lichen pulmonarius. **H., witch,** Hamamelis Virginiana, Sorbus aucuparia.

Ha'zelra or **Ha'zelraw.** Lichen pulmonarius.

Head (from a Saxon word meaning heaved or heaved up). The head forms the upper extremity of the body, and tops the skeleton; it consists of the cranium and face. The first, comprising the superior and posterior part, has the encephalon in its cavity; the latter forms only the anterior part, and serves as a receptacle for the greater part of the organs of the senses. Rounded end of a bone or organ, as H. of epididymis, H. of femur, H. of radius, H. of ulna, etc. **H., big,** osteoporosis of maxillary bones of horses. **H., black,** comedo; acne punctata. **H. of mus'cle,** extremity of muscle at its origin. **H. of pan'creas,** duodenal extremity of that organ, *Caput pancreatis.* **H. of pe'nis,** glans penis. **H. scald,** eczema, pityriasis, or seborrhœa of the scalp. **H. swell,** actinomycosis. **H., wa'ter in the,** hydrocephalus.

Headache, hed'ake. Pain in the head; see *Cephalæa, Cephalalgia, Hemicrania.* Papaver rhœas, Cardamine pratensis. **H., intermit'tent,** cephalalgia periodica. **H., sick,** cephalæa spasmodica.

Head-breeze. Static electrization of the head with a head-plate.

Head-drop. Endemic disease of Japan, attended with heaviness of the head, slow speech, muscular debility, or partial paralysis.

Head-first la'bor. Presentation of the head in labor.

Head-fold. Duplication or fold of blastoderm under upper extremity of embryo.

Head-gut. Cavity in the raised cephalic extremity of the fœtus.

Head-last la'bor. Presentation of the fœtus in such a position that the head emerges last.

Head-lock'ing. Locking together of chins of twins, in labor, when presenting in opposite directions.

Head-mould. Cranium.

Headmould-shot. Condition of the skull in which the bones ride, or are *shot,* over each other at the sutures.

Head-piece. Upper enlarged extremity of a rod of Corti.

Head-plàte. Part of middle germ-layer constituting head of the embryo; top of inner rod of Corti prolonged.

Head'y. Affecting the head; that which affects the head and inebriates readily, as alcoholic drinks.

Heal. To cure or make healthy.

Healall. Collinsonia Canadensis, Prunella vulgaris, Scrophularia nodosa, Valeriana officinalis.

Heal'ing. Curative; see *Intention.* **H. art,** medicine. **H. blade,** Sempervivum tectorum, Plantago major. **H. piece,** see *Touch, royal.*

Health, helth. Condition in which the functions are performed with regularity and harmony.

Health'ful. Promoting health.

Health'y. Salutary; not diseased. **H. pus,** laudable pus; see *Pus.*

Hear'ing. Sense of perception and appreciation of sound. **H., abnor'mal,** hyperacusis; paracusis; diplacusis. **H., double,** diplacusis. **H., hard'ness of,** deafness. **H., monau'ral** or **uniau'ral,** appreciation of sound by one ear only. **H., mor'bid,** morbid paracusis. **H., perverse',** paracusis perversa.

Heart. See *Cardiac.* Azygous muscle, of an irregularly pyramidal shape, situate obliquely and a little to the left side in the chest; resting on the diaphragm by one of its surfaces; suspended by its base from the great vessels; free and movable in the rest of its extent, and surrounded by the pericardium. The right side of the body of the heart is thin and sharp, the left is thick and round. It is hollow within, and contains four cavities, two of which, with thinner and less fleshy walls, receive the blood from the lungs and the rest of the body, and pour it into two others with thick and very fleshy parietes, which send it to the lungs and to every part of the body. Of these cavities, the former are called *auricles,* the latter *ventricles.* The right auricle and right ventricle form the *pulmonic* or *right* or *anterior heart;* the left auricle and ventricle, the *systemic, corporeal, left,* or *aortic heart.* In the adult these are totally distinct from each other, being separated by a partition, the septum cordis. Into the right auricle the venæ cavæ, superior and inferior, and the coronary vein open. The pulmonary artery arises from the right ventricle (see *Conus arteriosus*); the four pulmonary veins open into the left auricle, and the aorta arises from the left ventricle.

The mean weight of the adult heart is, according to Bouillaud, from eight to nine ounces. The heart is covered externally by a very thin, membranous reflection from the *pericardium.* The muscular structure of the heart is much thicker in the parietes of the ventricles than in those of the auricles. Its cavities are lined by a very delicate membrane, the *endocardium,* continuous with the inner membrane of the arteries as regards the left cavities, and with that of the veins as regards the right. Its arteries, the coronary, arise from the commencement of the aorta. Its nerves proceed chiefly from the pneumogastric and the cervical ganglions of the great sympathetic. The heart is the great agent of the circulation; by its contraction the blood is sent over every part of the body.

When the ear is applied to the chest a dull, lengthened sound is heard, synchronous with the arterial pulse. This is instantly succeeded by a sharp, quick

sound, like that of the valve of a bellows or the lapping of a dog, and this is followed by a period of repose. Different views are entertained as to the causes of these sounds of the heart, which are evidently produced by contraction of the ventricles and consequent tension of the auriculo-ventricular valves, by reflux of blood against the semilunar valves, etc. The word *lubb-dup* conveys a notion of the two sounds. The *beating* or *impulse of the heart, heart-stroke, apex-beat,* against the parietes of the chest, is mainly caused by the systole of the heart tending to project it forward.

The valves of the heart are situated as follows: Aortic, opposite third intercostal space on left side, close to the sternum; pulmonary, opposite junction of third rib with sternum; mitral, opposite third intercostal space, an inch to left of sternum; aortic, behind middle of sternum at level of fourth rib.

The following table exhibits the different actions of the heart and their coincidence with its sounds and impulse. It presumes that the period from the commencement of one pulsation to that of another is divided into eight parts; and if the case of a person whose pulse beats sixty times in a minute be taken, each part will represent the eighth of a second:

Last part of the pause	1	Auricles contracting; ventricles distended.
First sound and impulse	4	Ventricles contracting; auricles dilating.
Second sound	2	Ventricles dilating; auricles dilating.
Pause	1	Ventricles dilating; auricles distended.

The duration of systole and diastole may be thus tabulated from various authorities:

Systole of ventricles	0.314 (0.301–0.327)	second (Donders).
	0.307–0.311	" (Landois).
	0.309–0.346	" (Marey).
Diastole of ventricles	0.58	" (Landois) [74.2 heart-beats].
Pause	0.4	second (Landois).
Systole of auricles	0.17	" (Landois) [60 pulse-beats per minute].
	about 0.1	second (Marey).
Diastole of auricles	about 0.4–0.5	
Duration of beat of heart	0.809	seconds [74.2 heart-beats per minute].

Heart, at'rophy of. A condition of the heart in which there is diminution in the thickness of the parietes of the whole organ. **H., beat'ing of,** see *Heart.* **H., black,** Vaccinium myrtillus. **H., bleeding,** Cheiranthus cheiri. **H., bone of,** a piece of fibro-cartilage, when ossified, behind the aortic orifice and between the two auriculo-ventricular openings. **H., bran'chial,** heart, as in fishes, in which aëration of the blood takes place in gills in the absence of pulmonary structures. **H. clot,** see *Polypus.* **H., dicœ'lious,** heart having two cavities, an auricle and a ventricle. **H., dilata'tion of,** see *Aneurism.* **H., displace'ment of,** see *Ectopia cordis* and *Cardiocele.* **H., fatty,** steatosis cordis. **H., fatty degenera'tion of,** steatosis cordis; see *Degeneration.* **H., fi'broid degenera'tion of,** see *Degeneration.* **H., fœ'tal,** see *Fœtus* and *Circulation, fœtal.* **H., hy'pertrophy of,** supernutrition of the muscular parietes of the heart, which are thicker than usual, the cavities being generally diminished. The pulse is generally strong, full, and hard. Concentric hypertrophy of the heart is when the parietes augment at the expense of the cavities. **H., hy'pertrophy with dilata'tion of the,** active aneurism, eccentric hypertrophy. Pulsations can be seen and felt over a larger space, and the apex is more to the left and lower down than natural. Impulse is less steady, but at times more violent, than that accompanying simple hypertrophy. The pulse is strong, full, and vibratory. Shock of the heart's action is often transmitted to the whole person and to the bed on which the patient is lying. **H., im'pulse of the,** see *Heart.* **H., ir'ritable,** condition of the heart, noticed especially in the army in actual service, and characterized by palpitation, cardiac pain, rapid pulse, shortness of breath, sometimes headache, dizziness, etc. **H. lymph** or **lymphat'ic,** muscular sacs in reptiles connected with lymphatics at their point of entrance into the veins. **H. mur'murs** are produced by the blood passing over roughened endocardium, or through constricted heart orifices, or by valvular insufficiency, allowing the blood to regurgitate. **H., neural'gia of,** angina pectoris. **H., pul'monary,** right side or cavities of the heart. **H., rup'ture of,** laceration of the heart; see *Cardiorrhexis.* **H., sounds of,** see *Heart.* **H., spasm of,** palpitation; angina pectoris. **H. stroke,** see *Heart.* **H., system'ic,** left side or cavities of the heart. **H., tobac'co,** irritable condition of the heart from use or abuse of tobacco. **H., tricœ'lious** or **tripar'tite,** heart with three cavities, two auricles and a ventricle. **H., valves of,** see *Heart.*

Heart'burn. Cardialgia.

Heart's ease. Polygonum persicaria, Viola tricolor, Cheiranthus cheiri.

Heart'scald. Cardialgia.

Heart'seed. Cardiospermum heliocacabum.

Heart'wort. Laserpitium album.

Heat. Material cause producing sensation, or the particular sensation itself, produced by a body of an elevated temperature on our organs, especially on the organs of touch. The name caloric is given to the principle, whatever its nature, which is the cause of heat. When we touch a body of a temperature superior to our own, a portion of caloric passes from the body to the hand, and produces the sensation of heat. If, on the contrary, we touch a body of a temperature inferior to our own, we communicate a portion of our caloric to it, and experience the sensation of cold. The terms *calory* and *unit of heat* or *thermal unit* have been given to the quantity of heat required to raise a kilogramme of water one degree centigrade. The chief instrument used in medicine for measuring heat is the thermometer. Of this three kinds are employed: that of Fahrenheit, of Réaumur, and of Celsius, or the centigrade. The varying temperature, as indicated by the thermometer—thermometry or clinical thermometry—is a valuable element of diagnosis in morbid conditions. See *Thermometer.*

The normal temperature of the body may be regarded as on an average from 98° to 100°. Blood of the right side of the heart is slightly hotter than that of the left; the highest temperature observed is where the suprahepatic veins empty their blood into the vena cava ascendens. See *Animal heat.*

The human body can bear a high degree of heat diffused in the atmosphere. There are cases on record where air of 400° and upward of Fahrenheit's scale has been breathed with impunity for a short time. It can likewise withstand very severe cold. In the Arctic regions the thermometer was as low as −70° of F., and Sir George Simpson affirms that it has fallen in Siberia to −83°, or 115° below the freezing-point.

Excessive heat disposes the body to gastric and intestinal diseases, and particularly to inflammation and enlargement of the liver; hence the frequency of such affections within the torrid zone. Heat is often used therapeutically: the actual cautery, at a white heat, disorganizes the parts to which it is applied; a lesser degree occasions violent inflammation. Heat higher than that of the human body is excitant; of a lower degree, sedative. Excessive cold acts as a powerful sedative, inducing sleep, the tendency to which, after long exposure, becomes irresistible. Many topical applications, as cataplasms, act wholly by virtue of their warmth and moisture.

Heat also denotes the rut of animals, periodical sexual desire experienced by them. Œstruation.

Heat, ac'rid, see *Acrid.* **H., an'imal,** see *Animal heat.* **H. ap'oplexy** or **asphyx'ia,** see *Sunstroke.* **H., atom'ic,** quantity of heat necessary to raise the temperature of an atom 1° C. **H., inter'nal,** sensation of heat felt by the patient, but not sensible to the touch; external heat is that which can be felt by others. Heat is called moist when accompanied with moisture, like that felt after bathing; dry, when the skin has not its ordinary softness. It is called acrid and pungent when

it conveys a disagreeable tingling to the fingers; nervous and erratic when coming by flushes, alternating with chills, and moving rapidly from one part to another. Septic heat produces a pungent sensation on the hand, similar to that of acrid heat, but is milder and more uniform, and accompanied with feebleness and frequency of pulse, etc. **H., la'tent,** heat taken into a substance without increasing its temperature. **H., prick'ly,** lichen tropicus. **H., specif'ic,** quantity of heat required to raise the temperature of a given quantity of a substance to a certain higher temperature. **H., u'nit of,** see *Heat.* **H., vi'tal,** see *Animal heat.*

Heat-givers. See *Aliment.*

Heath or **Heath'er.** Erica vulgaris.

Heatophonics, he-at-o-fon'iks (*heautou,* of himself, *phone,* voice). Autophonia.

Heat'stroke. Sunstroke.

Heaves. Broken wind; asthmatic condition of horses.

Heav'iness. Somnolency.

Heaving, he'ving. Vomiturition, or effort at vomiting; swelling movement of the chest.

Heavy, hev'e. Having sensation of weight or heaviness; pregnant. **H. spar,** sulphate of barium.

Hebdomadal (heb-dom'ad-al) **cycle** (*hebdomas,* week). Period of seven days or years, which, according to some, controls the phenomena of animal life. **H. fe'ver,** malarial fever with paroxysms occurring once a week.

Hebdomadaria, heb-dom-ad-ar'e-ah. Hebdomadal or septan fever.

He'be. Goddess of puberty; first hair on the pubes; pubic region; puberty.

Hebenon, heb'en-on. See *Nicotiana tabacum.*

Hebephrenia, heb-e-fren'e-ah (*hebe,* puberty, *phren,* mind). Insanity of age of puberty.

Heberden's (heb'er-den's) **disease.** Rheumatic condition of the fingers, accompanied with nodules or small lumps near their extremities.

Hebeter (heb-e'ter) or **Hebetes,** heb-e'tes. Adolescence.

Hebetic, he-bet'ik (*hebe,* puberty). Relating to puberty.

Heb'etude. Dulness of intellect; moderate stupor.

Hebetudo (heb-e-tu'do) **an'imi** (*hebes,* dull). Imbecility; dulness of intellect. **H. au'ris,** dulness of hearing. **H. den'tium,** great sensibility of the teeth, especially to acid food. **H. men'tis,** dulness of intellect. **H. vis'ûs,** dulness of vision; amblyopia; asthenopia; caligo.

Hebradendron (heb-ra-den'dron) **cambogioï'des.** See *Cambogia.*

He'bra's disease. Polymorphous erythema. **H.'s pityri'asis,** chronic pityriasis rubra. **H.'s pruri'go,** true idiopathic prurigo.

Hecatonia (hek-a-to'ne-ah) **palus'tris** (*hekaton,* a hundred). Ranunculus sceleratus.

Hecatophylla, hek-at-o-fil'lah (*hekaton,* a hundred, *phullon,* leaf). Rosa centifolia.

Hecteus, hek'te-us. Greek measure containing about 72 chopines or pints.

Hectic, hek'tik (*hexis,* habit). Relating or appertaining to the constitution or habit. **H. fe'ver** (*hexis,* habit of body, because in this disease every part of the body is emaciated), slow, continued, or remittent fever, generally accompanying the end of organic affections, and esteemed idiopathic, although probably always symptomatic. It is the fever of irritation and debility, with progressive emaciation, frequent pulse, hot skin, especially of the palms of the hands and soles of the feet, and, toward the end, colliquative sweats and diarrhœa. Being symptomatic, it can only be removed by getting rid of the original affection, which is often impossible.

Hectica, hek'tik-ah. Hectic fever. **H. infan'tilis,** fever, infantile remittent.

Hecticopyra (hek-tik-op'ir-ah) or **Hecticopyr'etos,** hek-tik-op-ir'et-os (*hectic, pur,* fire or fever). Hectic fever.

Hecticus, hek'tik-us. Hectic.

Hectisis, hek'tis-is. State of those having hectic fever.

Hectogramme, hek'to-gram (*hekaton,* hundred). Measure of 100 grammes—*i.e.* 3 ounces 1 drachm and 44 grains, Troy.

Hectolitre, hek'to-le-t'r. Measure containing 100 litres or 26.42 wine pints.

Hectometre, hek'to-me-t'r (*hekaton,* hundred, *metron,* measure). Measure of 100 metres, or 109 yards 1 foot 1 inch.

Hedeoma (hed-e-o'mah) or **H. pulegioï'des** (*hedus,* agreeable). *Pennyroyal, Tickweed, Stinking balm, Squawmint.* Nat. ord. Labiatæ. Indigenous plant with widely-diffusing perfume, employed in the same cases as the mints and the English pennyroyal; in popular practice emmenagogue and a remedy for colds. *Oleum hedeomæ* (Ph. U. S.), *Oil of hedeoma* or of *pennyroyal,* is used as a stimulating carminative, dropped on sugar. Dose, 2 to 6 drops.

Hedera arborea, hed'er-ah ar-bo're-ah. H. helix. Ord. Araliaceæ. Taste of ivy leaves is bitter, styptic, and nauseous. They have been used as an application to running sores and to keep issues open, also to burns. Berries were supposed by the ancients to have an emetic and purgative quality, and a watery extract was made from them. From the stalk of the tree a resinous juice exudes, in warm climates, called *Gummi hederæ, Ivy gum,* possessed of tonic and astringent properties. **H. quinquefo'lia,** Ampelopsis quinquefolia. **H. terres'tris,** Glechoma hederacea.

Hederia, hed-e're-ah. Ivy gum.

Hederine, hed'er-een. Alkaloid from seeds of Hedera helix.

Hederula, hed-er'u-lah. Glechoma hederacea.

Hedge gar'lic. Alliaria. **H. hys'sop,** gratiola. **H. must'ard,** alliaria; Sisymbrium officinale. **H. nettle,** Stachys palustris.

Hedonism, hed'on-ism (*hedone,* pleasure). Mental peculiarity as to irrational pursuit of pleasure.

Hedra, hed'rah (*hedra,* vestige, seat). Seat. Fracture of the bones of the cranium in which the trace of the fracturing instrument is still perceptible; term variously used to signify the anus, the breech, excrement, a privy, a night-chair, and the bottom of an abscess.

Hedrocele, hed-ro-se'le (Eng. hed'ro-seel) (*hedra, kele,* tumor). Proctocele; ischiatic or rectal hernia.

Hedrosyrinx, hed-ro-sir'inks (*hedra,* anus, *surinx,* pipe or fistula). Anal fistula.

Hedwigia balsamifera, hed-wig'e-ah bal-sam-if'er-ah. Tree of W. Indies and Mexico, ord. Burceraceæ. Extract of bark of the root contains a resin and an alkaloid, resembling in action curare. The resinous extract is used like copaiba; bark is antiperiodic.

He'dy (*hedus,* sweet). In composition, sweet, agreeable.

Hedychroum, hed-ik'ro-um (*hedy, chroa,* color). Remedy of a pleasant color, as troches.

Hedyosmum arborescens, hed-e-oz'mum ar-bor-es'sens. Grows in Jamaica; stomachic and antispasmodic. **H. Bonplandian'um,** shrub used as febrifuge in Brazil. **H. nu'tans,** mountain cigar-bush, has similar properties.

Hedyotis Americana, hed-e-o'tis am-er-ik-an'ah. Mexican plant having astringent root. **H. auricula'ria,** E. Indian species; employed in deafness, and its leaves as emollient dressing. **H. umbella'ta,** Indian madder; leaves are expectorant; employed in asthma and phthisis.

Hedyphonia, hed-e-fo'ne-ah (*hedy, phone,* voice). Sweetness of voice.

Hedypneustus, hed-e-nuse'tus (*hedy, pneo,* to breathe). Breathing sweetly or softly; smelling sweetly; having sweet breath.

Hedypnois taraxacum, hed-ip'no-is tar-aks'ak-um (*hedy, pneo,* from its scenting the breath). Leontodon taraxacum.

Hedysarum (hed-is'ar-um) **alha'gi** (*hedus,* sweet). *Alhagi camelorum;* grows in Persia, and supplies alhagi manna. **H. alpi'num,** species used in Asia in dysentery and hæmatemesis.

Hedysma, hed-is'mah. Condiment.

Heel. See *Calcaneum.* **H., club'foot,** see *Kyllosis.*
Heel'string. Achillis tendo.
Hegar's operation. Battey's operation. **H.'s sign of preg'nancy,** detecting through the rectum softness or compressibility of the lower part of the womb, from thinning of that part of the organ immediately above the cervix.
Heidenheim's dem'ilunes. Crescentic masses of small cells contiguous to acini of sublingual gland in the cat and dog.
Height. Stature; crisis; period of greatest development, as of fevers.
Hei'mia salicylifo'lia or **syphilit'ica.** Decoction of leaves of this plant of Mexico and parts of South America is sudorific and antisyphilitic; alcoholic extract is styptic.
Heister's valve. Spiral duplication of mucous membrane in the duct of the gall-bladder.
Helcencephalus, helk-en-sef'al-us (*helco, enkephalos,* brain). Ulceration of the brain.
Helcenteritis, helk-en-ter-e'tis (*helkos,* ulcer, *enteritis*). Dothinenteritis.
Helchydrion, hel-kid're-on. Helcydrion.
Helco, hel'ko (*helkos,* ulcer). In composition, ulcer.
Helcocace, hel-kok'as-e (*helco, kake,* badness). Malignant ulcer.
Helcodes, hel-ko'dees. Ulcerated; ulcerous.
Helcœdema, helk-e-de'mah (*helkos,* ulcer, *oidema*). Ulcerative œdema.
Helcoid, hel'koid (*helco, eidos,* resemblance). Like an ulcer.
Helcology, hel-kol'o-je (*helco, logos,* discourse). Doctrine of or treatise on ulcers.
Helcoma, hel-ko'mah. Ulcer. **H. Yemen'se,** Yemen sore or ulcer.
Helcomenia, hel-ko-men'e-ah (*helco, menes,* menses). Vicarious menstruation from an ulcer.
Helcophthalmia, hel-kof-thal'me-ah. Ophthalmia with ulceration.
Helcoplasty, hel'ko-plas-te (*helco, plasso,* to form). Operation of grafting skin on an ulcer when the destruction is too great to permit of a healing process.
Helcopoiesis, helk-o-poi-a'sis (*helco, poiesis,* making). Formation of ulcer.
Helcos, hel'kos. Ulcer.
Helcosis, hel-ko'sis. Ulceration. **H. cere'bri,** ulceration and suppuration of the brain-substance. **H. laryn'gis,** laryngeal phthisis. **H. pulmona'lis,** phthisis pulmonalis. **H. rena'lis,** ulceration of the kidney. **H. u'teri,** ulceration of the uterus; see *Metrophthisis.* **H. vesi'cæ,** ulceration of the bladder; see *Cystophthisis.*
Helcostaphyloma, hel-ko-staf-il-o'mah. Staphyloma with ulceration.
Helcotic, hel-kot'ik. Relating to or affected with ulceration.
Helcotrauma, helk-o-traum'ah (*helco, trauma,* wound). Traumatic ulcer.
Helcoxerosis, helk-o-zer-o'sis (*helco, xerosis,* dryness). Drying of an ulcer.
Helctica, helk'tik-ah (*helko,* to draw). Epispastics.
Hel'cus. Ulcer.
Helcydrion (hel-sid're-on) or **Helcyd'rium.** Small ulcer; superficial ulceration of the cornea.
Helcyster, hel-sis'ter (*helko,* to draw). Iron hook or crotchet for extracting the fœtus; crotchet.
Helenin, hel'en-in. Yellow crystalline principle (C_6H_8O) from Inula helenium; demulcent, antiseptic, and germicide; used internally in diphtheria, tuberculosis, bronchitis, pneumonia, etc.; externally, in almond oil, in diphtheria; dose, gr. ½.
Helenium, hel-en'e-um. Inula helenium. **H. autumna'le,** false sunflower, sneeze-wort, sneeze-weed, swamp sunflower, yellow star, ox-eye; ord. Compositæ. Indigenous herb with large golden-yellow compound flowers; all parts are bitter and acrid, and in powder are powerful sternutatories. Several other varieties are described. **H. tenuifo'lium** is known for its peculiar deleterious effects on the nervous system, of the lower animals especially.
Helianthel'la. Root of H. tenuifolia; expectorant and antispasmodic.
Helianthemum Canadense, hel-e-an'the-mum kanad-en'se (*helios,* sun, *anthemon,* flower). *Frostwort, Frostweed, Frostplant, Mockrose,* ord. Cistaceæ. An herbaceous plant, having large yellow flowers, growing in all parts of the United States, prescribed in scrofula and as a diuretic, as a wash in skin diseases, gargle in scarlet fever, etc. **H. corymbo'sum,** rockrose, indigenous, is used in the same cases. **H. vulga're,** European plant having similar properties.
Helian'thus an'nuus. Sunflower. Nat. ord. Compositæ. From its seeds a bland oil is obtained. **H. tubero'sus,** Jerusalem artichoke; Brazilian plant, used as an article of food.
Heliasis, hel-e'as-is (*helios,* sun). Astrabolism; insolation.
Hel'ical. Relating to the helix.
Helica'lis ma'jor. Helicis major. **H. mi'nor,** helicis minor.
Helichrysum (hel-ik'ris-um) **arena'rium** (*helios,* sun, *chrusos,* gold). Common yellow everlasting. Flowers of this European plant have been used in constipation, diarrhœa, dysentery, and worms. **H. nudifo'lium,** Caffer tea; S. African plant, demulcent, and, in the form of infusion, recommended in catarrh, phthisis, and other pulmonary affections. **H. auricula'tum** and **H. serphyllifo'lium,** Hottentots' tea, have similar virtues.
Helicia, hel-ish'e-ah. Age. Prime of manhood. Growth.
Hel'icin. $C_{13}H_{16}O_7$. Principle resulting from oxidation of salicin by nitric acid.
Helicine, hel'is-een (*helix,* tendril of the vine). Resembling the tendril of a spiral vine. **H. ar'teries,** short vessels given off from the larger branches as well as from the finest twigs of the artery of the penis.
Helicis major, hel'is-is ma'jor. A muscle of the ear originating from the anterior acute part of the helix, upon which it ascends to be inserted into the helix. **H. mi'nor** originates from the under and fore part of the helix, and is inserted into the helix near the fissure in the cartilage opposite the concha.
Helicoid, hel'ik-oid (*helix, eidos,* resemblance). Helicine.
Helicoidin, hel-e-koid'in. $C_{26}H_{34}O_{14}$. Substance derived, with helicin, from action of nitric acid on salicin.
Helicomonas, hel-ik-om'on-as (*helix,* spiral, *monas,* monad or micro-organism). Name given by Klebs to micro-organism of syphilis.
Helicotrema, hel-ik-o-tra'mah (*helix, trema,* foramen). Hiatus of Scarpa. The hole by which the two scalæ of the cochlea communicate at the apex.
Helicteres (hel-ik'ter-ees) **corylifo'lia** or **iso'ra.** E. Indian plant; fruit is used in diarrhœa, gout, and rheumatism; juice of root in affections of the stomach; leaves are used in constipation.
Heliencephalitis, hel-e-en-sef-al-e'tis (*helios,* sun, *encephalitis*). Inflammation of the brain due to insolation.
Helig'ma (*helisso,* to bend). Bending without fracture. Prominent part of the helix.
Heligmus, hel-ig'mus (*helisso,* to turn round). Convolution. Prominence of helix.
Heliomyelitis, he-le-o-me-el-e'tis (*helios,* sun, *muelos,* marrow). Myelitis due to insolation.
Helion'osus (*helios,* sun, *nosos,* disease). Insolation.
Heliophobia, he-le-o-fo'be-ah (*helios,* sun, *phobos,* fear). Dread of sunlight; photophobia.
Heliopsydracium, he-le-o-sid-ras'e-um (*helios,* sun). Pustule from exposure to the sun.
Heliosciadium nodiflorum, he-le-os-se-ad'e-um node-flo'rum (*helios,* sun, *skiadion,* parasol). Sium.
Heliosis, he-le-o'sis. Astrabolism; insolation; sunbath.
Heliostat, he'le-os-tat (*helios,* sun, *histemi,* to stand). Mirror to reflect the sun's rays constantly in photomicrography.
Heliotherapy, he-le-o-ther'a-pe (*helios,* sun, *therapeuo,* to cure). Sun-cure; cure of disease by exposure to the light of the sun.

He'liotrope (*helios*, sun, *trepo*, to turn). Heliotropium Europæum.

Heliotropin, he-le-ot'rop-in. Bitter principle from Heliotropium Europæum; piperonal.

Heliotropion, he-le-o-tro'pe-on. Cichorium intybus.

Heliotropium (he-le-o-tro'pe-um) **canes'cens, erec'tum**, or **Europæ'um**. Heliotrope, ord. Boraginaceæ; plant formerly considered aperient and capable of destroying cutaneous excrescences, etc. **H. his'pidum** or **In'dicum**, E. India plant naturalized in the U. States; has similar virtues. **H. supi'num**, H. Europæum.

Helix, he'liks (tendril of the vine). Fold forming the outer circumference or ring of the external ear; colon; convolution of intestines; limax.

Helleboraster (hel-le-bo-ras'ter) **fœt'idus**. Helleborus fœtidus.

Hellebore, hel'le-bor. Dracontium fœtidum. **H., Amer'ican**, Veratrum viride. **H., bas'tard**, Adonis vernalis. **H., bear's foot**, Helleborus fœtidus. **H., black**, Helleborus niger. **H., fet'id**, Helleborus fœtidus. **H., green**, Helleborus viridis. **H., stink'ing**, Helleborus fœtidus. **H., swamp**, Veratrum viride. **H., white**, Veratrum album.

Helleborein, hel-le-bore'in. $C_{52}H_{44}O_{15}$. Crystalline glucoside from black hellebore; therapeutic properties similar to those of digitalin; strong cardiac poison.

Helleboresin, hel-le-bo-res'in. $C_{30}H_{38}O_4$. Result of treating helleborin with dilute acids.

Helleboretin, hel-le-bor-et'in. $C_{14}H_{20}O_3$. A result of decomposition of helleborein.

Helleborin, hel-le-bor'in. $C_{36}H_{42}O_6$. Bitter crystallizable principle obtained from hellebore.

Helleborism, hel'leb-or-izm. Method of treating disease among the ancients by hellebore alone.

Helleborrhetin, hel-le-bor-rhet'in. Helleboretin.

Helleborus, hel-leb'o-rus. H. niger. **H. al'bus**, Veratrum album. **H. fœt'idus**, *Stinking hellebore* or *Bear's foot, Setterwort;* ord. Ranunculaceæ; emetocathartic; leaves are anthelmintic and antispasmodic. **H. grandiflo'rus**, H. niger. **H. menta'lis**, plant growing in Greece; possesses similar properties to H. niger. **H. ni'ger**, *Black hellebore, Melampode, Christmas rose, Clovertongue;* the root of this European plant is drastic cathartic; it was formerly employed as an emmenagogue, and has been given in mania, melancholia, dropsy, etc.; now used in veterinary medicine. **H. trifo'lius** or **tril'obus**, Coptis trifolia. **H. vir'idis**, green hellebore; European plant, naturalized in the U. S.; has some of the properties of H. niger, but is also used like digitalis.

Hellenia grandiflora, hel-len'e-ah gran-de-flo'rah (after C. N. Hellenius, professor at Abo). Costus.

Hel'ler's test for albu'min. To a convenient quantity of nitric acid in a test-tube is added carefully an equal amount of clear urine; if albumin is present, a white band appears between the urine and nitric acid. **H.'s test for blood:** the urine is first heated, then caustic potash is added and urine again heated; if blood is present, a dirty, yellowish-red color is precipitated.

Helmerich's (hel'mer-ish's) **oint'ment.** Unguentum sulphuris alkalinum.

Hel'met flower, yel'low. Aconitum anthora. **H. pod**, Jeffersonia Bartoni.

Helmholtz's (helm'holz) **lig'ament.** Part of anterior ligament of malleus connected with anterior tympanic spine.

Hel'mins or **Hel'minth** (pl. **Helmin'thes**) (*helmins*, a worm). Worm; entozoon.

Helminthagogue, hel-min'tha-gog (*helmintho, ago*, to drive). Anthelmintic; vermifuge.

Helminthi, hel-min'the. Worms.

Helminthia, hel-min'the-ah. Helminthiasis. **H. al'vi**, worms in the intestinal canal. **H. errat'ica**, worms introduced by accident into the stomach or intestines. **H. pod'icis**, worms in the rectum.

Helminthiasis, hel-minth-e'as-is. Generic name for the condition giving occasion to the presence of intestinal worms; also condition produced by presence of worms; worm disease; invermination; verminationt; see *Worms*. **H. Wucheri**, condition caused by bilharzia hæmatobia in the human body.

Helminthic, hel-minth'ik. Anthelmintic.

Helminthicide, hel-minth'i-side. Vermicide.

Helminth'ion. Ascaris; small worm.

Helmintho, hel-min'tho (*helmins*, worm). In composition, worm.

Helminthochor'ton or **Helminthochortum**, helminth-o-kor'tum (*helmintho, chortos*, grass). Corsican moss; Corallina Corsicana.

Helminthocolic, hel-minth-o-kol'ik. Colic caused by worms.

Helminthocorton, hel-minth-o-kor'ton (*helmintho, chortos*, grass). Corsican moss; Corallina Corsicana.

Helminthogenesis, hel-minth-o-jen'es-is (*helmintho, genesis*, generation). Helminthiasis.

Helminthoid, hel-minth'oid (*helmins, eidos*, resemblance). Vermiform or worm-like; relating to worms.

Helminthology, hel-min-thol'o-je (*helmintho, logos*, description). Entozoölogy; treatise on worms.

Helminthoma, hel-minth-o'mah. Helminthoncus.

Helminthoncus, hel-minth-on'kus (*helmintho, onkos*, tumor). Tumor caused by, or containing, worms; see *Malis*. **H. medinen'sis**, dracunculus.

Helminthophthisis, hel-minth-o-te'sis (*helmintho, phthisis*, wasting). Emaciation from presence of worms.

Helminthopyra, hel-minth-op'ir-ah (*helmintho, pur*, fever). Fever occasioned by worms; fever, verminous.

Helminthopyretus, hel-minth-o-pir'et-us (*helmintho, puretos*, fever). Helminthopyra.

Helminthus (hel-minth'us) **Gor'dii**. Hairworm; seta equina.

Helobacterium, hel-o-bak-te're-um (*helos*, head of a nail). Bacterium capitatum.

Helodes, hel-o'dees (*helos*, marsh). Marshy, or relating to a marsh, as marsh fever.

He'loid (*helos*, nail). Like a nail in shape. Marshy or miasmatic; caused by exhalations from marshes (*helos*, marsh).

Helonias (hel-o'ne-as) (*helos*, swamp) **bulla'ta.** Species of Liliaceæ growing in eastern part of the U. States, decoction of which is used in constipation and intestinal diseases. **H. dioi'ca**, Chamælerium luteum. **H. erythrosper'ma**, Amianthium muscætoxicum. **H. lu'tea**, Chamælerium luteum. **H. ni'gra**, Veratrum nigrum. **H. officina'lis**, Veratrum sabadilla. **H. vir'idis**, Veratrum viride, Asagræa officinalis.

Hel'onin. Extract of Chamælirium luteum; veratrin.

Helopyra (hel-op'ir-ah) or **Helopyretus**, hel-o-pir'et-us (*helos*, marsh, *pur*, fever). Marsh fever.

Helosis (hel-o'sis) or **Helotis**, hel-o'tis (*heilo*, to turn). Eversion of the eyelids and convulsions of the muscles of the eyes; strabismus; plica polonica.

He'lus. Marsh. Clavus.

Helvella esculenta, hel-vel'ah es-ku-len'tah. Morchella esculenta.

Helxine, helks'een (*helko*, to draw). Parietaria.

Helx'is (*helko*, to draw). Traction.

Hema, he'mah (*haima*, blood). In composition, blood.

Hemachroin, he-mak'ro-in (*hema, chroa*, color). Hæmatin.

Hemadynam'ics. Hæmadynamics.

Hemagalactasia, he-mah-gal-ak-tas'e-ah (*hema, gala*, milk). Condition of milk containing blood.

Hemalopia, he-mal-o'pe-ah (*hema, ops*, eye). Effusion of blood into the eye.

Hemanthine, he-man'theen. Alkaloid, similar to atropine, from Hæmanthus toxicarius.

Hemaperitonirrhag'ia (*hema, peritonæum, rhegnumi*, to break forth). Hemorrhage into the peritoneum.

Hemaproctic, he-ma-prok'tik (*hema, proktos*, anus). Hæmorrhois.

Hemastat'ics. Hæmatostatics.

Hematin, he'mat-in. Hæmatin.

Hemato, he'ma-to. In composition, blood.

Hematocele, he-mat-o-se'le (Eng. he-mat'o-seel). Hæmatocele.

Hematog'enous (*haima, gennao,* to produce). Blood-forming.

Hematoid, he'mat-oid. Hæmatodes.

Hematology, he-mat-ol'o-je. Hæmatology.

Hematosin, he-mat-o'sin. Hæmatin.

Hematostatica, he-mat-o-stat'ik-ah. Hæmatostatica.

Hematox'ylum Campechia'num. See *Hæmatoxylum.*

Hemera, hem'er-ah (*hemera,* day). A day.

Hemeralopia, hem-er-al-o'pe-ah (*hemera, optomai,* to see). *Daysight, Day-vision, Moon-blindness, Nocturnal amaurosis.* Disease in which the eyes enjoy the faculty of seeing while the sun is above the horizon, but are incapable of seeing when light is limited. The eye, when carefully examined, presents no alteration, either in its membranes or humors. Sometimes incorrectly employed to denote night-blindness.

Hemeralops, hem'er-al-ops. One laboring under hemeralopia.

Hemeraphonia, hem-er-af-o'ne-ah (*hemera,* day, *aphonia,* loss of voice). Deprivation of voice in daytime.

Hemeratyphlosis (hem-er-a-tif-lo'sis) or **Hemerotyphlo'sis** (*hemera, tuphlos,* blind). Nyctalopia.

Hemerodroma, hem-er-o-dro'mah (*hemera, dromos,* course). Ephemera.

Hemeropathia, hem-er-o-path-e'ah (*hemera, pathos,* affection). Disease continuing only a day or severe only during the day.

Hemerotyphlosis, hem-er-o-tif-lo'sis (*hemera, tuphlos,* blind). Nyctalopia.

Hemi, hem'e (half, semi). Hence:

Hemiablepsia, hem-e-ah-bleps'e-ah (*hemi, ablepsia,* blindness). Hemiopia.

Hemiacephalus, hem-e-ah-sef'al-us. Monster whose head is represented by a shapeless tumor with appendages or cutaneous folds anteriorly. The condition is called *Hemiacephalia.*

Hemiachromatopsia, hem-e-ak-ro-mat-op'se-ah (*hemi, a, chroma,* color, *ops,* eye). Defect of appreciation of color in half the field of vision.

Hemialbumin, hem-e-al-bu'min. An original component of albumin, changed during digestion into hemialbumose.

Hemialbu'minose. Hemialbumose.

Hemialbuminosu'ria. Discharge of urine containing hemialbumose.

Hemialbumose, hem-e-al'bu-mose. Effect of duodenal digestion on albumin by the action of the pancreatic juice; afterward transformed to hemipeptone; noticed in urine in certain morbid conditions.

Hemialgia, hem-e-al'je-ah (*hemi, algos,* pain). Pain on one side of the body or of the head; hemicrania.

Hemiamaurosis, hem-e-am-aur-o'sis. Hemiopia; hemianopsia.

Hemianæsthesia, hem-e-an-es-the'se-ah. Anæsthesia of lateral half of the body, due to lesions of various parts of central nervous system.

Hemianalgesia, hem-e-an-al-je'se-ah (*hemi,* half, *analgesia*). Loss of sensation of pain in one-half of the body. Analgesia confined to one side of the body.

Hemiandrus (hem-e-an'drus) or **Hemianer,** hem-e-an'er (*hemi, aner,* man). Eunuch; hermaphrodite.

Hemianopia (hem-e-an-o'pe-ah) or **Hemianop'sia** (*hemi, a, ops,* eye). Blindness as to half the visual field; if affecting one eye, it is called *Monocular, Uniocular,* or *Monolateral h.;* of both eyes, *Binocular* or *Bilateral h.* It is *Homonymous* when the outer half of one field and inner half of the other are affected; *H. dextra* when right half is deficient; *H. sinistra* when left is deficient; *Binasal h.* when insensibility of temporal halves of the retina render the nasal fields invisible; *Bitemporal h.* when the opposite condition exists; *Heteronymous* or *crossed h.* when the inner half of one side and outer half of the other are affected; *Superior* or *Inferior h.* when the upper or lower half is wanting.

Hemianthropia, hem-e-an-thro'pe-ah (*hemi, anthropos,* man). Mania.

Hemianthropus, hem-e-an-thro'pus. Eunuch; maniac.

Hemiarthro'sis (*hemi, arthron,* joint). Symphysis.

Hemiataxia, hem-e-at-aks'e-ah (*hemi, ataxia,* want of order). Want of power to co-ordinate movements on one side of the body.

Hemiatheto'sis (*hemi, a, thetos,* fixed). Athetosis or inability to assume a fixed position of one side of the body.

Hemiatrophia, hem-e-at-ro'fe-ah. Hemiatrophy. **H. facia'lis progressi'va,** progressive unilateral atrophy of the face.

Hemiatrophy, hem-e-at'ro-fe (*hemi, atrophia,* atrophy). Atrophy of one side; unilateral atrophy; it is seen in progressive facial hemiatrophy, an incurable affection of the face and neck.

Hemiazyga (hem-e-az'e-gah) or **Hemiazygos** (hem-e-az'e-gos) **vein.** Left lower azygos vein. **H. vein, acces'sory,** left upper azygos vein.

Hemic, he'mik. Hæmic.

Hemicephalæa, hem-e-sef-al-e'ah (*hemi, kephale,* head). Hemicrania.

Hemicephalæ'um, or **Hemicephal'ium,** or **Hemiceph'alum.** Sinciput.

Hemicephalic, hem-e-sef-al'ik (*hemi, kephale,* head). Relating to the sinciput, or to half the head; deficient formation or development of one side of the head.

Hemicephalus, hem-e-sef'al-us. Monster with half a head; the condition is called *Hemiceph'alism.*

Hemichorea, hem-e-ko-re'ah. Unilateral chorea; chorea affecting only one side of the body.

Hemicrania, hem-e-kran'e-ah. Hemicrany; megrim; pain confined to one-half the head; almost always intermittent; at times continuing only as long as the sun is above the horizon, and hence called sun pain. **H. idiopath'ica,** neuralgia, facial.

Hemicrany, hem-e-kra'ny. Hemicrania.

Hemidesmi radix, hem-e-des'me rad'iks. Root of hemidesmus.

Hemidesmus Indicus, hem-e-des'mus in'dik-us (*hemi, desmos,* tie, in allusion to the filaments). *Nannari,* Indian sarsaparilla, ord. Asclepiadaceæ. Hindostanee plant, the root of which, *hemidesmi radix,* is used in India as a substitute for sarsaparilla; it is tonic, diaphoretic, and diuretic.

Hemidialysis, hem-e-de-al'is-is (*hemi, dialysis,* dissolution). Hemiplegia.

Hemidiaphoresis, hem-e-de-a-for-a'sis (*hemi, diaphoresis,* perspiration). Perspiration of one-half or one side of the body.

Hemidiarthrosis, hem-e-de-ar-thro'sis. Amphiarthrosis.

Hemidro'sis (*hemi, hidrosis,* sweating). Excessive sweating of one side of the body.

Hemidysæsthe'sia (*hemi, dys,* with difficulty, *æsthesia,* sensation). Partial sensibility of one side of the body.

Hemidystrophia, hem-e-dis-trof'e-ah (*hemi, dys,* with difficulty, *trophe,* nourishment). Nutrition of one side of the body.

Hemiecton, hem-e-ek'ton. A vessel in which fumigations were formerly made in diseases of the uterus and vagina.

Hemielliptical fossa, hem-e-el-lip'tik-al fos'sa. Fossa for reception of utricle on inner wall of vestibule of internal ear.

Hemiencephalus, hem-e-en-sef'al-us. A monster without any trace of the organs of senses, and yet with a very natural body. See *Hemicephalus.*

Hemiepilepsy, hem-e-ep'e-leps-e. Epilepsy in which convulsions are restricted to one side of the body.

Hemifacial, hem-e-fa'she-al. Relating to half the face.

Hemiglossitis, hem-e-glos-se'tis (*hemi, glossa,* tongue). Inflammation of half the tongue.

Hemigynus, hem-ij'in-us (*hemi, gune,* woman). One who is effeminate, or half a woman.

Hemihidrosis. Hemidiaphoresis.

Hemihypother'mia (*hemi*, *hypo*, under, *therme*, heat). Diminution of temperature of one side of the body.

Hemilaryngoplegia (*hemi*, *larunx*, larynx, *plege*, stroke). Unilateral paralysis of the larynx.

Hemimeles (hem-im'el-ees) or **Hemim'elus** (*hemi*, *melos*, limb). Genus of monsters in which the inferior extremities of the limbs are absent or very defective; condition is called *Hemimelia*.

Hemimœrion, hem-e-me're-on (*hemi*, *moira*, part). One-half part; a drachm.

Hemimyasthenia, hem-e-me-as-then-e'ah (*hemi*, *mus*, muscle, *astheneia*, weakness). Muscular debility of one side of the body.

Hemimyoclonus, hem-e-me-ok-lo'nus (*hemi*, *mus*, muscle, *klonos*, disorder). Unilateral, irregular muscular action or twitching.

Hemina, hem'in-ah. Greek measure, one-half sextarius, or about half pint English.

Hemineurasthenia, hem-e-nu-ras-then-e'ah. Nervous debility limited to one side.

Hemiobolion (hem-e-o-bol'e-on) or **Hemiob'olon**. Half an obolus; weight of about five grains.

Hemiolios, hem-e-ol'e-os. Weight of 12 drachms, or oz. 1½. See *Sescuncia*.

Hemiopalgia (*hemi*, *ops*, eye, *algos*, pain). Pain in the eye of one side, or of both eyes, in hemicrania.

Hemiopia (hem-e-o'pe-ah), **Hemiop'sis**, or **Hemiopy** (*hemi*, *optomai*, to see). Loss of vision over half the retina; usually due to intracranial lesion.

Hemiopiasis (hem-e-o-pe'as-is) or **Hemiopsis**, hem-e-op'sis. Hemianopsia.

Hemipages (hem-ip-ah'gees) or **Hemip'agus** (*hemi*, *pegnumi*, to fasten). Monstrosity in which twins are united from navel to vertex; condition is called *Hemipagia*.

Hemipagia, hem-e-pah'je-ah. Hemicrania. See *Hemipages*.

Hemiparalysis, hem-e-par-al'is-is. Paralysis of half the body.

Hemiparanæsthesia, hem-e-par-an-ees-the'ze-ah. Condition after destructive lesion of lateral half of the spinal cord, characterized on the side of the lesion by motor paralysis, cutaneous hyperæsthesia, and anæsthetic and hyperæsthetic belt, respectively, above and below seat of lesion; on the opposite side of the lesion, by anæsthesia of touch, pain, and temperature, and tickling of the parts, and a hyperæsthetic belt above the level of the upper limit of the lesion.

Hemiparaplegia, hem-e-par-ah-plej'e-ah (*hemi*, *para*, below, *plege*, stroke). Paralysis of one-half the lower extremity; hemiplegia of spinal origin. See *Hemiplegia*.

Hemipar'esis (*hemi*, *paresis*, paralysis). Paralysis of one side of the body.

Hemipathia, hem-e-path-e'ah (*hemi*, *pathos*, affection). Hemicrania; disease of one-half or one side of the body.

Hemipegia, hem-e-pej'e-ah. Hemicrania.

Hemipeptone, hem-e-pep'tone (*hemi*, *pepsis*, digestion). Peptone obtained from hemialbumose by prolonged digestive process.

Hemiphalacrosis, hem-e-fal-ah-kro'sis (*hemi*, *phalakros*, bald). Baldness of one side of the head.

Hemiphonia, hem-e-fo'ne-ah (*hemi*, *phone*, voice). Great weakness of voice. Husky voice of those affected with cholera.

Hemiplectic, hem-e-plek'tik. Relating to or affected with hemiplegia.

Hemiplegia, hem-e-plej'e-ah (*hemi*, *plege*, stroke). Paralysis of motion of one side of the body, usually due to cerebral disease; occasionally to injury or disease of the spinal cord. Spinal h., or hemiparaplegia, is due to lesion seated low down in the spinal cord; see *Paralysis*. One so palsied is said to be hemiplegic. **H., alter'nate**, cross or crossed hemiplegia, cross or crossed transverse paralysis; paralysis in which the loss of power affects the face of one side and the limbs of the other, or the upper limb of one side and the lower of the opposite side. **H., anom'alous**, progressive muscular atrophy. **H., cer'ebral**, H. due to lesion of cortical portions of brain. **H., cross or crossed**, H., alternate. **H., embol'ic**, H. caused by embolism of artery of brain. **H. facialis**, paralysis, Bell's. **H., hephæs'tic**, hammer palsy. **H., spas'tic**, hemiplegia with irregular spasmodic contractions of the diseased muscles; most frequently in infants. **H., spi'nal**, see *Hemiplegia*.

Hemiplegic, hem-e-plej'ik. Relating to or affected with hemiplegia. **H. gait**, see *Gait*.

Hemiplexia, hem-e-pleks'e-ah. Hemiplegia.

Hemiprosoplegia, hem-e-pros-o-plej'e-ah (*hemi*, *prosopon*, face, *plege*, stroke). Paralysis, Bell's.

Hemipro'tein. Proteid resulting from treatment of albumen with dilute sulphuric acid.

Hem'ispasm. Spasm of one side of the body.

Hemisphæræ (hem-e-sfe're) **bulbi ure'thræ**. Hemispheres of bulb of urethra. **H. cer'ebri**, hemispheres of the brain.

Hem'isphere (*hemi*, *sphaira*, sphere). Half a sphere or of a body having a spheroidal shape.

Hem'ispheres of the brain. *Hemispherical ganglia*; upper spheroidal portion of the brain. The *cerebral hemispheres* constitute the great mass of the cerebrum, divided from each other above by the longitudinal fissure, united below by the corpus callosum. The two masses of cerebellum, joined together in median line by the vermiform processes, are the *cerebellar hemispheres*. **H. of the bulb**, the two sections of the bulb of the urethra.

Hemispherical (hem-e-sfer'ik'l) **fos'sa**. Depression on internal wall of vestibule of inner ear for reception of saccule. **H. gan'glia**, hemispheres of the brain. **H. papil'læ**, fungiform papillæ.

Hemisystole, hem-e-sis'to-le (*hemi*, *sustole*, contraction). Contraction or systole of only one ventricle of the heart.

Hemitera'ta (*hemi*, *teras*, monstrosity). Human bodies abnormally developed, but not sufficiently so as to be called monsters. They include anomalies of volume, shape, color, structure, situation, number of organs, etc.

Hemiteria, hem-e-ter'e-ah (*hemi*, *teras*, monstrosity). Partial malformation or monstrosity, as of a new-born child.

Hemitritæa (hem-e-trit-e'ah) **feb'ris** (*hemi*, *tritaios*, tertian). Semitertian fever possessing the characters of the tertian and quotidian intermittent.

Hemiuncia (hem-e-un'se-ah) or **Hemiuncion** (hem-e-un'se-on (*hemi*, *uncia*, ounce). Half an ounce.

Hem'lock. Pinus Canadensis; cicuta; Conium maculatum. **H., Amer'ican**, Cicuta maculata. **H., bas'tard**, Chærophyllum sylvestre. **H., com'mon**, Conium maculatum. **H. drop'wort**, œnanthe. **H. fruit**, conium. **H., ground**, Taxus Canadensis. **H. gum**, see *Pinus Canadensis*. **H. leaves**, conium. **H. oil**, oil of spruce from Abies Canadensis. **H. pitch**, see *Pinus Canadensis*. **H. plas'ter**, emplastrum picis Canadensis. **H. poi'son**, conium. **H. spruce**, Pinus Canadensis. **H., water**, Cicuta maculata; C. aquatica; Phellandrium aquaticum. **H., wild**, Cicuta maculata.

Hemo, he'mo. In composition, blood; see *Hema*.

Hemoangiairrhagia, he-mo-an-je-ar-rhaj'e-ah (*hemo*, *angeion*, a vessel, *aër*, air, *rhegnumi*, to break forth). Hæmoptysis.

Hemocardia, he-mo-kar'de-ah (*hemo*, *kardia*, heart). Hæmocardiorrhagia.

Hemocardioplast, he-mo-kar'de-o-plast (*hemo*, *kardia*, heart, *plasso*, to form). Blood-clot in the heart. See *Polypus*.

Hemocyanosis, he-mo-se-an-o'sis. Blue coloration of blood in asphyxia.

Hemocytometer, he-mo-se-tom'e-tur. Hæmacytometer.

Hemodia, he-mo'de-ah. Hæmodia.

Hemodynam'eter or **Hemodynamom'eter**. Hæmadynamometer.

Hemo-encephalorrha'gia (*hemo*, *encephalon*, *rhegnumi*, to break forth). Apoplexy.

Hemogastric, he-mo-gas'trik. Hæmogastric.

Hemohepatorrha'gia. Hepatorrhagia.

Hemom'eter. Hæmadynamometer.

Hemomyelorrha'gia (*hemo, muelos*, marrow, *rhegnumi*, to break forth). Apoplexy, spinal.
Hemopericar'dia. Hæmopericardium.
Hemophil'ia. Hæmatophilia.
Hemopho'bia. Hæmatophobia.
Hemophthal'mia. Hæmophthalmia.
Hemoplan'ia. Hæmatoplania.
Hemoplasty, he'mo-plas-te (*hemo, plasso*, to form). Blood formation.
Hemopoiesis, hem-o-poi-a'sis. Hæmatopoiesis.
Hemoproc'tia. Anal hemorrhage; see *Hæmorrhois*.
Hemopto'ic or **Hemop'tyic.** Hæmoptoic.
Hemop'tysis. Hæmoptysis.
Hemorrhage, hem'or-rhaj. Bleeding, loss of blood, rupturing, bursting or breaking of a blood-vessel. Discharge of blood from vessels, with or without rupture of their coats. Spontaneous hemorrhages belong to the domain of medicine; traumatic hemorrhages, to that of surgery.

Hemorrhages may be *active* or *passive;* in other words, dependent upon augmentation of organic actions or on debility. Hemorrhages may be constitutional, depending on original conformation; accidental, or those produced by some adventitious cause; supplementary, succeeding others; symptomatic, critical, etc. Secondary hemorrhage occurs some time after wounds or operations. When hemorrhage takes place into any tissue, or is interstitial, it is called *apoplexy.* Active or arterial hemorrhage occurs chiefly in the young and plethoric. It is commonly preceded by heaviness and pulsation in the part, owing to the afflux of blood and consequent hyperæmia, and by coldness of the extremities. Blood evacuated is generally florid red. Indications of treatment will be to diminish plethora and to lessen the heart's action.

Passive hemorrhage occurs in those of weak constitution, or who have been debilitated by protracted disease, poor diet, long watching, excessive evacuations, etc. It is not preceded by excitement or any signs of local determination, but is usually accompanied by paleness of the countenance, feeble pulse, fainting, etc. Indications of treatment will be to restore the action of the small vessels and the general tone of the system by styptics and cold externally, and tonics and astringents, creasote, mineral acids, etc., internally.

Hemorrhage also occurs from mechanical hyperæmia, as when hæmoptysis is produced by tubercles of the lungs; apoplexy by softening of the encephalic neurine; hæmatemesis by diseases of some of the solid viscera of the abdomen, etc. In traumatic hemorrhages following wounds of arterial or venous trunks the blood is of a florid red color, and issues by jets and pulses if it proceed from an artery; deeper red, and issues slowly and by a continuous flow, if from a vein. If the capillary vessels be alone divided, the blood is merely effused at the surface of the wound. Of the means employed for arresting traumatic hemorrhages, some act mechanically, as absorbents, ligature, and compression; others chemically, as fire, caustic, creasote, astringents, etc.
